MAX. SIZE: Maximum breadth 67 ft., maximum length of vessel that can be locked 268 ft. but vessels of greater length can enter docks on HW when all lock gates are open. 3 ft. clearance under the keel is required. Vessels having a draft of 19 ft. can normally enter the docks on any tide when the height of water is sufficient to allow 3 ft. clearance. Vessels with 21 ft. draft can be taken on spring tides. Vessels can enter usually approx. 3 hours before and 2.5 hours after high water.

Commercial Docks: Max. LOA 139 m., draft 5.8 m., beam 19.8 m.

Fish Docks: Max. LOA 73.2 m., draft 5.5 m., beam 12.2 m.

HEALTH: Master has to report any "Reportable" illness as detailed in Form "Port 38" to "Porthealth Grimsby". Also see "Health – All Ports" before first U.K. port.

RADIO: Humber Radio, 2182 kHz, or VHF Channel 16. Also see "Hull".

VHF: See "Hull" – Vessel Traffic Services Humber.

TUGS: Normally join in Grimsby roads. Optional whether use ship's or tug's lines. Tugs operate from Immingham so plenty of notice required.

BERTHING: *Grimsby Docks:*

	Commercial Docks	Fish Docks
Entrance Locks:		
Length	90.0 m.	43.6 m. & 21.4 m.
Width	21.4 m.	10.6 m. & 13.0 m.
Sill level MHWN	6.8 m.	5.7 m. & 6.8 m.
Quay cranes	11 electric – capacity 3 to 7.5 tonnes	1 electric – capacity 15 tonnes 1 electric – capacity 5 tonnes
	2 mobile cranes – capacity 20 tonnes for ship discharge	1 mobile – capacity 15 tonnes

There are 2 Ro/Ro berths in the Royal Dock, one to/from Esbjerg and a second to/from Norway. There is also one in the Alexandra Dock for motor vehicles.

2 Shiploaders available for Grain.

A recent development is the establishment with Angloscan Terminals of a Lo/Lo unit load service at the West side of the Royal Dock. A 35 tonne crane is being provided and the initial users are Floatline for their weekly service to Halmstadt and Rotterdam.

STEVEDORES: Vessels are allocated labour in order of arrival so it is only necessary to give the Agent the ETA preferably before noon on the previous day. Normal working hours 0800 – 1700 hrs., Friday 0800 – 1600 hrs. Overtime can be worked 1700 – 1900 hrs. Monday to Thursday. On Saturdays and Sundays as required.

MEDICAL: Hospitals and all other medical facilities are readily available. If immediate attention is required on arrival please advise Agent by radio or telegram.

FRESH WATER: Available at all quays. Rate approx. 20 t.p.h.

FUEL: Normal gas and diesel oils available by both road and barge with at least 24 hours notice. This is also quayside tankage in fish docks.

GANGWAY/DECK WATCHMEN: Not necessary, but the service is available if Master requires it.

OPENING/CLOSING HATCHES: Responsibility of the crew. The hatch beams can be removed and replaced by the shore cranes but there is an extra charge for this operation.
CUSTOMS ALLOWANCES: 200 cigarettes per 8 days. 1 bottle wine and 1 bottle spirits per 4 days. All seals to be broken.
CARGO GEAR: In accordance with the regulations laid down by H.M. Factories Inspector.
IDENTIFICATION CARDS: Some sort of identification whilst crew are ashore is advisable. (Seaman's Book or Passport).
CONSULS:

TELEPHONES: Not available for connection on board.
SERVICES: Compass adjusting, tank cleaning, etc., are available.
SHORE LEAVE: Crew are allowed ashore.
BANKS: See "Immingham".
STORING: See "Immingham".
GENERAL: The Grimsby Dock Master can be contacted on VHF Channel 16 and then change to Channel 18 or 9 for speaking.
AUTHORITY: Associated British Ports, Port Office, Cleethorpe Road, Grimsby, South Humberside DN31 3LL. *Tel:* (0472) 59181. *Telex:* 52250. *FAX:* (0472) 48275. *Contact:* D. Dunn, Port Manager.

HARTLEPOOL: 54.42 N. 01.12 W. **(See Plan)**

DOCUMENTS: *Ship's Official Papers including:*

Ship's Register.
Ship's Construction Certificate.
Load Line Certificate.
Derat Certificate.
Safety Equipment Certificate.
Radio Equipment Certificate.
U.K. Light Dues Certificate.
Crew List.
Bills of Lading, Manifest and Stowage Plan (Usually sent in advance).
Ship's Stores List.

PILOTAGE: Call by VHF when 3 hours from port and again 30 minutes before arrival. 2 hours required for sailing. VHF Channel 16, 14, 12, 9, 8 and 6.

Pilotage not compulsory. Tel. No. Hartlepool 66030.

Pilots usually board in vicinity of Longscar Buoy from a cutter showing the usual international signals.
ANCHORAGE: N.E. of Longscar Buoy but special care must be exercised in vicinity of prohibited anchorages near Ekofisk Oil Pipe-line and River Tees Fairway.
RESTRICTIONS: Daylight entry only for vessels exceeding 24.4 m. beam. Entrance Channel 1.1 km. long., 61 m. wide. Nominal dredged depth 5.0 m. below LAT.
MAX. SIZE: Overall length 181.3 m. Beam 29.2 m. reduced draft of 7.92 m. Vessels approaching any of the max. sizes must consult Dock Master in advance.
HEALTH: New Regulations. The Public Health (Ships) Regulations in force.

Also see "Health – All Ports" before first U.K. port.
RADIO: Cullercoats Radio. VHF Hartlepool Port Radio Channel 16 and 12.
TUGS: Two twin screw diesel (1,200 h.p.) tugs available during tidal periods. Tugs ropes available at extra charge.
BERTHING: Victoria Harbour, Deep Water Berth. Length 295 m. Depth 9.5 LAT. Equipped with 10 tonne cranes. Ro/Ro pontoon available.

Wood Quay: Length 300 m. Depth 4.5 m. LAT. No cranes (North Sea barges, repairs).

Entrance to the enclosed docks at Hartlepool is by 'The North' entrance, Victoria Harbour, which has a depth of water 8.18 m. on the sill at MHWST the entrance width is 21.33 m.

North Basin (Non-Tidal): Length of Dock 182.87 m. Depth on sill is 3.1 m. below LAT. No Cranes.

N.W. Corner: Roll-on/Roll-off berth. Max. LOA 135 m. Max. beam 20 m. Max. draft 6.25 m.

Central Dock (Non-Tidal): Length of Dock 301.73 m. Width of Entrance 21.33 m. Depth alongside is 2.5 m. below LAT. No Cranes.
West Quay – Conveyor: A dry cargo bulk loading appliance capable of loading any cargo of sizes up to 3 in. cube into vessels of 8,000 tonnes carrying capacity or less, according to tidal conditions prevailing at the entrance locks.
North-West Corner: Roll-on/Roll-off Berth. Max. length of vessel 135 m. Max. beam 20 m. Max. draft 6.25 m.
Union Dock (Non-Tidal): 11 Cranes 10 tonnes – 3 tonnes. Length of quayage 1,551.94 m. Width of Entrance 20.32 m. Depth of Water of 2.2 m. below LAT.

Roll-on/Roll-off berth to handle loads of up to 450 tonnes. Max. length of vessel 85.34 m. Max. beam 14.93 m. Max. draft 5.79 m. Bulk road vehicle chute.
Coal Dock (Non-Tidal): Length of Quayage 689.11 m. Width of Entrance 20.32 m. Depth of Water of 2.2 below LAT.
Jackson Dock (Non-Tidal): Length of Quayage 600 m. Width of Entrance 20.32 m. Depth of Water of 1.6 m. below LAT.
STEVEDORES: All stevedoring undertaken by Port Authority on day work basis with voluntary overtime available (including week-ends). Shift working can also be provided.
MEDICAL: Full hospital and emergency services available at all times. Shore Telephone No. 999 or call on VHF 16.
DENSITY: 1025.
FRESH WATER: Available from shore hydrants and tugs at 20 t.p.h.
FUEL: Available by road and bunkering vessels.
GANGWAY/DECK WATCHMEN: Available by private arrangement through Agents.
HATCHES: To be opened and closed by ship's crew.
IDENTIFICATION CARDS: Seaman's Book or Passport advisable.
CONSULS:

Belgium
Denmark
Finland
French Consular Agency
Germany F.R.
Netherlands
Norway
Portugal
Sweden

REPAIRS: Deck and engine repairs available.
SURVEYORS: Hull and cargo surveyors available through Shipping Agent.
AIRPORT: Teeside Airport nearby with regular U.K. and Continental Services.
TIME: GMT and BST (GMT plus 1 hour) during Summer months.
HOLIDAYS: Normal Bank Holidays.
STORING: See "Prelims".

1. Yes.
2. Yes – no regulations concerning storing.
3. Yes.
4. Yes.
5. Normal standing regulations.
6. Yes.

EMERGENCY CO-ORDINATION CENTRE: Tees Harbour Office.
AUTHORITY: Tees and Hartlepool Port Authority – Hartlepool Docks, Middleton Road, Hartlepool, Cleveland TS24 0SE. *Tel:* Hartlepool 76771. *Telex:* 58669. *Contact:* N. Britton, Director. Captain A. Kirk, Dock Master.

HARWICH (Including Parkeston Quay and Navyard Wharf): 51.56 N. 01.15 E. **(See Plan)**

The Harbour Authority is the Harwich Harbour Board whose jurisdiction extends from the seaward area of the Deep Water Channel to the mouth of the River Orwell on one hand and as far up the River Stour as the tide flows on the other.

The Harbour Master's Office is at Harbour House, Angel Gate, Harwich (Tel: (0255) 504303. Telex: 987304), at which is based the Harwich Harbour Operations Service maintained on a 24 hour basis by a Duty Officer and a Trinity House Duty Pilot.

The Harbour Operations Service (Call sign "Harwich Harbour Radio") maintains a listening watch on Channel 16, and operates on Channel 71.

The service is equipped with surveillance radar, radar information is available on request.

British Rail, at Parkeston Quay, keep a 24 hour listening watch on Channel 16 and work on Channel 18.
DOCUMENTS:

1 Home Officer Form 1.B.6 may be obtained from H.M. Customs Boarding Officer.
1 C.142 Crew Declaration List.
1 Maritime Declaration of Health ("Q" Flag procedure).
2 Ship's report by Master.
1 Stores List.
1 Certificate of Deck Cargo Tonnage (if carried).
1 Grain Certificate (if carried).
1 Light Certificate.
1 Port Dues Certificate.
1 Passenger List required by vessels other than packet vessels.
1 Landing Card for each passenger.
1 Ship's Certificate of Registry.
1 Mercantile Marine Office Certificate – for British vessels only.
1 Load Line Certificate.
1 Safety Equipment Certificate.
1 Lloyd's Certificate.
1 Derat Exemption Certificate.
1 Ship's Register.
1 Lights Bill.
1 Radio Safety Certificate.

In addition Manifests and Bills of Lading are usually sent to Agent direct from loading port.

PILOTAGE: Pilotage into harbour is compulsory for all ships of 50 tons and over, with the exception of vessels of not more than 3,500 tons gross regularly employed in the home and coasting trades and not carrying passengers. Pilots require 8 hours and 3 hours notice of arrival.

Also see "Felixstowe".

CORK PILOT STATION

Boarding Point: To facilitate the arrival and departure of ships trading to and from the ports of Felixstowe, Harwich and Ipswich, a Pilot station operates in the vicinity of the Cork in a position Lat. 51° 56′ 42″ N., Long. 01° 27′ 06″ E. *This station is additional to, but is not a substitute for, the Sunk pilot. It is for the use of ships bound to or leaving the above-mentioned ports whose normal course does not take them past the Sunk pilot.* Full service is also provided at the Sunk station by fast launches from Harwich.

The Cork station is operated by a fast Pilot launch with black hull and white wheelhouse, flying the Pilot flag, and at night exhibiting lights and signals in accordance with Rule No. 29 of the International Rules for the Prevention of Collisions at Sea.

The attention of Masters is drawn to the requirement when being served by a fast pilot launch of maintaining headway throughout the operation of shipping or landing a Pilot.

ETAs and Amendments: Inward Bound Ships. Ships requiring a Pilot at the Cork station should apply to the shore station at Harwich in the same manner and giving the same information but stating their estimated time of arrival at the Cork.

Outward Bound Ships: Masters of ships about to sail from Harwich and Felixstowe and wishing to use the Cork pilot station should state this when ordering their Pilots for departure. However ships may carry their Pilots out to the Sunk pilot station should they so desire. Pilots for ships outward bound should be ordered by telephoning Harwich (code 0255) 503129 – see "Harwich Shore pilot station" below.

Contact Procedure: The Cork pilot launches keep a constant listening watch on Channel 16 (VHF).

Working Frequencies: Vessels should call on the working frequency, Channel 9 (VHF).

HARWICH SHORE PILOT STATION (OPERATIONS)

The Shore pilot station (Operations) is situated at Harbour House, Harwich and is part of the Port Operations Service jointly operated by the Harwich Harbour Board and Trinity House. It should be noted that Pilots' accommodation and administrative offices are situated at the main pilot station at Town Quay, Harwich.

The pilot station (Operations) is manned by a Duty Pilot and is equipped with VHF, telex and telephone.

All requests for the services of Pilots for ships bound into or out of Harwich and Felixstowe should be made to this station. Orders for Pilots for outward bound ships should state whether the Pilot will be landed at the Sunk or the Cork. Requests from inward bound ships for the services of the Ipswich Pilots and for the Pilots for the Rivers Colne, Blackwater, Crouch and Roach may also be passed through this station.

Contact Procedure: A 24-hour listening watch is maintained on Channel 16 (VHF). The call sign is "Harwich Pilots Radio".

Working Frequencies: Vessels should call on the working frequency, Channel 9 (VHF).

Other communication details are:

Telephone number: Harwich (code 0255) 503129 or 506300
Telex number: 98472, Pilots Harwich

APPROACHES: Traffic Regulatory System in effect.

ANCHORAGES:

Erwarton: Situated to the North and West of Parkeston Quay with an average depth of 5.5 m. at LW.

Parkeston: Situated to the North of Parkeston Quay, with an average depth of 5.5 m. at LW.

Shelf: Situated on the Western side of the main Channel between the North and South Shelf Buoys. Average depth of 3.7 m. at LW.

Inner: Situated at the Pitching Ground. Average depth 8.0 m. at LW.

Cork: Situated to the North of the Harwich Channel. Area approx. 2 miles×1 mile. Average depth 6.5 m.

RESTRICTIONS: Normal max. draft allowed alongside the berths at Parkeston Quay is 26 ft.

Normal cargo working at Parkeston Quay ceases at 2200 hrs., but berthing and night work by arrangement at any time.

MAX. SIZE: Normal max. permissible length 500 ft. Arrangements for larger vessels can be made. Normal max. permissible breadth for Roll-on/Roll-off is 75 ft. Normal max. permissible draft – 20 ft. The height of the tide does not restrict a vessel berthing alongside the quay if her draft is within 20 ft.

HEALTH: Maritime Declaration of Health required ("Q" Flag procedure). Obtain Pratique through H.M. Customs Boarding Officer if no sickness on board.

If there is sickness on board the Customs Official will notify the Duty Port Medical Officer.

If the vessel is from another port in the U.K. Pratique is automatic.

Also see "Health – All Ports" before first U.K. port.

RADIO: North Foreland Radio (call sign GNF) or Humber Radio (call sign GKZ) are the most convenient stations to pass ETA cables, etc., to Agents or receivers

VHF: VTS in operation. Also see "Pilotage" and "Tugs".

TUGS: 5 tugs are available in Harwich Harbour for use in the area. M.T. "Alfred", M.T. "Crosby" and M.T. "Ganges", 40 ton bollard pull.; M.T.'s "Sauria" and "Egerton", 18 tons bollard pull. Tugs' lines usually used.

24-hour service, 7 days per week. Constant watch on Channel 16 VHF. Additional tugs up to 2,250 h.p. can be obtained from London at 24 hours' notice.

BERTHING: There are 8 berths at Parkeston Quay, of which 2 are Portal Ro-Ro berths and 1 is a Pontoon Ro-Ro berth. Normally max. draft permissible alongside is 20 ft. A new berth is under construction.

Berthing, etc., by arrangement. Applications for berths must be made through the Shipping or Port Manager, British Rail, Parkeston Quay, giving as much advance notice as possible. Also see "Navyard, Harwich" before "Authority".

STEVEDORES: All labour at Parkeston Quay are members of National Union of Railwaymen, and arrangements for their use must be made through the Shipping and Port Manager, British Rail, Parkeston Quay.

MEDICAL: Prior notice through British Rail, Parkeston Quay, desirable to arrange attention. All services are available.

TANKERS: A berth is available for tankers for the purpose of discharging and loading to the local oil refinery.

DENSITY: 1025 (sea water).

FRESH WATER: Fresh water can be supplied from quayside hydrants.

FUEL: Can be arranged by either barge or road tanker.

GANGWAY/DECK WATCHMEN: Watchmen are not provided or required by the port, but ships may use their own watchmen.

OPENING/CLOSING HATCHES: To be carried out by ship's crew.

CARGO GEAR: There are 2 transporter cranes, 30 tons SWL and 4×30 ton Goliath rubber tyred gantries. A 35 ton gantry crane will be delivered to Parkeston Quay mid-1986.

IDENTIFICATION CARDS: Seaman's Identity Cards sufficient.

CONSULS: Dutch, German F.R., Danish, Belgian.

REPAIRS: Minor repairs can be carried out by British Rail workshops at Parkeston Quay. As much advance notice as possible required.

REPATRIATION: All facilities available.

AIRPORT: Nearest is Ipswich, 22 miles; Southend, 70 miles.

HOLIDAYS: All normal Bank Holidays. Only passengers and car travellers are dealt with at Parkeston Quay on these days. Freightliners sail only if loaded before the holiday. Train ferries operate normal services.

POLICE/FIRE/AMBULANCE: Dial 999 and ask for service required.

TELEPHONES: Arrangements can be made, with advance notice given.

SHIP SUPPLY SERVICE:

The Alexandra Towing Co. (Felixstowe) Ltd., The Dock Office, Felixstowe Dock, Felixstowe, Suffolk.

Felixarc Marine, Felixstowe Dock, Felixstowe, Suffolk.

Orwell & Harwich Navigation Co., The Quay, Harwich, Essex.

DEVELOPMENTS: Eastern end of Parkeston Quay to be lengthened in due course to provide more container berths.

NAVYARD, HARWICH:

Operators: Harwich Dock Co. Ltd. Telephone: Harwich 508949. Telex: 98229. Listens on VHF Channel 16, working Channel 22.

Berths:

Berth No. 1: Length 42 m.
Berth No. 3: Length 160 m., depth 8.6 m.
Berth No. 4: Length 90 m., depth 4.5 m.
Berth No. 5: Length 160 m., depth 6.5 m.
(Berths 3, 4 and 5 equipped with Ro/Ro ramps).

Stevedores:

All labour at Navyard is employed by Harwich Dock Co. Ltd. Berths and labour must be booked through Operations Manager (24 hour service available).

Cargo Equipment:

2 Ransome Rapier NCK 60 mobile cranes – capacity 35 tonnes.

Other equipment includes 14 tugmasters, 10 forklifts to 25 tonnes.

Other Services:

Telephones, fresh water, bunkers, medical services can all be arranged. Harwich Dock Company Ltd., provides ships and goods agency services at this and other ports.

AUTHORITY: Harwich Harbour Board, Harbour House, Angel Gate, Harwich CO12 3EJ. *Tel:* Harwich 504303. *Telex:* 987304. *Contact:* Captain I. Whale, Harbour Master. Captain R. W. Shaw, Assistant Harbour Master (Operations).

HEYSHAM: 54.02 N. 02.55 W. (See Plan)

DOCUMENTS: As for other British ports plus Walney Light Dues.

PILOTAGE: Trinity House Pilotage Service, Barrow District. Compulsory for all vessels of 50 tons gross tonnage and over with the exception of vessels of not more than 1,500 tons gross regularly employed in the home and coasting trades and not carrying passengers. Also see "Barrow-in-Furness".

ANCHORAGES: Heysham Lake. 0.5 mile W.N.W. of No. 1 Buoy. Position: Lat. 53° 59.6′ N., Long. 3° 00.0′ W. Depth: 40 ft. at LW.

RESTRICTIONS: Entry possible at all states of tide. Harbour maintained at 4.1 m. below Admiralty chart datum of chart No. 2010.

MAX. SIZE: 480 ft. (146 m.) length, draft 17 ft.

HEALTH: See "Health – All Ports" before first UK port.

RADIO: Heysham Harbour Radio, VHF Channels 16, 14 and 74.

TUGS: None available.

BERTHING: Vessels may be berthed at any time. 1 Ro/Ro ramp, 1 berth exclusively for gas base, 1 general cargo berth North Quay, 2 general cargo berths on South Quay.

CRANES: 1×30 ton portal crane on North Quay; 1×23 tonne portal crane; 4×7.5 ton portal cranes on South Quay.

DENSITY: Salt water.

FRESH WATER: Available from the quays.

FUEL: Gas oil by road vehicle.

GANGWAY/DECK WATCHMEN: Ship's watchmen required.

AIRPORT: Nearest, Liverpool and Manchester; 60 miles.

REPAIRS: Small repairs possible, no docking facilities.

PROVISIONS: Available locally.

POLICE/AMBULANCE/FIRE: Telephone 999 in emergency.

SHORE LEAVE: No restrictions on landing.

AUTHORITY: Sealink UK Ltd., Sea Terminal, Heysham, Lancs. LA3 2XF. *Tel:* Heysham (0524) 52373, 52284. *Telex:* 65260. *Contact:* Captain P. A. Read, Port Manager.

HOLYHEAD: 53.19 N. 04.41 W. (See Plan)

DOCUMENTS:

1 Crew List and where applicable a Passenger List.
1 Pratique issued by Customs.
1 Crew Declaration (C.142 for H.M. Customs).
1 List of Consumable Stores (tobacco, snuff, alcohol).
1 Declaration of Health.
1 Cargo Manifest.
1 Ship's Report.

PILOTAGE: Pilotage compulsory under Trinity House Authority. Local Pilot available on request.

ANCHORAGES – PROHIBITED ANCHORAGE: The breakwater affords partial shelter to the outer anchorage and complete protection to New Harbour; there are depths of up to 12.0 m. in the former and of up to 12.0 m. in the latter.

The accommodation for vessels of deep draft in New Harbour is limited. Small vessels should always proceed into New Harbour and anchor in the S.W. part, leaving the outer part and the roadstead for large vessels. The bottom is hard, overlaid with mud but the holding ground is sufficiently good if an adequate amount of cable is veered. During Easterly winds an uncomfortable sea is raised; vessels may then obtain shelter in the Eastern part of outer anchorage. Anchorage is prohibited within 1.5 cables on either side of the track followed by Passenger Ferries from the head of the breakwater to the entrance to Old Harbour; the limits of this area are shown on charts.

MAX. SIZE:

Inner Harbour: Restricted to vessels of 4.5 m. draft and vessels exceeding this draft will only be accepted after consultation with the Port Manager or Harbour Master.

New Harbour: Vessels of approximately 60,000 tons can be accepted alongside the Anglesey Aluminium Jetty where the berth is dredged to 13.5 m. at L.A.T.

Ro-Ro vessels up to 150 m. length and 7.0 m. draft accepted.

HEALTH: See "Health – All Ports" before first U.K. port.

RADIO: Holyhead Radio, VHF Channel 16, No Port Radar.

TUGS: Available through Agents. Tugs up to 1,375 h.p.

BERTHING: By prior arrangement with the Port Manager.

Ferry Ramps and Services: There are 2 berths available in the port which are used by Sealink Multi-purpose (Car and Ro/Ro traffic) ferries. The main one is termed the 'Station Berth' and as its name implies is an integral part of the rail station complex offering quick and easy rail/ship interchange with all the necessary H.M. Customs, passenger waiting and ticket checking facilities. Two mechanical gangways are available. A similar berth is available at Salt Island (Admiralty Pier) with again passenger waiting and H.M. Customs clearance facilities available on the spot. Transfer for rail passengers can be made by connecting coaches.

	Station Berth	*Salt Island Berth*
Maximum length of ship accepted	130 m.	140 m.
Datum depth of water available	4.6 m.	4.6 m.
Ramp width	3.4 m.	3.0 m.
Maximum weight of vehicles over ramp	40 tonnes	30 tonnes
Maximum width of vehicles at ramp	3.7 m.	3.5 m.

General Cargo Handling: General Cargo berth is heavily used for exports of Aluminium ingots, steel, powdered chemicals and various other commodities. Imports include fertiliser, timber and steel. Staff are available to handle ship at all times with prior arrangement.

Cranage facilities on offer include:–
73 ton rough terrain road mobile.
Mobile 25 ton crane.
11 ton yard crane.

Cranes are usually hired out including drivers.
Quotes supplied upon request.

There is a railed 15 ton crane on the berth. One or two other mobile cranes, together with a fleet of fork lift trucks and other handling equipment are available. There is ample storage space available as a back up to this berth, and if necessary, covered storage can be provided in the 'Pontoon House' with 2,000 cu.m. capacity.

Length of berth	170 m.	(total quayage)
Depth of water available	4.4 m.	datum

CONTAINER HANDLING FACILITIES:

Sealink Container Terminal berth is used by Sealink Container Shipping Services to Dublin and Belfast. There is, however, spare capacity for other operators' ships and services. A regular twice weekly service has been operated by the Ford Motor Company between Holyhead and Cork for example. In addition Sealink have handled over 70 other Container ships for lines such as OCL, DART and CAST.

Sealink have 2×30 ton Wellman Transporter cranes for ship to shore movements and 2×30 ton Goliath cranes for rail to road transfer. The storage capacity of the Terminal is around 700 TEUs. Customs clearance is available on the spot, serviced by Sealink. Sealink's own fleet of lorries and trailers feed the cranes and ship discharge/loading rates of over 30 containers per hour are normal.

Daily Freightliner services operate to Manchester, Birmingham, London, Southampton, Cardiff, Liverpool and Felixstowe. Special train movements can be arranged as required. Alternatively, road movements can be accepted or arranged.

Length of berth	135 m.
Datum depth of water available	4.8 m.

STEVEDORES: No stevedores. Vessels loaded and discharged by Sealink dock porters. Outside vessels berthing at Public Quay can be discharged and loaded by making prior arrangements with Agent.

MEDICAL: Medical Officer available. Stanley Sailors Hospital situated in close proximity to Harbour.

DENSITY: Salt water (1025).

FRESH WATER: Available at all berths within the Inner Harbour and alongside Anglesey Aluminium Jetty.

FUEL: Fuel oil and diesel oil available provided that adequate warning is given to Agent. Only 1 berth available for bunkering of large vessels of deep draft alongside Anglesey Aluminium Jetty.

Prior arrangements must be made with Sealink UK Ltd. in conjunction with Anglesey Aluminium Metals Ltd., telephone Holyhead 3333.

No oiling barge available for bunkering vessels at anchor.

GANGWAY/DECK WATCHMEN: Required at all times when vessels are in port.

REPAIRS: Repairs can be carried out by Sealink UK Ltd. workshops.

DRY DOCK: Closed until further notice. Length 124 m., breadth 20.5 m., depth on sill 6.0 m. at Spring tides.

SURVEYORS: Cargo Inspectors can be contacted, if required.

Surveyors representing Lloyd's Register, Bureau Veritas, etc., can be contacted on request.

AIRPORT: RAF Station Valley, Anglesey (6 miles away).

HOLIDAYS: Saturdays, Sundays and all Public holidays.

POLICE/AMBULANCE/FIRE: Tel. 999.

EMERGENCY CO-ORDINATION CENTRE: Maritime Rescue Sub-Centre, Coastguard. Tel: 0407-2051.

TELEPHONES: No telephone connection for outside vessels. Public telephone within port limits.

SERVICES: Compass adjusting can be arranged. Agency can be arranged through Port Authority.

BANKS: British banks only available in the Holyhead area, exchange facilities are provided.

STORING: See "Prelims".

1. Vessels can be stored by barge or truck, usually by truck.
2. Vessels can be stored during loading or discharging.
3. Trucks can proceed alongside at the berth.
4. Forklift trucks can be used to handle stores.
5. Customs Regulations, where applicable, in force.
6. Local riggers can be employed, if necessary.

SHORE LEAVE: Allowed.

AUTHORITY: Sealink Harbours Limited, Rail House, Turkey Shore Road, Holyhead, Gwynedd LL65 2DD. *Tel:* (0407) 2304 Ext. 7. *FAX:* (0407) 5118. *Telex:* 61283. *Contact:* G. Imlah, Port Manager. Captain R. Daley, Harbour Master. Mr. D. E. Ing, Port Engineering Manager. Mr. I. R. Coulstock, Port Commercial Officer.

HOUND POINT: 56.00 N. 03.22 W. (See Plan)

LOCATION: The terminal is operated by B.P.

Position of terminal Lat. 56° 00′ 20″ N., Long. 03° 21′ 45″ W.

DOCUMENTS:

1 Crew List.
1 Passenger List.
1 Crew's Effects List.
1 Stores List.
All valid Certificates.

PILOTAGE: Pilotage in Firth of Forth is compulsory. Contact "Forth Pilot" VHF Channel 16. Pilot boards large vessels in vicinity of Fairway Buoy 56° 03.5′ N., 03° 00′ W. as there is limited depth and manoeuvring space at normal Pilot boarding ground East of Inchkeith. For large vessels in ballast, Pilots require gangway/pilot ladder combination rig.

ANCHORAGE: When vessel has to wait for Pilot, berth or tide, "Forth Navigation Service" will assign anchorage. These anchorages are in a line E.S.E. to S.W. of Fairway Buoy. Good holding ground at anchorages.

RESTRICTIONS: Vessels will be berthed at slack water – flood or ebb – only. The same in most cases for unberthing.

MAX. SIZE: Vessels up to 300,000 d.w.t. can berth at Hound Point Terminal with no defined restriction on LOA. Vessels berth starboard side alongside, heading East.

Max. permitted loading draft 20.72 m. (Neap tides) 21.64 m. (Spring tides). Minimum depth alongside terminal 25.0 m.

HEALTH: See "Health – All Ports" before first U.K. port.

RADIO: *Arrival advice:* For advance notice refer to Charterer's instructions.

RADAR/VHF: Estuary radar service. VHF contact can be made with Forth Navigation Service Channel 71, working Channels 20 and 12. Hound Point Terminal operates VHF Channel 9; B.P. Grangemouth VHF Channel 16 (calling) and Channel 19.

TUGS: 4 tugs of 35 tonnes bollard pull available. Tugs ropes are used.

BERTHING: Hound Point Terminal (leased and operated by British Petroleum) is a Sea Island in the Firth of Forth about 13 miles from Fairway Buoy. The approach channel from Fairway Buoy to berth is marked by buoys and has a guaranteed minimum depth of 66 ft. at LWST.

Maximum of 4 loading arms of 16 in. available for deballasting and/or loading. Loading rate about 8,000 t.p.h. by gravity and with 2 arms connected. This rate decreases as tank level drops.

When 4 arms are connected loading rate can be as high as 18,000 t.p.h. by means of booster pumps.

Facilities to receive any amount of dirty ballast are available. Discharge through 16 in. loading arms into 24 in. line with minimum of 5 kg./sq.cm. back pressure.

No need to prepare ship's derricks unless stores are taken on board. API of cargo about 36.7.

Berthing and Unberthing: The number of tugs employed will vary according to the size of the vessel and the prevailing weather conditions. Under normal conditions tankers in excess of 120,000 d.w.t. will use 4 tugs berthing and 2 tugs unberthing and ships of less than 120,000 d.w.t. will use 2 – 3 tugs berthing and 2 unberthing.

Berthing is undertaken during daylight or darkness at LWS and in normal circumstances vessels will berth heading East.

Minimum acceptable visibility for berthing and unberthing is 1 mile.

Berthing will not be attempted if the wind is in excess of 20 knots (Force 5) blowing onto or off the berth from a direction up to 45° either side of a line at right angles to the longitudinal axis of the berth, or if in excess of 30 knots (Force 7) from any other direction.

Berthing will not be attempted if the current is in excess of 1 knot, and a similar 1 knot flood limit applies to the unberthing of vessels if berthed heading West. The unberthing of vessels in excess of 54 ft. draft will also be restricted by the tidal rise, otherwise, any other limit conditions will be assessed at the time of unberthing, the controlling depth being 19.2 m. (65 ft.) in the Approach Channel.

Approach to the berth is made after having stopped some 200 m. off and parallel to the berthing line. Normal practice is for tugs to swing the vessel in this position prior to berthing starboard side to.

Speed of approach equipment is provided to assist in ensuring a safe speed during the final breasting in manoeuvre. The equipment operates a display panel which indicates the distance each end of the vessel is off the berthing fenders by means of 2 white bar lights which diminish in length as the vessel approaches. Speed of approach for each end of the vessel is indicated by 2 "traffic light" systems which show:

Flashing Red – dangerous speed, 8 cm./sec. and above.
Flashing Amber – marginally safe speed, 5 – 8 cm./sec.
Steady Green – safe speed, 5 cm./sec. and below.

A stand-by fire tug on 15 minutes notice will remain in attendance at the specially provided buoy mooring while the berth is occupied.

Safe Mooring Guidelines: The following table shows recommended mooring layouts:

200,000 – 300,000 d.w.t.
  4 head/breast lines.
  4 stern/breast lines.
  2 spring lines forward and aft.
100,000 d.w.t.
  2 head and stern lines.
  2 breast lines forward and aft.
  2 spring lines forward and aft.
50,000 d.w.t.
  2 head and stern lines.
  2 breast lines forward and aft.
  1 spring line forward and aft.

These layouts do not include synthetic first lines ashore used for manoeuvring vessels equipped with wire mooring systems into position.

The attention of the Master is particularly directed to the following:

(a) Shore moorings are available from each of the mooring dolphins and it is strongly recommended that all vessels should make use of them. Shore moorings are also available from the outer breasting dolphins to supplement the ship's backsprings if required.

(b) Masters shall ensure that mooring lines are in good condition and free of visible defects. Winch brakes or securing devices should be in efficient operating order and should have a holding power at least 60% the breaking load of the mooring lines. A number of vessels are known to have mooring winches with brakes designed to yield as low as 25% of the mooring line breaking load, and this considerably reduces a vessel's mooring capability. It is therefore most important that the holding power of a vessel's mooring winch brakes is advised to the terminal, together with any known defects in a vessel's mooring equipment in order that possibly more limiting "Action Guidelines" may be agreed.

(c) If mixed moorings of wire and fibre lines are used it is important that due to the differing elasticity of these materials their use in the same direction of restraint should be avoided.

(d) As soon as a vessel is secured, brakes on all mooring winches must be firmly applied. Winches shall not be left on automatic tensioning. Full steam pressure must be maintained on deck and available to all mooring winches throughout the period the vessel is alongside. On split drum mooring winches only one layer of rope shall be permitted on the working half of the drum.

(e) An efficient watch must be maintained on the vessel's moorings (including any shore wires used) to ensure that all lines are properly tensioned and tended when required.

(f) The flow booms are vulnerable to damage should a vessel range or move off the berth and it is essential that a vessel shall be held securely alongside throughout the period in the berth. Particular care should be exercised to ensure sufficient transverse restraint from the breast line moorings.

(g) The terminal is entitled to stop operations and/or summon tugs if it appears that a vessel's movement will endanger the flow booms, or in the absence of an alert and efficient deck watch.

(h) All vessels arriving at Hound Point in ballast should, in order to facilitate manoeuvring ability, have their propeller completely immersed. In addition to this requirement, vessels between 50,000 d.w.t. and 120,000 d.w.t. should be trimmed not exceeding 10 ft. by the stern, and vessels over 120,000 d.w.t. not exceeding 12 ft. by the stern.

(i) The ships accommodation ladder is to be rigged on offshore side for use as a secondary means of escape in the event of an emergency at the terminal. The lower end of the ladder must be maintained about 5 ft. above sea level and adquately lit at night.

(j) Displacement is not to exceed 150,000 tons.

DENSITY: 1020 – 1025.
FRESH WATER: Not available.
TIME: GMT in Winter. GMT plus 1 hour in Summer.
CONSULS: See "Leith".

GENERAL: Outside the Firth of Forth, clear of the land on the South side, streams are weak, spring rate up to 1 knot, but at spring tide the velocity at the terminal is up to 3.5 knots (Refer to Tidal Stream Atlas).

AUTHORITY: Forth Ports Authority, Port Office, Tower Place, Leith, Edinburgh EH6 7DB. *Tel:* (031) 554 4343. *Telex:* 72681. *Cables:* "Harbour Leith". *Contact:* Mr. ~~J. R. Grant~~ Skrueder, Port Manager, Leith & Granton.

HULL: 53.44 N. 00.14 W. (See Plan)

VESSEL TRAFFIC SERVICES HUMBER:

The Humber Ports Operation and Information Service operates a VHF (FM) radio telephone service available to all vessels navigating the Rivers Humber, Ouse, and Trent from the Queen Elizabeth Dock.

A continuous watch is maintained on Channels 10, 12, 13, 14, 16 and 52. The call sign is "VEE TEE ESS" Humber. The telephone number is Hull 0482 – 701787. Telegraphic address "Humberops", telex 527656.

The Service provides information regarding the arrival, berthing, anchoring and departure of vessels and also information on navigational aids, navigation generally, visibility, and the safety of vessels and persons. Tidal information, including the height of tide at Bull Sand Fort, Immingham, Hull and Hessle, is also available on request. Messages of any other nature and messages of a personal character cannot and will not be accepted. Messages of this kind should be passed through the British Telecom Ships Telephone Service via "Humber Radio" on Channel 26.

Other VHF (FM) Stations situated on the River Humber and the Channels used are shown in the Appendix to this Notice. These Stations provide direct communication between a vessel and the Dock or Pier Master at the place of destination. In general, vessels should obtain their navigation and safety information from the Vessel Traffic Services Humber and their berthing, docking and other pre-arrival information from the Station serving their destination.

A general broadcast giving weather reports, tidal information and navigational warnings is made by the Vessel Traffic Services Humber on Channel 12 every 2 hours commencing at 0103 hrs., prior notification being given on Channel 16.

Procedure:

(i) Vessels fitted with appropriate VHF R/T equipment on approaching the Humber should set watch on Channel 16.

(ii) Vessels wishing to communicate with the pilot station should call "Spurn Pilot" on Channel 16 and shift to Channel 14 for exchange of traffic.

(iii) On entering and before sailing or moving in the Humber, vessels should call "VEE TEE ESS" Humber on Channel 16. When contact is established they will be requested to transfer to Channel 12 for exchange of arrival or departure information. Watch should then be resumed on Channel 16 and 12.

(iv) Vessels wishing to communicate with the Station serving their destination should do so at the appropriate time on the Channels shown in the Appendix, reporting their departure from Channel 12 to "VEE TEE ESS" Humber. Vessels are advised that, when communicating with these Stations, contact with the Vessel Traffic Services Humber can only be re-established through Channels 16 and 12 and it is particularly advisable to maintain a listening watch on Channel 16 whenever practicable in the event of unforeseen circumstances developing in the River.

All times in messages should be given in local time using the 24 hour notation.

To achieve the full advantage of efficient communication, strict telephone discipline and attention to procedure, particularly on the Calling Channel, is imperative. The operating procedure should be in accordance with that laid down in Chapters VI and VII of the G.P.O. Handbook for Radio Operators (1975 Edition, with Supplements).

These services will be offered and will be rendered on the condition that neither the Associated British Ports, nor any of its servants or Agents, shall be liable to any person for loss or damage of any kind howsoever caused or arising whether as a result of negligence or otherwise or as a result of the non-availability of the services.

NOTICES:

GENERAL DIRECTIONS FOR NAVIGATION IN THE HUMBER: PROCEDURE AND INSTRUCTIONS FOR SHIPS USING THE RIVER HUMBER

1. *Time of arrival. ETA:*

1.1 Ship Owners, Masters and Agents are required to inform the Associated British Ports of the Estimated Time of Arrival of their vessels as per the General Directions together with relevant information regarding draft, hazardous cargo, last port of call, nationality of vessel. In this context the Associated British Ports means the Dock Master at the particular port to which the vessel is bound, the Vessel Traffic Services Humber or the Pilot Office at Hull, Grimsby or Goole. Reference British Transport Docks Board Notice to Mariners Nos. 2 and 3 of 1974.

1.2 Ship Owners or Agents are requested to inform the Masters of their vessels of the importance of amending ETA's as necessary due to changing circumstances. Such amendments can be passed to the Associated British Ports by radio through Humber Radio either in the form of a link call or telegram.

1.3 Within the Associated British Ports organisation Vessel Traffic Services Humber will disseminate relevant information received to all interested parties.

Appendix:

Station	Call Sign	Channel Nos.	Operational Times	Remarks
ASSOCIATED BRITISH PORTS				
Vessel Traffic Services Humber, Queen Elizabeth Dock, HULL	"VEE TEE ESS" Humber	16 12 10, 13, 14 and 52	Continuous watch maintained	Calling and safety. Navigation and safety information, etc., for the Rivers Humber, Ouse and Trent
Grimsby Docks	"Grimsby Docks Radio"	16 18 9	Continuous watch maintained	Calling and safety Docking instructions for Grimsby Docks. Short range berthing instructions.
Immingham Docks	"Immingham Docks Radio"	16 19 22 9	Continuous watch maintained	Calling and safety Berthing instructions for tankers. Docking instruction for Immingham Docks. Short range berthing instructions.
Saltend Jetties	"Saltend Radio"	16 19	Continuous watch maintained	Calling and safety. Berthing instructions for tankers.
King George Dock	"King George Dock Radio"	16 20 9 10	Continuous watch maintained	Calling and safety. Docking instructions for King George Dock. Short range berthing instructions.
Blacktoft Jetty	"Blacktoft Jetty Radio"	16 14	3.25 hours before HW Goole until 0.75 hour after HW Goole	Calling and safety. Port Operations and berthing instructions for Blacktoft.
Goole Docks	"Goole Docks Radio"	16 14	Continuous watch maintained	Calling and safety. Port Operations and docking instructions for Goole.
CRUDE OIL TERMINALS (HUMBER) LIMITED (Operated by Conoco, Ltd.)				
Tetney Oil Terminal	"Tetney Base"	16 19 48	Continuous watch maintained	Calling and safety. Berthing instructions for Mono-Mooring Buoy.
SPURN SHIPPING COMPANY LIMITED	"Oil Base"	9	Continuous watch maintained	Short range berthing instructions for Immingham Oil Terminal.
HULL CORPORATION				
River Hull Port Operational Service	"Drypool Radio"	16 14	2 hours before HW Hull until 1 hour after HW Hull, Mon. to Sat.	Calling and safety. Port Operations in River Hull.
		6	0900 – 1100 hrs. Sat. irrespective of tide.	Inter-ship use.

1.4 Within the river any message related to the movement and safety of vessels will be passed by Vessel Traffic Services Humber to the vessel concerned and Ship Owners and Agents may avail themselves of this service at any time.

2. *Time of Departure. ETD:*

2.1 In order to maintain a complete and up to the minute picture of traffic movement Dock Masters are requested to notify the Vessel Traffic Services Humber of the intended time and actual time of departure of vessels from their docks. This information should be passed by land line. Exchange of information thus engendered should ensure that all Officers of the Associated British Ports are fully informed of traffic movements. In the case of berths not under the jurisdiction of a Dock Master (e.g. wharves on the River Trent), it is anticipated that the present system of communication through Vessel Traffic Services Humber and the Pilot Office will be sufficient.

3. *Navigation of the river:*

3.1 Vessels entering the river should communicate with the Vessel Traffic Services Humber (VHF Channels 16 and 12). A two way exchange of information is essential to ensure the smooth flow of traffic on the Humber necessary for the safety of vessels using the ports. In addition the Vessel Traffic Services Humber can fully advise Owners, Agents and Dock Masters, etc., as to the movement on the river of the vessels in which they are interested. Vessels approaching their destinations desirous of communication with the station serving their destination should do so as per the instructions in Notice to Mariners No. 3 of 1974.

4. *Completion of passage or departure from river:*

4.1 Inward bound vessels should on completion of their passage report to Vessel Traffic Services Humber indicating the closing down of their station. VHF/RT should not be used whilst laid alongside in dock.

4.2 On departure from the river vessels are requested to report the disembarking of their Pilots and their intention of proceeding to sea.

4.3 All reported departures from normal traffic movement (e.g. engine failures, vessels weather bound at Spurn etc.), will be disseminated by the Vessel Traffic Services Humber to the appropriate authorities.

DOCUMENTS:

1 Maritime Declaration of Health.
1 Crew's Effects List.
2 Ship's Report by Master.
1 Home Office Form 1B6.
1 Stores List.
1 Certificate of Deck Cargo Tonnage.
1 Grain Certificate.
1 Light Certificate.
1 Port Dues Certificate.
1 Passenger List.
1 Landing card for each passenger.
Ship's Certificate of Registry.
Mercantile Marine Office Certificate – for British Ships only.
Load Line Certificate.
Safety Equipment Certificate.
Lloyd's Certificate.
Derat Certificate.
Ship's Register.
Light Bills.
Safety Radio Certificate.

In addition Manifests and Bills of Lading are usually sent to Agents direct from the loading port.

PILOTAGE: Compulsory. *Humber Pilotage District – Spurn Pilot Station:* Mariners are advised that the Pilotage Control Station (Tel: 0964-50392; Telex: 527393) is established on the Spurn Peninsula in a position Lat. 53° 34′ 29″ N.; Long. 00° 06′ 48″ E.

The station is manned at all times with a Pilot Master in attendance and vessels bound to the Humber requiring the services of Humber Pilots must give advance notice by signal through a G.P.O. Coast Station to the Spurn Pilot Station giving ETA at the seaward limits of the Humber Pilotage District, draft, and destination at least 12 hours in advance. Any adjustment to the time should be given at least 2 hours before arrival.

Vessels wishing to communicate direct with the Spurn Pilot Station by VHF radio telephony may if within VHF range (approximately 20 miles) call "Spurn Pilot" on VHF Channel 16 and after contact transfer to Channel 14 for passing messages.

(Note: Attempts to establish communication on VHF at extreme range can cause unnecessary interference).

Inward vessels bound for ports up river of Hull desiring to pick up a Goole or Trent Pilot in Hull Roads should give at least 2 hours advance notice of their ETA in Hull Roads to the Vessel Traffic Services Humber on VHF Channels 16 or 12 or through a G.P.O. Coast Station (Telegraphic address "Humberops") or by Telex No. 527656.

Compliance with this procedure will ensure, as far as possible, the shipping of Pilots without delay.

ANCHORAGES: The undermentioned anchorages have been designated for the use of sea-going vessels. Masters are asked to co-operate by using these anchorages and to avoid anchoring in the Fairway or elsewhere.

Spurn Anchorage for vessels awaiting Pilot, Bull Anchorage for vessels awaiting berth and vessels outward (awaiting orders, etc.), Hawk Anchorage for vessels sheltering and Haile Anchorage for vessels carrying explosives.

Spurn Anchorage. From position "A" 121° distant 3.65 miles from Spurn Lighthouse, in a 125° direction 1.60 miles; thence in a 020° direction 0.60 mile; thence in a 077° direction 1.00 mile; thence in a 347° direction 0.70 mile; and thence in a 257° direction 2.40 miles to position "A".

Haile Anchorage: (Explosives): From position A, 216° distant 2.18 miles from Spurn High Lighthouse in a 284° direction 0.77 mile; thence in a 139° direction 0.80 mile; and thence in a 027° direction 0.46 mile to position A.

Bull Anchorage: From Position "A", 193° distance 2.1 miles from Spurn High Lighthouse, in a 090° direction 1.96 miles thence in a 294° direction 1.76 miles, thence in a 274° direction 0.93 miles, thence in a 206° direction 1.0 miles, thence in a 116° direction 0.88 miles, thence in a 026° direction 0.55 miles to Position "A".

Hawk Anchorage:

(1) Lat. 53° 35′ 00″ N., Long. 00° 04′ 14″ E.
(2) Lat. 53° 36′ 16″ N., Long. 00° 01′ 33″ E.
(3) Lat. 53° 36′ 09″ N., Long. 00° 00′ 52″ W.
(4) Lat. 53° 34′ 51″ N., Long. 00° 04′ 02″ E.

RESTRICTIONS: Vessels may be accepted through the day and night, the only restrictions on the larger vessels being influence of tides together with the undermentioned physical limitations. The larger deep drafted vessels are usually docked from 3 hours before HW until HW, with similar restrictions on vessels sailing. Ships drawing up to 19 ft. can have access to the docks over the full 24 hours on Neap tides and can be docked/undocked over an 18 hour period on Spring tides.

Locks	*Entrance lock*		*Depth of water on sill*			
	Length	*Width*	*at MHWS*		*at MHWN*	
	ft.	*ft.*	*ft.*	*in.*	*ft.*	*in.*
King George Dock	750	85	42	0	37	1
Albert and William Wright Docks	320	80	28	1	23	2
			at MLWS			
Salt End Jetty Number 1	tidal		35	0		
Salt End Jetty Number 3	tidal		35	0		

MAX. SIZE: The maximum permissible dimensions for a general cargo/bulk carrier vessel (excluding tankers) requiring a berth in the enclosed docks are as follows: King George & Queen Elizabeth Docks, length 196 m., beam 25.5 m., draft 31 ft. at Neaps, up to 36 ft. at Springs.

HEALTH: Pratique is normally automatic. In case of suspected illness, death on board or the presence of captive birds or animals on board, Master must radio the Hull and Goole Port Health Authority through the Post Office or Coastal Radio Stations not more than 12 hours or less than 4 hours before arrival using the following telegraphic address "Portealth Hull" or through the Vessel Traffic Services Humber using call sign "Vee Tee Ess" Humber on VHF Radio Channel 12. The usual flag or light signals should be shown except where only animals are present and Free Pratique should be obtained from the Hull and Goole Port Health Authority.

RADIO: Portishead Radio – call sign GKL but when within 200 miles of the Humber can go through Humber Radio – call sign GKZ.

VHF: See "Vessel Traffic Services Humber".

TUGS: Head boat normally joins vessel in vicinity of Salt End, about 2 miles from dock, and the other tug or tugs connect with vessel when approaching the dock. Where vessel supplies own ropes for towage these to be good stout hawsers. Wire ropes will not be accepted. There is a charge for use of tug's hawsers.

BERTHING:

Dock or Jetty	*Length of Operational Quays (ft.)*	*Normal Depth (ft.)*
King George	11,229	37 ft. 07 in.
Queen Elizabeth	5,400	37 ft. 07 in.
Albert and William Wright	11,329	as HW
Salt End Jetty No. 1	258	35 ft.
Salt End Jetty No. 2	396	35 ft.
Riverside Quay	1,065	18 ft. 06 in.

BULK HANDLING FACILITIES: Container terminal at Queen Elizabeth Dock equipped with 2 container gantry cranes, one 40 tons and one 35 tons capacity, 5 rubber-tyred gantries and 3 straddle carriers. A third container crane to be installed and operational in 1986.

Ro/Ro container services operated from King George and Queen Elizabeth Docks. Cargill UK operate a grain storage and export facility for vessels up to 34,000 d.w.t. Loading rate 1,000 tonnes/h. Storage capacity 60,000 tonnes. Edible oil storage available.

CRANES: 1 sheerlegs of 150 tons. 60 cranes with capacity up to 35 tonnes.

STEVEDORES: Enable Agent order gangs important receive accurate ETA. See "Holidays".

Working hours: 0800 – 1200 hrs. Monday to Friday. Overtime possible 1630 – 1830 hrs. Monday – Friday; 0800 – 1200 hrs. on Saturdays and 0800 – 1830 on Sundays.

MEDICAL: Necessary for Agents to be advised of any urgent cases of illness in order that they can arrange for a doctor or if necessary an ambulance to be available immediately on berthing. Hospital facilities available.

If vessel required to remain in river awaiting berth, arrangements can be made for any serious case to be taken from vessel by lifeboat and conveyed to Grimsby for immediate treatment.

TANKERS: The Oil terminal at Salt End handles refined or semi-refined chemical and petroleum products which are transferred from the vessel along the oil jetties through a series of chemical and service pipes which range from 4 in. for chemicals, 8 in. and 12 in. for spirit and 16 in. for fuel oils and molasses. Facilities available for the discharge of slop residue.

There are 2 tanker berths at Salt End and maximum dimensions of vessels are length 214 m., draft 10.4 m.

Berthing Operations: Vessels normally berth on a rising tide from 2.5 hours before HW, swinging off berth and mooring port side to jetty. Late arrivals may be taken on up to 1 hour after HW, berthing starboard side to jetty but this is subject to tidal and weather conditions prevailing at time.

Moorings are to dolphins and buoys and normally consist of a minimum 2 head lines (to buoys), 2 stern lines (to dolphins), 2 breast lines forward (to buoys), 2 breast lines aft (to dolphins), 2 springs forward (to jetty), 2 springs aft (to jetty).

Cargo Handling and Requirements: Ship's derricks are needed to assist in hose connection. Shore hoses have 6 in., 8 in. and 10 in. 150 ASA flanges.

Discharge rates are governed by a maximum back pressure of 7 kg. (100 p.s.i.).

Facilities and Services:

Fresh water available.
Ship's gangway required.
Public telephone situated at jetty head.
No deballast or slop facilities are available.

Unberthing: Normally up to one hour either side of HW or LW slack.

DENSITY: 1013/1015.

FRESH WATER: King George and Queen Elizabeth Docks. Available at any time. Ex Quay. Rate of delivery – 15 t.p.h. Also available at Salt End if berth vacant at 50 t.p.h.

All other Docks. Available at any time. Ex mains. Rate of delivery – 15 t.p.h.

If water required urgently after 1700 hrs. weekdays or on Saturdays or Sundays Agents must be notified in good time to enable them order men out.

FUEL: Fuel oil available, viscosity up to 3,500 secs. Redwood. Gas oil and diesel also available. At least 24 hours notice required.

FIRE PRECAUTIONS: Masters receive an emergency services dock plan with an explanatory leaflet.

GANGWAY/DECK WATCHMEN: Watchmen available if required by Master.

OPENING/CLOSING HATCHES: Can be carried out by stevedores when ordered. Ship charged with actual cost, but ship's crew may do so if required.

CUSTOMS ALLOWANCES: Foreign trade – max. allowance 0.5 lb. cigarettes or cigars or tobacco. Home Trade – (Elbe/Brest limits) half the above. Wine and/or Spirits. Foreign Trade – 1 pint – opened. Home Trade – (Elbe/Brest limits) half the above allowance.

CARGO GEAR: When working with ship's gear a Register of Machinery, Chains and Wire Ropes, etc., with all Test Certificates and record of inspections to be produced to the stevedores before work commences.

AIRPORT: Humberside Airport. Air UK operate flights to Aberdeen, Amsterdam, Bergen, Edinburgh, London (Heathrow), Newcastle and Norwich.

REPATRIATION: Crew changes can be effected and repatriation arranged by sea or air.

TIME: BST (British Standard Time) GMT plus 1 hour, GMT during winter months.

HOLIDAYS: New Year's Day; Good Friday (movable Holiday); Easter Monday (movable Holiday); May Day (1st Monday after May 1st.); Spring Holiday (last Monday in May); Bank Holiday (last Monday in August); Christmas Day (25th December); Boxing Day (26th December).

POLICE/AMBULANCE/FIRE: Emergency Calls – Police – Fire – Ambulance – Coastguard – Dial 999. Ask the operator for the service required.
TELEPHONES: Can be placed on board at the majority of berths in King George and Queen Elizabeth Docks.
SERVICES: Tank cleaning, facilities for discharge of tank washings slop (residue), compass adjusting, etc., available.
SHORE LEAVE: Crew members allowed ashore.
AUTHORITY: Associated British Ports, P.O.Box No. 1, Kingston House Tower, Bond Street, Hull, North Humberside, HU1 3ER. *Tel:* (0482) 27171. *Telex:* 592251. *FAX:* (0482) 26283. *Contact:* ~~S. Bradley~~, Port Manager.

MR. FELL

KEITH UNDERWOOD, PUBLICITY.

IMMINGHAM: 53.37 N. 00.12 W. (See Plan)

VESSEL TRAFFIC SERVICES HUMBER: See "Hull".
NOTICES: See "Hull".
DOCUMENTS:

2 Copies Immigration, Crew and Passenger List, H.O. Form I.S.6 Supplied by Agents.
Form C.13 General Declaration (In duplicate).
Form C.14 Ship's Stores (In triplicate).
Form C.142 Crew Declaration (In duplicate).
Form C.143 Small Parcels List. (1 Copy) if appropriate.
Form D.C.1 Self Declaration Deck Cargo (In duplicate).
1 Copy Cargo Manifest.
1 Copy Dangerous Cargo List.

PILOTAGE: Compulsory.
Humber Pilotage District – Spurn Pilot Station: A Pilotage Control Station (tel. No. 096–46–392; telex No. 527393) is established on the Spurn Peninsula in a position Lat. 53° 34′ 29″ N., Long. 00° 06′ 48″ E.

The station is manned at all times with a Pilot Master in attendance and vessels bound to the Humber requiring the services of Humber Pilots must give advance notice by signal through a Coast Station to the Spurn Pilot Station giving ETA at the seaward limits of the Humber Pilotage District, draft, and destination at least 12 hours in advance. Any adjustment to the time should be given at least 2 hours before arrival.

Vessels wishing to communicate direct with the Spurn Pilot Station by VHF radio telephony may if within VHF range (approximately 20 miles) call "Spurn Pilot" on VHF Channel 16 and after contact transfer to Channel 14 for passing messages.

(Note: Attempts to establish communication on VHF at extreme range can cause unnecessary interference).

Inward vessels bound for ports up river of Hull desiring to pick up a Goole or Trent Pilot in Hull Roads should give at least two hours advance notice of their ETA in Hull Roads to the Vessel Traffic Services Humber on VHF Channels 16 or 12 or through a Coast Station (telegraphic address "Humberops") or by telex No. 527656.

Compliance with this procedure will ensure, as far as possible, the shipping of Pilots without delay.
ANCHORAGES: "Hawk", "Bull" and "Haile Explosives Anchorage".

The Pilot station will advise where to proceed to anchor and also provide Pilot. See "Hull".
RESTRICTIONS: No restrictions, vessels may enter the harbour day or night. Max. draft for entering harbour 34 ft. HW. Compulsory Pilots boarding Spurn Light-vessel, decide whether vessel shall proceed up river or anchor and await suitable state of tide.
MAX. SIZE: Also see "Tetney Terminal" and Immingham Oil Terminal under "Tankers".

Immingham Dock: Max. length 198 m., breadth 26.2 m., draft 10.4 m. on density 1010.
HEALTH: Master to report any "Reportable" illness as detailed in form "Port 38" to "Porthealth Immingham".

See "Health – All Ports" before first U.K. port.
RADIO: Humber Radio – 2182 kHz or VHF Channel 16. Dock Master VHF Channel 16. Tankers use Channel 19.
VHF: See "Hull" – Vessel Traffic Services Humber.
TUGS: Will join vessel off dock entrance, optional use of tow lines. If using tug's tow lines, charge for this service, depending on vessel's length.
BERTHING: Unless Master or Agent indicates preference, the Port Authorities will decide which side alongside. River Pilot deciding in conjunction with Dock Master most suitable berthing time for harbour and river installations.
Ro/Ro Terminals: The enclosed dock system incorporates 2 Ro/Ro freight terminals: 1×4 berth facility is operated by Exxtor while a second single berth terminal is available on a common user basis.
BULK HANDLING FACILITIES: *British Steel Corporation Ore Terminal:* Adjoins N.C.B. Terminal. Max. length 1,095 ft., max. draft subject to approach channel, 43 ft. – 46 ft. Two appliances for discharging, rate 2,000 tonnes per hour each.
National Coal Board Terminal: Adjoins B.S.C. Ore Terminal, length – no restriction up to 600 ft. thereafter dependent on vessel using ore berth. Draft average 40 ft.

One appliance for coal loading, rate 4,000 tonnes per hour.
Grain: 2×500 t.p.h. shiploaders available.
CRANES: 19 electric cranes 3 – 20 tonnes capacity and 1 electric derrick 32 tonnes capacity.
STEVEDORES: Firm ETA to Agent required if possible before noon on previous day before arrival.
Working Hours: Monday – Thursday, 0800 – 1700 hrs.; Friday, 0800 – 1700 hrs.; overtime by arrangement.
MEDICAL: No advance notice necessary for medical treatment as all hospital facilities available.
TANKERS: Also see "Tetney Terminal".
Immingham Oil Terminal: Up to 250,000 d.w.t. with part cargo conducive with Humber dredged channel. Length up to 1,100 ft., breadth, no restriction, draft depends on height of water in channel, average 43 ft. Three 12 in. lines for crude oil. Two lines 12 in. and 10 in. all other products. One 8 in. line for bunkers.
Mooring Operations: Vessels normally berth at HW port side to jetty. Ideally, vessels of maximum size should stop off jetty and approach beam on at rates of no more than 20 ft. per minute. Tugs are normally placed in the following positions: 2 forward, 2 aft and 2 pushing; but, this may vary according to Pilot/Master preference, weather conditions, etc.

There is no fixed doppler or berth approach rate indicators installed on jetty.

Normal mooring pattern for maximum sized vessel: 5 headlines, 5 sternlines, 3 breastlines forward, 3 breastlines aft, 3 springs forward, 3 springs aft, plus one breastline forward and one breastline aft from ashore if required.

Berthing is normally postponed if winds reach Force 7 from any direction from S.E. through South to N.W. and less if from N.W. through North to S.E.
Unberthing: Due to the strong tidal currents which develop in the vicinity, vessels normally sail on or around HW or LW slack.

Maximum size vessels, having made fast their tugs, come off the berth bodily, and swing in a position just to the S.E. of the terminal.

Eastern Jetty: Max. Length approx. 650 ft. breadth, no restriction, draft depends on LW, range 27 ft. to 36 ft. Lines 10 in., 8 in., 6 in. depends on Receivers. Bunker line available.
Western Jetty: Max. Length approx. 800 ft. breadth, no restriction, draft depends on LW, range 27 ft. to 36 ft.
Berthing Operations: (Eastern and Western Jetties): Normal berthing time for vessels is not more than 1 hour either side of HW or LW slack.

Vessels berth either port or starboard side to jetty depending on weather and tidal conditions prevailing at time.

Jetties are of wooden piling and fender construction and consequently care should be taken to ensure vessel does not land too heavily when berthing.

Draft restrictions can be calculated by taking the BTDB predictions on the outer sill at Immingham for LW and adding 0.5 m. (1.6 ft.).

Normal mooring pattern is 3 headlines, 3 sternlines, 2 breastlines forward, 2 breastlines aft, 2 springs forward and 2 springs aft.
Unberthing; Normal sailing time, in view of strong tidal conditions which develop, is at HW or LW slack or up to one hour either side of these times.

Killingholme North: Length 580 ft. max., beam, no restriction, draft 30 ft. 6 in. One 8 in. line. One 4 in. bunker line.
Berthing Operations: Normal berthing time for vessels is at HW or LW slack and not more than 1 hour either side of these times. Vessels berth either port or starboard side to jetty depending on weather or tidal conditions prevailing. The mooring pattern is similar to that used at Immingham East and West Jetties (see above).
Unberthing: Normally up to one hour either side of HW or LW slack.

Killingholme South: Length 800 ft. max., beam, no restriction, draft 31 ft. One 8 in. line. Bunker line available. No slop tanks available.
Berthing Operation: Normal berthing time for vessels is at HW or up to 1 hour before and after. Vessels berth either side to jetty depending on weather and tidal conditions prevailing at time.

Apart from draft restrictions, vessels up to 244 m. (800 ft.) equivalent to a partially laden 65,000 d.w.t. vessel can be handled. Similar mooring pattern as in previous two terminals.
Unberthing: Normally up to one hour either side of HW or LW slack.

LPG FACILITIES: Jetty located at South Killingholme.
Max. Vessel Size: LOA – 280 m. (Min. 65 m.). Beam – No restriction. Capacity – approx. 78,000 cu.m. (dependent on draft).
Max. Draft: No restriction at HW. Berth dredged to 12 m. LAT with guaranteed depth of 10 m. below LAT alongside at all times. Mud bottom on berth. Capable of future dredging to 14.8 m below LAT.
Tidal Range: Springs – 6.4 m. (21 ft.) (approx.) Neaps – 3.2 m. (10.5 ft.) (approx.)
Max. Tidal Ebb Speed: Springs – 4.5 – 5 knots. Neaps – 2.54 – 3 knots.
Approach to Berth: Sunk Dredged Channel and Main Channel. Two Channels are marked by light buoys and light floats. Pilotage compulsory.
Jetty Berth: 6 facing fenders. 6 mooring dolphins (3 Fore/3 Aft). Minimum flat side vessel – 28 m. with manifolds midships.
Presentation Arm: 1 × 10 in. Fixed WR marine loading arm. Provision for 3 additional loading arms.
Jetty Pipe-lines: 1×14 in. and 1×4 in. Product Lines for Propane/Butane loading and discharging. Capacity is available on pipe track for up to 7 future lines, if required.
Cargo Handling Rates: Loading – 2 Pumps each 300 cu.m. per hour with facility for 3rd pump to be installed later, if required. Discharging – Butane up to 1,800 cu.m. per hour. Propane – up to 1,000 cu.m. per hour. (Discharge speeds dependent upon ability of Jetty heaters to warm product from vessel).
Fresh Water: Available from berth.
Bunkers: Available only by barge.
Stores: Limited access to Jetty. Rigid vehicles only but no parking facility at Jetty Head. (Always refer to Agent).
DENSITY: In harbour 1010.
FRESH WATER: Available all berths by hose. Rate of delivery 20 t.p.h.
FUEL: 24 hours notice required. All grades available.
FIRE PRECAUTIONS: Copy of these regulations handed to the Master on arrival.
GANGWAY/DECK WATCHMEN: Watchmen not usually employed, but left to the discretion of the Master.
OPENING/CLOSING HATCHES: See "Grimsby".

CERTIFICATES:
Ship's Register.
Load Line.
Safety Radio.
Safety Equipment.
Safety Construction and any British Light Dues Receipts.
Derat Certificate.
Oil Pollution Certificate (Tankers).

CUSTOMS ALLOWANCES: 8 days – 200 cigarettes per person approx. Wine/spirits, 4 days – 0.25 pt. per day; this depends on the Customs Officer's discretion.

CARGO GEAR: This must comply with the Department of Employment and Productivity regulations. Normally discharge carried out by shore cranes, although overside berths available.

IDENTIFICATION CARDS: Seaman's Book or Passport sufficient for crew members going ashore.

CONSULS:

Finland	Immingham 72387	Netherlands	Grimsby 43177
Denmark	Grimsby 57521	Norway	Hull 224151
Greece	Hull 224151	Sweden	Immingham 72387

REPAIRS: All major repairs possible.

DRY DOCKS: 1. Length 225.6 m., width at entrance 17.1 m.
2. Length 182.9 m., width at entrance 27.4 m.

SURVEYORS: Classification/P&I and cargo surveyors available.

REPATRIATION: All facilities exist for dealing with crews and passengers.

AIRPORTS: Leeds Bradford Airport and Humberside Airport for Amsterdam (3 flights from each daily). Aberdeen and London for International destinations.

TIME: GMT. Summertime, GMT plus 1 hour.

HOLIDAYS: See "Grimsby".

POLICE/AMBULANCE/FIRE: Port Security – 72067, 72068. County Police – Immingham 76444. Ambulance; County – Cleethorpes 692912. Fire; 999 ask for Fire.

EMERGENCY CO-ORDINATION CENTRE: Humber Estuary, Humber Ports Operations and Information Service. Tel: Hull 35599 – Hull Radio on VHF Channels 16 and 12.

TELEPHONES: Public telephones available.

STORING: See "Prelims".

1, 2, 3. It is normal practice for such stores to be delivered to ships side at in-dock berths by road vehicles. At the Eastern and Western River Jetties at Immingham, however, vehicles are not permitted and the approximate distances fom the root of the Jetties to ships side is from 400 m. to 500 m.

4. Fork lift trucks could be used at in-dock berths, if necessary.

If proceeding to NCB/BSC or Immingham Oil Terminals – check with Terminal Authorities.

BANKS: All major U.K. Banks have branches in the area.

AUTHORITY: Associated British Ports, Port Office, Cleethorpe Road, Grimsby, South Humberside DN31 3LL. *Tel:* (0472) 59181. *Telex:* 52250. *FAX:* (0472) 48275. Contact: D. Dunn, Port Manager.

INVERNESS: 57.29 N. 04.14 W. (See Plan)

DOCUMENTS:
2 Crew Lists.
2 Passenger Lists.
Customs and Excise and Health Documents.
Manifest.
Bills of Lading, etc.

PILOTAGE: Compulsory for all vessels over 50 g.r.t. Apply direct to Agent or to Pilot, telephone Inverness 232845. ETA 24 hours. Pilot equipped with VHF. Pilot cutter blue launch with letter "P". Pilot station Munlochy Buoy. Location of anchorage while awaiting Pilot – Munlochy Buoy.

ANCHORAGES: Munlochy Buoy in 5 – 8 fathoms. Beauly Basin in 15 fathoms.

RESTRICTIONS: Vessels may enter and leave from 2 hours before HW until 2 hours after HW.

MAX. SIZE: Ship max. 360 ft. length, 20 ft. draft, high water springs. 18ft. draft, high water neaps

HEALTH: See "Health – All Ports" before first U.K. port.

RADIO: Wick Radio.

VHF: Harbour Office on VHF Channels 16, 14 and 12 during office hours.

TUGS: 1 privately owned tug, 6.5 tons bollard pull.

BERTHING: *Longman Quay:* Length 180 m. Depth 5.0 m.
Thornbush Quay: Length 156 m. Depth 3.0 m.
New Citadel Quay, Old Citadel Quay and *Central Quay:* Each about 100 m. in length, and *Shore Street Quay,* about 150 m. in length, form a continuous length of quayside on the East side of the harbour at its upper end; there are depths of 3 m. alongside.

BRIDGES: Kessock Road Bridge, max. clearance 29 m. at MHWST.

STEVEDORES: Arrange through Agent. 24 hours notice required.

MEDICAL: Doctor available.

DENSITY: 1002.

FRESH WATER: Available on demand, 5 t.p.h., ex-hose on quay.

FUEL: Marine diesel and petroleum on request.

GANGWAY/DECK WATCHMEN: Supplied by ship.

OPENING/CLOSING HATCHES: Done by crew.

CUSTOMS ALLOWANCES: Tobacco/Wines/Spirits. Usual amount allowed by Customs and Excise.

IDENTIFICATION CARDS: None.

CONSULS: Sweden (Mr. John Fraser), Tel: Inverness 238366.

REPAIRS: Thornbush Slipway Tel: 233813.

REPATRIATION: Facilities available.

AIRPORT: Dalcross, 7 miles from Inverness.

HOLIDAYS: 1st and 2nd January; Easter Monday; July Bank holiday; First Monday in October; and Christmas Day. All official holidays, cargo work can be arranged on these days.

POLICE/AMBULANCE/FIRE: Police Inverness 239191; Fire Brigade Inverness 222722; Ambulance Inverness 231511.

TELEPHONES: On quay.

SHORE LEAVE: Unrestricted.

AUTHORITY: Inverness Harbour Trust, Harbour Office, Longman Drive, Inverness IV1 1SU, Scotland. *Tel:* (0463) 233291. *Contact:* Captain D. S. Gilmour, Harbour Master.

AGENT: Denholm Ship Agency Ltd., Clydesdale Bank Building, P.O.Box 8, 64 High Street, Invergordon, Ross-shire. Tel: (0349) 853347. After Hours: (086 284) 2495, (0349) 853117. Telex: 75546.

IPSWICH: 52.03 N. 01.10 E. (See Plan)

DOCUMENTS: Masters can conclude all documentation in port. Ship's Agent will give the necessary advice.

PILOTAGE: See "Felixstowe".

A pilot station has been established in the Orwell Navigation Centre at Ipswich Dock Head, Tel: Ipswich 211347 (after hours Tel: 56011) who will receive orders, and requests for information, regarding the pilotage of vessels in the Ipswich pilotage district – Pilots should be ordered at least 2 hours prior to departure.

ANCHORAGES: No anchorages within port. All vessels will proceed direct to berth, otherwise anchorage provided in Harwich Harbour.

RESTRICTIONS: Up to 80 m. in length the lowest permissible U.K.C. is 0.75 m. Over 80 m. and up to 110 m. in length the lowest permissible U.K.C. is 1.0 m. Over 110 m. in length by special arrangement. (U.K.C.=Under Keel Clearance).

Night Navigation: Vessel of up to 110 m. in length can navigate at any time provided the U.K.C. is observed.

Certain vessels over 110 m. in length may be navigated at any time at the discretion of the Pilot provided that a request is received by the Ipswich Pilot Office, 48 hours in advance of the vessel's arrival/departure, so that the vessel's capabilities in relation to the river can be assessed by the Trinity House Pilots and the Ipswich Port Authority Harbour Master.

Petroleum Tankers – Daylight: There will be no special restrictions or requirements other than conforming with the U.K.C.

Petroleum Tankers – Night: Tankers up to 80 m. in length can navigate at any time provided that U.K.C. requirement is observed. Tankers over 80 m. in length can navigate provided that:

(a) The U.K.C. requirement is observed.
(b) There will be no opposing traffic on the river above No. 5 Buoy.
(c) Visibility is at least 2.5 miles.

Chemical Tankers having on board Hazardous Cargo (i.e. Commodities specified in IMO Hazardous Codes): Will navigate in the river during daylight only.

N.B. Tankers in this category having discharged their cargo and having no hazardous cargo remaining on board will not be constrained by this provision.

Also see "Notice" and "Bridges".

MAX. SIZE: 460 ft. (140.2 m.) overall length and 25 ft. 6 in. (7.7 m.) draft.

HEALTH: See "Health – All Ports" before first U.K. port.

RADIO: Masters to contact ship's Agent through North Foreland, Humber, Niton or Portishead depending on position of vessel. All these radio stations hold cable addresses and staff telephone numbers of Agents.

VHF: A 24 hour VHF radio facility has been established. Vessels arriving should contact "Ipswich Port Radio" on VHF Channel 16 on entering the River Orwell and report and/or maintain a listening watch as instructed. Channels 14 and 12 will be used for the passing of messages which should be restricted to the safety of navigation or persons.

TUGS: Vessels of 110 m. in length and up to 130 m. will use 1 tug. Vessels of 130 m. in length and over will use 2 tugs. Vessels of less than 110 m. in length but having a deadweight capacity of 5,000 tons or more will use 1 tug.

Special consideration may be given to vessels fitted with Bow Thrust facilities.

BERTHING: Vessels bound for berths in the Wet Dock should arrive off the lock 2 hours before HW.

Cliff Quay: Length: 3,250 ft (990 m.).

Depth of water alongside: 28 ft. (8.5 m.) below LWOST. Subject to silting.

Approach Channel: 19 ft. (5.8 m.) below LWOST.

Cranes: 12 portal jib cranes from 3.00 to 35 tonnes lifting capacity. A Karrilift container gantry is also available.

Largest vessel which can be accommodated: 460 ft. (140.2 m.) overall in length, 25 ft. 6 in. (7.7 m.) draft inwards, 24 ft. 6 in. (7.4 m.) outwards.

The Quay handles containers and heavy lifts up to 35 tonnes and is particularly well equipped to handle cargoes direct to and from both road and rail transport. The South end has been developed as a modern terminal for handling all types of general cargo, including containers, flats and palletised units. Spacious modern transit sheds, together with a container park, are sited conveniently behind this part of the Quay. Vessels up to 25 ft. 6 in. (7.7 m.) draft can be handled at the terminal.

Grain Terminal: Located at Cliff Quay. Capable of handling vessels up to 10,000 tonnes capacity at a loading rate of 550 t.p.h. (malt) and 700 t.p.h. (other grain products). Grain silo capacity 11,000 tonnes.

Container Terminal: The terminal has a 40 tonne ship to shore luffing crane and 2 shoreside gantries with 1-9-1 configuration.

West Bank Terminal: This Terminal provides 3 berths with a total quay frontage of 310 m. and is dredged to 20 ft. (6.1 m.). A container berth is backed up by 7 hectares of hardstanding, including a transit shed of 2,750 sq.m. floor area. The berth is served by 3 portal cranes of 37.5 tonnes, 35 tonnes and 10 tonnes capacity and is adjacent to a Freightliner Terminal offering daily services and incorporated into the Railfreight Speedlink network.

A Ro-Ro berth is backed up by 6 hectares of hardstanding. The bridge ramp is designed to carry a load of 180 tonnes with maximum axle loads of 45 tonnes. The ramp has a carriageway of 36.9 m. long×7 m. wide and can handle traffic at all states of the tide.

The Dock: The dock is situated within the town of Ipswich. It is some 26.25 acres (10.63 hectares) in extent and is approached by an entrance lock 300 ft. (91.4 m.) long by 50 ft. (15.2 m.) wide and ships up to 47 ft. 6 in. (14.4 m.) beam can be brought in.

The following are the depths on the outer sill: At HWOST, 23 ft. 6 in. (7.16 m.). At LWOST, 10 ft. (3.04 m.). At HWONT, 20 ft. 6 in. (6.25 m.). At LWONT, 12 ft. (3.65 m.).

Owing to the shape of the lock-pit modern vessels require the following clearances:

Beam	*Clearance*
40 ft. (12.19 m.)	3 ft. (0.91 m.)
42 ft. (12.80 m.)	4 ft. (1.22 m.)
45 ft. (13.71 m.)	5 ft. (1.52 m.)
48 ft. (14.63 m.)	5 ft. 6 in. (1.67 m.)

Inside, in addition to some 2,700 ft. (823 m.) of private quays owned by merchants having warehouses or mills adjoining, where small vessels can berth, there are the following quays owned by the Authority:

(i) *South West Quay:* This quay is 800 ft. (244 m.) in length with a depth of 19 ft. (5.79 m.) of water alongside at mean dock level. The quay is served by 3 modern 7.5 tonne portal electric travelling cranes and mobiles as required.

(ii) *Timber, Public Warehouse,* and *End Quays* total 940 ft. (286 m.) in length and have a depth of water alongside varying from 12 ft. (3.65 m.) to 20 ft. (6.09 m.). Public Warehouse Quay has transit shed and warehouse space behind the quay and is served by mobile cranes capable of lifting up to 5 tonnes.

(iii) *Tovell's Wharf* is a 600 ft. (183 m.) reinforced concrete quay with 22 ft. (6.70 m.) of water alongside. It is served by 2×4 tonne and 1×5 tonne electric travelling luffing cranes.

(iv) *Orwell Quay* is 775 ft. (236 m.) in length, with 18 ft. (5.48 m.) of water alongside and includes a combined container and Ro/Ro berth with a derrick capable of lifting 32.5 tonnes at 112 ft. (34.14 m.). One transit shed, with a floor area of 10,100 sq.m. is situated immediately behind the quay apron together with further extensive covered and open areas.

BRIDGES: The Western half of the River Orwell Bridge has a clearance of 38.8 m. above MHWOST.

Masters of larger vessels are advised to check their air drafts and if in any doubt contact their Agent or the Ipswich Port Authority before proceeding up the River Orwell.

STEVEDORES: Ship's Master normally advises his Agent of his ETA, disposal of cargo on board, and all relevant details. The Agent passes this information to Stevedores.

MEDICAL: All medical facilities available in port. Vessels requiring medical assistance on arrival should advise all details by radio telephone or on their ETA cables.

TANKERS: It is desirable that when Master of a tanker gives an ETA he also indicates the size of pipe-line, size of connection and discharging point in order that necessary arrangements can be made at discharging point of receiving oil terminal. There are no slop facilities at port of Ipswich, however arrangements can be made, through the Port Authority (Tel: 56011) for firms using road tank vehicles to remove sludge or oily-waste. All cleaning and gas-free operations must be carried out outside precincts of the Harwich Harbour Conservancy Board. Only one tanker berth at Ipswich but there are 6 intake points on quay and it is usual for 4 coastal tankers to be accommodated, depending on the overall length and berth availablity. A maximum draft on the berth of 23 ft. (7 m.) subject to silting.

Also see "Notice".

DENSITY: Approx. 1020 oz. depending on the amount of fresh water in river due to heavy rain.

FRESH WATER: Available at all quays. Delivery by hose through meter at 10 t.p.h.

FUEL:

Gas oil 35 secs. Redwood.
Light fuel oil 200 secs. Redwood.
Medium fuel oil heated 950 secs. Redwood.
Heavy fuel oil heated 3,500 secs. Redwood.
At least 24 hours' notice required.

GANGWAY/DECK WATCHMEN: No watchmen required by Port Authority, but sufficient men available at all times to move vessels, if necessary.

OPENING/CLOSING HATCHES: Hatches opened by ship's crew.

CERTIFICATES: Following certificates are required by Agents in order to arrange Customs clearance:

Ship's Register.
Radio Certificate.
Load Line Certificate.
Safety Equipment Certificate.
Derat Certificate.
British Tonnage Certificate, if required.

CUSTOMS ALLOWANCES: Tobacco, 200 cigarettes, or equivalent in tobacco, per man. Wine and/or Spirits, 1 bottle per man.

CARGO GEAR: Cargo working gear is supplied by stevedores. Normally, quayside cranes are used for discharging and loading. In event of cargo gear being used in port, Ship's Gear Certificate, duly certifying that all gear has been examined and is in every way workable and suitable for discharge and/or loading of cargo, is to be produced.

REPAIRS: Only small repairs on board.

IDENTIFICATION CARDS: Not required as long as each crew member has in his possession a seaman's book and/or passport.

CONSULS: Vice-Consul for Sweden and Vice-Consul for Norway. Tel: 59281.

SURVEYORS: Lloyd's Register, Tel: 52518.

REPATRIATION: Facilities exist at port for effecting crew changing and arranging repatriation.

AIRPORT: Ipswich Airport is 2 miles from the port. Charter flights available for ship's crew. Tel: 70111.

HOLIDAYS: Normal holidays for English ports.

TIME: GMT in Winter months. Summer time, GMT plus 1 hour.

POLICE/AMBULANCE/FIRE: In emergency dial 999. Otherwise Police – Ipswich 55811; Ambulance – Ipswich 56407; Fire – Ipswich 75345.

SHORE LEAVE: Allowed.

DEVELOPMENTS: See "Berthing".

Main channel at Harwich presently being dredged to 11.0 m.

NOTICE: *Guide lines for vessels navigating in the River Orwell and the Port of Ipswich:*

1. In the following guide lines all lengths quoted are to be taken as overall lengths.

2. Daylight refers to the time between one hour before sunrise and one hour after sunset from April to September inclusive and to the time between one half of one hour before sunrise and one half of one hour after sunset for the remainder of the year.

3. Restrictions on night navigation shall apply to that part of the river which lies upstream of an imaginary line joining the end of Pin Mill Hard to Survey Beacon No. 19A.

4. Under Keel Clearance (U.K.C.): Up to 80 m. in length the lowest permissible U.K.C. is 0.75 m. Over 80 m. and up to 110 m. in length the lowest permissible U.K.C. is 1.0 m. Over 110 m. in length by special arrangement.

5. Night Navigation: Vessels of up to 110 m. in length can navigate at any time provided the U.K.C. is observed

Certain vessels over 110 m. in length may be navigated at any time at the discretion of the Pilot provided that a request is received by the Ipswich Pilot Office, 48 hours in advance of the vessel's arrival/departure, so that the vessel's capabilities in relation to the River can be assessed by Trinity House Pilots and the Ipswich Port Authority Harbour Master.

6. Towage: Vessels of 110 m. in length and up to 130 m. will use 1 tug. Vessels of 130 m. in length and above will use 2 tugs. Vessels of less than 110 m. in length but having a deadweight capacity of 5,000 tons or more will use 1 tug.

Special consideration may be given to vessels fitted with bow thrust facilities.

7. Petroleum Tanker Movements: Daylight: There will be no special restrictions or requirements other than conforming with the U.K.C.

Night: Tankers up to 80 m. in length can navigate at any time provided that U.K.C. requirement is observed. Tankers over 80 m. in length can navigate provided that:

(a) The U.K.C. requirement is observed.
(b) There will be no opposing traffic on the River above No. 5 buoy.
(c) Visibility is at least 2.5 miles.

8. Chemical tankers having on board hazardous cargo (i.e. commodities specified in the I.M.O. Hazardous Codes): These vessels may navigate at any time (subject to tidal constraint if appropriate) provided that during the hours of darkness:

(a) There is no opposing traffic in the River.
(b) Weather and visibility conditions are of a standard acceptable to the individual Pilot concerned.

N.B.: The Pilot charged with the conduct of the vessel should satisfy himself by contacting the Orwell Navigation Service that condition (a) above obtains.

9. Sound Signals: In addition to the sound signals required to be made by the Regulations for the Prevention of Collisions at Sea, the following signals will be used by vessels navigating within the Ipswich Pilotage District:

4 short blasts followed by 1 long blast = vessel is swinging to starboard.

4 short blasts followed by 2 long blasts = vessel is swinging to port.

1 long blast followed by 2 short blasts = signal given by vessel intending to overtake another on that vessels port side.

1 long blast given by the overtaken vessel to indicate that she is ready to be overtaken.

10. Nothing in these rules will remove from any Pilot the right to advise Masters against navigating in the river if in the professional opinion of the Pilot a proposed course of action is considered to be imprudent.

11. Notwithstanding anything contained in the generality of these or other arrangements regarding the navigation of the River Orwell, vessels of over 140 m. in length may, under certain special circumstances and conditions, navigate in the River subject to prior consultation with the Trinity House Pilots and the Ipswich Port Authority Harbour Master.

12. Nothing in these guide lines shall preclude the Pilots and the Ipswich Port Authority Harbour Master from giving consideration to the exemption of a specific vessel from any of the conditions and requirements hereinbefore mentioned.

Issued by: Ipswich Port Authority.

AUTHORITY: Ipswich Port Authority, Old Custom House, Key Street, Ipswich IP4 1BY. *Tel:* (0473) 56011. *Telex:* 988787. *Contact:* A. J. Hanson, Commercial Manager. Captain G. C. Jones, Harbour Master.

KING'S LYNN: 52.45 N. 00.24 E. (See Plan)

DOCUMENTS:

Pilot Note to be filled in and signed by the Master on completion of pilotage services both inwards and outwards.

Cargo tonnage return to be completed by the ship's Agent.

PILOTAGE: Pilotage is compulsory between an East-to-West line through Bar Flat Buoy in the Wash and the Freebridge at King's Lynn.

Vessels may be boarded from pilot cutter in the Wash from approx. 2.5 hours before HW between Cork Hole, the Sunk Buoy and Roaring Middle Light Float. Unless prevented by weather or breakdown a pilot cutter cruises between King's Lynn No. 1 Light Buoy and the Sunk Light Buoy approx. 2.5 hours before HW until such time as it is too late for a vessel to transit the Approach Channel on that tide.

Requests for a Pilot sent at least 24 hours before the service is required (with amendments if necessary up to 14 hours before) to the Pilot Office, Common Staith, King's Lynn (Tel: King's Lynn 773411, telegrams "Conservator" King's Lynn) or through local Agent. The Pilot Office is at the Harbour Office and maintains VHF R/T watch on Channels 16 and 14 from 0900 – 1700 hrs. Monday to Friday and from 4 hours before HW until 1 hour after HW on each tide after 1700 hrs. and before 0900 hrs. The pilot cutter listens on Channel 16 when on station and is fitted with Channels 14, 12, 11 and 6 as working channels.

No. 3 and 4 pilot launches "Brackley" and "Denver" are 40 ft. fibre glass craft with blue hulls, white superstructure and orange tops to the wheelhouses. In the event of bad weather the pilot launch on duty will fore-run vessels into Cork Hole (Lat. 52° 53′ N., Long. 00° 24′ E.) before boarding Pilots.

Requests for Pilots for ships in port, should be made to the Pilot Office at least 2 hours before the Pilot is required to attend the ship. The signals to be used or displayed where the services of a Pilot are required in accordance with the provisions of the Merchant Shipping (Pilot Signals) Order, 1970.

ANCHORAGE: In the Wash vessels anchor within an area bounded by the Roaring Middle Light Float and the King's Lynn No. 1 Light Buoy and the Sunk Light Buoy. Anchoring close to No. 1 Buoy in sufficient depth of water assists early boarding of Pilots. Depth of water 20 ft. minimum.

RESTRICTIONS: King's Lynn Harbour is situated on the River Great Ouse about 2 miles inland from its mouth, at the S.E. corner of the Wash.

The shipping channel in the approaches to King's Lynn and its approaches in the Wash is subject to changes in depth and direction as published on Admiralty Charts.

Harbour Master will advise in advance upon the suitability of vessels and tides.

All ship movements are at HW, times in accordance with a position list maintained at the Harbour Office on the basis of information supplied in advance from Masters of vessels and their Agents.

At the Docks entrance lock docking signals are exhibited from a signal mast. Gale warnings are exhibited from a signal mast on Common Staith.

MAX. SIZE: Max. dimension for vessels entering the Harbour: length 300 ft. (No. 6 Berth, South Quay), beam 45 ft., draft 11 ft., on lowest Neap tides, and 18 ft. on highest Spring tides. Access over high tide only. Harbour Master to be consulted for vessels approaching these limits.

HEALTH: See "Health – All Ports" before first U.K. port.

RADIO: The King's Lynn Conservancy Board operates in the River Great Ouse and its approaches in the Wash a VHF (FM) port operations and information radio-telephone service in the International Maritime Band, call signs: "King's Lynn Harbour Radio" (Channels 16, 14, 12 and 11); "King's Lynn Pilots" (Channels 16, 14, 12, 11 and 6).

Associated British Ports operates a docks operations and information service, call sign: "King's Lynn Docks Radio" (Channels 16, 14 and 11).

TUGS: Controlled by King's Lynn Conservancy Board and in attendance at the discretion of the Board's Harbour Master. Vessels joined in the Wash Approaches and/or lower reach of River Great Ouse (Marsh Cut). Vessels should provide own hawsers. If ordered, tug hawser available.

Harbour Master may require any vessel to use and employ a tugboat.

BERTHING: *Alexandra Dock:* Size 780 ft. × 310 ft. Approached from the River Great Ouse and King's Lynn Harbour by a lock. Vessels of length 96.0 m. and beam 13.65 m. can be accepted. The depth of water on sill is 22 ft. to 26 ft. (Springs) and 18 ft. (Neaps).

Bentinck Dock: Size 1,000 ft. × 400 ft. Connected with the Alexandra Dock by a passage and gates over which pass 2 swing bridges. Also double-sided jetty 235 ft. long. Container storage terminal with 42 ton capacity forklift.

The quays of the 2 docks have a water frontage of approximately 1 mile and provide a total of 16 berths.

3 quay cranes up to 20 tons capacity available.

South Quay (King's Lynn Harbour): Grain loading and discharging facilities at South Quay No. 6 Berth. Lay-by facilities at South Quay No. 1 Berth. Ships berthing at South Quay take the ground at LW.

STEVEDORES: Gangs usually can be provided at minimum notice. Main commodities and handling rates: timber (200 cu.m. pre-pack, pre-slung, per gang-hour), steel coils (250 tons per gang-hour), tinplate (90 tons per gang-hour), grain (200 t.p.h. per gang hour), also Ro/Ro and container handling.

TANKERS: 3 tanker berths in enclosed docks. Discharge from vessels is to 6 in. connecting pipes feeding 8 in. pipes to storage tanks.

MEDICAL: It is advisable to give advance notice of required medical attendance via Agent. In emergency the Harbour Office will pass on requests received over the VHF R/T Port Operations and Information Service. For other medical information, refer to the Port Medical Officer of Health and H.M. Customs.

FUEL: Available at berths alongside King's Lynn Harbour on 24 hours previous notice. Light-grade fuel oil, gas oil, petrol and paraffin only.

FRESH WATER: Available on all berths through 4 in. pipes off hydrants from public supply.

OPENING/CLOSING HATCHES: Done by crew. Cranes available for heavy beams.

GANGWAY/DECK WATCHMEN: Vessels responsible for providing own gangways at King's Lynn Harbour berths, where the Regulations require the Master or other person having the care of any ship or other craft to have a proper number of hands on board to attend moorings and to comply with all the requirements and directions of the Harbour Master or his Deputy or Assistants.

CONSULS: Vice-Consul for the Netherlands and Germany F.R.

REPAIRS: Limited facilities only available locally for hull and engine repairs.

AIRPORT: Charter flights and some regular flights, from Cambridge and Norwich airports about 45 miles from King's Lynn. Regular flights from London (Heathrow) about 100 miles from King's Lynn.

POLICE/AMBULANCE/FIRE: In emergency dial 999 and ask for the service required. Normal service: Police – King's Lynn 761311; Ambulance – King's Lynn 773503 or 773910; Fire Service – King's Lynn 775163.

HOLIDAYS: Cargo work usually available at overtime rates on Saturday and Sundays and on all public holidays.

AUTHORITY: The King's Lynn Conservancy Board, Harbour Office, Common Staith, King's Lynn, Norfolk PE30 1LL. *Tel:* (0553) 773411 and 773412. *Telex:* 817588. *Cables:* "Conservator" King's Lynn. *Contact:* M. J. Kiddle, General Manager. Captain D. W. Garside, Harbour Master and Pilot Master.

Associated British Ports, – King's Lynn, St. Ann's Fort, King's Lynn, Norfolk PE30 2EU. *Tel:* King's Lynn (0553) 772636. *Telex:* 81368. *FAX:* (0553) 761335. *Contact:* M. G. Fell, Port Manager. C. B. Greenwell, Assistant Port Manager.

KIRKCALDY: 56.07 N. 03.09 W. (See Plan)

DOCUMENTS/PILOTAGE: See "Leith".

RESTRICTIONS: Dock gates open for 2 hours before HW until HW.

MAX. SIZE: Vessels of 1,500 d.w.t. regularly use the port. Width at dock gates 15.2 m. Depth 5.2 m. Max. width to enter 14.4 m.

RADIO: See "Leith".

VHF/RADAR: Forth Navigation Service from Leith or Methil Harbour Radio.

TUGS: None.

BERTHING: 494 m. of berthing space available in dock.

CRANES: Mobile cranes available.

BULK CARGO FACILITIES: Privately owned grain discharge plant.

STEVEDORES: Available from Methil.

AUTHORITY: Forth Ports Authority, Dock Office, Kirkcaldy. *Tel:* Kirkcaldy 260176. *Contact (at Methil):* Captain I. C. Bayliss, Harbour Master; Captain R. Taylor, Port Manager; *Tel:* Leven (0333) 26725.

KIRKWALL: 58.59 N. 02.58 W. (See Plan)

PORT LIMITS: See "Plan".

DOCUMENTS:

Maritime Declaration of Health.
Vaccination List.
Immigration Form H.O. Form IS6.
Crew List – 2 copies.
Ship's Store List.
Crew Personal Effects Declaration. Customs Form C142.
Last Port Clearance.
Ship's Register.
Load Line Certificate.
Safety Construction Certificate.
Safety Radio and Safety Equipment Certificates.
Derat Certificate.
Previous British Light Dues Receipt.

Customs and Health: Customs, Immigration, Health and Agent will embark at anchor in Kirkwall Bay or alongside pier.

PILOTAGE: Non-compulsory except for passenger vessels over 50 g.t. Pilotage limits same as harbour limits. 15 licensed Pilots available. Arrange through Harbour Authority Office, Scapa. Tel: 0856-3636. VHF Channel 16. Telex: 75475 or by local Agents.

ANCHORAGES: Two areas. See "Plan".

RESTRICTIONS: Kirkwall Pier tidal berthing restrictions on draft. See "Berthing".

MAX. SIZE: See "Berthing".

HEALTH: See "Health – All Ports" before first U.K. port.

RADIO: Coast station call sign "Orkney Radio" (Wick Radio). Call Channel 16 VHF, working Channel 26 VHF.

VHF: Continuous watch Channel 16 VHF, call sign "Orkney Harbour Radio". Working on Channels 9, 10, 11 and 20 from 0800–1700 hrs. weekdays and when vessel expected. "Kirkwall Harbour Radio" Channel 16 VHF, working Channel 12.

RADAR: No facilities at Kirkwall Harbour.

TUGS: No tugs available.

BERTHING: See "Plan" for berths.

	Depth (m.)	*Length* (m.)	*Max. Draft at L.A.T.* (m.)	
East "1"	5.2	75	4.5	
East "2"	4.6	75	4.0	
West "1"	5.2	60	5.0	
West "2"	3.8	54	3.6	
West "3"	3.2	55	3.0	(Tanker berth – no petrol)
Basin	3.0	46	2.5	

Tidal Reference: Range 3.0 m. at Springs and 2.0 m. at Neaps.
Cargoes: Load/discharge ship's gear and mobile crane. Cargoes: Bulk, general, livestock, fuel oils (not petrol), passengers.
DENSITY: 1025.
CRANES: 2 mobile Jones cranes with grabs. S.W.L. 11 tons at 12 ft. radius and 2.75 tons at 40 ft. radius.
STEVEDORES: Kirkwall Port Employers Association have 25 dockers available. Contact local stevedores for detailed information.
MEDICAL: Medical and dental services are available by arrangement. Hospital facilities are available at Balfour Hospital at Kirkwall.
FRESH WATER: Available at all berths by 51 mm. mains supply. May be restricted in dry periods. 0.71p per tonne.
FUEL: Available by road tanker only from Esso – Shell/B.P.
FIRE PRECAUTIONS: Standard precautions. Local fire brigade.
CONSULS: Denmark, Netherlands, Norway, Germany F.R.
REPAIRS: Several small engineering firms can carry out minor repairs.
DRY DOCKS: None.
SURVEYORS: Not available.
GANGWAY/DECK WATCHMEN: Not available.
HATCHES: Opening/closing by crew.
CUSTOMS ALLOWANCES: As per British Customs scales.
REPATRIATION/TRAVEL: There are daily air services during the week to Aberdeen, Inverness, Glasgow and Edinburgh from Kirkwall Airport. There is no service on Sunday. There is a daily ferry service from Stromness to Scrabster to connect with British Rail. During the Winter months there is no service on Sunday.
AIRPORT: Approximately 4 miles from Kirkwall. Airlines: British Airways and Logan Air.
TIME: GMT. BST (GMT plus 1 hour) March – October.
HOLIDAYS: Public holidays vary except for Christmas and New Year (25th and 26th December, 1st and 2nd January).
POLICE/AMBULANCE/FIRE: Emergency – 999. Police: 2241. Ambulance: 2763.
EMERGENCY CO-ORDINATION CENTRE: Coast Guard: Tel. 3268. Telex: 75211.
SERVICES: Radio/radar technicians, divers, charts, etc., all available. Contact Agents.
SHORE LEAVE: No restrictions.
DELAYS: Stevedores also work Stromness when required, delays to vessels at Kirkwall can be expected due to lack of labour.
BANKS:

Bank of Scotland, 56 Albert Street, Kirkwall. Tel: 0856-2169.

Bank of Scotland, 99 Victoria Street, Stromness. Tel: 0856-850238.

Clydesdale Bank plc, 3 Broad Street, Kirkwall KW15 1DH. Tel: 0856-3237.

The Royal Bank of Scotland plc, P.O.Box 6, 1 Victoria Street, Kirkwall. Tel: 0856-2718. Telex: 75327.

The Royal Bank of Scotland plc, P.O.Box 1, 3 Victoria Street, Stromness. Tel: 0856-850217.

DEVELOPMENTS: Proposed extension to Kirkwall main pier, no details available at present.
AUTHORITY: Department of Harbours, Orkney Islands Council, Harbour Authority Building, Scapa, Orkney KW15 1SD. *Tel:* 0856-3636. *Telex:* 75475. *Contact:* Director of Harbours: Captain H. A. Banks.

LARNE: 54.51 N. 05.48 W. (See Plan)

DOCUMENTS: See "Belfast".
PILOTAGE: Not compulsory, though private Pilots operate who, when required, are engaged by ship's Agent. Pilots board off Fairway Buoy. Port VHF. Channels 16 and 14.
ANCHORAGES: Inner anchorage in Larne depth up to 5 fathoms. Anchorage outside Fairway Buoy exposed in N.E. winds.
MAX. SIZE: Draft dependent on berth but max. 18 ft. at MLWS, and 19 ft. at MLWN. Oil tankers proceed to Ballylumford Power Station which lies across Larne Lough directly opposite Larne Harbour. Approach channel has depth of 30 ft. below datum and berth has 35 ft. below datum.
HEALTH: See "Health – All Ports" before first U.K. port.
RADIO: Portpatrick.
TUGS: 2×3.5 tons bollard pull tugs based at Larne, suitable for small vessels. As a rule tugs are not required for vessels using Larne Harbour. Tugs from Belfast serve oil tankers to Ballylumford.
BERTHING: 1 berth equipped with two 5-ton cranes for grabbing and general cargo work. 2 berths are equipped with cranes of 32 tons and 35 tons capacity for handling containers. 4 berths (2 twin-level) are equipped with Ro/Ro ramps, capable of taking loads up to 180 tons and ships up to 70 ft. beam.
STEVEDORES: Larne Harbour Ltd. carry out all the stevedoring. 24 hours' notice required for arrangements.
MEDICAL: No advance notice required for medical attention, a hospital being situated 1 mile from harbour. No special inoculations or certificates required.
TANKERS: 1 tanker berth in Larne Harbour. Depth alongside, 18 ft. below datum. Discharging only. LPG tankers max. LOA 171 ft., pipe diameter 4 in. For Ballylumford, see "Max. Size".
DENSITY: 1025.
FRESH WATER: Unlimited by shore hose. Rate 7 t.p.h. to 10 t.p.h.
FUEL: Bunkering carried out by road tanker. Arrangements to be made through ship's Agent.
GANGWAY/DECK WATCHMEN: Agents arrange watchmen.
OPENING/CLOSING HATCHES: Performed by crew.
CUSTOMS ALLOWANCES: Agents arrange with Customs.
IDENTIFICATION CARDS: Not required.
CONSULS: Consuls in Belfast can be contacted through ship's Agent.
REPAIRS: Limited repairs by local firms. Major repairs by Belfast firms.
REPATRIATION: Possible.
AIRPORT: 20 miles. Regular flights.
HOLIDAYS: 12th and 13th July, Easter Monday and Tuesday, 1st May, Christmas Day, Boxing Day and New Year's Day. No cargo worked on these days.
POLICE/FIRE/AMBULANCE: Dial 999 and ask for Emergency service required.
TELEPHONES: Only on Cross Channel vessels.
SHIP SUPPLY SERVICE: John McLoughlin & Son (Shipping) Ltd., North End, The Harbour, Larne. Tel: Larne 3785 & 4085.

Ship supply and personnel transfer carried out by tugs and launches.
DEVELOPMENTS: A third twin-level Ro/Ro ramp to be constructed at the Mail Quay. Completion expected 1988. The Mail Quay is to be lengthened and deepened, completion expected in 1989.
AUTHORITY: Larne Harbour Ltd., 9, Olderfleet Road, Larne BT40 1AS, County Antrim, Northern Ireland. *Tel:* (0574) 79221. *Contact:* Captain B. R. Dickinson, Harbour Master.

LEITH: 55.59 N. 03.10 W. (See Plan)

DOCUMENTS:

2 Report Forms (C. 13).
3 Stores Declarations (C. 14).
2 Crew Declarations (C. 142).
Crew Lists } As Required.
Passenger Lists }

Also additional forms for specific circumstances, e.g. deck cargo, hazardous cargo, livestock etc.

(Also see "Glasgow".)
PILOTAGE: Pilot station Firth of Forth located at Granton, boarding station West of Fairway Buoy at Long. 3° West. Contact with pilot cutters can be made on VHF Channels 16 and radio-telephone 2182. Pilotage not compulsory for vessels approaching South of Inchkeith Island.

Large vessels are normally docked 1.5 hours before HW. Vessels up to 20 ft. draft, dock at any time.
ANCHORAGES: Good holding ground at Inchkeith Island and Leith roadstead depths 8 m. – 19 m. at C.D. Request should be made to Forth Navigation Service.
APPROACHES: *Cautionary Advice:* Tidal streams set across the approach channel with rates up to 1.5 knots (in a 080/260° (T) direction). Great care should be exercised in ensuring sufficient set is allowed to maintain the correct approach course when slowed down in the channel immediately prior to entering the locks.
RESTRICTIONS: None. Vessels can enter harbour day or night.
Lock: Entrance to the port is from the Firth of Forth through the entrance lock which is 259 m. long and 31.6 m. wide between fenders, depth over the outer sill MHWST 12.239 m.

The lock is operated 24 hours a day, 7 days a week.
MAX. SIZE: Governed by draft of vessels. Max. permissible draft alongside in Imperial Dock 9.1 m. and in Western Harbour 9.7 m., in dock water density is 1015.
HEALTH: See "Health – All Ports" before first U.K. port.
RADIO: Forth, Stonehaven and Cullercoats Radio Stations.
RADAR/VHF: Port and Estuary radar service. VHF contact can be made with Leith Harbour Radio on Channel 16. Forth Navigation Service must be contacted on VHF Channel 71 by vessels entering Forth Port Authority Seaward Limit (line joining North and South Carr Beacons), working Channels 20 and 12.
TUGS: 5 tugs, 12-27 tonnes bollard pull. Attend inward-bound vessels in Leith roads. Tug's towline available and compulsory. Tugs on VHF Channels 16, 6, 8, 11, 12 and 14.
CRANES: 2×11 tonnes, 1×7.3 tonnes and 1×3 tonnes mobile diesel cranes. Also see "Berthing".
BULK HANDLING FACILITIES: See "Berthing".
Grain Storage: Imperial Basin: 55,880 tonnes. Western Harbour (private) 53,848 tonnes.
STEVEDORES: ETA advices given by Master to ship's Agent and conveyed by them to stevedores.
MEDICAL: No advance notice of medical attention required. All hospital facilities available.
TANKERS: 1 tanker berth available – max. permissible draft 9.1 m. in dock water of density 1015. Discharge lines 6 in. and 8 in. No slop discharge facilities.
DENSITY: 1015.
FRESH WATER: Available alongside at all berths.
FUEL: All grades available subject to 24 hours notice in advance.

BERTHING:

Dock/Basin	*Quayage* (m.)	*Maximum Depth* (m.)	*Entrance Width* (m.)	*No.*	*Quayside Cranes* *Capacity* (tonnes)	*Type*	*Remarks*
Imperial Basin Common User Berth	200	9.6	31.6				Tanker Berth Oil bunkering facilities available.

REPAIRS: Facilities available to carry out all types of deck and engine repairs.

DRY DOCKS: Largest dry dock "Imperial", length 167.6 m. width of entrance 21.3 m. depth over blocks at 7.7 m. also 2 smaller dry docks.

REPATRIATION: All facilities available for effecting crew changes and repatriation by sea, air and rail.

AIRPORT: Edinburgh Airport served by regular airlines and located approx. 9 miles from Leith.

TIME: British Standard Time, GMT plus 1 hour. GMT in Winter months.

HOLIDAYS: Public holidays observed annually: 3rd Monday in April; 3rd Monday in September; Christmas Day (25th December); 26th December; 1st, 2nd, and 3rd January. Cargo work can be arranged on public holidays except 25th December and 1st and 2nd January.

POLICE/AMBULANCE/FIRE: Tel. 999 and ask for service required or call Leith Harbour Radio on VHF Channels 16 and 12.

TELEPHONES: Can be arranged with G.P.O.

SERVICES: Compass adjusting facilities available.

SHORE LEAVE: No restrictions.

DELAYS: Minimal delays in berthing, loading and discharging.

AUTHORITY: Forth Ports Authority, Port Office, Tower Place, Leith, Edinburgh EH6 7DB. *Tel:* (031) 554 4343. *Telex:* 72681. *Cables:* Harbour Leith. *Contact:* Mr. J. R. Grant, Port Manager, Leith & Granton. I. T. Whale, Business Development Officer.

AGENT: Denholm Lewis Ltd., 49 Assembly Street, Leith, EH6 7BQ. Tel: (031) 553 6388. After Hours: (0324) 474554, (031) 337 1920, (031) 552 4148. Telex: 727410.

LERWICK: 60.09 N. 01.08 W. (See Plan)

PORT LIMITS: All waters contained within the following boundaries including Dales Voe and Aith Voe.

Straight line drawn from the N.E. extremity of Hawks Ness (Lat. 60° 13′ 27″ N., Long. 1° 10′ 00″ W. approx.) in an East Southeasterly direction to the N.E. extremity of Green Holm and thence in a Southeasterly direction to the N.E. extremity of Score Head in the island of Bressay. Thence in a Westerly and Southerly direction along the HW mark of all foreshores to Whinna Skerry (Lat. 60° 07′ 45″ N., Long. 1° 07′ 17″ W. approx.). Thence in a straight line in a Westerly direction to the S. extremity of Ness of Sound. Thence along high water mark of all foreshores in a generally Northerly direction to Hawks Ness.

BUOYAGE: Buoyage in Lerwick Harbour is IALA System "A".

DOCUMENTS: See "London".

PILOTAGE: *Pilot Office:* At foot of Victoria Pier in Harbour Master's Office. Lat. 60° 09′ N., Long. 1° 08′ W. Limits of Pilotage District similar to Port limits given above. Licenced Pilots always available on 24 hour service subject to following correct procedure given below.

Call Sign: Lerwick Harbour Radio.

Frequencies: Calling: VHF Channel 16. Working: VHF Channel 12. Pilot Cutter: VHF Channels 6, 11, 12 and 16.

Port Control: Fitted with VHF Channels 11, 12 and 16. Continuous watch is maintained 24 hours per day, 7 days per week on Channel 16 except when working vessels on Channel 12.

Procedure: The Port Control Office controls the movement of all vessels arriving or departing by either entrance and all movement within the harbour from public or private quays or supply bases, whether such vessels are under the control of Pilots or not.

(a) Vessels requiring pilotage should arrange with Agent not less than 24 hours before arrival. Vessels without Agent should contact Lerwick Harbour Master through Coast Radio Stations not less than 24 hours before arrival. Vessels leaving ports less than 24 hours steaming away should advise time of sailing, projected speed and ETA at time of leaving last Port. Vessels inward from Continental Shelf should advise time of leaving location, projected speed and ETA at time of leaving last location. Amended ETAs should be advised 2 hours before the time given in the last transmitted ETA. VHF contact should be made with Lerwick Harbour Radio while still 1 hour away when final pilotage and berthing arrangements will be made. Port control cannot guarantee a Pilot on station unless 1 hour's notice is given.

(b) ETA messages should also contain information on which harbour entrance is to be used, draft and length overall. Vessels entering by the South entrance will be boarded West of Kirkabister Lighthouse or near Knab Point if weather conditions are unsuitable. Vessels entering by the North entrance will be boarded abeam of the Green Holm and 0.5 miles N.E. of Beosetter Holm. If boarding conditions in this area are unsuitable the South entrance must be used.

(c) "Knab", 18 m. Dark blue hull, white upperworks. Pilot boat and tug, can be used for towing, bollard pull 8 tons.

(d) Outward vessels should call the Port Control 1 hour before departure when information on traffic movement will be given and arrangements for pilotage will be made. When moving within the harbour all vessels should maintain a continuous listening watch on Channel 16. All vessels moving within the harbour should report to the Port Control immediately prior to leaving the berth or anchorage, whether a Pilot is on board or not.

(e) Pilotage within Lerwick Harbour is compulsory, but all vessels not carrying passengers are exempt.

(f) Telephone number of Lerwick Harbour Master and pilot station is Lerwick 3462.

ANCHORAGE: Ample anchorages in harbour roads.

Inner South Harbour depth up to 60 ft.

Breiwick Bay (Inner South Harbour) depth up to 90 ft.

MAX. SIZE: Vessels up to 20 ft. draft and 320 ft. long alongside berth as routine. Vessels of greater length and for draft may be accommodated alongside after discussion with Harbour Master. Anchorages available for any size of vessel subject to prior consultation with Harbour Master, if above 10,000 g.r.t. No mooring buoys available.

HEALTH: See "Health – All Ports" before first U.K. port.

RADIO: Nearest Coast Radio Station "Shetland Radio" Frequency and other details as for "Wick Radio" except for VHF working Channel which is Channel 27.

"Lerwick Harbour Radio" see "Pilotage".

TUGS: No tugs available but Pilot cutter will give towage assistance within her capabilities.

BERTHING: Berths are available for the handling of most cargoes including Roll-on/Roll-off and arrangement should be made through Agents well in advance of arrival. No berths available for handling liquid chemicals. Mobile cranes available from Harbour Authority up to 30 tons capacity or through private operators to 110 tons capacity.

	Length	*Depth*
South Harbour	3,000 ft.	10 ft. to 35 ft.
Shell & BP Bases, Holmsgarth	1,000 ft.	15 ft. to 25 ft.
Holmsgarth, 5 berths, including 2 Ro/Ro	3,000 ft.	18 ft. to 35 ft.
Norscot Base	2,000 ft.	18 ft. to 21 ft.
Ocean Inchcape	656 ft.	20 ft. to 24 ft.

STEVEDORES: Arranged through Agent.

MEDICAL: Medical aid can be arranged through Agent or Coastguard at any time day or night.

TANKERS: BP Oil have their own discharging berth. Tankers are also able to discharge at various offshore oil industry supply berths

DENSITY: Density 1025 at all states of tide.

FRESH WATER: Available at most berths, 65 t.p.h. to 100 t.p.h. No water boat.

FUEL: Gas oil available on demand.

FIRE PRECAUTIONS: No-smoking regulations in operation inside all transit sheds. Usual tanker terminal regulations in operation. Handling of explosives covered by local Bye-Law.

GANGWAY/DECK WATCHMEN: Ships usually supply own watchmen. No fixed sum if shore watchman is employed.

OPENING/CLOSING HATCHES: Crew open hatches.

CUSTOMS ALLOWANCES: Tobacco, wine/spirits; at the discretion of the Customs and Excise.

IDENTIFICATION CARDS: Foreign seamen have to supply same if left behind, i.e. hospital, etc.

CONSULS:

Denmark (Vice)	3057	Iceland	4121
Finland (Vice)	3057	Netherlands(Vice)	3057
France (Vice)	3057	Norway	3057
Germany F.R.	2556	Sweden	2556

REPAIRS: Repairs to fishing vessels and other small craft in steel, wood and fibre glass. Also engine and machinery repairs. Comprehensive electronics repair facilities.

DRY DOCKS: No dry dock available, slip available to take small vessels up to 100 d.w.t.

REPATRIATION: Facilities exist.

AIRPORT: 25 miles to airport. 5 services per day to Aberdeen operated by British Airways. Charter flights by Dan Air and other airlines.

Tingwall, 7 miles from Lerwick, Loganair Twin Otter service to Edinburgh.

HOLIDAYS: Scottish holidays. Working can be arranged on these days if so desired.

POLICE/AMBULANCE/FIRE: Emergency telephone 999 or call Port Control VHF Channel 16. Harbour Master and Port Control 3462 night or day.

COASTGUARD: Lookout on top of Knab Point manned 24 hours a day. Fitted with MF and VHF Radio Channels 16, 13, 10 and Zero.

TELEPHONE: Ships telephones can be arranged.

SERVICES: No tank-cleaning equipment. Compass adjuster can be procured if necessary.

SHORE LEAVE: No restrictions.

AUTHORITY: Lerwick Harbour Trust, 1/2 Alexandra Buildings, Lerwick, Shetland, ZE1 0LL. *Tel:* (0595) 2991, 2828, 3462. *Telex:* 75496. *Contact:* A. B. Laurenson, General Manager. Captain D. I. Polson, Harbour Master.

LIVERPOOL: 53.28 N. 03.02 W. (See Plan)

DOCUMENTS: Required on arrival, Crew List Form I.B.6 to be completed; this list to include all passengers and any British subjects who joined vessel outside of U.K. If any person falling into this category should be on board they must not leave until permission to land is granted by Immigration Officer.

Customs Form C.142, Declaration of goods obtained abroad or during a voyage, must be completed and signed by Master, and each crew member. Health Declaration must be completed. Above forms should be obtained from Pilot.

Manifest and Bills of Lading should be forwarded to vessel's Agent so as to be available before vessels arrival.

Ship's Papers Required:

Ship's Register.
Certificate for British Tonnage (if issued).
Safety Equipment Certificate.
Safety Radio Certificate.
Safety Construction Certificate.
International Load-line Certificate.
Derat Exemption Certificate.

PILOTAGE: At least 48 hours before arrival, vessels should give ETA Lynas/Mersey Bar to Agents who will arrange docking and pilotage and advise the Master accordingly.

Pilot Stations: For vessels bound in from the South and West, Pilots board at Point Lynas, North Anglesey, using 40 ft. launches. Contact shore pilot station on VHF Channel 9 with call sign "Lynas Pilot".

For vessels bound in from the North, Pilots board in the vicinity of the Bar Lanby Buoy using launches. Contact shore pilot station on VHF Channel 11 (or 12) with call sign "Liverpool Pilot". It is essential to make this contact as early as possible.

Penalty charges operate for late arrivals, therefore Masters should keep ETA's updated and make contact by VHF as early as possible.

ANCHORAGE: In the event of berths not being readily available for vessels, normally they must wait at the Mersey Bar Anchorage which is in the open roadstead. There are river anchorages, but these are only usually for vessels about to enter the dock system.

RESTRICTIONS: No restrictions on night entry, except VLCCs, tidal restrictions depend on vessel's draft and to which berth vessel proceeding, larger vessels usually have to wait for HW.

MAX. SIZE: Tranmere: up to 41 ft. (12.5 m.) draft dependent on tide. Birkenhead: up to 28 ft. 6 in. (8.68 m.) draft. Liverpool Docks: up to 40 ft. (12.2 m.) draft.

Royal Seaforth Dock: 42 ft. (12.8 m.) of water depth, up to 75,000 d.w.t.

HEALTH: Maritime Declaration of Health Form must be completed and handed to Customs Officer or Port Health Officer, whoever first boards ship. This form is obtainable from Pilot. In event of any suspected disease or fever on board, or if ship has called during last 4 weeks at any port in Brazil, China, Indo-China, India, Pakistan, Burma, Colombia and the port of Dar-es-Salaam, West African ports between Lat. 20° North and 20° South, the Master should, prior to entering port, make radio contact with Liverpool Port Health Authority, via Anglesey Radio or Port Radar Station (Signal "Portelth Liverpool") giving them following information:

1. Name of Ship. 2. Date of departure from and name of last infected port. 3. Number, ages and sex of any cases of infectious diseases or other relevant information. 4. Expected time of arrival at Rock Light.

Before reaching the Rock Light if medical clearance has not been obtained the following signal must be displayed: by day – fly the flag signal "Z W". By night – show red light over white light.

When medical clearance is obtained Pratique will be issued at discretion of Customs Officer.

If there is no suspected disease on board and vessel has not called at any of the above ports listed, Master can radio for Free Pratique. Unless otherwise instructed, Customs Officer will again issue Pratique.

Vessels arriving from another U.K. port do not require Pratique or health clearance.

Also see "Health – All Ports" before first U.K. port.

RADIO: Portishead Radio, call sign: GKL; Landsend Radio, call sign: GDL; Wick Radio, call sign: GKR; but on approaching Liverpool, the local radio station is Anglesey Radio, call sign: GLV.

RADAR/VHF: (VTS to be operational early 1987). Vessels should establish contact by VHF/RT with the Port Radar Station call sign "Mersey Radio" before sailing and inward bound when within VHF/RT range and not later than when in the vicinity of the Bar Lighted Buoy.

Harbour Radar: The Liverpool Port Radar Station is situated at the N.W. corner of Royal Seaforth Dock 53° 27′ 56″ N., 03° 02′ 22″ W.

The radar coverage extends seaward over Liverpool Bay for a radius of 20 miles from the station and in the River Mersey as far South as the approaches to the Manchester Ship Canal.

Vessels entering or leaving the Port in conditions of low visibility can, on request, be supplied with continuous information of their position whilst navigating in the river or sea channels, providing such vessels can be identified.

A general situation and movement statement, giving all intended movements inwards and outwards for the Port of Liverpool, Eastham, Bromborough, Garston and Cammell Lairds and approximate times at the dock entrance or river berth, together with a list of Local Navigation warnings in force, latest weather reports and area forecast, is broadcast on Channel 9 at 3 hours before each HW. This full statement is repeated with any amendments and the disposition of the River Anchorages North and South at 2 hours before each HW.

Any local navigation warning is broadcast on receipt on Channel 12.

A full list of navigation warnings is broadcast on Channel 9 every 4 hours, commencing at 0001 hrs. No separate broadcast of this list is made during the period from 4 hours before HW to 1 hour before HW as such warnings are included in the General Situation and Movement Statement.

Docking Instructions: The VHF/RT Stations at the Dock Entrances and Stages are provided to facilitate docking and berthing operations and to provide direct communication between the Dock Master or Stage Master and a vessel. The Range of these stations is limited to a distance of 6 to 8 miles.

Tug Communications: Channels 8 and 10 are reserved for tug communications and should not be used for any other purpose. Due to the heavy working of these Channels, especially at tide time, and in order to minimise interference, vessels and their tugs when communicating to one another on VHF/RT, should, when possible transmit on reduced power.

Large Vessels Swinging: Vessels of 150 m. or over in length intending to swing in the river should give advance notice of at least 10 minutes to Mersey Radio of their intentions so that Mersey Radio can broadcast on Channel 12 a swinging warning to all ships.

Port VHF Radio Telephone Communications System:

Station	*Call Sign*	*Hague Channel Number*	*Remarks*
Liverpool Port Radar Station	Mersey Radio	16	Calling and safety
		12	Port Operations – Calling and navigation.
		9	Port Operations and routine broadcasts
		18, 22	Port Operations and Radar information
		19	Radar information and general, for tanker traffic for Tranmere only.
		4	Navigation Broadcasts. Transmitting Only.
			A continuous watch is kept on Channels 16 & 12 at Port Radar Station
Gladstone Dock Master's Office	Gladstone Dock	5	Port Operations and Docking Instructions.

Eastham Locks Office	Eastham Locks	7	Port Operations and Docking Instructions
M.D. & H.C. Pilot Stations			
Point Lynas Shore Station	Lynas Pilot	16	Calling and safety
		9	Ship to shore.
Liverpool Control Centre	Liverpool Pilot	16	Initial calling
		12	Initial calling
		11	Calling & ship to shore

Local Priority Messages: A vessel which has an urgent message to transmit to Mersey Radio concerning urgent navigation matters and which message should receive priority over normal Port Operations R/T Communications, should indicate the urgency of the message by prefixing the call sign of the Port Radar Station with the spoken word "PRIORITY" i.e. "PRIORITY MERSEY RADIO" repeated 3 times followed by normal procedure.

In special circumstances such as the launch of a vessel or in an emergency such as a wreck, it may be necessary temporarily to establish a patrol for the control of traffic. Vessels will be warned of the existence of any such patrol by "Mersey Radio" and any such patrol vessels or launches will maintain a listening watch on Channel 12 and communicate with other vessels on Channel 6.

R/T Procedure

Channels to be Used for Calling and for Preparatory Signals: Mersey Radio and ship stations will call on Channel 12. Channel 16 should only be used for distress, urgency or safety communications.

Channels for Reply: Calls received on Channel 12 should be replied to on the same Channel, but if calls are received on Channel 16, replies should be made on this Channel.

Indication of the Channel to be Used for Radio Telephone Traffic: When communication has been established on Channel 12 between a ship and "Mersey Radio", the shore station will indicate the number of the Channel to be used for passing and receiving information if Channel 12 is busy.

Times: All times in messages should be given in local time, i.e. BST or GMT, using the 24 hour notation.

R/T Discipline: To ensure that the full advantage of efficient communication is achieved, strict telephone discipline and attention to procedure, particularly on the calling Channel is imperative. Channel 16 must only be used for establishing contact between ship and shore or ship and ship, and must not be used for the passing of messages except in cases of distress within Port limits. Channel 12 should be used for establishing contact between ship and shore or ship and ship.

Sequence of R/T Communication for Vessels Entering the River Mersey: (i) Vessels wishing to communicate with the Liverpool Pilotage District Point Lynas Shore Station should call "Lynas Pilot" on Channel 9. Channel 16 shall only be used in case of difficulty in establishing initial contact.

(ii) Vessels wishing to communicate with the Liverpool Pilotage Control Centre should call "Liverpool Pilot" on Channel 11 as early as possible.

(iii) When within VHF R/T range and not later than when in the vicinity of the Bar Lighted Buoy the vessel should establish contact with Mersey Radio on Channel 12 and pass her arrival information on Channel 12 or other Channel indicated by Mersey Radio, watch should be kept on Channel 12 unless instructed to remain on another working Channel for Port Operational reasons. A vessel at anchor at the Bar anchorage should keep watch on Channel 16.

(iv) Vessels requiring radar information or assistance will be requested to shift to Channel 18 or 22, or if a tanker for Tranmere, Channel 19.

(v) Vessels should inform Mersey Radio when they are ceasing to keep a listening watch on Channel 12. If they are shifting to a tug or a dock entrance or Tranmere Oil Stage Channel they should inform Mersey Radio of such intention.

Vessels Sailing from the River Mersey: Vessels, on sailing from any Stage or Dock, should establish contact with Mersey Radio on Channel 12 and then maintain watch on that Channel unless instructed to remain on another working Channel for Port Operational reasons. Vessels requiring radar information or assistance will be requested to work on Channel 18 or 22, or if a tanker from Tranmere, Channel 19.

TUGS: Join vessel after passing Rock Light. Normally use tug's lines but optional. Charge for tug's hawsers.

BERTHING: 35 general cargo berths.

BULK CARGO FACILITIES: *Grain Berths:* Royal Seaforth Grain Terminal accommodates ships of up to 75,000 d.w.t. up to 260 m. overall length and 12.8 m. draft. Discharge is by 2 marine towers at up to 2,000 tonnes p.h. into 133,000 tonnes capacity silo. 2×750 tonnes per hour dischargers (Buhler) for animal feedstuffs at Berth S.2 storage capacity 30,000 tonnes.

Other grain berths include Birkenhead East Tower Berth accommodating vessels up to 150 m., draft 8.8 m.; Buchanan's Mill, max. length 145 m. (152 m. by arrangement), draft 8.7 m.; Ranks/Ocean Mill, max. length 144.7 m. (152 m. by arrangement), draft 8.7 m.; Spillers Mill, max. length 137 m. (152 m. by arrangement) draft 8.7 m.

Grab Cargoes: (Minerals, ores, coal, meals, etc.).

N.3 Huskisson Branch Dock: 2 berths for vessels up to 9.3 m. draft, each equipped with 4 grab cranes.

S.E.2 Alexandra Dock: Vessels up to 8.84 m. draft, equipped with 3 grabbing cranes for handling animal feeding stuffs; discharge to road via hoppers and direct by conveyor to silo storage.

E. Bramley Moore: 2 × 5 tonnes grabbing cranes for handling vessels up to 3,000 tonnes d.w.t. and 5.8 m. draft. Discharge direct to road vehicles.

North Bidston Dock: Quay length 305 m., 8.7 m. draft, max. length 192 m., 3 transporters each with an hourly digging capacity of 350 tonnes discharging to road or rail via 175 tonnes hoppers or into coasters or barges.

Cavendish Quay: 2 × 20 tonnes level luffing jib cranes with a grabbing capacity of 15 tonnes. Each designed to handle up to 450 t.p.h. Loading to road or rail with 2 × 100 tonnes capacity mobile weigh hoppers.

Duke St. Wharf: Vessels up to 8.7 m. draft discharged by 2 × 7.5 tonnes electric level luffing cranes.

Coal handled at N.2 Gladstone Dock (Panamax. 75,000 tonnes).

BULK LIQUID FACILITIES: *Tranmere:* Petroleum oils at Tranmere South Stage, accommodating tankers up to 115,000 tons displacement, max. draft 11.1 m. plus height of tide and Tranmere North Stage accommodating tankers after lightening up to 210,000 tons displacement, max. draft 12.0 m. plus height of tide. Facilities operated by Shell U.K. Ltd.

Cautionary Advice: Vessels which are required to pump over the tide must discharge so as to reach, 30 minutes before LW, a draft not greater than 41 ft. plus height of LW at the North stage, or 38 ft. plus height of LW at the South stage. (These figures may vary slightly from time to time and should be checked with the Berthing Master).

Liverpool: N.2 Gladstone (edible oils berth total quay length 175 m., 12.8 m. draft).

S.1 Canada (edible oils and molasses, up to 213 m. length, 9.75 m. draft).

S.E. Nelson (wines and spirits for vessels up to 99.1 m. length, 6 m. draft).

S.E. Salisbury (edible oils for vessels up to 6 m. draft).

Birkenhead: N. Alfred (8.6 m draft, edible oils).

Ilchester Wharf (8.6 m. draft).

E. Lewis (edible oils and molasses for vessels up to 192 m. in length, 8.7 m. draft).

SPECIALISED CARGO HANDLING FACILITIES: *Containers:* The container terminal at Royal Seaforth Dock has a continuous quay 1,100 m. in length, served by 6 gantry cranes up to 40 tons capacity and a fleet of straddle carriers working to a 22 ha. container park supported by a 26 ha. back-up area. Tractor trailer units are used to feed the integral Freightliner Rail Terminal.

Containers can also be handled at all general cargo berths.

Timber and Forest Products: At the Royal Seaforth Timber Terminal, 793 m. of continuous quay are served by 4 × 10 tonnes cranes discharging packaged timber to a 26 ha. stacking and back-up area. 3 sheds provide covered storage of 16,000 sq.m. for plywood, pulp-kiln-dried timber.

Ro/Ro: There are 12 berths in the port with Ro/Ro ramp facilities; Royal Seaforth, S.3, S.6 and S.10; Gladstone No. 3, North Hornby. N.W. Alexandra, E. Langton, N.E. 3 Canada, S.E. Nelson, S.E. Trafalgar, S.W. Princes and S. Bidston (Birkenhead).

Heavy and Indivisible Loads: Good road access and specialised facilities include 3 berths strengthened to accept loads of up to 300, 400 and 1,000 tonnes respectively.

STEVEDORES: Earliest possible ETA to be given to arrange gangs.

TANKERS: See "Bulk Liquid Facilities".

DENSITY: River Mersey salt water. Docks approx. 1020.

FRESH WATER: Available at all berths, ex-quay. No water barges available. Rate of delivery 15-20 t.p.h.

MEDICAL: If doctor is required to attend immediately on arrival of vessel, prior notice will be required, but generally doctor is arranged for most convenient time after vessel's arrival.

Hospitalisation is available, but seamen will only be admitted if immediate treatment is required. It is preferred for foreign seamen requiring hospital treatment to be repatriated, if able to travel.

Dentist available by appointment only.

FUEL: Most major oil companies are represented and can supply range of fuels of various viscosities. Notice required depends on the berth at which vessel is lying as bunkers are supplied ex-lighter at most berths. Notice required can vary depending on availability of barges, but generally at least 3 to 4 days notice is required.

FIRE PRECAUTIONS: Tankers may not carry out repairs whilst at discharging berth unless permission is obtained from Harbour Authorities. Fire precautions notice is placed on board by Harbour Authorities.

GANGWAY/DECK WATCHMEN: Watchmen not necessary but available if required.

OPENING/CLOSING HATCHES: Carried out by ship's crew for bulk cargoes and by stevedores for general cargoes.

CERTIFICATES:

Register/Certificate of Measurement.
Certificate of British Tonnage (if issued).
Safety Radio Certificate.
Safety Construction Certificate.
Safety Equipment Certificate.
Load-line Certificate.
Derat Certificate.
Cargo Gear Test Certificates.

CUSTOMS ALLOWANCES: Crew members who remain on vessel during vessel's stay in port may be allowed, under certain conditions, to keep for their own use on board small quantities of any tobacco, spirits and other goods declared on Customs Form C.142. The amount allowed depends on the number of days the vessel is in port.

CARGO GEAR: Cargo Gear Certificates must be produced with the necessary up-to-date endorsement.

IDENTIFICATION CARDS: Not required.

CONSULS: The following countries have representatives in Liverpool:

Australia
Belgium
Bolivia
Brazil
Chile
Colombia
Denmark
Dominican Republic
Ecuador
El Salvador
Finland
France
Germany F.R.
Greece
Haiti
Hong Kong
Iceland
India
Japan
Lebanon
Liberia
Monaco
Netherlands
Nigeria
Norway
Panama
Paraguay
Peru
Philippines
Spain
Sweden
Thailand
Uruguay
U.S.A.
Venezuela

SURVEYORS: (1) Caleb Brett and other companies available. (2) Lloyds, A.B.S. and B.V. are available.

REPAIRS: All types of deck and engine repairs can be carried out.

DRY DOCKS: Largest (Cammel Laird) – length 950 ft. × 140 ft. Also 7 smaller dry docks (M.D.H.C., Seaforth Welding and H. Stewart Metals).

REPATRIATION: Can be effected, but must be arranged through Agent, so that Immigration Clearance can be arranged.

AIRPORT: City Centre to Airport approximately 7 miles, regular service to London for international connections.

Regular Services from Liverpool Airport to:

Aberdeen	Air Ecosse
Amsterdam	Genair
Belfast	British Midland
Brussels	Jersey European Airways
Cork	Jersey European Airways
Dublin	Jersey European Airways
Dublin	Air Lingus
Isle of Man	British Midland
Jersey	British Midland
Gatwick	Genair
Heathrow	British Midland
Stansted	Jersey European Airways
Newquay (Cornwall)	Genair

(The above are all passenger services with the exception of Dublin which is mainly freight).

TIME: British Standard Time, which is 1 hour in advance of Greenwich Mean Time, reverting to GMT in Winter months.

HOLIDAYS: Good Friday; Easter Monday (movable); 1st Monday in May; last Monday in May; last Monday in August or first Monday in September, whichever may be closest to August 31st. December 25th-26th and New Year's Day. Weekly holidays Saturday, Sunday. Cargo can be worked on official holidays, other than 25th-26th December, also arrangements can be made for cargo to be worked on Sundays.

BANKS: Allied Irish Bank Ltd, 5/9 Renshaw Street, Liverpool 1; Banco Exterior C A, 6 Victoria Street, Liverpool 1; Bank of Credit & Commerce, International (Overseas Ltd), 41 Castle Street, Liverpool 2; Bank of Ireland, 25 Victoria Street, Liverpool 1; *Citibank Trust Ltd, Tower Buildings, 22 Water Street, Liverpool 2; *American Express International, Travel Agents, Lord Street, Liverpool 2.

*Not Banks as such but possibly undertake closely allied functions.

STORING: See "Prelims".

1. All vessels can be stored by either barge or truck.
2. Barge storing at Tranmere Oil Stages is restricted to "Approved" barges.
3. Trucks do not always have direct access to vessels by driving along quayside. Approach may be via sheds.
4. Forklift trucks can be used in most cases.
5. As per British Customs Regulations.
6. Riggers can be employed.

POLICE/AMBULANCE/FIRE: Telephone 999, ask for service required.

EMERGENCY CO-ORDINATION CENTRE: "Liverpool Coast Guard" Tel: Liverpool (051) 931-3341/43.

TELEPHONES: A temporary telephone can be placed on board a vessel, at most berths, whilst in port.

SERVICES: Compass adjusting, D.F. calibration can be arranged.

SHORE LEAVE: All bona fide crew members may be granted temporary shore leave during the vessel's stay in port, on condition that they leave in the same ship. This permission does not apply to any alien member of the crew who is refused leave to land by an Immigration Officer, or to whom an Immigration Officer has given notice prohibiting him from landing without leave.

SHIP SUPPLY SERVICE: Alexandra Towing Co. Ltd., Castle Chambers, 43, Castle Street, Liverpool 2. Tel: 051-227 2151.

Carmet Tug Co. Ltd., Lock Head, Bromborough, Wirral. Tel: 051-645 5579.

Manor Diving and Marine Services Ltd., Customs House, Four Bridges, Birkenhead, Merseyside. Tel: 051-647 8300.

Rea Towing Co. Ltd., Odyssey Works, Corporation Road, Birkenhead, Merseyside. Tel: 051-647 6263.

In addition the Port of Liverpool has the Buoyage Tender and Salvage vessel "Vigilant" which has fire fighting capability and is classed 100 A1 for River Mersey and Liverpool Bay Service.

DEVELOPMENTS: Floating crane "Mersey Mammouth" with capacity 250 tonnes operational. VTS to be in operation early 1987.

AUTHORITY: The Mersey Docks and Harbour Company, Port of Liverpool Building, Pier Head, Liverpool L3 1BZ. *Tel:* (051) 200-2020. *Telex:* 627013 MDH G. *Contact:* Captain K. J. Lewis, Marine Operations Manager (*Tel:* (051) 700-2114).

LOCHMADDY: 57.36 N. 07.11 W.

PORT LIMITS: Lochmaddy Bay.

PILOTAGE: Pilot can be arranged if required. VHF Channels 16 and 12. Tel: 087 63 337/282/226.

ANCHORAGES: Available in Lochmaddy Bay.

RADIO: Skye Radio.

VHF: Lochmaddy Harbour on Channels 16 and 12.

RADAR: No radar service.

TUGS: None.

BERTHING: Length of berth 370 ft. (South Face). Depths alongside at LWS: East end 6.0 m., West end 4.5 m.

Length of berth 180 ft. (North Face). Depth alongside at LWS is 4.0 m.

CRANES: Available by arrangement. 10 ton lift.

BULK CARGO/SPECIALISED CARGO-HANDLING FACILITIES: None.

BRIDGES: None.

MEDICAL: Doctor and hospital available.

TANKERS: No facilities.

DENSITY: Salt water.

FUEL: Gas oil available. Tel. 087 94 238.

FIRE PRECAUTIONS: None.

CONSULS: None.

REPAIRS/DRY DOCKS/SURVEYORS: None.

GANGWAY/DECK WATCHMEN: Available if required.

HATCHES: Opening/closing carried out by crew.

AIRPORT: 20 miles to Benbecula Airport.

POLICE/AMBULANCE/FIRE: Police Tel: 087-63-328. Ambulance Tel: 087-63-324. Fire Tel: 0463-2222722.

SERVICES: None.

BANKS: Bank of Scotland Tel: 087-63-323 or 266.

SHORE LEAVE: Permitted.

IDENTIFICATION CARDS: Not required.

REGULATIONS: None.

SHIP SUPPLY SERVICE: Crew members, and essential stores can be transported between ship and shore at Lochmaddy by launch. Ships requiring such service should contact Harbour Office. VHF Channel 16 or Telephone 087-63-337 or 282, and at night 087-63-226.

DEVELOPMENTS: Ro/Ro to be fitted at West end of South Face berth in March 1986.

AUTHORITY: Western Isles Islands Council, Council Offices, Stornoway, Isle of Lewis.

Local Authority: The Port Manager, Harbour Office, Lochmaddy, Isle of North Uist. *Tel:* Office 087-63-337 and 087-63-282. After Hours 087-63-226. *Telex:* 777273. *Contact:* U.I.M. Robertson, Port Manager.

LONDON and Thames District: 51.30 N. 0.05 W.

(See Plan)

PORT LIMITS: The seaward limit means lines drawn from Lat. 51° 37′ 00″ N., Long. 00° 57′ 19″ E. (Foulness Point in the county of Essex) to Lat. 51° 46′ 05″ N., Long. 01° 20′ 32″ E. (Gunfleet old lighthouse) and thence to Lat. 51° 26′ 36″ N., Long. 01° 25′ 30″ E. and thence to Lat. 51° 24′ 55″ N., Long. 00° 54′ 21″ E. (Warden Point in the county of Kent).

An arrived ship is considered (subject to Charter Party terms) to have arrived when vessel is instructed to anchor at a designated anchorage, as ordered by the Port Authority, if berth where vessel's operations are to be carried out is not available. Otherwise when vessel is alongside. Usual anchorage for larger vessels is below Southend, which is allocated to vessels by the Port Authority.

DOCUMENTS:

1 copy of H.M. Customs and Excise form C.142 to be completed showing each crew members declaration as to the amount of cigarettes, tobacco, spirits, wine, radios, lighters, etc., belonging to them on board the ship to enable Customs to ascertain if in conformity or excess of requirements.

1 copy of IMO Crew List.

1 copy of List of Passengers on board, showing names, place of joining vessel, passport details.

Ship's Register to be available for inspection on arrival.

List of space occupied by cargo in unregistered spaces.

Chief Engineer's declaration as to the quantity of fuel carried in double bottom tanks.

Details of any livestock on board.

Ship's Stores declaration arrival Form C.14 to be completed.

Details of previous ports of call.

PILOTAGE: Pilotage by licensed Pilots in London Pilotage District is compulsory unless previous exemption is granted.

Vessels approaching from South enter the pilotage area off Folkestone Harbour, position (Lat. 51° 04′ 37″ N., Long. 01° 11′ 21″ E.).

Vessels approaching from the North collect the Pilot at Sunk Pilot Vessel which operates out of Harwich.

Radio Communication – General: The maximum range for radio messages is about 20 miles for VHF. The shore Pilot stations and shore based fast launches operate on VHF only.

Attempts to establish communication at extreme ranges cause much unnecessary interference. The first estimated time of arrival should be sent through a Post Office Coast Station giving at least 1 hours' notice of the ETA. Anything less than 1 hour's notice *must* involve ships in delay. The maximum range for MF radio messages is about 50 miles.

Ships should if possible remain in direct contact with the pilot launch or pilot vessel on their approach, as this facilitates shipping the Pilot.

SUNK PILOT STATION

The Sunk Pilot vessel is a fast launch operating out of Harwich. It provides Pilots for ships heading for the Port of London and other ports in the London Pilotage District, and disembark Pilots from outward bound ships.

The attention of Masters is drawn to the requirement of providing a satisfactory lee for the pilot launch.

Contact procedure:– See "Harwich".

The attention of Masters of VLCCs is drawn to the special arrangements for Pilot boarding described below:–

VLCCs requiring a Pilot at the Sunk Station should give the Pilot vessel 8 hours' in advance and through a Post Office Station or the Harwich Pilot Station, their ETA, g.r.t. and Port of Destination. Confirmation of ETA should be given at least 3 hours before arrival. Anything less than 3 hours' notice will involve ships in delay.

Pilot Boarding Arrangements for VLCCs:–

The Masters of all VLCCs requiring a Pilot at the Sunk Pilot Station are requested to comply with the following directions so as to ensure that the boarding operation can be carried out with the minimum inconvenience to the ship and the optium safety.

The Master of the VLCC should establish voice contact with Harwich at the earliest possible time.

Harwich will advise the Master:–

(a) The position in which the Pilot will board and the time of boarding.

(b) The mode in which the Pilot will board, i.e. with the VLCC at anchor or under way. If under way then the speed ordered should be minimal consistent with maintaining steerage way.

In the interests of safe boarding of the Pilot, the VLCC should not proceed inwards of the agreed boarding position.

Vessels bound for the Thames from Rotterdam or ports North of Rotterdam may embark their Pilot at the previous port. Vessels requesting this facility should contact Harwich Pilots, telephone Harwich (02555) 3129 or 6300, telex Pilots Harwich 98472, giving as much notice as possible, stating name and draft of vessel, port and terminal of embarkation, ETD, and whether or not North Sea pilotage is required.

FOLKESTONE PILOT STATION

Pilot launches, with black hulls and white wheelhouses and flying the pilot flag, operate from a shore station at Folkestone to provide Pilots for ships making the port of London and other ports in the London Pilotage District and to disembark Pilots from outward bound ships. The conspicuous building is 77 ft. high and flies a pilot flag by day; by night it displays an illuminated sign with the word "Pilots". The launches normally ship and land Pilots in a position 225° distant 1 mile from Folkestone Pier Light in fine weather but farther off in bad weather.

A shore VHF station is maintained at Folkestone (Lat. 51° 04′ 37″ N., Long. 01° 11′ 26″ E.), and all requests to ship and land Pilots off Folkestone should be made to it.

Ships requiring a Pilot at the Folkestone Station should give the shore station, 12 hours in advance and through a Post Office Coast Station, their estimated time of arrival, gross tonnage, maximum draft and port of destination. Any adjustment to this time should be given at least 2 hours before arrival. The message should be addressed to "Pilots Folkestone".

The following Channels are in use by Folkestone Shore VHF station (call sign "Folkestone Pilots Radio"):

Channel 16 (Calling): A 24 hour listening watch is kept on this Channel, and ships should make contact on it.

Channel 9 (Working): After initial contact has been made on Channel 16, a transfer should be made to Channel 9 for the exchange of operational messages. It is stressed that the shore station has no other working frequency and that ships wishing to communicate with it must have Channel 9 fitted.

Masters of ships approaching Folkestone are advised to maintain a listening watch on Channel 16 so that they can receive any messages for their ships from the pilot station.

Masters are warned that it is difficult to receive VHF signals from Folkestone when their ships are to the Westward of Dungeness owing to the presence of very large buildings.

The station is manned by a duty Pilot and is equipped with telex, telephone, radar and a daylight signalling lamp. The communications details are:

Tel. Folkestone (code 0303) 56766.
Telex 96381, Pilots Folkestn.
Telegraphic address "Pilots Folkestone".

Ships without VHF should send any amendment of their ETA in sufficient time to allow its delivery through the Post Office telex network. Ships without VHF should also establish their identity by visual means during their final approach.

If requested Folkestone Station Pilots may also be embarked off Brixham 1.5 miles N.E. of Berry Head in position Lat. 50° 24′ N., Long. 03° 27′ W., or off Cherbourg at buoy "CH I" in position Lat. 49° 43′ N., Long. 01° 40′ W. 24 hours notice is required by Folkestone Pilot Station for picking up at Brixham, and 36 hours for Cherbourg.

Should a deep drafted vessel not wish to approach too closely to the Folkestone Pilot Station, then the pilot cutter will meet the vessel 1 mile to the S.E. of the East Road port red can lighted buoy, Gp. Fl. 4 red every 15 seconds, which is moored about 4.75 miles N.E. of Dungeness in position Lat. 50° 58′ 18″ N., Long. 01° 03′ 48″ E.

N.E. SPIT.

Ships bound to or from ports between Amsterdam and Dieppe inclusive may land or ship their Pilots by means of a pilot launch which operates as required, but does not cruise, in the vicinity of the N.E. Spit Buoy, but it is emphasised that ships from beyond these 2 ports or bound to ports beyond them are required to ship or land their Pilots at the Sunk or Folkestone Pilot Stations.

A shore VHF station operates from North Foreland Lighthouse (Lat. 51° 22′ 27″ N., Long. 01° 26′ 49″ E.) which is linked by land-line to the pilot station at Folkestone. The call sign is "North East Spit Pilots Radio" and the only Channel available is Channel 9. A 24 hour listening watch is kept on this Channel.

Advance notification of ships requiring services of a Pilot at the N.E. Spit should be given 6 hours beforehand through a Post Office Coast Station, addressed "Pilots Folkestone", or by telephone to Folkestone (code 0303) 56766 or telex 96381.

"North East Spit Pilots Radio" should then be contacted when within VHF range.

Communication with North East Spit pilot launch may be made on Channel 9 VHF. A ship about to ship or land her Pilot should keep in radio contact with the pilot launch.

Ships without VHF should send their ETA or any subsequent amendment in sufficient time to allow its delivery through the Post Office telex network.

The N.E. Spit Pilot will board vessels between the "Elbow Buoy" and the "N.E. Spit Buoy", depending on weather, from a fast launch which is based in Ramsgate Harbour.

RIVER MEDWAY

Messages for the Medway Pilots may be passed through the launches of the Medway Ports Authority, call sign "Medway Patrol". They keep a continuous watch on 2,182 kHz.

Ships bound for the River Medway are requested to call on 2,182 kHz., when 20 – 30 miles from Sheerness, stating their estimated time of arrival, requirements and draft. When contact has been made on 2,182 kHz ships should transfer to 2,241, 2,246 or 2,301 kHz or other licensed intership frequency for passing messages. Ships may also call the Medway Port Operations Service, call sign Medway Radio, when within 20 miles of Sheerness, on VHF Channel 16, transferring to Channel 14 for passing messages.

RIVER THAMES

Sea Pilot leaves vessel at Gravesend when River Pilot boards for final river passage.

PROCEDURE FOR OBTAINING THE SERVICES OF A LICENSED TRINITY HOUSE CHANNEL PILOT.

Ships outward bound from above Gravesend: Masters are requested to give advance notice of estimated time of arrival at Gravesend. Masters of ships fitted with VHF may pass this information direct to Gravesend Radio on the appropriate Port Operations Channel.

Channel Pilots for outward-bound ships are obtainable only from the Royal Terrace Pier, Gravesend, from where they board ships by means of black-painted pilot vessels flying the pilot flag, in response to the statutory signals or a VHF message to Gravesend Radio. In thick or foggy weather 1 prolonged blast followed by 4 short blasts should be sounded by means of a whistle or fog horn or a VHF message should be sent to Gravesend Radio.

In addition to the above, the following signals should be displayed:

Ship's gross registered tonnage	*By day* *International Code pendant*	*By night* *White lights*
Not exceeding 2,000	—	1 over the starboard bow
Exceeding 2,000 but not exceeding 6,000	3	1 over the bridge
Exceeding 6,000 but not exceeding 12,000	2	1 over the starboard bow and 1 over the bridge
Exceeding 12,000	1	1 over the starboard bow

Ships outward bound from below Gravesend or shifting between the Nore or Sheerness and Gravesend: When the services of a Channel Pilot are required for shifting a ship inwards between the Nore and Sheerness and Gravesend, or for conducting a ship outwards from below Gravesend, a telephone message should be sent to the Channel Pilots, tel. Gravesend (0474) 3619, stating Name of ship. Time and place at which Pilot is required to join ship. Where bound, Ship's gross tonnage. Ship's draft.

It is particularly stressed that the Pilot must be given adequate time to travel from Gravesend to the ship for her time of sailing, and that allowance must be made for the slowness of night travel and the inaccessibility of some wharves and moorings.

PROCEDURE FOR OBTAINING THE SERVICES OF A LICENSED TRINITY HOUSE RIVER THAMES PILOT.

Duty Pilot: A Trinity House River Thames Duty Pilot is available in the Information Room at the Gravesend pilot station. He can be contacted by telex (Pilot Gravesend 96444) or by telephone Gravesend (0474) 67716/7. Among his duties is the provision of information to Shipowners and Agents, and the Duty Pilot will be pleased to give advice and guidance on the pilotage of ships in the River. The Duty Pilot is in continuous touch with the Duty Officer of the Thames Navigation Service.

Ships outward bound or shifting: When the services of a Trinity House River Thames Pilot are required for piloting a ship down river to Gravesend, or for shifting a ship in the river above Gravesend, a telex message should be sent to Pilot Gravesend 96444. If the message cannot be passed by telex the same information should be given by telephoning Gravesend (0474) 67716/7.

The telex message must start with the word "Pilot" to show that it is an order for a Pilot, and to be consistent with other information now received at the pilot station by telex, should be in the following form:

1. *Order for Pilot.* The word "Pilot" should be used to show that it is an order for a Trinity House Pilot rather than general information on expected movement. This should be on a separate line from the other information.
2. *Time Pilot required.* This should be expressed as a time on the 24-hour clock followed by a date, e.g. 1035/15 or 2215/16.
3. *Ship's Name.*
4. *Draft.* This should be given in feet.
5. *Berth where lying.* If a shift is required the shift should be shown as "FM Smiths WHF to Jones WHF". If one location is given this is the place where the ship is lying and where the Pilot is required. The abbreviation FM (From) should precede the place where the ship is lying in all messages.
6. *Route or where is bound.* This should state N., S., or E. to show where ship is bound, i.e. N. for ships outward bound to the North, S. for ships outward bound to the South, and E. for ships outward bound to near continental ports between Amsterdam and Dieppe. If an outward Channel pilot is required the letter "P" should be added so that it reads NP, SP or EP.
7. *Name of Owner or Agent.*

The message should start with the heading of "Pilot" and should continue as follows:

Time	*Ship*	*Draft*	*Berth*	*Route*	*Agent*
2030/15	*Tasman*	13	FM Robinsons WHF	S	E. Wright
0010/16	*British Isles*	18.5	FM Hightown Tier	NP	Despatch Co.
0830/17	*Nicola*	14	FM Black Bys to Spring WHF		Noel S.S. Co.

It is particularly stressed that the Pilot must be given adequate time to travel from Gravesend to the ship for her time of sailing, and that allowance must be made for the slowness of night travel and the inaccessibility of some wharves and moorings. Normally a minimum of 3 hours is required.

Inward bound ships: It is most important that all inward bound ships notify their estimated time of arrival at Gravesend and keep this information up to date. An estimated time of arrival should be given by using the Post Office public correspondence service through North Foreland Radio at least 3 hours before arrival at Gravesend and preferably immediately after the embarkation of the Sea Pilot. When in VHF range this information may be passed direct to Gravesend Radio on the appropriate port operations channel. In addition the following supplementary information should be communicated: draft, and, if known, berth and name of Agents.

Trinity House River Thames Pilots for inward-bound ships are obtainable only from the Royal Terrace Pier, Gravesend, from where they board ships, by means of black-painted pilot vessels flying the pilot flag, in response to the statutory signals or a VHF message to Gravesend Radio. In thick or foggy weather the letter "G" in Morse code should be sounded by means of a whistle or fog horn or a VHF message should be sent to Gravesend Radio.

Table of Abbreviations: Abbreviations used in this notice are:

FM=From. WHF=Wharf. N=The route of an outward ship is to the North. S=The route of an outward ship is to the South. E=The route of an outward ship is to near continental port between Amsterdam and Dieppe. NP=The route of an outward ship is to the North and she requires a Channel Pilot. SP=The route of an outward ship is to the South and she requires a Channel Pilot. EP=The route of an outward ship is to the East and she requires a Channel Pilot. Bys=Buoys.

Pilot Ladders: Instances of the use of unsatisfactory and unsafe pilot ladders continue to be reported by Trinity House Pilots.

Faulty ladders endanger the lives of Pilots.

Instructions have been issued to all Trinity House Pilots to report immediately any pilot ladders which do not comply strictly with the provisions of the Merchant Shipping (Pilot Ladders) Rules 1965, the Merchant Shipping (Pilot Ladders) (Amendment) Rules 1971 and the Merchant Shipping (Pilot Ladders) (Amendment) Rules 1972.

Masters of ships are reminded of their obligation to comply with the statutory rules and are requested also to comply with the following Trinity House recommendations, ensuring that:

1. The Officer responsible for the embarkation and disembarkation of the Pilot is a Watch-keeping Deck Officer.
2. The ladder is in one length and does not consist of two or more lengths shackled or lashed together.
3. The ladder is secure.
4. The ladder is used solely for embarking and disembarking Pilots.
5. A light is provided so that the pilot ladder overside and also the position where the Pilot boards the ship is adequately lit.
6. The ladder is clean and free from oil and grease.
7. Means are provided to enable the Pilot to pass safely and conveniently from the head of the ladder into the ship or on to the ship's deck. Where portable stanchions and accompanying bulwark step ladders are used for this purpose, the portable stanchions *must* be rigidly secured to the ship's structure against being unshipped and supported at not less than 2 points to prevent lateral movement, and the bulwark step ladder should also be independently attached and firmly secured. The stanchions should be of reasonable height and adequately capped to allow firm grip. *Under no circumstances should a stanchion or handrail be attached to the bulwark step ladder.*
8. The ladder is in good condition and its treads remain horizontal. The treads are to have a rough upper surface.
9. The length of the ladder does not exceed 30 ft. Whenever the distance from sea level to a point of access to the ship is more than 30 ft., access from the pilot ladder to the ship must be by means of an accommodation ladder or other equally safe and convenient means.
10. The ladder is rigged so that each step rests firmly against the ship's side.
11. Spreaders are provided not more than 10 ft. apart to prevent the ladder twisting.
12. 2 manropes and a safety line are provided; and a lifebuoy with self-igniting light is available.
13. The ladder is rigged well clear of discharges and water outlets, and at a place where most lee can be given to the Pilot Vessel.
14. Where a pilot hoist is used a ladder must be at hand ready for use in case the hoist fails.

The Masters of small, "all-aft" ships, in which the main deck is frequently awash when a Pilot is being shipped or landed, or of any type of ship in which the bulwark rails are below the deck of the pilot vessel coming alongside, are asked to provide a boarding platform on each side of the forward end of the raised quarter deck and on the same level as that deck.

The platform should be easily accessible from the quarter deck and should have adequate handrails, those on the outboard side being portable. Fittings should also be provided for the rigging of a pilot ladder. When a pilot ladder is rigged from a boarding platform the top rung of the ladder should not be less than 12 in. nor more than 15 in. below the level of the platform. The top of the ladder should be secured at least 3 ft. 6 in. above the platform in such a way as to make a safe handhold for the Pilot entering or leaving the platform.

If a pilot ladder is unsafe a Pilot may refuse to board, thus delaying the ship. If the ladder is unsatisfactory for boarding the Master of that ship renders himself liable to a fine of double the amount of the pilotage dues involved, for failure to comply with the Pilotage Act 1913; and if the ladder does not meet the statutory requirements, the Master renders himself liable to a fine not exceeding £50 in accordance with the Merchant Shipping Act 1984.

RESTRICTIONS: Certain restrictions are placed on the navigation of vessels carrying petroleum, chemicals, explosives and other hazardous commodities.

Vessels which are carrying any of the above mentioned cargoes should call Gravesend for details of these restrictions and ascertain whether it is permitted for them to navigate.

Notwithstanding any of the aforementioned restrictions, all vessels should comply with the "General Directions for Navigation in the Port of London 1975". (Copies obtained from the Harbour Master, Port of London Authority, Thames House, Tilbury Docks, Essex RM18 7JH.)

The tides at London Bridge have a range of 4.6 m. at Mean Neaps and 6.6 m. at Mean Springs.

The sea approach to Shellhaven is dredged to allow the passage of vessels to 13.7 m. at Mean Neap tides. The depth to Gravesend Reach is about 7.9 m. to 8.1 m. below LAT.

THAMES NAVIGATION SERVICE:

Thames Navigation Centre: (Call sign "Gravesend Radio") is the main operations centre for traffic information within the Port of London Authority area of jurisdiction. All information required by the Authority regarding ETAs and ETDs, etc., should be passed to this Centre. It also deals with matters concerning moorings in the River and enquiries concerning Byelaws, regulations and shipping information.

Communications: VHF radio: Channels 16, 12, 18, 20. Telephone: Gravesend 60311 & 357724. Telex: 262880 Platns G. Facsimile: Group 3. Gravesend 352996.

Radar coverage and area of responsibility: From Crayfordness to the sea.

Tidal Information: Information on tidal heights from gauges at Walton, Margate, Shivering Sands, Southend and Tilbury is available on request.

Procedures: All vessels must report to this station on entering the Port Limits inward bound or when leaving a berth within the area of responsibility outward bound or when moving from one berth to another. It is also a requirement to report the vessel's progress at the "reporting points" indicated on the Admiralty Charts of the area. Regular half-hourly broadcasts of navigational information are made on VHF Channel 12 on the hour and 10 minutes past the hour.

Thames Barrier Navigation Centre: (Call sign "Woolwich Radio") is a sub-centre to the Thames Navigation Centre with particular responsibility for controlling navigation through the Thames Flood Barrier.

Communications: VHF Radio Channels 16, 14, 22. Telephone: 01-855 0315. Telex: 896157 Plabar G.

Radar coverage and area of responsibility: Radar from Crayfordness to Greenwich. Area of responsibility from Crayfordness to Teddington.

Tidal Information: Tidal information from a gauge at North Woolwich is available on request. (Note: It is expected that gauges at London Bridge and Erith will be commissioned in 1987).

Procedures: All vessels navigating in the area of responsibility must inform this station of their intention to do so and maintain a listening watch on VHF radio. Progress reports should be made at the "reporting points" indicated on the Admiralty Charts. Special regulations are in existence for navigating through the Thames Flood Barrier and the Barrier Control Zone (Margaretness to Blackwall Point). See Port of London Notice to Mariners – No. 3 of 1986.

Tilbury Dock: All vessels wishing to enter or leave Tilbury Dock must book a time with the Lock Co-ordinator. Telephone Number Tilbury 79677. The Lock Co-ordinator also deals with enquiries for dock tugs, dummy pontoons, floating crane and other services for vessels in the Dock.

Patrol Service: A 24-hour patrol service is maintained by the Authority whose launches can be contacted on VHF radio (Call sign "Thames Patrol") on VHF Channels 16, 12, 14 and 6. They can also be contacted through Gravesend or Woolwich Radios.

General: The Thames Navigation Service maintains close liaison with Owners, Agents, Pilots, Watermen, Port Health, Customs and Excise and all the Emergency Services. It is available to give help and advice on any matters affecting ships and shipping.

ANCHORAGES: Great Nore and Little Nore anchorages allocated by Medway Port Operations, all other anchorages allocated by the Thames Navigation Service dependent upon the size and draft of vessel, the length of stay required at the anchorage and the specific details of the vessel, i.e. explosives, petroleum, etc.

Explosives anchorage at Chapman Anchorage for discharging/loading to/ex barge to/from appointed river wharves.

MAX. SIZE: Tankers:

Berth	*Depth at low water*	*Length*
Coryton	14.0 m. maximum	1,100 ft.
Shellhaven	14.6 m. maximum	1,200 ft.
Holehaven	11.2 m. maximum	720 ft.
Purfleet	8.6 m. – 11.2 m. maximum	700 ft.
Grays	11.2 m. maximum	620-750 ft.

Other river and tanker berths restrictions apply according to tides and berth.

Passage for deep-draft tankers for berthing at Shellhaven is sometimes over a period of 2 tides. Passage on the first tide to deep water anchorage, vessel to leave anchorage on make of second tide and arrive off the installation half an hour before HW of this tide.

TUGS: Tugs usually pick up vessels for Shellhaven and Holehaven in reaches approaching berth, or Gravesend for berths/docks up river. Tugs and lines can be hired from Alexandra Towing Co. (London) Ltd., Alexandra House, Royal Pier Road, Gravesend, Kent. Tel: (0474) 534227.

P.L.A. provide a towage service within the enclosed docks.

BERTHING:

Cargo Berths: The Port of London Authority operates one enclosed dock system at Tilbury Docks.

Specialist and general purpose facilities for handling general cargo, rolling cargo, forest products, latex, grain, unitised cargo/containers and passengers are provided at Tilbury Docks in Essex. Bulk wine and spirits are handled at Phoenix Wharf, Rainham, Essex.

Port of London Authority:

PLA facilities are managed in three divisions: Containers, Conventional and Grain.

Depths of water shown for berths in the enclosed docks and on the river are the authorised depths to which the berths may be dredged. Actual depths may be less than the authorised depth and the advice of the PLA or tenants Operating Manager should be sought if necessary.

Berth	*No. of Berths*	*Length (ft.)*	*Depth (ft.)*	*Equipment*	*Remarks*
TILBURY DOCKS:					
Entrance lock dimensions: Length 1,000 ft. (305 m.). Width 110 ft. (33.5 m.). Depth 45.5 ft. (13.9 m.).					
Access to berths (except the Grain Terminal, Northfleet Hope Container Terminal, cargo and repair jetties, riverside Ro/Ro terminal and passenger landing stage) is gained through an entrance lock.					
Northfleet Hope Terminal	1 (in dock) 1 (in river)	850 1,000	35.0 41.0 (MLWS)	2 container cranes 45 tonnes (in dock), 2 container cranes 35 tonnes (riverside), straddle carriers, tractors and trailers.	OCL/ACT and partners. Container services. Accommodation for 5,500 containers at any one time (inc. 1,464 reefers). Operation: 24 hours per day, 7 days a week.
PLA Container Terminal	3	2,540	38.0	4 container cranes 30 tonnes, van carriers, tractors and trailers, forklift trucks.	(Container Division). Containers to and from cellular and purpose built lift-on/lift-off all container or semi-container vessels. Electrical reefer points. Floating cranes for uncontainerisable cargo. Operation: 24 hours per day, 7 days a week.
22/26 Berth	4	2,200	38.0		Ro/Ro and self sustaining container vessels.
42 Berth (Tilbury) Ltd.	1/2	700	38.0	130 tonne mobile. Heavy duty forklift trucks, tractors and 35 tonne trailers. 45 ton quay cranes.	Forest products.
PLA General Purpose Berths	14	8,900	up to 38.0	225 tonne quay cranes, forklift trucks, mobile cranes, van carriers, tractor/trailer units, 180 tonne mobile, 136 tonne land based and up to 120 tonne floating heavy lift cranes, 1 container crane 30 tonnes.	(Conventional Division). Conventional, Ro/Ro and unitised general import and export cargoes. Containers to and from semi-container/Ro/Ro vessels. Forest products. Heavy lifts. Scrap metal.
PLA Riverside Ro/Ro Terminal	1	Ship length up to 500 ft.	20.0 (MLWS)	Tractors	(Conventional Division). Ro/Ro. Suitable for bow or stern ramp vessels.
Tilbury Passenger Landing Stage	1/2	Ship length up to 740 ft.	Dredged to 10 m. below datum	2 covered gangways.	(Conventional Division). Embarkation and disembarkation of passengers for ships, hovercraft, hydrofoils and launches and Tilbury/Gravesend local ferry.
Seaboard Pioneer Terminal Ltd.	1	870	38.0	Forklift trucks, tractors, trailers.	Forest products.
Svenska Terminal in London Ltd.	1	750	38.0	Straddle carriers, forklift trucks, trailers, tractors.	Forest products and Ro/Ro cargo.
West Africa Terminal Ltd.	5 (ship) 2 (barge)	2,700 100 ft. each	31.0	9 quay cranes 10 tonnes, 2 quay cranes 15 tonnes, 5 mobile cranes 15 tonnes, 2 mobile cranes 35 tonnes, light and heavy duty forklift trucks, tractors and trailers.	(Conventional Division). Cargo to and from West Africa and North America, conventional general cargo, forest products, including logs, containers and Ro/Ro.
PLA Tilbury Grain Terminal	1 Deep Sea 1 Short Sea 6 barge berths 1 Coaster discharge berth	900 230	42.0 (MLWS)	21,000 tonnes per hour marine leg elevator towers, coaster and barge loading points, 2200 tonnes per hour pneumatic elevators (coastal jetty). Silo capacity 100,000 tons. Export vessels now handled. 30,000 tonnes on outer jetty and 10,000 tonnes on inner jetty.	(Grain Division). Terminal has direct feed by conveyor to 4 adjacent privately-owned mills: Allied Mills Ltd., Rank Hovis Ltd., Spillers French Milling Ltd., Cargill Albion Ltd. Laing National Ltd.

(Berthing continued)
Private Wharfingers:

Berth/Wharf Name	*No. of Berths*	*Length (ft.)*	*Depth (ft.)*	*Equipment*	*Remarks*
Bridge Wharf (Bow Creek)	7 (barges)	270-290	15.0 (MHWS)	Up to 20 tonnes, mobile.	Metals of all descriptions and bulk ore by grabs.
Bridges Wharf (Battersea)	1	225	13.0 (MHWS) Dries at LW	3 cranes up to 10 tons.	Handling and storage of inflammable and hazardous chemical products etc.
Convoys Wharf	1	800	18.0 (MLWS)	62 tonnes.	Newsprint, forestry products and general cargo. Operators of nationwide warehousing and transport interests.
	1	410	23.0 (MLWS)	Ro/Ro pontoon.	
Dartford International Ferry Terminal	2	200 m. (downstream) 150 m. (upstream)	36 (LLW)	8 tug units.	2 Ro/Ro berths (bow, stern or quarter ramp) 22 acres hardstanding. 4,260 sq.ft. transit shed.
Denton Wharf	3	260-600	34.0 (MHWS)	113 – 30 tonnes. 230 tonne container park gantries.	Discharge and loading of all types of conventional cargo and containers to and from ships and barges. Groupage service. Licensed for handling explosives.
Erith Deep Wharf	1 (ship) 2 (barges)	600 600	21.0 (MLWS)	46.5 – 7.5 tonnes. 24.5 tonnes.	Direct handling ship/road transport or ship/warehouse. Handling of forestry products. Lash/Seebee barges.
Imperial Wharf	1	300	26.0	35 tonnes.	Forest products.
The London Steel Terminal	2	295	16.4 (MHWS)	3 cranes up to 30 tonnes.	Handling of steel using electro-mechanical grabs for steel coils. All operations including shipwork carried out under cantilevered roof providing all weather working. Container services.
Lovells Wharf	1	280	18.0 (MHWS)	3 cranes up to 20 tonnes.	Steel and other metals (London Metal Exchange approved warehouse).
Mast Pond Wharf	1	220	16.5 (MHWS)	15 tonne, mobile.	Bulk handling, overside or direct delivery.
Mulberry Wharf	1	225	17.0 (MHWS)	15 tonne mobile, 12.5 tonne fixed.	Bulk handling, overseas and direct delivery.
Phoenix Wharf	2	625-800 (floating jetty)	20.0 (MLWS)	5 cranes up to 30 tonnes. (8 – 10 tonnes ex-ships hold).	Forest products in all forms, steel, fertilisers and bulk cargoes, empty containers. Bulk wine and spirits.
	1 (Ro-Ro Berth)	450	16.0 (MLWS)	3 tugmasters.	For continental ferry service and Import/Export of motor vehicles.
Pinns & Limmer Wharves	3-4	850	18.0 (MHWS)	450 tonnes. (30 tonnes on ships).	Bulk materials, heavy lifts and unitised cargoes.
Purfleet Deep Wharf	2	1,000	27.5 (MLWS)	7 (jetty)5 – 6 tonnes. 2 (shoreside)40 tonnes.	Equipped with modern floating Ro/Ro berth. Handling of forestry products and general cargo.
Tower Wharf	3	300-650	36.0 (MLWS)	11 cranes up to 5 tonnes (Quay). 4 cranes up to 22 tonnes (Shore).	All cargo except bulk.
Victoria Deep Water Terminal	2	850	22.0 (MLWS)	35 – 32 tonnes. 230-40 tonne container gantries.	Container unit loads and groupage.
	1	350	15.0 (MHWS)	130 tonne transtainer container park gantry.	

The depths quoted are to be taken as approximate only. For detailed information contact the wharf operator or Thames Navigation Service.

TANKERS: (Also see "Notices"). There are about 40 berths for tankers in the Thames District, main terminals of which are listed below. Recommended that Masters cable terminal with discharge manifold size, enabling wharf have correct pipes ready. Slop tanks are available at most wharves.

Company	*No. of Berths*	*Length* **(ft.)	*Depth* **(ft.)	*Remarks*
BP (Northfleet)	1	170.0	—	Able to handle vessels 3,000 d.w.t. High and low flash point products. Storage capacity 20,000 tons.
BP (Fulham)	1	—	—	Lube oil, gas oil and spirits.
Esso (Purfleet) No. 1	1	Max. LOA 628	26.5 (LWS)	Max. size 28,000 d.w.t. Products handled: F.O., G.O., D.O., kero, gasoline. 410 in. (clean products); 210 in. (fuel oil). Max. pressure 150 psi.
Esso (Purfleet) No. 2	1	Max. LOA 628	26.5 (LWS)	Max. size 18,000 d.w.t. Products handled: F.O., lube oil, G.O., kero. 36 in. (lube oil); 26/8/10 in. (fuel oil); Max. pressure 150 psi. Total capacity (Berth Nos. 1-2): White oils 187,000 tons. Fuel oil 126,000 tons. Lube oil 39,000 tons.
Mobil* (Coryton) No. 1	1	Max. LOA 650	Max. draft 33 (MLW)	Max. displacement 40,000 tons. Products handled: L.P.G., gas oil, lube oil, fuel oil, gasoline.
Mobil* (Coryton) No. 2	1	—	Max. draft 18 (MLW)	Coaster berth, max. displacement 2,000 tons. Products handled: Same as No. 1 berth (excluding L.P.G.).
Mobil* (Coryton) No. 3	1	Max. LOA 900	Max. draft 44 (MLW)	Max. displacement 100,000 tons. Products handled: Crude and fuel oil (3,000 t.p.h.), gas oil (2,000 t.p.h.), gasoline (1,000 t.p.h.), products (350-500 t.p.h.). Other products handled: Diesel oil, naphtha and Av. Tur.
Mobil* (Coryton) No. 4	1	Max. LOA 1,200	Max. draft 45 (MLW)	Max. displacement 230,000 tons (320,000 d.w.t. with part load). Crude oil only handled. 416 in. steel arms. Rate 3,500 t.p.h. each arm.
Mobil* (Coryton) No. 5	1	Max. LOA 200 m. Max. draft 37 ft.	Depth 43 (MLW)	Max. displacement 40,000 tons. 410 in. arms for loading/discharging fuel oil, gasoline and gas oil (rate 2,000 t.p.h.). 110 in. arm for receiving refrigerated butane.
Conoco Ltd.	1	256 Max. LOA 625 ft.	44.0 (MHWS)	White oils, capacity 70,000 tonnes.
F. T. Everard & Sons Kent Ltd.	Globe Wharf	450	16.0 (LWS)	Vegetable and edible oils. White oils including motor spirit. Chemicals and other low flash liquids. Fuel oils.
	Deep Water Jetty	300	16.0 (LWS)	Storage capacity: 40,735 water tons in 63 tanks.
London & Coastal Oil Wharves Ltd.	1	720	36.0 (average low water)	Hydrocarbon oils. Chemical and other low flash liquids. Vegetable and edible oils. Storage capacity: 200,000 cu.m. (27 cu.m. to 9,860 cu.m. capacity tanks).
Murco Petroleum Ltd.	2	730	37.0 (MLWS)	Motor spirit, distillates. Storage capacity: 52,000 tonnes motor spirit. 10,870 tonnes distillates. Shares Blue Circle Industries Ltd.'s Wouldham Jetties with Unitank Storage Company Ltd.
P.D. Oil & Chemical Storage Ltd.	7	840	34.0 (MLWS)	Hydrocarbon oils and all chemicals. Total storage capacity: 423,000 cu.m. Oil storage capacity: 365,000 cu.m. Chemical storage capacity: 58,000 cu.m. (50 cu.m. to 15,000 cu.m. capacity tanks).
Tate & Lyle Feeds Ltd.	1	100-200	25.0 (MHWS)	Hydrocarbon oils, some chemicals, molasses. Storage capacity: 21,000 water tons of bulk liquid storage tanks (260-3,700 tons water capacity).
Thames Matex (West Thurrock)	3	750	34.0 (MLWS)	Hydrocarbon oils, chemicals, vegetable oils. Storage capacity: 352,000 cu.m. (125 tanks-200 cu.m. to 10,000 cu.m. capacity).
Thames Terminal Ltd.	1 (ship) 2 (barge)	750	34.0 (MLWS)	High and low flash petro-chemicals, edible and mineral oils, fuel oils. Storage capacity: 160,000 cu.m. for fuel oil, gas oil, lubricating oil and kerosene. 40,000 cu.m. for chemicals, edible oils, etc.
Unitank Storage Co. Ltd.	2	750	37.0 (MLWS)	High and low flash petroleum, some chemicals. Storage capacity: 310,000 cu.m. in 52 mild steel tanks (1,700 cu.m.-20,800 cu.m. capacity). Shares Blue Circle Industries Ltd.'s Wouldham Jetties with Murco Petroleum Ltd.
Shell (Shell Haven) "A"	1	Max. LOA 259.1 m.	†12.5 m.	Deadweight unlimited. Size of vessel limited to 20,000 s.d.w.t. when height of HW exceeds 5.8 m. (due to strength of tide). When VLCC on "B" jetty, size of vessel not to exceed 40,000 s.d.w.t. When 100,000 d.w.t. vessel on "B", largest on "A" not to exceed 70,000 s.d.w.t. Berth to be vacant when VLCC berthing at "B". 16 in. (L.P.G.).
Shell (Shell Haven) "B"	1	Max. LOA 320.0 m.	†14.6 m.	Deadweight unlimited. VLCCs and other large crude carriers berth head down river at slack HW. Products handled: Crude oil, fuel oil, unleaded white oils, leaded white oils (discharge only), aviation spirit. 410 in. and 48 in. (white oils and fuel oil). 410 in. and 416 in. (crude).
Shell (Shell Haven) "C"	1	Max. LOA 237.7 m.	†10.4 m.	Max. d.w.t. 55,000 tons. Import/export white and black oils. 410 in.
Shell (Shell Haven) "E"	1	Max. LOA 182.9 m.	†8.8 m.	Max. displacement 25,000 tons. Chemical import/export, lube oil import. 56 in.
Shell (Shell Haven) "G"	5	No LOA restriction	(outer) †8.0 m. (inner) †4.0 m.	(Outside) No. 1 and 2 berth. Max. size 3,000 s.d.w.t. (Inside) Nos. 3, 4 and 5 berths. Max. size 1,000 s.d.w.t. Coastal jetty for export of white and black oils. (Outer) 68 in. (Inner) 56 in.
Texaco (Canvey Island)	1	Max. LOA 580 ft.	Depth (subject to dredging) 40 ft. Max. draft 32 ft.	Products handled: Gasoline, gas oil, diesel, kerosine, jet fuel. Pumping rates into barges, 200-250 t.p.h. with max. pressure 100 p.s.i. Discharge rate 400-1,500 t.p.h.

Other Wharves: In addition to the above some manufacturing and service industries have their own riverside premises with ship berths. Thames Navigation Service will assist with information. Otherwise contact Waterside Manufacturers and Associated Industries. Tel: 01-481 3681.

*Bunkers available at all berths. Fresh water not available. **Unless otherwise stated †Designed datum (All berths subject to siltation).

††Tank cleaning is permitted when back loading operations are to take place. Tank cleaning for other purposes may take place only after agreement from the Terminal.

Dirty ballast separator system allows a cumulative rate of 1,500 cu.m./hr. from all jetties. No waxy material, chemicals or chemical additive is accepted.

Vessels should arrive with minimum possible ballast commensurate with safe handling of vessel.

TANKERS (Continued):

Shell – Shellhaven: *Cautionary Advice:* Shellhaven Terminal is situated on the concave side of a bend in the river and, as a consequence, the tide does not run parallel to the berths. There is a strong outflow of tide from behind "A" and "B" (the VLCC berth) during the ebb.

When swinging off the terminal before berthing or (for smaller ships) on sailing, due allowance must be made for the run of the tide and a close watch kept on passing traffic. Before a VLCC is berthed on Berth B the adjacent berths A and C should be vacant or occupied by small craft.

Berthing Masters: All vessels of 11,500 g.r.t. and over, bound for oil jetties in the Shellhaven area are required to employ the services of a Berthing Master. (Drawn from senior Trinity House Pilots). The Berthing Master will normally board the vessel from one of the berthing tugs.

Berthing Procedures: Deep draft ships (over 12 m.) are swung before berthing and should, therefore, arrive off the berths on a flood tide. Other ships berth heading up or down river according to the tidal direction at the time of arrival (always head to tide).

Tugs are made fast off No. 2 Sea Reach Buoy. Ships are swung off the berth with due allowance for the set of the tide being made. Extreme care should be exercised in selecting the precise swinging position as the flood tide sets strongly onto "Mucking Flats".

During the swing all tugs are on the hook. For VLCCs there are 3 tugs from the forecastle head and 1 from the poop. When swinging, 2 forward tugs will let go and come alongside to push the ship onto the berth. The vessel should always land on the fenders parallel to the berth. 2 "boatmen" will board the ship in the vicinity of the berth to assist and liaise between ship's crew, the mooring boats and the jetty during mooring operations. Moorings are taken ashore by motor boats (one at each end of the vessel). Spring lines are normally taken first, followed by breast lines, then head and stern lines. Liaison between the Pilot/Berthing Master and the terminal in positioning the ship is not always good, and it is recommended that a ship's officer with portable VHF be stationed near the manifold to assist in positioning.

Moorings – Cautionary Advice. During Spring tides a surface current of up to 2 knots setting out from behind the berth can be experienced on the ebb tide. Large deep ships should be securely moored prior to the start of operations. Upstream moorings in particular, must be of good material and well positioned. Mixed moorings of wire and fibre are not recommended and the terminal recommends that fibre tails be removed from wire moorings. There are no shore moorings.

Mobil – Coryton: *Berthing Masters:* All vessels of 11,500 g.r.t. and over, bound for jetties in the Coryton area are required to employ the services of a Berthing Master. (Drawn from senior Trinity House Pilots). The Berthing Master will normally board the vessel from one of the berthing tugs.

Berthing Procedures: Regardless of draft, VLCCs must not enter the berth dredged box until 1 hour prior to HW.

Deep draft ships (over 12 m.) are swung before berthing and should, therefore, arrive off the berth on a flood tide. Other ships berth heading up or down river according to the tidal direction at time of arrival (always head to tide).

Tugs are made fast at No. 6 Sea Reach Buoy. Ships are swung off the berth with due allowance for set and tide being made.

During the swing all tugs are on the hook. For VLCCs there are 3 tugs from the forecastle head and 1 from the poop. When swung 2 forward tugs will let go and come alongside to push the ship onto the berth. Berth 4 (VLCC) is fitted with a Marconi Semi Mark II approach speed measuring device. Information from this equipment is supplied to the ship by means of VHF radio telephone. (The service will be offered to the vessel when radio contact is first made, and radios will be placed aboard the vessel prior to its arrival off the berth).

Maximum impact velocity is 25 ft. per minute for a maximum displacement of 230,000 tons at a maximum angle of 12°.

Mooring arrangements for Berth 4 are as follows:

4 mooring dolphins are provided to take the breast ropes and head ropes from vessels. The 4 mooring dolphins are of equal strength and are capable of taking a load of 150 tons. Each mooring dolphin is fitted with triple hook assemblies capable of taking a load of 50 tons on a single hook.

Mooring hook assemblies are also fitted to each of the 2 berthing dolphins and at either end of the jetty head. Each assembly comprises two hooks which are capable of taking a load of 50 tons on a single hook. These mooring arrangements are intended to take the spring lines of vessels and have been designed to be capable of taking a load of 100 tons acting either parallel to berth face or up to an angle of 20° from this line. Any significant load applied at an angle greater than 20° from the berthing line may cause severe damage to the jetty head.

Mooring diagrams will be available to each vessel from tugs or boatmen.

2 shore breasting wires are provided, and it is recommended that vessels should make use of these.

2 "boatmen" will board the ship in the vicinity of the berth to assist and liaise between the ship's crew, the mooring boats and the jetty during mooring operations. Moorings are taken ashore by motor boats (one at each end of the vessel).

Moorings: Cautionary Advice. Strong tidal flows, especially during Spring ebb tides which can generate tidal flows up to 4 knots, demand a diligent tendering of vessel's moorings at all times.

Esso – Purfleet: *Berthing:* A vessel should come up river on the flood tide so as to arrive off the berth about 2 hours before HW. Then turn to starboard and berth port side to the jetty head.

Moorings: At Berth No. 1 the first lines run are a head rope to the buoy and a spring to the jetty. When the vessel is secured, she should have 2 head/stern ropes to the buoys, 2 breast lines to shore, and 2 backsprings to the jetty head. For large vessels the eye of a 5 in. shore wire is taken aboard and put over a set of bitts located aft. This wire is tensioned from ashore.

For large vessels or in bad weather, additional heavy wire/combination backsprings may be available from shore.

The vessel must provide "emergency towing wires" on her offshore bow and quarter, with eyes maintained at water level.

Thames Matex – West Thurrock: *Cautionary Advice:* Both main berths are of similar construction. No. 2 berth (down-river) is subject to heavy silting.

Berthing: Depending on the size of the ship and the weather, 2 or 3 tugs usually accompany the vessel from Gravesend. They secure with the tug's towline on the hook when about 1 mile from the terminal. When sailing, 1 or 2 tugs are used depending on the flash point of the product.

Vessels berth head to tide and may secure either side to jetty. Those with drafts not exceeding 25 ft. can berth at any stage of the tide. Deep draft vessels (34 ft.) usually berth about 1 hour before HW, during the last of the flood tide, and turn off the terminal and secure port side to the jetty.

Moorings: No particular pattern of mooring is specified. Vessels usually secure with 2 or 3 head and stern ropes, 1 or 2 breast ropes, and a spring at each end. 2 mooring launches are in attendance while berthing. The vessel must provide emergency towing on her offshore bow and quarter, with eyes placed at water level.

No shore moorings are available.

HEALTH: Port of London Health Authority:
Public Health (Ships) Regulations, 1979.
Notes for the guidance of Masters/ships Agents:

(1) It is the responsibility of the Master of a vessel due to arrive in the Port of London to report to the Port Health Authority the presence of sickness, animals or captive birds on board, or of the occurrence, during the voyage, of the death, other than by accident, of a crew member or passenger.

(2) This information should be transmitted to North Foreland Radio Station for forwarding to "Portelth London", not more than 12 hours or less than 4 hours before vessel's arrival in the Port.

(3) Vessels already in the Port can contact the Port Health Authority directly by telephoning Tilbury (03752) 2663.
At Public Holidays (and all times other than 0900 – 1700 hrs. Monday to Friday) an answering machine is connected to this number giving the telephone number of the Duty Officer who will give any advice or assistance required.

(4) The Port of London Health Authority District includes that part of the River Medway comprising Sheerness, Isle of Grain, Ridham Dock and Queenborough.

Also see "Health – All Ports" before first U.K. port.

RADIO: Outside U.K. waters from the South, call long range station "Portishead Radio"; approaching London, "Niton Radio" or Northforeland Radio giving Agents draft and ETA. "Gravesend Radio" when in the Thames and its estuary.

CRANES: (See "Berthing").

BULK CARGO FACILITIES: (See "Berthing").

SPECIALISED CARGO HANDLING FACILITIES: (See "Berthing").

BRIDGES: No bridges below Tower Bridge which opens for shipping on request.

STEVEDORES: Ordered by the Agents; no ETA to stevedores from vessel necessary; labour to be ordered by 1200 hrs. day before required.

At PLA General Purpose Berths order by 1100 hrs. day before except for weekends/public holidays when 1600 hrs. 2 days before. PLA/TCS Container Terminals work 24 hours a day, including weekends.

MEDICAL: Not necessary to contact Agents once port health requirements satisfied unless urgent medical treatment required on board on arrival. All medical treatment, vaccinations available.

DENSITY: Varies according to position and tides.

FRESH WATER: Available at all berths either from shore or barge.

FUEL: All types, grades available by barge, or from terminals.

FIRE PRECAUTIONS: Tankers – no smoking on open decks, only cabins. Deck fire hoses to be connected. Explosive workings at Chapman anchorage, same precautions. Red flag to be flown by these vessels. Fire tug to be in attendance when explosives being worked. Smoking not permitted in the docks or berths.

GANGWAY/DECK WATCHMEN: Available but not compulsory, Master's discretion.

OPENING/CLOSING HATCHES: Liner vessels by crew, with stevedore assistance. Tramp vessels according to charter party.

CERTIFICATES: These certificates to be on board.
Ship's Register.
Load Line.
Safety Radio.
Safety Equipment.
Safety Construction.
Oil Record Book.
Derat Exemption.
Previous U.K. Light Due Bills.
Cargo Gear and Chain Register complying to U.K. Factory Acts.
British Tonnage Certificate if available.

CUSTOMS ALLOWANCES: Customs usually permit 200 cigarettes or 0.25 lb. tobacco per person on board for 4 days. They can refuse to issue duty free or amount allowed at their discretion. Usually permit 1.3 pints or 1 bottle spirits per person for 4 days. They can issue less or refuse to allow as duty free at their discretion.

CARGO GEAR: To comply with U.K. Factory Acts, valid chain and Cargo Gear Register to be on board. Stevedores usually supply cargo slings, etc.

IDENTIFICATION CARDS: Seamen's identity book required to be retained on board in port.

BANKS: All British and most foreign banks represented in London. British banks have branches in Thameside towns.

CONSULS: All British Commonwealth countries are represented in London by a High Commissioner's Office.

Most foreign countries maintain embassies or a consular representative in London.

REPAIRS: All repairs, gas freeing possible; pre-advice recommended.
DRY DOCKS: Largest dry docks at Tilbury, 752 ft. length, 133 ft. breadth. There are smaller dry docks available on the river.
REPATRIATION: All facilities exist for changing crews, repatriations.
AIRPORTS: All flights serve London Heathrow and Gatwick Airports. Southend Airport serves domestic and Continental services.
TIME: British Summer Time which is 1 hour in advance of GMT. GMT during Winter months.
HOLIDAYS: *Public Holidays:* Work is available on official holidays if practical. New Year's Day, Good Friday; Easter Monday; May Day Monday; Spring Bank Holiday Monday; August Bank Holiday Monday; Christmas Day; Boxing Day.
POLICE/AMBULANCE/FIRE: Contact by public telephone; dial 999 and ask for service needed. PLA telephones dial 259 (fire) and 222 for others.
EMERGENCY CO-ORDINATION CENTRE: See "Thames Navigation Service" and "Notices".
TELEPHONES: Ship to shore connections available at most berths.
SERVICES: All types of service for navigational aids, radar, compass adjusting, nautical instruments repaired, slop discharge barges available. Tank-cleaning, gas-freeing services available.
SHORE LEAVE: Crew members allowed ashore.
REGULATIONS: No livestock allowed ashore without permission Customs and Port Health Authorities. Rabies regulations enforced.
NOTICES: *Emergency Procedures for Vessels on The River Thames:* Report immediately by the quickest means available to either Thames Navigation Service on VHF radio, Gravesend Radio, VHF Channel 12; Woolwich Radio, VHF Channel 14, or public telephone Tel: 999.
Message: Vessel's name and present position together with details of emergency and assistance required.
Collision, Fire or Other Accident: If involved in or sighting a collision or accident report as above.
Human Injury or Man Overboard: In event of serious personal injury or recovery of a person from the river when vessel's crew require additional assistance report as above.
Machinery or Steering Failure: In event of machinery or steering failure report as above.

If necessary to anchor then endeavour to anchor clear of the fairway if size and draft permit.

Details of Port of London Authority Combined Accident Procedure Applicable to Vessels (POLACAP): In event of a major accident, the Thames Navigation Service will broadcast on appropriate VHF Channels an outline of the accident, including in the message:

Word	*Meaning*
"POLACAP"	Serious accident as specified has occurred – Combined Accident Procedure is in force.

Action by Vessels on Receipt of POLACAP Message: Maintain current communications watch, keeping requests for information to MINIMUM. If in vicinity of accident be prepared for traffic regulation, which, if required, will be operated by PLA Harbour Master's Launches.

If directly involved in or assisting with the accident, switch to VHF Channel 16 for inter-ship/craft communications, and report to Thames Navigation Service.

On scene control will be exercised from the forward control craft using call sign POLACHIEF. This craft will identify itself by a blue rotating light and in addition by day will hoist a red ball at the masthead.

When Combined Accident Procedure is no longer in force, Thames Navigation Service will pass:

Words	*Meaning*
"CANCEL POLACAP"	Combative measures to deal with the major accident are completed and no further action required.

June 1984.

H. Revell, Director of Port Services, Port of London Authority.

This Notice supersedes similar Notice dated February 1968.

Notice to Mariners – 27 of 1983.
Merchant Shipping (Tanker) Regulations 1981 and (Amendment) Regulations 1982 (EEC Requirements):
In compliance with the above regulations: (Statutory Instruments 1981, No. 1077 and 1982 No. 1637). The Master of any tanker of 1,600 g.r.t. or over which is:
(a) Carrying a cargo of chemicals, gas or oil in bulk; or
(b) Non gas free from any of these cargoes shall:
Section I: Make a report to the Harbour Master by telex (Telex No. 262880) or via G.P.O. Coast Station before entering or navigating within the limits of the Port of London which shall provide the following information in the order listed:
(a) Tanker's name and call sign.
(b) Country where registered.
(c) Length, beam and arrival draft.
(d) Destination and ETA.
(e) Tankers bound for the Medway, ETA at Medway Buoy.
(f) Nature and type of cargo (together with Flash Point if known).
(g) Is an inert gas system fitted?
(h) If an inert gas system is fitted, is it fully operational?
(i) Do any of the cargo tanks have an atmosphere which has been rendered non-flammable?
(j) If the tanker has a cargo of chemicals or gas has it been issued with a certificate stating that it complies with:
  (i) IMO Code for Ships carrying dangerous chemicals.
  (ii) IMO Code for Existing Ships carrying Liquefied Gas.
  (iii) IMO Code for Ships carrying Liquefied Gas.
(k) Does the tanker have any hull, machinery or equipment defects which may materially affect:
  (i) Its safe manoeuvrability.
  (ii) The safety of other vessels.
or constitute a hazard to:
  (iii) The marine environment.
  (iv) Persons or property.

If the answer is 'Yes' to any of the 4 questions contained in (k), then details of the problem must also be provided.

If the Master fails to make a report or knowingly provides false information to the Port Authority or to a Pilot when boarding his ship he shall be guilty of an offence and liable on summary conviction to a fine not exceeding £1,000 or on conviction on indictment a fine.

If any Pilot boarding a ship to pilot it in or out of the port believes there are defects as described in sub-section (k) which have not been reported to the Port Authority he shall inform the Master of those defects and if the Master then fails to inform the Port Authority the Pilot shall forthwith give such information to the Authority himself.

If the Pilot knowing the Master has failed to make a report, then himself, fails to make a report of any known defect as defined in sub-section (k) he shall be guilty of an offence and liable on summary conviction to a fine not exceeding £400.
Section II: Make a check list available to the Pilot when he boards the vessel and make a copy of the same check list available to the Harbour Master (if necessary through the vessel's agents).

If the Master fails to make a check list available the Pilot shall forthwith notify the Harbour Master.

If the Master knowingly makes a check list available which is materially false he shall be guilty of an offence and liable on summary conviction to a fine not exceeding £1,000 or on conviction on indictment a fine.

Notice to Mariners – 50 of 1981.
Inert Gas Systems and Crude Oil Washing (COW): (Reference Statutory Instruments No. 541, 544 and 687 of 1980).

The attention of tanker Masters are drawn to the following conditions, which must be observed whenever crude oil washing of tanks is to be undertaken in the Port of London.

1. *Notification*
(a) At least 24 hours prior notification of the intention to COW is to be received by the Director of Marine Operations (through the Thames Navigation Service) together with written assurance that all systems have been checked and found satisfactory in accordance with the ship's COW Manual and IMO requirements.
(b) One hour before the actual commencement of COW, a further advice must be received by the Director of Marine Operations (through the Thames Navigation Service) that COW is about to commence and that all systems are fully operational.
2. *Terminal Approval*
No vessel is to undertake COW without the approval of the Terminal Management and having complied with IMO COW requirements applicable to that ship.
3. *Failure of Systems*
Following the failure of the inert gas system to supply either the correct quality or quantity of inert gas, or a failure of any other part of a COW system, all cargo discharge, de-ballasting and tank cleaning must cease forthwith, and the Authority is to be immediately advised. Operations are NOT to be resumed until after consultation has taken place and agreement reached between the Authority, the Terminal Management and the ship's Master.
4. *Tanker Drafts*
No tanker crude oil washing is to be accepted at any berth where the vessel cannot safely be afloat at any state of the tide.

Notice to Mariners – 3 of 1984
Precautions to be Observed by Vessels
All Vessels – Navigation Between Sea Reach No. 7 and West Blyth Buoys:
1. Shall proceed at a moderate speed when passing berths where specified vessels with cargoes of LNG, LPG, ammonia or explosives are present or manoeuvring in the vicinity. When specified vessels with these cargoes are present details will be included in the routine broadcasts by Gravesend Radio.
2. Shall communicate to Gravesend Radio the intention to overtake a specified vessel. Gravesend Radio will broadcast this information and overtaking should not take place until this has been promulgated, and all vessels navigating in the area are aware of the manoeuvre. It is essential that the overtaking vessel proceeds with engines on stand-by, ready for manoeuvring, and anchor stations manned, ready for immediate use in case of emergency. Where it is necessary for a deep drafted vessel to overtake a specified vessel of lighter draft, then, provided it is practical and navigationally safe to do so, the specified vessel should facilitate this manoeuvre by moving to the side of the fairway to give the deep draft vessel the deeper water.
3. Shall give specified vessels, and specfied vessels shall give all other vessels, whether underway, at anchor, or berthed, the widest practical clearance.
4. Shall take particular care when manoeuvering for, or preparing to leave a berth having due regard for vessels underway and passing through the area. It is to be noted that the special requirements of deep drafted, and certain other vessels manoeuvring for these berths may demand priority of movement.
5. Shall before leaving a berth obtain a situtation report of other vessels navigating in the area.
6. Shall ensure that anchor parties are immediately available and anchors ready for letting go.

Additional Instructions for Specified Vessels:
1. Before entering or navigating within port limits, the Master shall advise the Pilot, if carried, and the Thames Navigation Service of the condition of propelling, steering and anchoring machinery, navigation radar and VHF radio equipment and special fire detection and fire fighting equipment carried in connection with the special cargoes, stating whether or not they are fully operational. Attention is drawn to the Port of London General Directions for Navigation, 1975, No. 15, which refers to vessels with mechanical and equipment defects.
2. Shall when navigating above Sea Reach No. 7, at all times proceed at a 'moderate speed'.

Specified Vessels – Recognition Signals:

1. A specified vessel, except petroleum ships, and vessels carrying explosives (which are required to display the signals which follow under the PLA Petroleum and Explosives Byelaws) shall whether underway, at anchor or secured to a berth, indicate the hazardous nature of the vessel's cargo or cargo tanks by displaying:

   Between sunrise and sunset – International Code Flag "B"
   Between sunset and sunrise – a red light
2. These signals shall be displayed at the masthead or where they can best be seen, and shall be of such size and character as to be visible all round the horizon for a distance of at least 2 miles, and shall be in addition to any navigation lights or other signals which may be required by any other regulations, rules or byelaws.

Definitions: Specified vessel means any vessel laden with or having on board quantities of (IMO Codings in brackets):

(a) LNG, LPG, ammonia or non-gas free following discharge of these cargoes. (Class 2).
(b) Explosives. (Class 1).
(c) Low flash and toxic chemicals or non-gas free following discharge of these cargoes. (Classes 3.1, 3.2, 6.1 and 9.0).
(d) Petroleum ships and barges as defined in the PLA Petroleum Byelaws. (Classes 3.1 and 3.2).

Moderate Speed: Shall not be more than 8 knots through the water, or minimum speed necessary for adequate control and safe navigation, whichever is the greater.

Port of London Petroleum Byelaws – Definition of 'Petroleum Ship': Petroleum Ship: Shall mean any vessel other than a petroleum barge having on board or about to take on board petroleum spirit as cargo or having discharged petroleum spirit if the holds and tanks have not been rendered free from inflammable vapour to the satisfaction of the Harbour Master but it shall not include a ferry boat working Woolwich Free Ferry by reason only of the ferry boat's having on board or being about to take on board one or more road vehicles engaged in the conveyance of petroleum spirit.

Definition of 'Petroleum Barge': Petroleum Barge: Shall mean any barge approved and licensed by the Port Authority for the conveyance of petroleum spirit on the Thames except when the same is empty *and rendered free from inflammable vapour to the satisfaction of the Harbour Master.*

Notice to Mariners 3 of 1982 is hereby cancelled.

Notice to Mariners – 4 of 1985

Dangerous Goods

Definition of Dangerous Goods: In this Notice to Mariners, the expression dangerous goods means all dangerous goods for which a list, manifest or stowage plan must be carried in the vessel carrying the goods pursuant to Regulations 7(5) and 13(1) of the Merchant Shipping (Dangerous Goods) Regulations 1981 (S.I. 1981 No. 1747) if, in relation to the classes of dangerous goods set out in Regulation 7(2) of those Regulations, the goods fall within classes 2, 3, 4.1, 4.2, 4.3, 5.1, 5.2, 6.1, 6.2, 7, 8 or 9, but does not include carbide of calcium, explosives, liquid methane or petroluem spirit the handling of which is subject to separate byelaws.

Notice to be Given by Owner or Master:

The Owner or Master of a vessel carrying dangerous goods or which is non-gas free from dangerous goods in bulk shall, before the vessel enters the Port of London, give at least 24 hours notice to the Harbour Master of the nature and quantity of the dangerous goods carried in the vessel as required by Section 150 of the Port of London Act 1968 (see below).

A similar notice is to be given to the Harbour Master by the Owner or Master of a vessel at least 24 hours, before any dangerous goods are loaded on the vessel anywhere within the Port of London.

The Master of an inward vessel whose duration of voyage is less than 24 hours, may give notice within 1 hour of departure from the last port of call.

These notices should also include the following details:

(a) Whether the dangerous goods are in bulk, and if not, how they are packaged or carried, including details of the type and size of any drums, portable tanks or other portable containers.
(b) The flash point, if the dangerous goods are flammable.
(c) The vessel's proposed discharging or loading berth (even if the dangerous goods are to be retained on board).
(d) To which of the Classes 2 to 9 set out in the Merchant Shipping (Dangerous Goods) Regulations 1981 (S.I. 1981 No. 1747) the dangerous goods belong.

All Dangerous Goods Shipments: The notice referred to above for shipments of all dangerous goods must be sent to, Harbour Master, Thames House, St. Andrews Road, Tilbury, Essex. RM18 7JH. Tel: Tilbury 3444 Extn. 584. Telex: 995553.

For inward vessel on a voyage of less than 24 hours, notice may be given by telex to Thames Navigation Service – Telex: 262880.

Dangerous Goods Handled in Dock: All dangerous goods which are due for loading or discharging in the Port Authority's enclosed docks are subject to the terms and conditions set out in the Authority's published booklet "Schedule of Dangerous Goods" which is available from the Dangerous Goods Section (see address below). Attention is especially drawn to the terms and conditions for explosives (class 1) and radioactive substances (class 7).

In addition to the above notification. Some descriptions of dangerous goods (designated Group 3 in the schedule) require the prior approval of the PLA before entering the enclosed docks and the appropriate application should be made to the Dangerous Goods Section, Accident Prevention, Tilbury Docks, Essex RM18 7EH. Tel: Tilbury 3444, Ext. 276. Telex: 99267.

Dangerous Goods Generally: Movement of Vessels: Between sunset and sunrise or in conditions of reduced visibility such as fog or falling snow, vessels carrying dangerous goods or which are non gas-free from dangerous goods in bulk, may be subject to Special Direction from the Harbour Master.

Labelling of Containers: All dangerous goods which have been taken on board a ship at any port within the territorial waters of the United Kingdom must be packed and marked in accordance with the provisions of Regulations 8 and 9 of the Merchant Shipping (Dangerous Goods) Regulations 1981 as should dangerous goods taken on board any British vessel registered in the United Kingdom.

Dangerous goods taken on board foreign registered vessels outside the territorial waters of the United Kingdom should, ideally, be similarly packaged and marked.

Flammable Liquids (Non-Petroleum) – (Flash Point less than 22.7° C (73°F))

1. *Limitations of Quantities:*

   Masters of vessels are hereby informed of the following limitations in respect of the conveyance of flammable liquids (non-petroleum).

   To Barking Creek: Unrestricted as to quantity whether in bulk or in drums, portable tanks or other portable containers.

   To Bow Creek: Up to a maximum quantity of 1,016 tonnes whether in bulk or in drums, portable tanks or other portable containers.

   To Saundersness: Up to a maximum quantity of 508 tonnes in bulk or in drums, portable tanks or other portable containers, except that a maximum of 1,016 tonnes may be carried in a vessel previously approved for the purpose by the Port Authority.

   Above Saundersness: Up to a maximum quantity of 152 tonnes in bulk or in drums, portable tanks or other portable containers, except that a maximum of 1,016 tonnes may be carried in a vessel previously approved for the purpose by the Port Authority.
2. *General:*

(a) Flammable liquids may be carried in barges but should only be accepted for carriage in bulk in barges which have been approved for the purpose by the Port of London Authority.
(b) Drums should not be of a greater capacity than 450 litres each unless prior permission is given by the Port of London Authority.
(c) Vessels at river wharves when discharging flammable liquids overside into barges should only do so into barges on the outside or riverward side of the vessel. Such barges should not be left unattended and should be afloat at all times. Under no circumstances should a barge loaded with flammable liquids be left or moored between a vessel and a river wharf.
(d) Immediately after any tank vessel carrying bulk flammable liquids is discharged and before it is removed from the quay at which it has been discharged, all hatches and manholes to the cargo tanks and adjoining spaces shall be closed down and properly secured and kept so closed down and secured whilst the vessel is in transit.
(e) Day and night signals for vessels carrying flammable liquids in bulk to be as for vessels carrying petroleum spirit.
(f) The above mentioned requirements do not apply to shipments of flammable liquids of less than 450 litres provided that shipment is contained in suitable receptacles and is not merely the residue of a larger consignment.

Port of London Act, 1968.

Section 150 – Notice Concerning Dangerous Goods:

1. Except in case of emergency, the Owner or Master of a vessel:

(a) which it is intended to bring into the limits carrying dangerous goods; or
(b) which is within the limits and on which it is intended to place dangerous goods;

shall before that vessel enters the limits or before the dangerous goods are placed on board, as the case may be, give notice to the Harbour Master of the Port Authority of the nature and quantity of the dangerous goods in question and, if such notice is not given, the Owner or Master of the vessel shall be guilty of an offence and liable to a fine not exceeding £1000. Provided that:

(i) The notice required by this subsection shall, when practicable, be given not less than twenty-four hours before the vessel enters the limits or the dangerous goods are placed on board, as the case may be; and
(ii) nothing in this subsection shall, impose any obligation upon the Owner or Master of a vessel to give any notice to the Harbour Master in respect of the carriage of dangerous goods in that vessel by reason only that the vessel passes through any part of the limits on a voyage between places situated on the River Medway or on the Swale or on that part of the Kent coast between Warden Point and the North Foreland or on that part of the Essex coast between Foulness Point and the Naze and any other places not within the limits.

Regulations in respect of Damage/Loss involving Dangerous Goods: Attention is drawn to: Port of London River Byelaws.

No. 6: Escape of dangerous substance. Vessel to proceed subject Harbour Master's permission.

No. 7(f): Reporting to Harbour Master of spillage of bulk liquid.

Merchant Shipping Notice M 1152: Reporting of loss of harmful substance.

AUTHORITY: Port of London Authority, Leslie Ford House, Tilbury Docks, Tilbury, Essex RM18 7EH. *Tel:* Tilbury (03752) 3444. *Telex:* 99267. *Contact:* John N. Black, Chief Executive. John S. McNab, Director of Tilbury. Captain Gordon Varney, Harbour Master.

AGENT: Lambert Brothers Ship Agencies Limited, 450 High Road, Ilford, Essex. Telegrams: "Lambert Ilford" and "Lambert London EC3". Telex: 897147 and 897435. Tel: 01-553 3311.

LONDONDERRY (incl. Moville): 54.59 N. 07.19 W. (See Plan)

The main port of Londonderry is situated about 21 miles from the sea on the River Foyle.

PORT LIMITS: Extend from Lifford Bridge to a line drawn from Greencastle Fort in the County of Donegal to the Tower on Magilligan Point in the City and County of Londonderry.

DOCUMENTS: For Londonderry see "Belfast". For "Moville" see "Dublin".

Since the Port of Londonderry falls within the Republic of Ireland and the United Kingdom, both Governments are concerned in regard to Customs documents. Moville, which is situated down river from Londonderry, is located in the Republic of Ireland and is the anchorage where deep-sea vessels lie prior to proceeding to Londonderry. Should vessels discharge cargo or load cargo at this anchorage, Irish documents are required. The port is under the control of the Londonderry Port and Harbour Commissioners who are recognised by both Governments.

PILOTAGE: The Londonderry Port and Harbour Commissioners are the Pilotage Authority for the Londonderry Pilotage District. For information regarding pilotage application should be made to The Secretary, Harbour Office, Londonderry, Northern Ireland. Tel: (0504) 262553.

Pilotage is compulsory, vessels normally taking the Pilot at Carrickarory Pier, Moville. A Pilot may be taken at the Fairway buoy by special arrangement.

The Pilot station is located at Carrickarory Pier, Moville, 55° 10′ 57″ N.; 07° 03′ 27″ W.

Deep-draft vessels usually take Pilot 2 hours before HW time Londonderry, so as to arrive at Londonderry on the top of HW.

Pilotage service may be obtained in response to following signals:

Inward-bound vessels: By day. 1. The International Code Signal G; 2. The International Code Signal P.T.; 3. The Pilot Jack hoisted at the fore; 4. By daylight signalling lamp to the pilot station. If required after hours telephone Harbour Radio (Londonderry 263218)

By night. Pilot Station unattended at night. Vessels should contact harbour radio on VHF Channel 16 or Londonderry (0504) 263218.

By day or night. 1. By VHF (FM) radiotelephony to the pilot station at Carrickarory Pier. 2. By VHF (FM) radiotelephony to the pilot launch "James McDonald." 3. After hours and weekends VHF (FM) to Harbour Radio.

In poor visibility. By sounding the letter G in Morse Code on the steam whistle or siren.

As visibility to seaward from Carrickarory Pier is restricted it is important that Owners, Masters or Agents notify the Berthing Master (tel: Londonderry 263680) or outside Office hours Harbour Radio (tel: Londonderry 263218) of the name of vessel; estimated time of arrival at the Fairway Buoy; draft of water of the vessel. It is also important that VHF (FM) communication be established with pilot station, pilot launch "James McDonald", or Harbour Radio as early as possible before arrival in Lough Foyle. Call signs, frequencies and procedure are as follows:

VHF (FM) Communications:

1. Pilot Station at Carrickarory Pier, Moville: Call sign "Foyle Pilots". Equipment VHF (FM) R/T single frequency working. A continuous listening watch is kept during office hours on Channel 16 (156.80 MHz.) except when pilot launch is operating, when watch is transferred to the launch. When communication has been established on Channel 16 (calling and safety channel) operators should switch to Channel 14 (156.70 MHz.)

2. Harbour Radio: A continuous listening watch is kept on Channel 16 (156.80 MHz) outside of office hours. Once communication has been established switch to Channel 14 (156.70 MHz).

3. Pilot launch: Name of vessel "James McDonald". Equipment VHF (FM) R/T single frequency working. When launch is operating a listening watch is kept on Channel 16 (156.80 MHz). When communication has been established on Channel 16 (calling and safety channel) operators should switch to Channel 14 (156.70 MHz).

4. Harbour Office, Londonderry: Call sign "Harbour Office". Equipment VHF (FM) R/T single frequency working. All vessels fitted with VHF (FM) R/T while navigating in the river or at anchor in Moville Bay should keep a listening watch on Channel 16 (156.80 MHz). When communication has been established on Channel 16 (calling and safety channel) Operators should switch to Channel 14 (156.70 MHz).

Messages must be restricted to those related to the movement of vessels and safety of vessels and persons. Messages of any other nature and messages of a personal character cannot be accepted.

Outward-bound vessels and vessels shifting:

When the services of a Pilot are required for an outward-bound vessel or for shifting a vessel, 4 hours notification should be given to the Berthing Master (Tel: Londonderry 263680) during office hours, of name of vessel; time of departure; draft of water of vessel; where bound. Early notification should be given to enable Pilot to board vessel in good time.

ANCHORAGES: The only anchorage at Londonderry is located at Moville.

RESTRICTIONS: See "Max. Size".

MAX. SIZE: For vessels using main port of Londonderry, overall length 152.5 m. draft 7.2 m.

Due to new road bridge at Madam's Bank, height clearance 32 m. H.W.O.S.T.

For vessels using N.I.E.S. Oil Jetty, Coolkeeragh, Londonderry, overall length 183 m. draft (salt water) 7.2 m.

Maximum draft of vessels is increased on Spring tides at Coolkeeragh and Londonderry.

HEALTH: Pratique is automatic except in the case where the Master suspects one of the dangerous diseases on board when he should notify the Agent.

Also see "Health – All Ports" before first U.K. port.

RADIO: Malin Head Radio Station, Republic of Ireland, covers W/T and R/T transmissions and Portpatrick Radio Station, Scotland, covers R/T transmissions.

TUGS: One tug is available which is owned by the Londonderry Port and Harbour Commissioners.

BERTHING: Vessels of deep draft or large dimensions can only berth at Londonderry to arrive on top of high water. Decisions in this matter are taken by the Pilots in conjunction with the Harbour Master.

A total of 800 m. of ferro-concrete wharf is available. All berths dredged to 7.6 m. LWOST

CRANES: 3×5 tons electric grabbing cranes; 2×2 tons electric hook cranes; 1×1.5 tons mobile crane; 3×20 tonnes mobile cranes; 1×30 ton mobile crane; 1×10 ton mobile grab crane and 1×35 ton container crane.

STEVEDORES: ETA advices should be given before 1600 hrs. on week-days to arrange work for the next morning and before 1100 hrs. on Saturday to arrange work for Monday morning.

MEDICAL: Doctors and hospital facilities available. Agents should be advised in advance of any medical attention required.

TANKERS: No slop facilities available. Deep-sea tankers discharge heavy fuel oil for electricity power station at N.I.E.S. Jetty, depth 8.8 m., Coolkeeragh, diameter of pipes 8 in. Crew are required to connect and disconnect hoses under port conditions.

Shell Oil: Max. LOA 120 m. Depth 6.0 m.

Du Pont: Depth 8.5 m.

DENSITY: Water at Londonderry is brackish and average density 1005 to 1018.

FRESH WATER: Available at all berths direct from shore lines.

FUEL: Gas-oil and light marine diesel available by road tankers and from Shell Jetty at Pennyburn. Shell Mex and B.P. can supply light, medium and heavy fuel oil by road tanker.

GANGWAY/DECK WATCHMEN: Can be covered by crew; shore watchmen available if required.

OPENING/CLOSING HATCHES: This is required to be carried out by ship's crew under local port labour conditions.

CARGO GEAR: Ship's winches and derricks should be in good working order and have DTI Certificates or equivalent. Cluster lighting is required for night work.

IDENTIFICATION CARDS: Not obligatory but should be carried.

CONSULS: Nearest at Belfast.

REPAIRS: Deck and engine repairs are carried out by a local engineering works. No major repairs available.

REPATRIATION: Can be arranged by ship's Agent on request.

AIRPORT: The nearest airport to Londonderry is Aldergrove (Belfast) Airport, which is 61 miles from Londonderry.

HOLIDAYS: Port Holidays at Londonderry are: St. Patricks Day (17th March); Easter Monday; 12th July; 1st Monday and Tuesday in August; Christmas Day and Boxing Day.

POLICE/AMBULANCE/FIRE: Dial 999 and ask for service required, or Police 265161; Ambulance 265171; Fire 261815.

TELEPHONES: No telephones available for connecting on board.

SERVICES: No tank cleaning available or facilities for discharging of tank-washings. Compass adjusters available from Glasgow.

REGULATIONS: Copies of Port Bye-Laws may be obtained through Agent.

AUTHORITY: Londonderry Port and Harbour Commissioners, Harbour Office, Londonderry BT48 6AF, Northern Ireland. *Tel:* (0504) 264884, 264885, 262553. *Contact:* Captain H. Stewart, Chief Executive. G. S. Wilson, Secretary.

LOWESTOFT: 52.29 N. 01.45 E. (See Plan)

DOCUMENTS:

Crew List (at least 2 copies).
Passenger List (at least 2 copies).
Manifest (at least 3 copies).
Customs & Health Documents (normal U.K. regulations).
Ship's Papers (to be presented to Customs or Port Authorities).

PILOTAGE: Pilots on standby at all times. Pilot launch fitted with VHF and maintains listening watch on Channel 14. Pilots can also be ordered by R/T via Humber and Northforeland Radio, hence by phone.

Pilot's telephone No. Lowestoft 60277, or at the Lowestoft Harbour Masters Office, tel. Lowestoft 2286 (this number manned 24 hours). Pilot boat, black hull, white upper work with "Pilot" painted on each side. Light and sound signals as laid down in the International Code of Signals.

Pilot boards vessel at West Holm Buoy or East Barnard Buoy. Vessel should not approach harbour closer than these limits when awaiting Pilot.

ANCHORAGES: Pilotage anchorage North of a line joining West Holm Buoy and Lowestoft Lighthouse.

RESTRICTIONS: No specific restrictions provided the height of tide is sufficient for draft of vessel. Large vessels normally enter on HWS tide due to cross currents at entrance.

There are regulations governing the passage of vessels through the harbour entrance. Masters of vessels shall observe the Harbour Control Light which is a white flashing light situated below the occulting red light on the South Pier Lighthouse. This light is visible except between 232° to 286° true from the light. When this light is flashing vessels may proceed to sea, but no vessel shall enter the harbour. At all other times vessels may enter the harbour, but no vessel shall proceed to sea.

A green occulting light is shown on the North Pier Head and a red occulting light on the South Pier Head, from sunset to sunrise.

Two fixed vertical green lights are shown on the Inner North Pier Head. These Inner Pier lights will be clearly visible from a vessel upon entering the harbour but will also be visible from certain directions before entry.

A "horn" signal is fixed on the South Pier Head for use in foggy weather. 4 blasts of 2 seconds each will be given every minute.

MAX. SIZE: Max. length approx. 410 ft. Draft up to 21 ft. MHWS. (Check with Port Authority for current situation.)
HEALTH: See "Health – All Ports" before first U.K. port.
TUGS: 3 tugs are available; tug's lines normally used.
BERTHING: *Outer Harbour* (comprising Hamilton and Waveney Docks and Trawl and Yacht Basins). Used largely for fish traffic, sea aggregates and offshore module construction:

Width at entrance	148 ft.
Depth at entrance	23 ft. MHWS
Water area	40 acres
Length of quays	4,500 ft.
Depth of water at quays	18 ft. MHWS 12 ft. MLWS

Inner Harbour. Used for general cargo and grain traffic.

Width of bridge	74 ft.
Water area	70 acres
Length of quay	6,800 ft.
Depth of water at quays up to	23 ft. MHWS 17 ft. MLWS

CRANES: 1×200 tonne crane, 1×35 tonne crane and 1×32 ton container crane. Mobile cranes also available.
CARGO HANDLING FACILITIES: *Grain Silo:* Grain silo has a capacity of 14,000 tonnes and discharging and loading rates of 120 tonnes and 350 tonnes/p.h. respectively.
Containers: Container vessels are accepted, along with the general cargo carriers, in the port's Inner Harbour.
STEVEDORES: Shipping Agent should be advised of ETA, etc., to enable gangs to be available. Working hours: 0800 – 1700 hrs. (1600 hrs. Friday). Overtime as required.
MEDICAL: Advance notice desirable of medical attention required on arrival. Hospital facilities available in Lowestoft.
FRESH WATER: Can be supplied at various points on quays from hydrants with waterman in attendance. Normal hours 0800 – 1700 hrs. Monday to Thursday and 0800 – 1600 hrs. Friday, outside those hours overtime rates payable. Approx. flow 15 t.p.h.
FUEL: Marine diesel available from road tankers or fuel barge within the harbour. 24 hours notice is normally required for supplying gas oil or boiler fuel; this comes from road tankers.
FIRE PRECAUTIONS: Local fire services available in an emergency. Special arrangements can be made for taking fire-fighting equipment to sea. Normal harbour fire-prevention regulations apply to all berths.
OPENING/CLOSING HATCHES: Carried out by crew.
CONSULS:

Belgium	Tel: Lowestoft 2301
Denmark	" " "
France	" " "
Netherlands	" " "
Norway	" " "

REPAIRS: All types of deck and engine repairs are possible in the port.
DRY DOCKS: One dry dock. Length 248 ft. Width at entrance 48 ft. Depth of water on sill 14.5 ft. MHWS.
AIRPORTS: Nearest international airport served by regular airlines is London (Heathrow). Smaller airport at Norwich (27 miles) served by regular airlines.
POLICE/AMBULANCE/FIRE: In an emergency dial 999 and ask for service required. For normal enquiries: Police Lowestoft 2121; Ambulance Lowestoft 2572; Fire Lowestoft 2227.
GENERAL:
Air/Sea Rescue Services at R.A.F. Cottishall (35 miles).
Royal National Lifeboat Institution, lifeboat berthed at Lowestoft.
Modern transit sheds.
SERVICES: Compass adjusting. VHF, Radar, radio repairs. All ships' provisions are available by arrangements with the shipping Agencies.
SHORE LEAVE: Leave is permitted.
AUTHORITY: Associated British Ports, Port House, Lowestoft, Suffolk, NR32 1BG. *Tel:* (0502) 2286/7. *Telex:* 97448 Abplow G. *Contact:* J. W. Green, Port Manager. M. J. C. Graham, Dock and Harbour Master.

LYDNEY: 51.43 N. 02.33 W. (See Plan)

PILOTAGE: Available from Sharpness.
RESTRICTIONS: Entry and exit only possible at HW and for a very short period afterwards.
VHF: Not permanently manned. Used solely for directing vessels. Standard multi-channel. Channel 16 for call up.
BERTHING: *Tidal Basin:* 82.3 m.× 22.8 m. Width of entrance 10.5 m. Depth at HWST 7.3 m.
Inner Dock: 237.7 m.×32 m. Width of entrance 7.0 m. Depth 3.6 m.
FRESH WATER: Limited supply from small bore tap.
FUEL: Not available.
AIRPORT: Gloucester (Staverton) 24 miles, Bristol 24 miles, Cardiff 30 miles.
GENERAL: The port does not offer any cargo handling facilities and traders need to make use of the overhead crane owned by Mallinson-Denny Limited. This is situated upstream of the inner lock gates and therefore severely limits the size of vessel which can enter.
AUTHORITY: Severn-Trent Water Authority, Lower Severn Division, Southwick Park, Gloucester Road, Tewkesbury, Gloucestershire GL20 7DG. *Tel:* Tewkesbury (0684) 294516. *Telex:* 43520. *Contact:* Mr. R. J. Bishop, Water Amenity Officer. W. B. Price, Harbour Master, Tel: (0594) 562303 (part-time only – 48 hours notice required).

MANCHESTER: 53.29 N. 02.14 W. (See Plan)

GENERAL: The port of Manchester includes the whole of the Manchester Ship Canal and Queen Elizabeth II Dock. The Canal is approximately 36 miles long from its entrance at Eastham on River Mersey to the Manchester Docks.
DOCUMENTS:
1 Maritime Declaration of Health.
1 Crew Effects List.
2 Ship's Report by Master.
1 Home Office Form 1B6.
1 Stores List.
1 Certificate of Deck Cargo Tonnage.
1 Grain Certificate.
1 Light Certificate.
1 Port Dues Certificate.
1 Passenger List.
1 Landing Card for each Passenger.
Ship's Certificate of Registry.
Mercantile Marine Office Certificate – for British ships only.
Load-Line Certificate.
Safety Equipment Certificate.
Lloyd's Certificate.
Derat Certificate.
Ship's Register.
Light Bills.
Safety Radio Certificate.

In addition, Manifests and Bills of Lading are usually sent to Agent direct from loading port.
PILOTAGE: Non-compulsory. Orders for Pilots may be lodged with the Pilotage Office at Eastham (Tel. 051-327 1233). As much notice as possible should be given, particularly in the case of inward-bound vessels due to arrive at Eastham. Helmsmen can be obtained in same manner.
RESTRICTIONS: Eastham Locks. The main entrance to the Canal is at Eastham where there are two locks side by side, one 600 ft. by 80 ft., and the other 350 ft. by 50 ft. The outer or lower sill of each lock is 11.36 ft. below Chart Datum (1975). The levels of upper sills of the 80 ft. and 50 ft. locks are 32 ft. and 29 ft. respectively below statutory water level in Canal.

Both locks are operated for incoming and outgoing vessels of suitable draft during a period of 8 hours on each tide, i.e. from 4 hours before high water to 4 hours after high water.

The Canal is constructed to give an available depth of water of 30 ft. from Eastham to Ince Oil Berth (5.375 miles) and of 28 ft. from Ince to Manchester Docks.

The size of vessel which can navigate the Canal is governed by the dimensions of locks, the height of fixed bridges and limitations for the draft of vessel.

Maximum length: The greatest length measured between perpendiculars drawn at the foreside of the foremost extremity and at the afterside of the aftermost extremity of the hull or any attachments to the hull shall not exceed 560 ft. The acceptance of ships proceeding above Ince with overall length greater than 530 ft. is subject to approval of the Harbour Master.

The length measured between perpendiculars drawn at the foreside of the stern and at the afterside of the rudder post, or through centre of the rudder stock if there is no rudder post, on the Summer load water-line shall not exceed 535 ft.

The length measured between perpendiculars drawn at the afterside of the rudder plate and at the foreside of the foremost extremity of any part of the hull which is below a horizontal line drawn through the top of the rudder plate shall not exceed 544 ft.

Maximum beam: Vessels not proceeding beyond Ince Oil Berth: 72 ft. overall. Vessels proceeding beyond Ince Oil Berth: 63 ft. 6 in. overall.

Provided the height of masts and/or funnels or other structures is not more than 70 ft. 9 in. from water-line, vessels can pass under all fixed bridges under normal conditions. As, however, the headroom is less during periods of high-water levels, a vessel, in order to avoid possible detention, should reduce masts and funnels or other structures to 70 ft. above the water-line. The restriction as regards height does not apply to vessels proceeding only as far as Runcorn Bridge.

Facilities are available at Eastham for removing and replacing tops of masts and funnels.
MAX. SIZE: When vessels are loading inwards for the Canal, Masters should take these facts into their calculations and have regard to the following limitations, all of which are expressed as maximum draft in fresh water:

Vessels inward bound to a berth	*Arrival draft (in fresh water) at Eastham not to be such as would exceed:*
Between Eastham Locks and Ince Oil Berth	28 ft. 10 in.
Between Ince Oil Berth and Latchford Locks (Other than Runcorn Docks)	26 ft. 06 in.
Between Latchford Locks and Mode Wheel Locks	24 ft. 00 in.
In the Manchester Docks upstream of the Inner Gates of Mode Wheel Locks and downstream of the Railway Swingbridge.	22 ft. 00 in.
In the Manchester Docks upstream of the Railway Swingbridge to No. 3 Dock Pomona	14 ft. 00 in.

Vessels loading outward at any point between Eastham Locks and Ince Oil Berth should not have a draft exceeding 28 ft. 6 in. upon completion of their loading in this section.

Vessels loading outwards at any point between Ince Oil Berth and Latchford Locks (other than Runcorn Docks) should not have a draft exceeding 26 ft. 6 in. upon completion of their loading in this section. Vessels requiring to swing in the Manchester Dock Basin should not have a draft exceeding 22 ft. 00 in. upon completion of their loading in this section.

Vessels loading outward at any point between Latchford Locks and Mode Wheel Locks should not have a draft exceeding 24 ft. 00 in. upon completion of their loading in this section. Vessels requiring to swing in the Manchester Dock Basin should not have a draft exceeding 22 ft. upon completion of their loading in this section.

Vessels loading outward at any point in the Manchester Docks upstream of the Inner Gates at Mode Wheel Locks and downstream of the Railway Swingbridge should not have a draft exceeding 22 ft. 00 in. upon completion of their loading in this section.

Vessels loading outward in the Manchester Docks upstream of the Railway Swingbridge to No. 3 Dock Pomona should not have a draft exceeding 14 ft. 00 in. upon completion of their loading in this section.

Large vessels can swing in the basins at Stanlow and Manchester Docks. Small vessels can swing at certain other points on the Canal.

HEALTH: Foreign arrivals to complete Maritime Declaration of Health. They are cleared immediately on arrival by either a port doctor or an officer of H.M. Customs depending on where ship comes from and whether there is sickness on board.

Vessels arriving from ports within accepted area (N. European ports) and coastal arrivals need not present Declaration in all cases; when there is sickness on board the Port Health Authority must be informed preferably not more than 12 hours and not less than 3 hours before arrival.

Also see "Health – All Ports" before first U.K. port.

RADIO: FM VHF R/T equipment is installed at Eastham, Stanlow, Latchford, Irlam, Barton and Mode Wheel Locks as an aid to navigation on the Canal.

Ships which are equipped with the appropriate R/T channels are requested to establish contact with the nearest shore station before leaving a berth or lock within the harbour and thereafter to maintain a continuous listening watch on Channel 14.

Station	*Call sign*	*Channel*	
Eastham Locks	Eastham Locks	7	Docking instructions: When approaching Eastham Locks from seaward.
Eastham Locks	Eastham	14	Port operations: Vessels moving within the harbour should maintain a listening watch on Channel 14. After contact has been established the shore station will request the ship to switch to the appropriate speech Channel.

Weston Point Docks: Near Runcorn, 11 miles from canal entrance at Eastham. 10-12 berths for vessels up to 2,500 tonnes. Fixed, portal and mobile cranes for handling bulk cargoes.

CARGO HANDLING FACILITIES: Heavy duty floating cranes with capacity up to 120 tonnes. Roll-on/Roll-off berth with strengthening to take loads of 300 tonnes.

Transporter cranes for containers with capacity of 35 tonnes and 25 tonnes.

STEVEDORES: The stevedores require to sight a certificate covering inspection and S.W.L. of slings used in pre-slung cargoes.

TANKERS: *Queen Elizabeth II Dock.* This dock is adjacent to the locks at Eastham which give access to the Canal, and is approached from River Mersey through its own entrance lock. This lock is 807 ft. long by 100 ft. wide. The level of outer sill is 18.36 ft. below Chart Datum (1975). The dock covers an area of 19 acres in the form of a square and has four berths designed to accommodate large tankers, the dimensions of berths being as follows:

Berth No. 1 800 ft.	Berth No. 3 900 ft.
Berth No. 2 725 ft.	Berth No. 4 730 ft.

The dock is directly connected to oil installations by pipe-lines.

Stanlow Oil Docks. No. 1 & 2 (5 berths) 4.5 miles above Eastham Lock. Length 560 ft., draft 28 ft., beam 72 ft.

Ince Oil Berth. 5.5 miles above Eastham Lock. Length 560 ft., draft 28 ft., beam 72 ft.

Ince Coaster Berth: Max. length 350 ft., beam 53 ft. draft approx 21 ft. dependent on current survey.

Barton. 32 miles above Eastham Lock. Length 508 ft., draft 24 ft., beam 63 ft. 6 in. Max. height above water-line 70 ft.

DENSITY: The water in lower section of the Canal between Eastham Locks and Latchford Locks is brackish. In all sections above Latchford Locks the water is fresh.

MEDICAL: Doctors and hospital facilities available. Agent should be advised in advance of any medical attention required.

FRESH WATER: Available.

FUEL: Oil bunkers may be taken by arrangement with oil companies either from craft alongside or at various oil berths along the Canal.

CUSTOMS ALLOWANCES: At discretion of local Customs Inspector. Normal allowances are equivalent to 0.5 lb. tobacco per man and equivalent to 1 bottle of wine per man. Allowances may be halved for home trade vessels. Vessels in port for more than 3 or 4 days may receive extra allowances.

(A) MEDWAY (See Plan)

PILOTAGE: Sunk Pilot Station. See "London".

Folkestone: Vessels for River Medway that are approaching from the South obtain Inward Sea Pilot at Folkestone Pilot Station. Telex: 96381. Tel: Folkestone 56766. Telegraphic Address: "Pilots, Folkestone". Notice required: preferably 24 hours notice ETA, then confirmation 12 hours prior arrival with ETA, draft, gross tonnage and destination.

Pilot boards from launch 1 mile South of Folkestone Pier. Contact Pilots by VHF Channel 16, then Channel 9, two hours before arrival (call sign "Folkestone Pilots Radio").

Deep drafted vessels can be provided with Pilots in deeper water by arranging to be met by the Sunk Pilot (fast launch from Harwich) in a suitable position about 3 miles East of the Sunk Light Vessel.

North East Spit: Vessels approaching within the range Dieppe/Amsterdam obtain inward ISP between the "Elbow Buoy" and "East Margate Buoy". Telegraphic address: "Pilots, Folkestone". Telex: 96381. Tel: Folkestone 56766. Advance notice essential as Pilots not always on station. Notice required: preferably 6 hours giving ETA, draft, gross tonnage and destination, confirming 2 hours prior to arrival. Contact Pilots on VHF Channel 16, changing to Channel 9 for working (call sign "North East Spit Pilot Radio"). Light or sound signals as per International Code. Pilot boards between the "Elbow Buoy" and the "East Margate Buoy", depending on weather, by fast launch which is stationed in Ramsgate Harbour. Contact Pilots on Channel 16, changing to Channel 9 for working.

Medway: Medway Pilots join ships at Little Nore Sheerness for all Medway ports, i.e. Isle of Grain, Sheerness, Oakham Ness, Otterham, Rochester, Queenborough and Ridham. Telegraphic Address: "Pilot Sheerness". Tel: Sheerness 662276. Notice required, minimum 2 hours. Pilots may be contacted through Medway Radio on VHF Channel 74 or pilot launch keeps watch on Channel 74 when in service. Lights and sound signals as per International Code.

VHF/RADAR: Medway Navigation Service (Medway Ports Authority) is situated at Garrison Point, Sheerness. Tel: Sheerness 663025. Telex: 96435 (call sign "Medway Radio"). Fitted with VHF, Channels 16, 74, 9 and 22. The station has radar service surveillance of Inner Estuary, Sea Reach, Medway Approach Channel and Lower Reaches of River Medway.

Tugs operate on Channel 73.

REGULATIONS: All vessels required to proceed in accordance with instructions of Port Authority. Vessels are requested to advise Medway Ports Authority – Medway Port Operations Service (call sign "Medway Radio") VHF Channels 16, 74, 9 and 22 of ETA, shifting of sailing movements.

Prior notification to the Medway Ports Authority is required, detailing the carriage of all explosives and "dangerous goods".

GENERAL:

Tidal Information:

Tidal streams in the River Medway vary between about 2.5 knots at Springs and 1.5 knots at Neap Tides, although velocities vary considerably from Reach to Reach, the areas of maximum encountered velocities are: off Garrison Point Sheerness and through Rochester Bridge.

Average Tidal Heights are as follows: (metres)

Sheerness	5.7 MHWS	4.8 MHWN
Chatham	6.0 MHWS	4.9 MHWN
Rochester	6.2 MHWS	5.0 MHWN

High Waters occur approximately:

Margate	45 minutes	before Sheerness
Herne Bay	20 minutes	before Sheerness
Whitstable	10 minutes	before Sheerness
Rochester	9 minutes	after Chatham
Wouldham	28 minutes	after Chatham
New Hythe	33 minutes	after Chatham
Allington Lock	41 minutes	after Chatham

Tide Tables may be obtained at the offices of the Medway Ports Authority.

(B) SHEERNESS: 51.27 N. 00.44 E. (See Plan)

Situated on Isle of Sheppey at junctions of Thames and Medway Rivers.

DOCUMENTS: See "London".

PILOTAGE: See "Medway".

ANCHORAGES: For vessels entering River Medway up to 107 m. length, Little Nore Anchorage, Sheerness. Over 107 m. length – as directed by Medway Navigation Service (Medway Radio) or Thames Navigation to Great Nore, Sea Reach or Warps.

RESTRICTIONS: Subject to tidal conditions and under keel clearance appropriate size of vessel. Minimum depth of Medway Approach Channel 8.5 m. at Chart Datum.

Entry as directed by Medway Navigation Service (Medway Radio). Station keeps watch on VHF Channels 16, 74, 73, 9 and 22.

Occasional restriction for vessels over 130 m. overall length entering approach channel between sunset and sunrise when the Traffic Warning Lights are exhibited from Garrison Point.

MAX. SIZE: Five deep water terminals for vessels up to 230 m. in length and 11.0 m. in draft. Also see "Developments".

HEALTH: See "Health – All Ports" before first U.K. port.

RADIO: Portishead. Local Stations: From South – Lands End, Niton, Northforeland. From North, Cullercoats, Humber, Northforeland.

VHF/RADAR: See "Medway".

TUGS: River Medway – For Sheerness, Ridham Dock, Isle of Grain, Oakham Ness – Tugs usually meet vessels at Garrison Point Sheerness. Tug's lines used, no extra charge.

BERTHING: Sheerness, deep water berths and Ferry Terminal – as directed by Medway Navigation Service (Medway Radio).

Berths equipped for handling containers, forest products, motor vehicles and wine in bulk and for general cargo of all kinds, including fresh fruit and vegetables.

Storage facilities available for bulk wine, vehicles, forest products and the warehousing of general cargo.

Sheerness Deep Water Berths – No. 1 – suitable for vessels up to 230 m. length and 11.0 m. draft.

No. 2. Suitable for vessels up to 210 m. length and 11.0 m. draft.

No. 1/2. Retractable Ro/Ro pontoon serves both berths simultaneously, capable of 60 tonne payload.

No. 3. Suitable for vessels up to 230 m. length and 11.0 m. draft.

No. 4. Suitable for vessels up to 230 m. length and 9.0 m. draft.

Also see "Developments".

Ferry Terminal – Berth 11. Suitable for either bow or stern door vessels of up to 165 m. in length and 7.0 m. in draft. Present service twice daily Sheerness/Flushing and vice versa.

STEVEDORES: All stevedoring at Sheerness is provided by the Port Authority.

CRANES:

Berth No.	*Remarks*
1	3 – 3 & 5 tonne Electric 1 – 7.5 tonne Electric 1 – 35 tonne Container Gantry
2	4 – 3 & 5 tonne Electric
3	5 – 3 & 5 tonne Electric
4	None (Car Terminal)
11	Ro/Ro/Ferry Terminal
12	10 tonne static (Launches)
12A	Mobile (Marine Services)
14	Mobiles (Launches)
15	Mobiles (Ship Repairs)
16	Mobiles (Ship Repairs)

MEDICAL: 24 hours notice to Agents so that Port Medical Officer can be advised. Normal boarding point – Garrison Point Sheerness. All usual hospital facilities available within 15 mile range of Sheerness.

DENSITY: Average density 1021/22.

FRESH WATER: Available alongside all berths at Sheerness.

FUEL: All grades available at BP Refinery Isle of Grain – or available by barge or lorry given 48 hours notice.

GANGWAY/DECK WATCHMEN: Gangway watchmen – services recommended as all berths at Sheerness are tidal with average rise and fall of 5 m.

OPENING/CLOSING HATCHES: Within Sheerness Docks rigging gangs are employed by the Authority for this purpose.

SURVEYORS: Cargo Surveyors available from London or Gravesend. Lloyd's Agent in docks.

REPAIRS: All types of deck and engine repairs can be carried out either in berth, in dry dock or at river buoys.

DRY DOCKS: Sheerness: 2 dry docks available. Largest for vessels up to 86 m., otherwise only small slipways available.

REPATRIATION: Usual facilities available for crew changes – repatriation can be arranged by various air/sea routes.

TELEPHONES: Police: Sheerness 661451; Fire: Sheerness 662382 or dial 999 and ask for Fire Service; Ambulance: Sheerness 664079. At Sheerness coin boxes are available for placing on board.

EMERGENCY CO-ORDINATION CENTRE: Medway Navigation Service, Garrison Point Fort, Sheerness Docks, Sheerness, Kent ME12 1RX. Tel: Sheerness 663025.

STORING: See "Prelims".

1. Yes.
2. No limitations except when loading dangerous goods or explosives.
3. Yes.
4. Yes.
5. Standard practice – 24 hour customs availability.
6. No.

GENERAL: All shipping movement co-ordinated by Medway Navigation Service, Tel: Sheerness 663025, all arrangements being made after notification of arrival or departure by vessel's Agent.

REGULATIONS: See "Medway".

DEVELOPMENTS: Reclamation underway at Lappel Bank will provide an additional storage area of 46 acres. No. 4 berth will be re-aligned and be able to accept vessel of approx. 250 m. LOA. Completion expected late 1986.

AUTHORITY: Medway Ports Authority, Dockyard House, Sheerness Docks, Sheerness, Kent ME12 1RX. *Tel:* 0795-662211. *Telex:* 96435. *Telex* (commercial): 965503. *FAX:* (0795) 668516. *Contact:* Mr. K. Cooper O.B.E., Chief Executive. Captain R. L. Collins, Harbour Master. Mr. P. Vincent, Director of Operations.

AGENT: See "Rochester".

(C) ISLE OF GRAIN: 51.26 N. 00.43 E. (See Plan)

DOCUMENTS:

1 Maritime Declaration of Health.
2 Crew's Effects Lists.
2 Ship's Reports by Master.
2 IMO FAL. Form 5.
2 Stores Lists.
1 Port Dues Certificate.
Ship's Certificate of Registry.
Load-line Certificate.
Safety Equipment Certificate.
Lloyd's Certificate.
Derat Certificate.
Ship's Register.
Light Bills.
Safety Radio Certificate.
Safety Construction Certificate.
2 Cargo Declarations.
1 Oil Pollution Certificate (OPIC).

PILOTAGE: See "Medway".

ANCHORAGES: *Estuary Passage and Anchorages:* Vessels proceeding to Isle of Grain will initially contact the Thames Navigation Service (Gravesend Radio Channels 16-12) and comply with the 'General Directions for Navigation in the Port of London 1975' until entering the Medway Area. Prior contact should be made with the Medway Navigation Service (Medway Radio, Channels 6-74-9-22). Anchorages are allocated according to size and draft of vessel and if outside the Medway area are nominated by the T.N.S.

RESTRICTIONS: Tidal port. 24 hour movements, subject to tidal conditions and under-keel clearance appropriate to size of vessel. The declared depth in the Medway Approach Channel is 8.5 m. at chart datum.

HEALTH: Under new procedures which apply from April 1st, 1978 a Health Clearance is only required if the vessel is "Suspect". In this case the Port Health Authority should be advised by radio message addressed to "Portelth London" not more than 12 hours and where practicable not less than 4 hours before arrival.

See "Health – All Ports" before first U.K. port.

RADIO:

Notice of 72 hours and over	– Portishead Radio.
Notice of 12 – 72 hours	– Landsend Radio.
Notice up to 12 hours	– from South, Northforeland Radio. – from North, Humber Radio.

RADAR/VHF: See "Medway".

TUGS: 3 tugs available, one equipped for fire-fighting. Tugs join and leave vessels at Garrison Point, Sheerness. Normally use tug lines, cost included in tug hire.

BERTHING: There are 2 T-headed jetties (Nos. 3 and 4) suitable for coastal and ocean-going vessels. All other berths are closed.

Maximum vessel dimensions:

Jetty	*Length* (m.)	*Draft* (m.)	*D.W.T.*
3	250	10.5	40,000
4	250	11.0	70,000

Length may be reduced dependent on size of vessel on adjacent jetty.

Draft may be varied due to siltation/tidal conditions. D.W.T. refers to fully loaded vessels. Larger vessels may be accepted, dependent on arrival displacement. Maximum drafts for the Medway Approach Channel and berths can be supplied on request.

Ballast water containing petroleum spirit may be pumped ashore.

DENSITY: Approx. 1020.

FRESH WATER: Available all jetties by pipe-line.

FUEL: Only gas oil is available from Nos. 3 and 4 jetties, prior arrangements can be made for the delivery of other fuel oils by barge.

MEDICAL: Advance notice of medical attention and inoculations required is advisable. Hospital facilities available in surrounding areas.

FIRE PRECAUTIONS: *Safety Regulations:* A copy of the BP Oil Ltd. Kent Terminal Jetty Safety Regulations is put on board each vessel on arrival. The booklet additionally contains various tear-out check lists, forms for confirmation of bunker requirements and requests for immobilisation and permitted repairs. These must be completed by ship and shore representatives before operations commence.

GANGWAY/DECK WATCHMEN: *Gangways:* Vessels provide their own gangway at all jetties and are responsible for maintaining it as a safe means of access.

REPAIRS: Local marine repair company can undertake repairs of general nature. No drilling or hot-work permitted alongside jetties.

REPATRIATION: All facilities for repatriation by land, sea and air, through London and Dover. Attendance of British Ministry and Foreign Consulate Officials arranged through Agent.

POLICE/AMBULANCE/FIRE: In case of fire or accident requiring ambulance attendance, contact Security by dialling 222.

Any request for attendance by the County Police should be made through the Shift Supervisor.

TELEPHONES: Public telephone kiosks on the foreshore road.

CUSTOMS ALLOWANCES: At the discretion of the local Customs Officer. Normal allowances are 200 cigarettes (F.G.) or 100 cigarettes (H.T.) or equivalent and 1 bottle of spirits per man. Additionally 1.5 litres of wine per man per day. Separate arrangements apply when crew are leaving ship. Vessels in port more than 4 days may receive an additional allowance.

TIME: British Standard Time is GMT plus 1 hour. GMT in Winter months.

SHORE LEAVE: The Shift Supervisor will board each vessel on arrival to collect from the Master a copy of the crew list. This should specify which crew members are leaving the vessel, the names of wives or other visitors expected and, if known, details of crew members joining. It should also note if any crew members are not permitted to go ashore.

The list will be retained at the Security Gate and passes will be issued when crew members pass out and collected from them on their return. Crew leaving should be issued with baggage passes by the ship.

GENERAL: Agents have difficulty in providing most services at weekends, therefore, requests for Bond, cash, Consular Officials, etc., should be radioed as soon as possible.

OPERATOR: BP Oil Ltd. Kent Terminal, Isle of Grain, Nr. Rochester, Kent ME3 0AG. *Tel:* Medway (0634) 270710. *Telex:* 965584 BP Oil G. *Contact:* C. B. Hook, Plant Manager.

AGENT: See "Rochester".

(D) CHATHAM DOCKYARD: 51.24 N. 00.33 E. (See Plan)

Until 1984 the Naval Dockyard and now operated by the Medway (Chatham) Dock Co. Ltd., under the control of the Medway Ports Authority.

DOCUMENTS: See "London".

PILOTAGE: See "Medway".

ANCHORAGES: See "Sheerness".

RESTRICTIONS: Movement of vessels subject to tidal conditions and under keel clearance appropriate to the size of vessel. Entry as directed by Medway Port Operations (Medway Radio). There are occasional restrictions for vessels over 130 m. in length between sunset and sunrise.

Limiting Depths: Medway Approach Channel 8.5 m. at Chart Datum.
Long Reach 5.8 m. at Chart Datum.
North Lock 3.9 m. at Chart Datum.
South Lock 3.5 m. at Chart Datum.

MAX. SIZE: All berths in No. 3 Basin can accommodate vessels drawing up to 8.5 m. The locks can accept vessels of unlimited length provided the beam does not exceed 25 m. Vessels drawing up to 4.5 m. can be accommodated at any state of the tide.

HEALTH: See "Medway (Rochester)".

RADIO: Portishead. From South: Lands End, Niton, North Foreland. From North: Cullercoats, Humber, North Foreland.

VHF/RADAR: See "Medway".

TUGS: A number of tugs are available, operated by J. P. Knight Ltd., and Crescent Shipping.

BERTHING: Access to all 3 basins is via the North or South Lock situated at Bull Nose in Gillingham Reach. Chatham Shiprepairers Limited carry out voyage repairs, services, etc. in No. 3 Basin. Tel: Medway (0634) 812401.

All 8 cargo handling berths are presently confined to No. 3 (Outer) Basin.

Berth No.	*Length* (m.)	*Cranes* (tons)	*Operator*	*Remarks*
1	168	None	Common user	Vehicle Import/ Export Terminal
2	150	None	Kent Line/ Norfolk Line	Ro/Ro Ferry Terminal
3	150	2×5	Crescent Shipping	General Cargo
4	150	1×10	Crescent Shipping	Ro/Ro Berth
5	150	1×5	Crescent Shipping	LASH and BACO
6	140	None	Transit Freights	Ro/Ro Berth
7	140	1×40 2×5 1×10	Heavy Lift Common User	Ro/Ro/Sto/Ro Terminal
8	168	2×5 1×10	Honigs (Rochester) Ltd.	Sto/Ro Terminal

Storage facilities are available.

For further details contact: Mr. J. Dixon, Tel: Medway 405397.

STEVEDORES: All stevedoring provided by the berth operators (see "Berthing").

MEDICAL: Advance notice of medical attention and inoculations required is advisable. Hospital facilties available in surrounding area.

DENSITY: 1020 (within No. 3 basin).

FRESH WATER: Metered supply available on all berths.

FUEL: No facility within the dockyard for the supply of fuel, although subject to weather conditions being suitable, bunkering from barges can take place in the anchorages.

GANGWAY/DECK WATCHMEN: Ship's responsibility.

SURVEYORS: Cargo surveyors available from London or Gravesend.

REPAIRS: All types of deck and engine repairs can be carried out either in berth, in dry dock or at river buoys. (See "Berthing").

DRY DOCKS: Sheerness: 2 dry docks available; the largest for vessels up to 86 m.

REPATRIATION: Usual facilities available for crew changes. Repatriation can be arranged by various sea routes or by air through Heathrow or Gatwick.

TELEPHONES: No telephones are placed aboard vessels nor are public telephones available on the quay side other than in offices in close proximity. In an emergency contact Docks Security on Medway 827130 or Locks Office on Medway 827317, or by radio, call sign "Bullnose" on Channel 73. Alternatively call Medway Port Operations and Information Service, call sign "Medway Radio" on Channels 16, 74 or 11. (Tel: 663025).

GENERAL: All shipping movements co-ordinated by Medway Port Operations and Information Service.

REGULATIONS: See "Medway".

AUTHORITY: *Contact:* Mr. J. C. Dixon. Medway (Chatham) Dock Co. Ltd., Tel: Medway 405397, 814936/7/8. Telex: 966642.

AGENT: See "Rochester".

(E) ROCHESTER: 51.23 N. 00.30 E. (including Chatham, Strood, Upnor, Gillingham, Snodland, Halling & New Hythe) (See Plan)

DOCUMENTS: See "London".

PILOTAGE: See "Medway".

ANCHORAGES: See "Sheerness".

RESTRICTIONS: No entry restrictions only as to state of tide and draft and as directed by Medway Radio (Medway Navigation Service, Garrison Point). Station keeps watch on Channel 16, 74, 73, 22 and 9. Channel 74 is allocated for port operations generally. For vessels exceeding 106.67 m. (350 ft.) in length, normally daylight navigation.

MAX. SIZE:

Ship Berths: Max. Length: 114 m. (122 m. LOA with special dispensation obtained from the Harbour Master. Bow thruster, tug, etc., required). Max. draft 7.6 m.

River Berths: Length 49 m. – 122 m. Depth 4.3 m. – 7.6 m. MHWS 2.7 m. – 6.1 m. MHWN. Max. LOA 46 m. – 122 m.

HEALTH: Pratique obtained on arrival at Berth.

Also see "Health – All Ports" before first U.K. port.

RADIO: From South: Lands End, Niton, Northforeland. From North: Cullercoats, Humber, Northforeland.

TUGS: J. P. Knight (Rochester) Ltd., 348 High Street, Rochester (Tel. Medway STD 0634 – 42408 and Sheerness STD 0795 – 662821), cover the whole of the Medway Ports Area.

The following companies operate within the Medway Ports Area on a smaller scale with towing and light recovery services:

Medway Towing & Light Recovery – Medway STD 0634 – 54300
N.E. Murray (Marine Contractors) – Sheerness STD 0795 – 663701
P. E. Woodger (Craft Hire) Ltd. – Sittingbourne 23874
Mr. J. Oliver – Medway STD 0634 – 406525

BERTHING:
Rochester: There are 5 dredged berths maintained by the Medway Ports Authority and mooring buoys to accommodate 75 lighters and 21 LASH barges situated between Chatham Reach and Rochester Bridge.

Size restrictions vary from 46 m. to 140 m., the latest minimum depths can be obtained from the Medway Navigation Service situated at Sheerness (Garrison Point).

The facilities or riverside berths are operated by commercial interests:

Arco Shipping Ltd. at Neptun Wharf	Medway 34011
Transit Freights Ltd. at Crown Wharf	Medway 717811
Honigs (Rochester) Ltd. at Limehouse Wharf	Medway 46261
Wm. Cory & Sons Ltd. at Cory's Wharf	Medway 41022
Anglosped Ltd. at Stanley's Wharf	Medway 407285
Lynch and Sons Ltd. at Lynch's Wharves	Medway 77831
Crescent Shipping Ltd. at Barnetts Wharf	Medway 79541/8
John Howards Ltd. at Crown & Quarry Wharf and Howards Wharf	Medway 402040 (20 lines)

Details of alongside berths handling equipment, latest depths and relevant information can be obtained from the appropriate wharf concerned.

Current depths can be ascertained from Medway Navigation Service.

Pier Wharf: (Lat. 51° 24′ North; Long. 0° 33′ East)

Situated at the Western Arm of Gillingham Dock and operated under a consortium of companies. Length of wharf 183 m. with varying depths from 3 m. to 5 m. at MHWS. Mobile crane of 4 tonnes and forklift of 4,000 lbs. Storage warehouses and storage capacity available.

Ship repair and boat builder – Medway Marine Engineering – STD 0634 - 576600.

Tylers Wharf: (Lat. 51° 24.6′ North; Long. 0° 34′ East)

Situated at West Hoo Creek owned and operated by the Lifeline Moulding Co. Ltd. Length of wharf 73 m. with a depth of 3 m. at MHWS. Large sheerlegs of 30 tons and mobiles available. Boat builders and outfitters.

Mooring Facilities: Buoys are provided at points within the River Medway and Swale. Arrangements to use these buoys and current charges can be made through the Medway Ports Authority.

Kethole Reach: Buoys 20, 21, 22, 23 and 24: 4 fore and aft moorings to accommodate vessels up to 200 m. length and 16,000 tonnes displacement.

Saltpan Reach:

Buoy No.	*Class*	*Maximum Displacement*	*Remarks*
1	3rd	8,000 tons	Max. Length 122 m.
2	Super 1st	70,000 tons	Max. Length 300 m.
4	Super 1st	70,000 tons	Max. Length 300 m.
5	4th	3,500 tons	LASH
6	4th	3,500 tons	LASH
7	4th	3.500 tons	LASH
8	4th	3,500 tons	LASH
9	4th	3,500 tons	LASH
10	4th	3,500 tons	LASH
11	4th	3,500 tons	LASH

MEDICAL: Port Medical Officer available if necessary on arrival at Sheerness with 24 hours notice to Agents. Doctor and hospital facilities available at Rochester.
DENSITY: 1020 unless excessive land water coming down river.
FRESH WATER: Quantities up to 200 tons available for delivery by water barge.
FUEL: Oil bunkers may be obtained at the main installation at the Isle of Grain Oil Refinery or by barge or by road tanker. The last 2 methods require minimum 48 hours notice, similarly with supplying lubricating oil which is not available at the Isle of Grain.
OPENING/CLOSING HATCHES: To be carried out by crew.
CARGO GEAR: Discharge by ship's gear at ship berth and by mobile cranes up to 10 tons at all river berths.
CONSULS:

Vice-Consul Netherlands, Tel. Medway 43256.
Consul Sweden, Tel. Medway 44632.
Vice-Consul Finland, Tel. Medway 44632.

REPAIRS: The Medway Dry Dock Co. Ltd. (Tel: Sheerness STD 0795 – 662241/662461) provide 2 Dry Docks of 87.84 m. and 65.58 m. respectively. A smaller slipway is available and alongside berths also.

The Medway Slipway Yard at Rochester High Street or Doust and Company Limited (Tel: Medway STD 0634 – 43087) provide ship repair facilities and operate 2 slipways. The larger can accommodate up to 600 tonnes and 55 m. in length. Afloat repair facilities and riverside berths also available.

Acorn Shipyard (ex New Medway), Gas House Road, Rochester, Kent ME1 1PJ (Tel: Medway STD 0634 – 41355/6/7), provide ship repair facilities at the Isle of Grain; Sheerness and River Medway, and operate 1 patent slipway of 85.0 m. working length and 1 grid situated at Rochester.

DRY DOCKS: All repair facilities available on river berths for vessels up to 60.96 m. (200 ft.) in length; on a grid for up to 76.19 m. (250 ft.), and a slipway for up to 42.67 m. (140 ft.).
AIRPORTS: London (Heathrow), Southend, Gatwick and Rochester.
POLICE/AMBULANCE/FIRE: Dial 999 and state service required and where vessel berthed, also contact Medway Radio in cases of emergency.
SERVICES: Compass adjustors available.
REGULATIONS: See "Medway".
DEVELOPMENTS: Development of Frindsbury Marshes (Rochester).
AUTHORITY: Medway Ports Authority.

AGENT: Norpark Shipping Co. Ltd., Bridge Wharf, Horse Wash Lane, The Common, Rochester, Kent ME1 1PV. Tel: (0634) 815761. After Hours (0268) 691394, (0375) 374063. Telex: 966422. FAX: (0634) 828192. Cables: Normed Rochester.

(F) OTHER FACILITIES:

(1) BLOORS WHARF – RAINHAM CREEK: 51° 22′ 48″ N., 00° 36′ 42″ E.

Situated at the head of Rainham Creek a distance of 10.3 nautical miles from Rochester. Main wharf 183 m. long with 3.1 m. at MHWS. The Western arm is 61 m. long with a depth of 2.1 m. at MHWS. 5×2.5 tonne grab cranes and 2×40 tonne crawler cranes.

The Wharf is owned and operated by Medway Metals Ltd. Telephone: STD 0634-34411. Telex: 33562. Mobile cranes, forklifts and crushing equipment available. Large storage capacity and warehouses also available. Shipbreaking and re-cycling of metals.

(2) FAVERSHAM: 51° 19′ N., 00° 54′ E.

DOCUMENTS: See "London".
PILOTAGE: Not compulsory. Advisable to engage local person by arrangement with Agent or contact Medway Navigation Service.
ANCHORAGE: The Swale (East) 1 mile (approx.) upstream of the Sand End buoy.
RESTRICTIONS: No night restrictions. Tidal creek – vessels enter from 1.5 hours before High Water according to draft.
MAX. SIZE: 43 m. LOA, 7.6 m. beam, 2.7 m. draft, on Spring tides only. Larger vessels may be accepted under certain conditions on application to the Harbour Master.
RADIO: North Foreland.
VHF/RADAR: See "Medway".
TUGS: None available.
BRIDGES: Maximum size of vessels proceeding to basin above Faversham Swing Bridge – 43 m. length, 7 m. beam. Draft – the minimum clearance for vessels up to 34 m. in length is 0.5 m. over the sill, and for longer vessels 0.6 m. over the sill.
MEDICAL: Notify Agent of any medical treatment required.
FRESH WATER: Available on some berths.
FUEL: No local installation. Bunkers may be obtained by road tanker – contact Agent.
REPAIRS: Minor repairs can be carried out locally. For nearest grid, slipway and dry dock facilities see "Rochester" and "Sheerness".

(3) KINGSNORTH: 51° 25′ N., 00° 36′ E.

DOCUMENTS: See "London".
PILOTAGE: See "Medway."
ANCHORAGES: Vessels proceeding to Kingsnorth must contact Medway Navigation Service (VHF Channels 16 and 74) when a designated anchorage will be allocated appropriate to the size of the vessel.
RESTRICTIONS: Tidal port. 24 hour movements, subject to tidal conditions and underkeel clearance appropriate to size of vessel. Minimum depth of approach channel 8.5 m. at Chart Datum.
MAX. SIZE: Max. length: 229 m. No breadth restriction. Depth: 6.3 m. min. depth alongside at Chart Datum.
HEALTH: See "Health – All Ports" before first U.K. port.
RADIO: Notice of 72 hours and over, Portishead Radio. Notice of 12-72 hours. Landsend Radio. Notice of up to 12 hours, from South, Northforeland Radio, and from North, Humber Radio.
RADAR/VHF: See "Medway".
TUGS: Although tugs are not normally required for berthing at Kingsnorth 3 tugs are available, 1 of them equipped for fire fighting. Tugs join and leave vessels at Garrison Point, Sheerness. Normally use tug lines, cost included in tug hire.
BERTHING: *Kingsnorth Jetty:*

Lat. 51° 24′ 36″ N.
Long. 0° 36′ 18″ E.

The jetty is owned and operated by C.E.G.B. (Kingsnorth) and is situated at the Western end of Long Reach a distance of 6.3 nautical miles from Sheerness and 5.85 nautical miles from Rochester.

The jetty is of concrete construction and is 580 m. long and "L" shaped with a 306.3 m. face, there is a single upstream connected dolphin making an overall face of 330.7 m.

The size of vessels using the jetty are governed by draft.

Minimum depth at MLWS is 6.9 m.
MHWS is 12.8 m.

There is an inner spur situated on the approach arm 396 m. from the jetty face. It is primarily intended for stern Ro/Ro craft, and has 2 starboard berthing dolphins situated at 30.5 m. and 61.0 m. respectively.

Depth at MLWS is 0.6 m. above Chart Datum.
MHWS is 5.3 m.

The jetty is used for the import of coal for Kingsnorth Power Station.

Address: Kingsnorth Power Station
(South Eastern Region)
Hoo, Rochester,
Kent ME3 9NQ
Telephone: STD 0634 – 250088 Telex 965015

MEDICAL: Advance notice of medical attention and inoculations required is advisable. Hospital facilities available in surrounding areas.
TANKERS: Advisable radio Agents connection sizes required. No slop tank available. 1 large tanker berth only.
DENSITY: Approx. 1018.
FRESH WATER: Available by pipe-line on jetty.
FUEL: Bunkers not usually available on jetty, but may be delivered by barge. Advance notice essential.
FIRE PRECAUTIONS: No immobilisation or repairs allowed without prior authorisation. No hot-work allowed alongside jetty.
GANGWAY/DECK WATCHMEN: Services of shore watchmen not necessary. Shore gangway may be used.
REPAIRS: Local marine repair company can undertake repairs of general nature. No drilling or hot-work permitted alongside jetty.

REPATRIATION: All facilities for repatriation by land, sea and air, through London and Dover. Attendance of British Ministry and Foreign Consulate officials arranged through Agent.
POLICE/AMBULANCE/FIRE: Dial 999 from public call box. Medway Navigation Service can be alerted on Channel 16 and 74 to call these services.
TELEPHONES: No facilities exist for placing telephones onboard.
GENERAL: Agents have difficulty in providing most services at weekends, therefore, requests for bond, cash, consular officials, etc., should be radioed as soon as possible.

(4) OAKHAM NESS JETTY: 51° 24′ 55″ N., 00° 38′ 45″ E.

The jetty is jointly owned and operated by C.E.G.B. and K.C.A. International Ltd. and is situated in Kethole Reach a distance of 4.5 nautical miles from Sheerness (Garrison Point). The jetty is of concrete construction and is 1,960 m. long. The jetty head is 27.5 m. long with upstream and downstream attached dolphins making a 85 m. face. There are 2 further berthing dolphins unattached, both upstream and downstream. The max. size of vessel permitted on the jetty is restricted to 55,000 d.w.t. with a max. length of 229 m.
The depth at MLWS is 10.6 m.
at MHWS is 16.7 m.

C.E.G.B. have a separate storage capacity of 300,000 tons for crude oil primarily for Kingsnorth Power Station.

(5) OTTERHAM QUAY – RAINHAM: 51° 22′ 30″ N., 00° 37′ 42″ E.

Situated at the head of Otterham Creek a distance of 2.75 nautical miles from the junction of Long Reach and Kethole Reach and 10.25 nautical miles from Rochester.

There is 192 m. of quay space with a max. length restriction imposed on loaded vessels of 73 m. There is 3.3 m. at HWNT and 4.6 m. at HWST.

The Quay is owned and operated by Crescent Shipping (sole proprietors London and Rochester Trading Co.). Telephone STD 0634 – 815501. Telex: 96312.

(6) QUEENBOROUGH: 51° 26′ N., 00° 44′ E.

Area of harbour extends from Queenborough Spit to Long Point in the West Swale. Queenborough Creek is landlocked and small commercial interests operate within the creek which is buoyed, all berths dry out but are safe berths.

MHWS 5.8 m. Weather – prev. S.W.

The ex-Coal Wharf known as the Washer Wharf, situated at Loden Hope is operated by Queenborough Rolling Mill Ltd. (Tel: Sheerness 668080) and is primarily used for loading scrap metals.

(7) RIDHAM DOCK: 51° 23′ N., 00° 46′ E.

Situated 900 m. (0.5 nautical miles) S.E. of Kingsferry Bridge in the Swale. Restrictions on vessels governed by London Pilotage Committee in the light of water available in the Swale, Kingsferry Bridge and restricted bends in the navigational channel. Max. LOA 102 m. Beam 15.3 m. and draft 6.7 m.

Beam of vessels transiting Kingsferry Bridge restricted to 15.3 m. maximum.

Vessels of 82 m. and over LOA require a tug in attendance.

Ridham dock is owned and operated by Independent Sea Terminals (Tel: STD 0795 – 70881). The terminal has 4 berths, 2 of 244 m. and 2 of 213 m. approximately. These are serviced by 8 electric cranes 2×6 tonnes and 6×5 tonnes. There is a fleet of forklift trucks 8,000 lbs. to 36,000 lbs. plus a 25 ton container handler. 5 hectares of marshalling area for containers including refrigerator points.

Vessels dock only on or near HW and take the ground at LW, the bottom being soft mud. Special facilities for reefer ships going aground.

The terminal covers approximately 26.7 hectares and 13,000 sq.m. of warehousing are available.

Authority: Independent Sea Terminals Ltd., Ridham Dock, Sittingbourne, Kent. *Tel:* 0759 70881. *Telex:* 96409.
AGENT: See "Rochester".

METHIL: 56.11 N. 03.01 W. (See Plan)

DOCUMENTS/PILOTAGE: See "Leith".
ANCHORAGES: Deep water anchorages available in Largo Bay.
RESTRICTIONS: Dock gates opened from 3 hours before HW until HW.
MAX. SIZE: Max. beam 14.4 m. to pass dock gates.
RADIO: See "Leith".
VHF: Methil Harbour Radio on Channel 16.
TUGS: Available from Leith.
BERTHING: No. 1 Dock has 340 m. of berthing space, max. depth alongside 6.7 m. MHWS. No. 2 Dock has 500 m. of berthing space, max. depth alongside 8.2 m. MHWS. Transit shed with 1,120 sq.m.
CRANES: 4×4 tonne mobile cranes (with grabs) available.
BULK CARGO FACILITIES: 2×1,000 tonnes capacity grain silos and discharge plant at No. 1 Dock (private).
STEVEDORES: Local company supplies labour.
AUTHORITY: Forth Ports Authority, Dock Office, Methil. *Tel:* Leven 26725. *Contact:* Captain I. C. Bayliss, Harbour Master. Captain R. Taylor, Port Manager.

MILFORD HAVEN: 51.42 N. 05.10 W. (See Plan)

PORT LIMITS: The seaward boundary of the port is 3 miles from St. Ann's Head.
DOCUMENTS:
5 Crew Lists.
2 Crew Stores Declarations (C.142)
3 Ship Stores Declarations (C.14)
2 E.E.C. Safety Check Lists.
Agents will prepare other Customs papers.
Ship's Papers:
Register.
Load Line Certificate.
Safety Construction Certificate.
Safety Equipment Certificate.
Safety Radio Certificate.
Oil Pollution Insurance Certificate (tankers).
British Tonnage Certificate (if applicable).
U.K. Light Dues for Current Year (if applicable).

PILOTAGE: Pilots normally board incoming ships from a green-hulled pilot vessel, in a position S.W. of Mid-Channel Rock Light-tower, as close thereto, as weather, size of ship and circumstances permit. When the Western Channel is being used by very large ships other ships may be requested by the Port Signal Station, or by the pilot vessel, to use the Eastern channel, if draft, and length of ship permit, in which case the Pilot will board close to Sheep Buoy. Deep-draft ships should not approach too close whilst awaiting the pilot vessel. They should remain at least 3 miles S.W. of Mid-Channel Rock Light-tower. It is important, when manoeuvring at slow speeds to embark a Pilot to make proper allowance for the set of the tidal stream, which sets across the entrance. *Accurate times of arrival* are requested so that the pilot vessel may be on station at the correct time. ETAs should be given at least 12 hours before arrival and amendments should be made 2 hours before the latest ETA.

ETAs and subsequent amendments should be passed by radio telegram or radio telephone through any United Kingdom Coast Station to Milford Haven Signal Station (Milford Haven 2343. Telex: 48575) or to the local Agent of the ship. Alternatively when within 30 miles of St. Ann's Head ETA's may be passed direct to Milford Haven Conservancy Board Signal Station calling on VHF Channel 16 then transferring to Channel 12 (the Port working frequency). In addition ships may call the pilot vessel on MF radio calling on 2,182 kHz and transfer to the working frequencies 2,241, 2,246 or 2,301 kHz.
ANCHORAGES: Anchorage normally available for vessels up to 40 ft. draft in Dale Roads. Anchorage for smaller vessels normally available in Dale Shelf or Stack anchorages. Signal Station will advise mariners on the availability of these anchorages.
RESTRICTIONS: The West Channel with minimum depth of 54 ft. at the entrance and 53 ft. inside is the channel used by the largest tankers. The East Channel with minimum depth of 32 ft. is available to all vessels of suitable size and vessels able to do so are requested to use it when the largest tankers are entering or leaving in the West Channel.
MAX. SIZE: Vessels of 65 ft. draft can be handled on virtually all high waters, but draft restriction always dependent on tide, 63 ft. at worst HW Neaps, or up to 68 ft. in favourable conditions.
HEALTH: The Port Health Authority must be notified in advance if any animals on board or of any suspected disease or fever.

Also See "Health – All Ports" before first U.K. port.
RADIO: Lands End Radio, Ilfracombe Radio, Celtic Radio and Cardigan Bay Radio.
VHF: It is important to maintain continuous radio telephone contact with Signal Station when within one hour's steaming of St. Ann's Head, and at all times when in Haven and not safely moored to an alongside berth, including all times spent at anchor or at buoys.

All vessels equipped with VHF radio should adopt following procedures:

Entering the Harbour: Contact Signal Station on Channel 16 when within one hour's steaming of St. Ann's Head. After making contact ship will be requested to maintain watch on Channel 12 until vessel safely moored alongside or at anchor.

Going to anchor or to a buoy mooring: Report to Signal Station when secured and then maintain a continuous watch on Channel 16.

Berthing alongside: Report to Signal Station when safely moored and may then shut down.

Leaving the Haven: Maintain continuous listening watch on Channel 12 until Pilot has disembarked, when Signal Station should be informed and vessel should maintain a continuous watch on Channel 16 until one hour after passing St. Ann's Head.

Navigating within the Haven: Maintain a continuous watch on Channel 12. When radio telephone is used between vessel and tugs during berthing operation, Channel 6 or 8 will be used and Signal Station should be informed before vessel comes off Channel 12.

Signal Station will answer calls on Channel 16 for any ship in the port which has been instructed to move off international calling frequency.
RADAR: Harbour surveillance radar in operation, range 24 miles.
TUGS: Tugs normally join vessels to Westward of Esso Jetty, but Master will be advised by Pilot. Tug's lines used, cost of lines inclusive of towage charge.
BERTHING: VLCCs enter at HW and normally berth heading East. Vessel will be required to swing after unloading and prior to departure. *Milford Docks:* Enclosed dock, minimum depth on sill 26 ft., lock length 550 ft., width 69 ft., 5,033 ft. of quayage includes 420 ft. fish market and two modern cargo handling berths, one of 732 ft. and the other 455 ft. in length. Vessels of up to 36 ft. draft may be handled on Spring tides. *Port Operators and Storage* (Formerly Celtic Sea Supply Base): One cargo berth, depth 20 ft., for vessels up to 350 ft. length. Max. size approximately 6,500 d.w.t.
CRANES: In Milford Docks – 2×25 ton mobile, 1×15 ton mobile, 2×6 ton electric. Further mobile cranage available if required.

SPECIALISED CARGO HANDLING FACILITIES:
Containers: Container traffic is handled at Milford Docks although there is no specialised container handling equipment.
Ro/Ro: Pembroke Dock Ferry Terminal has one Ro/Ro berth, depth alongside 21 ft., and can accommodate ferries up to 425 ft. in length, max. size 6,000 g.r.t. (approx.).
LPG: LPG is handled at the Amoco, Gulf and Texaco oil terminals.

STEVEDORES: Ordered prior to arrival with at least 3 days' notice.
MEDICAL: All oil terminals have well equipped medical centres. Local hospital facilities available.

TANKER TERMINALS:
Amoco:
No. 1 Berth: Depth 64 ft., 1×18 in., 4×16 in. crude lines, 2×12 in. and 3×8 in. product lines, max. size 275,000 d.w.t.
No. 2 Berth: Depth 38 ft., 1×18 in., 1×12 in., 2×10 in. and 2×8 in. product lines, 1×8 in. and 1×6 in. LPG lines, max. size 30,000 d.w.t.
No. 3 Berth: Depth 22 ft., 1×18 in., 1×8 in. and 2×6 in. product lines, 1×8 in. and 1×6 in. LPG lines, max. size 5,000 d.w.t.

Esso:
No. 1 Berth: Depth 54.5 ft., 5×12 in. cargo lines, max. size 190,000 d.w.t.
No. 2 Berth: Out of commission.
No. 3 Berth: Out of commission.
No. 4 Berth: Out of commission.
No. 5 Berth: Out of commission.

Gulf Oil:
No. 1 Berth: Depth 44 ft., 3×10 in. and 2×12 in. cargo lines, max. size 65,000 d.w.t.
No. 2 Berth: Depth 55 ft., 6×12 in. cargo lines, max. size 135,000 d.w.t.
No. 3 Berth: Depth 32 ft., 6×8 in. product and 1×4 in. LPG cargo lines, max. size 8,000 d.w.t.

Texaco:
No. 1 Berth: Depth 62.3 ft., 4×16 in. crude, 4×10 in. black oil and 4×10 in. clean oil cargo lines, max. size 275,000 d.w.t.
No. 2 Berth: Depth 44.9 ft., 2×12 in. LPG ship discharge lines with 1×8 in. vapour return line, 4×10 in. black oil, 6×10 in. clean oil and 2×10 in. ballast/bunker lines, max. size 100,000 d.w.t. (75,000 cu.m. LPG).
No. 3 Berth: Depth 35.4 ft., 1×12 in. LPG ships discharge with 1×4 in. vapour return line, 2×12 in. black oil and 2×10 in. clean oil lines, max. size 35,000 d.w.t. (30,000 cu.m. LPG).
No. 4 Berth: Depth 18.7 ft., 1×6 in. black oil, 3×6 in. clean oil, 1×6 in. LPG and 1×6 in. ballast lines, max. size 2,000 d.w.t.
No. 5 Berth: Depth 20 ft., 1×6 in. black oil, 3×6 in. clean oil, 1×6 in. LPG and 1×6 in. ballast lines, max. size 4,500 d.w.t.
No. 6 Berth: Depth 62 ft., 5×16 in. cargo lines, 1×10 in. fuel line, max. size 275,000 d.w.t.
No. 7 Berth: Depth 50 ft., 5×10 in. cargo lines, 1×8 in. fuel line, max. size 113,000 d.w.t.
No. 8 Berth: Out of commission.
No ballast facilities at Berths 6, 7 and 8.

Report: *Cautionary Advice:* In-Port: There are 4 major oil terminals within the Haven. The Esso Terminal is located less than 2 miles E.N.E. of the Angle Buoy. Ships bound for the Esso Terminal make tugs fast between the Angle Buoy and South Hook Buoy.

VLCCs which require 5 or 6 tugs have little but adequate time to make them fast. It is, therefore, extremely important for a deep tanker bound for a terminal in the Haven to have everything ready and the crew on stations prepared to make tugs fast by the time the Angle Buoy is reached and that after the turn is made the speed over the ground is reduced quickly so that by the time the South Hook Buoy is reached, all tugs are fast and speed reduced to about 2.5 knots.

Ships bound upstream of Esso must proceed at the slowest speed consistent with safe navigation, as they pass quite close to ships lying alongside other terminals and can cause considerable "passing ship" problems. They usually make tugs fast after passing South Hook Buoy.
Berth Approaches: Ships are strongly advised against steaming into the berths at any terminal.

The only safe manoeuvre being to bring the ship to rest, stopped over the ground, parallel to and about 40 – 60 m. off the berth before breasting in.

This particular manoeuvre is of importance to vessels of 70,000 d.w.t. and over.

Most of the incidents during berthing operations have arisen because of a combination of an angled approach to the berth, excessive headway and berth approach speed with a sheer resulting from strong astern engine movements.
Anchorages: Ships of up to 12.80 m. draft for which there is no berth available on arrival can find anchorage within the Haven. (See below). Deeper draft ships which have to wait for tide or berth should only attempt to anchor outside when weather conditions are good and for limited periods only. A number of large tankers have successfully anchored S.W. of St. Ann's Head outside the 36.5 m. contour, but tides are quite stong. The Milford Haven Signal Station should be consulted before anchoring in this location mainly due to the high incidence of port and passing traffic.

When Easterly winds prevail, there is good anchorage in St. Bride's Bay. Carmarthen Bay is not recommended, as there is a gunnery range covering the area but not marked on the charts.

Vessels at anchor outside must keep listening watch on VHF Channel 16, and it is stressed that enough time must be allowed to weigh anchor and reach the entrance at the proper time for shipping the Pilot to enter port.

Anchorages Within the Haven: The recognised anchorages within the Haven are shown on the large scale charts.

Dale Roads is the only anchorage for ships over 7.62 m. and under 12.80 m. draft. It is exposed to wind and swell and has an uneven rocky bottom which does not always afford a good holding ground. *Many ships have dragged anchor here and several have lost an anchor, and it is emphasised that a full anchor watch must be maintained on all ships with a listening watch on VHF Channel 12.*

If at anchor in Dale Roads at the onset of a gale, it is usually sound advice to pick up the anchor and proceed to sea. After rounding the Angle Buoy, if Mid-Channel Rock Lighthouse is kept fine on the port bow, this will take a ship clear of dangers. Before departing, the status of the buoys should be checked out with the Signal Station and then proceed with caution.

The 2 entrance buoys should not be relied upon as they sometimes drag out of position during gales.

Stack Anchorage can be used by medium sized ships of up to 7.62 m. draft. It is a little more sheltered and has a better holding ground.

Small ship anchorages are at Dale Shelf, Sandy Haven, and with the exception of LPG ships between Milford Shelf Buoy and Newton Noyes Pier. Some small ships find shelter South of the channel opposite the Esso Terminal.
Esso Marine Terminal – Cautionary Advice: Each berth has a designed maximum speed of approach for the maximum size tanker acceptable. These are:
Berth No. 1 – 6.7 m./min. for 190,000 d.w.t.
These are maximum speeds, and the aim should be to land at not more than 2 m./min. with ship parallel to the berth.

The berths are in an exposed position with prevailing winds blowing on to the berths. Strong winds from the Northerly semi-circle do occur and usually with a sudden shift in wind. Ships with high freeboard can be badly affected by these strong winds and it is, therefore, very important that moorings are kept tight and are properly tended at all times.
Description of Berthing Procedures: All vessels berth head to tide. Ships of less than 265 m. and 14.6 m. draft can be berthed on the flood tide and, therefore, swung before berthing. These ships are usually swung off the berth. Ships of greater draft will always berth at HW or on the ebb tide and will, therefore, always be port side to.

All moorings are taken ashore by boat and lifted on to the dolphins by power winch.

Breast and spring lines are usually put out first.

Good messengers are required at each position for this operation. This system is for VLCCs only.

DENSITY: 1025.
FRESH WATER: Available at all berths.
FUEL: All oil terminals can supply all grades of bunkers, except that Esso can only supply gas oil grades. Fuel also available within Milford Docks and from bunkering barge elsewhere in the Haven.

FIRE PRECAUTIONS: Fire wires to be rigged fore and aft on all tankers.
GANGWAY/DECK WATCHMEN: Available if necessary – very rarely required.
CUSTOMS ALLOWANCES: Tobacco, 0.5. oz. per man per day. Spirits, 0.25 pint per man per day.

IDENTIFICATION CARDS: Not necessary.
CONSULS: The following countries are represented by Consuls at the port or elsewhere in South Wales:
Belgium
Brazil
Denmark
Finland
France
Germany F.R.
Italy
Netherlands
Norway
Spain
Sweden
Turkey

REPAIRS: All types of deck and engine voyage repairs carried out.
DRY DOCKS: One dry dock at Milford Docks, 600 ft. × 63 ft. × 18 ft.
SURVEYORS: Lloyd's at Milford Haven, ABS and NV in South Wales. Cargo inspectors available – Saybolt, Moore, Barrat and Redwood have local offices.
REPATRIATION: Crew changes frequently carried out and repatriation arranged. Crew arriving by rail to join vessels at Amoco, Esso, Gulf and Milford Docks should be directed to Milford Haven station. If joining vessels at Texaco to Pembroke station, and for vessels at Port Operators and Storage or Pembroke Dock Ferry Terminal, to Pembroke Dock station.

AIRPORT: Nearest main airport is Cardiff (Wales) Airport, distance approximately 100 miles. Flights to London for onward connections.
TIME: GMT in Winter months, BST (GMT plus 1 hour) March to October.
HOLIDAYS: Oil Terminals operate 24 hours/365 days. Other berths observe standard U.K. holidays but cargo work can be arranged if required.
POLICE/AMBULANCE/FIRE: Police – Milford Haven 2351, Pembroke 682121; Ambulance – Haverfordwest 3347; Fire – Haverfordwest 2131.
EMERGENCY CO-ORDINATION CENTRE: Emergencies within the port are co-ordinated by the Milford Haven Conservency Board Signal Station. Emergencies outside the port and S.A.R. co-ordinated by H.M. Coastguard St. Ann's Head (Tel: Dale 218).
TELEPHONES: No telephones on board. Public call boxes exist on all oil jetties.

SERVICES: Ministry of Defence compass adjuster available subject to operational commitments.
SHORE LEAVE: Shore leave allowed.
STORING: Vessels can be stored by barge or truck and local riggers are available to assist. Storing can normally take place during cargo operations but, in the case of oil tankers, trucks cannot proceed alongside the ship and storing from a barge must be carried out near the stern of the ship. Fork lift trucks cannot be used to store oil tankers.
SHIP SUPPLY SERVICE: D.V. Howells and Sons Ltd., P.O. Box 14, Milford Haven, Dyfed SA73 3ER. Tel: Milford Haven (06462) 3091/2418/4733. Telex: 48575.

Marine & Port Services Ltd., The Dockyard, Pembroke Dock, Dyfed SA72 6TF. Tel: Pembroke (0646) 682271/5. Telex: 48303.

Additionally, there is a tug company operating in Milford Haven with a fleet of locally based tugs whose prime duty is the berthing and unberthing of tankers at oil terminals in the Haven and firefighting responsibilities, although occasionally a tug may be called offshore for salvage purposes. The tug company is Cory Towage Ltd., Slip Hill, Milford Haven, Dyfed SA73 3BB. Tel: Milford Haven (06462) 2296/7.

There is a helicopter squadron based at RAF Brawdy, Haverfordwest, which provides a rescue service and, on occasions, airlifts seriously injured or sick personnel from ships in the area, usually on request through the local Coastguard Station.

AUTHORITY: Milford Haven Conservancy Board, P.O.Box 14, Milford Haven, Dyfed, SA73 3ER, U.K. *Tel:* Milford Haven (06462) 3091 office, Milford Haven signal station (06462) 2342 or 2343. Signal Station – 24 hours. *Telex:* 48575 – 24 hours. *Contact:* Capt. G. Dudley, O.B.E., Harbour Master.

AGENT: G. S. Kelway Ltd., Murray Crescent House, The Rath, Milford Haven SA73 3JR, Dyfed. Tel: Milford Haven 2313/4. After hours: Milford Haven (06462) 5587, 2615, 2364. Telex: 48213. Cables: "Kelway Milford Haven".

MISTLEY: 51.57 N. 01.05 E. (See Plan)

LOCATION: Private port situated on the River Stour within Harwich Harbour. Seven tidal berths, vessels lay safe aground (also see "Harwich").

DOCUMENTS: Normal requirements – local Agents will advise.

PILOTAGE: Order via Agents or direct with Harwich Pilots.

Call sign: "Harwich Pilots".
VHF: Channel 16 and 9.
Telephone: Harwich (0255) 3129.
Telex: 98472.

Compulsory ETA 8 hours before arrival and 2 hours confirmation. Details required: Name of vessel, ETA, destination, max. draft., g.r.t.

ANCHORAGES: Safe anchorage in Harwich Harbour or Cork Pilot Station.

RESTRICTIONS: Vessels can enter/depart on HW according to state of tide and draft. Day and night navigation.

MAX. SIZE: No length or beam restrictions. Draft varies between 3.3 m. Neap tides to 4.3 m. Spring tides. Dredging work to channel and berths presently on hand will result in an increase in acceptable draft limits.

HEALTH: As per Port Health Regulations. See "Harwich".

RADIO: Northern Approach: Humber Radio, Tel: (0521) 73447.
Southern Approach: North Foreland Radio, Tel: (0843) 20592.

VHF: Harwich Harbour Radio, Channel 14.

TUGS: Available from Felixstowe and Mistley via ship's Agents.

BERTHING: Instructions given via Pilot or Agents. Loading/discharging via shore cranes/elevators.

CRANES: Mobile cranes up to 10 tons and Scotch Derrick up to 30 tons.

BULK HANDLING FACILITIES: Bulk cargo facilities available for discharge of grain, ores, fertilisers, etc., by grab. Loading elevators for grain, etc.

STEVEDORES: All cargo handling instructions and enquiries to: The Mistley Quay and Forwarding Co. Ltd., High Street, Mistley, Manningtree, Essex. Tel: 0206 394431. Telex: 98692.

MEDICAL: All requirements via Agents with advance notice.

DENSITY: 1026.

FRESH WATER: Available with notice. Up to 20 tons-charge £19 plus overtime charges if incurred.

FUEL: Bunkers available from major suppliers via Agents.

SURVEYORS: Cargo inspectors, superintendents and surveyors are available locally via Agents.

GANGWAY/DECK WATCHMEN: Ship's gangway, watchmen not necessary.

HATCHES: Opening and closing by crew.

CUSTOMS ALLOWANCES: Normal U.K. Regulations.

CARGO GEAR: All work by shore cranes, heavy lift up to 30 tons.

REPATRIATION: Facilities via Agents.

TIME: GMT. Summertime, GMT plus 1 hour.

HOLIDAYS: No work on public holidays unless overtime working is arranged in advance.

POLICE/AMBULANCE/FIRE: See "Harwich".

TELEPHONES: No onboard facilities available.

SHORE LEAVE: Possible.

IDENTIFICATION CARDS: Not necessary.

DELAYS: None.

DEVELOPMENTS: Dredging of the approach channel to Mistley and within the port to increase acceptability of larger vessels is presently in hand but at present it is not possible to indicate when such improvements will be completed. Please enquire to the Port Owners, The Mistley Quay & Forwarding Co. Ltd.

AUTHORITY: *Port Owners:* The Mistley Quay & Forwarding Co. Ltd., High Street, Mistley, Manningtree, Essex CO11 1HB. *Tel:* (0206) 394431. *Telex:* 98692. *Contact:* T. P. Crossley, Port Director.
Local Port Authority: The Harwich Conservancy Board.

MONTROSE: 56.42 N. 02.17 W. (See Plan)

PORT LIMITS: The port is bounded by a line drawn in a Northwesterly direction from Scurdie Ness Lighthouse to the Annat Bank and thence by both banks of the river to the road bridge which completes the inner boundary.

DOCUMENTS:

1 Crew List,
1 Passenger List,
1 Store List,
1 Personal Effects List for baggage coming ashore,
1 Manifest or Bill of Lading.
Ship's Register, Load Line Certificate, Radio Certificate and LSA and Safety Certificates to be sighted.

PILOTAGE: Pilotage is compulsory. Pilots are available throughout the 24 hours. International Code Flag "G" to be exhibited.

Vessels should approach the port to a position with Scurdie Ness Lighthouse bearing 250° distance 0.5 mile where Pilot will normally board.

Pilot cutter *"Celurca"* has a dark blue hull with white upper works and "Pilots" painted in black on each side of the wheelhouse. The normal red and white pilot flag is flown during daylight and regulation lights exhibited at night. VHF Channel 16 for calling with a working frequency on Channel 12.

In bad weather it may be necessary for a ship to proceed inwards at the radioed directions of a Pilot to a position on the outer leading marks and inside the lighthouse where the Pilot may board safely. This will only apply during periods of strong Easterly gales and very heavy seas and may be applicable for only a few times in a year. Similarly the port may be closed under severe weather conditions on average 2.5 days per year.

ETA Messages: Masters should cable Agent with 24 hours' notice of arrival giving overall length and deepest draft and also call Montrose Harbour Radio within 2 hours of arrival at the pilot station.

ANCHORAGE: In position mentioned above with Scurdie Ness bearing 250° distance 0.5 mile, in about 13 m.

MAX. SIZE: Since the harbour was reconstructed and deepened ships of 450 ft. LOA and 5,500 tons have been handled on a max. draft of 24 ft.

HEALTH: "Q" flag to be flown when coming from a foreign country until cleared inwards. In event of disease or fever onboard, advise Agents by radio. Strict attention paid to quarantine regulations regarding dogs which are not allowed ashore.

Also see "Health – all ports" before first UK port.

RADIO: Messages to Agents may be sent through Stonehaven Radio. Harbour service is on Channel 12. Call Montrose Harbour Radio on Channel 16.

RADAR/VHF: No port radar service. Harbour service and pilot vessel work on VHF Channels 16 and 12.

TUGS: Pilot vessel is equipped with towing hook and pusher bow to assist in berthing and unberthing if necessary. Vessel's lines used. Small charge made for such work.

In addition to the pilot vessel, the tug "Glenesk", 425 b.h.p. (4 ton bollard pull) is available.

BERTHING: North Riverside Quays: No. 6 – 112 m., No. 7 – 141 m., No. 8 – 87.5 m., No. 9 – 69 m. No., 10/11 – 152 m.

Depths vary from 6 ft. at No. 8 (see "Developments") to 16 ft. at No. 10/11 at chart datum.

South Riverside Quays: Berth Nos. 12, 13, 14, 15, 16, 17 and 18. These are extensively used by oil related vessels and this area of the harbour has been leased to Sea Oil Services Ltd.

Total wharf length available is 1,600 ft. with depth alongside 20 ft. at MLWS.

Fixed Ro/Ro Ramp available between Berth Nos. 6 and 7. Vessels able to land bow or stern ramp of width 8 m. Depth alongside 18 ft.

STEVEDORES: Provided by J. M. Piggins & Co. Ltd., Tel: Montrose 72827. Telex 76251.

CARGO HANDLING FACILITIES: The stevedores are well equipped with mobile cranes, fork lifts, etc., and only rarely is ship's gear used unless it is of rapid, modern type. Grab discharge is used for bulk cargoes and conveyor belt systems for loading same.

Rates of loading or discharge:— Bagged cargoes 250 tons per gang per day; Bulk 400 tons; Bulk grain loading 700 tons; Unitised pulp 500 tons; Paper 500 ton; Timber 500 tons all per gang per day.

There is always available a large motor transport fleet at the port and the Agents also have their own road haulage company.

TANKERS: There is no oil berth in the harbour except the facilities offered by Sea Oil Services for the receipt into their 3,000 ton storage depot of gas oil.

MEDICAL: Small hospital in Montrose. Several major units within easy reach by road.

DENSITY: At high water average 1024 but can be as low as 1005 at LW during heavy river outflow.

FRESH WATER: Supplied from quayside hydrants at all berths.

FUEL: Obtainable from road tanker, gas oil and H.S.D. from more prominent oil companies. Rix Oils can supply gas oil from local stocks. Contact J. Piggins.

FIRE PRECAUTIONS: Normal rules to be observed.

CONSULS: None in Montrose.

GANGWAY/DECK WATCHMEN: Can be arranged. Owing to range of tide on riverside berths mooring watch strongly recommended.

OPENING/CLOSING HATCHES: Normally done by ship's crew.

CERTIFICATES: On arrival ship's register may be asked for.

CUSTOMS ALLOWANCES: As arranged between Customs Officer and Master.

CARGO GEAR: The port is equipped with mobile cranes which can be used at any berth. These are of various capacities and the maximum lift is 25 tons for which prior notice is required.

IDENTIFICATION CARDS: Not required.

REPAIRS: Minor deck and engine repairs can be carried out.

DRY DOCKS: None.

SURVEYORS: Cargo ship and engine surveyors Johnston & Smart; Swan & Co., or Pirie & Smith available from Aberdeen at short notice.

Cargo Superintendents regularly working at the port on loading out and discharging various bulk cargoes, include Cargo Superintendents (London) Ltd., 50 Wellington Street, Glasgow; James Patterson, The Old Granary Buildings, Meadowside Quay, Partick, Glasgow, and Malcolm Main at same address.

REPATRIATION: Facilities available with excellent railway connections. Air connections from Aberdeen.

AIRPORT: Aberdeen 36 miles. Montrose has facilities for light aircraft and helicopter landing.

TIME: GMT with 1 hour advance for British Summer Time, approximately March to October.

HOLIDAYS: *Port Holidays:* Christmas Day; Boxing Day; 1st and 2nd January; One day Spring, mid-Summer and Autumn Trades Holidays.

POLICE/AMBULANCE/FIRE: Report to Dock Office immediately. Dial 999 and ask for whichever emergency service required.

EMERGENCY CO-ORDINATION CENTRE: Maritime Rescue Sub Centre – Forth District Tel: Crail 666.

TELEPHONES: Not possible to place telephones aboard. Kiosk on Wharf near Agents office. Comprehensive connections to Continent and Telex services from Agent's office.

SERVICES: Laundry, Ship Chandlers and Lloyd's Agent immediate.

Compass Adjuster, Radio/Radar Mechanics can be called in from Aberdeen at short notice.

BANKS: Usual branches of Scottish banks all in High Street. No American or European banks.

STORING: Vessels can be stored by truck. Trucks can proceed alongside vessel. Fork lifts can be used if required. Customs notification required for all bonded stores.

Stevedores can be employed to assist with storing and also lashing and fastening deck cargo.

SHORE LEAVE: No restrictions on crew members after inward clearance.

DEVELOPMENTS: No. 8 Berth to be reconstructed between April 1986 and October 1986 to provide 293 m. of continuous quayside with a minimum depth of 18 ft. below C.D.

AUTHORITY: Montrose Harbour Trust, Harbour Office, 2 Meridian Street, Montrose, Tayside. *Tel:* (0674) 72302, 73153. *Contact:* Captain H. J. Johansen, Harbour Master.

NEWHAVEN: 50.47 N. 00.04 E. (See Plan)

PORT LIMITS: A line drawn from a position 300 ft. South of breakwater in a 075° direction to Seaford Bay.

DOCUMENTS: See "London".

PILOTAGE: Trinity House Pilots, Newhaven District: VHF "Newhaven Radio" Channels 16 and 12. Pilot boats are small fast launches painted orange. Light and sound signals for a Pilot is "G". Notice of ETA 12 hours before arrival, if possible. Anchorage for a vessel awaiting a Pilot is 0.5 to 1 mile S.W. of the breakwater, depending on weather conditions. Pilots normally board S. to S.W. of the breakwater, but in severe gale conditions they keep station 100 m. from breakwater end, and guide vessels in with VHF or lamp. Notice should also be given to the red and green signal lights at the West Pier end lighthouse, and on no account should vessels pass breakwater end if signal is at red. In normal weather, pilot ladder should be on lee side about 1 m. above water. In Southerly gales Pilots prefer a ladder on each side, if available.

RESTRICTIONS: 5.0 m. through entrance to port LWOST. Inner harbour then dredged depth of 4.0 m. in accordance with chart datum 3.5 m. below OD Newlyn (tide gauge readings are directly applicable to soundings).

MAX. SIZE: Max. LOA 520 ft. 25 ft. draft taking bottom on soft mud at low water. Vessels greater than 350 ft. LOA length must either be towed into or out of port. Vessels for North Quay must not exceed 250 ft. length, draft 17 ft.

HEALTH: See "Health-All Ports" before first UK port.

RADIO: Radio Station Newhaven Radio, call sign Newhaven Radio.

RADAR/VHF: No radar service. Ship's may contact West Pier control point on Channel 16, working on Channel 12.

TUGS: One tug available upon request, owned by Sealink U.K. Ltd.

BERTHING: Vessels may be berthed at any time, with prior notice given.

BRIDGES: Vessels requiring to berth at North Quay must arrive within 2 hours either side of HW in order to pass through swing bridge which governs access to this quay.

STEVEDORES: ETA should be given as far in advance as possible and not less than 24 hours before ETA.

DENSITY: Salt water.

FRESH WATER: Available on request. Supplied by shore hosepipe.

FUEL: Available by previous arrangement.

FIRE PRECAUTIONS: Usual no-smoking precautions on quayside in port area.

GANGWAY/DECK WATCHMEN: Not provided by Port Authorities but recommended at discretion of Ship's Master.

CONSULS: Norwegian Vice-Consul and French Consular Agency.

REPAIRS: Repairs of a temporary nature only may be carried out by Sealink U.K. Ltd. workshops, Ship & Industrial Repairs Ltd., Unit A3, Beach Road, Newhaven and C. R. Irving Ltd., Chapel Street, Newhaven.

AIRPORT: Nearest airport Gatwick, distance 30 miles. Served by regular airlines and Shoreham, distance 17 miles.

POLICE/AMBULANCE/FIRE: Police: Civil, Newhaven 515219; Port, Newhaven 514131 (extension: 229). Ambulance: 0830 – 1700 hrs., Lewes 515400; 1700 – 0830 hrs., Lewes 512819; Fire: 999.

SHORE LEAVE: Allowed.

DEVELOPMENTS: Southern Port Services Ltd. are to construct a new container terminal which is expected to be ready April 1986. Length of berth 125 m., depth alongside 4.5 m. at MLW. 1×30 ton capacity tango crane.

AUTHORITY: Sealink U.K. Ltd., Beach Road, Newhaven Harbour, Sussex BN9 0BG. *Tel:* Newhaven (0273) 514131. *Telex:* 87151. *FAX:* 512902. *Cables:* Sealink, Newhaven. *Contact:* G. G. Burke, Port Manager. Captain A. Flint, Harbour Master.

NEWPORT: 51.35 N. 02.59 W. (See Plan)

DOCUMENTS: Required for arrival.

C142	2 copies	Crew Declaration
C14	3 copies	Stores Declaration
C13	2 copies	General Declaration (completed by Agent)
C16	2 copies	Cargo Inward Declaration
C74	1 copy	Master's Authority (completed by Agents)
C1320	2 copies	Cargo in unregistered spaces

These documents are to be completed and presented with copies of manifests and ship's documents at the time of report.

PILOTAGE: Telegraphic address – "Sewpil G 498180". Advance notice required – 24 hours. VHF Channel – Channel 16 for contact, thence Channel 6 for conversation. Description of pilot boat – diesel launch, black hull, white superstructure. Particular light or sound signals to be made by vessels requiring a Pilot – Code Signal 8, i.e. 3 longs 2 shorts. Pilot boat is located in vicinity of Breaksea Lightvessel, or in vicinity of Merkur Buoy, for small vessels. Maintain VHF contact (if possible) with pilot cutter and obey instructions with reference to positioning of vessel to facilitate boarding of Pilots.

ANCHORAGES: Large vessel should anchor in deep water to North of one Fathom banks. Deeper water anchorage (10 – 14 fathoms) in area between Breaksea Lightvessel and East 1 Fathom Bank Buoys to the South, and shallow water off Barry Roads to the North. Small vessels will find safe anchorage in Barry Roads in varying depth, depending on weather conditions and draft.

RESTRICTIONS: Entrance to Newport Docks is by means of a sea lock 1,000 ft. long, 100 ft. wide.

MAX. SIZE: Max. size of vessels accepted at Newport is 800 ft. long, 96 ft. beam, 34.5 ft. draft.

HEALTH: Port Health Authority board vessel at entrance lock and Pratique is automatic.

See "Health – All Ports" before first U.K. port.

RADIO: At sea – Land's End radio station, call sign GIL. Within Bristol Channel use Portishead Radio.

VHF: Vessels requiring entry can contact port on VHF radio Channels 16, 9 and 11.

TUGS: Normally join at Newport Deeps. Ship's line used.

BERTHING: South Dock, normal depth of water 35 ft. North Dock, normal depth of water 27 ft. Junction passage connecting South and North Dock restricts vessels to a max. size of 56 ft. 6 in. beam and 25 ft. draft.

SPECIALISED CARGO HANDLING FACILITIES:

Combi Ship Operations: Heavy lift/containers for combi vessels are handled by the 25 tonne cranes at the same berth where breakbulk general cargo is handled.

Forest Products: The North side, South dock area extends to over 11 hectares with 1 hectare under cover.

Banana Imports: There is a terminal of 3 hectares for a weekly Jamaican service importing bananas and exporting general cargo. Included within the terminal is a transit shed of 3,716 sq.m.

CRANES: Heavy lift/container cranes: 2×25 tonne electro-hydraulic and 1×32 tonne Scotch Derrick cranes.

Bulk handling: 6×11.5 tonne electric grabbing cranes.

General cargo: 2×11.5 tonne, 2×10 tonne and 20×6 tonne electric cranes.

Handling equipment up to 27 tonnes capacity with a comprehensive range of attachments is available.

STEVEDORES: Labour is allocated to vessels on arrival.

Working Hours: Monday to Friday: 0730 – 1700 hrs., 0600 – 1400 hrs., 1400 – 2200 hrs.

Saturday: 0730 – 1200 hrs., 0600 – 1400 hrs., 1000 – 1400 hrs.

Sunday: 0600 – 1400 hrs., 1400 – 2200 hrs.

MEDICAL: No advance notice of medical attention for crew members is required and hospital facilities are available.

DENSITY: Average density of water in docks is 1016.

FRESH WATER: Available at all berths.

FUEL: All classes of fuel available.

GANGWAY/DECK WATCHMEN: Available but not compulsory.

OPENING/CLOSING HATCHES: Normally carried out by crew.

CUSTOMS ALLOWANCES: Tobacco, 0.5 lb. per crew member, reduced by 50% on coastal trade. 1 pint of spirit and 1 pint wine per crew member, reduced by 50% on coastal trade.

IDENTIFICATION CARDS: Not required.

REPAIRS: All wet dock and engine repairs possible.

DRY DOCK: Bristol Channel Ship Repairers Ltd., 454 ft. × 64 ft.

REPATRIATION: All facilities for the changing of crew and repatriation are available.

AIRPORT: Glamorgan Rhoose Airport terminal 28 miles from Newport. Regular connection planes to London Airport.

TIME: BST, GMT plus 1 hour. GMT in Winter months.

HOLIDAYS: Work not undertaken on Christmas, Easter, Spring and Summer Bank holidays. With the exception of Christmas holiday (25th and 26th December) dates on other holidays vary.
POLICE/AMBULANCE/FIRE: Telephone number 999 stating which service is required.
TELEPHONES: Telephone facilities are available aboard vessels.
SERVICES: Tank cleaning equipment. Facilities for tank washing, compass adjusting are available.
SHORE LEAVE: No restrictions to crew members.
SHIP SUPPLY SERVICE: A ship supply service could be provided by Cory Ship Towage with their tugs at Cardiff if required. Address: Cory Ship Towage Ltd., S.E. Wales Office, Alexandra Dock, Newport, Gwent, NP9 2NP. Tel: Newport 56835/6
AUTHORITY: Associated British Ports, Dock Office, Alexandra Dock, Newport, Gwent NP9 2UW. *Tel:* (0633) 65411. *Telex:* 498585. *FAX:* (0633) 843070. *Contact:* R. C. F. Williams, Port Manager.

PADSTOW: 50.35 N. 04.55 W.

PORT LIMITS: A line from Stepper Point to Gulland Rock, thence N.E. to Newland Rock, thence S.E. to Pentire Point.
DOCUMENTS: All usual documentation required by H.M. Goverment.
PILOTAGE: Trinity House Pilot compulsory. Contact via Harbour Office, Tel: Padstow (0841) 532239, or direct to Pilot on Padstow (0841) 532541, daytime or Padstow (0841) 532603 at night time. VHF via Padstow Harbour Office on Channel 16 during all office hours and 2 hours either side of HW at Padstow. ETA's should be given at least 12 hours before arrival, amendments up to 2 hours before ETA. Pilot boards from fishing vessel off Stepper Point in normal conditions. In adverse conditions ships should endeavour to close the pilot boat as near to the starboard hand buoy as possible in safety. Padstow Bay experiences heavy ground swell. Anchorage not recommended in onshore wind or sea.
MAX. SIZE: Max length approximately 350 ft. (depending on draft). Max. Draft 11 ft. any tide. Up to 18 ft. draft on Spring tides. No airdraft restriction.
VHF: Harbour office, call sign 'Padstow Harbour' listens VHF channel 16 during office hours and 2 hours either side of HW at Padstow. Call on Channel 16, working Channel 14.
TUGS: Not available. Local fishing vessels may assist.
BERTHING: All berths dry to firm mud or sand bottom. Depth alongside, South Jetty 11 ft. every tide and 18 ft. Springs. Depth alongside South Dock and West Quay 9 ft. every tide and 16 ft. Springs. Lesser depths in Inner Harbour and Outer Basin.
CARGO HANDLING: Undertaken by Padstow Harbour Commissioners. Dry bulk and unitised cargoes handled. Limited storage facilities. Cranes hired by Harbour Commissioners to suit requirements.
FRESH WATER: Available, delivery from standpipes. Cost £1 per 100 gallons.
FUEL: Marine gas oil available direct from bunker tank on South Pier.
REPAIRS: Welding and general engineering services readily available.
STORES: All usual stores available.
AUTHORITY: Padstow Harbour Commissioners, Harbour Office, West Quay, Padstow, Cornwall PL28 8AQ. *Tel:* Padstow (0841) 532239. *Contact:* E. M. Wakelin, Port Administrator/Harbour Master.

PEEL, Isle of Man: 54.14 N. 04.40 W. (See Plan)

PILOTAGE: Not compulsory.
MAX. SIZE: See "Berthing".
VHF: Channels 16 and 12 available only when vessels expected.
BERTHING: Outer Harbour: Max. LOA 250 ft., although twin screw cross-channel vessels up to 350 ft. LOA can be accommodated under certain conditions. Max. draft 14 ft. to lie afloat over LWOST. Not tenable with strong Northerly winds.

Inner Harbour: Max. LOA 160 ft., draft 10 ft. on Neaps, 13 ft. on Springs. Dries out at LW. No quay space for storage.
AUTHORITY: Isle of Man Harbour Board, Sea Terminal Building, P.O.Box 11, Douglas, Isle of Man. *Tel:* 0624-23813. *Contact:* H. G. Moore, Chief Executive.

Harbour Master at Peel, Tel: (0624) 842338.
AGENT: See "Douglas".

PENZANCE: 50.07 N. 05.32 W.

PILOTAGE: Trinity House Pilots are available at all times. Call "Penzance Pilots" during normal working hours or when vessel is expected on VHF Channel 16. Working Channels 12 and 9 are also available. At all other times contact the Pilot through Land's End Radio.
MAX. SIZE: Largest vessel 1,660 n.r.t.
RADIO: Land's End Radio.
VHF: VHF Channel 16 and Working Channels 12 or 9 are manned from 0800 – 1200 hrs. and 1300 – 1630 hrs. local time plus from HW–2 until HW+1.

Also see "Pilotage".
BERTHING: Penzance Dock: Dock entrance 50 ft. wide. 5 berths, longest 450 ft. Vessels for discharging cargoes should have a max. length of 300 ft. and a max. draft of 5.49 m. Springs or 4.4 m. Neaps.

Penzance Harbour: 4 berths, 1×320 ft., 1×250 ft. and 2×200 ft. This dries at LW. There is one drying berth designed for Ro/Ro vessels with a max. draft of 4.72 m.
STEVEDORES: Available through the Port Agents.
MEDICAL: Facilities available by request through Port Medical Officer. Evacuations arranged through Port Medical Officer and Mount's Bay Boarding Service.
FRESH WATER: Available on all berths.
FUEL: Marine gas oil and lubricating oils available.
CONSULS: Vice-Consul for Netherlands and France available.
DRY DOCKS: Length 245 ft., breadth 40 ft., max. draft 12.5 ft.
SURVEYORS: Lloyd's, Germanischer Lloyd, Bureau Veritas and Det Norske Veritas.
REPATRIATION: This can be arranged through Mount's Bay Boarding Service and J. H. Bennetts Ltd. See "Ship Supply Service".
AIRPORT: There is an airport at Newquay with connecting flights to London Heathrow via Plymouth and/or Exeter. There is a heliport at Penzance which connects with the Isles of Scilly.
POLICE/AMBULANCE/FIRE/COASTGUARD: Services are available by dialling 999 for emergencies only. Police are available on 0736-2395, Fire Service on 0736-2918, Ambulance Service on 0872-78181 and Coastguard on 0326-317575.
SHIP SUPPLY SERVICE: *Mount's Bay Boarding Service:*

By helicopter: British Airways operate a regular service between Penzance and the Isles of Scilly (30 miles S.W. of Land's End). Mount's Bay Boarding Service (MBBS) can charter helicopters to rendezvous with ships at sea.

Parcels: MBBS collect and despatch stores, parts, charts, etc, via British Rail "Red Star" parcels service, T.N.T. "Overnite" and "Courier" services, or G.P.O. Datapost.

Charts: British Admiralty/Decca charts and publications are available within 12 hours.

Stores: Fresh, frozen and dry stores are obtainable within 6 hours. Bonded stores are available within 24 hours.

Spare parts: MBBS arrange clearance, forwarding and transport of spare parts to meet vessels on arrival. Undivided lifts of 1.5 tonnes can be handled (up to 10 tonnes by arrangement).

Crew transfer: MBBS can land and clear crew through Customs and Immigration, and arrange for their travel onward to worldwide destinations. MBBS can meet crew and either embark or accommodate them until the vessel's arrival.

Landing sick crew: Although in urgent cases, vessels are in direct contact with Coastguard Rescue Co-ordination Centre, Falmouth, MBBS arrange the landing of non-urgent cases. In both cases MBBS liaise with local Coastguards, Customs & Immigration Officers, Doctors and Hospitals, and can usually provide interpreters for non English-speaking crew. MBBS visit and look after the interests of hospitalised crew, and can report on their progress to your company. MBBS arrange travel and repatriation of crew members either with or without escort, according to Doctors' and company instructions.

Contact: J.H. Bennetts Ltd. (See "Agent".)
SERVICES: Compass adjusting, divers, engineering, welding, hydraulic and electronic repairs and servicing are available.
AUTHORITY: (a) Penwith District Council. *Tel:* 0736-2341.

(b) Harbour Office. *Tel:* 0736-66113. *Contact:* Captain M. Tregoning, Harbour Master. Address: Harbour Office, Wharf Road, Penzance, Cornwall TR18 4AB.
AGENT: J. H. Bennetts Ltd., 72-73 Market Jew Street, Penzance, Cornwall TR18 2LF. Tel: 0736-4345. Telex: 45530 (Jhb G).

PERTH: 56.24 N. 03.29 W. (See Plan)

LOCATION: On River Tay, 35.4 km. above Dundee and 48.3 km. from sea.
DOCUMENTS: Normal documentation for arrival and departure U.K.
PILOTAGE: Not compulsory but highly advisable. Approaching River Tay, vessels should call "Dundee Port Control" as per Dundee Port Information. Masters will be advised by Dundee Port Control when River Pilot will board for transit up river from Dundee to Perth. River Pilots board at Dundee 2 hours before high water Dundee.
ANCHORAGES: No anchorage above Dundee.
RESTRICTIONS: Clearance under bridges 78 ft. at MHWOS. Vessels draft for acceptance at the discretion of the Harbour Master (Perth). *Longest Vessel:* 275 ft. for those vessels specifically designed for operation on inland waterways (Rhine Trader type) and 250 ft. for conventional vessels.
MAX. SIZE: Length 77 m. Max. draft 4.2 m.
RADIO: VHF for upper river transit. "Perth Harbour" Channel 9.
TUGS: By arrangement with Agents. Small tug/push boat may be available at harbour.
BERTHING: Tidal harbour about 3 acres with total quayage of 2,400 ft. Depth at LW 9 ft. HWST 15 ft. At LW vessels sit evenly on soft muddy bottom.
CRANES: 14 mobile cranes available. SWL ranging from 5 to 40 tons. Ample fork lifts and elevators for loading bulk.
STEVEDORES: North Eastern Shipping and Warehousing Co. Ltd., Tel: 0738-33226. Telex: 76611.

Calport of Perth. Tel: 0738-26675/24372. Telex: 76458.
DENSITY: River Tay above bridges pure fresh water.
BRIDGES: See "Restrictions".
FRESH WATER: Available at all berths.

FUEL: Available by road tanker, arranged by Agent.
REPAIRS: Small repairs undertaken locally by good engineering firm. Major repairs undertaken at Dundee.
AIRPORT: Edinburgh (Turnhouse) 44 miles, Glasgow (Abbotsinch) 70 miles, Prestwick 90 miles. Motorway M90, connects Perth with airports. Dundee operates variety of daily air services.
HOLIDAYS: (1986): January 1st and 2nd, March 31st, May 5th and 26th, September 8th, October 13th, December 25th and 26th.
POLICE/AMBULANCE/FIRE: Police: 21141. Ambulance: 22123. Fire: 22226.
DEVELOPMENTS: No. 1 Berth to be extended.
AUTHORITY: (a) Tayside Regional Council Transport Dept., Friarfield House, Barrack Street, Dundee DD1 3RP. *Tel:* (0382) 23281. *Contact:* Mr. L. Watson, Deputy Director of Public Transport.

(b) Harbour Office, Shore Road, Lower Harbour, Perth PH2 8BH. *Tel:* Perth (0738) 24056. *Contact:* Captain N. H. Lawrance, Harbour Master. Mr. P. Hannah, Assistant Harbour Master.

PETERHEAD BAY HARBOUR: 57.30 N. 01.47 W.

(See Plan)

DOCUMENTS: On arrival at Peterhead, Masters should have the following Customs documents ready for presentation:
2 copies C13 – General Declaration.
3 copies C14 – Ship's Stores Declaration.
2 copies C142 – Declaration of Goods.
PILOTAGE: Compulsory on all vessels except H.M. Ships, fishing vessels and vessels under 50 tonnes. Masters must call "Peterhead Pilots" on VHF Channel 16 giving ETA.

In the message of ETA, the following information must be included:
1. Name/call-sign of vessel.
2. Nationality.
3. Length, draft and g.r.t.

Pilot boards within 0.5 miles of breakwaters in fair weather. In adverse weather Pilot boards inside bay.
ANCHORAGE: Depth within bay up to 12 m. Poor holding in Easterly gales.
TUGS: No tugs available at Peterhead. Agents can arrange services of tugs from Invergordon if necessary.
BERTHING: Two supply bases for oil-related support work. Aberdeen Service Co. (North Sea) Ltd. have a quay 457 m. long with a minimum depth of 6.8 m., situated at the South side of the Bay, with support berthage on the South Breakwater and about 10 hectares of back up land. Total of 12 berths. Cranage available up to 200 tons.

S B Offshore Peterhead Base Ltd. have a jetty situated on the North side of the Bay. Two outside berths 121.9 m., inside 112.7 m. with a minimum depth of 3.6 m., with support berthage on the North Breakwater of 420 m., depth up to 21.2 m. Total of 7 berths. Cranage available up to 200 tons. Facilities for Ro/Ro, semi-submersible drill rigs, etc. Ample storage space.
CRANES: See "Berthing".
TANKERS: One berth for vessels up to 40,000 d.w.t. Max. LOA 200 m., Max. draft 12 m. Four loading arms with 12 in. flanges feed the Boddam Power Station via a 24 in. pipe-line. This berth can accommodate semi-submersible drill rigs.
FRESH WATER: Available.
FUEL: Available.
REPATRIATION: Crew changes and repatriation possible.
REPAIRS: Most deck and engine repairs can be carried out.
AIRPORT: Aberdeen, Dyce 34 miles. Feeder routes to main international airports, some continental air transportation.
TIME: GMT. Clocks advanced 1 hour last Sunday in March.

Last Sunday in October, clocks retarded 1 hour.
POLICE/AMBULANCE/FIRE: Emergency 999. Police 72571. Ambulance 72494. Fire (emergency only) 999.
RESCUE CO-ORDINATION CENTRE: Moray Coastguards. Call on VHF Channel 16, telephone emergency 999 or Peterhead 74278.
DEVELOPMENTS: Dredging expected to start Spring 1987.
AUTHORITY: Peterhead Bay Authority, Harbour Office, West Pier, Peterhead AB4 6DZ. *Tel:* Peterhead (0779) 74020, after hours (0779) 74281. *Contact:* Captain S. K. Young, General Manager/Harbour Master.

PLYMOUTH: 50.22 N. 04.09 W.

(See Plan)

DOCUMENTS: Importer to supply Agent with Customs documentation, e.g. original B/L with cheque to cover various details; plus copies of Invoice and Forms C.105 with packing lists. Derat or Exemption Certificate required.
PILOTAGE: Compulsory for merchant vessels. Call sign FSG, or 4 short blasts on whistle. Vessels not subject to compulsory pilotage may obtain Docking Pilot in Plymouth Sound otherwise pilot station off Penlee Point.

Pilot boat is motor boat with white upperworks, black hull. "Pilot" in black on wheelhouse.
ANCHORAGES: In Plymouth Sound.
MAX. SIZE: Maximum depth of water 9.0 m. Vessel drawing 8.0 m. would leave anchorage 2 hours before HW. Also see "Berthing".
Ro/Ro Berth: Max. LOA 145 m. Max. beam 20 m. Max. draft 5.5 m.
Outer Basin: Max. LOA 168 m. Max. draft 8.0 m.
Inner Basin: Max. LOA 130 m. Max. beam 22 m. Max. draft 5.0 m.
HEALTH: Pratique – Apply to Customs Waterguard. Pratique issued when requirements satisfied.

See "Health – All Ports" before first U.K. port.
RADIO: *Pilots:* The calling and listening frequency is 2182 kHz and the working frequencies are 2246 or 2301 kHz. A listening watch is kept on 2182 kHz at every even hour to 15 minutes past, local time and for longer periods when a ship is expected.
VHF: The pilot vessel is equipped with VHF and should be called on Channel 16; the working Channels 6, 8 or 12 should be used for passing messages. Alternatively the shore-based Trinity House Pilot Station, Plymouth, call sign "Cattewater Harbour Radio", maintains a continuous watch on Channel 16 (calling Channel) and is fitted with Channel 12 (first choice Port Operations Channel) and 18.

"Millbay Radio" operates 24 hours, on Channels 16, 14, 13, 12 and 9.
TUGS: Available in Sound.
BERTHING: *Millbay Docks:* (Associated British Ports).

Inner Basin. (Entered through Outer Harbour). (Gates open 2 hours before HW. Shut at HW).

Water Area	3.98 Hectares
Length of Dock	265 m.
Width of Dock	150 m.
Width of Entrance	24.38 m.
Length of Quayage	628 m.
Length of North Quay	261 m.
Length of Clyde Quay	165 m.
Length of East Quay	120 m.
Length of South Quay	82 m.
Depths:	
MHWST	6.17 m. – 7.17 m.
MHWNT	5.07 m. – 6.07 m.

Outer Harbour:

Water Area	12.80 Hectares
Length of West Wharf	200 m.
Depth alongside MLWST	8.6 m. – 9.0 m.
Length of Millbay Pier	146 m.
Depth alongside MLWST	5.8 m.
Length of Trinity Pier	146 m.
Depth alongside Northside and West end MLWST	5.8 m.

Ro/Ro Berth No. 1 (3 Round dolphins)

Max. length of vessel	135 m.
Depth alongside MLWST	6.7 m.

Ro/Ro Berth No. 2

Max. length of vessel	180 m.
Depth alongside MLWST	9.0 m.

Fresh Water available at all berths.
Cranage available up to 28 tons.
Large transit sheds on West Wharf and Trinity Pier.
Grain silo with 24,000 tonnes capacity.

Victoria Bulk Wharves: Pier No. 1. Length 475 ft. Depth 20 ft. LWOST. Pier No. 2. Length 350 ft. Depth 20 ft. LWOST. Max. beam 38 ft. (Larger with prior notice.) Max. d.w.t. 3,000 tons. Bulk products loaded by conveyor ex-railway trucks and lorry.
Cattedown Wharves: Length 712 ft. Depth 24 ft.–26 ft. LWOST. Max. LOA 560 ft. Max. draft 26 ft. Max. size 12,000 g.r.t. 1×5 ton and 2×3 ton cranes.
CRANES: 4 quayside cranes of 6 tonnes capacity. 3 mobile cranes up to 28 tonnes capacity.
STEVEDORES: Commodities regularly handled include fresh fruit and vegetables, timber, scrap metal and general cargoes.
Imports: Fertiliser, clinker, pumice and bulk cargoes.
Working Hours: Monday – Thursday 0800 – 1700. Friday 0800 – 1600. Overtime by arrangement.

Shift working is also regularly undertaken 7 days per week to meet specific requirements.
MEDICAL: No advance notice required; hospital facilities in Plymouth.
TANKERS: Vessels of the Shell "H" class can be handled at Cattedown Wharves. Max. draft 26 ft. 5 hose connections, diameter 10 in. 2 for black oil and 3 for white oil.
FRESH WATER: Available from shore at all berths.
FUEL: All normal grades available at short notice.
OPENING/CLOSING HATCHES: Performed by ship's crew or by stevedores at request of ship.
CERTIFICATES: Tonnage registration.
CONSULS:

Belgium	65154	Italy	63445

POLICE/AMBULANCE/FIRE: Telephone 999.
TELEPHONES: By special arrangement with British Telecom, can be placed on board.
SHIP SUPPLY SERVICE: Cory Ship Towage Ltd., 1-3 Buller Road, Torpoint, Cornwall PL11 2LD.

Bellamy & Co. (Plymouth) Ltd., Millbay Pier, Millbay Docks, Plymouth PL1 3DT. Tel: (0752) 665154. After hours 779586, 330338, 775957. Telex: 45225.

The Royal Navy maintain a helicopter service for landing sick crew men from ships beyond the port limits.
AUTHORITY: Associated British Ports, Port Office, Millbay Docks, Plymouth, Devon PL1 3EF. *Tel:* Plymouth (0752) 662191 *Telex:* 45219 Apply G. *Contact:* E. S. Chapman, Port Manager. Captain J. R. Willan, Docks and Marine Superintendent.

Cattedown Wharves for Cattedown Wharves and Bethyl Gwynn for Victoria Wharves.

POOLE: 50.43 N. 01.59 W. (See Plan)

DOCUMENTS: As for other British ports.
PILOTAGE: Pilots board 0.5 mile South of Poole Bar Buoy from cutter. Prefer ladder 0.50 m. from water and a good lee. VHF watch kept on Channel 16 working Channels 9 and 14. As much notice as possible. Address: Pilots, Poole.
ANCHORAGE: Vessels can anchor anywhere in Poole Bay and Studland Bay. Good holding ground and protected in all but Easterly gale.
RESTRICTIONS: Vessels drawing up to 3.7 m. can enter at any state of tide. Drafts of 5.0 m. must wait to within 2 hours of HW.
MAX. SIZE: Max. length 140 m., beam – no limit, draft 5.0 m.
HEALTH: See "Health – All Ports" before first U.K. port.
RADIO: Vessels using the Port may call the Harbour Master direct on VHF Channel 16 – working frequency Channel 14 call-sign "Poole Harbour Radio".
TUGS: 2 tugs, 8 ton and 5 ton bollard pull. Join at Stakes Buoy, by special application arrangements can be made to join at North Haven Point. Ship's lines. No difference in charges.

Pilots will advise whether a tug is necessary or not. Any vessel in excess of 1,000 d.w.t. or 300 ft. LOA due to pass through the Poole Bridge is required to take a tug. The gap in the bridge is 60 ft.
BERTHING: Berthing time depends on draft at some private quays. No restriction at New Quay or Ro/Ro berths.

Ro/Ro Terminal (CFFT):
Size of vessel:
Max. draft 5.0 m.
Max. length 140 m.
Depth 5.0 m.

Berths/Equipment: Two linkspan berths for Ro/Ro vessels, No. 1 Berth utilises mooring dolphins, No. 2 Berth has 90 m. long working quay. Vehicles up to 180 tonnes gross weight can be handled subject to prior approval of Port Authority. A total of some 7 hectares (17 acres) of terminal is surfaced to a high standard, providing parking places for 280 heavy goods vehicles. A further 11 hectares (28 acres) of reclaimed land is available for future port expansion. Warehousing facilities; self weighing weighbridge; fleet of Tugmasters and fork lift trucks; 35 tonne gantry crane in area adjacent to Terminal for handling 20/30/40 ft. containers to/from road/rail.

New Quay:
Length: 520 ft. (157 m.).
Depth alongside: 16 ft. (4.9 m.).
Equipment: 3 ton capacity level luffing rail-mounted crane and 35 tonne capacity crawler crane equipped for hook/bulk/grab/spider grab duties giving an operational capacity of 6 tonnes at 18 m.; warehousing 3,000 sq.m. plus open storage; mobile crane capacity up to 200 tonnes.

Yard Quay:
Length: 200 ft. (61 m.).
Depth alongside: 10 ft. to 12 ft. 9 in. (3.0 m. to 3.9 m.).
Equipment: Warehousing facilities; limited open storage.

Ballast Quay:
Length: 270 ft. (82 m.).
Depth alongside: 14.6 ft. (4.4 m.).
Equipment: 6.5 ton capacity level luffing crane fitted with grab/hook for bulk handling/general cargo duties.

Poole Town Quay:
Length: 1,300 ft. (396 m.).
Depth alongside: 14 ft. to 16 ft. (4.3 m. to 4.9 m.).
Equipment: Mobile crane capacity 40 tonnes.

Bulwark Quay:
Length: 382 ft. (116 m.).
Depth alongside: 14.6 ft. to 16 ft. (4.4 m. to 4.9 m.).
Equipment: 25 ton Scotch Derrick; warehousing facilities; open storage.

Private Quays:
J. T. Sydenham (Timber Wharf)
Length: 250 ft. (76 m.).
Depth alongside: 15.3 ft. (4.6 m.).
Equipment: Mobile crane capacity 45 tonnes.

Other Private Quays:
Corrals (Fuel)
J. Bolson & Son Ltd. (Marine Repair & Engineering).
South Coast Sand & Ballast (Sea Dredged Aggregates).
Southern Ocean Shipyard Ltd. (Yacht Builders).
Enoxy Chemicals Ltd.
Central Electricity Generating Board.

Oil Jetty:
Length: 270 ft. (82 m.).
Depth alongside: 16 ft. (4.9 m.).

BRIDGES: Poole Bridge at West end of Poole Quay. Will open at any time on request by commercial vessel.
STEVEDORES: Normal notice for gangs.
MEDICAL: Advance notice required for ambulance services. Normal medical and hospital services available.
TANKERS: 3 oil berths. Diameter of load/discharge lines 6 in.
DENSITY: 1021.
FRESH WATER: Delivery 25 t.p.h. by 2 in. hose.
FUEL: Gas oil only.
GANGWAY/DECK WATCHMEN: Not required.
OPENING/CLOSING HATCHES: Work carried out b crew.
IDENTITY CARDS: Not required.
CONSULS: At Southampton.

PORT ASKAIG: 55.51 N. 06.07 W. (See Plan)

Operated mainly as a ferry port although other shipping may use the facilities available.

The wharf operated by Strathclyde Regional Council (SRC) is 60 m. long with a depth of 4.06 m. below Chart Datum. It has a Ro/Ro ramp suitable for use by end loading vessels. Fresh water is available. Western Ferries operate a second Ro/Ro berth at Port Askaig.
AUTHORITY: Strathclyde Regional Council (SRC), Department of Roads, Strathclyde House, 20 India Street, Glasgow G2 4PF. *Tel:* 041-204 2900. *Contact:* W. S. McAlonan, Director.
Port Askaig: Piermaster *Tel:* (049) 684 208.

PORT ELLEN: 55.37 N. 06.13 W.

Operated by Caledonian MacBrayne Ltd., used mainly by ferries. Chart B.A. 2037 covers the area.
PILOTAGE: Not compulsory.
ANCHORAGE: Approach with Carraig Fhada Light bearing 332°(T) until 2 cables off light. Alter course to 026°(T) till lighthouse bears 270°(T) × 2.2 cables, then altering course to 353°(T). Anchorage position is reached when lighthouse bears 206°(T) × 3.6 cables, equidistant with Na Sglithean Beach, 3.6 cables. Depth at anchorage 5 fathoms.
APPROACHES: Harbour entrance 7 cables wide, depth 7 to 8 fathoms.
BERTHING: Car Ferry Berth can accommodate vessels up to 1,200 g.r.t. either side of the dolphin. Inner Berth can accommodate vessels up to 600 g.r.t. Depth at pier 12 ft. LWOST, range 3 ft. to 4 ft.
AUTHORITY: Caledonian MacBrayne Ltd., The Ferry Terminal, Gourock PA19 1QP. *Tel:* 0475-33755. *Telex:* 779318. *Cables:* "Calmac" Gourock.

PORTLAND: 50.34 N. 02.26 W.

PILOTAGE: Available from Weymouth. Pilot boards in position Lat. 50° 36′ N., Long. 02° 24′ W.
ANCHORAGE: Vessels seeking shelter from Westerly gales are likely to find more room and better shelter outside the breakwaters in Weymouth Bay.
VHF: All Harbour movements are controlled on VHF Channel 13.
TUGS: Admiralty tugs available.
BERTHING:
Castletown Pier: Castletown Pier is a commercial wharf and leased to Kingston Minerals Ltd. for the discharge of fertilisers. Max. LOA of vessel 82.3 m, beam 12 m. with max. draft 5.3 m.
CRANES: 1 mobile crane.
FUEL: Available by road tanker.
GENERAL: The Harbour and the immediate vicinity are classified as a Dockyard Port under the supervision of the Queen's Harbour Master, Portland. Attention is drawn to Chart 2268 which gives details of the Restricted Area around the Naval Base, of designated Anchor Berths for H.M. Ships, of Prohibited Anchorage areas and of the numerous Admiralty moorings and telephone cables. The Harbour, which is protected by breakwaters, is easily accessible by the North Ship Channel (12 m. LWS) or East Ship Channel (12.5 m. LWS). The South Ship Channel is blocked both above and below the surface and is only suitable for small boats.
AUTHORITY: Flag Officer Sea Training, H.M. Naval Base, Portland. *Contact:* Queen's Harbour Master, H.M. Naval Base, Portland, Dorset. DT5 1BQ. *Tel:* Portland (0305) 820311 Ext. 2106.

PORTREE: 57.24 N. 06.07 W. (See Plan)

PILOTAGE: No Pilots available.
ANCHORAGE: No defined areas, left to the discretion of the ship's Master.
RESTRICTIONS: Berthing of larger vessels dependent on state of the tide. Larger vessels tend to anchor off and transhipment carried out by ship's tender.
MAX. SIZE: LOA 65.5 m., beam 11.25 m., draft 4.08 m. (Summer) and 3.99 m. (Winter).
BERTHING: Depth alongside 4.8 m. (Neaps) and 6.3 m. (Springs). Depth at entrance 9.1 m.
TANKERS: Fuel oil discharged to B.P. storage depot by means of fuel line under pier.
FRESH WATER: There is 1 water supply outlet.
FUEL: Ordinary gas oil available from B.P. Depot during normal working hours.
GANGWAY/DECK WATCHMEN: At the discretion of the ship's Master.
OPENING/CLOSING HATCHES: By ship's crew.
CARGO GEAR: Ship's gear used.
REPATRIATION: No facilities.
AIRPORT: At Broadford, 50 km. from the harbour. One flight a day to Glasgow on Mondays, Tuesdays, Thursdays and Fridays with an additional flight on Saturdays in the Summer.
TIME: GMT in Winter. GMT plus 1 hour in Summer.
HOLIDAYS: January 1st, 2nd and 3rd; Good Friday; Easter Monday; May 1st; Christmas Day and Boxing Day.
POLICE/AMBULANCE/FIRE: Police Tel: Portree 2888.
EMERGENCY CO-ORDINATION CENTRE: Coastguard: Shetland District for Portree. Tel: Oban 63720. Station at Portree not continually manned.
BANKS: Royal Bank of Scotland plc, Bank Street, Portree.
Clydesdale Bank plc, Portree.
Bank of Scotland, Somerled Square, Portree.
STORING: No facilities for storing.
SHIP SUPPLY SERVICE: Not available.
SERVICES: The following are not available: Radio, VHF, radar, tugs, cranes, stevedores, medical facilities, consuls, repairs, surveyors, telephones.
GENERAL: Arrivals and departures not desirable on Sunday.
AUTHORITY: Highland Regional Council, Department of Roads and Transport, Regional Buildings, Glenurquhart Road, Inverness IV3 5NX. *Tel:* (0463) 234121. *Telex:* 75313.

The Harbour Master, Divisional Engineer's Office, Dunvegan Road, Portree, Isle of Skye. *Tel:* Portree 2727.

PORT ST. MARY, Isle of Man: 54.04 N. 04.44 W. (See Plan)

PILOTAGE: Not compulsory.
MAX. SIZE: See "Berthing".
VHF: Channels 16 and 12 available only when vessels expected.
BERTHING: Outer Harbour (Alfred Pier): Max. LOA 170 ft., draft not to exceed 10.5 ft. to lie afloat over LWST.

Inner Harbour: Max. LOA 160 ft., draft 8.5 ft. at Neaps, 12 ft. at Springs. Harbour dries out at LW. No quay space for storage.
AUTHORITY: Isle of Man Harbour Board, Sea Terminal Building, Douglas, Isle of Man. *Tel:* 0624-23813.

Isle of Man Harbour Board, Harbour Master's Office, Port St. Mary, Isle of Man. *Tel:* (0624) 833206. *Contact:* Captain A. D. McKaig, Harbour Master.

PORTSMOUTH: 50.48 N. 01.07 W. (See Plan)

DOCUMENTS: (Those marked* to be produced to H.M. Customs Boarding Officer.)

*1 Maritime Declaration of Health.
*1 Crew's Effects List C142.
2 Ship's Reports by Master.
*1 Home Office Form 1B6.
*1 Stores List.
*1 Certificate of Deck Cargo Tonnage.
*1 Grain Certificate.
1 Light Dues Certificate.
1 Port Dues Certificate.
*1 Passenger List.
*1 Landing Card for each non-British passenger.
*Ship's Certificate of Registry.
Mercantile Marine Office Certificate (British ships only).
*Load Line Certificate.
*Safety Equipment Certificate.
Lloyd's Certificate.
*Derat Certificate.
Ship's Register.
Light Bills.
Safety Radio Certificate.
*List C143 for packages not cargo or crew/passenger effects.
*Danish Tollpass for ships arriving from Denmark.
Form of Authority for Agent to make Report and clear vessel outwards for Master.

Note: Where cargo is to remain on board for unloading at another port after Portsmouth, 3 copies of Ship's Report are required by the Customs House.

PILOTAGE: Portsmouth is within the Southampton and Isle of Wight Trinity House Pilotage District (see "Southampton" entry for limits of District) and a vessel liable to compulsory pilotage must employ a Pilot from and to the limits of the District. Non-compulsory vessels may obtain a Pilot in the vicinity of the 'Outer Spit' buoy. (Note: All vessels carrying explosives or petroleum products are compulsory from the 'Outer Spit' buoy and within the Harbour area, by Order in Council. This also applies to regular Home Trade vessels.) Ministry of Defence Pilots must be employed in addition for vessels using Admiralty berths or being assisted by Admiralty-owned tugs.

In addition to 48 hours notice to local Agent, advise Nab, Needles or Portsmouth Pilot, as appropriate, ETA 48 hours and again 2 to 3 hours immediately prior to arrival. The Nab, Needles and Portsmouth pilot stations are maintained by fast launches under the control of the Duty Pilot at the Pilot Station, 37 Berth, Southampton Docks. The Duty Pilot keeps a continuous watch on VHF Channel 16; call sign 'Nabpilot', 'Needlespilot' or 'Portsmouthpilot' as appropriate. Working frequency, Channel 9 only, but can listen on Channels 14, 12 and 6. No medium frequency: M/F and R/T messages via NITONRADIO. Duty Pilot's telephone numbers: Southampton 32345 and 32346.

The launches only put to sea when required. Failure to send an accurate ETA 2 to 3 hours before arrival could cause delay to the offending vessel.

Strict compliance with the requirements of the Merchant Shipping (Pilot Ladders) Safety Rules is requested by the Pilots, who may refuse to board vessels with unsatisfactory and dangerous ladders. Manropes are not required. Ladders should reach to about 3 ft. from the water, each rung resting firmly against the ship's side; a good lee should be provided whilst making approximately 3 to 7 knots headway.

In most cases, vessels bound to and from the Westward will find it more convenient to use the Nab or Eastern approach to Portsmouth. For details of entrances and pilot launches, see "Southampton".

ANCHORAGES: Small vessels may anchor close Westward of the 'Outer Spit' buoy, unless prohibition signal flying – see "Restrictions". Larger vessels will be allocated a numbered anchor berth in the Spithead Man-of-War anchorage.

If anchorage is prohibited in Spithead, St. Helen's Roads, Ryde Roads or Cowes Roads are the nearest safe anchorages. Mooring Buoys 1, 2 and 3 off North Corner in the Harbour are sometimes used. Pilots will be fully informed before the vessel's arrival.

RESTRICTIONS: The following traffic signals are exhibited and must be complied with by all vessels. Shown by Central Signal Station (C), Blockhouse (B), Gilkicker (G), Dolphin Pier (D) and H.M. ships concerned (S).

Day	*Night*	*Meaning*	*Shown by*
Red flag with white diagonal.	Red Green Green	No vessel to enter or leave harbour or enter approach channel North of Outer Spit Buoy.	C B G
Red flag with white diagonal over black ball.		No vessel to enter harbour or approach channel. Outward shipping may proceed.	C B G
Black ball over red flag with white diagonal.		No vessel to leave harbour. Inward-bound shipping may proceed.	C B G
Black pendant.	White Red Red	No merchant or private vessel to anchor in man-of-war anchorage in Spithead.	G
Answg. Pendant over Pt 0.		All vessels North of Outer Spit keep clear of warship flying this signal.	S
Answg. Pendant over Pt. 9.	Green Green Green	All vessels and boats keep clear of H.M. ships under way.	C B G
Answg. Pendant over flags N E.	Green Red	Proceed with great caution, ships leaving Camber (Not ferries).	B
Answg. Pendant over flag A.	Red Red	Divers down, keep clear.	Diving boat.
Flag E	Orange	Submarine entering or leaving Haslar Lake. At night, light flashes when sub. under way. All vessels keep clear of submarines.	B D

Speed limit of 10 knots in harbour and when within 1,000 yards of shore; 12 knots within 1,000 yards of any H.M. ships and anywhere within the Dockyard Port not covered by the 7 knots limit. Dockyard Port boundaries are shown on Admiralty charts.

Time of entry is restricted by the vessel's draft and state of tide. Enter Camber only at 4 hours before high water or at high water slack. Vessels do not berth at South Railway Jetty from 2 hours before high water until high water.

MAX. SIZE: Commercial berths: Camber – length 80 m., draft 16 ft. Flathouse – length 130 m., depth 2.0 m. below C.D. Albert Johnson Quay – length 143 m. Depth 3.5 m. below C.D. Continental Ferry Port Ro/Ro Linkspans – Max. length 150 m., depth No. 1 – 5.0 m. below C.D., depth No. 2, 3 and 4 – 7.0 m. below C.D.

Vessels at the Camber, Flathouse and Rudmore Wharves must expect to take the bottom in soft mud at low water Springs.

HEALTH: Foreign arrivals to complete Maritime Declaration of Health. They are cleared immediately on arrival by either a Port Doctor or an officer of H.M. Customs, depending on where ship comes from and whether there is sickness on board.

Vessels arriving from ports within accepted area (North European ports) and coastal arrivals need not present Declaration in all cases; when there is sickness on board, Port Health Authority must be informed, preferably not more than 12 hours nor less than 3 hours before arrival.

See "Health – All Ports" before first U.K. port.

RADIO: See "Southampton" for pilotage communications.

Harbour Control is exercised through "Queen's Harbour Master" for commercial traffic on VHF Channels 16 and 11. Gilkicker Radio on Channels 16 and 14 is also available for commercial vessels, and all vessels entering the area bounded by the "Warner" buoy in the East and the "Sturbridge" buoy in the West must contact Gilkicker, even if only passing through the District. Channel 13 is the working channel for H.M. ships and the Q.H.M.'s office; call sign "Q.H.M.". H.M. ships are required to keep a listening watch on Channel 16 when in the Portsmouth and Southampton control areas, and will 'shift' to working frequencies selected by mutual agreement. Gilkicker is also equipped for visual signalling. Medium frequency calls to Pilots and Port Authorities only available by link call through Nitonradio.

TUGS: Tow-boat services are available for commercial vessels at commercial berths. In addition Admiralty tugs available at commercial berths by arrangement with Queen's Harbour Master.

STEVEDORES: Available by arrangement with stevedoring companies.

MEDICAL: All medical facilities available. Agent should be advised in advance. (See "Southampton" entry if arrival is solely to land sick personnel).

CUSTOMS ALLOWANCES: As for "Southampton".

DENSITY: 1025 salt water.

FRESH WATER: Available.

FUEL: Fuel and Diesel Oil available by road tanker or bunker barge from Fawley.

FIRE PRECAUTIONS: Notices will be delivered to Master if berthing at any jetty where special precautions apply.

OPENING/CLOSING HATCHES: By ship's crew.

CRANES: 32 ton Scotch Derrick at Flathouse Quay. Mobile cranes provided by stevedoring companies.

CONSULS:

Belgium	Finland	Netherlands	Sweden
Denmark	France	Norway	

REPAIRS: Minor deck and engine repairs can be carried out locally. Larger repairs and dry dock facilities at Southampton.

AIRPORT: Fast train service from Portsmouth to London Airport. Eastleigh Airport local, but mainly short flights to Channel Islands and feeder services.

SERVICES: All marine, radio and radar services can be obtained from Southampton.

REPATRIATION: All facilities exist.

TELEPHONES: None on board.

SHIP SUPPLY SERVICE: J. Butcher & Sons (Port Services) Ltd., 19 Pembroke Road, Old Portsmouth PO1 2NS. Tel: (0705) 822584. After hours 821347 and 821033.

The Company provides the majority of the towing services in the commercial port, operating in the Eastern Solent from Cowes to Nab Shoal including Spithead, The Mother Bank and St. Helen's Roads. A fleet of 11 vessels is operated, headed by the 525 b.h.p. Kort Nozzle Tugs "Janet James" and "Carol James" providing towing services (including tow boats for smaller ships using Mile End and Camber Docks) and boats for mooring, rope running and berthing purposes. The passenger launch and workboat service transports ships' crews, Agents, technicians, stores and equipment within the harbour area and Eastern Solent.

The tugs and tow boats have been purpose built for berthing and unberthing ships up to 140 m. at the commercial port.

DEVELOPMENTS: With the opening of the Portsmouth section of the M27 and M275, there is immediate access to the Flathouse and Albert Johnson quays at the Rudmore Roundabout. At present, Thoresen operate daily services to Cherbourg and Le Havre, Brittany Ferries twice daily to St. Malo and Sealink daily to the Channel Islands.

Double-deck Linkspan under construction at No. 3 Berth. Completion expected 1986.

AUTHORITY: City of Portsmouth, Port Manager's Department, Harbour Officers, George Byng Way, Continental Ferry Port, Portsmouth PO2 8SP. *Tel:* Portsmouth (0705) 822251. (Ext. 4795). *Telex:* 86382 Cen Lib. *Contact:* Port Manager and Harbour Master (Ext. 4790).

PORT TALBOT: 51.35 N. 03.49 W. **(See Plan)**

DOCUMENTS: Documentation required for arrival:

C142	2 copies	Crew Declaration
C14	3 copies	Stores Declaration
C13	2 copies	General Declaration (completed by Agent)
C16	2 copies	Cargo Inward Declaration
C74	1 copy	Masters Authority (Agents complete)
C1320	2 copies	Cargo in unregistered spaces

These documents are to be completed and presented with copies of Manifest and ship's documents at the time of report.

PILOTAGE: Compulsory. Station – Swansea Bay. Usual International signals. VHF Channels 16 and 12.

ANCHORAGES: Swansea Bay.

RESTRICTIONS: *Ore Terminal* in New Harbour, entrance channel 1.5 miles long, 550 ft. wide. Depth 60 ft. MHWS, 53 ft. MHWN.

MAX. SIZE:

Ore Terminal: 100,000 tons d.w.t. ore carriers. Draft 48 ft. 6 in.

HEALTH: See "Health – All Ports" before first U.K. port.

TUGS: Join off Breakwater.

BERTHING: *New Harbour:* British Steel Corporation provide 3 unloading appliances on the jetty and also a conveyor-belt system to carry the iron ore to the stocking ground close to harbour and steel works. Grabs on the unloading appliances weigh 22 tons each, and each have a pay-load of 22 tons. The 3 discharging appliances together have an unloading rate of 5,400 t.p.h. Average rate throughout discharge from start to finish of the 3 discharging appliances together is 2,700 t.p.h.

A continuous ship unloader constructed and currently under proof working. At a latter stage 1 or 2 of the existing appliances will be removed. The continuous unloader is rated at 3,000 t.p.h. for iron ore and 1,500 t.p.h. for coal.

STEVEDORES: ETA advices sent by vessels to local Agent and then advised to British Steel Corp. as stevedores. Labour ordered by Agent from B.S.C.

DENSITY: Ore Terminal 1025.

FRESH WATER: By gravity 10 t.p.h. Harbour pumping 100 t.p.h.

FUEL: By barge or road tanker. Any grade available.

GANGWAY/DECK WATCHMEN: None, but bye-laws state that vessel must be manned.

OPENING/CLOSING HATCHES: Performed by crew.

CUSTOMS ALLOWANCES: Tobacco, 1 oz. per day/man, max. 8 days. Wine/Spirits, 0.25 pint per day/man, every 4 days.

IDENTIFICATION CARDS: Docks Police would require identification to be available.

CONSULS: None at Port Talbot, contact Swansea.

REPAIRS: Facilities exist.

SURVEYORS: Cargo Surveyors available locally.

Hull surveyors available from Swansea and Cardiff.

REPATRIATION: All facilities exist.

AIRPORT: Rhoose Airport 25 miles away. Mainly short trips connecting with main airports.

TIME: GMT plus 1 hour. GMT in Winter months.

HOLIDAYS: It is the custom, at the Tidal Harbour, to work on Bank Holidays.

POLICE/AMBULANCE/FIRE: Dial 999 and ask for service required.

EMERGENCY CO-ORDINATION CENTRE: Search and Rescue Centre – Mumbles. Tel: Swansea 66534.

TELEPHONES: Can be connected on board.

BANKS: Lloyds Bank Ltd., Station Road. Tel: Port Talbot 891401.
Barclays Bank Ltd., Station Road. Tel: Port Talbot 887655.

STORING: See "Prelims".

1. Yes.
2. None.
3. Yes.
4. No.
5. Usual regulations.
6. Riggers not available.

SHIP SUPPLY SERVICE: It is the practice for pilot cutters of Swansea and Port Talbot to ferry personnel, stores, etc. to vessel off shore and due to dock at the respective ports.

Contact: Swansea and Port Talbot Pilotage Authority, 90 Exchange Buildings, Swansea SA1 1SY, W. Glam., S. Wales. Tel: Swansea (0792) 53631. Cables: Pilority.

AUTHORITY: Associated British Ports, Harbour Office, Adelaide Street, Swansea, West Glamorgan SA1 1QR. *Tel:* Swansea (0792) 50855. *Telex:* 48150. *FAX:* (0792) 50729. *Contact:* Mr. T. Wilkinson, Port Manager. Captain T. Boyd, Dock and Harbour Master.

RAMSEY, Isle of Man: 54.19 N. 04.21 W. **(See Plan)**

PORT LIMITS: Line joining Shellag Point (3.25 miles North of harbour entrance) and Cor Stack (2.75 miles S.E. of harbour entrance) defines the port limits.

DOCUMENTS: Same as other U.K. ports.

PILOTAGE: Service provided by Harbour Master and is not compulsory. There is no regular pilot boat. Pilot will board 0.5 miles East of harbour entrance.

Contact Harbour Master direct by telephone (0624) 812245 or by VHF Channels 16 and 12 at tide times only. In all cases as much notice as possible should be given.

ANCHORAGES: No specific anchorages, but anchoring not permitted within 4 cables of harbour entrance or within 4 cables of Queen's Pier (3.5 cables S.E. of harbour entrance). Moderately good holding ground in sand, often used by sheltering vessels in S.S.W. or N.W. gales.

RESTRICTIONS: Harbour dries out each LW.

MHWN: Max. available depth 3.80 m.
MHWS: Max. available depth 5.50 m.

MAX. SIZE: For East Quay and West Quay: Max. length 61 m., breadth 9.0 m. Draft 3.0 m. on Neap tide, 4.0 m. at Spring tides.

For Channel Berth: Max. length 70 m., breadth 13 m.

For all berths max. available depth will vary according to tide.

HEALTH: Standard U.K. procedure.

RADIO: R/T, W/T and VHF through Portpatrick Radio (GPK) or Anglesey Radio (GLV).

VHF: Coverage from Harbour Master's Office includes port and approaches, Channels 16 and 12 at tide times only.

Coverage of North Irish Sea from Snaefell Summit by Douglas Harbour Radio, continuous 24 hour watch on Channel 16. Messages may be passed through Douglas Harbour Radio to amend ETA Ramsey etc.

RADAR: No port radar.

TUGS: Two tugs (420 i.h.p. and 345 i.h.p.) based at Douglas. Can be made available with sufficient notice, if required.

BERTHING: All berths dry out each LW. Bottom is sand and shingle.

Name	*Length* (m.)	
Channel Berth	76	
East Quay	116	
West Quay	80	
North Quay	73	For lay-by only.

With exception of North Quay all berths readily accessible to road traffic. Load/discharge by ship's gear or shore equipment at ship's discretion.

CRANES: No cargo handling gear at any berth. Mobile cranes can be arranged through Agents with reasonable notice.

BULK CARGO FACILITIES: Bulk cement handling facility at East Quay No. 2 Berth with 2×500 ton silos. Privately owned.

SPECIALISED CARGO HANDLING FACILITIES: No Ro/Ro, container handling or bulk liquid handling facilities.

BRIDGES: Access to upper harbour through swing bridge, by arrangement with Harbour Master. Sufficient depth of water usually available 2 hours either side of HW. At least 24 hours' notice required to swing the bridge outside normal working hours, weekends and holidays. Within normal working hours less notice is acceptable.

STEVEDORES: Arranged through Agent. A minimum of 24 hours' notice required and all working hours are negotiable in advance. Main commodities discharged are grain and coal by mobile crane with grab – average discharge rate is approx. 60 t.p.h. Occasional grain cargo loaded by mobile elevator at approx. 40 t.p.h.

MEDICAL: Hospital and dental facilities available without prior notice.

TANKERS: No tanker facilities or berths available.

DENSITY: 1025.

FRESH WATER: Available by hose at approx. 30 t.p.h. on East, West and North Quays. Labour charge £2.90 per hour (minimum 2 hours) plus £1.15 per 1,000 gallons.

FUEL: Delivery by road tanker from Douglas to all berths except North Quay. Gas oil and medium fuel oil available at 24 hours' notice. Tel: (0624) 74652 or via Agent. Minimum 100 gallons, maximum unlimited.

CONSULS: None.

REPAIRS: All types of deck and engine repairs possible by small shipyard in upper harbour.

DRY DOCKS: No dry docks but 2 slipways; one for vessels about 185 g.r.t. and one for about 50 g.r.t. Both slipways in upper harbour.

Also a grid in upper harbour which dries out at approx. half tide, length 40 m., breadth 7.5 m. This grid used occasionally by vessels of up to 500 g.r.t. for bottom plate inspection/repairs. At least 72 hours' notice required, more if possible. Grid hire arrangement through Harbour Master.

SURVEYORS: All surveyors from Liverpool by arrangement.

GANGWAY/DECK WATCHMEN: Not required.

HATCHES: Normally handled by ship's crew.

CUSTOMS ALLOWANCES: Standard U.K. allowance.

CARGO GEAR: Loading/discharging of general by ship's gear or mobile crane. Discharge of bulk by grab equipped mobile cranes. A wide range of mobile cranes up to 25 tons available for hire at reasonable notice.

REPATRIATION: Facilities available for repatriation of crew members.

Daily scheduled aircraft connections to London and other U.K./Irish airports. Daily ferry services to Heysham. These services operate all year with supplementary air and sea services to other destinations during the Summer.

AIRPORT: 25 miles distant.

TIME: GMT and BST.

HOLIDAYS: New Year's Day, Good Friday, Easter Monday, May Day, Whit Monday, Senior TT Race Day (usually 1st or 2nd Friday in June), Tynwald Day (5th July), August Bank Holiday, Christmas Day, Boxing Day.

Cargo not normally worked on these days but all working hours are negotiable in advance.

POLICE/AMBULANCE/FIRE: All emergency services available by telephoning 999 on any telephone, no charge is made for this call. Assistance possible from H.M. Coastguard on VHF Channel 16.

EMERGENCY CO-ORDINATION CENTRE: H.M. Coastguard, Ramsey Marine Rescue Sub-Centre, Queens Promenade, Ramsey. Tel: (0624) 812322. Telex: 627382. VHF Channel 16.

TELEPHONES: There are no facilities for telephones to be placed on board.

SERVICES: Compass adjuster and Lloyd's Agent available. Decca, Kelvin Hughes, Furano, etc., repairs and servicing available locally. Divers available via Harbour Master.

SHORE LEAVE: When Immigration and Customs requirements satisfied (for vessels arriving from a port outside the U.K.), no restriction on crew shore leave provided that they rejoin prior to the vessel's departure.

IDENTIFICATION CARDS: Not required.

DELAYS: Berthing delays are not usual (disregarding awaiting tide) except when strong N.E. to S.E. winds make navigation in the harbour entrance hazardous. These conditions may cause 1-2 days delay if severe.

BANKS: Barclays Bank, 52 Parliament Street. Tel: (0624) 813124.
I.O.M. Bank, 20 Parliament Street. Tel: (0624) 812829.
Lloyd's Bank, 71 Parliament Street. Tel: (0624) 812225/814233.
Midland Bank, St. Paul's Square. Tel: (0624) 814000.
Nat. West Bank, Peel Street. Tel: (0624) 812109.
Major banking facilities are available in Douglas.

STORING: See "Prelims".

1. Vessel may be stored by barge or truck.
2. No restrictions unless dangerous cargo being handled. If dangerous cargo being handled as cargo or as part of the stores then all other cargo work/storing to cease.
3. Berths accessible to all road traffic.
4. Fork lift trucks may be used on quayside.
5. Bonded stores available through Local Agent, who will arrange necessary clearance, etc. H.M. Customs may attend at their discretion.
6. Riggers may be arranged through Local Agent at reasonable notice.

SHIP SUPPLY SERVICE: See "Douglas".

AUTHORITY: Isle of Man Harbour Board, Sea Terminal Building, Douglas, Isle of Man. *Tel:* 0624-23813. *Telex:* 629335.

Harbour Office, East Quay, Ramsey, Isle of Man. *Tel:* 0624-812245. *Contact:* M. Brew, Harbour Master.

AGENT: See "Douglas".

RYE: 50.56 N., 00.47 E. (See Plan)

PILOTAGE: Call "Rye Pilots" 1 hour before to 1 hour after HW. Pilots attend station when vessels expected – ETA 24 hours in advance.

Vessels fitted with VHF Radio should keep watch on Channel 14 when arriving and sailing from Rye and call for instructions on traffic movements.

NAVIGATION: *Leading Marks:* On West Bank inside West Groyne may be moved as channel alters.

Day – Beacons with triangular topmarks points together.

Inner Leading Light – Occulting Green 4 secs. with white sector 326°T to 331°T.

Tide Signals: Shown from harbour office 0.75 miles inside harbour entrance on East Bank.

Night – 7 ft. to 10 ft. on bar. Fixed Green.
Over 10 ft. on bar. Fixed Purple.

Day – None but horizontal timbers on tripod beacon at harbour entrance indicate plus 5 ft., plus 10 ft., plus 15 ft. above Ordnance Datum.

Traffic Signals: Day and Night: Qk. Fl. Yellow above Harbour Office and at West end of Alsford's Wharf denote immediate shipping movement into or out of harbour.

Day – on Flagstaff yard arms behind Harbour Office denotes expected shipping movements on tide.

One Black Ball – ship arriving from sea.
Two Black Balls side by side – ship sailing.
Three Black Balls in a triangle – ships arriving and sailing.

Fog Signals: East Pierhead Horn every 7 secs.

Radio Direction Beacon: Call sign "RYE" position Lat. 50° 57.5′ N., Long. 0° 43.5′ E. Frequency 321 kHz continuous.

RESTRICTIONS: See "Berthing".

MAX. SIZE: LOA 235 ft. Max. draft 13 ft. 06 in.

VHF: Call sign "Rye Harbour Radio" Channels 16 and 14. 0900 – 1700 hrs. daily. "Dover Coastguard" VHF Channels 16 and 67.

BERTHING: Cargo vessels entering Rye Bay should follow the coast from Dungeness coming from the East or Fairlight coming from the West keeping at least 2 miles offshore until Rye Fairway Buoy is reached (Spher. R.W. Fl. 10 secs.), position 149° T, 1.8 miles from the harbour entrance. Anchorage 5 fathoms. at MLWS.

The entrance is 42 m. (140 ft.) wide and is recognised by a conspicuous tripod beacon (Fl. 5 secs. Red), 30 m. seaward of the West Groyne which is 240 m. seaward of the East Pier with the light post (Qk. Fl.(9) 15 secs.). The channel virtually dries and is liable to change. 2 leading marks with triangular top marks inside the entrance on the Western beach indicate the line of best water (October 1983). The East Pier submerges at HWS and is marked by starboard hand beacons. There is a strong eddy inside the East Pier during the flood stream.

Inside the entrance the channel narrows to 30 m. and runs straight for half a mile (329°T) to Rye Harbour Village where there is an inner leading light (Occ. W.G. 4 secs.). Strict attention should be paid to Port Hand Beacons (4 with Qk. Fl. Red) which mark a training wall on the West side of the channel (submerged at plus 8.3 O.D.N.)

The Rother has a strong flood stream and as the harbour dries out it should NOT be approached 3 hours either side of LW. In gales from from the S.E. through to S.W. waves break across the entrance.

The best time for any vessel to enter or leave the port is 1 hour either side of HW but care is needed because movement of cargo vessels takes place during this period (see "Navigation" – "Traffic Signal"). Visiting yachts may berth at the Admiralty Jetty by the Harbour Office and in mud berths at Strand Quay in Rye by arrangement with the Harbour Master. Subject to weather conditions it is possible for vessels drawing less than 1.5 m. to enter the harbour at HW minus 2.5 hours (before the flood tide flows at maximum rate) to plus 3 hours.

H.M. Customs clear craft entering from abroad at the Harbour Office.

Alsford's Wharf is located 1 mile from the entrance on the West bank of the river.

GENERAL: *Tidal Information:* These tide tables are referred to Ordnance Datum Newlyn and GMT.

Chart Datum equals O.D. Newlyn minus 4 m. (13 ft.)

O.D. Newlyn equals Chart Datum plus 4 m. (13 ft.)

Duration of Mean Rise at Rye Harbour:

Spring – 3 hours 15 minutes.

Neaps – 5 hours 00 minutes.

Latest Surveys (September 1982) indicates that the channel has been moving Eastwards with a sand bar extending 110 m. Eastward from the tripod beacon. Average depth in the channel at the entrance:

At MHWS – 5.5 m. (19.2 ft.)

At MHWN – 4.5 m. (15 ft.)

Depth over bar:

At MHWS – 4.2 m. (13.8 ft.)

At MHWN – 2.5 m. (8.2 ft.)

For depth at HW at Alsford's Quay add 1.52 m. (5 ft.) to predicted height given in tables.

For depth at HW at Strand Quay mud berths deduct 0.6 m. (2 ft.) from predicted height.

The following approximate corrections for level and time of HW should be added/subtracted to convert these tables for use at the undermentioned coastal areas:

Hastings	minus 0.8 ft.	minus 2 minutes
Dungeness	plus 0.9 ft.	minus 6 minutes
Folkestone	minus 1.6 ft.	minus 15 minutes

AUTHORITY: Southern Water, Kent Division, Luton House, Capstone Road, Chatham, Kent ME5 7QA. *Tel:* Medway (0634) 46655. *Telex:* 965134 Krw Me G. *Contact:* Mr. George Roberts, Rivers Controller. Tel: Rye 223256. Captain C. H. Marsh, Harbour Master. Tel: Rye 225225.

SCALLOWAY: 60.08 N. 01.16 W. (See Plan)

Scalloway is a small port on the Atlantic side of the Mainland of Shetland and is located only 7 miles by road from Lerwick.

The main trade is centred around the catching, processing and export of fish, but there has been a marked increase in general trade since the recent improvement of port facilities.

Most services are available and can be arranged through the local shipping Agents.

Communications: Listening watch is maintained on Channel 16 only during office hours. At other times contact to be made through Shetland Radio. Local shipping Agent Tel: Scalloway 636 (office), after hours: Scalloway 304. Pier Master Office, Scalloway 574, home Scalloway 324. Assistant Pier Master, Lerwick 3485.

PILOTAGE: Request for Pilot should be made via local Agent at least 12 hours in advance of ETA and confirmed 1 hour before arrival by calling Scalloway Harbour Radio on Channel 16 VHF. No particular light or sound signals required. Usual station off Fugla Ness Lighthouse on the Island of Burra. Alternative station at entrance to North Channel. Vessels awaiting Pilot maintain position off Fugla Ness. Pilotage not compulsory.

ANCHORAGES: Good holding bottom in Scalloway Bay.

RESTRICTIONS: No night time or tidal restrictions. Largest scale and up to date charts essential.

MAX. SIZE: Only restriction, draft limit of 6.1 m.

HEALTH: See "Health – All Ports" before first U.K. port.

RADIO: Shetland Radio.

VHF: Vessels should listen to Channel 16 VHF when in VHF range.

BERTHING:

Berth No.	*Length (m.)*	*Least Depth (m.)*
1	66	7.5
2	53	4.0
3	77	4.2
4	75	6

No. 1 Berth can accommodate vessels up to 95 m. in length.

CRANES: Mobile cranes available. Ships normally employ their own cranes.

STEVEDORES: Should be arranged through Agents.

MEDICAL: Doctor based at Scalloway. Hospital at Lerwick.

FRESH WATER: Available from standpipe at all berths, rate 10 t.p.h.

FUEL: Marine gas oil by pipe or from road tanker. 1 hour advance notice through Agent.

REPAIRS: Most types deck and engine repairs.

SLIPWAYS: Slip accommodation for vessels up to 180 tons.

SURVEYORS: Lloyd's Agency at Lerwick: Hay and Company (Lerwick) Ltd., 106a Commercial Street. Tel: (0595) 3057. Telex: 75295.

CUSTOMS ALLOWANCES: See "Lerwick".

REPATRIATION: Facilities for effecting crew changes.

AIRPORT: Sumburgh Airport 25 miles. British Airways several times daily. Tingwall Airstrip 3 miles.

HOLIDAYS: Cargo or shipping operations not affected by holidays.

POLICE/AMBULANCE/FIRE: Dial 999.

TELEPHONES: No arrangement for placing telephones on board. The Port Authority provide a telephone box in the harbour area.

SERVICES: Compass adjusting. Provisions of all kinds can be obtained locally.

SHORE LEAVE: Crew members allowed ashore.

AUTHORITY: Shetland Islands Council, Ports and Harbours Department, Port Administration Building, Sella Ness, Graven, Shetland. *Tel:* Sullom Voe 242551. *Contact:* Captain C. J. Nicolson, Deputy Harbour Master/Deputy Port Director.

SCAPA FLOW (Flotta Terminal), Orkney Isles: 58.53 N. 03.05 W. (See Plan)

OPERATOR: Occidental of Britain Inc., Flotta Terminal, P.O.Box 14, Kirkwall, Orkney. Tel: Longhope 341.

DOCUMENTS:

Maritime Declaration of Health (Form supplied by Pilot or Agent).

Vaccination List.

Immigration Form H.O. Form IS6.

Crew Lists — 2 required.

Ship's Stores List.

Crew Personal Effects Declaration, Customs Form C.142.

Last Port Clearance.

Ship's Register.

Load Line Certificate.

Safety Construction Certificate.

Safety Radio and Safety Equipment Certificates.

Derat Certificate.

Previous British Light Dues Receipts.

Customs and Health: Weather permitting, Customs, Immigration, Health and Agent will embark inside Scapa Flow.

Customs House: Customs clearance inward and outward will be the responsibility of ship's Agents.

Light dues will be paid by the vessel.

Cargo Documents: Bills of Lading; Cargo Manifest, Quantity and Quality Report; Tanker Time and Loading Report; Certificate of Origin; Ship's Cargo and Ullage Reports; Master's Receipt for Shipping Documents and Documentation Transmittal Reports will be prepared by Company Representative.

Ship's Agent: All ship's business other than Cargo and Customs documentation and the shipping documents under section above will be conducted by the ship's Agent.

EDP: Early departure procedures apply to most vessels. Blank Bills of Lading are signed by the Master on arrival, and the tonnages inserted on completion of loading.

PILOTAGE: Pilot vessels *Scapa Pathfinder, Scapa Pilot* and *Scapa Patrol* watch VHF Channel 16.

Inside pilot station (Lat. 58° 46′ N., Long. 03° 07′ W.) located 2 miles 180° from Cantick Head Lighthouse.

Unfamiliar vessels, VLCCs, also any vessel without full information about the unusually strong currents in Pentland Firth is recommended to embark the Pilot at the appropriate outside position (Refer to Tidal Stream Atlas, Admiralty Publication H.O. Number NP 209).

Port Restrictions which may cause delays: Weather preventing embarkation of Pilot at either inside or outside positions.

Local wind conditions in Scapa Flow preventing a safe approach to the berth.

Remarks: In Scapa Flow the weather conditions, in particular the wind, can change suddenly and quickly deteriorate, not only in Winter but at any time of the year.

Mooring Masters: A Company Mooring Master will board vessels to the Northward of the Calf of Flotta or at her designated anchorage within Scapa Flow prior to berthing at any Terminal Facility. A Company Mooring Master will be on board during the time that a vessel is moored and he will liaise between the Terminal and ship personnel throughout any deballasting, loading or discharging operation.

The Company Mooring Master may ensure that Masters of vessels are familiar with, and strictly observe, all local regulations concerning the safety of operations and pollution of the sea by oil whilst laid at the Company's facilities.

Vessels using the Company's facilities are required to provide the Mooring Master with accommodation and messing of a standard equivalent to that enjoyed by the vessel's officers.

ANCHORAGE: Inside Scapa Flow several anchorages are available depending upon prevailing winds. Sea anchorage outside, in the approaches to the Pentland Firth, is not possible.

APPROACHES: The approach to the Terminal is through the Pentland Firth from East or West, and then Northward through Hoxa Sound, the main entrance to Scapa Flow. Consult Admiralty Sailing Directions Vol. 1, and Admiralty Tidal Stream Atlas for Orkney and Shetland, Publication No. 209. Principal charts are as follows and Decca coverage is available: Admiralty Chart Nos. 2162, 2581, 35.

MAX. SIZE/RESTRICTIONS: The current maximum sizes of crude tankers permissible at Flotta is 200,000 d.w.t. at the SPMs and 150,000 d.w.t. at the jetty.

Since the advent of segregated ballast tankers, an anomaly has arisen between the physical size of tankers, upon which these maximums are based and the deadweight capacity. In order to prevent confusion as to the size of tanker that is acceptable, the following guidelines will be enforced.

	Conventional Ballast Tankers	*Segregated Ballast Tankers*
SPMs	200,000 d.w.t.	170,000 d.w.t.
Jetty	150,000 d.w.t.	130,000 d.w.t.

Prior to accepting crude vessels it must be clarified whether the vessel is a segregated ballast tanker or a conventional ballast tanker. If a segregated ballast tanker then the deadweight must be indicated. If the tanker has been converted from a conventional ballast tanker to a segregated ballast tanker, then the original deadweight should also be indicated.

HEALTH: See "Health – All Ports" before first U.K. port.

RADIO: Arrival Notices.

Pilots: By coastal radio station 24 hours and 12 hours prior to arrival. VHF contact at least 3 hours prior to arrival at the pilot station.

Terminal: By coastal radio station 7 days, 72, 48 and 12 hours prior to arrival at the pilot station.

VHF contact should be established at least 3 hours prior to arrival at the pilot station.

The Terminal must be advised by VHF via the "Harbour Control", when the Pilot has boarded or when 6 miles from Stanger Head at the entrance to Hoxa Sound.

INFORMATION REQUIRED PRIOR TO ARRIVAL:

Radio Advice Prior to Arrival: Terminal operated by Occidental of Britain, Flotta Terminal, Telex: 75212 (Oxyops G), via Portishead Radio, of ETA with following details. Also advise Agent of ETA, drafts fore and aft for arrival, and any immediate requirements on arrival.

Standard Message to Crude Vessels (Initial Visit): Masters are advised that reception facilities are available for clean ballast only. All ballast must be discharged to reception facilities ashore. No ballast from either cargo or permanent ballast tanks is permitted to be discharged into Scapa Flow.

Please advise the following details:

AAA	Arriving and sailing drafts and ETA.
BBB	Cargo requirements in metric tonnes.
CCC	Grade of previous cargo.
DDD	Quantity of Cargo tank ballast and position uplifted.
EEE	Quantity of permanent ballast and position uplifted.
FFF	Quantity of ballast for discharge ashore.
GGG	Last port and destination.
HHH	Is inert gas system fully operational and cargo tanks inerted?
JJJ	Oxygen level in cargo tanks.
KKK	Gross nett and summer d.w.t. tonnages.
LLL	Maximum loading rate.
MMM	Total time for deballast.
NNN	Number and size of cargo manifolds.
OOO	Availability of reducers to adapt manifolds to suit 16 in. 150 ASA flanges three required.
PPP	Can vessel load and deballast simultaneously while maintaining a minimum of a two valve separation?
QQQ	Is vessel equipped with a patent A.K.D. stopper or similar capable of accepting an 80 mm. end link?

Vessels are required to load part cargo prior to discharging ballast.

Minimum 10 ton SWL derrick required on port side for SPMs. Derrick required at jetty if it is necessary to fit spool pieces to accept loading arms. Ballast manifold is aft of two crude connections on SPM.

Your attention is drawn to the serious view taken by Port and Terminal Authorities of pollution. Heavy fines are imposed to which is added the cost of clean up operations. Please ensure all crew members are conversant with and comply with pollution requirements.

Principal pollution causes are leaking sea valves overboard discharge valves and cargo or bunker overflows. We recommend sea valves, overboard discharge and bilge discharges are checked tight. Prior arrival cargo and bunkering procedures should be reviewed with chief officer and chief engineer. All scuppers to be plugged.

NOTE: On subsequent visits vessels should only answer AAA to JJJ inclusive.

Standard Message to Liquid Gas Carriers (Initial Visit):
LIQUID GAS CARRIERS ARRIVING AT SCAPA.
LPG vessels arriving at Flotta Terminal with ballast for discharge to Scapa Flow will comply with the following instructions in respect of this ballast.

1. Ballast for discharge must have been taken on board within 24 hours of arrival and at a distance of at least 12 miles off shore.

2. The Master will provide the Terminal with signed advice stating date, time and positions between which ballasting operations were carried out, quantity of ballast for discharge and tanks in which it is contained.

Harbour Authority Officials may board vessels to ascertain that these procedures have been adhered to and the quality of the ballast is suitable for discharge. The Authority's decision as to whether or not the ballast is acceptable for discharge will be final. Non compliance will result in delays being occasioned by the vessel.

Masters are advised that this concession for discharge of permanent ballast relates only to LPG carriers and your attention is drawn to the serious attitude adopted by Port and Terminal Authorities to pollution incidents of any kind.

To prevent problems arising due to surge pressures caused by too rapid closure of emergency shutdown valves (ship side) it is required that the minimum closure rate from fully open to completely closed be 9 seconds when loading LPG or 13 seconds for Ethane loading.

Please advise the following details:

AAA	Arriving and sailing draft and ETA.
BBB	Cargo requirements in metric tonnes.
CCC	Previous cargo and quality of tank atmospheres.
DDD	Tank temperature on arrival.
EEE	Time required for cooldown.
FFF	Height of manifold above water line at arrival draft.
GGG	Closure timed of emergency shutdown valves.
HHH	Quantity of ballast and amount to discharge.
JJJ	Last port and destination.
KKK	Gross, nett and summer deadweight tonnages.
LLL	Maximum and cooldown loading rates.
MMM	Availability of deck tanks to accept coolant and quantity required.
NNN	Size of cargo/vapour return manifold and position of vapour return manifold relative to cargo manifold.

Purging and/or coolant is not carried out alongside.

Vessel will require to load sufficient coolant for purging and/or coolant to be carried out at anchor.

NOTE: On subsequent visits vessels should only answer AAA to JJJ inclusive.

VHF: *Harbour Pilots and Harbour Control:*
VHF Listening: 16 Telex: 75475
Working: 9, 11 and 20

Mooring Masters/Terminal:

Mooring Masters	161.15	Private Frequencies Only
Terminal	161.30	
Loading Operations	161.15	Private Frequencies Only
,, ,,	161.30	

N.B. Launches are fitted with VHF Listening Channel 16.
Working Channels 14, 12, 8, 6

TUGS: 3 tugs (2×37 ton bollard pull and 1×45 ton bollard pull) are available, and compulsory, for berthing. They are fire fighting tugs and equipped with Warren Springs pollution dispersent equipment.

Whenever a tanker is on a berth, 1 stand-by tug is anchored in the close vicinity for safety and pollution purposes. Fire wires must be rigged off-side forward and aft.

1 tug (standby tug) is towing aft whilst tanker is moored to SPM.

READINESS: *Notice of Readiness to Load/Discharge:*

Notice of Readiness will be accepted subject to the following conditions;—

a. The Terminal is open (this decision shall be communicated to the Master of the vessel by the Company).

b. i) The vessel has been boarded by the Company Mooring Master prior to her proceeding towards the berth *or*

ii) The vessel has anchored within the anchorage area awaiting a berth.

N.B. Although vessels will be loaded in order of Acceptance of Notice of Readiness, it should be borne in mind that Acceptance of Notice of Readiness is contingent upon complete compliance with all the requirements of Port Conditions.

c. Acceptance of Notice of Readiness may be withdrawn by the Company upon the occurrence of any of the following events:

The decision by the Mooring Master that the vessel's drafts, equipment and/or appurtenances are not suitable for berthing at the Terminal. If this decision has not been taken, for reasons within the Mooring Master's control, within 24 hours from Acceptance of Notice of Readiness, the Company shall be deemed to have waived its right to withdraw acceptance under this sub-paragraph.

Any supervening decision of the Harbour Authority which prevents the vessel from berthing.

N.B. A derrick or crane with a safe working load of not less than 10 tons is required for handling hoses at the SPM berths.

BERTHING:
Position:
SPM 1: Lat. 58° 52′ 11.86″ N., Long. 3° 07′ 20.68″ W.
SPM 2: Lat. 58° 52′ 17.72″ N., Long. 3° 05′ 47.79″ W.
Main Control Building (Radio Mast): Lat. 58° 50′ 31.05″ N., Long. 3° 07′ 08.01″ W.

SPM Particulars:
Pillar Type Single Buoy Mooring – 2.
Tanker Size – 35,000 d.w.t. – 200,000 d.w.t.
Minimum Water Depth – 75 ft.
Max. Draft – 72 ft.
Mooring System – 10 m.×3 in. chain, 40 m.×21 in. rope grommet, 10 m.×3 in. chain and 6 m.×2⅝ in. chain.
Crude Manifolds – 2×16 in.
Ballast Manifolds – 1×16 in.
Maximum Loading Rate – 80,000 bbls.p.h.
Hose Weight – Minimum 7.5 tons
Ballast connection is positioned aft of the 2 crude connections.

A load monitoring system is fitted to each SPM giving constant strain readings to the Terminal Control Room and the Mooring Master on board the tanker. In adverse weather conditions strain gauge readings will indicate when vessel should prepare to vacate the berth.

LPG/Crude Oil Jetty:
Finger type jetty with breasting dolphins.
Tanker Size – 4,000 d.w.t. – 150,000 d.w.t.
Minimum Water Depth – 63 ft.
Maximum Draft – 62 ft.
LPG Manifolds – 1×10 in. loading plus 1×10 in. vapour return.
LPG Loading Rate – 10,000 bbls.p.h.
Crude Manifolds – 4×16 in.
Crude Loading Rate – 80,000 bbls.p.h. maximum.
Ballast Manifold – 1×16 in. (crude gantry only).
Maximum Deballasting Rate – 40,000 bbls.p.h.

LPG: Gas tankers also load at the jetty and in their case the only relevent restriction is a requirement for the cargo manifold flange to be able to work within the operating envelope of the LPG loading arms which have the following parameters:- Max. Airdraft 13.18 m.; Min. Airdraft 1.75 m.; Max. distance ship's side to flange 7.0 m.; Min. distance ship's side to flange 3.1 m.

Terminal Capacity:

1. Crude Oil:

There are 5 tanks, each of 500,000 bbls. nominal capacity for storage of stabilised crude oil, plus a further 2 of 1,000,000 bbls. each.

2. Liquid Petroleum Gas:

There are 2 tanks, each of 100,000 bbls. nominal capacity for storage of propane.

3. Ethane:

There are 5 ethane tanks, each of 500 cu.m. nominal capacity.

Remarks: Vessels moored to the SPMs are required under conditions to maintain a tug towing astern to keep the mooring system under a tension of 15 tons – 20 tons.

When ship's piping does not permit the pumping of permanent ballast through the manifold, the possibility to load some cargo prior to deballasting the cargo tanks' clean ballast may be granted by prior arrangement with the terminal. In all cases where ships intend to deballast and load simultaneously there must be at least a 2 valve separation.

Lightering Operations: Ship-to-ship lightering operations can be carried out in Scapa Flow on vessels up to 72 ft. draft.

Tug facilities and oil pollution equipment readily available.

GENERAL: *Tidal Information:* These tide tables are referred to Ordnance Datum Newlyn and GMT.

Chart Datum equals O.D. Newlyn minus 4 m. (13 ft.)

O.D. Newlyn equals Chart Datum plus 4 m. (13 ft.)

Duration of Mean Rise at Rye Harbour:

Spring – 3 hours 15 minutes.

Neaps – 5 hours 00 minutes.

Latest Surveys (September 1982) indicates that the channel has been moving Eastwards with a sand bar extending 110 m. Eastward from the tripod beacon. Average depth in the channel at the entrance:

At MHWS – 5.5 m. (19.2 ft.)

At MHWN – 4.5 m. (15 ft.)

Depth over bar:

At MHWS – 4.2 m. (13.8 ft.)

At MHWN – 2.5 m. (8.2 ft.)

For depth at HW at Alsford's Quay add 1.52 m. (5 ft.) to predicted height given in tables.

For depth at HW at Strand Quay mud berths deduct 0.6 m. (2 ft.) from predicted height.

The following approximate corrections for level and time of HW should be added/subtracted to convert these tables for use at the undermentioned coastal areas:

Hastings	minus 0.8 ft.	minus 2 minutes
Dungeness	plus 0.9 ft.	minus 6 minutes
Folkestone	minus 1.6 ft.	minus 15 minutes

AUTHORITY: Southern Water, Kent Division, Luton House, Capstone Road, Chatham, Kent ME5 7QA. *Tel:* Medway (0634) 46655. *Telex:* 965134 Krw Me G. *Contact:* Mr. George Roberts, Rivers Controller. Tel: Rye 223256. Captain C. H. Marsh, Harbour Master. Tel: Rye 225225.

SCALLOWAY: 60.08 N. 01.16 W. (See Plan)

Scalloway is a small port on the Atlantic side of the Mainland of Shetland and is located only 7 miles by road from Lerwick.

The main trade is centred around the catching, processing and export of fish, but there has been a marked increase in general trade since the recent improvement of port facilities.

Most services are available and can be arranged through the local shipping Agents.

Communications: Listening watch is maintained on Channel 16 only during office hours. At other times contact to be made through Shetland Radio. Local shipping Agent Tel: Scalloway 636 (office), after hours: Scalloway 304. Pier Master Office, Scalloway 574, home Scalloway 324. Assistant Pier Master, Lerwick 3485.

PILOTAGE: Request for Pilot should be made via local Agent at least 12 hours in advance of ETA and confirmed 1 hour before arrival by calling Scalloway Harbour Radio on Channel 16 VHF. No particular light or sound signals required. Usual station off Fugla Ness Lighthouse on the Island of Burra. Alternative station at entrance to North Channel. Vessels awaiting Pilot maintain position off Fugla Ness. Pilotage not compulsory.

ANCHORAGES: Good holding bottom in Scalloway Bay.

RESTRICTIONS: No night time or tidal restrictions. Largest scale and up to date charts essential.

MAX. SIZE: Only restriction, draft limit of 6.1 m.

HEALTH: See "Health – All Ports" before first U.K. port.

RADIO: Shetland Radio.

VHF: Vessels should listen to Channel 16 VHF when in VHF range.

BERTHING:

N.B. Launches are fitted with VHF Listening Channel 16.
Working Channels 14, 12, 8, 6

TUGS: 3 tugs (2×37 ton bollard pull and 1×45 ton bollard pull) are available, and compulsory, for berthing. They are fire fighting tugs and equipped with Warren Springs pollution dispersent equipment.

Whenever a tanker is on a berth, 1 stand-by tug is anchored in the close vicinity for safety and pollution purposes. Fire wires must be rigged off-side forward and aft.

1 tug (standby tug) is towing aft whilst tanker is moored to SPM.

READINESS: *Notice of Readiness to Load/Discharge:*

Notice of Readiness will be accepted subject to the following conditions;—

a. The Terminal is open (this decision shall be communicated to the Master of the vessel by the Company).

b. i) The vessel has been boarded by the Company Mooring Master prior to her proceeding towards the berth *or*

ii) The vessel has anchored within the anchorage area awaiting a berth.

N.B. Although vessels will be loaded in order of Acceptance of Notice of Readiness, it should be borne in mind that Acceptance of Notice of Readiness is contingent upon complete compliance with all the requirements of Port Conditions.

c. Acceptance of Notice of Readiness may be withdrawn by the Company upon the occurrence of any of the following events:

The decision by the Mooring Master that the vessel's drafts, equipment and/or appurtenances are not suitable for berthing at the Terminal. If this decision has not been taken, for reasons within the Mooring Master's control, within 24 hours from Acceptance of Notice of Readiness, the Company shall be deemed to have waived its right to withdraw acceptance under this sub-paragraph.

Any supervening decision of the Harbour Authority which prevents the vessel from berthing.

N.B. A derrick or crane with a safe working load of not less than 10 tons is required for handling hoses at the SPM berths.

BERTHING:

Position:

SPM 1: Lat. 58° 52′ 11.86″ N., Long. 3° 07′ 20.68″ W.
SPM 2: Lat. 58° 52′ 17.72″ N., Long. 3° 05′ 47.79″ W.
Main Control Building (Radio Mast): Lat. 58° 50′ 31.05″ N., Long. 3° 07′ 08.01″ W.

SPM Particulars:

Pillar Type Single Buoy Mooring – 2.
Tanker Size – 35,000 d.w.t. – 200,000 d.w.t.
Minimum Water Depth – 75 ft.
Max. Draft – 72 ft.
Mooring System – 10 m.×3 in. chain, 40 m.×21 in. rope grommet, 10 m.×3 in. chain and 6 m.×2⅝ in. chain.
Crude Manifolds – 2×16 in.
Ballast Manifolds – 1×16 in.
Maximum Loading Rate – 80,000 bbls.p.h.
Hose Weight – Minimum 7.5 tons
Ballast connection is positioned aft of the 2 crude connections.

A load monitoring system is fitted to each SPM giving constant strain readings to the Terminal Control Room and the Mooring Master on board the tanker. In adverse weather conditions strain gauge readings will indicate when vessel should prepare to vacate the berth.

LPG/Crude Oil Jetty:

Finger type jetty with breasting dolphins.
Tanker Size – 4,000 d.w.t. – 150,000 d.w.t.
Minimum Water Depth – 63 ft.
Maximum Draft – 62 ft.
LPG Manifolds – 1×10 in. loading plus 1×10 in. vapour return.
LPG Loading Rate – 10,000 bbls.p.h.
Crude Manifolds – 4×16 in.
Crude Loading Rate – 80,000 bbls.p.h. maximum.
Ballast Manifold – 1×16 in. (crude gantry only).
Maximum Deballasting Rate – 40,000 bbls.p.h.

LPG: Gas tankers also load at the jetty and in their case the only relevent restriction is a requirement for the cargo manifold flange to be able to work within the operating envelope of the LPG loading arms which have the following parameters:- Max. Airdraft 13.18 m.; Min. Airdraft 1.75 m.; Max. distance ship's side to flange 7.0 m.; Min. distance ship's side to flange 3.1 m.

Terminal Capacity:

1. Crude Oil:

There are 5 tanks, each of 500,000 bbls. nominal capacity for storage of stabilised crude oil, plus a further 2 of 1,000,000 bbls. each.

2. Liquid Petroleum Gas:

There are 2 tanks, each of 100,000 bbls. nominal capacity for storage of propane.

3. Ethane:

There are 5 ethane tanks, each of 500 cu.m. nominal capacity.

Remarks: Vessels moored to the SPMs are required under conditions to maintain a tug towing astern to keep the mooring system under a tension of 15 tons – 20 tons.

When ship's piping does not permit the pumping of permanent ballast through the manifold, the possibility to load some cargo prior to deballasting the cargo tanks' clean ballast may be granted by prior arrangement with the terminal. In all cases where ships intend to deballast and load simultaneously there must be at least a 2 valve separation.

Lightering Operations: Ship-to-ship lightering operations can be carried out in Scapa Flow on vessels up to 72 ft. draft.

Tug facilities and oil pollution equipment readily available.

DENSITY: 1025.
MOORING AND HOSE HANDLING:
On SPMs: Ship's derrick (SWL 10 tons) and manifold connections will require to be prepared on the port side. An accommodation ladder will be rigged to starboard with a pilot ladder ready to port.

Securing equipment for single chain mooring forward and hose connecting gear will be hoisted on board from Company work launch by ship's derrick. A good mooring line will be required from forecastle head as a messenger for the buoy mooring.

Tanker Loading Pier: The loading pier is equipped with rigid articulated pipe arms mounted on gantries for loading liquid petroleum gas and also for loading crude oil. The crude oil gantry is also fitted with a ballast discharge arm.

There is an access roadway between the Pier head and the shore. Mooring lines are run to dolphins by terminal mooring boats. Vessels with tension winches when moored at the pier must have winches on 'Manual brake'.

Arrival Draft: Vessels must arrive at the Company's facility in an adequate ballast condition compatible with safe manoeuvring during handling. Excessive trim or insufficient ballast could incur delay until such time as an acceptable condition is reached.

BALLAST: All berths are equipped with water ballast discharge lines. There is a water ballast tank of 500,000 bbls. capacity and a ballast treating facility capable of handling 40,000 bbls.p.h. It is prohibited to discharge water ballast into Scapa Flow.

Bilge Ballast Discharge: Vessels should arrive in Scapa Flow with clean ballast only.

The discharge of bilges and/or ballast by vessels into Scapa Flow is strictly prohibited.

N.B. All ballast water including permanent ballast must be discharged through the Terminal ballast reception and cleaning facility.

Discharge of ballast and simultaneously lifting of cargo is not permitted unless approval has been given by the Mooring Master.

The salvage in ballast shall become the property of the Company, in consideration of the Company's operation of the Terminal ballast reception and cleaning facility.

MEDICAL: Medical and dental services are available by arrangement. Hospital facilities are available at Balfour Hospital, Kirkwall.
FRESH WATER: Not available.
FUEL: Bunkers not available at present, but lubricants in small quantity available. Ships should cable requirements to Agent as soon as possible.

REPAIRS: There are no dry-docking facilities available, but local engineering firms undertake minor repairs to machinery and equipment.
Immobilisation of Engines: Not allowed on any of the berths, and not recommended when at anchor. When at the anchorage, however, in special circumstances, and provided the Harbour Master's permission is first obtained, it may be possible.
TRAVEL: There are daily air services, during the week, to Aberdeen, Inverness, Glasgow and Edinburgh from Kirkwall Airport. There is no service on Sunday, There is a daily ferry service from Stromness to Scrabster to connect with British Rail. During the Winter months there is no service on Sunday.

CONSULS: Denmark, Netherlands, Norway and Germany F.R.
LAUNCH SERVICES: Launch services from Flotta and SPM berths are available by arrangement with local Agents to Scapa Pier.
SHORE LEAVE: There are no restrictions on shore leave for ships' personnel. For vessels moored at SPMs arrangements can be made with the Agent for a launch service to be operated to the shore. For safety reasons, the boat selected for this service must have good stability, to prevent accidents in cases of hazardous boarding due to weather conditions.

SAFETY: Should communications fail, the Mooring Master will authorise continuous soundings of the ship's whistle or siren as a signal to stop loading (ships in the vicinity capable of so doing should inform the Terminal Control by VHF that this signal is being sounded in case it is inaudible ashore). Ships hearing the signal and unable to contact the Terminal should inform "Harbour Control".

SERVICES: Stores are of good quality, and the laundry facilities are good, but limited. Tank cleaning and dirty ballast facilities are not available.
GENERAL:
Accidental Spills and Leakage: All oil spills and leakages must be immediately reported to the Mooring Master, who will inform the Harbour Authority forthwith. All deballasting/loading/discharging operations will be immediately suspended until the cause of the spill/leakage has been determined, and rectified to the satisfaction of the Mooring Master, and the Harbour Authority.

Galley and Other Refuse: Dumping of all refuse into Scapa Flow and approaches is prohibited. Refuse must be retained on board in sealed containers. (Vessels in port over a long period may make arrangements with their local Agent for collection).

Lighting: Sufficient lighting must be provided in the way of all overboard discharge points to facilitate detection of leaks or spillage. Adequate lighting must also be provided at the loading manifold.

Lifting of Stores; When tankships are at SPMs, loading or off-loading of stores, provisions, drums or any other goods or articles on, to or from the main tank deck is prohibited while cargo is being lifted.

Under certain circumstances and with the approval of the Company's Mooring Master, stores may be worked on the poop during the cargo lifting.

When tankships are moored at the pier, vessels and boats are prohibited from coming alongside during cargo lifting, unless all cargo operations are shut down, all tank openings are closed and secured, and permission from the Mooring Master has been obtained.

Working of stores over the pier will not normally be allowed.

During Loading/Deballasting Operations at SPMs: Mooring Masters will carry Company communication equipment. Ship's VHF must also be available to the Mooring Master at all times. Ship's whistle must be available throughout the time a Mooring Master is on board.

Emergency signals in the event of complete communication failure will be as follows:

By day: Continuous blasting of ship's whistle accompanied by the hoisting of 2 black balls in a position conspicuous to the Terminal Control Room.

By night: Continuous blasting of ship's whistle accompanied by continuous flashing on an Aldis type signal lamp aimed towards the Terminal Control Room.

In the event of such a communication failure all loading operations shall cease until an effective means of communications has been established.

AUTHORITY: Orkney Islands Council, Department of Harbours, Harbour Authority Building, Scapa, Orkney KW15 1SD. *Tel:* 0856-3636. *Telex:* 75475. *Contact:* Captain H. A. Banks, Director of Harbours.

AGENT: John Jolly, 21 Bridge Street, Kirkwall, Orkney Isles KW15 1HR. Telegraphic Address: "Jolly Kirkwall Telex", Telex: 75253. Tel: Kirkwall (0856) 2268 (24 hours answering service) and 3462. VHF call sign (Private frequency 161.25 mHz): Jolly.

SCRABSTER: 58.37 N. 03.32 W. (See Plan)

PILOTAGE: Not compulsory. Pilotage available for Pentland Firth and locally. Pilots can be contacted on Channel 16, working Channel 12.
MAX. SIZE: 5.2 m. draft, 2,500 d.w.t. can be accommodated at Ro/Ro berth.
VHF: See "Pilotage".
TUGS: None.
BERTHING: Ro/Ro Berth: Length 100 m., depth 5.5 m.
Inner Harbour: 2 wharves, length 30.5 m., depth 3 m.
Fishing Berths: Quay 300 m. long, depth 1 m.
CRANES: Mobile cranes up to 36 tons available.
SPECIALISED CARGO HANDLING FACILITIES: Ro/Ro Berth available. See "Berthing".
STEVEDORES: Cargo worked 24 hours.
TANKERS: Vessels up to 2,000 d.w.t. can use Tanker Terminal.
FRESH WATER: Available.
FUEL: By road from Tanker Terminal, 24 hours notice required. Also from tanks on Ro/Ro lay-by.
REPAIRS: Engine and minor hull repairs can be undertaken.
AIRPORT: Nearest at Wick, 32 km. away.
HOLIDAYS: Usual U.K. holidays.
AUTHORITY: Scrabster Harbour Trust, Harbour Office, Scrabster, Thurso, Caithness KW14 7UJ. *Tel:* 0847-62779/64618. *Telex:* 75449 Thurso G. *Contact:* Harbour Master.
AGENT: See "Cromarty Firth".

SEAHAM: 54.50 N. 01.19 W. (See Plan)

PILOTAGE: Not compulsory. Trinity House Pilotage Service available with VHF watch on Channel 16 over tidal period. Call sign: Seaham Harbour Pilots. Tel: (0783) 817052.
ANCHORAGE: Good anchorage approximately 1 mile N.E. of North Pier Lighthouse. Shallow water and rocks to South of South Pier (Liddle Scars). Depth on bar at HWST 6.85 m.
RESTRICTIONS: The entrance to harbour is formed by North and South Piers and is 84.34 m. wide. South Dock gates are manned from 2.5 hours before HW to 1.5 hours after HW. Gateway to South Dock 19.81 m. wide.

No vessel can enter at LW and entrance should not be attempted during strong on-shore winds.
MAX. SIZE: *Largest Vessel:* 106 m. LOA, 16 m. beam and draft subject to tidal rise.
VHF: VHF watch on Channel 16 over tidal period and during office hours (0800 – 1800 hrs.) Monday – Friday. Working Channels 6 and 12.
TUGS: 1 tug with 8 tons bollard pull available.
BERTHING: *South Dock:* 8 berths. 625 m. quayage with cranage up to 100 tons capacity. Gravity spouts and conveyors for loading vessels up to 6,000 tons. 60 ton weighbridges with 18.4 m. platforms available. Railway connections.
North Dock: Used by fishing boats only.
CRANES: Four cranes with capacity up to 35 tons.
BULK CARGO FACILITIES: Chute, conveyor and cranage handling facilities available for loading/discharging bulk cargoes from/to road transport.
SPECIALISED CARGO-HANDLING FACILITIES: *Container and Ro/Ro Facilities:* Area available for handling containers. 42 ton container handling forklift truck recently acquired.
STEVEDORES: *Working Hours:* Monday to Friday 0800 – 1200 hrs., 1300 – 1700 hrs. Overtime to be ordered by 1300 hrs.

Saturday and Sunday: Work at overtime rates can be arranged with 8 hour minimum period. Weekend overtime to be ordered by 1600 hrs. Friday.

Public Holidays: Overtime possible except New Year's Day, Christmas Day and Boxing Day.
MEDICAL: Nurse available on site. Hospital at Sunderland, distance 6 miles.
TANKERS: No facilities.
FRESH WATER: Available on quay.
FUEL: Available by barge or road tanker.
REPAIRS: Facilities available at Sunderland and the Tyne.
OPENING/CLOSING HATCHES: By crew.

AIRPORT: Newcastle Airport, 32 km. Teesside Airport, 40 km.
HOLIDAYS: *Local Holidays:* Port closes for second two weeks of July and one week at Christmas.
POLICE/AMBULANCE/FIRE: Dial 999.
EMERGENCY CO-ORDINATION CENTRE:
Maritime Rescue and Search Centre. Tel: North Shields 572691.
Coastguard. Tel: (0783) 74255.
BANKS: Barclays, National Westminster, Lloyd's and Midland.
GENERAL: *Chart:* B.A. Chart No. 1627.
Weather: The prevailing winds are from the West.
Tides: Normal range in enclosed dock: 1.97 m. Spring range 4.42 m. Neap range 3.5 m.
Provisions: Available from local chandlers.
Storage: Transit shed of 1,394 sq.m. and warehouse space of 6,000 sq.m. Open storage of 10 acres also available.
AUTHORITY: The Seaham Harbour Dock Co., Seaham House, North Terrace, Seaham, Co. Durham SR7 7EU. *Tel:* Administration 0783-813877; Harbour Office 0783-813246; Security 0783-813320; *Telex:* 537368 SEADOC G. *Contact:* D. Clifford, Managing Director; G. Hicks, Operations Manager; F. Aitkens, Pier Master.

SHARPNESS and GLOUCESTER: 51.43 N. 02.29 W. (See Plan)

The Port of Gloucester comprises the wet docks at Sharpness and Gloucester which are connected by a ship canal named "The Gloucester and Sharpness Canal".
PORT LIMITS: Sharpness Dock entrance.
DOCUMENTS:
1 Maritime Declaration of Health.
1 Crew's Effects List.
2 Ship's Report by Master.
1 Home Office Form 1B.6.
3 Stores Lists.
1 Certificate of Deck Cargo Tonnage.
1 Grain Certificate.
1 Light Certificate.
1 Port Dues Certificate.
1 Passenger List.
1 Landing Card for each passenger.
Ship's Certificate of Registry.
Mercantile Marine Office Certificate (British ships only).

In addition Manifests and Bills of Lading are usually sent to Agent direct from loading port.
PILOTAGE: Pilotage is compulsory. Masters of vessels bound for the Ports of Gloucester, Sharpness, Chepstow and Lydney requiring the services of a Pilot at the Barry Roads Station must give at least 24 hours notice of their intended arrival at the Pilot Station. Failure to give this notice could lead to a vessel being delayed. Draft and g.r.t. are also required. Masters who expect their passage time to be less than 24 hours should send advice from their sailing port with gross tonnage, draft, speed and ETA. Masters of vessels bound for Chepstow should also state mast height above the appropriate water line and whether masts can be lowered. (Vertical clearance limited by Bridge to 52 ft. (15.8 m) above MHWS)

Vessels are boarded at Barry Roads by the Cardiff Pilot Cutter which is equipped with VHF Channels 16, 6, 8, 9, 11 and 14. Radio contact with the Cardiff Pilot Cutter should be made not later than 1 hour before arrival at Breaksea L.V. In fog ships sound "9" (4 longs, 1 short). Pilot replies the same. Masters can send ETAs direct to the Pilotage Agent, Sharpness. Tel: Dursley (0453) 811323.
Dock Pilots: Dock Pilots are available, not compulsory but advisable for berthing in Sharpness Dock, transit of the Sharpness Canal and in Gloucester Dock.
ANCHORAGES: Barry Roads afford good anchorage in moderate weather for vessels awaiting a Pilot.
RESTRICTIONS: 3 ft. (0.9 m.) water clearance over outer sill for vessels of maximum draft 21 ft. 6 in. (6.55 m.) Neap tides impose certain restrictions.

Beam	*Clearance Required*
Less than 10.36 m.	0.61 m.
10.36 m. – 13.71 m.	0.76 m.
13.72 m. – 16.76 m.	0.91 m.

Note: The River Severn at Sharpness dries out at LW.
MAX. SIZE: Maximum Length – no restriction. Maximum beam – 55 ft. (16.76 m.) Maximum draft – 21 ft. 6 in. (6.55 m.).
HEALTH: See "Health – All Ports" before first U.K. port.
RADIO: Niton Radio, Lands End Radio, Ilfracombe Radio.
VHF: Sharpness Radio Channels 16, 14 and 9. Range normally within pilotage waters only.
TUGS: *(River):* Larger vessels normally pick up tugs off Avonmouth if required by Pilot. *(Dock Tugs):* Not suitable for river work. 3 tugs available in Sharpness Dock and for use between Sharpness and Gloucester if required. All tugs take ships lines.
BERTHING: Max. draft 21 ft. 6 in. (6.55 m.) Fresh Water. Range of dock level 9 in. (0.2 m.)
Available Berths: 10 to 14 berths depending on ship length. This includes a Container berth and a scrap berth. Available length of Quay – 12,000 ft.
Cargo Equipment and Methods: Cranes 6×3 tons, 5×6 tons all Portal and 1 Scotch Derrick of 32 tons. Grabs, Slings and Pallets, etc. Load/discharge by shore gear.
BULK CARGO FACILITIES: 2 grain silos, 1 fixed suction plant.
Belt driven elevators provided as required.
1×300 t.p.h. mobile hopper for handling fertiliser into 4×2,500 ton storage bays.
BRIDGES: 16 swing bridges between Sharpness and Gloucester. Mast height restriction 32 m. (105 ft.)
STEVEDORES: British Waterways Board.
MEDICAL: Absolutely necessary for Agent to have as much notice as possible if any medical attention is required. All facilities available.
DENSITY: 1000/1003.
FRESH WATER: Available by stand pipe, 20 t.p.h.
FUEL: Through Agents, 12 hours notice, most grades available.
FIRE PRECAUTIONS: According to local laws available on request.
CONSULS: See "Bristol".
REPAIRS: All types of deck and engine repairs are possible.
DRY DOCK: 360 ft. by 47 ft. by 14 ft. over blocks.
SURVEYORS: Most Societies are available.
GANGWAY/DECK WATCHMEN: Ship's personnel, but watchmen can be arranged if necessary.
HATCHES: Opened by ship's crew.
CUSTOMS ALLOWANCES: As for other U.K. ports.
REPATRIATION: All arrangements through Agents.
AIRPORT: London or Birmingham within 2 hours. Local taxi service available.
TIME: BST is GMT plus 1 hour. GMT in Winter months.
HOLIDAYS: Easter (varies). May Day. Spring Bank Holiday (last Monday in May). August Bank Holiday (varies, usually last Monday in August). Christmas Day (25th December), Boxing Day (26th December). Work can usually be arranged on these holidays although unusual to work 25th/26th December.
POLICE/AMBULANCE/FIRE: Telephone 999 ask for service required.
TELEPHONE: No ship to shore connection. Public telephone kiosks available.
SERVICES: Taxi. Laundry. Ship chandlery.
SHORE LEAVE: Possible.
IDENTIFICATION CARDS: Not necessary unless being repatriated.
REGULATIONS: British Waterways Board Byelaws 1962.
GENERAL: *Gloucester and Sharpness Canal and Gloucester Dock:* Maximum size of Vessel: Length 205 ft. (62.5 m.), beam 31 ft. (9.45 m.), draft 11 ft. 6 in. (3.5 m.) fresh water. Vessels exceeding these dimensions may be considered subject to Harbour Master's approval.
AUTHORITY: British Waterways Board, Dock Office, Sharpness Docks, Gloucestershire GL13 9UD. *Tel:* (0453) 811644. *Telex:* 43376 BWB SDS G. *Contact:* Mr. ~~D. McNeill~~, Dock Manager. Captain G. A. Boyack, Harbour Master.
1×300 t.p.h. mobile hopper for handling fertiliser into 4×2,500 ton storage bays.

M. STILLIARD.

SHOREHAM: 50.50 N. 00.15 W. (See Plan)

DOCUMENTS and all general information, refer to "London". Distance from London, 80 km.
PILOTAGE: Pilotage is compulsory for all foreign-going vessels, all coastal vessels of over 1,500 g.r.t. and all passenger-carrying vessels. Send ETA 12 hours and 2 hours in advance, including max. draft. Pilot boards within 2 nautical miles of harbour entrance. Tel: Brighton (0273) 592455. Cables: Shoreham Pilots. VHF: Channels 16, 6, 9, 14. Hours: Pilot Station office hours and tidal hours.
ANCHORAGE: Off Harbour. Depths as per English Channel Charts.
RESTRICTIONS: No night restrictions. Locks manned 4 hours either side of HW. According to size and draft these times can be extended by prior arrangement.

Main entrance channel, 122 m. wide, leads into a 91.4 m. channel to the Eastern arm.

Dimensions of Prince Philip Lock: 113.9 m. length, 17.3 m. width.
MAX. SIZE: *Canal:* Length 105.9 m., beam 16.7 m., draft 6.7 m. (subject to tide). Vessels over 103 m. are subject to the Harbour Master's approval.
Western Arm: Length 82.3 m., beam 14.3 m., draft subject to tide.
East Arm: Max. LOA 118 m. Max. Draft 6.4 m. (subject to tide).
HEALTH: See "Health – All Ports" before first UK port.
RADIO: Niton Radio/Northforeland Radio. ETA to Shoreham Harbour Master 24 hours prior to arrival.
VHF: When within VHF range advise Harbour Master (via "Shoreham Harbour Radio"), ETA, draft, beam, LOA and of any circumstances which may affect seaworthiness or handling capacity of the vessel.

Port Operation and Information Service manned continuously, contact by VHF calling Channel 16, working Channel 14. Station is situated on the middle pier.
TUGS: One tug (Bollard Pull 10 tonnes). Tug lines used for which no extra charge. Communications between vessel and tug take place on VHF Channel 6.
BERTHING: See "Restrictions".

Heavy lift cranes, 35 tons, 45 tons and 90 tons. Capacity for container handling.

A bulk wine terminal capable of handling 4,731,750 litres of wine is available.

A grain silo terminal with a storage capacity of 13,000 tonnes has been constructed within the canal.

A Ro/Ro berth has been constructed at the East end of Aldrington Basin.
STEVEDORES: Reasonable ETA is sufficient for gangs to be called.
MEDICAL: All facilities available.
TANKERS: Shell, Esso and Texaco at berths No. 48, 52 and 53 respectively in the Canal.
DENSITY: Approx. 1025.
FRESH WATER: Available at most berths.
FUEL: Available by road tanker.
CONSULS: Denmark.
REPAIRS: Minor repairs possible.
SURVEYORS: Available locally.

GANGWAY/DECK WATCHMEN: Recommended.
HATCHES: Opening and closing by crew.
REPATRIATION: Possible.
AIRPORT: Gatwick Airport.
POLICE/AMBULANCE/FIRE: Dial 999.
TELEPHONES: There are no arrangements for placing telephones aboard ship.
BANKS: Barclay's, National Westminster, Lloyd's and Midland Bank all have branches locally.
STORING: No restrictions. Stevedores not required to load stores.
SHORE LEAVE: Possible.
DEVELOPMENTS: The Port Authority is awaiting approval for development of the Eastern Arm. Approval is expected to be granted in 1986 and first berth expected to be operational late 1987.

The new facilities will include a Ro/Ro berth, with single ramp, on the North side and be able to accept vessels of LOA 130 m. (8,000 d.w.t.) and draft 6.5 m. On the South side a container berth will be constructed to accept vessels of LOA 125 m. and draft 6.5 m. A 35 ton container gantry crane will be erected at the berth.

The approach channel and basin will be dredged to 6.5 m. below datum.

AUTHORITY: Shoreham Port Authority, Harbour Office, Albion Street, Southwick, Brighton BN4 4ED. *Tel:* Brighton (0273) 592613. *Telex:* 878178. *Contact:* Captain J. Robertson, Harbour Master. P. Lacey, General Manager.

SILLOTH: 54.52 N. 03.24 W **(See Plan)**

PORT LIMITS: A vessel is considered to be an "arrived vessel" for the purposes of stemming when she arrives at the pilot station off Workington (see Admiralty Chart No. 1346). Laytime normally commences when the vessel berths in the New Dock, Silloth.
DOCUMENTS: Normal U.K. requirements.
PILOTAGE: Compulsory for all vessels except for those qualifying for special exemption. Vessels should send their ETA to local Agents or to the Dock Master, Silloth, at least 12 hours before arrival. Pilot boat "Medway Patrol" is stationed off Workington when vessels are expected and listens out on Channels 16, 14 or 12 VHF. Pilot boards vessels between 2.5 hours and 1.5 hours before HW, Silloth.
ANCHORAGES: Vessels may anchor at the pilot station in good weather, but are advised to seek shelter in Ramsey Bay, Isle of Man or Wigtown Bay in adverse weather conditions.
RESTRICTIONS: The port lies in a relatively sheltered position in the Solway Firth, and in consequence, access during adverse weather is mainly governed by the practicability of boarding and landing Pilots off Workington. Vessels over 75 m. in length do not normally enter the port at night.
MAX. SIZE: *Neap Tides:* Length 90 m., beam 15 m., draft 4 m.
Spring Tides: Length 90 m., beam 15 m., draft 6 m.

Typically, the port is used by vessels of between 500 tonnes and 1,500 tonnes deadweight.

VHF: A "Port Operation" and Information Services operates on Channels 16 and 12 from 2.5 hours before HW, Silloth, call sign, "Silloth Harbour Radio".
TUGS: There are no tugs available at the port.
BERTHING: The port comprises two docks:

The outer, Marshall Dock is tidal and contains no berths.

The inner, New Dock is enclosed by dock gates which are opened from 1 hour before to 1 hour after HW. Minimum depths in the New Dock are maintained at 4 m. on Neaps and 6 m. on Springs. The specific gravity of the water in the dock is normally about 1.022.

Cargo Berths: The New Dock contains 7 berths:

No. 1 Berth: A "single user" bulk grain import berth operated by Carr's Flour Mills Ltd. Suction elevators, 60 tonnes p.h.

No. 2 Berth: A general cargo berth with limited quay space.

No. 3 Berth: A specialised bulk molasses import terminal operated by Carr's Flour Mills Ltd. and general cargo berth.

No. 4 'A' Berth: A "common user" import terminal for bulk agricultural materials (mainly animal feeds) operated by D. A. Harrison & Co. Suction elevators and grabs; 100 tonnes p.h., automated handling and storage.

No. 4 'B' Berth: A specialised import/export bulk cement terminal operated by D. A. Harrison & Co. 100 tonnes p.h., automated handling and storage of cement powders.

No. 5 Berth: Main general cargo berth. Mobile cranes and elevator, heated-covered storage.

No. 6 Berth: Specialised livestock import terminal operated by Frans Buitelaar Ltd., under the control and supervision of M.A.F.F. officials. Lairaging facilities for 800 cattle. The berth can also be used for general cargo.

No. 7 Berth: General cargo berth for small vessels of up to 50 m. in length.

BULK CARGO FACILITIES: See "Berthing".
STEVEDORES: D. A. Harrison & Co., Anvil House, West Newton, Aspatria, Cumbria. Tel: (0965) 20529. Telex: 64493. Working hours in the port are unlimited 24 hours per day, 365 days per year.
Storage: Stevedores D.A. Harrison & Co. also operate a large covered storage facility adjacent to the Port with a capacity of more than 40,000 tonnes, and can provide inland road transport to and from this facility to all parts of the United Kingdom using own vehicles.
CRANES: 4 × 30 tonne mobile cranes are permanently available in the port. Larger or additional cranes can be conveniently hired in. Ship's gear is never used.
HATCHES: Always handled by ship's crews.
FRESH WATER: Available at all berths.
FUEL: Fuel oil can be loaded from road tanker.
POLICE/FIRE/AMBULANCE: Police: Tel. 31313 or 09002422; Fire: Tel. 999; Ambulance: Tel. 31309 or 999. The nearest public telephone is at the entrance to the docks.
REPAIRS: Any type of repair which does not require dry dock facilities can be carried out by local contractors.
DRY DOCKS: None.
AIRPORT: Nearest airports are Carlisle, 39 km., Newcastle 140 km., Prestwick 225 km. and Manchester 260 km.
BANKS: The Midland Bank, Station Road, Silloth. The National Westminster Bank, Eden Street, Silloth.
AUTHORITY: Associated British Ports, Dock Office, Silloth Docks, Cumbria CA5 4JQ. *Tel:* (0965) 31358 or 31165. *Cables:* Dock Office, Silloth. *Contact:* Captain J. R. W. Myers, Dock Master.

SOUTHAMPTON (Including Fawley): 50.54 N. 01.24 W. **(See Plan)**

DOCUMENTS:

1 Maritime Declaration of Health.
1 Crew's Effects List.
2 Ship's Reports by Master.
1 Home Office Form 1B6.
1 Stores List.
1 Certificate of Deck Cargo Tonnage.
1 Grain Certificate.
1 Light Certificate.
1 Port Dues Certificate.
1 Passenger List.
1 Landing Card for each Passenger.
Ship's Certificate of Registry.
Mercantile Marine Office Certificate – for British ships only.
Load-line Certificate.
Safety Equipment and Safety Construction Certificate.
Lloyd's Certificate.
Derat Certificate.
Ship's Register.
Light Bills.
Safety Radio Certificate.

In addition, Manifests and Bills of Lading are usually sent to Agent direct from loading port.

PILOTAGE: Compulsory, with usual regular Home Trade and other small exemptions. In addition to 48 hours' notice to local Agent, advise Nab or Needles Pilot as appropriate, ETA 48 hours and again 2 to 3 hours immediately prior to arrival. The Nab and Needles stations are maintained by fast launches under the control of the Duty Pilot at The Pilot Station, Berth 37, Southampton Docks. Duty Pilot keeps a continuous watch on VHF Channel 16; call sign Nabpilot or Needlespilot as appropriate. Working frequency; Channel 9 only, but can listen on Channels 6, 12 and 14. No medium frequency: M/F and R/T messages via Nitonradio. Duty Pilot's telephone numbers: Southampton 32345 and 32346.

The launches only put to sea when required. *Failure to send an accurate ETA 2 to 3 hours before arrival could cause delay to the offending vessel.*

The Nab and Needles stations also provide Pilots for vessels bound for Portsmouth, Cowes or other small ports within the Trinity House Southampton and Isle of Wight Pilotage District.

Strict compliance with the requirements of the Merchant Shipping (Pilot Ladders) Safety Rules is requested by the Pilots, who may refuse to board vessels with unsatisfactory and dangerous ladders. Manropes are not required. Ladders should reach to approximately 3 ft. from the water, each rung resting firmly against the ship's side; and a good lee provided whilst making approximately 5 to 7 knots headway.

Eastern Approaches or Nab Tower. The station is maintained by 40 ft. fast launches, black hulls, white wheelhouses, showing international signals. VHF Channels 6, 9, 12 and 16. Vessels under 40 ft. draft are normally boarded between the "New Grounds" and "Dean Tail" light buoys, approximately 2 miles N.N.W. of Nab Tower, although in bad weather, boarding at the "Warner" buoy or St. Helen's Roads might be advised by the Duty Pilot. Launches operate from Ryde Pier or from Portsmouth Harbour.

Vessels over 35 ft. draft are restricted by tide for time of entry, and will be advised by the Duty Pilot. Vessels of 40 ft. draft and over use the Nab Channel and a message advising Tanker Master of transit times will be sent by "Essoship Fawley" and confirmed prior to arrival by Duty Pilot by VHF.

The Nab Channel has a limiting depth of 39.7 ft. (although 43 ft. can be carried to West of centre line (1976)) below Chart Datum (April 1976). Pilot will board all vessels of 40 ft. draft and over in a position 2 to 3 miles South of the Nab Tower. Masters of such vessels are strongly recommended not to approach closer than 2 miles to the Nab Tower without a Pilot, owing to strong tidal streams. It is advisable for a deep-drafted ship to anchor 3 miles South of the Nab Tower if waiting for the tide. Advice will always be given on request to the Duty Pilot by VHF.

Pilot *will not* board vessels under 40 ft. draft outside the defined pilotage district unless specifically requested by the Master to do so. The additional "Out of District" charge for boarding beyond the normal limits will be debited to Owners.

Western Approach – Needles: Vessels drawing more than 31 ft. are advised to enter via the Nab. Masters are strongly urged not to proceed beyond the Fairway Buoy without a Pilot, especially on the flood tide. Safe anchorage in vicinity of "Fairway" Buoy.

Station maintained by 40 ft. fast launch, black hull and white wheelhouse, showing international signals. Launch operates from Yarmouth Harbour or Lymington. Needles pilot launch is fitted with VHF Channels 6, 9, 12 and 16. No medium frequency.

When it is considered that the weather is deteriorating to the extent that the boarding and landing of Pilots could in the near future become dangerous, a message will be sent to all ships through Nitonradio, as follows:

> "Needles Pilot operating bad weather routine. Vessels should ascertain at least 3 hours before their ETA Needles whether a Pilot will be available. This information can be obtained either through Niton Radio or direct from Needles Pilot on VHF".

If it is not safe to ship or land the Pilot at the Needles, Masters will be advised to proceed to the Nab.

In poor visibility a vessel requiring Pilot at either Nab or Needles uses a distinguishing signal of "G" to which the pilot launch will reply with "H".

Also see "Notices".

GENERAL NAVIGATION: A Duty Operations Officer, responsible to the Dock and Harbour Master Southampton maintains a continuous watch in the Port Signal and Radar Station (Berth 37): call sign "Southampton Port Radio". He is to be informed prior to any movement to, from or within the port area and will give information on the movement of other vessels.

Harbour Radar Information and guidance will be given on request. The Radar reference line shown on the Admiralty Charts is superimposed on the Harbour Radar displays.

Particular attention should be paid by Masters to the designated "Reporting Points" marked on the Admiralty Charts. Reports should be made on VHF to Southampton Port Radio, to enable the proper identification and co-ordination of the ship movement, to be made to the benefit of all mariners navigating within the Solent area. This applies equally to naval and to non-compulsory vessels.

The following VHF Channels are operated within the port.

Southampton Port Radio: Channels 16, 14, 12, 18, 20 and 22.

Harbour Patrol Launch (Call sign Southampton Patrol) Channels 16, 14, 12, 10, 8 and 6.

Nab and Needles Pilot Launches: Channels 16, 14, 12, 9, 6 and 0.

Nab and Needles Pilot Stations: Channels 16 and 9. (Duty Pilot).

Southampton Pilot Launch (call sign Southampton Pilot) Channels 16, 14, 12, 9, 6 and 19.

Southampton Pilot Station (call sign Southampton Pilot) Channels 16 and 9 (Duty Pilot).

Tugs: When berthing vessels: Channels 71 or 74.

Esso Petroleum Terminal, Fawley: Channels 16, 14 and 19.

B.P. Oil Ltd., Hamble. Channels 16, 14, 19, 42, 44 and 46.

A patrol launch (Harbour Master flag by day, all-round blue light by night) is controlled by the Duty Operations Officer Southampton for pollution detection and keeping channels clear of pleasure craft for the passage of large vessels.

Vessels *(a)* drawing more than 10.5 m. *(b)* more than 288 m. in length *(c)* of more than 100,000 d.w.t. and *(d)* LPG vessels exhibit a large black cylinder by day and 3 vertical red lights by night. Vessels showing these signals are not to be passed or overtaken within channel limits between the "West Bramble" and "Hook" light buoys, these vessels are considered to be constrained by their draft or restricted in their ability to manoeuvre and may not be able to comply with the Collision Regulations at other times. Will indicate inability by 5 short blasts on the whistle. "Clear channel" control is exercised by the Duty Operations Officer at Port Signal and Radar Station, Berth 37, Southampton Docks. The Thorn Channel has a limiting depth of 12.6 m. (April 1976) at low water datum.

Up to 7 vessels other than LPG vessels (only 3 LPG) of under 91.4 m. in length are permitted with prior permission to anchor out of the channel to the East of the "Hook" Buoy in the designated Small Ships Anchorage, the limits of which must be strictly observed. Three numbered anchorages are available in an emergency for vessels not exceeding 168 m. in length in Fawley Reach, where vessels must moor to 2 anchors. Permission to anchor including within the small ships and numbered anchorages must be obtained from the Duty Operations Officer, Southampton Port Radio.

Also see "Notices".

APPROACHES:

(a) Prolonged high barometric pressure or strong N.E./N.W. winds may reduce predicted tide levels by 0.45 m. – 0.6 m.

(b) Deep drafted vessels enter via the Nab dredged channel. The tidal currents set at almost 90° to this channel, and, as it is marked by buoys on one side only, care must be taken to keep within the confines of the channel. At its Northern end the channel swings about 45° to the West but it is not marked on either side. Care must be taken by deep draft vessels not to cut the corner too finely when making up to pass between Nab End and Dean Tail buoys.

(c) When passing Portsmouth, ships should be prepared to encounter crossing traffic bound to and from that port.

(d) The most difficult part of the navigation between Nab and Fawley is that between Prince Consort buoy, Cowes Roads, Black Jack buoy and Calshot, particularly for VLCCs on maximum draft which have to take a wide sweep down to East Gurnard buoy before making a 145° starboard turn into Western approach channel which narrows to 305 m. Tidal currents in this area are somewhat uncertain but can reach up to 3.5 knots on a Spring ebb tide and 2.5 knots on a Spring flood tide. In Summertime many yachts and other small pleasure craft are encountered. The closest contact should be maintained with Southampton Port Radio and ships should ensure that the best possible helmsman is at the wheel and that engine responses are prompt and accurate.

(e) VLCCs are not to enter the Thorn Channel on a flood tide when the wind is between West and S.W. and in excess of 30 knots. The Pilot will board VLCCs with the latest weather report and will advise Masters accordingly.

(f) It is also important, before the VLCC enters Thorn Channel, that Southampton Port Radio is contacted to confirm that no ship which, by virtue of its size or draft, could interfere with the safe navigation and manoeuvring of the VLCC, will be allowed to enter the main channel between Cadland and Prince Consort buoys after the VLCC has entered this channel.

MAX. SIZE: The largest passenger and container vessels call regularly at Southampton. Tankers: Fawley can accept partly loaded VLCCs up to 14.9 m. draft.

HEALTH: See "Health-All Ports" before first UK Port.

TUGS: 2 tugs are permanently stationed at Fawley; if more than 2 tugs are required it should be noted that week-end requirements have to be advised to the tug operators not later than 1530 hrs. on Friday of each week.

If a vessel required more than 2 tugs and is due to arrive at Fawley between 0001 hrs. Saturday and 0900 hrs. Monday, ETAs must be submitted well in advance of 1530 hrs. on the Friday prior to arrival. It is usual to use the wires provided by the tugs for towing.

BERTHING: The Pilot boarding the ship at the Sea Station or anchorage will also berth the ship. Non-compulsory vessels can obtain or disembark a Pilot in the vicinity of the "N.W. Netley" or "Hook" buoys by contacting "Southampton Pilot" on VHF.

Other berths are available. Lesser draft berths not shown. The depths of water are maintained as far as practicable, but are subject to variation and are not guaranteed.

* To find the depth of water in the berths add the tidal rise to the depths shown in the above table.

† Chart datum is approximately the lowest low water level.

BULK HANDLING FACILITIES: Grain handling at Berths No. 36, 47, 101, 102 and 109.

Berth 36: Southampton Grain Silo: 8×1,600 tonnes capacity cells and 4 cells with total capacity 15,000 tonnes.

Receiving rate by truck 500 t.p.h. 1×1,000 t.p.h. shiploader available with travel of 135 m. (443 ft.).

Berth 47: Continental Grain: 16×1,000 tonnes silos. 1×1,000 t.p.h. shiploader with travel of 220 m. (720 ft.).

Western Docks: 1×32,500 tonne grain silo.

Ro/Ro facilities at Berths No. 105 and 201 – 202.

Scrap metals handled at berths No. 43 and 44 by 4×10 ton cranes with grabs.

TANKERS: Esso Marine Terminal, Fawley.

Cautionary Advice: All ships berth at Fawley stemming the tide, i.e. starboard side to berth on flood tides, port side to berth on ebb tides. Because of the "double high water" feature of the port the ebb tide is of short duration 3.75 hours, compared with 9.0 hours of flood over each tidal period. Therefore, most ships swing before berthing and berth starboard side to.

For VLCCs there is a turning width of about 1.5 ship's lengths off Berth No. 5 which is the Pilots' preferred swinging position. Because of these tight turning conditions it is VERY IMPORTANT that:

(a) The ship is in the correct position in relation to the channel before commencing to swing. For this the Pilot uses the 326°–327° leading lights shown on the chart.

(b) THE SHIP MUST BE STOPPED OVER THE GROUND BEFORE COMMENCING TO SWING. For several reasons the Pilots prefer to swing to port, i.e. to the West and towards the jetty and a serious accident has occurred because a VLCC was not stopped over the ground whilst swinging and collided with the jetty,.

In order to protect both ship and jetty, equipment to positively indicate to the ship that it is stopped over the ground is being provided on the jetty. Until this is installed VLCCs MAY BERTH PORT SIDE TO ONLY, i.e. without swinging before berthing. The doppler speed of approach equipment provided on the jetty is not effective in measuring the ship's speed parallel to the berth after it has passed a point about 500 m. South of Berth No. 5 and is therefore of no value in determining if the ship is stopped over the ground when off the berth. Ship's doppler logs are sometimes unreliable when a ship is manoeuvring with low bottom clearance and with the assistance of tugs.

Procedures: On closing the berth, either after swinging or when berthing port side to, advice as to the bodily speed of approach will be provided for all VLCCs using Berth No. 5 over UHV pocketfone, one of which is also issued to the Pilot acting as communications officer. This information is also displayed on a visual digital read out with 100 m. range in normal visibility for the direct use of the pilot. The MAXIMUM IMPACT VELOCITY SHOULD NOT EXCEED 8 cm./sec. (15 ft./min.) normal to the jetty faceline.

The doppler speed of approach equipment can also be used to provide accurate speed along the channel axis information up to a point when ship is about 500 m. South of Berth No. 5.

Prior to arrival off the berth, mooring lines should be lowered to 1 m. above the water and the winches of the first ropes on the mooring plan provided by the Pilot to be in gear ready to pay out the moorings to the rope running launches. Prevailing winds are off berth and the emphasis is on the use of springs and breast lines. The number used will depend on the size of the ship, condition of mooring lines and positions of fairleads, but generally minimum requirements are 2 spring lines and 4 breast lines of wire at each end. Additional head and stern lines may be required. Mooring plans are taken on board VLCC's by the Pilot. These must be closely followed.

Backsprings are always first lines ashore.

Tugs on hooks usually let go and push up on offside during the mooring operation.

Approach: Terminal is approached by either the Nab or the Needles. The Nab with a dredged channel of 43 ft. below chart datum admits the larger vessel. Double HW with an average tidal range of 13.25 ft. (Springs) and 7.75 ft. (Neaps). Rate of Spring tide 2 knots, Neap tide 1 knot.

Anchoring in the fairway adjacent to the terminal requires permission from Southampton Harbour Authorities. Approval will only be given to vessels of 300 ft. or under. Usual practice is not to moor with both anchors. This applies to Controlled Anchorage only. Depth of 41 ft. LW is available. Anchorages in the Solent and Cowes Roads are more generally used. Good holding ground with depth of 50 ft. LW.

Accommodation: Terminal has 2 approach trestles, 1,900 ft. long leading seaward to the main pierhead trestle with its 9 berths. This trestle is 4,575 ft. long and lies parallel with the channel. 5 main ocean berths are on the seaward side and the 4 coastal berths on the landward side. Dimensions of the berths are as follows:

Berth	Length of 'T' Head	Distance between centres
No. 1	222 ft.	800 ft.
No. 2	222 ft.	800 ft.
No. 3	222 ft.	800 ft.
No. 4	222 ft.	800 ft.
No. 5	300 ft.	1,000 ft.
No. 6	80 ft.	395 ft.
No. 7	80 ft.	400 ft.
No. 8	80 ft.	400 ft.
No. 9	100 ft.	440 ft.

Equipment: Suitable cargo hose handling equipment is positioned at each of the 9 berths. To facilitate the handling of mooring lines, air powered hoists are available at each of the berths. Mooring boats are in attendance for running lines. VLCCs are required to meet minimum standards with regard to their mooring equipment. All water ballast containing oil or likely to contain oil must be pumped ashore. 2×67,000 barrel ballast tanks are provided on shore. With the approval of the Terminal Manager minor repairs can be undertaken whilst discharging/loading at the Terminal. Major repairs can be undertaken at anchor or at Southampton Docks. Working is continuous throughout. Facilities installed at the berths and available for use by tankers include fresh water, bunkers, steam, compressed air, nitrogen. Ship's stores of all kinds are available in any quantity at Southampton. All deliveries of stores must be made by water transport. For quarantine purposes vessels are either boarded prior to berthing or immediately after berthing. Two firefighting tugs of 2,530 h.p. are permanently stationed at the Marine Terminal. Additional tugs can be provided on notice from Southampton.* All tugs are equipped with Radio Telephone and operate on Channels 8 or 10 of the Port Operations Service. Provision of shore steam is made in exceptional circumstances.

*A standby charge is levied on vessels over 16,000 d.w.t.

Pilotage: Compulsory. Inward-bound vessels embark Pilots at the Nab or Needles entrances. Tankers up to 250,000 d.w.t. berthed at any time during the day or night subject to tidal conditions.

Berthing:

1. Cautionary Advice:

Prevailing strongest winds are off berth and a considerable number of large container ships, passenger ships and ferries pass the terminal at close quarters. Drift-offs and excessive surging have been experienced at Fawley berths and have caused damage. It is therefore very important that ships, particularly deep draft or high freeboard ships, pay particular attention to moorings.

2. Mooring Requirements and Procedures:

In the case of VLCC's minimum mooring rerquirements are laid down. These preclude mixed moorings except under special circumstances agreed prior to acceptance of the ship.

Moorings reeled on winches must be held by brakes hardened up to full torque. Self-tensioning devices are not allowed. The moorings must be reeled in such a direction as to assist the brake, not oppose it. Where split drum winches are used, a maximum of two layers should be on the working drum when the mooring reaches the shore bollards or mooring hooks. Brakes must be in good condition and certificate of brake holding power should be available.

VLCCs should strictly adhere to requested order of running. This is done by motor launches.

There are limits applicable to freeboard both from a windage point of view and also because of the upper reach limit of the hard arms. These together with maximum operable wind speed will be discussed with Masters of VLCCs by a terminal supervisor shortly after the ship berths. Special attention must be paid to ballasting of permanent ballast spaces and use of over-deck systems into emptied cargo tanks during cargo discharge and, if necessary, and with the agreement of terminal supervision, into emptied cargo tanks using the cargo system, in order to keep the freeboard within reasonable limits.

The ship must be held firmly against the fenders at all times. It is unnecessary and dangerous to slack away lines, even if they appear taut, if the ship is not against fenders.

Rules for Berth Planning: The following limitations are now in force when planning berth movements.

1. Berth size restrictions:

Berth No. 1: Max. size of vessel 50,000 tonnes displacement.
Berth No. 2: Max. size of vessel 82,000 tonnes displacement.
Berth No. 3: Max. size of vessel 65,000 tonnes displacement.
Berth No. 4: Max. size of vessel 176,000 tonnes displacement.
Berth No. 5: Max. size of vessel 240,000 tonnes displacement.
Berth No. 6: Max. size of vessel 3,500 tonnes displacement.
Berth No. 7: Max. size of vessel 3,500 tonnes displacement.
Berth No. 8: Max. size of vessel 3,500 tonnes displacement.
Berth No. 9: Max. size of vessel 8,000 tonnes displacement.

2. Vessels on Berth 6 must not exceed 330 ft. (100.5 m.) in length.

3. Distance between vessels secured on any berths must be 100 ft. (30.48 m.) or more. (This is required under local by-laws for fire regulations.)

4. Distance allowed for berthing vessels must not be less than vessel's length +⅖ length. (Agreement with Pilots).

5. Maximum draft of vessels:

Berth No. 1	33 ft. 03 in.	(10.2 m.)
Berth No. 2	41 ft. 00 in.	(12.6 m.)
Berth No. 3	41 ft. 00 in.	(12.6 m.)
Berth No. 4	49 ft. 00 in.	(14.9 m.)
Berth No. 5	49 ft. 00 in.	(14.9 m.)
Berth No. 6	18 ft. 06 in.	(5.6 m.)
Berth No. 7	18 ft. 06 in.	(5.6 m.)
Berth No. 8	18 ft. 06 in.	(5.6 m.)
Berth No. 9	21 ft. 08 in.	(6.6 m.)

These drafts are subject to change and are therefore updated quarterly.

6. Tide charts are to be prepared for Nab and Thorn Channels for vessels over 40 ft. (12.19 m.) draft.

7. Check product can be loaded on nominated berth.

8. Check product or ullage availability before berthing vessel.

9. Check that maintenance will not interfere with operation of berth.

10. No vessels to berth on Ocean Berths with mean wind speed above 30 knots from N.W. through to S.W. to S.E.

11. No vessels to berth on Coaster Berths with mean wind speed above 30 knots from N.W. through to S.W. to S.E.

12. Ensure liaison maintained with S.P.R. regarding sailings coinciding with movement of vessels over 70 knots (hovercraft).

Fawley Coastal Berth Manoeuvring Requirements: Fawley coastal berths comprise Berths 6, 7, 8 and 9 and are situated on the inside (Western Side) of the Marine Terminal complex.

Before any manoeuvring is undertaken on these Berths the following requirements are to be followed:

1. Marine Controllers are to be informed of vessel manoeuvring plan.

2. Vessels without bow thruster capability should berth stemming the tide.

3. All vessels over 61 m. (200 ft.) LOA must have the assistance of the Esso mooring boat when:

(a) berthing.
(b) sailing if berthed starboard side to.

4. Vessels over 85 m. (279 ft.) in length will not normally swing West of a line between Fawley buoy and the S.E. of Fawley Jetty. Exceptions may be made only *after* consultation between Terminal and the Pilot or Master of the vessel. Due account must be made of wind, tide, weather and time. Only then will vessels be permitted to swing West of that line referred to above.

5. Vessels over 85 m. (279 ft.) LOA without bow thruster capabilities must have in attendance when berthing port side to or sailing after being starboard side to:

(a) Esso mooring boat, *and one tug.*

Such vessels when berthing starboard side to or sailing after being port side to must have in attendance:

(a) Esso mooring boat.

They may also be required to have a tug if prevailing conditions require it.

6. Vessels of 91.5 m. (300 ft.) LOA or more when berthing at Nos. 6, 7 or 8 to have at least one adjacent berth vacant during the berthing movement.

7. No vessel to berth when wind is from South to West with mean wind speed above 30 knots, i.e. within S.W. quadrant.

8. The Esso mooring boat will be made available on request to assist with any vessel not covered in these instructions. Its communication Channel is 71 (74 in an emergency). These boats must not be used for towing.

B.P. Terminal, Hamble. Situated immediately opposite Fawley; has two main berths on the outside faces and a small coastal berth (No. 3) on the inner face of No. 2 berth. Berth No. 1 is the Northerly berth, and is used for larger vessels (presently under reconstruction), having a depth of 31 ft. 6 in. below PLWD alongside and in the approaches. The berth face is 250 ft. long, so head or stern moorings are taken to 2 mooring buoys at the N.W. end of No. 1 berth. They are hook buoys; no lashings or mooring shackles are needed. No. 2 berth is similar in dimensions to No. 1 berth, the distance between centres being 530 ft. No. 3 berth is 250 ft. long, with 16 ft. 6 in. alongside at PLWD and 13 ft. in the approaches.

Facilities and services as for Fawley with the exception of transport, no transport being available within the depot. Ship's personnel are allowed to walk through the installation to Hamble Village where public transport to Southampton is frequent.

All grades of fuel and diesel bunkers and fresh water available on all berths.

Also see "Notices".

BUNKERS AND WATER: All grades of fuel oil and diesel oil are available and water is piped on all berths. Bunkers and stores can also be obtained by barge in Cowes Roads anchorage, but water is not readily obtainable there.

REPAIRS/DRY DOCKS: All ship repairs can be effected. Largest dry-dock is 1,141 ft. long overall, 132.5 ft. wide and has 34 ft. over the blocks. One other dry dock maintained within the Port by Vosper Ship Repairers Ltd.

SURVEYORS: Lloyd's Register. Tel: 220353.
Salvage Association, Tel: 227983.
Topmarine, Tel: 220585.
Murray Fenton & Associates, Tel: 229787.
International Shipping Trustees (UK) Ltd. Tel: 37596.

OIL POLLUTION: Southampton Water is an international yachting centre and has many holiday beaches on its shores. Consequently, oil pollution is treated very severely and heavy fines are imposed on offenders.

The Esso Refinery operates a clean-up service, the full economic cost of which is billed to the offending ship.

CRANES:

Type	*No.*	*Capacity in tonnes*
Container cranes	5	Up to 35
Quayside cranes	27	Up to 10
Floating crane	1	200

MEDICAL: Doctors and hospital facilities available. Agent should be advised in advance of any medical attention required.

An organisation exists for hospitalisation of sick seamen from vessels off Cowes, Isle of Wight. Arrange through Nitonradio, Nab, Needles or Southampton Pilot or through vessel's Agent. Minimum delay to vessel.

CUSTOMS ALLOWANCES: By statute, crews of vessels in port are allowed 25 cigarettes per day per man. 0.3 litres (0.5 pint) of spirits and 1 bottle of table wine per day per man.

TIME: British Standard Time is GMT plus 1 hour, reverting to GMT in Winter months.

AIRPORT: Eastleigh Airport. Air U.K. have flights to Amsterdam, Guernsey and Jersey.

HOLIDAYS: Good Friday (variable date); Easter Monday (variable date); May Day; Spring Bank Holiday (variable date); Autumn Bank Holiday (variable date); Christmas Day (25th December); Boxing Day (26th December); New Year's Day (1st January).

POLICE/AMBULANCE/FIRE: Dial 999 from any telephone and ask for service required.

SHIP SUPPLY SERVICE: Williams Shipping Company (Fawley) Limited, Clyde Buildings, Town Quay, Southampton SO1 1LX. Tel: (0703) 225271. Telex: 47436.

Services Supplied: Fast launches for personnel ship to shore, essential small packages and/or sick crew members.

D.O.T. approved to operate; not more than 6 passengers, area Swansea to Selsey, not more than 5 miles offshore.

Motorised barges for all types of supplies, deck and engine, and stores. Also, vessel with U.K. loadline that can meet vessels passing in the English Channel with essential stores.

Mainly used for storing vessels in Oil Terminals, Cowes Roads and Motherbank.

Also see "Cowes".

NOTICES: *Notice to Mariners No. 14 of 1986.*

The Dockyard Port of Portsmouth,
The Port of Southampton
and the Isle of Wight Pilotage District

Movement of Gas Tankers in the Solent

1. Notice is hereby given that these directions have been jointly promulgated by the Queen's Harbour Master Portsmouth and the Dock and Harbour Master Southampton, in agreement with the Isle of Wight Pilotage Service, to ensure the safe navigation of gas tankers within the Isle of Wight Pilotage District.

2. This Notice applies to all gas tankers loaded or partly loaded and gas tankers which have not been rendered gas free.

3. Gas tankers in transit within the Isle of Wight Pilotage District may not enter an area in which the visibility is less than 0.5 miles.

4. Before navigating within the area between the North Sturbridge Buoy and the Warner Buoy, all gas tankers must establish communications with the Queen's Harbour Master Portsmouth on VHF R/T Channel 11 to advise of their transit and to ascertain movements into and out of Portsmouth Harbour.

5. Gas tankers when navigating between Hook Buoy and West Bramble Buoy in the Western Approach Channel shall be given the sole occupancy of that channel.

6. Gas tankers when navigating between East Bramble Buoy and Calshot Buoy in the North Channel shall be given the sole occupancy of that channel.

7. No vessel may anchor closer to a gas tanker than twice their combined lengths.

8. At no time will more than 3 gas tankers be permitted to anchor within the designated Small Ships Anchorage in Southampton Water.

9. No gas tanker exceeding either 8,000 cu.m. total capacity or 6,000 g.r.t. will be permitted to enter or leave the Port of Southampton via the West Solent.

Signed: Dock and Harbour Master.

Notice to Mariners No. 15 of 1986.

The Merchant Shipping (Tankers)
(EEC Requirements) Regulations 1981
Isle of Wight Pilotage District

1. Notice is hereby given that the Merchant Shipping (Tankers) (EEC Requirements) Regulations 1981 (SI 1981 No. 1077) came into operation on Thursday, 15th October, 1981.

2. Application.

These Regulations apply to all tankers of 1,600 g.r.t. or over which:

(a) are carrying a cargo of chemicals, gas or oil in bulk; or

(b) having previously carried such a cargo, have discharged that cargo, but whose tanks are not free of vapours given off by residues of such cargo, and have an atmosphere which has not been rendered non-flammable.

The Regulations do not apply to any ship belonging to Her Majesty or owned or operated by any State and used, for the time being, only on the non-commercial service of that State.

3. Reporting.

The Master of a tanker to which these Regulations apply shall at least 24 hours in advance of entering the Isle of Wight Pilotage District notify the Dock and Harbour Master Southampton the following information by telegram or telex using one of the following modes:

Telegraphic Address: Dock and Harbour Master Southampton
Telex Number: 477161 – Dhmspr G
VHF Radio: Southampton Port Radio
Call Sign SPR, Channel 12, 14.
Telephone Number: 0703 – 223844 extn: 2440

(a) the name and call sign of tanker;

(b) the country in which the tanker is registered;

(c) the overall length, draft and beam of the tanker;

(d) the harbour where the Master intends first to berth the tanker;

(e) unless the Master does not propose to berth the tanker at the harbour which is being entered, the ETA at the pilot station or harbour limits of the harbour where the Master intends first to berth the tanker;

(f) the nature and quantity of any chemicals, gas or oil carried by the tanker;

(g) whether the tanker is fitted with an inert gas system;

(h) whether the inert gas system, if fitted, is fully operational;

(i) whether the cargo tanks have an atmosphere which has been rendered non-flammable.

(j) whether or not a certificate has been issued in respect of the tanker;

- (i) if its cargo includes chemicals, that it complies with the IMO Code for Ships carrying Dangerous Chemicals; and
- (ii) if its cargo includes gas, that it complies with the IMO Code for Existing Ships carrying Liquefied Gases or with the IMO Code for Ships carrying Liquefied Gases;

(k) any defect in the hull, machinery or equipment of the tanker, which may:

- (i) affect materially the safe manoeuvrability of the tanker; or
- (ii) affect materially the safety of other vessels in or in the vicinity of or in the approaches to the harbour; or
- (iii) constitute a hazard to the marine environment; or
- (iv) constitute a hazard to the persons or property on land or in the vicinity of the harbour.

4. The Master of a tanker to which the Regulations apply shall in advance of entering the Isle of Wight Pilotage District forthwith notify the Dock and Harbour Master Southampton of any change in the information notifiable under item 3 (k) above which occurs after such information was notified to the Dock and Harbour Master Southampton.

5. While a tanker to which these Regulations apply is within the Port of Southampton or the Dockyard Port of Portsmouth, the Master of that tanker shall notify the Dock and Harbour Master Southampton or through him the Queen's Harbour Master Portsmouth of any change which occurs in the information where appropriate notifiable under items 3 (k) and 4 above.

6. Check List.

The Master of a tanker to which these Regulations apply shall make available a check list in the form set out in the Schedule contained in the Regulations and completed in respect of the tanker to the Dock and Harbour Master Southampton or the Queen's Harbour Master Portsmouth if they so request.

7. Isle of Wight Pilotage District.

The Isle of Wight Pilotage District comprises that part of the sea with all harbours, docks and tidal waters within an imaginary line drawn from a point 1 mile true South from LW mark of ordinary Spring tides at Selsey Bill to a position in Lat. 50° 40′ N., Long. 00° 57′ W., thence to a point 1 nautical mile true South from LW mark of ordinary Spring tides at Whitehorse Culver Cliff in the Isle of Wight thence to a point 1 nautical mile true South from St. Catherine's Point and thence direct to Peverell Point but excluding any docks belonging to the Admiralty and any part of this area which lies within the Poole Pilotage District.

8. Authentication.

This Notice where applicable within the Port of Southampton is the direction of the Dock and Harbour Master as authorised pursuant to Section 52 of the Harbours, Docks and Piers Clauses Act 1847 and the Southampton Harbour Act 1939. The Port of Southampton is as defined in the Southampton Harbour Act 1887 as amended by the River Hamble Revision Order 1969 and extended by the British Transport Docks Act 1972. (The limits of the Port of Southampton are as shown on Admiralty Charts).

9. This Notice where applicable within the Dockyard Port of Portsmouth is the direction of the Queen's Harbour Master as authorised pursuant to the Dockyard Ports Regulation Act 1865, and the Dockyard Port of Portsmouth Order 1978. (The limits of the Dockyard Port of Portsmouth are as shown on Admiralty Charts).

10. These Directions have been jointly promulgated by the Queen's Harbour Master Portsmouth and the Dock and Harbour Master Southampton.

Signed: Dock and Harbour Master.

Notice to Mariners No. 17 of 1986.

Port Operations, VHF Communications
and Radar Information

1. Notice is hereby given that the following Port Operations, VHF R/T communications and radar information procedures are effective in the Port of Southampton and its approaches.

2. There is no alternation to the availability of the existing services including the provision of Harbour Radar Information. Messages on Port Operations Channels must be restricted to the movement and safety of ships and the safety of life.

3. Marine Incidents and Accidents.

A vessel involved in a marine incident or accident must immediately report this to Southampton Port Radio and state whether or not assistance is required.

4. The Solent and Southampton Water Marine Emergency Plan.

This plan has been prepared to deal with any serious marine accident occuring in the Solent or in the Ports of Portsmouth or Southampton and is intended to ensure that adequate Service and Civilian resources are made available to deal with any emergency.

5. VHF R/T Communications.

(a) The Port Signal and Radar Station Southampton, call sign SPR, maintains a continuous watch on Channels 16, 14, 12, 18, 20 and 22 and monitors Channels 71 and 74.

(b) The Queen's Harbour Master Portsmouth, call sign QHM, maintains a continuous watch on Channels 11, 13 and 73.

(c) Vessels should maintain a continuous watch on VHF R/T Channel 12 or 14 and report to SPR as appropriate when passing the designated reporting points, and, in addition, if embarking a Pilot, when the Pilot has boarded.

(See "Appendix".)

6. Co-Ordination of Shipping Movements.

(a) The Duty Operations Officer responsible to the Dock and Harbour Master, Southampton maintains a continuous watch in the Port Signal and Radar Station. Tel: 0703 – 223844, extn: 2440.

(b) The movement of vessels and the general situation in the Port and its approaches is monitored continuously at Southampton Port Signal and Radar Station whence information will be passed to Masters and Pilots. The full exchange of information is essential to efficient operations and the need to maintain R/T communications with SPR cannot be over-emphasised.

(c) In co-ordinating the movement of vessels it may be necessary for the Duty Operations Officer to require certain vessels to remain alongside or at anchor, or to regulate their time of entry into the Port, their departure or progress.

7. Movement Reporting Procedure.

(a) All vessels in excess of 20 m. length, bound to or from or passing through the Port of Southampton, vessels bound to or from Portsmouth or passing through the Dockyard Port of Portsmouth and vessels bound to or from anchorages or other locations in the Solent are required to communicate by VHF R/T with SPR.

(b) Inward bound vessels should establish contact when approaching Nab or Needles.

(c) Vessels outward bound from the Port of Southampton should establish contact at least 15 minutes prior to leaving the berth.

(d) Vessels clearing Portsmouth Harbour should establish contact when passing Southsea War Memorial.

(e) Vessels leaving an anchorage either inward or outward bound should first establish contact at least 15 minutes before getting underway.

(f) Vessels bound to or from Portsmouth Harbour are also required to report to QHM. See Dockyard Port of Portsmouth Local Notices to Mariners.

APPENDIX:

VHF R/T COMMUNICATIONS SCHEDULE

Station	Channel No.	Frequency MHz	Details	
Southampton Port Signal and Radar Station	16	156.80	Calling, Safety and Distress	Continuous Watch
	10	156.50	Department of Transport	Marine Pollution Control
	12	156.60	Port Operations	Calling and Working
Call Sign SPR	14	156.70	All vessels are required to establish R/T Contact with SPR on one of these Channels when approaching the NAB or NEEDLES inward, when passing SOUTHSEA WAR MEMORIAL outward from PORTSMOUTH and at least 15 minutes before leaving a berth or anchorage.

	19	156.95 161.55	Working Channel	Non-continuous Watch

8. Movement Reporting Points.

(a) Vessels bound to or from the Ports of Southampton and Portsmouth, or other destination in the Solent or passing through the Solent are required to report by VHF R/T when passing Movement Reporting Points indicated on Admiralty Charts.

(b) The initial report by all inward bound vessels should include:

1. Ship's Name or IRCS.
2. Deepest draft.
3. Destination and Last Port of Call.
4. ETAs at various locations as requested.
5. Deficiencies of ship, navigation equipment, machinery and cargo.
6. Tankers in addition should report any change in the information notifiable under the Merchant Shipping (Tankers) (EEC Requirements) Regulations 1981 and confirm that a check list has been completed.

(c) The initial report by outward bound vessels from the Port of Southampton should include:

1. Ship's name or IRCS.
2. ETD.
3. Deepest draft.
4. Other information requested.
5. Where applicable, tug working Channel to be used.
6. ETAs at various locations as requested.
7. Next Port of Call.

(d) The initial report by vessels from anchorages and other locations in the Solent should follow the procedure for inward or outward bound vessels as appropriate.

9. Harbour Patrol.

The Operations Officer is assisted by a Patrol Officer who maintains a continuous harbour patrol. To assist Mariners in identifying the Harbour Patrol Launch at night, a blue all round light is exhibited at the mast head. The Harbour Patrol is fitted with VHF R/T call sign SP.

10. Height of Tide.

Automatic tide gauges are located at Calshot, Dock Head and Prince Charles Container Port. Tidal information is available on request and is recorded.

11. Wind Speed and Direction.

Wind speed and direction information is available on request and is recorded.

12. Harbour Radar.

(a) Remote controlled radar Stations are situated at Calshot Spit and Hythe and depicted on Admiralty Charts. Each station is fitted with a 25 ft. horizontal aperture scanner 110 ft. above MHWS searching over a 0.3° horizontal and 4° vertical beam width rotating at 20 rpm in winds up to 80 knots.

(b) Vessels can be supplied with continuous information relating to their progress, approach to navigation marks and other vessels, transits and turning marks, channel margins and the manner in which the vessel is progressing round the West Bramble and Calshot turns. Manoeuvring instructions, however, will not be given unless specifically requested by the Master or Pilot.

(c) Computer Assisted Measurement System.

This system employs a small digital computer and a variable marker which can be placed over any target on the display to provide the following information:

1. The bearing and distance between the scanner and a selected target.
2. The bearing and distance between any two targets.
3. The course made good by a selected target.

Facilities are available to store up to 24 targets such as Navigation Buoys, vessels at anchor, etc. The bearing and distance from any selected target to any one of the stored targets can be quickly obtained and the closest point of approach determined.

(d) Accuracy of Bearing and Distance Measurement.

Bearing accuracy from point A to point B is to 0.5° and distances are to 25 m. or to 0.3% of the most distant echo from the scanner, whichever is the greater.

(e) Radar Reference Line.

An alternative position fixing system indicates the position of a vessel relative to a Reference Line electronically produced as points 1 cable apart on the radar display linked to the Calshot Radar only. The Radar Reference Line is shown on the Admiralty Charts of the area as a broken line with points at 1 cable and circles where the line changes direction.

A vessel underway will, upon request, be given her position using the distance between the points of the Reference Line as a scale to estimate the position:

1. As a distance RIGHT or LEFT of the Reference Line relative to her direction of progress.
2. As a distance along the Reference Line to a navigational mark or marks in transit.

The position of another vessel will be given:

3. As a distance from the Reference Line ON THE SAME SIDE or ON THE OTHER SIDE.
4. As a distance along the Reference Line.

Note: In areas where a Reference Line is not shown progress will be indicated relative to navigational marks and other vessels.

(f) Bearings and Distances.

Bearings and distances will be related to the bow (stem) of the vessel concerned unless otherwise stated.

13. This Notice is issued in agreement with QHM Portsmouth.

Signed: Dock and Harbour Master.

AUTHORITY: Associated British Ports, Dock House, Canute Road, SO9 1PZ. *Tel:* (0703) 223844. *Telex:* 47334. *Contact:* W. D. Noddings, Port Director.

AGENT: Keller Bryant & Co., Ltd., Havelock Chambers, 21/22 Queen's Terrace, Southampton. Telephone: (0703) 228566/7/8/9. Telex: 47568. Cables: Keller Southampton. After hours telephones: (0703) 734055, (0703) 225585.

STORNOWAY: 58.12 N. 06.22 W. (See Plan)

PORT LIMITS: Extend to a line from Southern end of Holm Island on the East to Rugh A'Bhaigh Vaine on the West – approximately 7.5 cables to seaward of Arnish Point Light.

PILOTAGE: Pilotage not compulsory. Vessels requesting Pilot request same with ETA. Boarding off Arnish Point Lighthouse.

ANCHORAGES: Anchorage in harbour between Goat Island and mouth of Creed River, 8 fathoms.

RESTRICTIONS: Entry night or day and at any state of tide. No bar on entrance.

MAX. SIZE: 400 ft. by 60 ft. by 22 ft. draft to berth alongside, 600 ft. length by 35 ft. draft for anchorage in bay.

HEALTH: The customary flying of "Q" flag.

Also see "Health – All Ports" before first U.K. port.

RADIO: Wick Radio or alternatively Stonehaven Radio.

RADAR/VHF: R/T-VHF established in harbour, call "Stornoway Harbour" on Channels 16 and 12. Emergency messages may be passed through Stornoway Coastguard on 81.8 m.

TUGS: No tugs available at port. Fishing vessels have been used, when necessary, for this purpose.

BERTHING: Vessels can be berthed at any time, provided berth is free.

Ro/Ro ferry terminal for Stornoway/Ullapool service in operation.

Depth of Water at Low Water Spring Tides: West side No. 1 Pier: 24.5 ft. shallowing to 12 ft. at junction of North Beach Quay. East side No.1 Pier: 24.5 ft. shallowing to zero at inward end. West side No. 2 Pier: 17.5 ft. shallowing to zero at inward end. East side No. 2 Pier: 16.5 ft. shallowing to zero at inward end. Inner Harbour decreases from 12 ft. at junction of Esplanade Quay to 8 ft. at upper end of Cromwell Street Quay.

STEVEDORES: Arranged by Agents on receipt of ETA.

MEDICAL: Advance notice desirable, Hospital facilities available in the town.

TANKERS: Normal safety requirements. One tanker berth only 15 ft. mean draft, max. length 220 ft.

DENSITY: Pratically always dead salt; 1025 density.

FRESH WATER: Fresh water available by hose at 15 t.p.h.

FUEL: 24 hours notice required.

GANGWAY/DECK WATCHMEN: Service of watchmen not necessary. Watchmen from shore may be employed if required.

OPENING/CLOSING HATCHES: Normally crew.

IDENTIFICATION CARDS: Not required.

CONSULS: French, Swedish, Norwegian; Tel: Stornoway 2920, 2054, 3173 respectively.

SURVEYORS: Marine & Engineer Surveys (Hebrides) Ltd., Stornoway.

REPAIRS: Minor deck and engine repairs can be carried out locally.

DRY DOCKS: No dry dock but one slipway of 750 tons displacement.

REPATRIATION: Facilities exist for this service.

AIRPORT: 3 miles from port, served regularly by British Airways from Glasgow, Aberdeen and Inverness.

HOLIDAYS: New Year's Day, Christmas Day and all other local Bank Holidays. Cargo work can be arranged except New Year's Day. (No Sunday work.)

POLICE/AMBULANCE/FIRE: Police, Stornoway 2222 (can deal with all three services).

EMERGENCY CO-ORDINATION CENTRE: Stornoway Coastguard Tel: 2013 or 2014.

TELEPHONES: Can be arranged by prior application through Aberdeen office.

STORING: See "Prelims".

1. By truck. 4. Yes.
2. – 5. Notice No. 69.
3. Yes. 6. Yes.

GENERAL: ETA to be sent 24 hours beforehand so that necessary arrangements can be made.

AUTHORITY: Stornoway Pier and Harbour Commission, Amity House, Esplanade Quay, Stornoway, Isle of Lewis PA87 2XS. *Tel:* (0851) 2688. *Cables:* Harbour Commission. *Contact:* General Manager or Harbour Master.

STRANRAER: 54.55 N. 05.02 W. (See Plan)

DOCUMENTS: As for other British ports.

PILOTAGE: Not compulsory.

ANCHORAGE: Deep water anchorage at Lady Bay.

MAX. SIZE: Largest vessel handled 420 ft. long. Working draft 5.0 m.

HEALTH: See "Health – All Ports" before first UK port.

TUGS: Not available.

RADIO: VHF watch kept on Channel 16 at Sealink Scotland Ferry Terminal. Working Channel is 14.

BERTHING: *East Pier:* 3 berths dredged to 15 ft. at L.A.T. One with vehicular ramp.

Ross Pier: Length 500 ft. Dredged to 16 ft. at L.A.T. Double tier vehicular ramp at this berth.

CARGO GEAR: Portable crane of 15 tons maximum capacity.

MEDICAL: Medical Centre and hospital in town.

FRESH WATER: Available at East Pier.

FUEL: Limited quantities of fuel oil can be supplied from road tankers.

REPAIRS: Small repairs can be carried out by local engineering firm.

GENERAL: Inshore lifeboat based at Stranraer.

AUTHORITY: *East Pier:* Sealink Harbours Ltd., Sea Terminal, Stranraer Harbour, Stranraer DG9 8EL. *Tel:* (0776) 3531. *Telex:* 778125. *Cables:* Sealink Port Stranraer.

Contact: A. Boland, Port Manager. *West Pier:* Harbour Master, Dumfries and Galloway Regional Council.

AGENT: See "Clyde Port". (Lloyd's Agent).

SULLOM VOE: 60.27 N., 01.17 W. (See Plan)

GENERAL: The Port of Sullom Voe is a major deep water harbour. It is owned and operated by the Shetland Islands Council as Harbour and Pilotage Authority.

The Port Administration Building, from which all marine operations are monitored and controlled, stands on Sella Ness in position: Lat. 60° 26.8′ N., Long. 01° 16.5′ W.

Services offered by the port and financed through conservancy charges include port radar, navigational advice to Shipmasters, intensity controlled navigational lighting to assist in poor visibility, meteorological advice, shore access gangways and speed of approach docking equipment. Services offered and financed through separate charging structures include pilotage and mooring boat services. Boat hire can be arranged for vessels anchored or standing off. The towage service is operated by a separate towage company and financed directly through towage charges.

The harbour is presently designed to accept tankers up to 365 m. LOA, with a draft of up to 22.6 m. and LPG carriers up to 260 m. in length with a draft up to 15.9 m. In addition to liquid bulk and LPG cargo, the port is designed to handle general, dry bulk, Ro/Ro and containerised cargo.

There are 2 entrances to Yell Sound. The primary Northern route, suitable for oil and gas tankers, lies on the Western side of Yell Sound and is marked by leading lights situated on Gluss Isle. The South Eastern approach is considered suitable for coastal traffic and vessels up to 200 m. LOA and having a draft of not more than 11.6 m.

Both routes merge at the entrance to Sullom Voe; the lead into the Voe is indicated by a sectored light situated at Skaw Taing and leading markers located on Fugla Ness. In the case of vessels other than coastal vessels, all manoeuvres South of Lamba Island will be assisted by tugs.

Ships will generally be berthed starboard side alongside at the oil loading berths. This will involve a 180° swing within the Voe in a turning area marked by sectored lights which are located on Sella Ness and Scatsta Ness. Vessels may berth port side alongside during adverse wind conditions.

The turning area has a diameter of 800 m., and minimum depth of 15 m. at LAT. For the purpose of manoeuvring within the pilotage district a minimum under keel clearance of 2.0 m. is required.

Although current rates of up to 7 knots may be experienced in areas of Yell Sound, the maximum current likely to be experienced on the deep draft route, is unlikely to exceed 1 knot.

The maximum tidal range within the Harbour Area is 2.3 m. at Springs and minimum 0.6 m. at Neaps. The main tidal current flows to the South on the flood and to the North on the ebb.

Note: Strong winds are frequently experienced at Sullom Voe and may be accompanied by sudden gusts from any direction. The prevailing wind direction is S.W.

It is essential that whilst alongside the jetty, moorings are tended carefully and regularly and conform with the recommended mooring pattern. (See "Plan").

The Sullom Voe Oil and Gas Complex is located within the port limits on Calback Ness in position: Lat. 60° 27.5′ N., Long. 01° 17.0′ W., and is operated by BP Petroleum Development Limited on behalf of several oil company participants.

The oil reaching Sullom Voe through the Brent and Ninian Pipe-lines is collected from a group of oilfields located in the East Shetland Basin.

CONDUCT OF VESSELS ENTERING YELL SOUND:

a) Masters of tankers and gas carriers entering the Port of Sullom Voe are advised to refer to Charts BA 3298, 3297 and 3292.

b) Navigation within the Pilotage District is prohibited unless the vessel is mechanically and navigationally sound, anchors have been cleared away and there is a responsible person who can speak and understand English on the bridge.

c) The berthing of tankers and gas carriers is suspended when wind speeds are consistently gusting in excess of 30 knots. Masters will be advised by Port Control in the event of such suspension.

d) Vessels should afford a safe lee for the pilot boat during boarding and landing operations at the Northern Station – Reporting Point A ('Alpha').

e) At Reporting Point B ('Bravo') the Master should order the crew to stations fore and aft in preparation for securing tugs, while speed is reduced accordingly.

f) The bow and stern tugs will be made fast in the area North of Reporting Point C ('Charlie').

g) The alongside tugs shall be secure as soon as possible thereafter.

h) The vessel's speed must not exceed 5 knots South of a line joining Skaw Taing and Trumba Point.

i) Standard practice requires vessels to be swung on arrival (except when weather conditions dictate otherwise) and berthed starboard side alongside the designated jetty (see "Plans" for mooring guidelines).

Note: Tugs will use their own lines for securing.

MINIMUM REQUIREMENTS: In order to avoid delays, all vessels programmed for Sullom Voe should comply with the recommendations of the Council of the European Committee for Vessels Transitting Community Seaports, and be fitted with:

(i) Fully operational radar.
(ii) Fully operational VHF radio with Channels 16, 14, 20 12, 10, and 9.
(iii) Sufficient crew to handle tugs' lines and moorings efficiently.
(iv) Efficient propulsion and deck machinery.
(v) Efficient and adequate moorings to secure vessels safely.
(vi) Efficient signalling equipment.
(vii) Fully operational tachometer, rudder and helm indicators.
(viii) Efficient mooring stations communications systems.
(ix) An efficient anchor windlass and anchors.
(x) A complete and valid set of Safety Certificates.
(xi) All officers to be properly qualified and carry recognised certificates of competency.

Note: If any vessel cannot comply with any of the above, Sullom Voe Port Control should be advised prior to arrival or departure.

DOCUMENTS:

General Declaration (C13). In duplicate.
Cargo Manifest (if appropriate).
Crew Declaration (C142). In duplicate.

When the vessel is not boarded on arrival the Master must arrange for 1 copy of each form to be lodged within 3 hours of arrival at the Custom Office, located in the Port Administration Building at Sella Ness.

PILOTAGE: Pilotage is compulsory within the Sullom Voe Pilotage District. Masters of British registered vessels of less than 1,600 g.r.t. may be eligible to sit an examination to gain a Pilotage Exemption Certificate under the conditions laid down in Section 11 of the Sullom Voe Pilotage Byelaws.

Vessels of less than 300 g.r.t. are exempt from compulsory pilotage under the conditions laid down in Section 12 of the Sullom Voe Pilotage Byelaws.

The District takes in the waters of Yell Sound and Sullom Voe, including all creeks, voes and inlets bounded on the North by a line drawn from the Northern extremity of the Point of Fethaland to the Northwestern extremity of Fogla Lee and in the S.E. by a line drawn from the Northwestern extremity of the Ness of Sound to the Northern extremity of Uynarey Island and thence to the Northern extremity of Mio Ness. The limits of the District in the S.E. may be extended by Pilotage Order during 1986.

All vessels entering or leaving the Sullom Voe Pilotage District are requested to contact Sullom Voe Harbour Radio initially on VHF Channel 16, whereupon they will be asked to change to a working Channel.

The traffic situation will be broadcast daily at 4 hourly intervals, commencing at 0000 hrs. local time on VHF Channel 20. Any vessel may, however, receive the traffic situation at other times on request.

Brief local weather forecasts will be broadcast at 0800 hrs. and 2000 hrs. local time on VHF Channel 20. Gale warnings will be broadcast when received and in the traffic broadcasts.

Any vessel intending to use the deep water channels marked by the leading lights of Gluss Isle, the white sector of Queyfirth Light, the white sector of Skaw Taing Light, the Fugla Ness Leading Lights or the Sella Ness Leading Light, for the purpose of fishing must report such intentions to Sullom Voe Harbour Radio and report at intervals not exceeding 2 hours while fishing.

Sullom Voe Harbour Radio maintains a continuous listening watch on the following VHF Channels: 16, 9, 10, 12, 14 and 20. Vessels should, where possible, refrain from using Channel 16 except for initial calling and Channel 10, which is designated for emergency purposes.

Pilots: Licensed Pilots are available on a 24-hour basis. A continuous VHF watch is maintained. Call sign "Sullom Voe Harbour Radio".

Pilot Boarding Areas: All vessels approaching Sullom Voe by the North Entrance and which require a Pilot and all vessels of 200 m. LOA and over should rendezvous with the Pilot in a position with Point of Fethaland Light bearing 260°T×1.6 miles. Vessels of less than 200 m. LOA approaching Sullom Voe by the S.E. Channel should rendezvous with the Pilot in position Lat. 60° 28.5′ N., Long. 00° 56.5′ W. with Firths Voe Lighthouse bearing 260°T×7 miles.

Vessels transferring Pilots by helicopter may be requested to carry out such operations some 3 to 5 miles North of the normal boarding position for the North Entrance given above. This may be varied due to weather or other cause and vessels should proceed in accordance with advice from Sullom Voe Port Control when helicopters are used.

Pilot Boats: The Authority has 3 boats for use at the Port of Sullom Voe.

(i) "Sullom Mareel" LOA 16.2 m., service speed 16 knots.
(ii) "Sullom Spindrift" LOA 19.8 m., service speed 20 knots.
(iii) "Sullom Shoormal" LOA 19.8 m., service speed 20 knots.

The main construction of all boats is of G.R.P. They are fully equipped with modern navigational aids.

The freeboard of each boat is approximately 1.5 m.

Pilot Ladder Requirements: All vessels calling at the Port of Sullom Voe must comply with "The Merchant Shipping (Pilot Ladders and Hoists) Regulations 1980 (S.I.543) and (Pilot Ladders and Hoists) Amendment Regulations 1981 (S.I.581)".

The following points are stressed:

(i) The rigging of pilot ladders and the embarkation and disembarkation of Pilots thereby shall be supervised by a responsible officer of the ship.

(ii) Every pilot ladder shall be secured in a position clear of any possible discharges from the ship, and so that each step rests firmly against the ship's side.

(iii) Every pilot ladder shall be secured in a position where the Pilot can gain safe and convenient access to the ship after climbing not less than 1.5 m. and not more than 9.0 m.

(iv) Whenever the distance from the water to the point of access to the ship exceeds 9.0 m., access to the ship must be by means of a combination of a pilot ladder and an accommodation ladder, or an equally safe and convenient means.

(v) Owners, Charterers and Masters of vessels should be aware that Section 5(3) of the M.S. (Pilot Ladders and Hoists) Regulations 1980 specifies very clearly the conditions under which accommodation ladders are permitted to be used in combination with a pilot ladder when the freeboard exceeds 9 m. The attention of those involved is drawn particularly to Section 5(3)(ii) of these regulations which reads as follows ". . . the lower end of the accommodation ladder *rests firmly against the side of the ship* as near to the mid-length of the ship as is practicable and *leading aft*".

Masters are advised that these regulations will be strictly enforced by the Harbour Authority. Any vessels unable to comply with the above section in every particular way should contact their Agent in good time before arrival in order to arrange alternative means for embarking the Pilot.

Any delays and/or additional costs incurred by vessels unable to comply with the above regulations will be strictly to the ship's own account.

(vi) Adequate lighting shall be provided at night so that the pilot ladder overside and also the position where the Pilot boards the ship shall be properly illuminated.

Pilot Hoists: Pilots are not obliged to use pilot hoists. Any use of these devices must only be at the option of the Pilot, and in general, pilot hoists are not acceptable for the boarding and landing of Pilots at Sullom Voe.

Any pilot hoist offered must, in any case, comply fully with IMO recommendations on performance standards for mechanical pilot hoists and also with the recommendations of the European Maritime Pilots Association.

Note: Because of the low ambient air temperature combined with strong wind conditions, experience has shown that it is not uncommon for pilot hoists driven by compressed air to freeze. Careful attention should be paid to this equipment during the Winter months.

Pilot Boarding Arrangements: In all normal circumstances the boarding and landing of Pilots at Sullom Voe will be carried out by the Authority's pilot vessels which are approved for this purpose. Helicopters may be used at certain times and under certain conditions as set out below.

Pilot Transfer by Helicopter: Sea conditions at the North Entrance to Yell Sound can at times prevent the boarding and landing of Pilots by boat even though wind speeds may be within operational limits. Helicopters may be used at the discretion of the Authority to carry out Pilot transfer when such conditions exist. Helicopters may also be used in cases where a vessel is unable to provide a satisfactory pilot ladder/accommodation ladder. Factors affecting the use of helicopters for these purposes are set out below.

1. From 1st October, 1986 until 2359 on 30th April, 1987 an MBB Bolkow 105 helicopter is available to the Authority on a sole user basis for purposes of Pilot transfer. This helicopter may also be available from 0001 1st October, 1987 until 2359 30th April, 1988.
2. The first choice helicopter is capable only of landing on vessels to be serviced. Winching operations cannot be carried out by this aircraft. It is a small twin-engined helicopter of approximately 2 tonnes weight and with a rotor height of 3 m. Experience has shown that this helicopter can safely land on 90% of vessels calling at Sullom Voe.

   Winch-capable helicopters may be available but will take much longer to obtain and delays could result to the requesting vessel.
3. The permission of the Master, Owners, Charterers, Managers or Agents as appropriate will be obtained prior to any such transfer taking place.
4. All transfers by helicopter will be carried out strictly in accordance with the UK CAA regulations and the Procedures set out in the "Guide to Helicopter/Ship Operations" published by the International Chamber of Shipping (see extracts on page 1684).
5. The service is available only to crude carriers and combination carriers provided with suitable helicopter operating areas. It is not available to LPG carriers.
6. Any helicopter service is available during daylight hours only. The MBB Bolkow 105 helicopter is generally available during all daylight hours. Service by winch – capable aircraft may be available only during ordinary airport operating hours which may be 0730–2030 weekdays and 1045–1430 Sundays.
7. No extra charge accrues to the vessel when boarding and landing by the MBB Bolkow 105 helicopter for reasons of weather and/or adverse sea conditions. The regular and published boarding and landing fee is applied.
8. Any helicopter secured to carry out winching operations for whatever reason must be paid for at cost.
9. If the MBB Bolkow 105 helicopter is used to service a vessel with defective boarding and landing equipment a charge of £2,000 per operation plus re-charges at cost will be applied.

10. Helicopter operations are co-ordinated by Sullom Voe Port Control. Vessels serviced in this manner should follow instructions issued by Sullom Voe Port Control to facilitate such transfers.
11. Helicopters used are operated only by the well-established companies, Bond Helicopters Ltd. and British International Helicopters Ltd., which operate to the highest standards and are approved to carry out transfers of Sullom Voe personnel by this Authority.
12. Only experienced aircrew are used and Marine Pilots of this Authority are all experienced in this mode of transfer and trained in accordance with Section 8(h) of the ICS Guide to Helicopter/Ship Operations.
13. From 0001 1st May, 1987 until 2359 on 30th September, 1987, service by MBB Bolkow 105 helicopter is not provided. Vessels which require helicopter services for reasons of defective pilot boarding equipment during this period must give early and specific advice of this requirement if delays are to be avoided. Helicopters may be obtained on an ad hoc basis for this purpose subject to availability and will generally transfer by winching only. All costs incurred in providing this service will be paid by the vessel which requires the service. Only helicopter operators approved by the Authority will be used.

For convenience of ships Masters the following extracts from the current "Guide to Helicopter/Ship Operations" are reproduced by kind permission of the International Chamber of Shipping:

5.1 Operational Checks

The Officer in charge should check all operational requirements on deck shortly before the arrival of the helicopter. Different types of ships may require specialist checks.

The general requirements for all types of ships are listed below.

5.1.1 Ship Checks

- (a) All loose objects within and adjacent to the operating area must be secured or removed;
- (b) All aerials and standing or running rigging above or in the vicinity of the operational area should be lowered or secured;
- (c) Fire pumps should be running with sufficient water pressure on deck;
- (d) Fire hoses should be ready. (Hoses should be near to but clear of and, if possible, upwind of the operating area pointing away from the helicopter);
- (e) Foam equipment operators (at least 2 wearing the prescribed firemen's outfits) should be standing by, and have foam nozzles pointing away from the helicopter;
- (f) A rescue party should be detailed with at least 2 members wearing firemen's outfits;
- (g) The man overboard rescue boat should be ready for immediate lowering;
- (h) The following items of equipment should be to hand:
  - (i) Portable fire extinguishers.
  - (ii) Large axe.
  - (iii) Crowbar.
  - (iv) Wirecutters.
  - (v) Red emergency signal/torch.
  - (vi) Marshalling batons (at night).
  - (vii) First aid equipment.
- (i) The correct lighting and signals (including special navigation lights) should be switched on prior to night operations;
- (j) The deck party should be ready, and all passengers clear of the operating area;
- (k) Hook handlers should be equipped with electricians' strong rubber gloves and rubber soled shoes to avoid electric shocks from static discharge;
- (l) All the deck crew should be wearing bright coloured life vests and protective helmets securely fastened with a chin strap;
- (m) The Officer of the watch on the bridge should be consulted about the ship's readiness.

5.1.2 Landing On (These checks are additional to those in 5.1.1):

- (a) The deck party should be made aware that a landing is to be made;
- (b) The operating area should be free of heavy spray or seas on deck;
- (c) Awnings, stanchions and derricks and, if necessary, side rails should be lowered or removed.

APPROACHES: *Routeing and Aerial Surveillance in Shetland Waters.* Vessel routes in Shetland Waters:

Applicable to all tankers, combination carriers and LPG vessels calling at Sullom Voe.

Shetland Islands Council, conscious of the dangers to navigation around the Shetland coast, due largely to offshore obstructions, strong tides, rapid weather changes and the presence of fishing vessels, vigorously discourages navigation within 10 miles of the coastline.

An agreed procedure has been reached between the Oil Industry and Shetland Islands Council of which the following is an extract:

1. Masters are strongly recommended to keep at least 10 miles off the Shetland Islands, including Foula and Ve Skerries, when approaching or leaving Yell Sound. Since Fair Isle is part of Shetland Islands it is recommended that vessels navigate the Fair Isle Channels approximately midway between Fair Isle and either Mainland Shetland or North Ronaldsay, Orkney.
2. It is further recommended that passage between off-lying islands/skerries etc., including Foula and Mainland Shetland should not be attempted.
3. For the final approach to/departure from Yell Sound, vessels are strongly recommended to navigate on the offshore side of the boundaries joining the following co-ordinates:

When approaching from/proceeding to the West:

A. Lat. 60° 42.5′ N., Long. 01° 42.0′ W.
B. Lat. 60° 42.5′ N., Long. 01° 22.0′ W.
C. Lat. 60° 40.0′ N., Long. 01° 17.0′ W.

When approaching from/proceeding to the East:

D. Lat. 60° 40.0′ N., Long. 01° 14.0′ W.
E. Lat. 60° 56.5′ N., Long. 01° 14.5′ W.
F. Lat. 61° 01.5′ N., Long. 00° 59.5′ W.
G. Lat. 61° 01.5′ N., Long. 00° 48.0′ W.
H. Lat. 60° 56.5′ N., Long. 00° 27.0′ W.

4. Vessels which have permission to use the pilot station at the S.E. entrance to Yell Sound are requested to navigate as follows:

   A. Vessels approaching the Shetland Islands from the South and making for the pilot station at the S.E. entrance to Yell Sound or wishing to anchor in Colgrave Sound are advised to navigate to a position 10 miles East of Out Skerries before altering course to the pilot station or to Colgrave Sound.

   B. Vessels approaching from the North and making for the pilot station at the S.E. entrance to Yell Sound or wishing to anchor in Colgrave Sound are advised to navigate to a position 10 miles East of Fetlar before altering course to the pilot station or Colgrave Sound.
5. Where, for any reason of safety or emergency, it is not possible to comply with the foregoing, you are required to notify immediately your intentions with reasons, to Sullom Voe Port Control by VHF Channel 16 or via Agents. Charts should not be cleaned off until berthed at Sullom Voe to assist checking by Port Authority.

ANCHORAGES: There are no suitable anchorages available for large tankers in the Port of Sullom Voe.

However, LPG carriers of less than 180 m. LOA may be anchored in a designated area within the harbour at the discretion of the Harbour Master.

Vessels are permitted to anchor in Colgrave Sound (Lat. 60° 35′ N., Long. 00° 57′ W. approx.) when circumstances dictate that this is appropriate. In doing so, Masters should make reference to charts B.A. 3282 and 3292, the North of Scotland Pilot – NP.52 page 99 and "Routeing and Aerial Surveillance in Shetland Waters", see "Approaches".

In addition, the following guidance to the usage of Colgrave Sound is relevant and all vessels intending to anchor there should comply with the advice given herein.

1. Colgrave Sound is used extensively by fishing craft throughout the year and Masters of other vessels are requested and required to give such fishing vessels a wide berth.
2. Three designated anchorages in Colgrave Sound have been identified as being suitable for large vessels and clear of established fishing grounds. These anchorages should be used in preference to any other area of Colgrave Sound. (See "Plan").
3. Colgrave Sound is outside the Sullom Voe Harbour Area and also outside the extended area of coverage of the Harbour surveillance radar. It is however observed several times each day by the surveillance aircraft. Therefore any information given by Sullom Voe Port Control to vessels proposing to anchor in Colgrave Sound is given in good faith and on the understanding that neither the Harbour Authority nor its servants will accept liability for the consequences of any vessel dragging anchor, colliding with any other vessel, stranding, causing pollution, or any other occurrence occasioned by or to the vessel concerned whilst navigating or at anchor within Colgrave Sound and its approaches.
4. Sullom Voe Harbour Authority will, however, give all assistance to any vessel seeking information about the Colgrave Sound area with the objective of establishing orderly navigational disciplines in the area for the benefit of all users.
5. To this end any vessel (including oil rigs, oil exploration vessels, barges and supply craft) wishing to anchor in Colgrave Sound is requested, in the first instance, to contact Sullom Voe Port Control. The vessel will then be advised which designated anchorage is believed to be unoccupied and which may therefore be used by the vessel.
6. The designated anchorages are identified by the numbers 1, 2 and 3 (see "Plan") and also by bearing and distance of the White Hill Light House (Lat. 60° 34.9′ N., Long. 01° 00.1′ W.) as follows:

   Anchorage 1: White Hill Lighthouse bearing 238°T×1.50 miles.
   Anchorage 2: White Hill Lighthouse bearing 253°T×0.95 miles.
   Anchorage 3: White Hill Lighthouse bearing 260°T×1.68 miles.
7. Masters of vessels making use of any of the designated anchorages are requested to provide Sullom Voe Port Control with details of their anchorage position when brought up.
8. Masters of vessels approaching or at anchor within Colgrave Sound are requested to strictly observe the regulations prohibiting the dumping of industrial debris, offensive and noxious substances and oil pollution.

Masters should beware of 2 submarine oil pipe-lines on the East Side of Shetland shown on the latest charts and referred to in "North Coast of Scotland Pilot" pages 94 and 95.

Except when advised otherwise, Masters should proceed to a point 6 miles off Gruney Island (Lat. 60° 39′ 00″ N., Long. 01° 18′ 00″ W.). Thereafter, Masters should follow directions in "North Coast of Scotland Pilot" page 54, noting, however, that there are areas of poor VHF reception with Sullom Voe to the West and North of Yell Sound.

MAX. SIZE: See "Berthing", "Loading/Discharging Facilities" and "Liquefied Petroleum Gas Facilities".

HEALTH: The following Port Health procedure applies at the Sullom Voe Terminal.

The Master has no need to obtain health clearance unless:

(i) An authorised officer otherwise directs.
(ii) A death or illness has occurred as defined in the Public Health (Ships) (Scotland) Regulations.
(iii) An abnormal mortality among rats or mice on board has occurred.

Where it is necessary to obtain "Free Pratique" for health purposes, the Master should provide the following documents:

(i) Maritime Declaration of Health.
(ii) A list of passengers and crew leaving the ship, together with the addresses they are going to in the United Kingdom.

Derat Exemption Certificates: The Sullom Voe Terminal is an "approved" Port, and Derat Exemption Certificates will be issued by the local Health Authority.

Also see "Health – All Ports" before first U.K. port.

RADAR: Full radar coverage exists for Yell Sound and Sullom Voe. Comprehensive coverage also includes the 'funnel' of approach to the Northern Pilot Boarding Station and also the S.E. entrance channels and the associated seaward approaches. (Coverage of the S.E. approaches to be commissioned during 1986).

The main scanner is located on the Hill of Vats Houlland (Lat. 60° 27.57′ N., Long. 01° 17.28′ W. and the secondary scanner, which provides coverage of the S.E. entrance and Western approach channels, is located near Brough (Lat. 60° 28.90′ N., Long. 01° 13.04′ W.). Both scanners are connected by microwave links to displays in the Port Control Room.

Port Control Officers maintain a continuous radar watch, and the transit of each vessel is monitored and recorded. Advice is available to vessels on request.

RADIO:

ETA Requirements: Vessels bound for Sullom Voe are required to provide the Pilotage Authority with the following information.

(i) An estimated time of arrival at least 24 hours prior to arrival or on leaving the last port (whichever is later). In addition to this ETA Masters are to include the estimated time of crossing Lat. 58° 20′ N. and estimated longitude on crossing that latitude, and the intended inward courses and turnpoints to the Gruney Island Pilot Station. Vessels arriving from the North Atlantic or Northern North Sea should use a position 200 miles from the pilot station.
(ii) Confirm the vessel's ETA at least 6 hours before arrival at the seaward limit of the Pilotage District and thereafter notify any significant change in excess of 1 hour.
(iii) On coming within range of "Sullom Voe Harbour Radio", the ETA to be given by VHF.

Pre-Arrival Information: 24 hours prior to arrival, all vessels calling at Sullom Voe should cable "Portcontrol Sullomvoe" the following information:

(i) Ship's name and call sign.
(ii) Port of Registry.
(iii) Name of Master.
(iv) G.R.T.
(v) Summer deadweight (tonnes).
(vi) Length overall and beam (metres).
(vii) Draft fore and aft.
(viii) Whether to berth or in transit.
(ix) Whether loaded or in ballast. If loaded, nature and quantity of cargo.
(x) Whether vessel is carrying segregated ballast.
(xi) If so, quantity and where loaded.
(xii) Dirty ballast quantity (tonnes).
(xiii) Total ballast/bunkers/FW and stores as a percentage of the Summer d.w.t. (minimum acceptable 35%).
(xiv) Which pilot station on arrival.
(xv) Pilot boarding arrangements.
(xvi) Number of crew.
(xvii) Last Port of call.
(xviii) Does ship have a fully operational inert gas system?
(xix) Your vessel will be required to "closed-load" at all times even during topping off, can you comply? Y/N.
(xx) Are all cargo/slop tanks inerted to less than 8% oxygen content (2% for LPG carriers)?
(xxi) Is all navigation, safety, anchoring and mooring equipment fully operational and ready for use? If not, specify. All anchors to be cleared away on arrival at the pilot station.
(xxii) Confirmation to be given that vessels are complying in all respects with "The Merchant Shipping (Tankers) (EEC Requirements) Regulations 1981".
(xxiii) Details of inward courses (to be telexed 24 hours prior to arrival).

VHF: All shipping movements within the Pilotage District are monitored from a Port Control Room in the Port Administration Building at Sella Ness.

The Port Control Room is manned on a 24 hour basis by Marine Officers who are licensed Pilots.

These Marine Officers, in their capacity as Port Control Officers, maintain a continuous VHF and radar watch. They provide advice to Masters and Pilots on all navigational aspects (including weather forecasts) within the area, direct shipping movements within the port, and liaise with the Terminal Operator and emergency services.

The following VHF Channels are continuously monitored in the Port Control Room:

Channel 16	Calling, safety and distress.
Channel 9	Tanker pilotage, tugs and radar assistance.
Channel 10	Port emergency, fire or oil pollution.
Channel 12	Secondary Port Control working frequency.
Channel 14	Main Port Control working frequency.
Channel 20	Traffic and weather broadcasts.

The call-sign for Sullom Voe Pilots is "Sullom Voe Harbour Radio". In addition, *Sullom Voe Oil Terminal* constantly monitors Channels 19 and 46 over which pre-arrival information concerning loading procedures will be given.

Since the Terminal has no direct access to Channel 16, initial contact should be made on Channel 19 using call sign "Sullom Voe Terminal".

It is emphasised that Masters should try to contact the Terminal as soon as possible prior to arrival at the Pilot Boarding Area, so that loading information may be exchanged before commencing the inward passage through Yell Sound.

Control of Traffic: The Port Control Room directs the movements of all vessels within the Pilotage District and the Harbour Area. Overtaking and passing is prohibited in the Deep Water Channel within an area bounded by a line joining Queyfirth Light and the Northern extremity of Lamba Island and a line joining Skaw Tang Light and the front leading light on Gluss Isle. With the introduction of LPG traffic, a further restriction on overtaking and passing has been included in the main tanker route as follows:

No vessel having an overall length in excess of 50 m. shall navigate so as to pass or overtake an LPG carrier underway anywhere within Yell Sound or Sullom Voe between lines drawn between the Northern extremity of Muckle Holm (Lat. 60° 35.1′ N., Long. 01° 15.8′ W. approximately) and the Northern extremity of the North Holm of Burravoe (Lat. 60° 35.4′ N., Long. 01° 18.2′ W. approximately) and between the Northern extremity of Lunna Holm (Lat. 60° 27.5′ N., Long. 01° 02.4′ W. approximately) and the Southern extremity of Heoga Ness (Lat. 60° 29.4′ N., Long. 01° 02.4′ W. approximately).

Reporting Positions: During the transit of Yell Sound, all vessels are required to report to Port Control when passing the following positions:

A. Lat. 60° 38.25′ N., Long. 01° 14.82′ W. with Gruney Island Lighthouse bearing 300.5°T×1.85 miles.
B. Lat. 60° 34.95′ N., Long. 01° 16.56′ W. with Muckle Holm Lighthouse bearing 105°T×0.35 miles.
C. Lat. 60° 31.35′ N., Long. 01° 18.49′ W. with Queyfirth Lighthouse bearing 285°T×0.49 miles.
D. Lat. 60° 29.32′ N., Long. 01° 17.47′ W. with Skaw Taing Lighthouse bearing 118°T×0.41 miles.
X. Lat. 60° 28.50′ N., Long. 01° 10.70′ W. with Mossbank Lighthouse bearing 175°T×1.25 miles.

The provision of additional reporting points in the S.E. entrance is under review.

TUGS: At present a fleet of harbour tugs provide a towing service for vessels at the Port of Sullom Voe. These are stationed at the Sella Ness Jetty adjacent to the Port Administration Building.

The fleet is operated by Shetland Towage Ltd., a private company owned and operated by a joint venture between Shetland Islands Council, Clyde Shipping Company and Cory Ship Towage.

The fleet consists of 3 twin screw 3,800 h.p. vessels, each having a bollard pull of 55 tons. These vessels are fully equipped as fire-fighting tugs and pollution control vessels and were built by Hall Russell and Company Ltd., in Aberdeen, in 1978. Named after Shetland birds, they are:

"Stanechakker", "Swaabie", "Lyrie"

Two new additions to the fleet are Voith water tractors, built in 1983 by Ferguson Ailsa Ltd., at Port Glasgow. These vessels have twin 32G Voith units developing 4,000 b.h.p. and a bollard pull of 45 tons. Also given bird names, they are:

"Tirrick", "Shalder"

The use of tugs and their numbers will be as directed by the Harbour Master. Prior to arrival, vessels should ensure that heaving lines of adequate length and breaking strain are readily available to assist in securing the tugs.

Tugs will normally meet incoming vessels at a position North of Lamba Island. Officers and crew should be standing by to receive lines and all necessary tugs must be secured before the vessel's ability to manoeuvre becomes restricted.

When a vessel is berthing, tugs will be secured to the bow and stern of the vessel with towing lines and alongside in a push pull mode. Their mode of operation and disposition will be fully explained by the Pilot on arrival. Tug lines will normally be used throughout, either from towing hook or towing winch.

It is requested that wherever possible tug orders for movements before 0900 hrs. on a particular day shall be placed not later than 1700 hrs. on the preceding day.

BERTHING: Attention is drawn to the minimum under keel clearance of 1 m. required alongside and the minimum under keel clearance of 2.0 m. in the channel.

Ore/Oil and Ore Bulk Oil vessels up to the 300,000 tons deadweight range may berth at Sullom Voe. Oil tankers up to 350,000 tons deadweight range will be accepted.

Limiting Vessel Sizes:

No. 1 Jetty:	**Crude Oil Carriers**
LOA	170 m. to 280 m.
d.w.t.	18,000 tons to 120,000 tons
Berthing Displacement	100,000 tons (max.)
Depth alongside	16.9 m.(min.)
Max. allowed draft	15.9 m.
	LPG Carriers
LOA	140 m. to 260 m.
Capacity	10,000 cu.m. to 75,000 cu.m.
No. 2 Jetty:	**Crude Oil Carriers**
LOA	210 m. to 365 m.
d.w.t.	50,000 tons to 350,000 tons
Berthing Displacement	250,000 tons (max.)
Depth alongside	23.1m. (min.)
Max. allowed draft	22.1 m.

Limiting Vessel Sizes – continued.

No. 3 Jetty:	**Crude Oil Carriers**
LOA	170 m. to 365 m.
d.w.t.	30,000 tons to 350,000 tons
Berthing Displacement	250,000 tons (max.)
Depth alongside	23.6 m. (min.)
Max. allowed draft	22.6 m.

No. 4 Jetty:	**Crude Oil Carriers**
LOA	170 m. to 365 m.
d.w.t.	30,000 tons to 350,000 tons
Berthing Displacement	250,000 tons (max.)
Depth alongside	23.6 m. (min.)
Max. allowed draft	22.6 m.

Note: (i) Vessels entering in ballast or partially loaded conditions should ensure that their draft does not exceed 13 m. as this is the draft normally allowed in the South Turning Area.

(ii) Where it is not possible for vessels to arrive with a draft of 13 m. or less, berthing will be carried out in accordance with the Harbour Master's directions.

Loading Systems:

No. 1	Crude 4×12 in.	Loading arms var. hydraulic connections.
	*LPG 2×12 in. 1× 8 in.	Loading arms var. hydraulic connections.
No. 2	Crude 4×16 in.	Loading arms var. hydraulic connections.
No. 3	Crude 4×16 in.	Loading arms var. hydraulic connections.
No. 4	Crude 4×16 in.	Loading arms var. hydraulic connections.

*As from about mid-December (date to be finalised) Sullom Voe Terminal will change flange specifications at coupler from 300 ASA to 150 ASA. All vessels calling at Sullom Voe Terminal from that date will need to present either:

(AA) 2×12 in. 150 ASA or (BB) 1×12 in. and 1×8 in. 150 ASA.

Terminal will normally load through 12 in. with 8 in. as vapour return and will no longer supply spool pieces and reducers. Owners should therefore ensure that their vessels are equipped with correct reducers/spools which meet terminal specifications.

Manifold Heights:

	Heights above chart datum	
	Max.	*Min.*
No. 1 Crude	22.70 m.	1.80 m.
LPG	19.00 m.	3.50 m.
No. 2 Crude	31.30 m.	2.60 m.
No. 3 Crude	31.30 m.	4.23 m.
No. 4 Crude	31.30 m.	4.23 m.

Maximum allowable pressure on lines and connections: 150 p.s.i.

Jetty Orientation:

No. 1	280°/100°
No. 2	135°/315°
No. 3	135°/315°
No. 4	145°/325°

Gangway: Shore tower type gangways are provided at all times. If for any reason, a shore gangway will not be available, ships will be advised in good time.

Maximum Loading Rate per Arm:

Crude: 16 in. loading arm	5,000 metric t.p.h.
Crude: 12 in. loading arm	2,500 metric t.p.h.
LPG: 8 in. loading arm	900 cu.m/hr.
LPG: 12 in. loading arm	2,100 cu.m/hr.

Connection of Loading Arms: Confirmation to be given that vessels will arrive with the required spool pieces fitted to their manifold for either crude of LPG lifting.

Manifolds should comply with latest OCIMF Standards. As a minimum there must be 500 mm. between faces of spool/reducer presented for connection.

Failure to present correct reducer/spool will result in Terminal levying a charge for their own equipment.

MOORING:

Oil Loading Berths: Four loading berths Nos. 1, 2, 3 and 4.

The loading berths are located in deep water on the Northern shores of Sullom Voe, adjacent to the Terminal complex at Calback Ness.

The berths are numbered 1 to 4 in sequence from East to West. No. 1 Jetty has facilities for both crude and LPG carriers and can accommodate vessels up to 120,000 d.w.t. Jetty Nos. 2, 3 and 4 have crude loading facilities only and are designed to accommodate tankers up to of 350,000 d.w.t. range and bulk carriers (OBO's, Ore/Oil, etc.) up to the 300,000 d.w.t. range.

Each jetty is of conventional "T" shaped construction with 4 breasting dolphins in line with the jetty head. The mooring dolphins are offset from the line of breasting dolphins to provide an optimum lead for mooring lines. Vessels may land at a maximum angle of 8° to the jetty face. Quick release mooring hooks are fitted on all dolphins. For use with large vessels, quick release mooring pulleys have been fitted on Berth Nos. 2, 3 and 4. These pulleys, 1 at each end of the berth are designed to accept a ship's mooring wire in the form of a bight.

Large flexible rubber fenders are fitted to the outer faces of each breasting dolphin. Each has a generous energy absorbing capacity but the optimum speed of approach for the largest ship is indicated by a single green light on the speed approach indicator panel on the jetty head. This equipment shows by the following combination of coloured light signals the speed of approach of the ship toward the jetty measured separately at the 2 outer berthing dolphins:

GREEN
GREEN/ORANGE
ORANGE
ORANGE/RED
RED

Any colour combination except the red (i.e. any approach speed below 22 cm./sec.) is acceptable at berthing for vessels displacing up to 100,000 tons at Jetty No. 1 and 250,000 tons at Jetty Nos. 2, 3 and 4.

The 2 lateral "distance off" indicators each comprise of 20 fibre optic bars. Each bar element is switched separately at specified distances, all bars being illuminated at 99 m. In addition to indicating distance off, this system provides some indication of the vessel's angle of approach to the jetty face.

Each mooring operation will be assisted by 2 purpose-built mooring boats.

Special Direction 1/85 Tankers and Gas Carriers Mooring Requirements:

Note 1

Except with the permission of the Harbour Master, this Direction shall apply to all vessels in excess of 10,000 tons gross.

1. In vessels equipped with synthetic moorings or a mixture of synthetic moorings and wires, a minimum of 4 headlines/sternlines, 4 breastlines and 2 springs at each end should be used.

2. Under no circumstances should synthetic ropes and wires be used leading in the same direction, to the same dolphin.

3. Where wires are used they should be of a similar breaking load to that of the ropes.

4. If conditions 1, 2 and 3 cannot be complied with the loading arms must not be connected until alternative arrangements have been arranged with the Harbour Master and the Terminal Operator.

ACTIONS TO BE TAKEN IN SEVERE WEATHER CONDITIONS

5. At least 1 tug shall be called out to assist in keeping *any* vessel alongside when all the following conditions exist:

(a) Where the mean freeboard height of the vessel exceeds the mean draft,

(b) Where the wind is gusting to 50 knots or more and

(c) When the wind is from a direction in line with or inside the berthing line of the jetty.

6. At the time of suspending loading/deballasting operations because of deteriorating weather conditions, the Terminal Loading Supervisor will advise Port Control immediately of any vessels in the condition stated in 5(a) above.

7. When a tug is called out under the conditions stipulated in (5) above:

(a) The Terminal Loading Supervisor will notify the Master of the situation and request that the vessel be brought to a state of immediate readiness.

(b) With the exception of the Port Controller, such Pilots as are available will station themselves aboard those vessels which are considered to be most vulnerable, and any vessel with a tug alongside must be attended by a Harbour Pilot throughout the period a tug is required.

(c) The Duty Harbour Master will be notified.

8. Tugs may be necessary to assist in keeping vessels alongside when some of the conditions in 5 above are absent, and may or may not be called for by the vessel. In such circumstances any vessel requiring tug assistance will also be attended by a Harbour Pilot who will board the vessel as soon as possible and remain on board throughout the whole period a tug is in attendance. In these circumstances the Duty Harbour Master will be informed.

9. Notwithstanding anything contained in 1 – 8, the Duty Port Controller may, *after consultation with the Harbour Master*, call out such tugs as are required, at any time, if he feels the situation warrants this action. In the case of large vessels in light condition for example, it may be prudent in certain circumstances to call out the tugs when the wind off the berth is less than 50 knots. In such cases the Duty Port Controller should exercise his discretion.

10. In all situations where tugs are required to assist a vessel moored alongside, a Harbour Pilot will also be stationed on board that vessel as soon as possible after tugs are called out, and will remain on board throughout the whole period the tugs are in use.

General Mooring Requirements:

(i) Masters should ensure that mooring lines are in good condition, winch brakes or securing devices should be in efficient operating order and should have a holding power of at least 60% of the breaking load of the vessel's mooring lines. (On vessels constructed before 1978 these conditions may be met by placing the winch in gear and applying power in addition to applying the brake).

(ii) Any known defects in the vessel's mooring system or limitation of mooring winch brakes should be reported to the Pilot and the Terminal before arrival in order that, if necessary, additional precautions may be agreed.

(iii) In order to avoid damage to loading arms and the serious consequences of oil pollution, the vessel should be kept close alongside at all times.

(iv) It is recommended that wires (or wires fitted with synthetic fibre rope tails of at least 25% greater breaking load to the wire), should be used for all mooring lines.

Except with the permission of the Harbour Master, the following shall apply to all vessels in excess of 10,000 tons gross.

(a) In vessels equipped with synthetic moorings or a mixture of synthetic moorings and wires, a minimum of 4 headlines/sternlines, 4 breastlines and 2 springs at each end should be used.

(b) Under no circumstances should synthetic ropes and wires be used leading in the same direction, to the same dolphin.

(c) Where wires are used they should be of a similar breaking load to that of the ropes.

(d) If conditions a, b and c cannot be complied with the loading arms must not be connected until alternative arrangements have been agreed with the Harbour Master and the Terminal Operator.

(v) Particular care should be taken to ensure sufficient transverse restraint from breast moorings. When synthetic fibre mooring lines are used, pre-tensioning of these lines on making fast will help prevent drift of the vessel away from the berth in "off the berth" wind conditions.

(vi) As soon as the vessel is secured, brakes on all mooring winches should be firmly applied. Winches must not be left on automatic tensioning. Full steam pressure or power to all mooring winches should be maintained at all times when alongside. On split drum mooring winches only one layer of rope shall be permitted on the working half of the drum.

(vii) An efficient watch must be maintained on the vessel's moorings at all times to ensure that all lines are properly tensioned and tended when required. The deck watch should make regular checks that mooring winch brakes are applied at the correct setting.

(viii) Masters should endeavour to ensure compliance with the mooring layout as advised by the Pilot. Large vessels should also use the "pulley" mooring hooks in the manner advised.

(ix) Notwithstanding anything contained above, the Duty Port Controller may, after consultation with the Harbour Master, call out such tugs as are required, at any time, if he feels the situation warrants this action.

LOADING: *Connection of Loading Arms:* Crude: The connection of loading arms will be undertaken by shore personnel. Vessels should arrive with 16 in. ASA 150 manifolds, ready for connecting to the loading arms.

LPG: The connection of loading arms with be undertaken by shore personnel. The terminal carries a wide range of LPG reducers both ASA 150 and ASA 300, rating up to 12 in.

Masters should ensure that fire extinguishers and fire hoses are ready for use at the ship's manifold, in accordance with jetty regulations.

Crude Oil Storage: 16 conventional floating roof storage tanks are constructed, each with a capacity of 600,000 bbls. These provide storage facilities in the event of port closures and ensure sufficient stocks to enable tankers to load without delay.

The storage tanks have been constructed with bases as much as 30 m. above sea level, to allow gravity loading. However 6 oil loading pumps are installed to increase the loading rate as may be required by the vessel.

Loading Rates: A maximum loading rate of 30,000 t.p.h. can be provided by the Terminal with a maximum of 20,000 t.p.h. to any one berth.

The LPG loading system delivers up to 3,000 cu.m./hr.

Cargo Measurement: Meters are installed for cargo measurement.

Early Departure Procedure: An early departure procedure is operated at the Sullom Voe Terminal.

LIQUEFIED PETROLEUM GAS FACILITIES: There is a single LPG insulated pipe-line from the LPG storage area to Jetty No. 1 for tanker loading. The LPG tankers using Jetty No. 1 will range in size from 10,000 to 75,000 cu.m. capacity and they will transport butane and propane under refrigerated conditions as in the onshore tankage.

Navigation, Mooring, Berthing: Except by permission obtained from the Harbour Master, no LPG ship shall at any time be navigated in, lie on, or be moored in any part of the harbour.

No LPG ship shall be anchored or moored except

(a) at a quay duly approved by the Harbour Authority
or
(b) in such position as the Harbour Master shall from time to time direct

and no LPG ship shall be removed from such last mentioned position except in accordance with the order or permission of the Harbour Master or for the purpose of leaving the harbour forthwith.

An LPG ship shall at all times lie safely afloat.

While an LPG ship is at a quay

(a) it shall be securely made fast as close alongside as possible in a manner approved by the Harbour Master.

(b) its moorings shall be adjusted from time to time to allow for the rise and fall of the tide and for the loading and discharging of cargo.

Except in accordance with such conditions as may from time to time be prescribed by the Harbour Master, no ship or harbour craft shall, when moored, unmoored or anchored, lie or pass within 30 m. of any LPG ship which is moored or anchored, without permission of the Harbour Master.

Loading and Discharging: All jetty LPG drains and ships' scuppers whereby LPG can, in case of spillage, escape to the Harbour shall be open before loading or discharging commences and shall be kept open during the whole period of such operations.

All vessels calling at Sullom Voe Terminal must be in possession of a certificate of fitness under the terms of the IMO code for the construction and equipment of ships carrying liquefied gases in bulk, or be in possession of an appropriate Classification Society's Certificate.

Also see "Report" dated October 1983.

DRY CARGO FACILITIES:

Construction Jetty: A concrete pier suitable for coastal traffic is located in Garths Voe, East of Jetty No. 1.

This pier, orientated on a 108°/288° axis is 100 m. long and can accept ships on both the North and South faces.

The North Berth is equipped with a fixed Ro/Ro ramp which has a width of 10.7 m., a total length of 23.7 m. and a fixed gradient of 1:22. The height of the sill is 1.67 m. above MHWS.

The pier is well fendered with patent fenders and tyres. The depths at the pier range from 9.9 m. at the Eastern extremity, rising to 3.9 m. at the Ro/Ro ramp.

Bunkers can be supplied by road tankers to vessels using this jetty.

There is no permanent dock labour force available on site at Sullom Voe. However, stevedoring services can be obtained as and when required from Lerwick, arrangements for which should be made through the local ships' Agents or receivers of cargo, as appropriate.

Garths Pier: This 2 finger jetty is situated adjacent to Sella Ness Industrial Estate.

The inside berths have a length of 41 m. and the outside berth a length of 65 m. Each finger is 7.3 m. wide. There is a depth of 4 m. alongside for the lengths stated; thereafter the depth decreases rapidly.

Graven Pier: A small concrete fishing pier is situated on the Southern shore of Garths Voe. The pier has been designated as an unsafe structure and must not be used. Vessels previously using Graven Pier should now use Garths Pier.

Tug Jetty: Harbour tugs and pilot boats are stationed at an "L" shaped jetty located on the Southern shore of Garths Voe adjacent to Sella Ness. This jetty, of cellular design is constructed of concrete and steel.

Fendering arrangements consist of used tyres suspended at intervals along the jetty face. This pier is suitable for coastal traffic but is not used as such on a regular basis.

The present minimum depth off the main face of the jetty is approximately 6.9 m.

Duty paid gas oil available from bunkering points on this jetty.

OIL POLLUTION SURVEILLANCE: Only clean ballast contained in tanks completely segregated from main cargo tanks will be allowed to be discharged into the Harbour, but then only after testing by the Terminal Operator and approval by the Port Authority.

Recent pollution of beaches and serious damage to wildlife around the shores of Orkney and Shetland suggests that certain vessels have disregarded the IMO Conventions on Oil Pollution and discharging dirty ballast whilst approaching or immediately after sailing from Sullom Voe.

Such procedures cannot be condoned by the U.K. Department of Trade, Local Authorities or the Terminal Operator, and with the object of preventing this practice (which is contrary to internationally agreed rules) air surveillance of all shipping in waters around Orkney and Shetland has been introduced.

As detailed in the section entitled "ETA Requirements" (see "Radio"), Masters are requested to advise Sullom Voe Port Control (Telex: Sulvoe 75142. Telegraphic Address: Portcontrol Sullomvoe) of their ETA 24 hours in advance of arrival. In addition, this message is to include the estimated time of crossing Lat. 58° 20′ N., Longitude on crossing this Latitude, and the intended inward courses and turnpoints to the Gruney Island Pilot Station (Lat. 60° 38.6′ N., Long. 01° 15.3′ W.). Vessels arriving from the North Atlantic or Northern North Sea should use a position 200 miles from the pilot station.

Prior to sailing from Sullom Voe, all vessels are requested by the Port Authority to indicate intended outward bound courses and turnpoints until South of Lat. 58° 20′ N. or 200 miles from the pilot station as appropriate. This should be detailed on the Tanker Safety Checklist provided by your Agent.

Any vessel sighted discharging dirty ballast will be immediately reported to the U.K. Government Authorities for appropriate action to be taken. In such circumstances, vessels may be liable to extensive delay until investigations have been completed.

Prevention of Oil Pollution: Prior to arrival, vessels are requested to ensure that all crew members are conversant with the anti-pollution regulations, which must be complied with at all times.

Principal causes of pollution are leaking ship side valves, cargo/bunker overflows and pumping engine room bilges. Therefore it is recommended that sea valves, overboard discharges (which should be shut) and ballast/cargo/bunker/bilge operations are checked by the Chief Officer and the Chief Engineer before arrival. Scuppers must be plugged on main and poop decks in respect of vessels loading/discharging bulk oil.

On arrival the terminal will give all assistance necessary but are empowered to take action in the event of contravention of pollution prevention requirements.

Masters must advise if their vessel has sustained any damage which could cause oil pollution and confirm any known oil losses from hull or sea valves.

Vessels are required to arrive at the Sullom Voe Terminal with a total deadweight of net less than 35% of summer d.w.t including bunkers, fresh water and stores.

Vessels should confirm in advance the amount of ballast, indicating the quantities of segregated ballast, and cargo tank ballast, separately. (See "Radio" – Pre-arrival information).

BALLAST:

Ballast Requirements: For the purpose of manoeuvring, all vessels are required to maintain a reasonable ballasted condition, subject to the requirements specified in the section dealing with Oil Pollution Surveillance.

Vessels should carry sufficient ballast so that the propeller remains immersed whilst maintaining a reasonable stern trim.

Masters are advised that the Port Authority requires, unless otherwise directed by the Harbour Master, that the propeller of any ship to be immersed at all times when vessels are alongside. When operations permit, the proportion of cargo loaded to ballast remaining onboard must be such as to ensure that the vessel can be safely manoeuvred at any time whilst in the harbour. It must be understood that shifts of wind and changes of wind force in Sullom Voe are at times violent and the adoption of an adverse trim in relation to the ship's optimum manoeuvring characteristics will not be accepted.

Ballast Reception Facilities: It is prohibited to discharge any ballast other than segregated clean ballast into the waters of Sullom Voe.

All dirty ballast or non-segregated ballast will be discharged ashore for treatment.

The Terminal can accept ballast whilst providing the vessel with cargo. Ballast will initially be pumped into settling tanks where excess oil will be skimmed off into recovered oil tanks. The remaining ballast will undergo further treatment before being discharged into Yell Sound. The ballast water will be monitored throughout the cleaning process.

Masters are reminded that vessels operating with CBT will not be permitted to discharge such ballast to sea. Furthermore any tank operating in CBT mode into which cargo is to be loaded must be inerted to below 8% oxygen content. Failure to do so will result in vessel vacating the berth.

Inert Gas: A random check of the quality of the inert gas in 3 of the vessels' tanks will be made on arrival alongside to ensure the vessel complies with the statutory requirements regarding inert gas. If any of the tanks are found to have an oxygen content in excess of 8% the vessel will be required to vacate the berth and return to sea to complete inerting.

Purging of tanks whilst alongside is not permitted.

Discharge of Dirty Ballast Water: The discharge of ballast water from oil cargo tanks or any ballast water containing quantities of oil or high levels of mineral or chemical pollutant, into the waters of the harbour is prohibited.

Ballast contained in CBT tanks will not be permitted to be discharged into the harbour.

The discharge of ballast water from segregated or permanent ballast tanks into the waters of the harbour will be permitted provided that:

1. The Master of the vessel advises the Harbour Authority prior to arrival:
   (a) The place at which the ballast was taken.
   (b) The quantity and disposition of the ballast.
   (c) That to his knowledge the ballast is free from oil contamination.
2. Samples have been taken and analysed by the Terminal Operator. Hydrocarbon level to be 5 p.p.m. or less.
3. The Master of the vessel advises the Harbour Authority:

On each occasion he intends to discharge the ballast and at least 30 minutes before commencing discharge.
   (i) The time at which he intends commencing deballasting, and
   (ii) The time at which he expects to complete deballasting.

The Oil Pollution Control Officer of the Harbour Authority will on occasions board vessels carrying segregated ballast to obtain samples. Analysis will be made of these samples to ascertain the quantity of hydrocarbon, colliforms and heavy metal pollutants within the ballast. The Harbour Authority may, as a result of information so obtained, refuse permission for the discharge of segregated ballast water taken on board in certain locations.

The discharge of segregated ballast is not to commence before permission has been received from the Loading Supervisor. He will have:

(i) confirmed with the laboratory that the hydrocarbon level is 5 p.p.m. or less;
(ii) advised Port Control that the discharge of segregated ballast is about to commence.

MASTERS ARE STRONGLY ADVISED TO CLOSELY MONITOR THE DISCHARGE OF SEGREGATED BALLAST AT REGULAR INTERVALS TO ENSURE THAT OIL IS NOT ENTRAINED IN THE BALLAST WATER.

MEDICAL: Medical attention for ship's crews is available on request through Agents. All specialist services including inoculation and vaccination are available.

FUEL: There are no bunkering facilities available for tankers calling at the Port of Sullom Voe.

FRESH WATER: Potable water can be supplied to tankers at Sullom Voe in an emergency. A small charge is levied for the use of the facility.

CUSTOMS: A selective system of boarding commercial vessels arriving from a non-U.K. port, will apply at the Sullom Voe Terminal.

CONSULS: In Lerwick.

Denmark	(C. W. L. Aitken)	106a Commercial St.	Lerwick 3057

REPAIRS: Engineering facilities are available to carry out repairs afloat to hull and machinery. Drydock facilities do not exist for vessels over 120 ft.

Electronic Navigational Aids and Radio: All major companies have agencies in Shetland. Repair facilities exist for all types of electronic equipment.

Engine Readiness: Main engines must be maintained in a state of readiness for vacating the Terminal at short notice at all times except in the cases of approved repair work as detailed in Regulation 14 of "Jetty Safety Regulations".

REPATRIATION: Crew changes can normally be arranged. Air and sea connections are available to mainland destinations.

It should be borne in mind, however, that during the Winter months delays to air traffic are not uncommon due to prevailing weather conditions whilst in Summer delays can be experienced due to low visibility.

Ships will not be permitted to retain their berth awaiting the arrival of crew members.

AIRPORT: Shetland's airport network is within easy reach of Sullom Voe and scheduled flights are available daily to all major U.K. cities, with connections to worldwide destinations.

The Royal Bank of Scotland. Tel: Lerwick 3540.

GENERAL:

The following services can be provided for vessels by the Shipping Agencies. Masters are requested to provide notice of requirements prior to arrival.

Compass Adjusting: A service is available for large vessels. Requests should be made in good time to ship's Agents in order that the adjuster may board with the Pilot on arrival.

Storing: Due to the high berth occupancy at Sullom Voe it is not possible to carry out major storings. However, a limited amount of fresh provisions for immediate store requirements can be supplied providing it can be easily handled by the ship's crew.

Fresh and frozen meat can be supplied in any quantity with Shetland lamb a speciality. Shetland knitwear goods of high quality are available at reasonable prices. Other local products include sheepskin rugs, traditional jewellery and handicrafts.

Bonded Stores: Bonded stores are available in any quantity.

Lubricating Oils: Most major oil companies have authorised dealers in Shetland. Lubricating oils of all grades are available at competitive prices.

Charts and Nautical Publications: Available on application to ship's Agents. Advance notice is required for the supply of large sets.

Lloyd's and Salvage Association: If service or survey is required, this may be obtained through their Shetland Agents, Hay & Co. (Lerwick) Ltd.

Sea Travel: P&O Ferries maintain a regular Ro/Ro and Passenger ferry service between Lerwick and Aberdeen.

Provisioning: This service is provided by ship's Agents on request.

Shore Leave/Taxis: All personnel proceeding ashore must be in possession of a shore pass, a supply of which is handed to Masters on the vessel's arrival.

Transport is provided free from the root of each jetty to Seafarers' Centre, and taxis can be arranged for those wishing to travel further afield in Shetland.

There is no public transport system serving the Sullom Voe area.

Telephones: This facility is provided at the Seafarers' Centre operated by the British Sailors' Society and situated outside the main gate.

Weather Routeing: This service is available to Shipmasters on application to Shetland Weather Centre.

British Sailors' Society: The British Sailors' Society has a Seafarers' Centre just beyond the Terminal Entrance. A free mini-bus service is provided between the jetties and the centre which is open from 1100 hrs. to 2300 hrs. Monday to Saturday and from 1230 hrs. to 1430 hrs. and 1900 hrs. to 2300 hrs. on Sundays.

Amongst the facilities provided are the following: A Chapel, Library, three International Telephones, Television Room, Snooker and Pool Tables, Darts, Shop, Fully Licensed Bar and Light Meals.

The resident manager, Mr. David Hughdie, is there to assist all seamen whatever their Nationality, Colour or Creed and there are three Honorary Chaplains whose services are also available.

Any Seafarer in need of practical, spiritual or welfare help is invited to contact the manager or his staff on Sullom Voe 242715.

CHARTS AND PUBLICATIONS:

Charts: British

B.A. 1119	Orkney and Shetland Islands, Fair Isle Channel.
B.A. 3281	Shetland Islands, N.W. Sheet
B.A. 3282	Shetland Islands, N.E. Sheet
B.A. 3283	Shetland Islands, South Sheet
B.A. 3297	Sullom Voe.
B.A. 3298	Yell Sound.
B.A. 3292	Eastern Approaches to Yell Sound, etc.
B.A. 1233	Northern Approaches to Shetland Islands.

Also see "Publications".

Note: These new charts are metric.

New editions of B.A. 1119, B.A. 3298 and B.A. 3292 may be published during the currency of this "Guide".

Pilot Books: North Coast of Scotland Pilot N.P. 52.

Admiralty Tide Tables: Admiralty Tide Tables, Volume 1, N.P. 201-8.

Tidal Stream Atlas: Orkney and Shetland Islands N.P. 209.

Approaches to Sullom Voe (Shetland Islands Council Publication).

Lights: Admiralty List of Lights, Volume A.

Additional Charts and Publications relevant to Sullom Voe may be published in the near future.

Admiralty Agents for the supply of hydrographic charts and publications are Hay & Co. (Lerwick) Ltd.

Publications – Navigational: Masters and/or Agents are requested to ensure that the following publications are available on board any vessel bound for Sullom Voe, which intends to navigate under Sections 11 and 12 of the Pilotage Byelaws:

a. Sullom Voe Harbour Authority – General Directions for Navigation.
b. Sullom Voe Harbour Byelaws.
c. Sullom Voe Pilotage Byelaws (1979).
d. Notices to Mariners in force for the area, issued by the Director of Ports and Harbours.
e. Charts B.A. 3297, B.A. 3298 and B.A. 3292.
f. Approaches to Sullom Voe – Tidal Stream Atlas.
g. Information Book – Port of Sullom Voe, which includes tide tables.

NOTICES:

Landing in Great Britain of Live Animals, Live Birds and Meat:

The attention of Masters is drawn to "Notice to Masters of Vessels and Commanders of Aircraft (IM24 (Rev 79))" of which the following are extracts:

Diseases of Animals Acts 1950 and 1975, Rabies Act 1974, Destructive Imported Animals Act 1932 and Ponies Act 1969.

WARNING: Her Majesty's Government exercise strict controls at ports and airports to prevent the introduction of animal disease and destructive animals into Great Britain. Severe penalties may be applied to those who do not comply with the import regulations.

Dogs, cats and other mammals (including ship's pets) brought to Great Britain on board a vessel which are not intended to be landed do not need a licence, but must at all times be securely confined in an enclosed part of the ship so as to prevent their escape and must not come in contact with any other animals except those similarly confined. The authorities must be informed immediately if any animal should escape.

Notice to Mariners 4/82:

Spur Booms

Anti-Pollution Spur Booms have been established at several permanent sites around the shores of Sullom Voe, and mooring buoys have been laid to facilitate quick deployment at each location as follows:

		Buoy Position	
Location	*Boom Layout*	*Latitude*	*Longitude*
Tivaka Taing	Spur Boom	60° 28′ 41″ N.	01° 18′ 37″ W.
Fugla Ness	Spur Boom	60° 27′ 04″ N.	01° 18′ 50″ W.
Lang Ayre	Twin Boom	60° 26′ 53″ N.	01° 20′ 12″ W.
Voxter Voe	Twin Boom	60° 24′ 36″ N.	01° 20′ 40″ W.
Calna Taing	Spur Boom	60° 26′ 26″ N.	01° 19′ 21″ W.
Scatsta Voe	Twin Boom	60° 26′ 38″ N.	01° 16′ 50″ W.
RAF Jetty	Spur Boom	N/A	
Roe Clett	Spur Boom	60° 28′ 56″ N.	01° 17′ 19″ W.

Buoy Description: Body: Yellow Pillar; Character: Gp. Fl. (4) ev. 12 sec.; Daymark: Yellow St. George's Cross; Range: 3 miles; Light: Yellow.

Notice to Mariners 5/82:

Bight of Haggrister: Mooring Buoy. A permanent barge mooring has been established in position: Lat. 60° 24′ 37″ N., Long. 1° 22′ 02″ W. Description: Yellow cylindrical; unlit.

Dumb barges will be permanently moored at the buoy.

Mariners are requested to exercise caution when navigating in the vicinity of these locations.

HYDROGRAPHIC NOTES:

Prohibited Anchorages

1. Owing to the existence of the tanker turning area within the vicinity of Sella Ness and Scatsta Ness, Mariners are advised that anchoring East of a line joining the following positions is prohibited, viz.:

From Position: Lat. 60° 26′ 57″ N., Long. 01° 19′ 17″ W.
To Position: Lat. 60° 26′ 32″ N., Long. 01° 18′ 10″ W.

2. Owing to the existence of an outfall pipe between Skaw Taing and Swarta Taing, all vessels are advised that fishing and anchoring is prohibited within the area bounded by Little Roe and lines produced seawards from 2 sets of day transit marks diamond in shape and yellow in colour which are established in the following positions:

A: Lat. 60° 29′ 15″ N., Long. 01° 16′ 42″ W.
Lat. 60° 29′ 10″ N., Long. 01° 16′ 44″ W.
B: Lat. 60° 29′ 10″ N., Long. 01° 16′ 17″ W.
Lat. 60° 29′ 06″ N., Long. 01° 16′ 21″ W.

Outfall Marker Buoy – Calback Ness: A yellow spherical navigational buoy with a yellow St. Andrews cross topmark and a radar reflector showing a light Gp. Fl. 4(Y). ev. 12s. has been established in position:
Lat. 60° 29′ 29″ N., Long. 01° 16′ 08″ W.

This buoy marks the seaward end of the ballast water outfall pipe.

Permanent Navigation Marks Tanker Jetties – Sullom Voe

Permanent navigation marks have been established on the mooring dolphins at either extremity of the tanker jetty complex as follows:

No. 1 Jetty East end dolphin in position Lat. 60° 27′ 21″ N., Long. 01° 17′ 02″ W. two fixed red lights vertically disposed 2 m. apart, the lower of which is 5 m. above MHWS. Visible 3 miles.

No. 4 Jetty West end dolphin in position Lat. 60° 27′ 56″ N., Long. 01° 18′ 20″ W. two fixed red lights vertically disposed 2 m. apart, the lower of which is 5 m. above MHWS. Visible 3 miles.

Misuse of VHF Radio:

Owners, Masters and Skippers are reminded to read Merchant Shipping Notice No. M814, which refers to the misuse of VHF Radio.

The improper use of VHF is illegal and can cause serious disruption to communications concerned with the movement of shipping in the port area.

The co-operation of all port users is requested to ensure that such misuse does not occur.

SAFETY: *Smoking:* Smoking is prohibited on vessels during loading operations. Except in 2 or at most 3 smoking rooms allocated by the Master and approved by the Terminal Representative.

Matches and lighters shall not be carried by personnel outside the approved smoking areas, or on the jetties.

The Seaman's pass issued to personnel going ashore by Sullom Voe Terminal carries the information that matches are available at the Main Gate for use outside the Terminal premises. The matches are issued free of charge.

Fire Precautions: Every vessel's fire-fighting appliances, (including main and emergency fire pumps) must be kept ready for immediate use with at least 1 fire pump maintaining pressure on the main.

Before deballasting and loading/discharging operations commence, and during periods when permitted repair work is being carried out, at least 2 fire hoses must be uncoiled and connected to the fire main. One of the fire hoses must be sited forward and the other abaft the manifold.

An International Shore connection shall be available on the vessel's fire main in the vicinity of the gangway.

Jetty Fire-Fighting Facilities: The oil loading jetties are each equipped with 2 independent fire-fighting systems, one for water alone and the second for either water or foam mixture.

These systems supply hydrants which are spaced along the jetty access road and jetty head.

Monitors are installed to provide a water curtain in the area of the jetty head and between the access tower and manifold area. Elevated monitors are also positioned at the top of the access and monitor towers. A sprinkler system protects the access tower.

Hose couplings are 2.5 in. standard instantaneous female type and the fire main to the access tower can accept international connections.

The working pressure of the fire system is 250-260 p.s.i. A fire hose connection is situated on the construction jetty to allow fire-fighting tugs to link into the system.

POLLUTION: It will be appreciated that oil spillages are viewed seriously by Government, Local Authorities, Port Authorities and Terminal Operators. Spillages will be investigated by the appropriate authorities and the Master and/or Owner may be liable to prosecution. Delay to the vessel could well arise.

Masters are therefore requested to ensure that every precaution is taken to prevent oil spillages at the Sullom Voe Terminal.

COASTGUARD SERVICES: H.M. Coastguard is the authority responsible for initiating and co-ordinating all sea and coastal search and rescue operations in the Shetland sea area. They also keep in close touch with the S.A.R. organisations of all countries in adjoining sea areas.

Regular stations are maintained at Lerwick M.R.S.C. (Marine Rescue Sub Centre), with a sector office in the Port Administration Building at Sella Ness.

Rescue equipment is maintained and manned by auxiliary coastguards at Baltasound, Mid Yell, Fetlar, Out Skerries, Whalsay, Bressay, Noness, Sumburgh, Fair Isle, Burra Isle, Walls, Sandness, Hillswick and North Roe.

Safety and Weather Information is available through the remote controlled VHF radio sites at Saxavord (Unst), Collafirth, Lerwick and Sumburgh. A 24 hour radio watch is maintained by Lerwick M.R.S.C. (call sign "Shetland Coastguard") on Channel 16 and 2182 kHz, and by Sullom Voe Coastguard (Channel 16) during normal office hours or as required.

This enables safety and distress calls from vessels, up to 40 miles out from Shetland, to be picked up on the Coastguard VHF network. On receiving a call for assistance or advice, the Coastguard can instantly alert the appropriate facility, which might be a military or civilian helicopter, RNLI lifeboat, shore rescue teams or vessels at sea.

Other VHF Channels are 0, 6, 10, 67 (working) and 73.

A VHF D/F facility through (Compass Head) Sumburgh Aerial on Channels 0, 6, 10, 16, 67 and 73.

Civilian SEARCH AND RESCUE HELICOPTERS, based at Sumburgh, are contracted by the Department of Transport (H.M. Coastguard) for long range search and rescue purposes. These helicopters are fitted for winching, and carry comprehensive rescue equipment including a salvage pump and inflatable dinghy capable of being dropped to vessels in distress.

They have a speed of about 100 knots and a range of approximately 150 nautical miles from Sumburgh. Navigation equipment includes V.O.R., I.L.F., Decca A and D/F Console. Communications facilities are:

MF	2182, 3095 and 5693.5 kHz
VHF AM	118/135.95 MHz
VHF FM	Marine Frequencies

MEDICOS: Vessels requiring medical advice or medical assistance should adhere to the radio regulations and contact either Collafirth or Shetland Radio on Channel 16 VHF. If unable to contact the coast radio station, vessels can contact Shetland Coatguard direct on Channel 16 VHF.

R.N.L.I. STATIONS: The following lifeboats are on station:

Lerwick: 58 ft. Arun Lifeboat 'Soldian'.
Details: Speed 18 knots, range – 220 nautical miles.
Navigation – Radar, Decca, D/F etc.
Communications MF 2182 kHz, 1647.5 kHz, 1662.5 kHz. 1827 kHz, 2226 kHz, 2241 kHz. 2306 kHz, 2381 kHz, 2548 kHz.
VHF Channels 0, 6, 8, 9, 10, 12, 14, 16, 27, 67.

Aith: 58 ft. Arun Lifeboat 'Snolda').
Details: Speed 17.2 knots, range 237 nautical miles.
Navigation – Radar, Decca, echo sounders, MF D/F, VHF D/F.
Communications MF (RX): 1647.5, 1662.5, 1792, 1827, 2182, 2241, 3023.
MF (TX): 1647.5, 1662.5, 2009, 2016, 2104, 2182, 2241, 2381, 3023 kHz.
VHF/FM (Marine Band): 60 Channel set.

All requests for lifeboat or helicopter assistance should be routed through Shetland Coastguard M.R.S.C.

Ambulance	Tel: Sullom Voe 242798	VHF Channel 10
Security	Tel: Sullom Voe 242798	VHF Channel 10

All emergency services at the oil terminal are co-ordinated by the "Emergency Response Control Room" situated at the Terminal fire station.

On vessel's arrival at the Terminal, the responsible officer and the Loading Supervisor will discuss action to be taken in an emergency situation. The Master of the vessel should study and comply with the 'Jetty Safety Regulations', a copy of which will be supplied.

Safety inspections will be undertaken by the Loading Supervisor throughout the vessel's stay alongside. Spot checks will also be made by the Terminal emergency services department.

In the event of an emergency, vessels should immediately contact Sullom Voe Port Control 242494/242495/242551 or VHF Channel 10.

SHIPMASTER'S REPORT:

It is necessary to provide access to the vessel on the offshore side, in the form of accommodation ladder with vessels having high freeboard, at all times when alongside.

All crew members require passes for shore leave and must use transport from the jetty. This transport is arranged by the security guard in the hut at shore end of jetty.

Usually with moorings it is springs first then breast lines. The Terminal is not concerned with head or stern ropes. Some of the dolphins are fitted with shore based pulley systems and these count as 2 ropes for mooring purposes.

Telephone calls may be made from the Mission (U.K. and International) and paid for in pounds sterling.

REPORT: October 1983.

Gas Carriers: Gas carriers shall conform to the following requirements and the pipe-line operators concerned shall, at the time of nomination, confirm to the terminal operator that the carrier nominated so conforms throughout the time she will be within the port limits.

a. The tanker conforms to the standards required in the EEC memorandum of understanding or to state control.

b. The tanker complies with the Statutory Instrument 1981 No. 1077 Merchant Shipping, Merchant Shipping (Tankers) (EEC requirements) Regulations 1981.

c. The tanker can comply with the conditions of carriage as specified on her IMO Certificate of Fitness.

d. The tanker will during the loading and simultaneous handling of ballast follow the procedures as outlined in her approval trim and stability document.

e. The tanker can be adequately moored to equivalent OCIMF standards, i.e. resisting loads due to any of the following current conditions acting simultaneously with a 60 knot wind from any direction:
3 knots at 0° and 180°
2 knots at 10° and 170°
3/4 knots from direction of maximum beam current loading.

f. The tanker can accept a minimum bulk loading rate per hour of 3% of her total cargo carrying capacity up to a maximum of 3,000 cu.m./hr.

g. The tanker reliquefaction units are capable of handling a minimum bulk loading rate per hour of 3 per cent of her total cargo carrying capacity up to a maximum of 3,000 cu.m./hr.:
(a) without venting to atmosphere and:
(b) without the use of a vapour return line to shore.

h. All cargo tanks will be cooled down on arrival and the vessel ready to commence loading. Any vessel that cannot comply and requires to purge and/or cooldown prior to loading will only be accepted on the basis of prior agreement having been reached between the terminal operator and the pipe-line group nominating the vessel.

i. That the following tests will be carried out within 24 hours before arrival and any defect, and any change in the status of the systems thereafter, be reported to the Port Authorities:
(a) ventilation of compressor/pump/control room.
(b) gas detection system
(c) emergency shut down system
(d) pressure and temperature control units
(e) cargo tanks' safety relief valves setting.

SHIPMASTER'S REPORT: August 1984.

Vessel: 140,000 d.w.t.

Tugs: Normally 4 tugs for berthing and 2 tugs for sailing, tugs' lines. All tugs make fast and 2 push. On arrival the forward tug requires a heaving line from the main deck, he then steams forward to pass his line up through the centre fairlead.

Moorings: Under normal conditions first 2 backsprings, then 2 to 3 breasts, then 2 to 3 head/sternlines.

Gangway: Shore gangway.

Departure: On departure Pilot normally boards 1 hour after completion of loading. EDP is rarely used.

Surveyor: Lloyd's Surveyor comes from Aberdeen and requires 2 to 3 days' notice.

AUTHORITY: Shetland Islands Council, Ports and Harbours Department, Port Administration Building, Stella Ness, Mossbank, Graven, Shetland ZE2 9QR. *Tel:* Sullom Voe (0806) 242551. *Telex:* 75142 Sulvoe G. *FAX:* Sullom Voe (0806) 242237. *Cables:* Portcontrol Sullomvoe. *Contact:* Captain G. H. Sutherland, Director of Ports and Harbours.

SUNDERLAND: 54.55 N. 01.21 W. (See Plan)

DOCUMENTS:

Crew List. 1 form I.B.6A to be delivered to an Immigration Officer within 24 hours of arrival.

Passenger Lists. Form P.R.4. in duplicate and Form P.R.10 in duplicate.

Customs Documents. Crew Declaration Form C.142 in duplicate.

Cargo Manifests, triplicate.

Ship's Papers:
Register.
Load Line Certificate.
Safety Radio Certificate.
Safety Equipment Certificate.
Safety Construction Certificate.
Derat Certificate.
Customs Light Bills.

PILOTAGE: Call Sunderland Harbour Radio, Channel 16, working Channel for port is 14. Pilotage not compulsory, but advisable for all but small vessels. Pilots maintaining continuous watch on VHF Sound signals for vessel requiring Pilot is Morse Code No. 6. Pilot boards 0.5 to 0.75 miles off piers. In bad weather pilot cutter leads vessel into inner harbour, and Pilot boards there.

ANCHORAGES: 0.5 to 0.75 miles N.E. of Roker Pier Lighthouse.

RESTRICTIONS: Vessels may enter South Dock from 2 hours before until half an hour after high-water. Vessels may lock in outside of these times depending on draft and state of tide. For North Dock and Corporation Quay restrictions depend on draft and state of tide.

MAX. SIZE: South Dock – length 142 m. beam 18.9 m., draft 8.08 m. with Spring tides, 7.16 m. with Neap tides.

River – length 183 m., beam – no restriction, draft 8.38 m. subject to siltage.

HEALTH: Pratique procedure: Pratique granted by Port Health Authority on arrival.

Suspected disease or fever: All ships from suspected areas must radio Port Health Authority 24 hours in advance of arrival, stating general condition of crew members. Pratique is automatic when ships arrive from other U.K. ports.

Also see "Health – All Ports" before first U.K. port.

RADIO: Cullercoats.

TUGS: Join vessel at or outside harbour entrance. Tug's ropes normally used.

BERTHING: In South Dock vessel must arrive from 2 hours before up to 30 minutes after high water. Vessels may lock in as under "Restrictions". At Corporation Quay small vessels berth at any time. Large vessels usually berth at same time as mentioned for South Dock.

Bridge swung to allow vessels to pass through.

BRIDGES: In South Dock bridge swung to allow vessel to pass through. Railway Bridge clearance, 25.1 m. MHWS.

STEVEDORES: The Port of Sunderland Authority carry out all stevedoring. Agents should advise as early as possible in order to arrange berthing and gangs, 5 to 6 days notice if possible. ETA from ship 2-3 days in advance. Working rates of principal commodities are;

Bagged cargoes	15	t.p.h.	
Scrap – fragmented	100	,,	
Scrap – heavy	25	,,	
Chrome and heavy ores	40	,,	
Wood Pulp	30	,,	(loose bale)
Wood Pulp	80/90	,,	(unitised)
Limestone	325	,,	
Containers	15	units per hour	

MEDICAL: Well served with General practitioners and hospital facilities, and attention can be arranged at very short notice. However, unless urgent, 24 hours notice desirable.

TANKERS: 4 installations (lines either 0.16 m. or 0.2 m.) 3 installations in South Dock and 2 berths, the S.E oil berth 98 m., the S.W. oil berth 89 m. 1 vessel of maximum length 142 m. can use this berth, draft 8.08 m. Spring tides; 7.16 m. Neap tides. At Corporation Quay vessel 183 m. long, draft 8.58 m.

DENSITY: Usually 1025. May be less after heavy rain.

FRESH WATER: Available. Arrangements can be made to supply water at any time.

FUEL: Bunkers supplied at Corporation Quay pipe-line from Petrofina Ltd. All grades available – Corporation Quay and Hendon Dock. Viscosities range from 32 secs. to 3,500 secs., and can be blended to any requirement in this range. 12 hours' notice necessary. Rate 250 t.p.h.

GANGWAY/DECK WATCHMEN: Services of watchmen recommended.

OPENING/CLOSING HATCHES: This work is normally carried out by ship's crew, otherwise shore riggers.

CERTIFICATES:
Register.
Load Line Certificate.
Safety Radio Certificate.
Safety Equipment Certificate.
Safety Construction Certificate.
Derat Certificate.

CUSTOMS ALLOWANCES: As per H.M. Customs and Excise Regulations.

IDENTIFICATION CARDS: Not required. Must possess valid Seaman's Book and/or Passport.

CONSULS:

Denmark	Tel. Sunderland	670811
Iceland	,, ,,	670811
Finland	,, ,,	672846
France	,, ,,	673694
Netherlands	,, ,,	75441
Norway	,, ,,	670101

REPAIRS: All repairs possible.

DRY DOCKS: One dry dock in use, length 112 m., breadth 16.5 m.

Floating dock, length 65.5 m., breadth 13.72 m.

REPATRIATION: Facilities available for effecting repatriations, with good rail, road and air communications.

AIRPORT: Approximately 20 miles. Newcastle Airport served by regular airlines, all the year round, to all parts of the world. Air UK operate flights to Aberdeen, Amsterdam, Bergen, Copenhagen, Humberside, Norwich, Paris and Stavanger.

HOLIDAYS: Official Holidays for General Cargo ships: New Year's Day (no work except by special agreement); Good Friday; Easter Monday; May Day; Spring Bank Holiday; Summer Bank Holiday; Christmas Day (no work except by special agreement); Boxing Day (no work except by special agreement).

POLICE/AMBULANCE/FIRE: Police Station Tel. Sunderland 76155; Ambulance Control Tel. Sunderland 72875; Fire Station Tel. Sunderland 56456. Or call 999 from any telephone and ask for service required.

TELEPHONES: Permanent arrangements do not exist, but a temporary arrangement can be made at any time.

AUTHORITY: Port of Sunderland Authority, Barrack Street, Sunderland SR1 2BU. *Tel:* (0783) 40411. *Telex:* 53483. *Contact:* Harbour Master.

SWANSEA: 51.37 N. 03.56 W. (See Plan)

DOCUMENTS:

C142	2 copies	Crew Declaration
C14	3 copies	Stores Declaration
C13	2 copies	General Declaration (completed by Agent)
C16	2 copies	Cargo Inward Declaration
C74	1 copy	Master's Authority (Agents complete)
C1320	2 copies	Cargo In unregistered spaces

These documents are to be completed and presented with copies of manifests and ship's documents at the time of report.

PILOTAGE: Compulsory for vessels of 1,500 g.r.t. and above. Request for Swansea Bay Pilots by International Signal Code for Sea Pilots, by telephone call for Dock Pilots. Telegraphic address for Swansea Pilots is "Pilority, Swansea".

Advance notice of ETA required at least 12 hours. VHF Channels 16 and 6. Pilot boat has bright yellow hull with red boot-topping; superstructure painted white. Pilot cutter's sound signal is "SM", 3 short and 2 long blasts. The area of boarding is usually 1 mile S.E. of Mumbles Lighthouse in all weathers. Usual requirements for ladders are in force, and Pilots require ladder to be about 4 ft. to 5 ft. above water.

ANCHORAGE: About 1 mile S.E. of the Mumbles Lighthouse.

RESTRICTIONS: Berthing is in accordance with tide. King's Dock Lock operates for a minimum of 8 hours each tide. River-side berths and Swansea Ferryport Terminal operate over a greater period.

No night-time restriction of entry.

MAX. SIZE: Max. size for entry is 655 ft. long, 86 ft. beam, 32 ft. 6 in. draft.

These vessels are docked over HW period. Any vessel whose dimensions are approaching maximum, or slightly in excess, for port should advise Port Manager well in advance. A vessel with a beam of 87 ft. 4 in. has been accepted.

TUGS: Towage undertaken by private operators. The Alexandra Towing Co. Ltd., at present use a modern fleet of tugs at Swansea and Port Talbot. It is optional whose lines are used, but if tugs line is taken, an extra charge will be made.

BERTHING:

Dock	*Quay Length (Total)* (m.)	*Depth of Water (Absolute Min.)* (m.)	*Maximum Size of Vessel* *Length* (m.)	*Beam* (m.)	*Draft* (m.)	*Approx. d.w.t.*
Kings Dock	2,268	10.1	199	26.5	9.9	30,000
Prince of Wales Dock	1,219	8.1	122	20.7	7.3	—
Queen's Dock	Oil Jetties (Operated by BP Co.)	10.7	199	26.5	9.9	30,000

Ro/Ro Berth: Situated on the East bank of the River Tawe, this facility provides a 137 m. berth, hinged shore bridge 76 m. long, with a 6 m. roadway. Adequate vehicle marshalling areas and Customs/passenger facilities are available. The nose of the bridge can be lowered through 12.95 m. to allow for variation in tides and ship's flotation.

BULK HANDLING FACILITIES: *Petro Chemicals:* One jetty in Queen's Dock operated by BP Chemicals International Ltd.

Coal: Two coal hoists in the King's Dock, operated by Associated British Ports.

Bulk Cargoes (Sulphur, ores, etc.): Two berths in King's Dock equipped with 5×7.5 ton and 5×10 ton grabbing cranes. Operated by Associated British Ports.

Ferryport: On East bank of River Tawe.

CRANES: 2×25 ton and 9×11.5 ton, 5×7.5 ton and 17×6 ton electric cranes. 2×4 ton mobile cranes also available.

40 fork-lifts up to 11.5 tons, 1×25 tonnes capacity, and 1×40 tonnes capacity.

HEALTH: Usual international health regulations are to be observed. Any vessel which is suspect should inform Port Medical Officer of Health.

RADIO: All communications for ship movements through "Swansea Dock Radio" Channels 16 and 14 VHF. Agents, receivers, etc., can be called through usual coastal radio stations – this includes Ilfracombe Radio.

BRIDGES: One in dock bridge is under direction of duty Assistant Dock Master. A vessel which has to pass will be informed by the Assistant Dock Master as to the availablity.

STEVEDORES: Stevedoring services are provided wholly by Associated British Ports. Advice of labour requirements must be received by the following times:

General Cargo: By 0700 hrs. to start work at 0700 hrs. By 1030 hrs. to start work at 1130, 1400 or 2200 hrs. same day.

Coal Shipping: By 1530 hrs. for work at 0600 hrs. next day. By 1030 hrs. for work at 1400 hrs. same day.

MEDICAL: Port Medical Officer of Health has an office on King's Dock Lock. Medical attention can be obtained at short notice. In emergencies, the duty Assistant Dock Master can be communicated with, to obtain medical help. Hospital facilities available, and there is a first-class medical centre on the Prince of Wales Dock. Vaccination and fever certificates will be examined when receiving Pratique.

TANKERS: All tankers arriving, working cargo, and departing are required to observe port's Petroleum By-laws and Oil in Navigable Waters Act. British Petroleum Company has further private directives for oil tankers. 5 main tanker berths, 1 petrochemical berth, 2 coastal tanker berths and 2 lay-by berths in Queen's Dock. 1 tanker/general cargo berth in King's Dock. Deepest draft permitted is 32 ft. 6 in.

Tankers of 1,600 g.r.t. and over to observe Merchant Shipping (Tankers – E.E.C. Requirements) Regulations 1981.

DENSITY: King's Dock Lock density is 1025.

FRESH WATER: Fresh water supplied from hydrants on quays by watermen. Rate of delivery is 2,000 g.p.h., approx., depending on the demand.

FUEL: Various grades of gas oil and diesel can be supplied by barge or road vehicles, or it can be delivered ex-pipeline at Queen's Dock.

FIRE PRECAUTIONS: All matches and lighters must be declared at entrance to oil installation. There are arrangements at the Queen's Dock depot for shore cooking and eating. There is an oil boom between the King's Dock and Queen's Dock to serve as an oil fire break between two docks.

GANGWAY/DECK WATCHMEN: Under Port Regulations, there shall always be on board sufficient men to move or take care of the vessel. Some vessels employ watchmen.

OPENING/CLOSING HATCHES: Normally done by the ship's crew, but if riggers are employed by vessel for general duties they open up hatches.

CERTIFICATES:
Certificate of Freeboard.
Certificate of Registry.
Certificate of Pratique.
Light Bill.
Manifest.
Bill of Health.
Bills of Lading.
AA (1) Certificate.

CUSTOMS ALLOWANCES: At discretion of local H.M. Customs Inspectors.

IDENTIFICATION CARDS: Not compulsory, but they are helpful if a crew member has to identify himself to Authorities.

CONSULS:

France	Tel: Swansea 50021
Norway	Tel: Milford Haven 2313
Vice-Consuls:	
Belgium	Tel: Milford Haven 2313
Sweden	Tel: Gorseinow 895881

SURVEYORS: Cargo Inspectors available locally.

Ship Surveyors located in Swansea and Cardiff.

REPAIRS: All types of deck and engine-room repairs are possible.

DRY DOCKS: 2 dry docks in port are entered from King's Dock. Dry docks: "Duke of Edinburgh" 670 ft.×92 ft.; "Palmers" 560 ft.×75 ft.

REPATRIATION: Arrangements can be made for repatriation through the Consular Channels.

AIRPORT: Nearest airport at Swansea, 8 miles from Docks. Next are Rhoose (Cardiff) and Bristol Airports where regular scheduled flights are handled.

TIME: Local time is British Standard Time which is plus 1 hour to Greenwich Time. Reverting to GMT during Winter months.

HOLIDAYS: Christmas (25th December); Boxing Day (26th December); New Year's Day; Easter, Good Friday and Monday (movable dates); Spring Holiday, May Day, Summer Bank Holiday (both movable dates). No cargo is worked on these days.

POLICE/AMBULANCE/FIRE: Call 999 from any telephone, and ask for service required.

EMERGENCY CO-ORDINATION CENTRE: S.A.R. Centre based at Mumbles. Tel: Swansea 66534.

TELEPHONES: Arrangements at most berths for placing telephones on board ships in port.

BANKS: Lloyd's Bank Ltd., 25 Wind Street, Swansea. Tel: 475555. Barclays Bank Ltd., 57 Wind Street, Swansea. Tel: 465007.

STORING: See "Prelims".

1. Yes
2. No interference with cargo work.
3. Yes
4. Yes
5. —
6. Yes.

SHIP SUPPLY SERVICE: It is the practice for the Swansea and Port Talbot pilot cutter to ferry personnel, stores, etc., to vessels offshore and due to dock at the respective ports.

Swansea and Port Talbot Pilotage Authority, 90 Exchange Buildings, Swansea SA1 1SY, West Glamorgan, South Wales. Tel: Swansea (0792) 53631. Cables: Pilority.

GENERAL: Entrance lock is 875 ft. in length, 90 ft. across at cope level. The inner sill is 7 ft. higher than the outer sill. The outer sill is 2.8 m. below Admiralty Chart datum (Chart No. 1161).

Tugs are available at the port for in-dock as well as sea towage.

A diver can usually be obtained by enquiry to the A.B.P. Port Engineer, Swansea.

Port Manager: Tel: 50855/200. Port Engineer: Tel: 50855/275. Dock Master and Fire Officer: Tel. 50855/260.

AUTHORITY: Associated British Ports, Harbour Office, Adelaide Street, Swansea, Glamorgan SA1 1QR. *Tel:* (0792) – 50855. *Telex:* 48150. *FAX:* (0792) 50729. *Contact:* Mr. T. Wilkinson, Port Manager. Captain T. Boyd, Harbour Master.

TEES RIVER: 54.39 N. 01.08 W. (See Plan)

PORT LIMITS: The Port facilities extend from the river entrance to the I.C.I. Billingham Oil Jetty 16 km. up river.

Arrival in the port is accepted as time of passing South Gare Lighthouse inward, or time of anchoring in the Tees Bay.

DOCUMENTS: Ship's official papers including:

- Register.
- Load-line Certificate.
- Derat Certificate.
- Safety Equipment Certificate.
- Radio Safety Certificate.
- Construction Safety Certificate.
- U.K. Light Dues.
- Oil Pollution Certificate. (Tankers).
- Crew List.
- C14 Ship's Stores List.
- C13 Arrival General Declaration.
- C142 Crew Declaration.
- Tanker Check List (Tankers over 1,600 g.r.t.)

PILOTAGE: The Tees Pilotage District extends from a radius of 5.6 km. seawards of the South Gare Lighthouse, as far up river as Victoria Bridge, Stockton, including Seaton Channel and is under the control of the Tees Pilotage Authority.

Official Address: Tees Pilotage Authority, 13-14 Bridge Street East, Middlesbrough, Cleveland TS2 1NS. Tel: Middlesbrough 242924/5 (during office hours). Pilots should be ordered through Redcar 485648 (all hours). Telegraphic Address: "Tees Pilots, Middlesbrough".

Pilot station is situated at South Gare and pilot cutter on duty is moored there. Cutters are painted blue with white or orange upper structure and fly the pilot flag by day when on duty and International Regulation lights by night. The duty cutter is equipped with VHF Radio, call sign "Tees Pilots" on Channel 16. Radar is also fitted.

As much advance notice of a vessel's arrival as possible should be given to Pilots: minimum requirement for vessel arriving is 1 hour and for vessel sailing 1 hour 15 minutes.

Pilot boards in vicinity of Tees Fairway Buoy although smaller vessels are occasionally boarded off the South Gare lighthouse. During severe weather the duty cutter may move to Tees Dock and the Pilot will board as far seaward as the conditions permit.

Pilotage is not compulsory.

APPROACHES: Vessels are prohibited from anchoring:—

(i) inside the dredged channel.
(ii) within a radius of 1,113 m. of the Tees Fairway Buoy.
(iii) within the limits of 2 divergent lines starting and extending from the dredged channel limits 244 m. apart at the South Gare Light Station, to 550 m. apart between their respective points of intersection with the circumference of the circle defined in (ii).

Small vessels can anchor close N.E. of No. 4 Light Buoy: larger vessels at Fairway Buoy and in all cases outside the 20 m. contour. Vessels waiting Pilots anchor in these areas.

Anchoring in the vicinity of the Ekofisk Pipe-line is to be avoided. See Notice to Mariners (Trinity House) No. 2724 of 1977.

RESTRICTIONS: *Traffic Control:* This is operated by the Harbour Master when vessels over 200 m. in length are moving within the river limits. The primary purpose is to allow the subject vessel to negotiate the channel without embarrassment from other traffic. Overtaking/passing is decided by the Harbour Master when circumstances favour such actions.

Restricted Transit Control: This is imposed by the Harbour Master upon vessels carrying certain hazardous cargoes. The subject vessel is intended to proceed from sea to berth or from berth to sea without meeting other traffic. As a consequence such vessel must be restrained from entering the main channel until an 'all clear' route is available. Some regulated passing.

Port Safety Control: Masters of ALL vessels before committing thei vessels to the River Tees Channel are required to satisfy the Harbou Master in respect of shipboard equipment by affirming to the followin questionnaire:—

Question No. 1: Your vessel is in all respects seaworthy.
Question No. 2: All secondary power or mechanical systems are i operation and *immediately* available in the event o failure of any primary system.
Question No. 3: Steering is under direct manual control.
Question No. 4: Anchors are ready for use.

In view of the controls it is essential for contact to be made with th Harbour Master before considering entering the river, leaving the berth

VHF Radio use Channels 22, 16 or 14 to contact. Tel: (0642) 452541 Telex: 58145.

MAX. SIZE: This matter is constantly under review. At present th largest dimensions acceptable are quoted as: Length 305 m. (1,000 ft. Beam 46 m. (150 ft.); Draft 17 m. (55 ft.). This depends on the bert nominated, tidal influence and prevailing weather.

A vessel with unusual dimensions e.g. oil rig, or any vessel wit dimensions approaching the port maxima, must be the subject o consultation with the Harbour Master.

HEALTH: New Regulations. The Public Health (Ships') Regulations i force from 1.4.78.

See "Health – All Ports" before first U.K. port.

RADIO: Ships approaching from the North or at anchor in Tees Bay us Cullercoats Radio. Ships approaching from Southward use Humbe Radio or Whitby Radio which is a slave-station to Cullercoats.

VHF Station	*Call Sign*	*Channel Fitted (min.)*
Harbour Master's Office	TEES HARBOUR RADIO	22,16,14,12,11,8
Harbour Master's Launch	TEES HARBOUR LAUNCH	16,14,12,11,9,8,6

Tees Pilot Station (South Gare)		16,14,9
Tees Tugs	NAME	16,14,12,8,6, etc.

Tees Harbour Radio is manned 24 hours per day and is also available t Hartlepool shipping for relaying port operational messages.

Channel	*Use*	*Channel*	*Use*
22	Port Operations	11	Domestic Port Operations
16	Calling and Safety	9	Pilot Port Operations
14	Port Operations	8	Intership
12	Port Operations		

RADAR: 3 scanner sites give full radar coverage from Smiths Dock t Fairway Buoy and up to 20 miles to seaward. Advice/informatio available to Masters/Pilots at any time. Advice in poor visibility i prescribed form. Call "Tees Harbour Radio". (See "VHF").

Norcontrol: The Ekofisk oil pipe-line runs 220 miles from the Ekofis oilfield to Teesside, coming ashore just North of the Tees Entrance; th inshore section is vulnerable to anchor damage from large ships and t give the pipe-line optimum protection, a computerised radar has bee installed in the Harbour Office.

TUGS: Official Address: Tees Towing & Co. Ltd., Cleveland Buildings Queen's Square, Middlesbrough, Cleveland TS2 1NX. Te Middlesbrough 247277 day and night.

Fleet of 7 tugs between 2,200 h.p. and 3,650 h.p. Tugs join vessel i Redcar Reach between No. 9 and No. 17 Buoys depending on size draft and destination. Tug's lines may be used at Master's discretion.

Tugs are on duty daily and only available on 6 hours notice for sailin and arriving after normal office hours.

BERTHING: Small vessels can usually berth at any stage of the tide Deep drafted vessels enter in accordance with the tide.

T.H.P.A. General Cargo Facilities:

Tees Dock: No. 1 Quay. 3 conventional general cargo berths each o 183 m. length, 1 of 174 m. length and 1 of 213 m. length with flush face quay. Road and rail access to all vessels. Ample cranage and spaciou sheds/open ground. Nominal dredged depth 10.9 m. below LAT.

No. 2 quay: Two berths each 183 m. in length have been built an equipped with electric luffing cranes up to 25 tonnes capacity. Nomina dredged depth 10.9 m. below LAT.

BULK HANDLING FACILITIES: *Redcar Ore Terminal:* Handles iron or imports for British Steel. Berth dredged to nominal 17.25 m. and able t accommodate vessels up to 305 m. in length, approx. 150,000 d.w.t 3 ore dischargers capable of handling 2,000 t.p.h.

Potash Terminal: Built on the East side of Tees Dock, this terminal is fo the export of Potash mined in North Yorkshire. Dredged to a nomina depth of 10.90 m., the quay is intended to accommodate vessel simultaneously. The main loader is capable of 2,000 t.p.h. A silo on the site has a storage capacity for 56,900 tons. Grain also exported from the terminal.

ROLL-ON/ROLL-OFF FACILITIES: A link span Ro/Ro berth in Tees Dock can accommodate ships of up to 160 m. in length and 23.7 m beam. Nominal dredged depth of 8.7 m.

Designed for loads up to 182 tonnes (when carried on 4 axles).

CONTAINER FACILITIES: A privately owned (Bell) purpose-buil Container Berth utilising a 32 tonne gantry crane is establishe downstream of Tees Dock.

CONSTRUCTION FACILITIES: There are a number of yards specialising in oil-rig module construction work, all capable of handlin flat-top barges up to 92 m. and unit loads to 4,000 tons.

Wherice Offshore, Redpath Offshore, Davy Offshore and ITM are o the South side of the river, while Cleveland Offshore are on the North side.

STEVEDORES: In order to prepare for loading/discharging, i.e. ordering of gangs, transport, etc., it is necessary to give ETA through their Agents not less than 24 hours before arrival.

In Tees berths, the port works 2 shifts daily, i.e. 0600 – 1400 hrs. an 1400 – 2200 hrs. Mondays to Fridays, with voluntary overtime a weekends.

TANKER BERTHS:

Clarence/Deep Water Wharves handle tankers also.

Report: *Cautionary Advice:* Vessels approaching River Tees should have BA Charts 2566 and 2567. Both are large scale charts, having complete coverage of River Tees and associated terminals, and Tees Bay. BA Charts 134, 152 and 1191 are recommended for use from seaward to the Tees Bay area.

It should be noted that there are two 15 m. wrecks outside the 30 m. line in positions within 3 miles of the Fairway Buoy (54° 41′ N., 1° 02′ W. and 54° 42.5′ N., 1° 24′ W. (PA)). Tides in the vicinity of the Fairway Buoy and the pilot boarding areas set at approximate right angles to the channel, with rates up to 1.5 knots. Great care should be exercised when slowing down to embark the Pilot.

During or after Northeasterly gales, a heavy ground swell can build up in this area.

North Sea Petroleum Teesside: Docking and Berthing: It is the normal practice to berth port side to. The vessel is swung in Seaton Channel turning circle and backed into the berth. There are no approach speed indicators on the jetties. Mooring boats are used to run the lines ashore (usually spring lines first, followed by a head line and a stern line). All moorings should be of the same construction and material.

North Tees Terminal: Docking and Berthing: Vessels may berth either side to any of these jetties (except No. 4 which is starboard side to only) according to tide and weather conditions, but port side to is favoured by Harbour Authorities so that the vessel is heading seaward. If the vessel is berthing port side to, normal practice is to swing off Tees Dock. There are no approach speed indicators.

Tees Storage Terminal: Docking and Berthing: Vessels may berth either side to at No. 2 Jetty according to tide and weather conditions prevailing, but port side to is favoured by Harbour Authorities so that the vessel is facing seaward. Vessels berthing port side to are swung in the Tees Dock turning circle and then pushed into berth with the aid of tugs.

Teesport Terminal: Docking and Berthing: Vessels may berth either side to these berths according to tide and weather conditions prevailing, but starboard side to is favoured by Harbour Authorities so that the vessel is facing seaward. If the vessel is berthing starboard side to, it is swung in the Tees Dock turning circle. There are no approach speed indicators.

Shell Oil Jetty: Docking and Berthing: Vessels may berth either side to this jetty depending upon prevailing weather and tidal conditions, but starboard side to is favoured so that the vessel is heading seaward.

Normal practice for vessels berthing starboard side to is to swing in the turning circle off Tees Dock and proceed to berth; however, occasionally vessels are swung in Seaton Channel turning circle. There are no approach speed indicators.

Billingham Oil Jetty: Docking and Berthing: Vessels may berth port or starboard side to depending on weather and tidal conditions prevailing at the time.

If vessel berths port side to, an anchor is sometimes used when swinging the vessel off the berth. 2 springs are run from each end of the vessel, then 2 messengers are passed from jetty deck to vessel, one to bow and one to stern. 2 shore head lines and 2 shore stern lines are brought on board and made fast.

Monsanto Terminal: Docking and Berthing: Vessels may berth either side to according to tide and weather conditions prevailing at the time, but port side is favoured by Harbour Authorities so that vessel is facing seaward. If vessel is berthing port side to it is swung in the turning circle off Tees Dock and then pushed into the berth with the aid of tugs.

DENSITY: The density of the river water fluctuates with the seasons and rain amount, being between 1015 and 1025 mainly. Below Smith's Docks the fresh water influence is minimal.

FRESH WATER: Plentiful from wharf and small quantities available from tug in emergency, approx. 20 t.p.h.

FUEL: All grades available by road or river delivery. 48 hours notice of requirements is requested for barge delivery.

MEDICAL: All medical facilities available. Vessels requiring doctor to board are advised to give maximum notice. Emergency medical attention can be arranged through VHF radio contact to Tees Harbour Radio on Channels 22, 16 or 14.

GANGWAY/DECK WATCHMEN: Recommended. Majority of berths are tidal with 5 m. range at Springs.

OPENING/CLOSING HATCHES: Always by crew. Riggers available.

CUSTOMS ALLOWANCES: 0.5 lb. tobacco or 200 cigarettes. (0.25 lb. tobacco for coasters). 1 spirit and 1 wine bottle (0.5 bottle spirit and 0.5 bottle wine for coasters).

IDENTIFICATION CARDS: Not used in Tees.

CONSULS: Sweden, Norway, Denmark, Netherlands, Germany F.R., Finland. Also French Consular Agency.

REPAIRS: Facilities available for all deck or engine repairs.

DRY DOCKS: None.

SURVEYORS: 1. Moore Barrett & Redwood Ltd., and Caleb Brett cargo inspectors available.

2. Lloyd's Register, American Bureau, German Lloyd, Bureau Veritas, Salvage Association, U.S. Salvage, N.K.K., RIMA and Corporation of China available.

AIRPORT: Teesside Airport with regular flights to London, etc. is 12 miles from Middlesbrough Centre.

Air U.K. have flights to Aberdeen, Amsterdam, Bergen, Norwich and Stavanger.

REPATRIATION: All facilities exist.

TIME: GMT in Winter months. BST (GMT plus 1 hour) operates between late March and mid-October as decided by government.

HOLIDAYS: Normal English Bank Holidays. On certain holidays work can be arranged if suitable notice is given.

POLICE/AMBULANCE/FIRE: Telephone 999 in emergency. If no phone available contact the Harbour Master on VHF Radio Channel 16 or 14.

EMERGENCY CO-ORDINATION CENTRE: Maritime Rescue Sub-Centre, Tyne/Tees. Tel: Tyneside (091) 257-2691. Telex: 58839.

TELEPHONES: Many berths can be connected to telephone system using coin boxes; a connection charge is made.

STORING: See "Prelims".

1. Both.
2. Tankers – No.

Storing may take place before or after cargo operations, while all tanks are battened down.

3. No. Distance varies from 100 yards to half mile depending on berth.
4. No.
5. Applicable to spirits, cigarettes, tobacco and bonded meat only.
6. Yes, but normally by suppliers/ship's crew.

AUTHORITY: Tees and Hartlepool Port Authority, Harbour Master's Office, Tees Dock, Grangetown, Middlesbrough, Cleveland TS6 6UD. *Tel:* (0642) 468127. *Telex:* 58145 HM Tees G. *FAX:* (0642) 467855. *Contact:* Captain P. J. Lewis, Harbour Master.

TETNEY MARINE TERMINAL: 53.32 N. 00.07 E.

(See Plan)

LOCATION: *Tetney Marine Terminal* is the deep water crude oil terminal of Crude Oil Terminals (Humber) Limited, operated by Conoco Limited.

The position of the mono-buoy is 53° 32′ 18″ N., 00° 06′ 48″ E., lying in approx. 60 ft. of water at low water and about 2.5 miles offshore.

Tetney is an open roadstead in the entrance of the River Humber on the East coast of England. The tidal rates in the vicinity of the mono-buoy reach 3.5 knots during Spring tides and the direction of the ebb and flood tides is generally East and West respectively. The tidal range varies between 7 ft. and 22.5 ft.

DOCUMENTS: The following documents should be completed for arrival:

General Declaration – Form C13 (duplicate).
Ship's Stores Declaration – Form C14 (triplicate).
Cargo Declaration (or copy of manifest) – Form C16 (duplicate).
Crew Declaration – Form C142 (duplicate).
Crew List – IMO (duplicate).
Tanker Check List Log 22.

Normally the Agent will board the tanker from one of the 2 berthing tugs prior to berthing, and the previously mentioned documentation, with the exception of the Tanker Check List (which will be handed to the Berthing Controller, together with cargo documents) will be handled by him.

Stores can be taken at the berth provided the Agents are given the order at least 72 hours before arrival.

The Master of the tanker shall notify to the Harbour Master prior to arrival the information required under S.I. 1981 No. 1077, The Merchant Shipping (Tankers) (EEC Requirements) Regulations 1981.

PILOTAGE: Vessels are requested to send ETA and draft to Spurn Pilot 12 hours before arrival and any adjustment to that time at least 2 hours before arrival. Spurn Pilots listen continuously on VHF Channel 16 and use Channel 14 as a working frequency.

Additionally, Agents should be advised of ETA 72 hours before arrival and the following information should be included in the cable: Arrival draft, type of OCIMF approved bow stoppers, size of forecastle centre mooring fairlead, bow to manifold distance and cargo manifold size.

Pilotage is by Humber Pilots who board in the vicinity of the Humber Light Vessel from a fast launch. Additional berthing information can be obtained from Tetney Base.

The Berthing Controller and his Assistant will board as the vessel approaches the mono-buoy and will assist the Pilot in the mooring operation. He will advise the ship's Officers during the mooring operation, hose connection and disconnection, and will act as Company representative throughout the vessel's stay in the berth.

Vessels must provide a pilot ladder with spreaders and grab lines for the Pilot and Berthing Controllers to board and whilst in the berth a suitable gangway with a pilot ladder near the end in order to board from a small boat.

HEALTH: See "Health – All Ports" before first U.K. port.

RADIO: *Pre-Arrival Procedure:*

In addition to the ETA requirements the following information is required by the terminal within 6 hours of clearing the previous port, or as soon as receiving orders for Tetney.

(a) Name of ship.
(b) Name of the last port from which the vessel cleared and the name of the loading port if different from above.
(c) Estimated date and time of arrival at Humber.
(d) Cargo loaded.
(e) API and gravity.
(f) Arrival draft fore and aft.
(g) Lifting capacity of derricks.
(h) Size of manifolds.
(i) Slops in cargo.
(j) Personal requirements.
(k) Ship's stores.

About 72 hours from the pilot station a second cable should be sent to the Agent with the following information:

(a) Name of Ship and Master.
(b) Amended time of arrival.
(c) Complete Crew List containing also passport numbers and dates of health certificates.
(d) Names of crew leaving the vessel.
(e) Requirements in way of doctor and dentist.
(f) Stores and water.
(g) Additional requirements.

About 24 hours from the pilot station a final cable should be sent to the Agent confirming:

a) Time of arrival.
(b) Ship's bond remaining on board.
(c) Amendments.

VHF: There is a VHF station at Tetney which is manned 24 hours a day and has the call sign, 'Tetney Base'. A continuous watch is kept on VHF Channels 16, 19 (156.8/156.95), and 48 (163.00/158.40). Channel allocation is as follows, 16 calling, 19 ship to shore, and 48 port operations. UHF (467.725 MHz) is allocated for use by the Conoco Berthing Controller, Tetney Terminal and the Conoco owned work boats.

The Pilot and Berthing Controllers carry portable VHF hand sets for use during berthing for inter-ship and ship to tug communications, Channel 9 (156.45 MHz).

Portable radios can be provided for vessels not having a VHF set and the Agents should be so informed in order to allow time to dispatch a set to the ship on arrival. A vessel arriving without suitable means of communication and not having informed the Agent of the fact could incur delays.

BERTHING: Hose hang-off chains and securing equipment are placed aboard the vessel when the Berthing Controller boards from the Conoco service craft, "Spurn Haven".

Vessels will moor using an OCIMF Approved Mooring Stopper.

The vessel approaches the mono-buoy on a Westerly heading. A messenger (min. 40 mm. diameter) should be lowered to the water and this will be picked up by the Conoco mooring launch "Monogirl" when approx. 150 m. from the mono-buoy. This messenger will be made fast to a 80 mm. × 92 m. polypropylene pick up rope which should be heaved up as the vessel makes the final approach to the buoy. When the chafing chain is in the fairlead the open links are secured to the bow stopper.

HOSES: Hoses are taken on the port side and the port derrick (minimum S.W.L. 10 tons) should be rigged and ready for use on arrival.

2×16 in. hoses are taken aboard, manifolds should be 16 in. 150 ASA and 10 in. and 12 in. 150 ASA can be accommodated by the provision of reducers. Should a vessel have any other size of manifold or be unable to provide adaptors to suit one of the sizes, Tetney Terminal will need to be notified at least 72 hours before arrival.

Hose connection and disconnection is carried out by the ships crew under the supervision of the Berthing Controller. Upon completion of discharge the hoses will be filled with sea water by the ship after which disconnection can commence. When the hoses are blanked off they will be hung off until just before sailing when they will be lowered to the Spurn Haven for towing clear.

POLLUTION: It is the Master's responsiblity to see that no oil of any kind is pumped or spilled overboard from his vessel. This includes oil water from the bilges, crude residues from previous voyages or any other matter that may result in the pollution of the sea. Owners and Masters should comply with any international regulations and recommendations concerning the prevention of pollution of the sea, especially in regard to the river Humber.

SHORE LEAVE: None of the officers or crew shall be allowed shore leave and no boats of any kind, except in an emergency, shall be lowered during the vessel's stay in the berth.

OPERATOR: Tetney Marine Terminal, Crude Oil Terminals (Humber) Ltd., Tetney Lock Road, Tetney, Nr. Grimsby, South Humberside DN36 5NX. *Tel:* (0472) 814101. *Telex:* 527055 Coth G. *Contact:* Captain B. R. Stephenson, Harbour Master & Terminal Superintendent.

TYNE DISTRICT: 55.01 N. 01.24 W. (See Plan)

(Including Newcastle, North and South Shields, Jarrow, Tynemouth, Wallsend and Gateshead).

PORT OPERATIONS AND INFORMATION SERVICE: VHF: Call sign "Tyne Harbour Radio" on Channel 16, frequency 156.80 MHz and on Channel 12, frequency 156.60 MHz. The control station is situated at the Harbour Master's Office, North Shields (Tel: 0632 – 572080, 570407), and is manned on a 24 hour basis. Vessels must obtain permission by VHF from the control station before entering the port, similar permisson must be obtained before movement within, or before sailing from the port. A service is provided for the passing of information to shipowners and Agents.

DOCUMENTS:

1 Crew List for H.M. Immigration Office.
1 Form C.142 (Tobacco List) supplied by H.M. Customs.
1 List of Private Addressed Packages not manifested (C.143) supplied by H.M. Customs.

Details of Oil in double bottom tanks, also measurement in cubic feet of cargo in non-registered spaces.

PILOTAGE: Pilots normally board outside Harbour entrance within 1 mile radius. In bad weather Pilots will advise concerning entering. 12 hours advance notice via Agent requested. Frequency medium wave 2182 kHz. Call "Tyne Pilots". VHF – Call on Channel 16, working Channel 9. Cutter – 55 ft. in length painted black with white lettering "Pilots" – displaying Pilot's flag. Efficient pilot ladder required as per D. Tp. regulations.

ANCHORAGE: Off entrance River Tyne, recommended 1.5 mile N.E. of North Pier. Minimum 12 fathoms.

RESTRICTIONS: Depths below Chart Datum (L.A.T.) from piers to Jarrow Quay Corner 8.61 m. thence to West end of Jarrow Staith 6.0 m., thence to Swing Bridge 5.2 m. (except in main channels of Swing Bridge and High Level Bridge) thence to Redheugh Bridge 5.61 m. West of Redheugh Bridge there is no authorised dredged depth.

MAX. SIZE: Harbour entrance, length and breadth: no limit. Draft 8.0 m. any state of tide: up to 11.0 m. at high water.

Riverside Quay, draft up to 10.00 m.
Esso Oil Terminal, draft up to 9.00 m.
Newcastle Quay, 27 – 28 berths – 7.5 m.

HEALTH: See "Health – All Ports" before first U.K. port.

RADIO: Cullercoats Radio W/T "GCC." Cullercoats Radio on R/T.

TUGS: Normally join inside piers, tow ropes optional except manufactured of man-made fibres. Orders for week-end arrivals must be given before 1030 hrs. Saturday. Rates on application to Tyne Tugs Ltd. Tel: South Shields 553361.

BERTHING:

Albert Edward Dock:

Warehouse Quay: 356 m. long, depth of water 7.9 m.
East Dock Wall: 162 m. long, depth of water 7.9 m.
Ro/Ro Berth No. 1, East Dock Wall: depth of water 7.5 m.
Heavy Load Berth (Ro/Ro No. 2) for heavy unit loads on transporters up to 510 tonnes; depth of water 7.9 m.
Tyne Commission Quay: 335 m. long, depth of water 7.11 m.
Tyne Commission Quay Extension: 118 m. long, depth of water 6.21 m.

Car Ferry Terminal:

Ro/Ro No. 3: 125 m. long, depth of water 7.11 m.
Ro/Ro No. 4: 140 m. long, depth of water 7.5 m.
Whitehill Point Jetty: 90 m. long, depth of water 5.5 m.

Tyne Dock:

North West Quay: 243 m. long, depth of water 8.2 m.
Factory Quay: 196 m. long, depth of water 7.0 m.
Riverside Quay: 384 m. long, depth of water 10.5 m.
Tynegrain Ltd. (Extension of Riverside Quay): Terminal, 37,000 tonnes silo capacity. Loading rate 1,000 tonnes per hour. Max. size 40,000 d.w.t. Depth of water 10.51 m.
Tyne Coal Terminal: 1 berth, depth of water 10.5 m. Loading rate 2,800 tonnes per hour.

Newcastle Quay:

Spillers Tyne Mill: 237 m. long, depth of water 8.01 m., discharge rate 150 tonnes per hour. Silo capacity 34,000 tons.

Jarrow Staith: 1 berth, depth of water 7.11 m. Loading rate 400 tonnes per hour.

Harton Staith: 1 berth, depth of water 6.8 m.

TANKERS:

Esso Petroleum Company Limited, Howdon:–
  Ocean Jetty: 274 m. long, depth of water 9.51 m.
  Coaster Jetty: 167 m. long, depth of water 6.0 m.
Jarrow Oil Jetty: Length 189 m.
Rohm & Haas Ltd. Jarrow: Chemical Berth, length 180 m. Depth 5.6 m.
Velva Tyne Tanks Limited, North Shields: 248 m. long, depth of water 7.11 m.
Tanker Cleaning Berth, Howdon: 248 m. long, depth of water 7.11 m.

Services: The tanker-cleaning berth at North Shields provides accommodation for vessels about 248 m. length, depth alongside 7.11 m. below Chart Datum. The shore installation, which is owned and operated by the Tyne Tanker Cleaning Co. Ltd., includes large reception capacity for tank washing and oily sludge, separators of the latest type which can deal with oily water at the rate of 1,000 t.p.h. and various treatment and storage tanks; together with boilers and steam pumping plant. Expert staff and modern equipment for carrying out tank washing, cleaning and gas-freeing of vessels at the berth, and for other essential duties are also available, making it possible for tanker crews to be paid off immediately on arrival. The whole installation is protected by a most complete system of fire precautions and fire-fighting equipment.

Report: *Cautionary Advice* – Port Approaches: The approach to the Tyne Piers is clear of danger and adequate navigation aids are provided and well maintained. The entrance, however, is exposed to Easterly winds and early contact should be made with "Tyne Pilots" on VHF when bad weather prevails to facilitate boarding and avoid unnecessary delays.

In addition to close attention to other coastal traffic, a sharp lookout should be maintained for local fishermen whose craft are often badly lighted and poorly painted, with colours which may blend rather than contrast with the background.

Entry: Provided that the out-going stream is not making strongly, which causes maximum turbulence, there should be no difficulty entering the port with winds between N.E. and S.E. It is preferable to enter while the in-going stream is still running although at that time it also sets across the entrance. This precaution is especially necessary during N.E. gales, which cause the heaviest seas at the entrance. In Northerly gales vessels should keep close under the lee of North Pier and in Southerly gales, especially with the out-going stream running, close under the lee of South Pier.

Entry: After embarking Pilot prior to entry, vessel proceeds at half to full speed keeping leading lights in line 258°(T).

Normal entry times for maximum draft vessel (although sufficient water at any state of tide) from 3 hours before HW to HW River Tyne North Shields.

During this period tide sets across entrance from North to South in a 160° direction with Spring rates up to 1 knot.

Vessels must approach entrance with sufficient speed and set allowed to maintain a true course of 258°(T) keeping leading marks and lights in line.

Leading line must be disregarded as soon as the Tyne Piers are passed, when a vessel should reduce speed and be guided by the light buoys and beacons.

Inside the piers, tidal streams tend to run with the channel at rates up to 3 knots during Spring tides.

Vessels should pass in mid channel between Nos. 1 and 2 light buoys on the North side and Herd Light Buoy and Herd Groyne Light Structure on the South side.

Regulations also state that vessels are to keep Southward of mid channel when proceeding to sea and Northward of mid channel when entering, so as to pass each other port side to port side.

Distance from Tyne Piers to Herd Groyne 0.8 miles, course approx. 255°(T).

Tugs meet vessel in the area between Tyne Pier and Herd Groyne.

Passage up river from Herd Groyne to Esso Tynemouth is approximately another 2 miles. Vessels speed when transitting this region should be between Dead Slow and Slow. This tends to be a very busy area with numerous riverside berths. Two bends, one to port and one to starboard, are negotiated before vessel reaches the swinging area off Esso Tynemouth Terminal.

Vessels coming up river on the flood tide swing in the turning area and berth port side to Esso Tynemouth Terminal.

Vessels late for the tide are accepted on a spot basis and have been berthed up to 2 hours after HW. In these cases, vessels go straight alongside, starboard side to, and swing in the turning area outward bound.

Prescribed turning area is 289.56 m. (950 ft.) in diameter.

Tugs are made fast between Herd Groyne and the swinging area, and normal practice is to swing to starboard heading vessel to the jetty when all way is off the vessel.

Mooring boats are employed for running the ship's lines to shore. Normal practice is to hold vessel alongside with tugs. First lines ashore are usually breast lines forward and aft, followed by springs, and finally the head lines and stern lines. Riggers will board vessel on arrival to secure 2 shore springs.

BRIDGES: At Newcastle 10 miles from entrance, Swing Bridge negotiated against tide; other bridges, maximum mast height 24.7 m. above MHWS.

STEVEDORES: Principal Stevedores Port of Tyne Authority. All arrangements through Agent. Stowage plan required prior to arrival.

Plant pool as follows:–

Albert Edward Dock:

Warehouse Quay – 7 cranes, 6 tonnes – 30 tonnes.
East Dock Wall – 3 cranes, 5 tonnes.
Tyne Commission Quay – 5 cranes, 3 tonnes – 40 tonnes.
Tyne Commission Quay Extension – 2 cranes, 6 tonnes.
Ro/Ro Berths – 4 terminal tractors.

Tyne Dock:

Riverside Quay – 7 cranes, 6 tonnes – 12 tonnes.
North West Quay – 5 cranes, 5 tonnes – 10 tonnes.
Factory Quay – 2 cranes, 3 tonnes.

There is a pool of 40 fork lift trucks of 5,000 lbs. – 25 tonnes capacity available for any location. These trucks can be fitted with attachments for handling paper, pulp, etc.

Also see "Dry Docks".

MEDICAL: Hospitals available, Advise Agent in advance if medical attention required on arrival.

DENSITY: Entrance/Tyne Dock – 1025; Tyne Dock/Jarrow 1020; Newcastle Quay 1005/1010.

FRESH WATER: Available ex-water boat, rate of delivery up to 150 t.p.h.

FUEL: All grades ex-installation, or by barge, 24 hours notice required.

GANGWAY/DECK WATCHMEN: Available if required.

OPENING/CLOSING HATCHES: Crew allowed open and close.

CERTIFICATES:

Register.
Load-line.
Safety Construction.
Safety Equipment.
Safety Radio.
Trinity House Light Bills.

CUSTOMS ALLOWANCES: At the discretion of Local Customs Inspector. Normal allowances are equivalent of 0.5 lb. tobacco per man and equivalent to 1 bottle wine per man. Allowances may be halved for home trade vessels. Vessels in port more than 3 or 4 days may receive extra allowances.

IDENTIFICATION CARDS: Required by crews of passenger vessels at Terminal Berths at North Shields.

WARRENPOINT: 54.06 N. 06.16 W. (See Plan)

PORT LIMITS: Seaward to a line from Ryland River (South Coast) to Ross Memorial (North Coast) approximately 3,000 m. from Warrenpoint.

DOCUMENTS:

2 Crew Lists.
2 Passenger Lists.
1 Store List.
Vessel's Papers and Certificates.
1 Manifest or Bill of Lading.

PILOTAGE: Not compulsory, if required Tel. (06937) 62549. Pilot station at Greencastle Pier at entrance (North side) to Carlingford Lough. VHF (Warrenpoint Pilot) radio, Channels 16 and 12. Notice to Agents of ETA at 48 hours and 24 hours.

ANCHORAGES: Safe anchorage at Fairmont Roads S.E. Greenore and also inside Carlingford Lough N.W. of No. 13 Buoy.
RESTRICTIONS: None except draft of vessel. Advise Agents.
HEALTH: No certificate necessary. In event of disease or fever contact Agent in advance. Hospitals available.

Also see "Health-All ports" before first U.K. port.
RADIO: All messages to Agents through Portpatrick Radio or Anglesea Radio.
VHF: Pilot station (Warrenpoint Pilot) and Port Radio (Warrenpoint Harbour) on Channels 16 and 12.
TUGS: None.
BERTHING: All berths except Town Dock have 17 ft. at LWOST.
STEVEDORES: Warrenpoint Harbour Authority. Telephone: Warrenpoint 3381. Telex: 74660
CARGO HANDLING FACILITIES:

2×35 tonne Liebherr Transporter Container Cranes;
2 Poclain HC300 Hydraulic Cranes;
1 Jones 971 HLB Dockside Crane;
2 Babcock Wilcox Luffing Grabbing Cranes.

BULK CARGO FACILITIES: Coal – 2 Luffing Grabbing Cranes at 150 t.p.h.

Grain discharged at up to 250 t.p.h. to Grain Silo of 8 bins, total capacity about 4,800 tonnes. Flat grain store capacity 4,000 tonnes also available.
SPECIALISED CARGO HANDLING FACILITIES: Ro/Ro berth with 17 ft. at LWOST. Ramp 6 m. wide Marshalling area about 6 acres.
FUEL: Available by road tankers. 48 hours' notice usually required.
FRESH WATER: Available from pipes on quay.
CONSULS: None.
REPAIRS: Small repairs can be undertaken.
DRY DOCKS: None.
SURVEYORS: Lloyd's – Jos. Fisher & Sons, Ltd. Warrenpoint 3500.
GANGWAY/DECK WATCHMEN: Neither compulsory nor necessary.
HATCHES: Opening and closing by crew.
CUSTOMS ALLOWANCES: As permitted by U.K. Customs and Excise.
CARGO GEAR: Ship's gear only used if shore cranes not available.
REPATRIATION: Airports (Belfast and Dublin) 2 hours away. Transport available. By sea – Belfast 1 hour.
AIRPORTS: Belfast (Aldergrove) 60 miles. Dublin 75 miles. Schedule flights daily to London.
TIME: GMT. GMT plus 1 hour in Summer.
HOLIDAYS: New Year's Day; St. Patrick's Day (17th March); Easter Monday and Easter Tuesday; 1st Monday in May; 12th July; 13th July; 15th August; Christmas Day and Boxing Day.
POLICE/AMBULANCE/FIRE: Dial 999 and ask for service required.
TELEPHONES: Not possible to place telephones on board.
SERVICES: Check with Agents. Most services can be supplied given 24 hours' notice.
SHORE LEAVE: After clearance inwards, Crew members allowed ashore without restriction. No passes issued.
DELAYS: Delays in loading or discharging are minimal and infrequent.
AUTHORITY: Warrenpoint Harbour Authority, The Docks, Warrenpoint, Northern Ireland BT34 3JR. *Tel:* 73381/73382. *Telex:* 74660. *Cables:* Harbour Authority. *Contact:* A. J. McGuffin, General Manager/Harbour Master.

AGENT: Samuel Stewart and Co. Ltd., The Docks, Warrenpoint. Tel: (06937) 72215/74024. After hours: (0693) 5223, (0232) 615846. Telex: 747092. FAX: (0232) 231367.

WATCHET: 51.11 N. 03.20 W. (See Plan)

DOCUMENTS: Crew List, Store List, Ship's Register, Manifest or Bills of Lading.
PILOTAGE: Trinity House Outport District, Compulsory, ETA 24 hrs. before arrival to Harbour Master's Office, Watchet (0984) 31264, after hours Minehead (0643) 3430.
ANCHORAGE: Safe anchorage Blue Anchor Road.
RESTRICTIONS: Accordance with state of tide and draft. Vessels enter 2 hours before HW.
MAX. SIZE: Max. permissible length 90 m., breadth 16 m., draft restrictions according the height of tides, max. draft Neap tides 12 ft. and Spring tides 14 ft. – 18 ft.
HEALTH: See "Health – All Ports" before first U.K. port.
RADIO: It is best for vessels to give ETA by R/T to Lands End or Ilfracombe Radio.
VHF: Watchet Radio Channels 16, 12, 14 and 9.
TUGS: None.
BERTHING: 2 quays, 1×150 m., 1×120 m.
CRANES: 3 cranes, 2×5 tons, 1×10 tons.
BULK CARGO: Cranes with grabs.
STEVEDORES: Watchet Marine Ltd.
MEDICAL: Port Doctor in Watchet.
DENSITY: Salt 90%.
FRESH WATER: Available on the quay.
FUEL: All grades, advance notice required.
FIRE PRECAUTIONS: Normal port precautions.
CONSULS: At Bristol.
REPAIRS: Normal repairs to ships possible notice required.
SURVEYORS: West Marine Surveyors & Consultants Limited, Consulting Marine Surveyors, Engineers & Naval Architects, The Old Custom House, Brixham, South Devon. Tel: Brixham (STD 08045) 2604. After normal office hours Tel: 0803 842925. Cables: Surveyor, Brixham. Telex: 42962 – Survey G.
OPENING/CLOSING HATCHES: Carried out by crew.
CUSTOMS ALLOWANCES: Decided by the Customs Officer in charge.
CARGO GEAR: Shore gear, cranes and forklifts.
REPATRIATION: Facilities exist for crew changes.
AIRPORT: Nearest airport at Bristol.
TIME: GMT and British Summertime.
HOLIDAYS: Cargo work can be arranged.
POLICE/AMBULANCE/FIRE: Phone 999 for all three services.
TELEPHONES: None on quay.
SERVICES: Chandler available.
SHORE LEAVE: Allowed.
IDENTIFICATION CARDS: None required.
DEVELOPMENTS: New warehouse and lorry park.
AUTHORITY: West Somerset District Council, East Wharf, Watchet, Somerset. *Tel:* (0984) 31264. *Cables:* Port of Watchet. *Contact:* Captain C. Muller.

WHITEHAVEN: 54.33 N. 03.36 W. (See Plan)

DOCUMENTS: Usual required for clearing a vessel from foreign port, i.e. Crew List, Passenger List, Customs Documents, Ship's Register, Manifest and Bills of Lading.
PILOTAGE: Request for Pilot is made by International Code signal G, sound and visual. ETA should be sent 12 hours in advance either to ship's Agent or Harbour Master or both. Area for taking Pilot on board 4 to 5 cables West of Harbour. Pilot boats are Trinity House Pilot Boats – "Viking" and "Cumbria". VHF is installed.
ANCHORAGE: Same area as for boarding Pilot according to draft.
RESTRICTIONS: Vessels may dock from 1.5 hours before HW till 1 hour after HW according to draft.
MAX. SIZE: 270 ft. length, 40 ft. beam and 17 ft. draft (deepest) on Spring tides, 14 ft. draft (deepest) on Neap tides.
HEALTH: See "Health – All Ports" before first U.K. port.
RADIO: Port Patrick and Anglesey Radio Stations.
TUGS: No tugs.
CRANES:

2×10 tonnes lifting capacity.
1×15 tonnes lifting capacity.
2×5 tonnes lifting capacity.

MEDICAL: Agent should receive notice in advance of any medical treatment required. Hospital services are readily available.
DENSITY: Any state of tide density is 1025.
FRESH WATER: Fresh water is available on all berths, any quantity on request to ship's Agent.
FUEL: Most grades and types available.
FIRE PRECAUTIONS: Usual precautions are taken when inflammable cargo is being loaded or discharged.
GANGWAY/DECK WATCHMEN: Advisable to have a watchman but not absolutely necessary.
OPENING/CLOSING HATCHES: Always opened and closed by crew.
CERTIFICATES: Derat Certificate, Load Line Certificate, Radio R/T Certificate, etc.
CUSTOMS ALLOWANCES: 200 cigarettes, 1 bottle spirits.
IDENTIFICATION CARDS: None required.
CONSULS: Norway, Sweden, Denmark and the Netherlands.
REPAIRS: All types of deck and engine repairs carried out.
REPATRIATION: Facilities exist for effecting crew changes and arranging any necessary repatriations.
AIRPORTS: Nearest airports are at Manchester, Newcastle and Prestwick, all approx. 130 miles away.
HOLIDAYS: Cargo may be worked on following days: New Year's Day, Good Friday, Easter Monday, Whit Monday, August Monday, Christmas Day and Boxing Day.
POLICE/AMBULANCE/FIRE: Telephone numbers of these services in order are: Whitehaven 2616, 3181 and 2151.
TELEPHONES: No special arrangements exist for placing telephones on board vessels.
SHORE LEAVE: Crew members may come and go at all times.
DELAYS: There are very seldom any delays in berthing and none in loading, discharging or bunkering.
AUTHORITY: Whitehaven Harbour Commissioners, Harbour Office, Pears House, 1 Duke Street, Whitehaven, Cumbria CA28 7HW. *Tel:* Whitehaven (0946) 2435. *Contact:* Captain B. Ashbridge, Harbour Master (*Tel:* 2436). R. W. Crosbie, General Manager.

WHITSTABLE: 51.21 N. 01.02 E. (See Plan)

PILOTAGE: Pilotage is available but Pilots must be ordered through the Lloyd's Agent. A minimum of 4 hours notice is required as Pilots are from Dover.
APPROACHES: Vessels are advised to arrive at the Whitstable Street Buoy not later than 1.5 hours before HW.

To ensure that vessel's approach on the correct heading, (122.5°), and to assist in identifying the entrance, the Whitstable Oyster Buoy has been established in a position bearing 310°×1,950 ft. from the light on the Dolphin on the Western side of the Harbour. This is a red can, flashing 2 red every 10 seconds.

The entrance to the Harbour is marked by a Sector Light fixed to the West Quay Dolphin and shows White, Green and Red. The outer end of the East Quay is marked by 2 fixed Vertical Red Lights. There are fixed Red Leading Lights on the South Quay bearing 122.5° from seaward. *Harbour Signals:* A fixed Red Light shown below the fixed Harbour White Light at night means entry of vessels is prohibited. A fixed White Light *only* means Port open for entry.

IAX. SIZE: The Harbour is tidal and dries out at LW with berths of soft ud capable of accepting vessels of up to 2,000 tonnes capacity. There re 4 quays having a total overall length of 2,205 ft. (679 m.), with ccommodation for up to 8 vessels at drafts of 15 ft. 6 in. (4.72 m.) at pring tides and 12 ft. 0 in. (3.66 m.) at Neap tides.

HF: Ship to shore communication is maintained by VHF Radio, the call ign being "Whitstable Harbour Radio", listening on Channel 16 and vorking Channels 12 and 9. The station is manned for 3 hours before W to 1 hour after HW and daily from 0800 hrs. – 1700 hrs.

n event of VHF Breakdown: On day tides between the hours of sunrise o sunset (from 3 hours before until 1 hour after HW), a Docking Light ignal may be in operation, exhibited from the Light Tower in position at: 51° 21′ 48″ N., Long: 01° 01′ 39″ E. Character to indicate Port Closed: Fixed White. Character to indicate Port Open and Clear for ntry: One flash every 3 seconds.

UGS: The services of a tug can be made available via Lloyd's Agent, 4 hours notice is required.

ERTHING:

East Quay: Length 900 ft. (274 m.). 3 berths.
Storage – Transit Shed 12,000 sq.ft. (1,115 sq.m.)
Warehouse 4,000 sq.ft. (371 sq.m.)
Bins – Stone, Slag and Ballast at Inner Berth.

South Quay: Length 500 ft. (152.4 m.). 2 berths.
Storage – 1. Warehouse 9,000 sq.ft. (836 sq.m.)
2. Warehouse 7,000 sq.ft. (650 sq.m.)
Open Storage – Bulk Stone, etc. – 2,000 tonnes.
Open Storage and Trailer Park – 5,000 sq.ft. (464 sq.m.)

North Quay: Length 205 ft. (62.5 m.). 1 berth.

West Quay: Length 600 ft. (183 m.), width 130 ft. (40 m.).
Storage – Warehouse 19,000 sq.ft. (1,765 sq.m.)

Depth of Water:

Quay:	*HWS*	*HWN*
North	13 ft. 6 in. (4.11 m.)	10 ft. (3.05 m.)
South	15 ft. 6 in. (4.72 m.)	12 ft. (3.66 m.)
East	15 ft. 6 in. (4.72 m.)	12 ft. (3.66 m.)
West	15 ft. 6 in. (4.72 m.)	12 ft. (3.66 m.)

CRANES: Cranes are privately owned and consist of 4 mobile cranes on tracks. SWL up to 10 tonnes.

FRESH WATER: Available.

FUEL: Available.

AUTHORITY: Canterbury City Council, Whitstable Harbour, Harbour Street, Whitstable, Kent CT5 1AB. *Tel:* Whitstable (0227) 274086. *Contact:* Commander F. J. Bloom, Harbour Master.

WORKINGTON: 54.39 N. 03.34 W.

DOCUMENTS: Standard U.K. documents.

PILOTAGE: Compulsory. Minimum notice 12 hours via vessel's Agents. Pilot boards 1 mile West of entrance.

ANCHORAGES: 1.5 miles to 2 miles N.W. of the entrance.

MAX. SIZE: 10,000 d.w.t., length 137.2 m. beam 62 ft. and draft 25 ft.

HEALTH: Standard U.K. procedure.

VHF: Workington Harbour Radio operates on Channels 16, 14 and 11. A listening watch is maintained daily from 2.5 hours before HW until 2 hours after HW.

TUGS: Vessels over 92 m. LOA shall, if the Harbour Master requires, be assisted by a tug. A tug is permanently based at the port and is available at 24 hours' notice.

BERTHING: *Tidal Harbour:* 853 m. of quayage for fishing vessels and other small craft. Depths are from 4.1 m. Neap tides to 7.2 m. Spring ides.

Prince of Wales Dock: Enclosed dock, width of entrance 21.2 m. There s 772.7 m. of quay frontage with depths from 7.2 m. Neaps to 10.2 m. Springs. The dock is 97.8 m. wide at the West end, 76.2 m. at the East end. There is a transit shed situated at the general cargo berth.

CRANES: 3 × 7 tonnes and 2 × 10 tonnes cranes are available. There s a Scotch derrick of 28 tonnes capacity.

BULK CARGO FACILITIES: The new automated coal terminal is capable of handling 1,750 tonnes of coal per hour.

SPECIALISED CARGO HANDLING FACILITIES: Ro/Ro facility available.

STEVEDORES: Normal working 0800 – 1700 hrs. with 3 hours evening overtime if requested.

FRESH WATER: Available.

FUEL: Available.

TIME: GMT plus 1 hour (late March – late October), otherwise GMT.

AUTHORITY: Cumbria County Council, Port of Workington, Dock Office, Workington, Cumbria CA14 2JH. *Tel:* (0900) 2301. *Telex:* 64253. *Cables:* Dock, Workington. *Contact:* Captain D. C. Thomas, Harbour Master and General Manager.

United States of America

GENERAL

SHIPMASTER'S REPORT: January 1987.

Preparation for arrival in U.S.A. Ports

Refer to:

1. Annual Summary of Notices to Mariners (British) No. 22 – Charts and Publications.
2. C.F.R. Title 33, Part 164 (especially 164.25/164.30/164.33, 35, 37, 38, 41, 53, etc. Also 159.59 and 155.440, 700, 740, 750).

Action Required:

Purchase (if necessary) large scale U.S. charts, current Coast Pilot and Light Lists, Tide Tables, Loran Charts, Tidal Stream Tables; but British publications are usually acceptable if up to date and charts are of largest scale.

Arrival Preparations:

U.S. Department of Agriculture prepare for inspection of:

1. Galley, storerooms, and possible sealing of prohibited fruits and meats.
2. Covered and leakproof garbage cans.
3. Rat guards.
4. Declare all animals and birds.
5. Hold inspections for grain, etc. Carried out by teams of 2 men, and extremely severe. Failure of holds will result if loose paint scale, loose rust scale, insects or deposits of past cargoes are found. High powered flash-lights used to probe the most remote corners. They are very experienced and know where to look!

U.S. Public Health Service: Ship not boarded unless sickness is reported or vessel is from an infected area.

U.S. Coast Guard: Do a preliminary check, using a "Vessel Compliance check-list" or an old "Vessel Inspection Form". Before arrival ensure navigation equipment is tested as per C.F.R.33 Part 164.25 and a good Log entry has been made. Check Oil Record Book (151.35); Placard re-discharge of Oil (155.440); Oil transfer procedures are posted (155.750); Marine Sanitation device is working and instructions for use are visible.

Read British Annual Notice to Mariner 4B (The Amver System) especially paragraph 5, (Constructive compliance with C.F.R.33, Part 161.7).

U.S. Customs: Will examine all Certificates.

U.S. Bureau of Labour: Will examine Cargo Gear Register and Certificates.

Documents:

4 Crew Lists (Form I-418).
4 Passenger Lists (Form I-418).
4 Ship's Stores Declarations (Form 1303), to include Shop and Bond Lists, Steward Stores Lists, Medicine Lists, Fire-arms Lists.
4 Crews' Effects Declarations (Form 1304).
1 Master's Oath (Form 1300).
3 Cargo Manifests (Form 1302), if cargo on board original showing all cargo on board and 2 copies showing only cargo for this port.
1 General Declaration (Form 1301), usually completed by Agent.

All ship's certificates should be to hand. Also Last Port Clearance and previous Tonnage Tax Vouchers.

All entry papers must be prepared on proper U.S. Customs Forms, with no attachments permitted.

The Crew List must be made out correctly in alphabetical manner as prescribed. Also a Crew List must be prepared at the previous port and visaed by the U.S. Consulate. For this purpose 2 copies are made.

The original has Columns 1 to 3 completed as usual, but the duplicate must list in Column 4 the date, city and country of birth, and in column 5 the Place and Authority issuing the crew member's passport or document. If this visaed Crew List cannot be produced on arrival a waiver can be granted, for which the Agent must pay US$15 in cash. If the vessel has crew from the People's Republic of China or other communist countries, then shore leave will not be granted at all, without that visaed Crew List. No waiver will be issued for them.

Crewman's Landing Permits (Form I-95A) must be prepared before arrival for each man. Previously used shore passes can be used again, but only if the seaman is still on the same ship.

Some ports require less than the number of documents stated above. The Mississippi consists of 3 Custom areas (New Orleans, Gramercy, and Baton Rouge). If the the ship moves to another area, then new forms may be needed, so extra copies are useful, in the case of Forms 1303 and 1304.

AGRICULTURE: All ports.

Arrival Notification: The vessel's Master or port Agent must notify the U.S. Department of Agriculture (USDA) Inspector at each port of arrival the expected time and location of arrival. In most cases the local Marine Exchange or Harbour Master notifies USDA on all arrival's with ETA's and ETD's.

Documents: The cargo, stores, and crews' effects lists or manifests must be available for review by the boarding USDA Inspector.

Inspection: The USDA Inspector will examine the galleys, storerooms, lockers, mess areas, and crew quarters in some instances for prohibited plant materials (fruits, vegetables, and plants) and meat products. Some categories of food materials may require being placed under seal. Also, inspections may be made of on-board cargo and cargo holds.

Garbage: All food wastes aboard vessels arriving from foreign or offshore areas (except Canada) must be handled in accordance with USDA regulations. Garbage must be held aboard vessels in leakproof, covered containers inside the rails for later disposal or, it may be removed with permission and under supervision of a USDA Inspector for incineration or sterlisation in approved facilities. Dumping in territorial waters or unauthorised garbage removal is unlawful and may subject the vessel operator to civil *or* criminal penalties.

Treatments: If quarantine-significant pests are found aboard a vess an Emergency Action Notification may be issued to the Master. It v prescribe what treatments are required to the affected articles or area the vessel and when this treatment must be accomplished.

Honeybees: Honeybees may not be brought into the United States. Th is a precaution to keep out Africanised bees, which could gravely ups beekeeping in North America. Do not disturb any signs of bees board, such as live swarms, dead bees, or hives. Contact the ship Agent before entering U.S. ports for appropriate instructions regardi disposal and treatment from the USDA inspector.

Animals/birds: All live animals or birds aboard vessels must be retain on-board and reported to the USDA Inspector.

For additional information: Write to "Quarantines", U.S. Department Agriculture, Federal Building, Hyattsville, MD 20782.

Notice

To: Ship's Masters:
From: United States Department of Agriculture, Animal and Plant Heal Inspection Service.

On April 1st, 1985, the Animal and Plant Health Inspection Servic (APHIS) will implement routine sealing of certain fresh fruits ar vegetables in stores aboard vessels calling at ports in Florid Mississippi, Alabama, Louisiana, Texas and California. Routine sealin will be limited to fruits likely to carry exotic tropical fruit flies. In additio APHIS Officers at any port may require sealing of any vessel store when pest infestations are detected.

This is an interim measure in preparation for full implementation of new Maritime Clearance and Monitoring Guideline on or about June 1s 1985. You will receive additional information in the near future.

It is recommended that each vessel construct a special compartme for sealing their fruits and vegetables so that it will not be necessary t seal the entire vegetable locker.

You are reminded that the following may result in a civil/moneta penalty:

1. Breaking U.S. Department of Agriculture seals.
2. Unauthorised or unsupervised removal/disposal of garbage.
3. Unauthorised removal of fruits, vegetables, meats or anim products, or live plants.
4. Failure to keep garbage in other than closed, leakproof container

Further information can be obtained by calling (713) 229-3541.

Purser's Note: It is advisable to have a locker ready prior to arrival i order that fruit and vegetables may be transferred for sealing.

HEALTH: All ports.

The U.S. Public Health Service does not maintain Quarantine Station at each port of entry. The smaller ports are under the jurisdiction c Quarantine Stations located at strategic ports of entry. Matters of publi health significance occurring on vessels destined to ports not staffed b Public Health Service personnel should be reported to the Quarantin Station having jurisdiction over that port.

Masters of Vessels arriving at United States ports

Effective July 1, 1973, Radio Pratique as a method of quarantine clearance was discontinued at all ports under control of the United States.

Vessels Subject to Public Health Inspection

The only vessels that will be subject to on-board public health inspection upon arrival or during stay at ports under control of the United States are those carrying crew or passsengers having:

1. Temperature of 100° F.(38° C.) or greater, accompanied by a rash, glandular swelling, or jaundice, or which has persisted for more than 48 hours; or

2. Diarrhoea, defined as the occurrence in a 24-hour period of three of more loose stools or of greater than normal (for the person) amount of loose stools; or

3. On-board occurrence of death, regardless of the signs and symptoms above.

Procedures. In accordance with regulations you must inform the quarantine station, through your vessel's Agent, at or nearest the intended port of your vessel's first arrival in the United States of the occurrence of illness as specified above. Arriving vessels no longer need to complete a Maritime Public Health Declarataion.

These changes reflect our confidence that you will continue to report, in advance of arrival in the United States, the on-board occurrence of: death or illness compatible with the signs and symptoms specified above, or death or illness while in port if such occurs after arrival.

CONTROLLED FLAG VESSELS:

SHIPPING AGENT GUIDELINES
UNITED STATES
PORT ENTRY REQUIREMENTS
FOR
CONTROLLED FLAG, CHARTERED AND
CREWED VESSELS
REVISED AUGUST 1986
PREVIOUS EDITIONS OBSOLETE
Issued by Department of Transportation
Commandant U.S. Coastguard (G-MPS-2)
2100 2nd Street S.W.
Washington, DC 20593

1. GENERAL PROVISIONS

A. *INTRODUCTION:*

The purpose of this document is to clarify and explain administrative procedures for affected vessels. This document is intended to provide primary assistance to shipping Agents in arranging entry into United States ports for vessels they represent.

This document provides guidance for entry by commercial maritime vessels of certain nations into United States ports. These nations are Bulgaria, Czechoslovakia, German Democratic Republic, Hungary, Poland, Romania, Union of Soviet Socialist Republics, and the People's Republic of China. Interested parties should note that vessels registered to, owned or operated by, or chartered by *Albania, Cambodia, Cuba, the People's Republic of Korea (North Korea), Vietnam, Iran, Nicaragua, Libya, South Yemen, and Syria are not permitted entry into the U.S. territorial sea or ports* (except as in certain cases stated in section "F"). The requirements apply to the Owner, Master, Agent or person in charge of commercial maritime vessels of these nations. The requirements apply also to the commercial maritime vessels of other nations which are owned by, chartered to or employ citizens of these nations. Adherence to these requirements will facilitate legitimate entry of the vessels to which the requirements apply. The requirements do not apply to entry by public vessels of these nations. Public vessel entry applications are handled only on a government-to-government basis.

Access to U.S. ports by any foreign vessel is subject to compliance with applicable laws and regulations of the Federal Government and of state and local authorities in the areas wherein they have jurisdiction. United States port entry procedures and applicable Federal laws and regulations apply generally to all foreign vessels. Specific mention is made in this document of those limited instances where commercial maritime vessels of certain nations are treated differently from other foreign vessels.

National security interests require that the movement of any vessel within the territorial waters of the United States be subject to U.S. Government review. Authority for this is found in Title 50, United States Code, Section 191, Executive Order 10173 as amended, and Title 33, Code of Federal Regulations, Part 6. These authorities are exercised by the U.S. Coastguard. The requirements herein are intended to expedite this review for vessels to which the requirements apply.

Additionally, these requirements implement and support provisions of treaties, conventions, agreements and similar instruments in force between the government of the United States and the governments of certain nations concerning maritime matters. Interested parties are advised that Title 1, United States Code, Section 112a directs the Secretary of State to compile a publication *"United States Treaties and Other International Agreements* (UST) which shall contain all treaties to which the United States is a party . . ." It also states that the UST "shall be legal evidence of the treaties, . . . in all courts of the United States, . . ." In some instances, these instruments and supporting documents state specific procedures for entry to United States ports, and should be consulted for a complete understanding of requirements applicable to affected vessels. This document addresses only those port entry requirements administered by the United States Coastguard.

B. *DEFINITIONS:*

1. *4-Day Notice:* This period is *exactly* 96 hours. It commences at the precise hour and minute that the Agent's entry application message is received in Coastguard Headquarters. Weekends and Federal holidays have no effect on 4-Day Notices. 4-Day Notices should not be submitted more than 2 weeks in advance of the first desired U.S. port call.

2. *4-Working Day Request:* This period excludes the day of receipt, day of entry, weekend, and Federal holidays. For example, to obtain clearance for a ship to call on a Tuesday, the request is required in Coastguard Headquarters no later than the preceding Tuesday provided no Federal holidays are involved. 4-Working Day Requests may not be submitted more than 2 weeks in advance of the first desired U.S. port call.

3. *7-Working Day Request.* This period excludes the day of receipt, day of entry, weekends, and Federal holidays. For example, to obtain clearance for a ship to call on a Monday the request is required in Coastguard Headquarters no later than the Wednesday 12 days preceding provided no Federal holidays are involved. 7-Working Day Requests may not be submitted more than 3 weeks in advance of the vessel's first desired U.S. port call.

4. *14-Day Request.* This period excludes the day of receipt only; not day of entry, weekends, or Federal holidays. For example, to obtain clearance for a ship to call on the 15th of the month, the request is required in Coastguard Headquarters by no later than the 1st of that month. 14-Day Requests may not be submitted more than 4 weeks in advance of the first desired U.S. port call.

5. *Government-to-Government.* These requests are co-ordinated at embassy level. They are handled through diplomatic channels between the 2 governments only. When the initial U.S. entry request is government-to-government and future itinerary changes are desired, those also *must be handled on a government-to-government basis.*

6. *Agent-to-Coastguard.* Co-ordination of applicable port entry requests, itinerary changes, and special waivers are specifically conducted between the USCG Headquarters Special Interest Vessel Desk and the U.S. Shipping Agent representing vessels covered by these guidelines.

7. *U.S. Coastguard's Special Interest Vessel (SIV) Desk.* The individual entry of all vessel's covered by these guidelines into the U.S. territorial sea and ports is co-ordinated by the USCG's SIV Desk. Under direction of the Chief, Port Security Branch, USCG Headquarters (G-MPS-2), the SIV Desk annually co-ordinates approximately 1,000 port calls. The SIV Desk is available 24 hours a day. During working hours, call (202) 267-0476; after hours and weekends, call Coastguard Headquarters Flag Plot at (202) 267-2100 for non-routine matters and ask for the Port Security Watch Officer.

8. *Port Call.* A port call includes anchoring or mooring *within the territorial sea or internal waters of the geographical limit of the port area described in Section "B".* It may be within these limits as long as they are either en route to an approved port call or departing from such a port call. These vessels must have a Commandant approved itinerary and entry date-time "window" for any U.S. port call (see Section "A4"). In addition, a required 24-hour advance notice of arrival (33 CFR 160.207) (see Section "A5") is *mandatory* for all vessels to submit to the local Coastguard Captain of the Port (COTP). Good communications with Coastguard COTP's, Coastguard vessel traffic services, liaison with Pilots, Port Authorities, U.S. Customs, and U.S. Immigration and Naturalisation will enable shipping Agents to efficiently move their vessels without delays.

9. *Port Area Descriptions.* Geographical Port Limits are defined for certain U.S. ports for purposes of administering this programme. The port descriptions were developed for use in negotiating maritime agreements and apply to port calls involving the countries covered by these guidelines. Port areas for which there is no geographical description are considered to include that area which encompasses the physical facilities of the port, the internal water approaches, and the seaward approaches to the limits of the territorial sea.

U.S. Port	*Geographical description*
Alameda, Califronia	(see San Francisco).
Albany, New York	Hudson River bounded by Rensselaer County to the East and Albany County to the West.
Anchorage, Alaska	Waters of Cook Inlet Northward from line drawn between Cape Douglas and Cape Elizabeth.
Astoria, Oregon	Coincident with Clatsop County, Oregon.
Baltimore, Maryland	North and West of a line from North Point to Bodkin Point, but including Annapolis anchorage area between the Chesapeake Bay Bridge and Kent Point.
Baton Rouge, Louisiana	Mississippi River Mile 170 to 255.2.
Bay City, Michigan	Saginaw River Mouth to navigable limit.
Beaumont, Texas	The Neches River from the Intracoastal Waterway (ICW) to Interstate 10 Bridge.
Bellingham, Washington	Bellingham Bay.
Berkeley, California	(See San Francisco).
Boca Grande, Florida	Boca Grande Channel from sea buoy to Port Boca Grande on Gasparilla Island.
Boston, Massachusetts	Boston Harbour proper, including Mystic River and Chelsea River to limit of navigation.
Brownsville, Texas	The Brownsville Ship Channel from the sea buoy to the Brownsville Turning Basin.
Burnside, Louisiana	Mississippi River mile 155 to mile 170.
Camden, New Jersey	(See Philadelphia).
Charleston, South Carolina	(See Section "C"). Same as MSO Charleston COTP zone limits.
Chicago, Illinois	Between Burns Harbour (including Burns Waterway Harbour) and Northern limits of Chicago Harbour, inlcuding Lake Calumet and other waterways, inland to intersection of the Chicago Sanitary and Ship Canal with Calumet Sag Channel
Cleveland, Ohio	Cleveland Harbour, including Cuyahoga River to limits of navigation.
Coos Bay, Oregon (including North Bend)	All of Coos Bay to North of Coos River.
Corpus Christi, Texas	The Corpus Christi Channel from the sea buoy to the Viola Turning Basin, and the La Quinta Channel from its junction to the Corpus Christi Channel.
Duluth, Minnesota/Superior, Wisconsin	Duluth/Superior Harbour only.
Erie, Pennsylvania	Erie Harbour located within Presque Isle Bay.
Eureka, California	Humboldt Bay.
Everett, Washington	N.E. end of Possession Sound.
Fall River, Massachusetts	Mount Hope Bay and Taunton River coincident with corporate limits of the city of Fall River.
Galveston/Texas City, Texas	The Galveston and Texas City Channels from their intersection with the Houston Ship Channel to their respective Turning Basins.
Georgetown, South Carolina	Entrance channel between Sand and North Islands and North Island at South Island bend through Wingah Bay, including all Georgetown and Sampit River, North to where Waccamaw River and Pee Dee River merge at U.S. Route 17 into Winyah Bay.
Gulfport, Mississippi	Ship Island Pass and Gulfport Ship Channel from the sea buoy to the harbour basin.
Hampton Roads (including Norfolk, Newport News, Jamestown, Yorktown, Portsmouth, Virginia and access to the James River.)	(See Section "C"). Honolulu Harbour proper.
Honolulu, Hawaii	(See Section "C"). Honolulu Harbour proper.
Hilo, Hawaii	Eastern end of Kohio Bay on N.E. coast of the Island of Hawaii.
Houston, Texas	The Houston Ship Channel from Five Mile Cut to the Houston Turning Basin and the Bayport Turning Basin.
Kenosha, Wisconsin	Kenosha Harbour proper.
Ketchikan, Alaska	Tongas Narrows, N.E. of a line between Mountain Point and Gravina Point, and S.E. of a line between Point Higgins and Guard Island, and including Vallendar Bay.
Long Beach, California (including Eastern part of Terminal Island).	That portion of San Pedro Bay and Cerritos Channel within the City of Long Beach, California.
Longview, Washington	Columbia River between Mile 62 and Mile 70.
Los Angeles, California (including San Pedro, Wilmington, and Western Terminal Island)	That portion of San Pedro Bay and Cerrritos Channel within the City of Los Angeles, California.
Milwaukee, Wisconsin	Milwaukee Harbour and Rivers to limits of navigation within Milwaukee breakwater.
Mobile, Alabama	The Mobile Ship Channel from the sea buoy to the Cochran Bridge, and the Hollinger's Island Channel from its junction with the Mobile Ship Channel.
Morehead City, North Carolina	Morehead City Harbour, including Radio Island from the sea buoy at Beaufort Inlet, North Carolina.
New London and Groton, Connecticut	(See Section "C").
New Orleans, Louisiana	Sea Buoy to Mississippi River Mile 155.
New York, New York (including both the New York and New Jersey parts of the New York Port Authority.)	From highway route No. 740 South, West from Sandy Hook to Condy Island, North to George Washington Bridge, East to Throg's Neck.
North Bend, Oregon	(See Coos Bay).
Oakland, California	(See San Francisco).
Olympia, Washington	Coincident with Thurston County, Washington.
Orange, Texas	The ICW from Mile 276.5 to Mile 265; the Sabine River from the intersection with the ICW; North to the Navy Yard.
Panama City, Florida	(See Section "C").
Pensacola City, Florida	(See Section "C").
Philadelphia, Pennsylvania (including Camden, New Jersey)	Trenton, New Jersey to the Delaware state line.
Ponce, Puerto Rico	Playa de Ponce only.
Port Arthur, Texas	The ICW from Mile 276.5 to Mile 288.5 including the East Basin, West Basin, and Turning Basin of Taylor Bayou.
Port Everglades, Florida	Port Everglades coincident with Broward County, Florida.
Portland, Maine	Hussey Sound and Fare River to combined fixed railroad and highway bridge (Route 1 Bridge).
Portland, Oregon	Three Oregon Counties: Multnomah, Clackamas, and Washington, and the Port of Vancouver, Washington.
Portsmouth, New Hampshire (including Kittery, Maine, and Dover, New Hamshire, on the Piscataqua River).	(See Section "C").
Port Canaveral, Florida	(See Section "C").
Port Hueneme, California	(See Section "C").
Port St. Joe, Florida	(See Section "C").
Richmond, California	(See San Francisco.)
Richmond, Virgina	James River from Benjamin Harrison Memorial Bridge, Hopewell, Virginia, to limits of navigation.)
San Diego, California	(See Section "C").
Sacramento, California	Sacramento Harbour proper, Sacremento River to limits of navigation.

U.S. Port	*Geographical description*
San Francisco, California (including Alameda, Oakland, Berkeley, and Richmond).	San Francisco Bay, South of Richmond/San Rafael Bridge.
San Pedro, California	(See Los Angeles).
Savannah, Georgia	Savannah River from the Route 17 Bridge to the territorial sea limit.
Seattle, Washington	Coincident with King County, Washington.
Stockton, California	Stockton Harbour proper and San Joaquin River to limits of navigation.
Skagway, Alaska	Taiya Point (in Tiaya Inlet on Lynn Canal) to the town of Skagway, Alaska.
Superior, Wisconsin	(See Duluth).
Tacoma, Washington	Coincident with Pierce County, Washington.
Tampa, Florida	That portion of Tampa Bay contained within Hillsborough County.
Terminal Island, California	(See Los Angeles).
Texas City, Texas	(See Galveston).
Toledo, Ohio	Maumee River to limits of navigation.
Vancouver, Washington	(See Portland, Oregon).
Wilmington, California	(See Los Angeles).
Wilmington, Delaware	Extending from the Mouth of the Christina River Westward to the Third Street Bascule Bridge (39° 44.06′ N., 79° 30.16′ W.).
Wilmington, North Carolina	The Cape Fear River from the Sea Buoy to Point Peter, and then the N.E. River to the Turning Basin at Mile 2.

C. UNAVAILABLE (CLOSED) PORTS:

The following ports are UNAVAILABLE to Warsaw Pact flag, owned or operated, or registered vessels. Free-flag vessels crewed with Warsaw Pact nationals or Non-Entrant nationals may be denied entry into these ports pending removal of certain of these crew members.

For crew make-up vessels, Agents should refer to Section E.

1. Portsmouth, New Hampshire (includes Kittery, Maine and Dover, New Hampshire on the Piscataqua River).
2. New London and Groton, Connecticut.
3. Hampton Roads, Virginia (including Norfolk, Newport News, Jamestown, Yorktown and Portsmouth Va, and access to the James River).
4. Charleston, South Carolina.
5. Kings Bay, Georgia.
6. Port Canaveral, Forida.
7. Panama City, Florida.
8. Pensacola, Florida.
9. Port St. Joe, Florida.
10. San Diego, California.
11. Port Hueneme, California.
12. Honolulu, Hawaii.

D. CHARTERED VESSELS.

The U.S. Port Security Programme applies to "free flag" vessels chartered or crewed with nationals from countries covered by these guidelines, as well as to the flag vessels of the countries previously mentioned. Since flag vessels furnish a required advance itinerary request or notice in accordance with these guidelines, they seldom experience delays when entering U.S. ports once approval is granted. In the case of "free flag" vessels chartered by these countries, it is recommended that the shipping Agent provide charter information in advance to the local Coastguard upon submitting the required 24-hour advance notice of arrival. *When advance information is provided to the Coastguard, a vessel chartered to one of these countries, in all likelihood, will receive delay-free entry.* Conversely, in those cases where charter information is brought to Coastguards attention by other means, there may be delays while processing the entry. Providing advance charter notification will in most cases expedite the vessel's entry, and thus it is clearly in the vessel's best interest. (Note: Vessels chartered to Non-Entrant nations are not allowed entry into U.S. ports.)

E. CREW MAKE-UP VESSELS:

Free-flag vessels with Warsaw Pact or Non-Entrant national crew members on board occasionally seek entry to U.S. ports. These crew members may be restricted from entering certain U.S. ports, especially those ports listed as UNAVAILABLE in Section C. Additonally, the presence of these crew members on board free-flag vessels may constitute a security risk in AVAILABLE ports and, therefore, be subject to restriction on board the vessel. If prior information is furnished concerning the presence of such crew members, problems involving the vessel's entry to a U.S. port can be resolved in advance of the vessel's arrival. Vessel delays can be minimised if this crew information is provided to the local Coastguard and the local Immigration and Naturalisation Service (INS) office with the normal 24-hour advance notice of arrival in accordance with 33 CFR 160.207. *Agents should submit proposals to the Coastguard Headquarters Special Interest Vessel Desk (G-MPS-2), (see Annex D), for the removal or restriction of those crew members prior to the vessel's entry into the U.S. territorial sea and ports.* Removal is co-ordinated with Coast Guard Headquarters (G-MPS-2), the local Coastguard COTP, and the local INS office. Proposals for removal should normally specify location, method, and date of removal, the location where the crew member(s) will be kept (normally under guard supplied by the Agent) and the location, method, and date the crew member(s) will be returned to the ship. The names and positions of the crew members should also be noted in the proposal message. *Each proposal is evaluated on a case-by-case basis.* Agents should allow for a minimum of 48 hours for the processing of these proposals.

F. UNUSUAL ENTRIES:

1. *National Marine Fisheries Service (NMFS) Observer Programme.* Under Authority of the Fisheries Conservation Management Act, NMFS can place U.S. observers aboard foreign fishing vessels while they fish within the U.S. 200-mile Fisheries Conservation Zone (also referred to as the Exclusive Economic Zone by Presidential proclamation of March 10th, 1982). In some instances, it is advantageous for a foreign fishing vessel to enter the U.S. 3-mile territorial sea briefly to embark/disembark a NMFS observer. When specifically authorised by the Commandant, a Coastguard District Commander may permit brief entry of commercial fishing vessels of countries subject to these guidelines into the territorial sea of the U.S. for the sole purpose of embarking/disembarking NMFS observers.

Note: To date, this Authority has been delegated to the Commander, Coastguard Pacific Area and Commander, Seventeenth Coastguard District for Pacific and Alaskan U.S. territorial sea. These fishing vessels must have a valid Governing International Fishing Agreement (GIFA) permit).

(a) Entry of these vessels for any purpose other than, or in addition to, NMFS observer transfer must be approved by the Commandant.

(b) Vessels ordered or permitted to enter U.S. waters to effect NMFS observer transfers need not provide a 24-hour Advance Notice of Arrival in accordance with 33 CFR 160.207; however, vessels must notify the local Coastguard of their arrival and departure times into and out of the U.S. territorial sea.

(c) Vessels permitted entry under this Authority must return to international waters immediately upon transfer of observers.

(d) Vessel's Agents should submit their proposal for NMFS observer transfer in Alaskan waters direct to: "Commander, Seventeeth Coastguard District, Juneau, Alaska; Telex: 09945305, Answerback US Cogard Jnu." NMFS transfers requests for other West coast ports should be submitted to: "Commander, U.S. Coastguard Pacific Area, Alameda, California; Telex: 330459, Answerback: CG ALDA." For all other NMFS observer transfers to occur in the U.S. territorial sea, Agents should submit their proposals to "Commandant (G-MPS), U.S. Coastguard, Washington, D.C.; Telex: 89-2427. Answerback: Coastguardwash."

Note: For all cases of unusual entry, vessels discharging oil into the U.S. territorial seas and the contiguous zone are liable for cleanup costs and subject to a civil penalty under the Federal Water Pollution Act. A Certificate of Financial responsibility (COFR) is required before entering the U.S. territorial sea.)

2. *U.S.-Warsaw Pact Co-operative Marine Scientific Research.* When specifically authorised by the Commandant, a Coastguard District Commander may permit brief entry of research vessels (ocean and fishing) of countries subject to these guidelines into the territorial sea of the U.S. for the sole purpose of embarking/disembarking U.S. scientists and their equipment.

Note: To date, this Authority has been delegated to the Commander, Coastguard Pacific Area and Commander, Seventeenth Coastguard District for Pacific and Alaskan U.S. territorial sea.

(a) Entry of these vessels for any purpose other than, or in addition to, U.S. scientist and equipment transfers must be approved by the Commandant.

(b) Vessels permitted to enter U.S. waters to effect U.S. scientist and equipment transfers need not provide a 24-hour Advance Notice of Arrival in accordance with 33 CFR 160.207; however, vessels must notify the Coastguard of their arrival and departure times into and out of the U.S. territorial sea.

(c) Vessels permitted entry under this Authority must return to international waters immediataely upon transfer of the scientists and their equipment.

Vessel's Agents should submit their proposal for U.S. scientist and equipment transfer in Alaskan waters direct to: "Commander, Seventeenth Coastguard District, Juneau, Alaska; Telex: 09945305. Answerback: US Cogard Jnu." Scientist tranfer requests for other West coast waters should be submitted to: Commander, U.S. Coastguard Pacific Area, Alameda, California; Telex: 330459, Answerback: CG Alda." For all other U.S. scientist and equipment transfers to occur in the U.S. territorial sea, Agents should submit their proposals to "Commandant (G-MPS), U.S. Coastguard, Washington, D.C.; Telex: 89-2427. Answerback: Coastguardwash."

Note: For all cases of unusual entry, vessels discharging oil into the U.S. territorial seas and the contiguous zone are liable for clean-up costs and subject to a civil penalty under the Federal Water Pollution Act. A Certificate of Financial Responsibility (COFR) is required for entry into the U.S. territorial sea.

3. *Force Majeure.* In accordance with this international doctrine, a foreign vessel may enter the U.S. territorial sea under a condition of force majeure. The Coastguard COTP is to be notified before the vessel's entry into the U.S. territorial sea. Original declaration of force majeure is subject to corroboration by the Coastguard.

4. *Innocent Passage.* Innocent passage is navigation through the territorial sea for the purpose of traversing that sea without entering internal waters for lawful entry, or from internal waters following lawful clearance to the high seas. It may include stopping or anchoring only when this is incident to ordinary navigation (such as when awaiting a favourable tide to traverse a particular narrows) or when rendered necessary by force majeure or by distress. *Innocent passage specifically does not include hovering, stopping or anchoring for other reasons, and it does not include fishing.* Anchoring or slow steaming within the U.S. territorial sea to avoid early arrival in a port for which the vessel holds an approved itinerary will not be considered innocent passage and will result in cancellation of the vessel's intinerary, except when the vessel's movements are directed by Coastguard Vessel Traffic Service (VTS) for purposes of safety of navigation.

5. *Medical Emergency.* From time to time it may be necessary to remove crew men in need of *immediate* medical attention from foreign flag vessels. Vessels not previously approved for a U.S. port of call may enter U.S. waters for the sole purpose of transferring crew in need of medical attention. The local Coastguard COTP is to be notified before entry as soon as possible. Upon completion of such transfer the vessel must depart the U.S. territorial sea. Repatriation of foreign nationals who have been evacuated for emergency medical treatment should be arranged and paid for by their native countries. Requests for vessel entry for the purpose of repatriating their nationals should be forwarded to "Commandant (G-MPS), U.S. Coast Guard, Washington, D.C.; telex: 89-2427, Answerback: Coastguardwash." Each request will be treated on a case-by-case basis.

G. NON-ENTRANTS:

Interested parties should note that vessel registered to or chartered by *Albania, Cambodia, Cuba, the People's Republic of Korea (North Korea), Vietnam, Iran, Nicaragua, Libya, South Yemen, and Syria* are not permitted entry into U.S. territorial sea except under conditions of force majeure, medical emergency, innocent passage or a Canadian approved passage of the St. Lawrence Seaway en route to Canadian ports.

H. REMOTE PORTS UNDER U.S. JURISDICTION:

The requirements of this programme apply to remote Alaskan ports as well as to Guam, American Samoa and the Commonwealth of the Northern Marianas Islands (CNMI).

I. DEEPWATER PORTS:

Port calls at U.S. deepwater ports require the same conditions of advance notification for entry as applicable in U.S. coastal ports.

II. SPECIFIC REQUIREMENTS: FOR FLAG VESSELS.

A. *PORT ENTRY APPLICATION REQUIREMENTS:*

1. *General:* All Port Entry Applications must be in writing. However, telephone inquiries are welcome during normal business hours (0700 to 1530 Eastern Time). The Special Interest Vessel desk, in the Port Security branch at U.S. Coastguard Headquarters, can be reached by calling (202) 267-0475/6. For non-business hour emergencies, call U.S. Coastguard Headquarters Flag Plot (Situation Room) at (202) 267-2100. Port Entry Applications (except Government-to-Government requests) should be submitted by the vessel's Agent direct to Coastguard Headquarters. *Telex messages are preferred.* Port Entry Applications will *not* be accepted by local or regional Coastguard Commands. Make application only to one of the following Coastguard Headquarters addresses:

(a). Telex address: "Commandant (G-MPS), U.S. Coast Guard, Washington, D.C. 20593" Telex No. 89-2427. Answerback: "Coastguardwash".

(b) TWX address: "Commandant (G-MPS), U.S. Coast Guard, Washington, D.C. 20593" TWX No. 710-822-1959. Answerback: "Cgdotwsh".

(c) Western Union address: "Commandant (G-MPS), U.S. Coastguard, 2100 2nd Street S.W., Washington, D.C. 20593 (Prepaid)".

2. *Required Information:* All Port Entry Applications must provide certain information in an orderly manner. See example formats provided in Annex B of this document for additional information. Agents should *double check all information,* including spelling of foreign translations, since incorrectly submitted applications may lead to entry delays. All port entry applications should include the following:

(a) The Agent's complete address, commercial telephone number, and Telex/TWX number with answerback code or Western Union address.

(b) Appropriate message title identification: For example, 4-day notice, 4-working day request, 7-working day request, or 14-day request.

(c) Itinerary number: For example, Initial Itinerary, or Change 1, 2, 3, etc.

(d) Vessel type: This information must precede the vessel's name; however, in most cases you can use an abbreviation as follows:

Merchant Vessel	M/V
Passenger Vessel	P/V
Fishing Vessel	F/V
Fishing Support Vessel	F/V
Fishing Research Vessel	None authorised
Hydrographic Research Vessel	None authorised

(e) Vessel's name, call sign, flag and Lloyd's number.

(f) Itinerary Information:

i. Desired U.S. Port of Call.

ii. Desired arrival *and* departure dates.

(g) Cargo information, although optional, is desired.

(h) Last foreign Port of Call, if known.

(i) Masters' name.

(j) Next Foreign Port of Call.

3. *Arrival and departure dates:*

(a) Only one day overlap is allowed for multiple port calls (i.e. New York 6/17-19, Philadelphia 6/19-21, Baltimore 6/21-6/27).

(b) Should any single port call exceed two weeks, your Port Entry Application must include an explanation of why.

(c) All approved itineraries *automatically* terminate upon the vessel's departure for a foreign port of call, except when the vessel departs for Canadian ports, which have been noted on the Port Entry Application message.

(d) The vessel's official notification period commences upon receipt of the Agent's request or notice at Coastguard Headquarters. By return message, Coastguard Headquarters will inform the Agent of the exact Greenwich Mean Time (GMT) his message was received. All entry and departure times are calculated and specified in GMT. Conversion to local time is the responsibility of the vessel and Agent.

4. *Approved Itinerary Entry Times.* If the vessel's itinerary is approved, the Agent is notified by a USCG Headquarters (G-MPS) message which specifies the official entry date-time or "window". Port entry and departure dates begin and end at midnight Greenwich Mean Time (GMT) (for example, an entry period approved for 12/28-01/03 is from 0001 GMT on 28th December until 0001 GMT on 4th January). The vessel has 24 hours after the starting date/time to enter that specific port (for example, from 0001 GMT 28th December until 0001 GMT 29th December). Upon releasing the Agent's message, USCG Headquarters (G-MPS) sends an entry approval notification message to the appropriate local Coastguard commands specifying the approved entry "window" for the vessel.

5. *24-hour Advance Notice of Arrival.* None of the procedures outlined in this document relieves the Master or Agent of his legal requirement to provide 24-hour advance notice or arrival to each local Coastguard Captain of the Port (33 CFR 160.207) and compliance with other applicable laws and regulations.

6. *Denials.* Vessels will be denied U.S. entry when there is insufficient information or insufficient advance notification in the Agent's application messages. *However, this does not prevent the Agent from submitting a new corrected entry application for the vessel.* In such cases, the official notification period commences upon receipt of the corrected entry application, *not the original entry application* which was denied. Occasionally an Agent's initial entry application may request that a portion of the official notification period be waived. In the event the waiver is denied, the Coastguard may recognise the time of receipt of the waiver is denied, the Coast Guard may recognise the time of receipt of the waiver request as the official notification period. Only if the initial entry request specifically states that a waiver is requested would this consideration be recognised.

7. *Early Arrival:* A vessel which holds an approved itinerary for a United States port entry shall not enter the U.S. territorial sea earlier than necessary to make an expeditious passage to the port for which the itinerary was approved. Deliberate slow steaming or anchoring within the U.S. territorial sea to avoid early arrival will not be considered innocent passage and will result in cancellation of the vessel's itinerary.

B. *ITINERARY CHANGE REQUESTS:*

1. *General:* Agents seek Itinerary Change Requests generally for three reasons: (i) to add ports, (ii) to change the prior Coastguard approved port call sequence and/or dates, and (iii) to cancel planned port calls after receiving Coastguard approval to enter. In each case, *the Agent's message request must list the vessel's full remaining itinerary, in addition to the desired change. Failure to list the vessel's entire desired U.S. calls will lead to automatic cancellation of the vessel's itinerary other than the requested change.* Use the same message procedures outlined in the prior section (Port Entry Application Requirements) for Itinerary Change Requests. Actions applicable to the three type of Itinerary Change Requests follow:

2. *Additional Port Calls:* Request for additional port calls are reviewed using the same criteria as for initial port calls. Details as follows:

(i) When the criteria calls for an initial government-to-government request, all requests for additional ports must be made at the Embassy level.

(ii) Agent message should be titled CHANGE 1, 2, 3, etc.

3. *Change Port Call Sequence/Dates:* Change requests to a vessel's approved port call sequence/dates are accepted by the Coast Guard, and in some cases approved, provided the following criteria are met:

(i) The initial port request was not government-to-government. (All others which are government-to-government must continue to be handled at the Embassy level).

(ii) Prior Coastguard approval was given for the vessel to initially enter the port.

(iii) The itinerary change request was submitted far enough in advance. For example, the maximum processing time needed within the Government ranges from 14 days for a "14-Day Request Port" to 96 hours for a "4-Day Notice Port". However, the Coastguard will try to expedite whenever possible. Normally 48 hours is the minimum processing time required by the Coastguard to process an itinerary change request. Whenever possible, the Coastguard will try to expedite the itinerary changes, however, requests made within the minimum processing time may be delayed.

REMEMBER – The vessel's entire U.S. itinerary must be contained in the message requesting port call sequence or date changes. When a port is not mentioned, the Coastguard concludes that the port is no longer desired and will delete it from the approved itinerary.

4. *Cancelled Port Calls:* Occasionally cargo loading plans change and certain U.S. port calls may not be desired even though they have previously been requested. Agents should notify the Coastguard of cancelled port calls as far in advance as possible. Failure to arrive at a port will lead to a vessel's remaining itinerary being cancelled, while, re-entry to a previously approved port will require the minimum entry requirement.

5. *Waivers:* The Coastguard recognizes that unusual circumstances arise which require Agents to request waivers. Approval of waiver requests will tend to be the exception rather than the rule and all waiver requests should be well documented.

Waiver requests will normally be processed within 48 hours; however, do not consider this a guaranteed time frame.

6. *Late Arrival Notices:* Will, in most cases, be accepted by the Coastguard in lieu of Itinerary Change Requests. While strictly optional, Late Arrival Notices do provide Agents with a simplified means to extend by 24 hours, the approved entry date. (see Example 3 of Annex B for additional details).

6a. In most cases, automatic late entry privileges will be extended to the vessel. Return message traffic will not be sent to the Agent unless late entry is denied. The following criteria apply:

(1) Late Arrival Notices may be submitted for any vessel which has prior Coastguard approval to enter the U.S. including those processed as government-to-government.

(2) Only *one* Late Arrival Notice may be submitted per vessel per port of call.

(3) The Late Arrival Notice does not change the vessel's approved official entry or departure time. It does, however, delay by 24 hours cancellation of a vessel's itinerary lacking an approved itinerary change request. Itinerary Change Requests and government-to-government requests remain the only means of changing the vessel's official entry or departure time.

(4) The Late Arrival Notice does not replace or eliminate the requirement for 24 hour advance notice of arrival to each local Coastguard COTP or Marine Safety Office (MSO).

ANNEX A:

Specific Entry Requirements.

Specific entry requirements for vessels registered in Bulgaria, Czechoslovakia, German Democratic Republic, Hungary, Poland, Romania, the Union of Soviet Socialist Republics and the Peoples' Republic of China are contained in Appendices 1 through 8 respectively. National security interests require that vessels registered in Bulgaria, Czechoslovakia, German Democratic Republic, Hungary, Romania and the Union of Soviet Socialist Republics be prohibited entry to selected U.S. ports. Additionally, personnel from these countries serving as crew members aboard "free flag" vessels may require removal prior to the vessel entering selected ports. All non-public vessels are subject to a U.S. Coastguard boarding at anytime. This may be, but is not limited to, the first port of call. Questions concerning these and other port entry matters should be directed to the vessel entry desk at Coastguard Headquarters at (202) 267-0775/6.

Appendix 1 – Bulgaria (BU).
Appendix 2 – Czechoslovakia (CZ).
Appendix 3 – German Democratic Republic (GC).
Appendix 4 – Hungary (HU).
Appendix 5 – Poland (PL).
Appendix 6 – Romania (RO).
Appendix 7 – Union of Soviet Socialist Republics (UR).
Appendix 8 – Peoples' Republic of China (CH).

Appendix 1 to Annex A:
BULGARIA (BU)

A. *Merchant and Passenger Vessels.*

1. Requirements: 7-working day request for all available U.S. ports. Vessel's Agent to submit port call applications to U.S. Coastguard Headquarters (G-MPS).

B. *Fishing Vessels.*

1. Fishing vessels (includes fishing support vessels) authorised by the Fisheries Conservation and Management Act of 1976 (PL 94-265) are permitted to enter selected ports upon providing notice to Commandant U.S. Coastguard (G-WPE) at least 4 days in advance of the desired entry. Those ports include:

Astoria Or
Baltimore Md
Boston Ma
Coos Bay Or
Eureka Ca
New York NY
Philadelphia Pa

2. Entry to all other available U.S. ports are subject to requests submitted on a government-to-government basis at least 14 days in advance of the desired entry date.

3. The U.S./Bulgaria GIFA currently in effect expires 1st July, 1988.

C. *Research Vessels.*

1. All research vessels must submit requests for entry on a government-to-government basis at least 14 days in advance of the desired entry date.

D. *Public Vessels.*

1. All public vessel entry applications are handled on a government-to-government basis.

Appendix 2 to Annex A:
CZECHOSLOVAKIA (CZ)

A. *Merchant and Passenger Vessels.*

1. Requirements: 7-working day request for all available U.S. ports. Vessel's Agent to submit port call applications to U.S. Coastguard Headquarters (G-MPS).

B. *Fishing Vessels.*

1. Entry to all available U.S. ports for fishing vessels are subject to requests submitted on a government-to-government basis at least 14 days in advance of the desired entry date.

C. *Research Vessels.*

1. All research vessels must submit requests for entry on a government-to-government basis at least 14 days in advance of the desired entry date.

D. *Public Vessels.*

1. All public vessel entry applications are handled on a government-to-government basis.

Appendix 3 to Annex A:
GERMAN DEMOCRATIC REPUBLIC (GC)

A. *Merchant and Passenger Vessels.*

1. Requirements: 7-working day request for all available U.S. ports. Vessel's Agent to submit port call applications to U.S. Coastguard Headquarters (G-MPS).

B. *Fishing Vessels and Fisheries Research Vessels.*

1. Under provisions of the U.S./German Democratic Republic Governing International Fishing Agreement (GIFA), fishing vessels (including fishing support vessels and fisheries research vessels) authorised by the Fisheries Conservation and Management Act of 1976 (PL 94-265) are permitted to enter selected ports upon providing notice to USCG Headquarters (G-MOS) at least 4 days in advance of the desired entry. those ports include:

Baltimore, Maryland,
Boston, Massachusetts,
New York, New York,
Philadelphia, Pennsylvania.

Fisheries research vessels are also permitted entry to the following select ports, under the provisions of the U.S./German Democratic Republic GIFA, upon providing notice to USCG Headquarters (G-MPS) at least 4 days in advance of desired entry:

Buzzards Bay, Massachusetts,
Woods Hole, Massachusetts.

2. Entry requests for all other available U.S. ports must be submitted on a government-to-government basis at least 14 days in advance of the desired entry date.

3. The U.S./German Democratic Republic GIFA currently in effect expires July, 1988.

C. *Research Vessels.*

1. All research vessels (including fishing research vessels) must submit requests for entry on a government-to-government basis at least 14 days in advance of the desired entry date.

D. *Public Vessels.*

1. All public vessel entry applications are handled on a government-to-government basis.

Appendix 4 to Annex A:
HUNGARY (HU)

A. *Merchant and Passenger Vessels.*

1. Requirements: 4-Working day request for all available U.S. ports. Vessel's Agent to submit port call applications to U.S. Coastguard Headquarters (G-MPS).

B. *Fishing Vessels.*

1. Entry to all available U.S. ports for fishing vessels is subject to requests submitted on a government-to-government basis at least 14 days in advance of the desired entry date.

C. *Research Vessels.*

1. All research vessels must submit requests for entry on a government-to-government basis at least 14 days in advance of the desired entry date.

D. *Public Vessels.*

1. All public vessel entry applications are handled on a government-to-government basis.

Appendix 5 to Annex A:
POLAND (PL)

A. *Merchant and Passenger Vessels.*

1. Requirements: 4-Working day request for all availble U.S. ports. Vessel's Agent to submit port call applications to U.S. Coastguard Headquarters (G-MPS).

B. *Fishing Vessels.*

1. Fishing vessels (includes fishing support vessels) authorised by the Fisheries Conservation and Management Act of 1976 (PL 94-265) are permitted to enter selected ports upon providing notice to Commandant U.S. Coastguard (G-MPS) at least 4 days in advance of the desired entry. Those ports include:

Astoria Or
Baltimore Md
Boston Ma
Coos Bay Or
Camden NJ
Dutch Harbour Ak
New York NY
Philadelphia Pa
San Francisco Ca
Seward Ak

2. Entry to all other available U.S. ports are subject to requests submitted on a government-to-government basis at least 14 days in advance of the desired entry date.

C. *Research Vessels.*

1. All research vessels must submit requests for entry on a government-to-government basis at least 14 days in advance of the desired entry date.

D. *Public Vessels.*

1. All public vessel entry applications are handled on a government-to-government basis.

Appendix 6 to Annex A:
ROMANIA (RO)

A. *Merchant and Passenger Vessels.*

1. Requirements: 4-Working day request for all available U.S. ports. Vessel's Agent to submit port call applications to U.S. Coastguard Headquarters (G-MPS).

B. *Fishing Vessels and Fisheries research Vessels.*

1. Entry request for all available U.S. ports must be submitted on a government-to-government basis at least 14 days in advance of the desired entry date. There is no Governing International Fishing Agreement currently in effect.

C. *Research Vessels.*

1. All research vessels must submit requests for entry on a government-to-government basis at least 14 days in advance of the desired entry date.

D. *Public Vessels.*

1. All public vessel entry applications are handled on a government-to-government basis.

Appendix 7 to Annex A:
UNION OF SOVIET SOCIALIST REPUBLICS (UR)

A. *Merchant and Passenger Vessels.*

1. Requirements: 14 day request for all available U.S. ports. Vessel's Agent to submit port call applications to U.S. Coastguard Headquarters (G-MPS).

B. *Fishing Vessels.*

1. Fishing vessels (includes fishing support vessels) authorised by the Fisheries Conservation and Management Act of 1976 (PL 94-265) are permitted to enter selected ports upon providing notice to Commandant U.S. Coastguard (G-MPS) at least 4 days in advance of the desired entry. Those ports include:

Astoria Or
Baltimore Md
Boston Ma
Dutch Harbor Ak
New York NY
Philadelphia Pa
Portland Or

2. Entry to all other U.S. ports are subject to requests submitted on a government-to-government basis at least 14 days in advance of the desired entry date.

C. *Research Vessels.*

1. All research vessels must submit requests for entry on a government-to-government basis at least 14 days in advance of the desired entry date.

D. *Public Vessels.*

1. All public vessel entry applications are handled on a government-to-government basis.

Appendix 8 to Annex A:
PEOPLE'S REPUBLIC OF CHINA (CH)

A. *Merchant and Passenger Vessels.*

1. Requirements: 7-Working Day Request for all U.S. ports. Vessel's Agent to submit port call applications to USCG Headquarters (G-MPS).

B. *Fishing Vessels.*

1. Under provisions of the U.S./PRC Governing International Fishing Agreement (GIFA), fishing vessels (including fisheries support vessels) authorised by the Fisheries Conservation and Management Act of 1976 (PL 94-265) are permitted to enter selected ports upon providing notice to Commandant U.S. Coastguard (G-MPS) at least 4 working days in advance of the desired entry. Those ports include:

Seattle, Washington,
Kodiak, Alaska,
Dutch Harbor, Alaska,
Nome, Alaska.

2. Entry requests for all other available U.S. ports must be submitted on a government-to-government basis at least 14 days in advance of the desired entry date.

3. The U.S./PRC GIFA currently in effect expires 1st July, 1990.

C. *Research Vessels.*

1. All research vessels must submit requests for entry on a government-to-government basis at least 14 days in advance of the desired entry date.

D. *Public Vessels.*

1. All public vessel entry applications are handled on a government-to-government basis.

ANNEX B
EXAMPLE MESSAGE FORMATS

EXAMPLE 1: This sample message format may be used by an Agent desiring entry of a People's Republic of China (CH) registered vessel into one of the designated 4-day Notice Ports outlined in Annex C.

FM Agent Name
Complete Address
Commercial Phone Number
Telex/Twx No. (including Answer Back Code)
TO Commandant, U.S. Coastguard (G-MPS)
Washington DC
Telex No. 892427

4 Day Notice
M/v. Dong Hai (CH) (Call Sign)
Initial Itinerary (or Change 1, 2, etc.)
New York 6/17-6/19, Philadelphia 6/20-6/21
Cargo: In Ballast. To Load Grain
Last Port of Call: Shanghai

EXAMPLE 2: This sample message format may be used by Agents for vessels desiring access to "request" ports.

FM Agent Name
Complete Address
Commercial Phone Number
Telex/Twx No. (including Answer Back Code)
TO Commandant, U.S. Coastguard (G-MPS)
Washington DC
Telex No. 892427

4-Working Day Request or 7-Working Day Request or 14-Day Request.
M/v. Polinski (PL) or m/v Czechlava (CZ) (Call Sign)
Initial Itinerary (or Change 1, 2, etc.)
Morehead City 6/30-7/4
Cargo: General
Last Port of Call: Gdynia

*NOTE: Bulgarian, Romanian, Hungarian also apply to Example 2.

EXAMPLE 3: Coastguard port entry approval messages will provide the official entry time that the vessel is cleared to enter a particular port. This will either be the exact conclusion of the 96 hour official notification period for all four day notices, or at 0001 GMT of the day requested for all other cases. Actual vessel entry is expected to occur during the 24 hour period commencing from the official entry time. An additional 24 hour period may be requested (but is not guaranteed) by providing the Coastguard Headquarters with a Late Arrival Notice message.

1. Message format as follows:
FM: Agent Name
TO: Commandant (G-MPS) (See paragraph C.2. for various message addresses)
1. This is a Late Arrival Notice.
2. The (type of vessel, name, flag and call sign) has received CG Headquarters approval to enter (name of port) at (date and time)
3. Revised ETA (date and time. This must not be later than 48 hours after official entry approval time.).
END OF MESSAGE

2. In most cases, automatic late entry privileges will be extended to the vessel. Return message traffic will not be sent to the Agent unless late entry is denied. The following criteria apply:

(a) Late Arrival Notices may be submitted for any Communist vessel which has prior Coastguard approval to enter the U.S. including those processed as government-to-government.

(b) Only one Late Arrival Notice may be submitted per vessel per port call.

(c) The Late Arrival Notice does not change the vessel's approved official entry or departure time. They do, however, delay by 24 hours a vessel's itinerary being cancelled lacking an approved Itinerary Change Request. Itinerary Change Requests and government-to-government requests remain the only means of changing the vessel's official entry or departure time.

(d) The Late Arrival Notice does not replace or eliminate the requirement of 33 CFR 161.7 for 24 hour advance notice of arrival to each local Coastguard Office (i.e. Captain of the Port (COTP) or Marine Safety Office (MSO)). Agents may, however, desire to send an identical message to Coastguard Headquarters in fulfillment of 33 CFR 161.7. In this case, change your first sentence to read:

THIS IS A LATE ARRIVAL NOTICE AND 24 HOUR ADVANCE NOTICE OF ARRIVAL.

ANNEX C
U.S. NOTICE PORTS FOR PRC FLAG MERCHANT VESSELS

The following geographical limits define the U.S. ports which have been established as 4-Day Notice Ports in the U.S./PRC Maritime Agreement.

WEST COAST

1. Skagway, Alaska: Taiya Point (in Taiya Inlet on Lynn Canal) to the town of Skagway, Alaska.
2. Ketchikan, Alaska: Tongas Narrows, N.W. of a line between Mountain Point and Gravina Point, and S.E. of a line between Point Higgins and Guard Island, and including Vallenar Bay.
3. Anchorage, Alaska: Waters of Cook Inlet Northward from a line drawn between Cape Douglas and Cape Elizabeth.
4. Bellingham, Washington: Bellingham Bay.
5. Everett, Washington: N.E. end of Possession Sound.
6. Seattle, Washington: Coincident with King County, Washington.
7. Tacoma, Washington: Coincident with Pierce County, Washington.
8. Olympia, Washington: Coincident with Thurston County, Washington.
9. Astoria, Oregon: Coincident with Clatsop County, Oregon.
10. Longview, Washington: Columbia River between mile 62 and mile 70.
11. Portland (including Vancouver, Washington), Oregon: Coincident with 3 Oregon counties: Multnomah, Clackamas, Washington. (Port of Vancouver, Washington considered to be part of Port of Portland).
12. Coos Bay (including North Bend), Oregon: All of Coos Bay to North of Coos River.
13. Eureka, California: Humboldt Bay.
14. Sacramento, California: Sacramento Harbour proper, Sacramento River to limits of navigation.
15. San Francisco (including Alameda, Oakland, Berkeley, Richmond), California: San Francisco Bay, South of Richmond/San Rafael Bridge.
16. Los Angeles (including San Pedro, Wilmington, and Western part of Terminal Island), California: The portion of San Pedro Bay and Cerritos Channel within the City of Los Angeles, California.
17. Stockton, California: Stockton Harbour proper and San Joaquin River to limits of navigation.
18. Long Beach (including Eastern part of Terminal Island), California: That portion of San Pedro Bay and Cerritos Channel within the City of Long Beach, California.
19. Honolulu, Hawaii: Honolulu Harbour proper.

ANNEX D
AGENT PROPOSAL FOR REMOVAL OF NATIONALS

From: Agent's Name
Complete Address
Commercial Phone Number
Telex. Twx No. (including Answerback Code)
To: Commandant, U.S. Coastguard (G-MPS-2)
Washington, DC
Telex No. 892427

Subject: m/v "Judith Schulte" (Flag) (call sign and Lloyd's Number); Crew Removal.

ETA Cape Henry late p.m. hours 20th April, 1984 to Sewells Point anchorage. Vessel scheduled to work cargo in Norfolk 23rd – 24th April then transit to Richmond, Va; thereafter transiting outbound 27th April bound for Jacksonville, Fla.

The above vessel has 2 Polish crew members on board. Details are as follows:

Name/Rank	*Passport No.*	*Date of Birth*
Robert Pazdiorek (C/E)	SA934255	4/6/42
Lech Szymonski (2/E)	SA478176	9/2/44

On behalf of the vessel's Owners, we propose to remove the 2 Polish crew members on arrival at Lynnhaven anchorage by commercial launch. The 2 men will be escorted to and remain under guard at the America House Hotel, Cape Charles until the vessel completes cargo activities at Norfolk International Terminal and Richmond Waterfront Terminal. We will arrange to have these individuals rejoin the vessel at Lynnhaven anchorage during the vessel's outbound transit. The local Coastguard and INS Office has been advised and we will co-ordinate with them.

During the time the Polish crew members are not on board the vessel, their positions will be filled by suitable replacements to ensure the safe navigation of the vessel and as per manning requirements.

PILOTAGE: North West Coast of U.S.A.
Columbia River Bar Pilots are "Sea Pilots" for all ports in Columbia and Willamette Rivers. Namely, Astoria and Portland (Oregon), Longview, Kalama and Vancouver (Washington) – when entering from sea and if providing above Astoria, Columbia River Pilots relieve Bar Pilots for balance of transit.

COLUMBIA RIVER BAR PILOTS
Foot of 14th Street,
P.O.Box 81, Astoria, Oregon 97103
TWX 910-466-8014
Telephones (503) 325-2641 or 325-2642

RADIO FACILITIES

Pilot Boat Peacock	WS 7217
Pilot Boat Columbia	WYE 7344
Bar Pilots Office, Astoria	KOK 360
(Ch. 16) (156.80 MHz)	
Astoria Marinephone "KFX"	
Ship's Call on	2206 kHz
KFX Answers on	2598 kHz
Or call on and receive KFX on Channel 26.	

In order there be no delays, vessels due to arrive at the Columbia River and desiring a Bar Pilot, must cable or telephone the Columbia River Bar Pilots. (Pilot normally not on station unless cable or telephone message received.) USE RADIO STATION KLB, EVERETT, WASHINGTON at least 12 hours before arrival at the lightship. Code address, "BAR PILOTS, STATING THE TIME OF ARRIVAL". If transmitted by any other radio station, delay may occur. If vessel is equipped with VHF, use Channel 16 (156.80 MHz) to call the pilot boat or Bar Pilots' Office, Astoria (KOK 360) and shift to Channel 13 (156.65 MHz).

PILOT LADDER INSTRUCTIONS

1. Please contact the pilot boat via voice radio (Channel 16 or frequency 2182 kHz) approximately 30 minutes prior to arrival for desired lee and boarding instructions.
2. The Columbia River Bar Pilots have 2 pilot vessels; the "Peacock" and the "Columbia". When the "Peacock" is on station, Masters will be instructed to rig their pilot ladder 4 ft. above the water's edge. When the "Columbia" is on station, the Master will be instructed to rig the ladder 10 ft. – 12 ft. above the water's edge. The above-mentioned distances above the water are of the utmost importance, particularly in the case of the "Columbia", as the pilot boat can and has pulled the ladder down when it becomes pinched between the pilot boat and the side of the vessel. Pilot ladders and boat ropes shall not be permitted to drag in the water. No tag lines, pull ropes or trailing lines shall be attached to the bottom of the ladder.
3. Pilot ladders shall be rigged amidships, over "draft marks" clear of all obstructions, such as accommodation ladders, and clear of overside discharges from the engine room and deck scuppers.
4. The pilot ladder should be kept clean and used for embarking and disembarking Pilots only. The ladder shall be made in one continuous length, not 2 sections shackled or lashed together. The ladder shall be equipped with spreaders approximately 10 ft. apart in accordance with SOLAS regulations. The ladder must be in good condition, the treads horizontal and the upper surface of rough non-skid quality.
5. The ladder must be adequately lit at night by means of a light shining well over the ship's side in the vicinity of the ladder. The area of the deck where the Pilot boards and leaves should be free of debris and well lighted. Where portable stanchions and bulwark steps are used, they shall be rigidly attached to the ship's structure. A life ring with water light and lifeline attached should be ready at hand. Rigging of the ladder and embarking and disembarking of the Pilot must be under the supervision of a licensed officer.
6. Boat ropes are not to be used, all pilot boats are power propelled.
7. Manropes shall be of manila 3 in. circumference. The manropes shall be free of any knots including the lower end. The manropes should be rigged 1 ft. – 2 ft. longer than the pilot ladder. Manropes are not to be rigged for boarding unless otherwise advised.
8. If vessel is to take a deck load of logs, please discuss with your Agent the building of a catwalk to provide safe passage to and from the pilot ladder.

AUTOMATIC RADAR PLOTTING AIDS: With effect as from July 1st, 1982, vessels carrying oil or hazardous materials in bulk must have automatic radar plotting aids.

A fine for failure to carry an ARPA could be multiplied by the number of days of the violation.

The United States Coastguard has stressed, however, that its official policy is enforcement by denial of entry and restriction of operation and not primarily by the enforcement of fines.

While the Coastguard recognises that the Public Law enables financial penalties to be incurred, it is believed that the terms of the Port and Tanker Safety Act under which the U.S. Coastguard operates directs it to monitoring and identification of previous offenders and enforcement by prevention of entry into U.S. ports or subsequent restriction of trade and departure.

COAST GUARD REGULATIONS: The U.S. Coastguard has announced its intention to develop the following regulations implementing sections of the 1978 U.S. Port and Tanker Safety Act requiring:

1. Existing crude oil carriers of 20,000 d.w.t. or above but less than 40,000 d.w.t. to have segregated ballast tanks (SBT) or a crude oil washing system (COW) by January 1st, 1986, or when they reach 15 years of age, which ever occurs later; and
2. Existing product carriers of 20,000 d.w.t. or above but less than 40,000 d.w.t. to have SBT or dedicated clean ballast tanks (CBT) by January 1st, 1986, or when they reach 15 years of age, whichever occurs later.

POLLUTION: Any vessel which does not have a valid I.O.P.P. Certificate on board will not be allowed to transit U.S. waters.
NOTICE: *B.A. Notice to Mariners No. 3013(T) of 1983:*
UNITED STATES OF AMERICA – Chart and Publication requirements.

A statement concerning the U.S. Navigation Safety Regulations relating to Navigation, charts and Publications has been issued in the U.S. Notices to Mariners Weekly 44/83. This is reproduced below. Admiralty Annual Notice to Mariners No. 22 will be amended as appropriate in the 1984 edition.

CHART AND PUBLICATION REQUIREMENTS

Sections 164.30 and 164.33 of Title 33 of the Code of Federal Regulations Part 164 (33 CFR 164), which detail requirements for the carriage of nautical charts and publications, are amended effective October 28, 1983. The regulations contained in these sections are applicable to each self-propelled vessel of 1,600 g.r.t. or more, operating on the navigable waters of the United States, except the Saint Lawrence Seaway, and are reprinted as follows:
§164.30 Charts, publications, and equipment: General.

No person may operate or cause the operation of a vessel unless the vessel has the marine charts, publications, and equipment as required by §§ 164.33 through 164.41 of this part.
§164.33 Charts and publications.

(a) Each vessel must have the following:

(1) Marine charts of the area to be transited, published by the National Ocean Service, U.S. Army Corp of Engineers, or a river authority that:
(i) Are of a large enough scale and have enough detail to make safe navigation of the area possible; and
(ii) Are currently corrected.

(2) For the area to be transited, a currently corrected copy of, or applicable currently corrected extract from, each of the following publications:
(i) U.S. Coast Pilot.
(ii) Coastguard Light List.

(3) For the area to be transited, the current edition of, or applicable current extract from:
(i) Tide tables published by the National Ocean Service.
(ii) Tidal current tables published by the National Ocean Service, or river current publication issued by the U.S. Army Corps of Engineers, or a river authority.

(b) As an alternative to the requirements for paragraph (a) of this section, a marine chart or publication, or applicable extract, published by a foreign government may be substituted for a U.S. chart and publication required by this section. The chart must be of large enough scale and have enough detail to make safe navigation of the area possible, and must be currently corrected. The publication, or applicable extract, must singly or in combination contain similar information to the U.S. Government publication to make safe navigation of the area possible. The publication, or applicable extract must be currently corrected, with the exceptions of the tide and tidal current tables, which must be the current editions.

(c) As used in this section, "currently corrected" means corrected with changes contained in all Notices to Mariners published by Defense Mapping Agency Hydrographic/Topographic Centre, or an equivalent foreign government publication, reasonably available to the vessel, and that is applicable to the vessel's transit.

SHIP'S OFFICER'S REPORT: The information given for the port of New Orleans (U.S.A.) applies to all the ports in the U.S.A. in the event of the vessel arriving from abroad or from a previous U.S. port. All the documents such as Crew List, Passenger List (Form I-418), Deck, Engine, Steward's and Bonded Stores Lists (Form 1303), Crew's Effects Declaration (Form 1304), are required in duplicate at each port for entry inward.

ALBANY, New York: 42.40 N. 73.45 W. (See Plan)

DOCUMENTS: If first port of call in U.S., 2 complete Customs Manifests describing all cargo on board and ports of discharge. Also 1 Cargo List for Albany cargo, 3 Crew Lists, 3 Store Lists, 3 Curio Lists, Ship's Register, Load Line Certificate and Tonnage Tax Certificate.
PILOTAGE: Hudson River Pilot boards vessel off Yonkers, N.Y. Cable address: "Hudpilots, Yonkers, N.Y."
ANCHORAGES: Several anchorage areas in Hudson River en route to Albany if required due to weather. Vessels cannot anchor at Port of Albany.
RESTRICTIONS: Hudson River Channel to Albany has controlling depth of 32 ft. MLW. Vessels with draft in excess of 28 ft. will be required to transit river on favourable tide as directed by Pilot.

MAX. SIZE: Max. permissible length 750 ft., breadth 110 ft., draft 30 ft. Turning basin at Albany 1,100 ft. in width.
HEALTH: See "Health: All Ports" before first U.S.A. port. Illness reports made to New York Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port.
TUGS: One 2,500 h.p. tug stationed at port at all times; additional tugs available upon advance request. Normally 1 tug is sufficient for turning and docking. Tug's lines are used.

BERTHING: 5,000 linear ft. of marginal wharf available at APDC terminal for general cargo, grain, lumber, etc., 32 ft. alongside wharf. Various privately operated deep-water petroleum terminals in port area.
Facilities: 13.5 million bushel grain elevator. 17 million gallon molasses storage – 3 terminals. Scrap Iron Terminal, Banana Terminal.
Equipment: Available at the Port of Albany:
2 Diesel-operated wharf cranes, 5 ton capacity each
1 Gasoline crawler crane, 15 ton capacity
3 Fork-type telescopic lift trucks, 15,000 lb. each (height of lift 17 ft.)
12 Fork-type telescopic lift trucks, 5,000 lb. to 7,000 lb. each
2 Clamp equipped telescopic lift trucks, 7,000 lb. capacity each
9 Gasoline operated lumber carriers
2 Front-end loaders, 1.25 cu.yd. capacity each
1 180 ton capacity bulk car unloader
21 5/8 cu.yd. clamshell buckets
Hoppers for shipside bulk materials handling
Complete bagging equipment for all bulk materials

BRIDGES: Minimum vertical clearance of bridges on Hudson River en route to Albany is 135 ft.
STEVEDORES: Rates and information can be obtained from I.T.O. Corporation; 7 gangs available.

TANKERS: Bray/Getty Terminal:
Location: The Bray/Getty Terminal is located approximately 126 miles from the Battery (NYC), about 0.8 miles Northward of Island Creek. It is an offshore wharf 250 ft. long with a dock height above the waterline of 11 ft.
Berthing: Normal berthing is starboard side to with the use of only one 1,800 h.p. tug. An additional tug may be required if adverse weather conditions exist. The vessel approaches the berth from midstream on approximately a 30° angle to the pier. The tug is used on the port bow to control the direction of the vessel during the approach. Once alongside the pier, spring lines are run out and the vessel is held in position with her own engines until the tug is secured. See "Plan".
Gangway: The terminal does not provide a gangway.
Fresh Water: Not available at this terminal.
Bunkers: Fuel is not available at this terminal.
Slop/Deballast: The terminal is not equipped to receive slops or dirty ballast.
Security: The terminal is fenced and guarded.
Pollution: Although an oil boom is permanently in place inside the dock area, outside contractors must be contacted for clean-up in the event of the oil spill.
Firefighting: The terminal is equipped with one 150 lb. dry chemical extinguisher with additional firefighting support by shorebased fire trucks.
Cirillo Terminal:
Location: The Cirillo Terminal is located approximately 125 miles from the Battery (NYC), about 0.5 miles Northward from Island Creek. It is a bulkhead wharf 280 ft. long with a dock height above the waterline to 10 ft. It is owned by Albany Port District Commission and operated by Cirillo Brothers.
Berthing: Normal berthing is port side to with the use of one 1,800 h.p. tug. An additional tug, may be required if adverse weather conditions exist. The vessel approaches the berth on the ebb tide and slowly approaches the marginal berth in the usual manner. The current in this area sets fair with the dock face creating an ideal docking environment. See "Plan".
Gangway: The terminal does not provide a gangway.
Fresh Water: The terminal can supply fresh water upon request.
Slop/Deballast: The terminal is not equipped to receive slops or dirty ballast.
Security: The terminal is fenced and guarded at all times.
Pollution: Although an oil boom is readily available for oil spill containment, all clean-up must be performed by outside contractors.
Metropolitan/Arco Terminal:
Location: The Metropolitan/Arco Terminal is located approximately 126 miles from the Battery (NYC). The dock is of an offshore wharf construction with dolphins.
Berthing: Normal berthing is starboard side to with the use of 2×1,800 h.p. tugs. All ships are usually docked at Slack High Water. The vessel approaches the dock from the centre of the channel and is carefully breasted alongside the pier, using her tug and the current to slide over against the breasting dolphins. Spring lines are run first, followed by breasts, then head and stern lines. See "Plan".
Gangway: The terminal does not provide a gangway.
Fresh Water: Piped fresh water is available.
Bunkers: Fuel is not available at the dock.
Slop/Deballast: The terminal is not equipped for slops or dirty ballast receipt.
Security: The terminal is fenced and guarded. The main gate is locked when no vessels are at the dock. When a vessel arrives the dock is continually manned by terminal employees.
Pollution: The terminal is equipped with a workboat and 1,000 ft. of boom for spill containment. Local contractors must be contacted for clean-up operations.
Firefighting: The dock is equipped with one 150 lb. dry chemical extinguisher. Additional back-up is supplied by local firefighting departments.

Niagara/Mohawk Terminal:
Location: The Niagara/Mohawk Terminal is located approximately 125 miles from the Battery (NYC).
Berthing: Normal docking is port side to with the assistance of one 1,200 h.p. tug. The vessel approaches the marginal berth at minimum velocity with the ship's engines used to maintain relative position of vessel while lines are passed. The tug assists in the breasting of the vessel towards the dock. See "Plan".
Gangway: The terminal does not provide a gangway.
Fresh Water: Piped fresh water is available at the dock.
Bunkers: Fuel is not available at this terminal.
Slop/Deballast: The terminal is not equipped to receive slops or dirty ballast.
Security: The terminal is fenced and guarded.
Pollution: The dock is equipped with 2,500 ft. of boom for oil spill containment.
Firefighting: Portable CO_2 extinguishers provide adequate firefighting capabilities.
Sears Terminal:
Location: The Sears Terminal is located approximately 124 miles from the Battery (NYC), about 1.2 miles Southward of Island Creek. It is an offshore wharf 191 ft. long with a dock height above the waterline of 10 ft.
Berthing: Normal berthing is port side to with the use of one 1,800 h.p. tug. An additional tug may be required if adverse weather conditions exist. The vessel approaches the dock on the first of the ebb tide, slowly stemming the tide during the approach. The tug is positioned on the starboard bow to control the vessel's movements. After a normal approach, the vessel is spotted and spring lines are led out. The vessel is then held in position with the tug and own engines while the breast, head and stern lines are led out. See "Plan".
Gangway: The terminal does not provide a gangway.
Fresh Water: Not available at this dock.
Bunkers: Fuel is not available.
Slop/Deballast: The terminal is not equipped to receive slops or dirty ballast.
Security: The terminal is fenced and guarded at all times.
Pollution: Although the terminal is equipped with a workboat and boom for oil spill containment, all clean-up equipment and personnel must be secured through local contractors.
Roseton, NY: Central Hudson Gas & Electric Terminal:
Location: The Central Hudson Gas and Electric Terminal is located on the Hudson River approximately 74 miles from the seabuoy.
Berthing: Normal berthing is starboard side to with the use of one 3,500 h.p. tug. An additional tug may be required during adverse weather conditions. The vessel proceeds to a point opposite to or a little above the dock, turns midstream with the aid of the tug and comes down parallel to the dock. She is then breasted in and held alongside by the tug while the spring and breast lines are led out. The tug then handles the head and stern lines (synthetic required). See "Plan".
Gangway: The terminal does not provide a gangway.
Fresh Water: Not available at the dock.
Bunkers: Fuel is not available at this terminal.
Security: The terminal is fenced and guarded.
Pollution: Booms and absorbent materials are available on the dock in the event of an oil spill.
Firefighting: The dock is equipped with one 250 lb. purple K extinguisher, 2×2.5 in. fire hoses with fog nozzles on a 6 in. main.
Ravena, N.Y. (Port of Albany): Atlantic Cement Terminal:
Location: The Atlantic Cement Terminal is located on the Hudson River approximately 127 miles from the seabuoy and is under the jurisdiction of the Port of Albany.
Berthing: All vessels must dock and undock during daylight hours only. Normal berthing is port side to with the use of one 2,100 h.p. tug. An additional tug may be required during adverse weather conditions or when docking on a rising tide. The dock is of a marginal design, parallel to the channel axis. Normal approach is with a tug breasting the vessel onto the dock.
Gangway: The terminal does not provide a gangway.
Fresh Water: Not available at the dock.
Bunkers: Fuel is not available at this terminal.
Slop/Deballast: The terminal is not equipped to receive slops or dirty ballast.
Security: Although the terminal is not fenced or guarded, dock personnel are in attendance at all times.
Pollution: In the event of an oil spill, the containment and clean-up equipment available at the dock consists of:
1. 7,400 ft. of 12 in. collar boom.
2. Oil retention gate mounted on dock.
3. 23 ft. 150 h.p. tow boat.
4. 30 ft. deck barge for oil boom.
5. 500 ft. of 2.5 in. fire hose.
6. 100 bags of oil absorbent material.
7. 15 bags plastic "Oil Snares".
8. Air bubbling system-along dock face.

Firefighting: The dock is equipped with one 500 lb. dry chemical extinguisher, 350×2.5 in. hose and fog nozzles located adjacent to the dock manifold.

FRESH WATER: Supplied during regular working hours daily, except Saturdays, Sundays, and holidays, at $2.75 per 100 cu. ft. plus $22.00 service charge per daily delivery on straight time. Additional charge if supplied during other periods.
GANGWAY/DECK WATCHMEN: Available via ship chandler, not required but recommended.
CONSULS: Italian Vice-Consulate located at Albany, other consulates available at New York City.
REPAIRS: Minor deck and engine repairs can be handled.
AIRPORT: 7 miles distant from port: served by Allegheny, America, Altair and Executive Airlines.

TIME: Eastern Standard and Eastern Daylight Saving, GMT minus 5 hours.
HOLIDAYS: Standard U.S. holidays; cargo work can be arranged on all holidays at overtime rates, except July 4th, Labour Day and Christmas Day.
SHORE LEAVE: Crew members allowed ashore unless restricted by Customs or Immigration requirements.

SHIPMASTER'S REPORT: February 1980.
Pilotage: Compulsory. Pilot boards at Ambrose Light vessel and Hudson River Pilot boards at Yonkers.
Restrictions: Vessels able to enter and leave during darkness at any stage of the tide.
Max. Size: LOA 750 ft. (Approx). Max. Draft: 31 ft. to 32 ft. depending on height of river.
Tugs: One tug stationed at Albany (approx. 2,500 h.p.). Additional tugs come from New York.
VHF: Tug only listens out on VHF before vessel arrives.
Services: Following services available: Fresh water, fresh provisions, small repairs, machine shop, airport, Lloyd's surveyor (from New York), Salvage surveyor (from New York), lubricating oil, groceries and meats.
Berthing: Pier No. 2 Albany: Berth located 3 miles from Albany and 145 miles from the entrance. Vessel's size limited by draft and space available in swinging room in basin. Max. size approx. LOA 600 ft., draft 31 ft. Least depth of water in channel from sea to berth 33 ft. (approx). Vessels able to dock and undock at any stage of the tide, day or night.
Grain Loading Facilities: Available.
Ro/Ro Facilities: Available, port now being used to discharge cars from car carriers. No floating cranes available.

AUTHORITY: Albany Port District Commission, Administration Building, Port of Albany, Albany, N.Y. 12202. *Tel:* (518) 463-8763. *Contact:* F. Keane, General Manager.

ALEXANDRIA, Virginia: 38.48 N. 77.03 W. (See Plan)

LOCATION: On the Potomac River 7 miles from Washington D.C.
DOCUMENTS/PILOTAGE: Refer to "Hampton Roads".
RESTRICTIONS: Anchoring necessary between 2200 to 0600 hrs. Berthing daylight only.

Channel: Width 200 ft. Depth 24 ft. Turning basin: length 6,700 ft. Width 300 ft.

MAX. SIZE: Governed by draft only – max. 22 ft. 6 in. all times.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Washington, D.C. Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
RADIO: WMH Baltimore, Md.
TUGS: None required.
BERTHING: 2 open piers. Berthing 0600 hrs. to 2200 hrs.
BRIDGES: 1 bridge, closed Monday through Friday 1600–1830 hrs. and 0630–0900 hrs.
STEVEDORES: Informally arranged through Receivers or Shipper's Agents.
MEDICAL: Hospital available.
FRESH WATER: Available at berth – 10 t.p.h.
FUEL: Not available.
GANGWAY/DECK WATCHMEN: Shore watchman provided.
OPENING/CLOSING HATCHES: Stevedores. Vessel – depending on understanding.
IDENTIFICATION CARDS: Required by Immigration.
REPAIRS: Minimal facilities.
REPATRIATION: Facilities exist.
AIRPORT: 3 miles. Washington National – multiple flights.
TIME: GMT minus 5 hours.
POLICE/AMBULANCE/FIRE: Agents arrange. Watchmen on duty.
SHORE LEAVE: Allowed.
DELAYS: No unusual delays.
SERVICES: Searle Consortium, Ltd. in Alexandria (Tel: (703) 768-6026) and their sister company, Seaward Marine Services can provide the following: Diving and general underwater inspection services; underwater hull cleaning; Salvage survey and underwater repairs of a salvage nature; assistance in the refloating of stranded vessels and assistance in the arranging/engineering of towage.
AUTHORITY: Virginia Port Authority, 600, World Trade Center, Norfolk, Va. 23510. *Tel:* (804) 623-8000. *Telex:* Twx. 710-881-1231. *Cables:* Vastports-Norfolk.

ANACORTES, Washington: 48.31 N. 122.36 W. (See Plan)

DOCUMENTS, PILOTAGE, etc: Refer to "Tacoma".
ANCHORAGES: East End Guemes Channel, 54 ft. minimum depth.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Seattle Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
TUGS: Join vessel in Guemes Channel at Anacortes – lines optional.
BERTHING: Pier No. 1, depth 30 ft.; Pier No. 2, depth 35 ft.
TANKERS: Shell Jetty: depth alongside 42 ft.
STEVEDORES: Request 24 hours' notice.
FRESH WATER: Available from city water system.
FUEL: Available from Shell and Texaco.
GANGWAY/DECK WATCHMEN: Not required by port.
OPENING/CLOSING HATCHES: Stevedores or crew before vessel's arrival.
CUSTOMS ALLOWANCES: No definite quantities prescribed; reasonable allowance at discretion of Customs Inspector.
CARGO GEAR: ILWU requirements.
IDENTIFICATION CARDS: Required.
REPAIRS: Minor repairs only.
AIRPORT: 75 miles Seattle International.
TIME: GMT minus 8 hours. From end April to end October, Pacific Daylight Saving Time, GMT minus 7 hours.
HOLIDAYS: See "Tacoma".
POLICE/AMBULANCE/FIRE: Police, Ambulance and Fire dial 911.
TELEPHONES: Available at Pier 2 and at Pier 1 by Phone Co.
SHORE LEAVE: Allowed.
AUTHORITY: Port of Anacortes, P.O.Box 297, Anacortes, Washington 98221. *Tel:* (206) 293 – 3134 (Scan System 576 – 6371). *Contact:* M. Hardy, Marine Terminal Supervisor.

ANCHORAGE, Alaska: 61.12 N. 150.00 W. (See Plan)

DOCUMENTS:

3 copies Cargo Manifest (Form 1302), the original showing all cargo on board, and 2 copies showing only cargo for this port.
2 copies Crew Manifest (curio list).
2 copies Stores List.
2 copies Passenger List (Form I-418).
2 copies Crew List (Form I-418).

Customs Boarding Officer will also examine Ship's Register and Load-line Certificate. In addition, the following documents will be required for formal entry to be made within 48 hours of arrival from abroad, or 24 hours from arrival from a United States port:

Master's Oath (Customs Form 1300).
All foreign clearances.
U.S. Certificates of payment of tonnage tax (Customs Form 1002).
Certified Crew List.

PILOTAGE: The pilot station for Anchorage is at Homer, Alaska. Vessels may contact Pilot by radio telephone. Telegraphic address "Almarrpilot", ETA notice requested 24 hours. Listens VHF Channel 10. Pilot boat green and white. Pilot flag by day, pilot light at night. Pilot boat 1 mile South of Homer Spit (Coal Point), Homer, Alaska. In bad weather, wait inside Homer Spit and advise via radio-telephone.

Also see "Homer".

ANCHORAGES: The best anchorage for deep-draft vessels is West of Anchorage in depth of 10 fathoms to 12 fathoms, silt bottom. Holding ground is good.
TIDE AND CURRENTS: The diurnal range of tide is 29.6 ft., currents from 1.7 knots to 6 knots or more in mid-channel.
RESTRICTIONS: Flow and pan ice is encountered in the Cook Inlet from approximately the end of November until the end of February. This ice does not freeze solid due to the tidal action. The port is in year-round use and expert information on Winter conditions may be obtained from any of the highly qualified licensed ship pilots available in the area.
MAX. SIZE: All berths 35 ft. MLLW.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Anchorage Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
RADIO: Port of Anchorage "KBT-42" on HF-AM and SSB. "WHJ-82" on VHF-FM.
Radio Advice: Masters must notify Agents at Anchorage of ETA at Homer Spit, Alaska, as early as possible. Homer Spit position: 59° 35' N., 151° 40' W. To avoid confusion ETA message to Anchorage should indicate Time Zone used. Alaska Communication System Stations are located at Juneau – call sign AKM – Keeping watch on 500 kHz and working on 452 kHz. This station is reported to be very difficult to contact and is closed during weekends.

The fastest way to forward radio messages in the North Pacific is via San Francisco Radio KPH.

The U.S. Coast Guard Station Kodiak – call sign NOJ – keeps W/T watch on 500 kHz, working on 470 kHz.

Due to difficulties reported in contacting local Alaskan stations, Masters of vessels engaged on trans-Pacific crossings are advised to route radio messages to Alaska and Europe via Singapore Radio or Choshi Radio until the dateline, thereafter via San Francisco radio.

TUGS: Join vessel 1.5 miles S.W. of docks.
BERTHING: 600 ft. general cargo Terminal No. 1, apron width 47 ft., live road limit 600 lb. per sq. ft. General cargo Terminals No. 2 and 3, 610 ft. and 893 ft. respectively, apron width 69 ft. Depth alongside face at MLLW 35 ft.
CRANES: Shore Cranes: Level luffing gantry and Paceco container cranes. Capacity: Level luffing gantry 7.5 tons and 40 tons (5 ton high-speed whip lines). Container cranes 27.5 tons.

Outreach from fender face is 70 ft. for the gantries and 81 ft. on the Paceco. Clear height above MLLW is 132 ft.

TANKERS: The Petroleum Terminal at the port of Anchorage is contiguous to the general cargo docks. The POL Dock is 612 ft. long and contains multiple petroleum manifolds in addition to those on Terminal No. 1. Depth 35 ft. alongside.
STEVEDORES: *Working Hours:* Stevedores do not work on January 1st, September 6th, November 25th and December 25th. The first 6 hours of any shift between 0800 hrs. and 1500 hrs. is at the straight time rate. Work performed on Saturdays, Sundays, holidays and between 1700 hrs. and midnight is at overtime rate. Meal breaks are 1145 hrs. to 1300 hrs. and 1645 hrs. to 1800 hrs. Stevedores do not normally work between midnight and 0700 hrs.
SPECIALISED CARGO HANDLING FACILITIES: 2×27.5 ton Paceco container cranes servicing general cargo Terminal 2 and 3; private bulk cement pipe-lines to shore silos. Ro-Ro service available.

DENSITY: From 1.0098 to 1.0102.
MEDICAL: All facilities available. 3 local hospitals.
FUEL: All grades available.
FRESH WATER: Public Health Service certified water station.
GANGWAY/DECK WATCHMEN: Required shipside.
OPENING/CLOSING HATCHES: By stevedores.
SURVEYORS: B. J. Logan and Associates, (Lloyd's Agency; correspondence to AIMU; National Cargo Bureau), 237 E. Third Avenue, Anchorage, Alaska 99501. Phone: (907) 272-7724.
AIRPORT: 5 miles; served by regular foreign and domestic airlines.
CUSTOMS ALLOWANCES: At the discretion of Customs Officer. Normal allowance is 200 cigarettes or 2 lb. tobacco and 1 quart wine or spirits per man. Additional allowances may be given if considered necessary, due to length of vessel's stay in port.
IDENTIFICATION CARDS: Standard U.S. Immigration Forms I–95 to be made up for each crew member on arrival. Not necessary for crew men already holding Form I–95, issued for the same vessel.
HOLIDAYS: New Year's Day (January 1st); Lincoln's Birthday; Washington's Birthday; Seward's Day (March 30th); Memorial Day; Independence Day (July 4th); Labour Day; Columbus Day; Alaska Day (October 19th); Veterans' Day; Thanksgiving Day; Christmas Day (December 25th).
POLICE/FIRE/AMBULANCE: Police 272–1414; Ambulance/Fire 272–1515.
EMERGENCY CO-ORDINATION CENTRE: U.S. Coast Guard, Anchorage, Alaska 99513. Tel: (907) 271-5137.
TELEPHONES: Telephones available shipside.
BANKS: First Interstate Bank of Alaska, 716 Fourth Avenue, Anchorage, Alaska 99501. Telex: 090-25-243.

Alaska Mutual Bank, P.O.Box 1120, Anchorage, Alaska 99510. Telex: 090-26-414.

Alaska National Bank of the North, Pouch 6608, Anchorage, Alaska 99502. Telex: 090-25-396.

Alaska Pacific Bancorp, P.O.Box 420, Anchorage, Alaska 99510. Telex: 090-25-380.

Alaska Statebank, P.O.Box 240, Anchorage, Alaska 99510. Telex: 090-25-333.

First National Bank of Anchorage, P.O.Box 720, Anchorage, Alaska 99510. Telex: 090-25-190.

National Bank of Alaska, P.O.Box 600, Anchorage, Alaska 99510. Telex: 090-25-226.

Ranier Bank Alaska N.A., Pouch 7007, Anchorage, Alaska 99510. Telex: 090-26-473.

Security National Bank, Pouch 7-777, Anchorage, Alaska 99510. Telex: 090-26-379.

United Bank Alaska, 645 G Street, Anchorage, Alaska 99501. Telex: 090-26-549.

STORING: See "Prelims".

1. Yes.
2. No restrictive regulations.
3. Yes: Immediately adjacent to ship.
4. Yes.
5. No.
6. Yes.

AUTHORITY: Port of Anchorage, 2000 Anchorage Port Road, Anchorage, Alaska 99501. *Tel:* (907) 272-1531. *Telex:* 090-26-431. *Contact:* Tyler Jones, Port Director.

ASHTABULA, Ohio: 41.53 N. 80.48 W. (See Plan)

Refer to "St. Lawrence Seaway" for important general information.
PILOTAGE: Nearest pilot station is the Welland Canal, Canada.
ANCHORAGES: No anchorage inside boundaries. Good anchorage outside to East of the entrance, depth approx. 20 fathoms.
MAX. SIZE: The Pinney Dock and Transport Company stevedoring dock handling overseas cargoes located just East of entrance to the port. Channel depth of 28 ft. 4 berths, 27 ft. alongside; length of facilities up to 700 ft. by 75 ft. beam. No facilities for oil carriers.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Chicago Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
RADIO: Contact Lorain, Ohio ship-to-shore station for local connections.
TUGS: Tugs normally join vessels just inside harbour entrance. Use ship's or tug's lines optional; if tug lines used an additional charge of 10% of the tonnage will be added. For tug service call ship-to-shore tug Idaho, FM Channel 51.
BERTHING: See "Developments".
STEVEDORES: Work gangs for loading and unloading provided by the Pinney Dock and Transport Company.
MEDICAL: Vessels requiring medical attention call U.S. Coastguard station located in the main river by calling AM Channel 20. Ambulance and hospital service available. No inoculation, vaccinations, or fever certificates required.
DENSITY: Fresh water.
FRESH WATER: Available at stevedoring dock.
FUEL: Available on 24-hour notice.
FIRE PRECAUTIONS: City fire department. Also water line on face of the dock available.
GANGWAY/DECK WATCHMEN: Overseas stevedoring dock enclosed wire fence, watchmen on dock at all times, guard at main gate.
OPENING/CLOSING HATCHES: Optional by crew or stevedores.
CUSTOMS ALLOWANCES: Only allotments per person consumed aboard allowed.
IDENTIFICATION CARDS: Required.
CONSULS: Nearest at Cleveland.
REPAIRS: All types of deck and engine repairs available; also topside shell repairs.
REPATRIATION: Can be arranged.
AIRPORT: Nearest airport approx. 10 miles South with commuter services to Cleveland Hopkins Airport. Cleveland Hopkins Airport approx. 70 miles West.
TIME: Local Eastern Standard Time except from May to October – Daylight Saving Time.
HOLIDAYS: Stevedoring docks double time on holidays and time plus one-half on Saturdays and Sundays.
POLICE/AMBULANCE/FIRE: Police, 998-2221; Ambulance, 998-2345; Fire, 998-2121.
TELEPHONES: No provisions for placing telephones aboard vessels.
SHORE LEAVE: Crew allowed ashore.
DEVELOPMENTS: A second slip (length 2,000 ft.) and a third pier (length 2,000 ft., depth 28 ft.) have been completed.
AUTHORITY: Ashtabula Port Authority, P.O.Box 889, Ashtabula, Ohio 44044. *Tel:* (216) 992 8428. *Contact:* Robert Weiner, Chairman. Nicholas Paulchel, Harbour Master.

ASTORIA, Oregon: 46.11 N. 123.50 W. (See Plan)

PILOTAGE: Columbia River Bar Pilots, P.O. Box 81, Astoria, Oregon, 97103. Tel: 503-325-2641. Also see "General – Pilotage" before first U.S.A. port (Albany).
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Seattle Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
GENERAL: The Port of Astoria Terminals are located 10 miles upstream from the mouth of the river and 86 miles downstream from the City of Portland, Oregon.

The channel in the Columbia River, from the ocean to Astoria, has a width of 500 ft. and project depth at low water of 40 ft.

At Astoria, the mean range of tide is 7.5 ft. with extreme tidal range of about 12 ft. On a flood tide a velocity of 2 knots is seldom exceeded, but the velocity sometimes attains 5 knots during the ebb tide. This variation is due largely to the strength of the river discharge, with maximum velocity during the freshets which occur during the months of May, June and July. These freshets, however, do not effect the height of water at Astoria. The Columbia River is navigable throughout the year.

A total of 9 berths at the Port of Astoria Terminals are periodically dredged to 35 ft. and 40 ft. at zero tide, but depths vary from time to time.
TUGS: Tugs are available for assisting ships at the option of the vessel.
BERTHING: The 3 piers, including Ro-Ro facilities and barge ramp, comprising the Port of Astoria Terminals are located in the Western part of the City of Astoria at the confluence of Youngs Bay and the Columbia River. Astoria is served by 1 railroad, 3 major highways and 6 barge lines. The piers extend to the main ship channel, allowing vessels to berth or sail at any time. The terminals are operated by the Port of Astoria Commission as a public property open to all carriers and shippers.

Pier No. 1:
Location: Foot of Portway Street, adjacent to Pier No. 2, and separated therefrom by a water slip 400 ft. in width.
Warehouse Shed: Mill type hollow tile wall construction. 167,000 sq.ft. floor area. Floor load of 600 lbs. per sq.ft.

Shed width 92 ft., slip side and face or end.

Shed length 1,150 ft. on slip side; 520 ft. face or end. Blacktop floor. Complete automatic sprinkler system.
Principal Commodities: General commodities, break bulk, plywood, frozen tuna, grain, sacked goods.
Berths: 2 vessels. 650 ft. face or Northerly end; 1,000 ft. slip or Westerly side, depth 40 ft.
Pier Apron: Width 24 ft., slip side; 16 ft., face or end. Dock is 16.1 ft. above MLW.
Equipment: Dock tractors, fork lift trucks, trailer trucks, hand trucks and other necessary miscellaneous cargo handling equipment.
Bagging Facilities: Bagging facilities for dry bulk commodities such as urea, pulses and dry beans. Usage and rates will be negotiated. (Contact Traffic Department).
Water Services: Portable meters and hose connections for vessel service. Rates of delivery, 10,000 g.p.h. Water pressure about 110 p.s.i.
Fire Protection: Complete automatic dry pipe sprinkler system and hose stand pipes.
Electric Current: Lighting 110 volt, 2 phase, 60 cycle, 35 amperes, alternating current. Portable meter and plug-in service available at all berths.
Grain Elevator: 1,100,000 bushel capacity. Unloading capacity, cars to elevator, 8,000 bushels bulk wheat per hour. 2 spouts at end of gallery from elevator for loading to vessels, capacity 20,000 bushels.

Pier No. 2:
Location: Between Pier Nos. 1 and 3. Separated from Pier No. 1 by a water slip, 400 ft. wide, and from Pier No. 3 by a water slip, 350 ft. wide.
Principal Commodities: Lumber, logs, general cargo, break bulk, bulky cargo in open storage.
Berths: 5 vessels; 425 ft. face or Northerly end; 1,307 ft., slip Easterly side, 40 ft. depth; 1,445 ft., slip Westerly side, 35 ft. depth.
Open Dock: 600,000 sq.ft. Dock level 16.1 ft. above MLW.
Equipment: Modern lighting. Tractors, fork trucks, etc. as listed under Pier No. 1, when required. Portable meters and hose connections. Pipe lines on pier for bunkering.
Water Service: City service. Portable meters and hose connections for service to vessels. Rate of delivery, 10,000 g.p.h. Water pressure about 110 p.s.i."
Electric Current: Lighting 110 volt, single phase, 60 cycle, 35 amperes, alternating current. Power 220 volts, 3 phase, 60 cycle, 35 amperes, alternating current. Portable meters and plug-in service at all berths.

Pier No. 3:
Location: Foot of Hamburg Avenue, (adjacent to and separated from Pier No. 2 by water slip 350 ft. wide).
Principal Commodities: Canned goods, wood pulp, paper products, general cargo, break bulk, dry bulk.
Berths: 2 vessels. 1,750 ft. slip on Easterly side; 35 ft. in depth.
Warehouse Transit Shed: Floor area 248,000 sq.ft. Floor load 600 lbs. East side; 1,000 lbs. West side, per sq.ft.

Shed width 160 ft. Shed length 1,550 ft. Mill type reinforced concrete walls and floor construction. Concrete and blacktop floor. Complete automatic sprinkler system.
Pier Apron: Width, slip side 24 ft. Dock level, 16.1 ft. above MLW.
Equipment: Tractors, trailers, fork trucks, etc., as listed under Pier No. 1, when required.
Barge Ramp: A barge ramp capable of handling loads up to 50 tons is now in operation at the outer berth of Pier No. 3. The ramp is utilised for transfer of cargo from barge or vice versa.
Water Supply: Portable meters and hose connections for service to vessels. Rate of delivery, 10,000 g.p.h. Water pressure about 110 p.s.i.
Fire Protection: Automatic dry sprinkler system. Hose stand pipes.
Electric Current: Lighting 110 volts, single phase, 60 cycle, 35 amperes, alternating current. Power 220 volts, 3 phase, 60 cycle, 35 amperes, alternating current. Portable meters and plug-in service available at all berths.

CONTAINER HANDLING: Container Yard (West of Pier No. 3) 11.5 acres paved, fenced and lighted.
CRANES: 30 ton crane on Pier No. 2.
STEVEDORES: Stevedore Services of America and Jones-Oregon.
FRESH WATER: Available, delivery to vessel through portable hose.
FUEL: Bunkering oil facilities for ocean vessels are maintained at Pier No. 2. The rate of delivery for heavy fuel oil is 1,500 b.p.h., and for diesel oil, 800 b.p.h.
DEVELOPMENTS: Proposed coal transhipment facilities (East Skipanon River and Tongue Point Development), also proposed Land Bridge Terminal at Tongue Point.
AUTHORITY: Port of Astoria, 1 Portway, Astoria, Oregon 97103. *Tel:* (503) 325-4521. *Contact:* Steve Felkins, Director.

BALTIMORE, Maryland: 39.17 N. 76.35 W. (See Plan)

PORT LIMITS: North Point is the outer limit of Baltimore Harbour for arrival purposes. The anchorage off Annapolis at Thomas Point, for vessels assigned thereto, is considered arrived for charter purposes.
DOCUMENTS:

3 Copies Cargo Manifest (Form 1302).
Direct Arrival – 2 All Cargo on Board.
1 Cargo this Port.
Coast Wise Arrival – 1 All Cargo on Board.
2 Cargo this Port.
3 copies Crew Manifest (curio list) (Form 1304).
3 copies Stores Lists (Form 1303).
3 copies Passenger List (Form I-418).
3 copies Crew List (Form I-418).

Customs Boarding Officer will also examine Ship's Register and Loadline Certificate. In addition, the following documents will be required for formal entry to be made within 48 hours of arrival from abroad, or 24 hours from arrival from a United States port.

Master's Oath (Customs Form 1300) 3 copies.
General Declaration (Customs Form 1301) 3 copies.
All foreign clearances.
U.S. Certificates of payment of tonnage tax (Customs Form 1002).
Certified Crew List (Visa Crew List – U.S. Immigration).

PILOTAGE: Each vessel entering the Chesapeake Capes under foreign flag or carrying foreign cargo is required to employ a Pilot of the Association of Maryland Pilots. The Association maintains a pilot boat which is anchored at the entrance of the Chesapeake Capes. Pilots are furnished with a small transistorised portable radio unit, which provide ships' bridge to bridge communication system to ensure navigational safety while traversing the waters of Chesapeake Bay. It is a positive means of communication to ensure ship's position reporting, the safety and movement of vessels, as well as messages related to the operational needs of vessels proceeding to the port, and provide the Pilots' communications instructions expediting operations of vessels when they are aboard.

The pilot boat has a black hull and white superstructure and is located 2 miles North of Cape Henry Lighthouse.

The pilot ladder should be 2 ft. above the water – manropes not required.

Send ETA pilot station via WMH 48 hours before arrival and confirm 24 hours before arrival. Also advise if change in ETA is over 2 hours.

The ETA message should state whether arriving via Chesapeake and Delaware Ship Canal or Cape Henry, and deepest draft and speed of vessel.

Cable address of Pilot: "Marpilot, Baltimore", pilot vessel "Maryland" on VHF Channels 11, 13 and 16. Telex: 87-574.

Shipmaster's Report: June 1981. I had the services of 2 Pilots from the pilot station at the entrance to Chesapeake Bay to Sparrows Point, and back out. The Pilots themselves are trying to have 2 Pilots as law. To have 1 Pilot on a deep drafted vessel such as we were for over 12 hours, sometimes in thick fog, is unfair and whilst faster light drafted vessels can cover the same distance in less than 12 hours the pilotage time is still lengthy.

ANCHORAGES: Numerous anchorages located within harbour limits for ocean-going vessels. 6 such areas are available for vessels of light and deep draft. 4 of these anchorages are located on the East side of the main ship channel between the entrance channel to the Central Soya Company Grain Elevator and Fort Carroll. 2 are on the West side of the main ship channel. At Thomas Point, approximately 22 miles South of Baltimore, there is an emergency anchorage in natural deep water with depth of 50 ft. or more. The U.S. Coast Guard is responsible for the anchorages, but in practice, the Pilots make the assignments.

RESTRICTIONS: There are two different approaches and exits to the sea lanes. The principal route is by way of the Southerly course through the Chesapeake Bay and Cape Henry to the ocean. The distance by this route is approximately 150 nautical miles. There is a main ship channel 20 miles long from Baltimore to the Chesapeake Bay; this channel is 800 ft. wide and 42 ft. deep.

The other route to the sea lanes is via the Chesapeake and Delaware Ship Canal. This offers a short protected route between Baltimore and other leading North Atlantic ports by way of Delaware Bay and allows ships serving North Atlantic European ports to save about 115 miles sailing distance.

Entrance to the Chesapeake and Delaware Ship Canal is located about 50 miles North of Baltimore. Depth of channel 35 ft. The width of the channel is 450 ft. Max. LOA 886 ft. Max. draft 31 ft. (Temporary condition, normally 32 ft.). The canal itself is 15 miles in length, and from the Delaware Bay side the distance to sea lanes is about 60 miles. Navigation lights are maintained so the canal is open to navigation day and night. Mean range of tide is 1.1 ft. at Baltimore. Currents are 0.8 knot on flood and ebb tides.

MAX. SIZE: Length 1,250 ft., draft 42 ft. at Consolidated Coal Pier. No restriction on beam.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Washington, D.C.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
TUGS: The port has an efficient fleet of tugs in operation. The tugs usually take vessel in tow at Francis Scott Key Bridge. Tug's lines are used at no extra charge.
RADIO: Marine Radio Station WMH with a world wide range operates on 500 kHz., 8610 kHz. and 12952.9 kHz.

BERTHING: Major piers and terminals:

CRANES: *Floating:* 1×150 tons.

One stiff legged derrick, capacity 350 tons, located at South Locust Point Marine Terminal.

BRIDGES: The Chesapeake Bay Bridge-Tunnel is located across the entrance to the Bay, between Cape Henry and Cape Charles. This vehicular crossing consists of fixed causeways and bridges 15 miles in length, and 2 tunnels – one under the Chesapeake Channel and one under the Thimble Shoal Channel. A horizontal clearance of 1,400 ft. at 60 ft. water depth exists.

The Francis Scott Key Memorial Bridge crosses the main ship channel in Baltimore Harbour and is 8,640 ft. long, with main channel horizontal clearance of 800 ft. and vertical clearance of 185 ft. Vessels en route to the harbour from the ocean via the Chesapeake Bay pass under the Chesapeake Bay Bridge (2 parallel bridges), about 138 statute miles above the ocean entrance to the bay. This bridge is 3.7 miles long from shore to shore; its Western end is 0.5 miles S.W. of Sandy Point and its Eastern end is on Kent Island, 4 miles S.W. of Love Point. Least clearance width of 1,500 ft. and vertical clearance 186 ft.

By way of the Chesapeake and Delaware Canal the least horizontal clearance is 500 ft. and vertical clearance of 133 ft.

The Curtis Creek and Middle Branch sections of harbour are each crossed by highway and railroad bridges.

DENSITY: Fresh water.

TANKERS:

Exxon: The Exxon Terminal in Baltimore Harbour is located 153 miles from the Sea Buoy and consists of 2 berths (North and South Piers). The controlling depth at this terminal is:

Navigation Channel – 41 ft. 0 in.	North Berth 35 ft. 0 in.
	South Berth 36 ft. 6 in.

The max. size vessels received at these berths are:

North Berth – 28,000 d.w.t.
South Berth – 76,000 d.w.t.

The controlling height of the vessel's mast – 180 ft. Vessels dock and undock at all stages of the tide. Constant Northwesterly winds may cause substantial variation in tide and delay docking.

At this terminal there are 3 terminal personnel on the scene at all times who will advise vessels of any critical conditions.

When docking, vessels normally use 2 tugs and when undocking, 1.

On approach to the berths, vessels transit the Fort McHenry Channel with a controlling depth of 41 ft. MLW and minimum width of 300 ft. Vessels are then turned 90° Eastward for berthing on the North side of the finger pier starboard side to or on the South side of the finger pier port side to.

Shell: The Shell Oil Dock is located in Fairfield, Maryland Harbour, 162.5 miles from the Sea Buoy. Although the controlling depth for vessels in the navigation channel is 39 ft., the max. allowable draft is limited to 33 ft. 6 in. due to the water available alongside the berth. The average size vessel normally received at this terminal is 28,000 d.w.t. Vessels can dock and undock at any stage of the tide. Passing traffic at this terminal could cause vessel to surge. When docking vessels utilise 2 tugs, and when undocking normally 2 tugs unless weather conditions permit 1.

The terminal is located on the port hand at Fort McHenry Channel on approach to berth. Vessels make a 90° turn to port and enter approach channel to berth. The distance from the main channel to the berth is approximately 270 ft. When undocking, vessels are backed down Approach Channel to the Main Channel where they are then turned.

Also see "Berthing".

MEDICAL: All facilities available.

FRESH WATER: Can be supplied at all berths. Water barges available.

FUEL: All grades supplied by numerous oil companies by barge or ex-wharf at the oil berths.

REPAIRS: *Bethlehem Steel Corporation:* At the Sparrows Point Shipyard vessels up to 300,000 d.w.t. are constructed, and the facilities include all the necessary equipment for the construction of large and small vessels.

One other marine yard, which is located on the Eastern end of Locust Point adjacent to Fort McHenry.

In addition to the above mentioned facilities there are numerous companies specialising in minor ship's repairs, tank cleaning, repair of all types navigational and optical instruments, fumigation.

AIRPORT: BWI Airport, 8 – 10 miles or 20 minutes from harbour by vehicle with 32 regular scheduled airlines and 580 flights daily.

DEVELOPMENTS: Maintenance dredging to 42 ft. underway.

A new 3 berth container facility (Seagirt Marine Terminal) to be built. The first berths will be available in 1989.

Brewerton Extension Channel to Baltimore to be dredged from 8.2 m. to 10.0 m. and widened from 122 m. to 137 m. (completion late 1986). The channel may be dredged to 10.7 m. at a later date.

An additional crane is to be constructed at South Locust Marine Terminal.

Approval has been given for main approach channel to be dredged from 42 ft. to 50 ft.

AUTHORITY: Maryland Port Administration, World Trade Center Baltimore, Baltimore, Maryland, 21202, U.S.A. *Tel:* 659-4550. *Telex:* 710-234-1075. *Cables:* Marport. *Contact:* David D. Wagner, Port Administrator.

BANGOR (including Brewer and Orrington), Maine: 44.49 N. 68.47 W. (See Plan)

LOCATION: Bangor is located on the West bank of the Penobscot River at the head of navigation. Brewer is on the East bank of the river opposite Bangor and Orrington is on the East bank of the river 2 miles below Brewer.

DOCUMENTS:

1 copy of Crew List.
1 copy of Passenger List.
2 copies of Stores Lists.
2 copies of Foreign Purchase Lists.
2 copies of Inward Foreign Manifest.
1 form 1300 (Master's Oath on entry of vessel).
2 forms 1374 outward foreign Manifest.

PILOTAGE: Pilotage is compulsory for all foreign vessels and U.S. vessels under register in the foreign trade, with a draft of 9 ft. or more, entering or departing from any port or harbour within the waters of Penobscot Bay and Penobscot River North of a line drawn from Marshall Point Livat Port Clyde, thence to Matinicus Rock Light, and thence to Western Head, Isle Au Haut. Pilotage is optional for vessels powered by sail.

Cable PENBAY via Chatham Radio. Ship's Agent usually notifies Pilot 48 hours and 24 hours before arrival at the pilot station. Pilot boat usually stands by on their radio 1 hour before ETA on RT 2182 kHz and VHF Channel 16. Pilot boards at Monhegan Is., Lat. 43° 45′ N., Long. 69° 22′ 5″ W. Pilot uses a white boat 36 ft. long and displays "H" by day and the Pilot signals at night. Vessels awaiting Pilot in bad weather must heave-to outside.

ANCHORAGES: The usual anchorage for vessels waiting at the river entrance for a towboat or favourable wind and tide is Northward of Fort Point on the West side of the channel.

Vessels bound up the river anchor anywhere in the channel where soft bottom is found. Vessels towing to Bangor, if the tide does not serve, often anchor off Winterport. On account of the strong ebb current, it is better for vessels going to Bangor, particularly large vessels, to anchor off Fort Point and start up the river about 3 hours after LW.

RESTRICTIONS: CHANNEL:– The controlling depth in the marked channel in Penobscot River from Bucksport to Bangor is 19 ft. to Winterport, thence 13 ft. to Bangor. The channel is marked by buoys to a point about 1.5 miles below South Brewer.

Caution: Deep-draft vessels should exercise caution above Fort Point as depths of 31 ft. to 32 ft. are in mid-channel, about 0.5 miles Eastward of Sandy Point, and rocky ledge, covered 34 ft., also in mid-channel, is reported about 0.2 miles S.W. of Odom Ledge Daybeacon.

The most difficult sections for vessels are off Lawrence and Luce Coves just North of Bucksport where it is difficult to mark the best water and off Frankfurt Flats where large vessels experience difficulty with the sharp turns.

The channel in Penobscot River is crooked and narrow in places, and frequent changes occur. Vessels should not attempt to carry drafts greater than 10 ft. to Bangor at LW. With a deeper draft a Pilot or towboat should be used; 14 ft. or 15 ft. is carried to Bangor and Brewer at HW, and deeper drafts occasionally to the oil berth at South Brewer. The safest time is on a rising tide. Navigation of the river at night is extremely dangerous due to lack of lighted navigation aids. After unusually high tides many logs, dangerous to small craft, are in the river. At times of maximum ebb currents, buoys are occasionally pulled under.

Tides: The mean range of tide varies from 10.3 ft. at Fort Point to 13.1 ft. at Bangor. Currents of 3 knots are not unusual from Odom Ledge to Orrington, and during Spring runoff currents approaching 5 knots may be encountered. Because of these currents, larger vessels should use caution navigating the river. Passage up the river is more advisable during flood current.

Ice impedes but usually does not prevent navigation above Winterport for nearly 5 months each year, beginning about December. During extreme Winters the river is closed to the mouth. The most difficult place below Winterport is abreast Fort Knox, where ice jams occur. If vessels can pass this point, they usually can go to Winterport. The river is kept open by an icebreaker, which prevents much of the damage that might otherwise be caused by ice and freshets. However, in recent years, according to local information, there has been very little ice and the river has seldom frozen over below Bangor. The brackish water formed by tidal action and the river current no doubt have contributed to this.

Freshets occur in the river during March and April; at times they are dangerous to vessels.

MAX. SIZE: At present ships of 560 ft. are taken up the river 2 hours before HW during daylight. Size and draft of ship depend on the berth.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Boston Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Vessels arriving Bangor use radio station at Chatham Mass., or call on the R/T through station WOU at Boston, Mass.

TUGS: 4 tugs available up to 1,200 h.p. Tugs join at Belfast to assist in turning and berthing.

BERTHING:

Texaco Oil Co. Terminal: A timber pile, timber-decked pier, approximately 5,250 sq.ft., used for berthing oil tankers. There are 8 storage tanks and 1 warehouse/office building with 1,920 sq.ft. of floor space.

Mobil Oil Co.: A timber crib pier approximately 8,500 sq.ft., used for berthing tankers. There are 10 storage tanks and a garage at this facility.

Webber Terminal Inc.: A timber crib pier, approximately 2,340 sq.ft. used for berthing tankers. Adjacent to this pier, there is another timber crib pier, approximately 5,280 sq.ft., also used for berthing tankers. There are 2 storage tanks and a storage building with 480 sq.ft. of floor space.

Astroline Petroleum Corp. of Maine: There is a log filled bulkhead used for berthing tankers. This facility includes 5 storage tanks and 1 tool shed.

Bangor Municipal Dock: A new wooden and steel float with gangway, 1,500 sq.ft. located just below the Joshua Chamberlain Bridge; also 4×4 ton guest moorings are available for recreational use.

Webber Tanks Inc. – Brewer: A rock and timber crib, timber decked pier, approximately 7,200 sq.ft., used for berthing tankers. There are 5 storage tanks and a warehouse with approximately 3,850 sq.ft. of floor area.

C. H. Sprague – Brewer-Orrington: A timber pile wharf, approximately 1,600 sq.ft., used for berthing tankers. The wharf is in Orrington and fuel is pumped to 3 storage tanks located in Brewer. There is one building, a pump house, approximately 600 sq.ft.

Hampden Recreational Boating Facility: 2 launch ramps with ground float; landing dock; 2 guest moorings, 8 ft. MLW to ramps, 80 ft. wide channel.

Town Launch Ramp – Orrington. This is a paved launch ramp; no docking facilities. There is a 40-space (30 car – 10 trailer) gravel parking area.

BRIDGES: 1 suspension bridge below Bucksport with a height of 135 ft. at HW. Horizontal clearance is 750 ft.

The overhead power cable that crosses the river just above Bucksport has a clearance of 145 ft.

MEDICAL: No advance notice required. There are 3 large hospitals.

TANKERS: 1 berth for ocean-going vessels. 1×8 in. hose with a 10 in. line. 22 ft. at low water. Also see "Berthing".

DENSITY: Nearly fresh water.

FRESH WATER: Supplied at ocean-going berth at the rate of 50 t.p.h.

FUEL: Only available at oil berth.

CERTIFICATES:

Load-line.
Foreign Clearance.
Safety Certificate.
Radio Operator's Licence.

CUSTOMS ALLOWANCES: 200 cigarettes per man, 1 bottle wine/spirits per man.

IDENTIFICATION CARDS: Form I–95 must be filled out upon arriving unless seaman has made one out before on a previous trip.

CONSULS: None.

REPAIRS: Only machinery repairs.

REPATRIATION: Arrangements must be made ahead of time by telegram.

TIME: GMT minus 5 hours in the Winter and minus 4 hours in the Summer.

AIRPORT: Bangor International is 2 miles from the city.

POLICE/AMBULANCE/FIRE: Police 9427377; Ambulance 9893311; Fire 9422293.

TELEPHONES: None put aboard. 1 pay phone on ocean-going berth.

SHORE LEAVE: Allowed subject to Immigration approval.

AUTHORITY: City of Bangor, Dept. of Harbour and Wharves, Harbour Master.

BATON ROUGE, Louisiana: 30.28 N. 91.12 W.

(See Plan)

DOCUMENTS:

Original and 3 Crew Lists.
Original and 3 Passenger Lists.
Clearance from last foreign port.
Original and 3 copies Inward Manifest.
Derat Certificate.
Load-line Certificate.
Safety Certificate.
Ship's Register.
3 copies Curio List.

PILOTAGE: Advise Agents ETA sea-buoy 48 hours in advance. Agent then makes arrangements for Pilots. Seven 46 ft. pilot boats – red hulls white cabins, flying white and blue pilot flags. Suggest pilot ladder 6 ft. above water level, no life-line. Call on 2738 kHz or VHF Channel 9, 30 miles to 40 miles out. Safe anchorage within 2 miles South Pass or S.W. Pass entrance.

ANCHORAGES: General anchorage Baton Rouge as directed by Pilots.

RESTRICTIONS: No night-time restriction for entry or clearance, docking or undocking.

MAX. SIZE: Exxon Oil Docks can accommodate 1,000 ft. vessels – unlimited breadth; draft governed by S.W. Pass – project depth 40 ft. usually restricted from 37 ft. to 30 ft. draft May through August, due to low water and silting.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: ETA cables can be routed through Tropical Radio WNU New Orleans.

TUGS: Available at Baton Rouge for docking and undocking. Ship's lines used.

BERTHING: No time restrictions on berthing. 2 general cargo docks with total 400,000 sq. ft. transit shed and 2,265 ft. long, 40 ft. wide apron with double marginal tracks; grain elevator and bulk terminal at Burnside, for handling ores, concentrates, etc.; container marshalling yard adjacent cargo docks; also 20-acre paved staging area for project cargo.

BULK HANDLING FACILITIES:

Grain: Cargill Grain Elevator: Max. draft 40 ft. Loading rate 1,000 t.p.h. Silo storage 160,000 tons.

Dry Bulk: Burnside Terminal: 2 unloading gantries for bauxite. Rate 2,000 t.p.h. Max. draft 40 ft.

Molasses: Molasses terminal, leased to Manard Molasses Company, has an 11 million gallon capacity.

Coal: Coal Monitor One: The ultimate in the midstream transfer of coal, Coal Monitor One is a joint venture of Ryan-Walsh Stevedores and P & C Bituminous Coal, Inc. The device has the ability to sample and blend as well as aerate and cool the coal as it is transferred from barge to vessel.

Coal has become a major commodity at the Port with the safe, convenient anchorage buoy facility for ocean going vessels and the connection through major rivers and waterways to the primary coal-producing states.

Coal Monitor One can handle vessels with airdraft of 65 ft. and beam 135 ft. Loading rate 1,800 tonnes per hour.

Midstream Transfer: The Port's midstream anchorage buoy facility is located in the Mississippi River just opposite its docks for the transfer of cargo between barges and ships. Primarily for the transfer of export coal, the operation is capable of handling import or export steel, salt, coke, unitised cargoes in slings and other bargeborne commodities by the use of floating cranes.

BRIDGES: Sufficient clearance for all stages of river at all times; 3 bridges cross at New Orleans, 1 at Baton Rouge, 1 at Donaldsonville, and 1 at Luling-Destrehan.

CRANES: 3×150 ton crawler; 2×70 ton crawler; 1×50 ton motor crane; 2×45 ton motor crane; 2×35 ton motor crane; 1×30 gantry and 5×100 ton rail car pushers.

STEVEDORES: May be obtained by Agent with 4 hours' notice.

MEDICAL: Agents should receive 24 hours' notice when medical attention is required. 2 excellent hospitals at Baton Rouge, U.S. Public Health Hospital at New Orleans.

TANKERS: Oil tankers load various petroleum and chemical products at Exxon Oil Docks, Apex Oil Co. and Placid Refinery. Oil residue slop facilities available.

Report:

Approaches – Cautionary Advice: Vessels make arrival at the S.W. Pass Sea Buoy located in position Lat. 28° 52.7′ N. Long. 89° 26′ W. Approach to the Sea Buoy should be made from the South to S.E. Vessels should remain in the fairways because of numerous structures in the approach area. Pilots board just South of the Sea Buoy. Precautions should be taken to remain to the East of the Sea Buoy, Buoy No. 1, and Buoy No. 3, when approaching the bar. At times strong cross-currents are encountered in the area of S.W. Pass Channel Entrance and precautions should be taken to prevent the vessel from being set onto shoal grounds on the West side of the channel. There is a large anchorage area to the East of the S.W. Pass Entrance Channel.

Exxon Refinery Terminal:

Docking: 1 tug is used for docking and 1 is used for undocking. On a very high river with a swift current 2 tugs should be used to turn the vessel when sailing, due to the close proximity of the Baton Rouge Highway Bridge as well as the limited turning basin. 2 tugs should also be used when the ship must be berthed between 2 other vessels. Vessels berth starboard side to. Vessels should not drop anchor due to numerous submerged pipe-lines.

A normal mooring configuration should be used with additional head lines in view of the river current.

Cautionary Advice: Channel traffic which is passing close by could cause ships to move away from the berths which could result in damage to the hard arms. It is essential that more than usual attention be given to maintaining the ship in position alongside. It is recommended that several crew members be specifically assigned to tend the mooring lines and winches.

Under no circumstances should mooring lines be slack.

Exxon U.S.A. Refinery Terminal: 232 miles AHP: The refinery dock, consisting of 5 berths, is a concrete and steel structure 50 ft. wide and running in a North – South direction along the river bank for about 2,750 ft. The berths are numbered 1 through to 5 from South to North. All products are transferred through hoses or 10 in. hydraulically operated steel loading arms. The loading arms for crude oil at No. 1 Berth, however, are 12 in. connections. Cargo hoses are handled by electric hoisting equipment. Vessels are moored to 50 ton quick release hooks located on the dock. Electric capstans are used for hauling the mooring lines to the mooring hooks.

The loading arms and hose connections are manifolded to permit washing into a slop line for change of grade.

All hose diameters are 4 in., 6 in. and 8 in. The 10 in. loading arms have 8 in. reducers.

Each berth has an office equipped with a telephone which is tied into a public address system. In addition, each berthman is equipped with a portable radio for communicating with the dock as well as all control centres. The emergency shut down system for the dock can be operated from each office.

The main control centre for the entire dock is equipped with telephones, a process radio, an FM and AM marine radio and the control station for the public address system. All loading line pressures are displayed on a panel. The public address system provides communication with each transfer location or berth office. The dock emergency shutdown system may also be operated from the control centre.

Cargo Handled and Shore Installations: Berth No. 1 handles nearly all products except lubes and some chemicals. It is also the primary berth for receiving crude oil.

Berth No. 2 handles specialties, chemicals, carbon black, asphalt and wax. Caustic soda is not handled at this berth.

Berth No. 3 handles clean products, lubes, chemicals, carbon black and dirty products.

Berth No. 4 handles clean and dirty products, chemicals and carbon black.

All berths can handle crude.

Pipe-lines range from 4 in. to 24 in.

Berthing: The river pilot berths the vessel starboard side to.

Approach to Berth No. 1 should never be attempted from directly below the dock, due to a shoal area. This shoal area is known to the Pilots and must be given a wide berth. The Pilot should be consulted as to the exact location of the shoal area.

Vessels should approach dock at dead slow ahead and as parallel to it as possible.

All vessels over 30,000 d.w.t. must use 2 tugs for docking and undocking. Light vessels under 30,000 d.w.t. must dock and undock with at least 1 tug. A bow thruster does not substitute for a tug. A normal mooring configuration should be used with additional head lines due to the river current. Minimum mooring requirements are 4 bow lines, 2 breast lines, 2 forward springs, 2 after springs and 2 stern lines. Mixed moorings in the same direction are discouraged.

When the Baton Rouge River gauge is 30 ft. and above, vessels greater than 30,000 d.w.t. must use a minimum of 6 bow lines plus 2 breast lines. In addition, all vessels over 60,000 d.w.t. must be attended by a tug actively pushing on the bow until the vessel has discharged 75% of its cargo.

When the Baton Rouge gauge is above 40 ft. a tug is required during entire time vessel is alongside Berth No. 1, regardless of ship size.

In the event of an emergency, tugs are readily available within 15 minutes. Tugs can be contacted via VHF Channel 13.

Mooring: Mooring is provided through the use of fairleads and quick release hooks at all of the ship berths. These hooks are rated at 38 tons and 50 tons throughout the berths.

The refinery provides a line handling crew for each ship berthing/unberthing. The line handling crew is assisted by electric driven capstans. This service is provided at no extra charge to the vessel.

Normal mooring line sequence: Forward springs, head and forward breast lines, after springs and stern lines. It is the ship's responsibility to provide all mooring equipment.

Terminal monitors mooring throughout operations and provides each vessel with a standard mooring plan.

Terminal has no requirements to limit wind area of vessel; however, in the event of unexpected high winds, vessel may be required to ballast down.

Manifold Criteria: The vessel's manifold must not be allowed to get more than 42 ft. above or below the dock deck. When connected to a vessel, the end of the arm should be positioned between 13 ft. and 19 ft. from the edge of the vessel if the 12 in. loading arms are used; between 4 ft. and 10 ft. for the 8 in. arms. The vessel's flanges to which the arms are to be connected must be spaced at least 3 ft. 6 in. apart and be vertical and parallel to the vessel's side. The vessel's flange should be no more than 3 ft. from the last permanent support and it should be attached to that support.

Before a vessel arrives at the dock, vessel personnel are advised of the size of flanges needed for connection to the loading arms or hoses.

Dock Communications: The Baton Rouge dock is equipped with a positive ship-to-terminal radio communications system. On arrival, vessel will be provided with a radio for which a signed receipt is required. The radio must be monitored by the English-speaking person in charge at all times. The ship's personnel will be instructed in the proper use of these radios at the time of receipt. If these radios are not returned in good condition, a charge of $2,000 will be levied against the vessel.

Each berthman is equipped with a portable radio on the same frequency as the radio provided to the ship. This will be the primary means of communication.

The main control centre for the entire dock is equipped with telephones, a radio on the same frequency as the berthman and an AM/FM marine radio with Channels 9, 16, 18 and 22.

Bunkers and Fresh Water: Bunker C, diesel and fresh water are available.

Ballast Facilities: Ballast facilities are limited to 20,000 barrels.

DENSITY: No tide – fresh water at all times.
FRESH WATER: At public docks. At Exxon Oil Terminal simultaneous with loading or discharging at no cost. Ship's crew to make water connections.
FUEL: All grades subject inquiry. Barging essential.
FIRE PRECAUTIONS: Usual fire lines and sprinkler systems. Fireboat "Exxon Bayou State" on station.
GANGWAY/DECK WATCHMEN: Only if Master requires.
OPENING/CLOSING HATCHES: Depending on terms of charter, usually by ship's crew.
CUSTOMS ALLOWANCES: Tobacco, each crew member allowed 1 carton cigarettes. Master allowed reasonable quantity. Wine and/or Spirit, each crew member allowed 1 bottle each of wine and spirits. Master allowed reasonable quantity.
CARGO GEAR: Safety certificate required for ship's gear.
IDENTIFICATION CARDS: Usual passports.
CONSULS: Norwegian only, all other consuls at New Orleans – 85 miles distant.
REPAIRS: All types of deck and engine repairs may be carried out.

SURVEYORS: *Testing, Sampling, Weighing and Cargo Certification:*
Caleb Brett USA Inc., P.O.Box 46039, Baton Rouge 70895. Tel: 927-0020.
Chas. Martin, Inspectors of Petroleum, 2835 Plank Rd., Baton Rouge. Tel: 355-8833.
Pittsburgh Testing Lab., 2166 Monroe Ave., Baton Rouge. Tel: 355-2641.
Saybolt, E. W. Co., 10023 Mammoth Avenue, Baton Rouge. Tel: 925-1231.
Transport Management & Consulting, Inc., 4137 Sherwood Forest Blvd., Suite 110, Baton Rouge 70816. Tel: 293-3025.
USDA, FGIS, Port Allen. Tel: 389-0373.
USDA, FGIS Field Office, Lutcher. Tel: 536-2811.
Marine Surveyors:
Jorgensen, Capt., N.E. 865 E. Riveroaks, Baton Rouge. Tel: 926-6828.
McAnally Engineering Co., Box 66012, Baton Rouge 70809. Tel: 766-8992.
National Cargo Bureau, 7414 Perkins Rd., Suite 180, Baton Rouge. Tel: 769-6353.
REPATRIATION: Crew repatriation and crew changes may be made.
AIRPORT: 6 miles to Ryan Airport, served by regular airlines.
TIME: Local time is Central Standard Time – GMT minus 6 hours; from April through October local time is CS daylight saving time, GMT minus 5 hours.
POLICE/AMBULANCE/FIRE: Tel. Nos. Public Dock: Police 343 – 9234; Ambulance 343 – 6691; Fire 343 – 6691.
TELEPHONES: No arrangements for placing telephones aboard.
GENERAL: Tankers in ballast advised of drift wood conditions in river and ballast their vessels accordingly so as to avoid propeller damage.
SERVICES: Because of restricted river width inadvisable adjust compasses. This is usually accomplished below New Orleans where river of sufficient width to permit large vessels to swing. 3 firms engaged in tank cleaning, namely, Watson Marine, Robin Hood Fleeting and Port Allen Marine Cleaning Plant. Slop facilities available at the Exxon Oil & Refining Co. dock.
SHORE LEAVE: Shore leave permitted except when detained aboard by U.S. Immigration.
SHIP SUPPLY SERVICE: *Launch Service:*
Capital Marine Supply, Inc., Box 3018, Baton Rouge. Tel: 343-8379.
Tri-G Marine Supply, Inc., Box 3808, Baton Rouge. Tel: 344-7664.
DELAYS: Normally no delays at Exxon Oil docks in berthing except when vessel's tanks unsuitable for loading. Normally no delay at city wharf.
NOTICE: To all Masters from a Ship's Agent:

Please be advised that the Agent will need a copy of the Notice of Readiness and Dry Tank Certificate. The Agent will pick these two certificates up from the Master on sailing of vessel. These are needed by the Agents to send out to the Owners and/or Charterers along with the other documents. We have been having problems receiving these documents from the terminal and/or Cargo Surveyor. The terminal will require, on the vessel's arrival at the berth, one copy of the Bill of Lading and/or Customs Manifest. It would be appreciated if you could make an additional copy of these documents when they are prepared by your vessel.

AUTHORITY: Greater Baton Rouge Port Commission, P.O.Box 380, Port Allen, Louisiana 70767-0380. *Tel:* (504) 387-4207. *Contact:* John B. Dutton, Executive Director. Doris J. Bautch, Director of Trade Development. Richard Savoy, Director of Terminal operations.

BAYTOWN, Texas: 29.44 N. 95.01 W. (See Plan)

DOCUMENTS, PILOTAGE, etc.: Refer to "Houston".
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Miami Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
RADIO/VHF: Exxon Dock "KNQ-Baytown" on VHF Channel 19.
TUGS: Available if required. Tel: 713-928-5406.
BERTHING: All berths at Baytown 39 ft. (Fresh water). Agent should verify safe arrival/departure draft with Exxon Docks prior vessel arrival.
STEVEDORES: Available. Call L. S. Mitchell Co. Tel: 713-426-4575.
MEDICAL: All medical assistance available.
TANKERS: *Caution:* Channel traffic which is passing close by could cause ships to move away from the berths which could result in damage to the hard arms. It is essential that more than usual attention be given to maintaining the ship in position alongside. It is recommended that several crew members be specifically assigned to tend the mooring lines and winches.

Under no circumstances should mooring lines be slack.

The terminal prefers the use of self-stowing winches with mooring wires.

Berthing: Tugs of up to 3,200 h.p. and bollard pull of up to 46 tons are available. Tugs use the "alongside" method. Tugs normally use a head line and quarter line; however, larger tugs will usually use 2 head lines.

By pre-planning discussions with the Pilot, Masters are to assure themselves that a sufficient number of tugs, each with sufficient horsepower, are ordered well in advance by the Pilot.

Depending on the size and draft of the vessel, 2 – 4 tugs will meet the vessel in the vicinity of the tunnel about 1 mile below Baytown and escort the vessel into the turning area. Vessels scheduled to Berth No. 1 will moor starboard side to, bow up stream. Vessels at Berth No. 2 will be turned about and moor port side to. Vessels scheduled to Berth Nos. 3, 4, 5 or 6 will be turned and backed into the berth, bow out. There are virtually no exceptions to these mooring rules.

Tidal height, current speed and direction are monitored by the Baytown Dock Co-ordinator. This information may be obtained prior to berthing by calling KNQ.

This information is particularly important when turning ship and backing into Berth No. 5.

Exxon Berth No. 1: Vessels assigned to this berth must dock starboard side to, bow upstream. Winch mounted wires are preferred, however, mooring ropes are acceptable. Additional lines will be required for vessels not equipped with all wire moorings. Vessels in this berth are passed close to by ships transitting the Ship Channel, therefore, all moorings must be well-tended and tight.

Products handled at this berth include gasolines, distillates, lube oils, and various petro-chemicals. All products are handled through 4 in., 6 in. or 8 in. hoses. All hose connections are bolted-type connections. Maximum pressure that all products are pumped at is 100 p.s.i. Ballast and slops are handled at this terminal. Maximum pumping pressure for ballast and slops is 100 p.s.i.

Exxon Berth No. 2: Bow to manifold should not exceed 320 ft. and stern to manifold is limited to 400 ft. due to berth overhang and interface with Berth No. 3.

Vessels assigned to this berth must dock port side to, bow downstream. Winch mounted wires are preferred, however, ropes are acceptable, though vessels with ropes will be required to use more lines than wire-equipped ships. Vessels in this berth are passed close to by ships transitting the Houston Ship Channel, therefore, all moorings must be tended and kept tight to prevent breakout or damage to hoses.

Products handled at this berth include gasolines, distillates, lube oils, and various petro-chemicals. All products are handled through 4 in., 6 in. or 8 in. hoses. All hose connections are bolted-type connections. Maximum pressure that all products are pumped at is 100 p.s.i. Ballast and slops are handled at this terminal. Maximum pumping pressure for ballast and slops is 100 p.s.i.

Exxon Berth Nos. 3 and 4: Vessels assigned to these berths are backed alongside the berth and then pushed by tugs against the dock. Extreme care should be taken not to approach the berth at too great an angle, and every effort should be made to manoeuvre into position prior to making contact with the breasting works. 2 or more tugs are required depending on vessel size and weather conditions.

Vessels always manoeuvre stern first into the slip utilising the turning area adjacent to the docks. Vessels are moored starboard side to Berth No. 3 and port side to Berth No. 4.

Winch mounted wires are preferred, but ropes are acceptable. Usually the spring lines are taken first followed by the stern then bow moorings.

Berthing of vessels at Berth No. 4 is predicated by the presence of a ship or tows at adjacent Berth No. 5. Terminal regulations are based upon the sum of the beam of vessels in adjacent berths to allow sufficient room for manoeuvring.

Products handled at Berth Nos. 3 and 4 include motor fuels, aviation fuel, distillates, solvents, petro-chemicals and bunkers. All products are transferred through 6 in. and 8 in. hoses, and 12 in. arms. Maximum pumping pressure for all products is 125 p.s.i. Ballast and slops are handled at both berths.

Exxon Berth Nos. 5 and 6: Vessels always manoeuvre stern first into the berth, utilising the turning area adjacement to the berth. 3 or 4 tugs are usually used to assist the vessel, depending on vessel size and weather conditions. Vessels are moored starboard side to Berth No. 5 and port side to Berth No. 6.

Docking: There is a large round mooring dolphin at the head of the finger-pier forming Berth Nos. 5 and 6 where loaded 80,000 – 90,000 d.w.t. vessels normally berth.

Although this dolphin has a fender system its sole purpose is to provide mooring points. It is not suitable to land on nor can it be used as a turning dolphin. On several occasions ships have come into contact with this structure resulting in both hull damage and damage to structure itself.

To prevent recurrence of such incidents it is necessary that the Master:

1. Before the berth approach is made reviews with the Pilot the intended docking manoeuvres which provide the widest possible berth to the mooring dolphin.
2. Monitors the docking manoeuvre carefully and plans corrective action in a timely fashion so that ship's contact with the dolphin will be prevented.

Tug Assistance: 4 tugs of minimum 3,000 h.p. each are to be used for 80,000 – 90,000 d.w.t. vessels. The tugs making fast on the outward side – not facing the berth – should use 2 headlines and a quarterline.

The Master should include these tug requirements in his first ETA message to the port Agent and ask for confirmation that such arrangements have been made.

Tidal Information: Having knowledge of tidal conditions in the Baytown area is of particular importance with regard to the docking manoeuvre.

Information on the velocity and direction of the current should be obtained from the Pilot.

Water level information should be obtained from the Baytown Dock Co-ordinator by VHF radio.

DENSITY: Mainly fresh.

FRESH WATER: Available ex-wharf.

FUEL: Bunker C and MDO only, no intermediate fuels. No bunkering by barge.

GANGWAY/DECK WATCHMEN: Required only if crew detained by Immigration.

CUSTOMS ALLOWANCES: Each man 300 cigarettes or 100 cigars or 1 lb. tobacco; 1 quart wine/spirits.

STORING: Permissible with advance notice/approval.

REPAIRS: Should be cleared with terminal before vessel arrives at dock.

SHORE LEAVE: No restrictions. Terminal bus transports crew from dock to refinery entrance.

AUTHORITY: Port of Houston Authority.

Operator: Exxon Company, U.S.A., P.O.Box 3950, Baytown, Texas 77520. *Tel:* 425-4452, 425-4453. *Telex:* 510-891-7885 Exxon Dock-Bton. *Contact:* Dock Co-ordinator.

Secondary Contact: Exxon Shipping Company, P.O.Box 3251, Baytown, Texas 77520. *Tel:* 713-427-7370. *Contact:* Transportation Co-ordinator.

BEAUMONT, Texas: 30.05 N. 94.05 W. (See Plan)

LOCATION: On Neches River, above Sabine Lake.

DOCUMENTS, PILOTAGE, RADIO, etc., Refer to "Port Arthur".

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

TUGS: Meet vessel in Neches River before arriving at berth. Normally 2 tugs used for docking, 1 for undocking.

BERTHING:

Wharf No. or Name	Length (ft.)	Depth (ft.)	Remarks
1	580	30	
2, 3 and 4	1,373	38	Ro-Ro Ramp
5, 6 and 7	1,483	36	
Harbour Island Marine Terminal	1,200	40	Ro-Ro Ramp
Carroll St. Wharf	765	40	
Grain Wharf	543	40	3.5 million bushel grain elevator Loading Rate: 1,875 t.p.h. (grain); 1,100 t.p.h. (soya).

CARGO HANDLING FACILITIES: For container ships, conventional break-bulk ships, heavy lift ships or side-loading Ro-Ro ships, the Harbour Island Marine Terminal – 1,200 linear ft. berthing space; 120,000 sq.ft. transit shed; 93 ft. wide apron facing transit shed; 240,000 sq.ft. open wharf space; 8 acres heavy duty hard stand adjacent to open wharf, backed up by 25 more acres for vehicle marshalling; twin marginal rail tracks for full length of wharf; 220 ton capacity truck-mounted mobile crane for containers and heavy lifts; 40 ton forklift machine with, expandable spreaders for container handling and 3-high container stacking or, blades for heavy cargo; 600 ft. undercover working track for all-weather rail car unloading inside transit shed; 200 linear ft. of truck height unloading platform along rear of open wharf; 20 ft. high × 18 ft. wide shed doors for high wide loads and entry for all-weather truck unloading or container stuffing; 40 ft. of water alongside; 1,200 lbs. per sq. ft. deck load capacity.

For stern loading Ro-Ro vessels, wharves 2 and 3 – 758 ft. in length with 75 ft. wide Ro-Ro platform at one end of the wharf. Ro-Ro platform deck elevation +15.89 ft. above mean low Gulf. (12 ft. 7 in. above average tide) 36 ft. of water alongside wharf; convenient roadway access to Ro-Ro platform from 15 acre storage area adjacent to the wharf; double marginal rail tracks for full length of wharf; 60 ton capacity gantry crane travels 700 ft. along face of wharf; 120,000 sq. ft. open wharf space; wharves 2 and 3 may also be used as an alternate to Harbour Island Wharf for containers, conventional break bulk, heavy lift or side loading Ro-Ro vessels. Covered wharf 4 is adjacent, extending total wharf length to 1,300 ft. and offering 57,000 sq. ft. covered area.

For security of cargo, all Port of Beaumont wharves are entirely within a chain link, barbed wire topped security fence, and all vehicular access is through the port's main gate, guarded 24 hours a day. The port is an approved outport of the Military Traffic Management Command, Eastern Areas, U.S. Army, is heavily used for shipments of military material, equipment and supplies, and is subjected to regular security inspections by Army personnel who have given the port high ratings.

For security of small, high value items that are considered especially subject to possible pilferage, the port will permit fencing and shelving of a limited designated security area within a transit shed.

For heavy lift requirements beyond the capacity of the 60 ton gantry (at Wharf No. 2 & 3) or the 220 ton mobile crane (at Harbour Island Marine Terminal), a 500 ton capacity derrick barge is available.

STEVEDORES: *Public Wharves:* Normal working hours 0800/1200 and 1300/1700 Monday to Friday.

TANKERS: *Amoco:* Terminal is located on the Neches River Channel 44 miles from the sea buoy. The controlling depth for the channel and turning basin is 40 ft. while the controlling depth for the North and South berth is 35 ft. The water is fresh (density 1000). The maximum size vessel normally received at the terminal is approximately 28,000 d.w.t. The limited strength of the docks combined with passing traffic should be noted. Vessels dock and undock day and night. A minimum of 2 tugs are used to dock and undock vessels. Pilings are not to be used as turning points. Vessels in ballast are turned prior to berthing starboard side to. Loaded vessels are berthed port side to and turned after discharge. Judicious use of tugs during turning manoeuvres is essential as vessels have a tendency to "overshoot" the pier when turning. Several mooring dolphins have been knocked out of position. Short wire springs are accepted. All other lines must be rope due to the weak pile clusters. Docks do not have winches nor do they supply a gangway.

Fuel and water are not available.

The terminal is fenced and guarded.

Pollution Control: Consists of 2,000 ft. of spill booms and a launch. Amoco is a member of Neches River Oil Control Committee.

Fire Protection includes a foam system with a tank on the dock. Water monitors and hoses are kept in readiness.

Mobil: Terminal is located on the Neches River Channel 56 miles from the sea buoy. The controlling depth for the channel and turning basin is 40 ft. The water at the terminal is brackish. The maximum size vessel normally received at the terminal is 50,000 d.w.t. Depth alongside 36 ft. The berths are subject to passing traffic and Master's are advised to keep mooring lines tight. No repair work may be done while transferring cargo at this port.

While berthing, a minimum of 2 tugs are used. 1 tug is needed when unberthing. 3 hours advance notice is required when ordering tugs.

Vessels normally proceed to the berth directly from the channel, prior communications establish whether ship will berth head-up or head-down the channel depending upon the LOA and hose connections. Ships can berth starboard side to; however, port is preferred. A normal complement of mooring lines is used. Wire lines are accepted with nylon pendants recommended. A mooring contractor is employed. The vertical range of hoses is 40 ft., 50 ft., if vessel uses its own derrick.

Fuel and fresh water are available at the Mobil terminal.

The terminal is fenced and guarded.

Pollution Control consists of 1,500 ft. of spill boom and a launch. Terminal has vacuum trucks.

Fire protection is provided by a terminal fire brigade. Monitors are situated on the shore, foam and water along with dry chemical are located on the dock. Fire hose is on reels, water is under pressure and spray nozzles are located under the wharf.

Also see "Smith's Bluff".

MEDICAL: All facilities available.
DENSITY: Fresh water.
FRESH WATER: Available at berths, or by barge.
FUEL: Available ex-wharf at Mobil terminal. All grades available by barge to other locations.
GANGWAY/DECK WATCHMEN: Not required unless crewmen detained by Immigration.
CUSTOMS ALLOWANCES: 300 cigarettes and 1 quart wine/spirits for each man.
IDENTIFICATION CARDS: Foreign crew require only Immigration landing permit.
CONSULS: Nearest at Houston.
REPAIRS, DRY DOCKS: Beaumont's Bethlehem Shipyard offers all types ship repair or reconditioning – plus vessel conversion and jumboizing. 2 side-launching ways over 800 ft. each. Floating dry dock with extreme length of 648 ft.; length on bottom 576 ft.; breadth at entrance, 87 ft.; and lifting capacity 17,500 tons. Active in design and construction of mobile drilling platforms and oil and gas production and storage facilities for service offshore.
HOLIDAYS: Longshore holidays are: New Year's Day: Martin Luther King's Birthday (January 15th); Lincoln's Birthday (February 12th); Washington's Birthday; Texas Independence Day (March 3rd); St. Patrick's Day (March 17th); Good Friday; Memorial Day (last Monday in May); Emancipation Day (June 20th); Fourth of July; Labour Day; Columbus Day; Veteran's Day (November 11th); Thanksgiving Day; Christmas Day.
AUTHORITY: Port of Beaumont, P.O.Drawer 2297, Beaumont, Texas 77704. *Tel:* (409) 835-5367. *Telex:* 779486. *Cables:* Portbomont. *Contact:* James W. Martin, Port Director. Billy G. Masters, Executive Managing Director.

AGENT: Strachan Shipping Company, P.O.Box 1309, Beaumont, Texas 777014. Tel: 409-898-8390 Telex: 910-884-5119 Cables: "Strachan".

BELLINGHAM, (Including Cherry Point), Washington: 48.45 N. 122.31 W. (See Plan)

DOCUMENTS: Refer to "Tacoma".
PILOTAGE: Compulsory.
HEALTH: See "Health: All Ports" before first U.S.A. Port (Albany). Illness reports made to Seattle Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
TUGS: Available, join vessel in Bellingham Bay.
ANCHORAGE: Deep water available, but poor holding ground.
RESTRICTIONS: Channel depth 32 ft.
BERTHING: North Terminal, Berth Nos. 1 & 2 length 1,400 ft., depth alongside 33 ft. MLLW. Berth No. 3 length 400 ft., depth alongside 25 ft. MLLW. Georgia Pacific Dock, Berthing length 600 ft., depth alongside 28 ft. MLLW. Ro-Ro facilities available within the port.
CRANES: 1 × 50 ton floating crane.
STEVEDORES: 8 local gangs. Additional gangs imported if required.
TANKERS: Cherry Point: 48° 52′ N., 122° 30′ W. 3 oil jetties.
Arco Jetty: Depth 70 ft. Intalco Jetty: Depth 37.5 ft. Mobil Jetty: Depth 43 ft.
Deadweight limit in Puget Sound is 125,000 tons.
HOLIDAYS: See "Tacoma".
MEDICAL: All medical facilities available. 2 local hospitals.
DENSITY: Salt water.
FRESH WATER: Available at all wharves.
FUEL: Available. Barge delivery only.
REPAIRS/DRY DOCKS: *Fairhaven Terminal:* Home to Maritime Contractors, Inc., large vessels repair and the Port's 2,800 ton capacity floating dry dock, which can accommodate vessels up to 116 m. length and 18 m. beam.
GANGWAY/DECK WATCHMEN: Required only if detainees aboard.
CUSTOMS ALLOWANCES: No definite quantities prescribed; reasonable allowance at discretion of Customs Inspector.
AIRPORT: 3 miles from the city.
TELEPHONES: Available.
AUTHORITY: Port of Bellingham, P.O.Box 1737, 625 Cornwall Avenue, Bellingham, Washington 98227. *Tel:* (206) 676-2500. *Telex:* 882806. *FAX:* 436-1011. *Contact:* D. C. Fleming, Executive Director.

BENICIA, California: 38.03 N. 122.10 W. (See Plan)

DOCUMENTS: Health and all General Information: refer to "San Francisco".
PILOTAGE: Port located about 25 miles above Golden Gate Bridge. River Pilot joins at San Francisco, using VHF for traffic information. Passage includes passing under 2 bridges, Carquinez Strait Bridge having the least clearance, with 146 ft. (HW) and 151 ft. (LW) (using North Channel). River passage is timed to arrive at Benicia at the first of ebb tide; this is approximately 2.5 hours after HW at Fort Point (Golden Gate).
ANCHORAGE: At San Francisco.
RESTRICTIONS: Tankers must lighten to 36 ft. fresh water draft. This is done at No. 7 anchorage, 1.5 miles East of Alcatraz Island. This cargo will later be pumped back to the tanker as barges cannot overcome shore back pressure. Turning basin off the berths, radius 1,800 ft.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to San Francisco Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
TUGS: 1 small tug assists berthing. Only 1 normally required for unberthing.
BERTHING: Continuous wharf 2,404 ft. long with berth for 3 vessels. The West berth is used for the loading of petroleum products, and the Centre and East berths are equipped for handling general and bulk cargoes. East of this facility is another berth that will accommodate one tanker for discharge of crude oil (Exxon), depth alongside – 38 ft.
MOORINGS: 2 head wires, 4 breasts and 2 springs forward. This is necessary because of current off the bank during ebb tide. 2 stern lines, 2 breast lines and 2 springs aft.
BULK HANDLING FACILITIES: Waterside silos' capacity 26,000 tons with loading conveyor belt capacity 1,000 t.p.h.
TANKERS: Crude oil discharge through 2×12 in. Chicksan arms and 36 in. shoreline, 2.5 miles long. Shore tanks are situated 164 ft. above sea level, initial back pressure 65/70 p.s.i.
FRESH WATER: Available from shore lines.
FUEL: Can only be delivered by barge. Averate rate 300 t.p.h.
DEVELOPMENTS: Current plans call for development of a complete container terminal.
AUTHORITY: Benicia Port Terminal Company, P.O.Box 315, Benicia, California 94510. *Tel:* (707) 745 – 2394. *Contact:* A. D. Vincent, Vice-President.

BOCA GRANDE, Florida: 26.43 N. 82.15 W. (See Plan)

SHIPMASTER'S REPORT: 1978.
LOCATION: On the Eastern side of the Southern end of Gasparilla Island, about 60 miles South of Tampa Bay.
DOCUMENTS: See "Tampa".
Government Officials must travel from Tampa to Boca Grande at vessel's expense.
PILOTAGE: Compulsory for all foreign-going merchant vessels. The Pilot boards vessel near the sea buoy. Pilotage available 24 hours a day.
Request should be made to ship's Agents via Tampa Marine Operator. VHF Channels 16, 12 and 13.
ANCHORAGES: Good holding ground near the sea buoy (Lat. 26° 39.8′ N., Long. 82° 19.6′ W.)
APPROACHES: The Belcher Oil tanks are clearly indicated on the radar at approximately 25 miles distance.
RESTRICTIONS: The channel is less than 300 ft. wide in some places. Depth 32 ft. at MLW. The traffic is one way and vessels enter only when the stream is half strength or less. Strong Westerly winds may cause a swell which prevents vessels using the channel.
MAX. SIZE: Beam: 80 ft. with 24 ft. max. distance from outside ship's hull to inside hatch coaming.
Draft: 31 ft. 6 in. (9.60 m.) recommended by Pilots. The channel is 32 ft. deep at MLW.
Length: 550 ft. should be a maximum because distance between end bollards is 475 ft.
HEALTH: Same procedure as for any other U.S. port.
A U.S. Public Health physician is located on the island.
RADIO: Tampa Radio – WPD.
VHF: Pilots on VHF Channels 16, 12 and 13. U.S. Coastguard on Channel 16.
TUGS: A small tug for light towing operations is available.
BERTHING: A "T" headed pier 325 ft. long; distance between end bollards: 475 ft. This pier is for loading phosphates in bulk. Max. draft: 32 ft. (SW). An oil handling berth with 32 ft. depth is located close Southward of the phosphate pier.
BULK CARGO: Material loaded: Phosphate Rock, Diammonium Phosphate, Triple Super Phosphate (granulated or run of pile) and Defluorinated Phosphate.
The shiploader travel is only 270 ft. so large vessels must shift alongside.
Maximum air draft of vessel: 34 ft. (10.36 m.) from the water line (MLW) to the rail or the hatch-coaming.
Trimming: Spout trimming is done free of charge. Mechanical trimming (levelling and/or filling) will be performed by the railroad at additional charge.
Loading Rates: Phosphate Rock: about 800 t.p.h spout trimmed.
Diammonium Phos.: about 400 t.p.h. spout trimmed.
Triple S. Phos.: about 550 t.p.h. spout trimmed (granulated).
Triple S. Phos.: about 300 – 500 t.p.h. spout trimmed (run of pile).
Defluor. Phos.: about 400 t.p.h. spout trimmed.
When levelling and/or filling is required, loading rates are much lower and extremely variable depending on the construction of the ship.
Work Schedule: Only one work crew is available; therefore, only about 16 hours working time per day and about 8 hours rest period for crew.
Work performed without overtime charge to the shipper 7 days a week except following, no work holidays: January 1st, July 4th, Labour Day, Christmas Day.
TIDES: Approximately 2 ft. variation.
TANKERS: *Belcher Oil:* Depth 32 ft.
Vessels enter and berth only when currrent is at half strength or less. The strength of the current has been reported to reach 4 knots. The current generally flows in 030°–210° direction, although the flood tide varies in direction. The pier face lies in a 060°–240° direction. A vessel uses an anchor to swing around and then to hold its head up into the current while mooring lines are run out to mooring buoys and the breasting cells. 2 mooring buoys forward for headlines and 2 mooring buoys aft for stern lines are used. A total of 14 mooring lines are required to safely tie up. Wires are permitted as spring lines only. Lines must be carefully tended and maintained in a tight condition with vessel snug alongside at all times. *There have been reports of floating timbers in the area; caution is advised.*
Also see "Berthing".

DENSITY: Salt water.
FRESH WATER: Available.
FUEL: No local facilities. Prior arrangements with ample notice must be made via the ship's Agent at Tampa.
CONSULS: See "Tampa".
REPAIRS: No local facilities. To be arranged via Agents with ample notice.
SURVEYORS: The nearest Lloyds' office is at Jacksonville. American Bureau available from Tampa.
STORES AND PROVISIONS: No facilities available for normal ship chandlering. Prior arrangements should be made via Tampa.
GENERAL: Boca Grande is the older of "Seaboard Coast Lines" (SCL) two existing loading facilities, the new one being at Tampa. All Agents are based at Tampa, about 110 miles by road.

BOSTON, Massachusetts: 42.21 N. 71.05 W. (See Plan)

DOCUMENTS:

3 copies Cargo Manifest (Form 1302), 2 copies showing all cargo on board, and 1 copy showing only cargo for this port.
3 copies Crew Manifest (Form 1304).
3 copies Stores List (Form 1303).
3 copies Passenger List (Form I-418).
3 copies Crew List (Form I-418).

Customs boarding officer will also examine Ship's Register, Safety Equipment Certificate and Load-line Certificate. In addition, the following documents will be required for formal entry to be made within 48 hours of arrival from abroad, or 24 hours from arrival from a United States Port:

General Declaration (Form 1301).
Health Pratique.
Master's Oath (Customs Form 1300).
All foreign clearances.
Certificate of Financial Responsibility (Oil Pollution).
U.S. Certificates of payment of tonnage tax (Customs Form 1002).
Certified Crew List.

PILOTAGE: Pilotage is compulsory for all foreign vessels, with few exceptions, and for United States vessels under register in foreign trade. It is optional for coastwise vessels which have on board a Pilot licensed by the Federal United States government for these waters.

Pilot boats meet vessels within sight of Boston Lighted Horn Buoy B. During Winter, with a Northwesterly wind, pilot boats may meet vessels to the Northwestward of Boston Approach Light Buoy BG. Pilot boats often land or pick up Pilots at the town wharf at Nahant Harbour.

Both the 70 ft. (21.3 m.) "Boston Pilot" and the 52 ft. (15.8 m.) "Thomas Knox" have black hulls with the word Pilot in black letters on either side of the white superstructure. Both are equipped with radar and maintain a 24 hour radio watch on VHF Channel 16 and a 0700 to 1800 hrs. watch on VHF Channel 11.

Vessels are asked to give a 4 hour advance notice of their time of arrival. Pilots for Weymouth, Quincy, Lynn and Saugus are obtained from the Boston pilot boat. Pilots can be notified by radio, telegraph or by radiotelephone through the Boston Marine Operator.

Boston Pilots: No. 66 Long Wharf, Second Floor, Boston, MA. Tel: (617) 227-3575. Cable: BOSPILOT.

ANCHORAGES:

ANCHORAGE No. 1. *Upper Harbour Anchorage:* Steam and motor vessels permitted to anchor in this basin anchor within the following area: S.E. of a line bearing 205° True from N.E. corner of Boston and Albany Pier No. 5, East Boston; N.E. of a line bearing 122° True from S.E. corner of Lewis Wharf, North Pier; S.W. of a line bearing 292° True from N.E. corner of Southernmost Airport Approach Pier; N.W. of a line bearing 025° True from Buoy No. 12, Fl.R.6 sec.

ANCHORAGE No. 2. *President Roads Anchorage* (40 ft. anchorage): All vessels anchoring in this basin anchor within an area beginning at a point bearing 237°, 522 yards from Deer Island Light; thence to a point bearing 254°, 2,280 yards from Deer Island Light; thence to a point bearing 261°, 2,290 yards from Deer Island Light; thence to a point bearing 279°, 2,438 yards from Deer Island Light; thence to a point bearing 319°, 933 yards from Deer Island Light; thence to a point bearing 319°, 666 yards from Deer Island Light; and thence to point of beginning.

President Roads Anchorage (35 ft. anchorage): All vessels anchoring in this basin anchor within an area beginning at a point bearing 256°, 2,603 yards from Deer Island Light; thence to a point bearing 258°, 3,315 yards from Deer Island Light; thence to a point bearing 264°, 3,967 yards from Deer Island Light; thence to a point bearing 261°, 2,290 yards from Deer Island Light; and thence to point of beginning.

ANCHORAGE No. 3. *Nantasket Roads Anchorage:* Vessels anchoring in this anchorage basin anchor within following area: Westerly of a line bearing 143° from wharf at Gallups Island to Bell Buoy No. 2, S.W. of Georges Island; Northerly of a line bearing 260° from Bell Buoy No. 2, Georges Island, to the Northerly end of Rainsford Island; Northerly of a line bearing 273° from the Northerly end of Rainsford Island to Bass Point, Long Island; Southerly of a line bearing 270° from the wharf at Gallups Island to Long Island.

ANCHORAGE No. 5. *Peddocks Island and Explosive Anchorage:* Vessels anchoring in this anchorage basin anchor within following area; S.W. of a line bearing 122° True from the Easterly end of Rainsford Island to the N.E. end of Rainsford Island to the N.E. end of Peddocks Island, N.E. of a line bearing 165° True from the Westerly end of Rainsford Island to the S.E. end of Peddocks Island.

RESTRICTIONS: There are 3 main channels of entrance from sea to President Roads.
Broad Sound North Channel from Broad Sound to President Roads from N.E. Dredged 35 ft. deep and 1,500 ft. wide and is deepened to 40 ft. in a width of 900 ft. to 1,100 ft. This channel well marked by lighted buoys.
Broad Sound South Channel from Broad Sound S.W. and Westerly to President Roads. Dredged 30 ft. deep and 1,200 ft. wide. This channel is well marked by buoys and ranges but most aids to navigation are not lighted.
The Narrows is channel leading into Boston Harbour from S.E. between Boston Lighthouse and Lovells Island on the N.E. and Point Allerton, Georges Island and Gallups Island on S.W. Depth is 27 ft. Width is generally 1,000 ft. except in a section between Narrows Light and Georges Island where shoaling on N.E side limits it to 700 ft. Channel is well marked.
The Main Ship Channel of Boston Harbour extends from President Roads to the mouths of the Chelsea and Mystic Rivers and to Charlestown Bridge on the Charles River. Channel has been dredged 35 ft. deep and 1,200 ft. wide to the inner end where widths decrease near the river mouths. It has been deepened to 40 ft. for 600 ft. width from President Roads to the mouth of the Mystic River, with a widening to 1,200 ft. at the bend just Northerly of Commonwealth Pier No. 5, South Boston.
Charles River is approach by water to Cambridge and Watertown. About 0.5 mile above the lower bridge there is a dam with a lock 45 ft. by 350 ft. with depth of 17 ft. over the lower sill. Depths above dam decrease gradually to 9 ft., basin level, at head of navigation.
Mystic River is approach by water to Everett, Malden and Medford. Controlling depths are 35 ft., from Mystic River bridge to approximately 1 mile above, thence 20 ft. from the 35 ft. channel to 800 ft. above the Malden Bridge to a point abreast Monsanto Chemical Company plant.
Chelsea River is approach to city of Revere. Channel from entrance to a point opposite the Tenneco Oil Co. terminal has a controlling depth of 35 ft.
Weymouth Fore River is approach by water to Quincy and Weymouth. Controlling depth is 30 ft. to Fore River Bridge. Controlling depth for a distance of 2,800 ft. above Fore River Bridge is 30 ft.
Town River extends N.W. from Weymouth Fore River at Quincy Point. River has a controlling depth of 27 ft. from deep water in Weymouth Fore River to a point opposite the Quincy Oil Co. terminal. Opposite Quincy Oil Co. terminal there is a turning basin 18 ft. deep, 400 ft. wide and 1,000 ft. long.

MAX. SIZE: The primary entrance to Boston Harbour is via the North Channel and President Roads. Controlling depth is 35 ft. MLW. Average rise of the tide in Boston is 9.5 ft.

Generally speaking, vessels drawing 40 ft. are taken at the top of the tide to Texaco Oil Terminal and Exxon only. Vessels going to berths in the Mystic River above the Mystic River Bridge are limited by the bridge's vertical clearance of 135 ft. MHW.

Vessels consigned to berths in the Chelsea Creek are limited to a length of 669 ft., beam of 90 ft. and draft of 36 ft. high water docking. Furthermore, vessels which exceed 630 ft. going above the Chelsea Street Bridge are restricted to daylight docking. Daylight sailing is required from the berths above the McArdle Bridge if the vessel is over 585 ft. long.

As a rule, vessels are docked bow in at the Chelsea Creek berths. If docked between the bridges, departure is stern first through the McArdle Bridge. If docked above the Chelsea Street Bridge, then on sailing, the vessel is turned in the basin West of the Gibbs and Union terminals.

The controlling depth in the channel leading to Weymouth Fore River is 28 ft. MLW. Vessels with a max. draft of 33 ft. 6 in. will be taken at high water, but it should be noted that docking and undocking in Fore River are daylight operations – between sunrise and sunset – and no vessel longer than 628 ft. will be handled.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Boston Quarantine Station.
RADIO: *Advance Notice of Arrival:* 24 hours advance notice of arrival be given. This notice is made to the office of the Captain of the Port – 223-6979.

The information to be provided consists of: Vessel's Agent's name; Vessel's name, type, flag, and call sign; the ETA; Berth; Last port and next port; Dangerous cargo on board. In return the Captain of the Port will assign a consecutive log number to the vessel.

In event the vessel's ETA is changed by more than 24 hours from first notice, the Captain of the Port should be so notified, identifying the vessel by its assigned log number.
VHF: Pilots on Channels 16 and 11.
Coastguard on Channels 16 and 22.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
TUGS: Vessels can proceed from the sea to Boston Upper Harbour under own power. Barges usually left by the outside tugs at the anchorage grounds, to be docked later by harbour tugs.

Tugs up to 4,300 h.p. are available at Boston for towing, docking, undocking and shifting. Tugs maintain radio communications on VHF Channel 10. Inbound vessels are usually met in the vicinity of Anchorage Areas 1 or 2. Arrangements are usually made in advance through ship's Agents.

BERTHING: There are 259 piers or wharves in the port of Boston providing 158,646 lineal ft. or 30 miles of berthing space measured along the sides and ends of piers and along bulkheads or shore wharves. Many of them have railroad connections. The depths of water available alongside these terminals range up to a maximum of 40 ft. at mean low water. Practically all terminals fronting on main ship channel are in close proximity to storage warehouses, both cold and dry which greatly facilitates transfer of cargo between vessel and warehouse.

Main Terminals:

Massport Marine Terminal	Depth alongside 38 ft.
Hoosac Pier, 3 berths	Depth alongside 35 ft.
Mystic Pier, 4 berths	Depth alongside 40 ft.
Commonwealth Pier, 5 berths	Depth alongside 40 ft.
South Boston, 10 berths	Depth alongside 35 ft.
Castle Island, 6 berths	Depth alongside 35 ft.
East Boston, 3 berths	Depth alongside 32 ft. to 35 ft.
Public Container Terminal, 2 berths	Depth alongside 40 ft.

Sea-land Container Terminal, South Boston (Berth 17, Conley Terminal – Castle Island):
Operator – Sea-Land Service, Inc. Tel. 268-9720.
Type of Pier – Single face, 500 ft. long. 1×27.5 ton container crane. 10 acre container storage area.
Depth alongside at MLW – 35 ft.
Normal ship side to dock – Starboard.
Line handling boat – not required.
Access to vessel (for stores and repairs) – trucks to ship's side.
Products handled – Containers.

Conley Terminal Terminal, Castle Island, South Boston:
Operator – Massachusetts Port Authority. Tel. 482-2930
Type of Pier – Single face. 6 berths No. 16 (610 ft.) adjacent to and extending N.W. of No. 17 (see above); No. 15 to No. 11 (2,995 ft.) adjacent to and extending Westward of No. 16. 294,000 sq.ft. covered storage, 4 million sq.ft. open storage (including 32 acres fenced in automobile storage and 20 acres lumber storage), 50 ton crane, rail service. Berth No. 11 equipped with 2×40 ton gantry cranes.
Depth alongside at MLW – 35 ft. – 40 ft.
Normal ship side to dock – Varies.
Line handling boat not required.
Access to vessel (for stores and repairs) – trucks to ship's side. Minimum 40 ft. apron.
Products handled – General cargo, containers, lumber, bulk salt and cement, automobiles.

Texaco Oil Terminal, South Boston:
Operator – Texaco, Inc. Tel. 269-2111.
Type of Pier – Single face.
Depth alongside at MLW – 40 ft.
Normal ship side to dock – Port (bow in).
Line handling boat – required.
Access to vessel (for stores and repairs) – limited, trucks can approach only to within 150 ft. of gangway or ship's side.
Products handled – Avjet, Heating Oil, No. 6 Oil, Molasses.
Size and number of pipe-lines – Numerous – 24 in., 20 in., 16 in., 12 in.
Bbls. per hour discharge capacity – 12,000 to 18,000.
Average distance to storage tanks – 1,000 ft.
Pollution control equipment – 1,600 ft. boom, 16 ft. boat, 300 absorbent pillows, 2,000 gallon pumpout truck.

Eastern Minerals, South Boston:
Operator – Eastern Minerals, Inc. Tel. 269-5857.
Type of Pier – Single face.
Depth alongside at MLW – 40 ft.
Normal ship side to dock – Starboard (bow out).
Line handling boat not required.
Access to vessel (for stores and repairs) – trucks to ship's side.
Products handled – bulk salt, pumice. Discharge rate 5,000 tons per day with fixed grab requiring vessel to be shifted in berth.

Boston Army Base, South Boston:
Operator – Port Terminals, Inc. Tel. 542-7100.
Type of Pier – Single face, three sides: South 3,705 ft., East 351 ft., North 964 ft., 950,000 sq.ft. covered storage, rail service, 2×27.5 ton rail mounted cranes.
Depth alongside at MLW – 35 ft.
Normal ship side to dock – Varies.
Line handling boat not required.
Access to vessel (for stores and repairs) – trucks to ship's side. 50 ft. apron incorporates rail lines.
Products handled – General cargo, containers.

Massport Marine Terminal – South Boston:
Owned and operated by: Massport, Maritime Department.
Adjacent to the former South Boston Naval Annex, this terminal features a 47 acre (19 ha.) site used for discharge and handling of automobiles, bulk road salt, lumber and other commodities; 2,700 ft. (822.96 m.) face; 38 ft. (11.58 m.) alongside depth; 16 ft. (4.88 m.) deck height; 750 lb./sq.ft. (340 kg./sq.cm.) load capacity. Railway track connection; stevedore equipment available as needed. An estimated 50,000 imported cars processed here yearly. Expansion space is available for future container facilities and additional cargo storage space.

Commonwealth Pier, South Boston:
Operator – Massachusetts Port Authority. Tel. 482-2930.
Type of Pier – Single face, three sides: North and South 1,200 ft. East 400 ft. 500,000 sq.ft. covered storage, 1,000,000 cu.ft. freezer, rail service, passenger lounge, upper level exhibition hall.
Depth alongside at MLW – 40 ft.
Normal ship side to dock – Varies.
Line handling boat not required.
Access to vessel (for stores and repairs) – trucks to ship's side. 20 ft. apron incorporates rail lines.
Products handled – Passengers, general cargo, refrigerated cargo, bulk tallow.

Pier 1, East Boston:
Operator – Massachusetts Port Authority Tel. 482-2930.
Type of Pier – Single face, three sides: East and West 605 ft., South 390 ft., 196,000 sq.ft. covered storage.
Depth alongside at MLW – 35 ft.
Normal ship side to dock – Varies.
Line handling boat not required.
Access to vessel (for stores and repairs) – trucks to ship's side.
Products handled – General cargo, containers.

Metropolitan Petroleum Company, Chelsea:
Operator – Metropolitan Petroleum Company. Tel. 288-1111.
Type of Pier – Timber pile, offshore.
Depth alongside at MLW – 35 ft.
Normal ship side to dock – Starboard (bow in).
Line handling boat not required.
Access to vessel (for stores and repairs) – by hand cart only.
Products handled – Heating Oil, No. 6 Oil.
Size and number of pipe-lines – 2 × 8 in.
Bbls. per hour discharge capacity – 6,000 to 8,000.
Storage tanks adjacent to berth.
Pollution control equipment – 1,000 ft. boom, 18 ft. boat, 50 absorbent pillows, 150 gallons Aqua-clene.
Note:– Bow to manifold 370 ft. No wire ropes used to moor vessel.
Vessels require 3 tugs while docking, depending on the deadweight of the vessel. A minimum of 2 tugs are required for undocking. Caution is advised while docking and undocking due to traffic congestion in this area of the channel.

Exxon Company U.S.A., Everett:
Operator – Exxon Company U.S.A. Tel. Marine Department 387-1733, Marketing Terminal 389-7400.
Type of Pier – Timber pile wharf with caissons.
Depth alongside at MLW – 42 ft.
Normal ship side to dock – Starboard.
Line handling boat not required.
Access to vessel (for stores and repairs) – by rail-mounted hand cart.
Products handled – Asphalt, Chemicals, Diesel Oil, Jet Fuel, LPG, Kerosene, Gasoline, No. 2 and No. 6 Oil.
Size and number of pipe-lines – numerous.
Bbls. per hour discharge capacity – Up to 35,000.
Average distance to storage tanks – 5,000 ft.
Pollution control equipment – 1,500 ft. boom, skiff.
Vessels meet tugs and Docking Master off Castle Island and then proceed up the main channel. Vessels pass under the Mystic Bridge on the approach to the berth and then dock starboard side to. If the vessel is equipped with a bow thruster 2 tugs are required when docking and undocking, otherwise 3 tugs are required. The vessel turns on departure from berth. A gangway is provided by the Terminal.

Prolerized New England, Everett:
Operator – Prolerized New England Company. Tel. 389-8300.
Type of Pier – Straight face.
Depth alongside at MLW – 36 ft.
Normal ship side to dock – Port (bow out).
Access to vessel (for stores and repairs) – trucks to ship's side, but access may be limited due to vessel's position at conveyor.
Products handled – Ferrous scrap (including Prolerized shredded-scrap).
General notes: Pier is equipped with 2×50-ton cranes. Shredded scrap is loaded from fixed conveyor requiring vessel to be shifted as each hatch is served.
This berth is also used by Distrigas Corp. and Union Carbide Corp.

Amstar Sugar Refinery, Charlestown:
Operator – Amstar Corporation. Tel. 242-3670.
Type of Pier – Single face. (371 ft.).
Depth alongside at MLW – 32 ft.
Normal ship side to dock – Port (bow in).
Line handling boat required.
Access to vessel (for stores and repairs) – trucks to ship's side, but may be limited depending on vessel's position at conveyor.
Products handled – raw sugar. Discharge facility consists of single grab with capacity of 240 t.p.h. Vessels limited to approximately 650 ft. overall length.

Revere Sugar Refinery, Charlestown:
Operator – Sucrest Corporation. Tel. 242-2750.
Type of Pier – Straight face.
Depth alongside at MLW – 33 ft.
Normal ship side to dock – Port (bow in).
Line handling boat not required.
Access to vessel (for stores and repairs) – trucks to ship's side.
Products handled – raw sugar. Discharge facility consists of 23.5 ton grabs with total capacity of 350-400 t.p.h. Vessels limited to approximately 600 ft. overall length.

Schiavone Scrap Terminal, Charlestown:
Operator – Schiavone Terminal, Inc. Tel. 242-5210.
Type of Pier – Single face. (700 ft.).
Depth alongside at MLW – 35 ft.
Normal ship side to dock – Owner's preference.
Line handling boat not required.
Access to vessel (for stores and repairs) – trucks to ship's side.
Products handled – Ferrous scrap.
General notes: Pier is equipped with 3×14-ton Clyde gantry cranes. Loading rate 2,500 tons per day. Rail service to pier.

J. F. Moran Container Terminal, Charlestown:
Operator – Massachusetts Port Authority. Tel. 482-2930.
Type of pier – Single face, 1,100 ft. long. 1×45-ton container crane, 1×70-ton container crane, 38,000 sq.ft. container stuffing shed, 30 acre container storage area, rail service.
Depth alongside at MLW – 40 ft.
Normal ship side to dock – Varies.
Line handling boat not required.
Access to vessel (for stores and repairs) – trucks to ship's side.
Products handled – Containers.

U.S. Gypsum, Charlestown:
Operator – U.S. Gypsum Co. Tel. 241-9100.
Type of Pier – Single face. (410 ft.).
Depth alongside at MLW – 27 ft.
Normal ship side to dock – Port.
Line handling boat not required.
Access to vessel (for stores and repairs – access to berth.
Products handled – Gypsum rock from Nova Scotia, carried in company's own vessels, specially fitted and adapted for discharge at this berth. Silo storage 25,000 tons. Open storage 38,000 tons.

Mobil Oil, East Boston:
Operator – Mobil Oil Corporation. Tel. 567-9080.
Type of Pier – Straight face, with centre relieving platform.
Depth alongside at MLW – 32 ft.
Normal ship side to dock – Starboard.
Line handling boat required.
Access to vessel (for stores and repairs) – trucks to ship's side.
Products handled – Gasoline, Heating Oil.
Size and number of pipe-lines – Various.
Bbls. per hour discharge capacity – 8,000.
Average distance to storage tanks – tank farm adjacent to berth.
Pollution control equipment – 950 ft. boom.

Amerada Hess Oil Terminal – East Boston:
Owned and operated by: Amerada Hess Corp.
For receiving and shipping petroleum products; 20 ft. (6 m.) face, 296 ft. (90.2 m.) total berthing space with dolphins, 35 ft. (10.67 m.) alongside depth, 13 ft. (3.96 m.) deck height. Pipe-lines extend from wharf to 10 steel storage tanks with total capacity of 595,250 bbls.

Citgo Oil Terminal – East Boston:
Owned and operated by: Citgo Petroleum Corporation.
For petroleum product shipments; 700 ft. (213.36 m.) total berthing space; 35 ft. (10.67 m.) MLW alongside depth; 14 ft. (4.26 m.) deck height; pipe-lines extend from wharf to 23 steel storage tanks with a total 1,200,000 bbls. capacity.

Gibbs Oil Company, Revere:
Operator – Gibbs Oil Company. Tel. 289-7700.
Type of Pier – Timber pile, wooden deck.
Depth alongside at MLW – 10 ft. – 35 ft.
Normal ship side to dock – Starboard.
Line handling boat not required.
Access to vessel (for stores and repairs) – only by hand cart.
Products handled – Heating Oil, Gasoline.
Size and number of pipe-lines – 3×10 in., 2×12 in.
Bbls. per hour discharge capacity – 8,000 per line.
Average distance to storage tanks – 2,500 ft.
Pollution control equipment – 1,750 ft. boom, 16 ft. boat. (Shared with Union, Gulf, Northeast.)
3 tugs are normally used for docking and undocking vessels at this berth. Vessels normally dock starboard side to.

Belcher New England Ship Pier – Revere:
Owned and operated by: Belcher New England, Inc.
Used for receiving and shipping petroleum products, the South side of pier has 600 ft. (182.88 m.) of berthing space; 37 ft. (11.27 m.) LW alongside depth; 15 ft. (4.57 m.) deck height. Pipe-lines extend to storage tanks with 1.25 million barrel capacity.

Union Oil Company, Revere:
Operator – Union Oil Company. Tel. 284-4490.
Type of Pier – Timber pile, wooden deck.
Depth alongside at MLW – 33 ft.
Normal ship side to dock – Starboard.
Line handling boat required.
Access to vessel (for stores and repairs) – only by hand cart.
Products handled – Heating Oil, Mogas, No. 5 Oil, No. 6 Oil.
Size and number of pipe-lines – 5×12 in.
Bbls. per hour discharge capacity – 8,000 per line.
Average distance to storage tanks – 2,500 ft.
Pollution control equipment – 1,750 ft. boom, 16 ft. boat. (Shared with Gibbs, Gulf, Northeast.)
Vessels meet tugs and Docking Master in vicinity of Castle Island. The maximum size vessel which can be safely accommodated at this berth is about 38,000 d.w.t. Vessel normally require 2 tugs when docking and undocking at Union Oil Terminal. Vessels dock starboard side to, and when undocking are turned in the turning basin. Vessels must utilise their own gangway at this berth. Fully loaded vessels are docked or undocked at HW only, day or night.

Gulf Oil Company, Chelsea:
Operator – Gulf Oil Company. Tel. 884-5980.
Type of Pier – Single face.
Depth alongside at MLW – 36 ft.
Normal ship side to dock – Port.
Line handling boat not required.
Access to vessel (for stores and repairs) – trucks to ship's side.
Products handled – Heating Oil, Gasoline.
Size and number of pipe-lines – 5×12 in.
Bbls. per hour discharge capacity – 8,000 per line.
Average distance to storage tanks – 1,000 ft.
Pollution control equipment – 1,750 ft. boom, 16 ft. boat. (Shared with Gibbs, Northeast, Union.)
Vessels require 3 tugs when berthing and normally 2 when unberthing. Vessels dock daylight only, normally port side to, and when undocking proceed up river to the turning basin and are turned before proceeding outbound.

Northeast Petroleum Terminal, Chelsea:
Owned and operated by: Northeast Petroleum Corp.
For petroleum product shipments; 1,025 ft. (312.4 m.) total berthing space; 22 ft. to 27 ft. (6.7 m. to 8.2 m.) alongside depth; 14 ft. (4.26 m.) deck height; pipe-lines extend from wharf to 23 steel storage tanks with a total 323,570 barrel capacity.

Ultramar Petroleum Inc., Chelsea:
Owned and operated by: Ultramar Petroleum Inc.
Used for receiving and shipping petroleum products, bunkering vessels; can accommodate vessels up to 690 ft. (210.3 m.) in length; 33 ft. (10 m.) alongside depth; 14 ft. (4.26 m.) deck height. Pipe-lines extend from wharf to 14 steel storage tanks with total 660,000 barrel capacity.

Amoco Oil Terminal, Chelsea:
Operator – Northeast Petroleum Corp. Tel: Office – 884-7570; Terminal – 884-7577.
Type of Pier – Timber pile dolphins, wooden decked parallel to single face abutment.
Depth alongside at MLW – 35 ft.
Normal ship side to dock – Port (bow upstream).
Line handling boat required.
Access to vessel (for stores and repairs) – trucks to ship's side.
Products handled – Gasoline, Kerosene, Heating Oil, No. 6 Oil.
Size and number of pipe-lines – 8 in., 10 in., 14 in., depending on product.
Bbls. per hour discharge capacity – Up to 13,000 depending on product.
Average distance to storage tanks – 2,500 ft.
Pollution control equipment – 1,750 ft. boom, 16 ft. boat. (Shared with Union, Gibbs, Gulf.)
Vessels, after meeting the tugs and Docking Master, at Castle Island proceed up the Chelsea River through the Meridian St. Bridge (horizontal clearance 175 ft.) and the Chelsea St. Bridge, and then dock port side to. Vessels for undocking proceed up river to the turning basin and turn around, due to the limited manoeuvring area in the river. Vessels normally require 3 tugs for docking and undocking.

Texaco, Chelsea:
Operator – Texaco, Inc. Terminal Tel. 884-7000, Offices 269-2111.
Type of Pier – Single face.
Depth alongside at MLW – For 575 ft. vessels: 31 ft. fwd., 34 ft. aft. For 624 ft. vessels: 21 ft. fwd., 34 ft. aft.
Normal ship side to dock – Port.
Line handling boat not required.
Access to vessel (for stores and repairs) – trucks to ship's side.
Products handled – Avjet, Diesel Oil, Gasoline.
Size and number of pipe-lines – 7×12 in.
Bbls. per hour discharge capacity – 5,000 to 10,000.
Average distance to storage tanks – tank farm adjacent to berth.
Pollution control equipment – Automatic boom being installed.
3 tugs are normally required for berthing and 2 for unberthing. Vessels require a 300 ft. messenger fore and aft for handling lines. Vessels normally dock port side to. Due to the limited manoeuvring area adjacent to the berth, vessels when unberthing are towed out stern first and then turned in the main channel.

Quincy Oil, Quincy:
Operator – Quincy Oil Company. Tel. 773-2500.
Type of Pier – Timber pile, timber deck, offshore wharf.
Depth alongside at MLW – 35 ft.
Normal ship side to dock – Port.
Line handling boat not required.
Access to vessel (for stores and repairs) – by hand cart only.
Products handled – Gasoline, Heating Oil.
Size and number of pipe-lines – 2×8 in.
Bbls. per hour discharge capacity – 6,000.
Average distance to storage tanks – tank farm adjacent to berth.
Pollution control equipment – 800 ft. boom, work boat.
Vessels meet tugs and Docking Master in the vicinity of Nantasket Roads and then proceed up the Weymouth Fore and Town Rivers to the Quincy Terminal.
Vessels should enter Town River at S.W. Extreme caution should be used when turning into Town River because of the narrow channel. Narrow channels demand extreme caution when navigating up to the terminal. Vessels normally berth port side to, and are swung around in the turning basin when unberthing. 3 tugs are required when docking or undocking. Vessels must utilise their own gangways.

Mobil Oil, Quincy:
Operator – Mobil Oil Corporation. Tel. 773-7080.
Type of Pier – T-head with dolphins.
Depth alongside at MLW – 32 ft.
Normal ship side to dock – Starboard.
Line handling boat not required.
Access to vessel (for stores and repairs) – trucks to ship's side.
Products handled – Gasoline, Heating Oil.
Size and number of pipe-lines – Various.
Bbls. per hour discharge capacity – 8,000.
Average distance to storage tanks – tank farm adjacent to berth.
Pollution control equipment – shared with Sprague.

C.H. Sprague & Son Co., North Weymouth:
Operator – C.H. Sprague & Son Co. Tel. Terminal 337-2040, Offices 542-7807.
Type of Pier – Timber pile, concrete deck.
Depth alongside at MLW – 35 ft.
Normal ship side to dock – Starboard.
Line handling boat not required.
Access to vessel (for stores and repairs) – trucks to ship's side.
Products handled – No. 6 Oil.

Size and number of pipe-lines – 2×12 in.
Bbls. per hour discharge capacity – 10,000 per line.
Average distance to storage tanks – 2,500 ft.
Pollution control equipment – 500 ft. boom, 16 ft. boat. (Shared with Mobil.).

Vessels dock and sail during daylight only. 3 tugs are required when berthing and unberthing. Vessels met the tugs and Docking Pilot in the vicinity of Nantasket Roads and then proceed to the manoeuvring area near the berth where the vessels are turned and berthed starboard side to. Vessels must utilise their own gangway at this berth.

Cities Service Oil Company, Braintree:
Operator – Cities Service Oil Company. Tel. 848-1100.
Type of Pier – 4 cylindrical caissons.
Depth alongside at MLW – 35 ft.
Normal ship side to dock – Starboard.
Line handling boat not required.
Access to vessel (for stores and repairs) – trucks to ship's side.
Products handled – Heating Oil, Gasoline.
Size and number of pipe-lines – 1×10 in., 4×12 in.
Bbls. per hour discharging capacity – 10,000.
Average distance to storage tanks – 2,500 ft.
Pollution Control Equipment – 1,500 ft. boom, work boat.

Vessels meet tugs and Docking Master in the vicinity of Nantasket Roads and then proceed up the Weymouth Fore River, through the Fore River Bridge, and berth starboard side to at the terminal. Vessels dock and undock during daylight hours only. 3 tugs are normally required when docking and undocking. Vessels must utilise their own gangways.

Bulk Cement Piers:
There are 2 berths in Boston used exclusively for the discharge of bulk cement from barges. Both are in the Mystic River.
No. 28: Independent Cement Corp.
No. 33: Atlantic Cement Company, Inc. Tel: 241-9090.

Meat Inspection Station: The Massachusetts Port Authority operates a meat inspection station on Mystic Pier (No. 38) adjacent to the Moran Container Terminal.

Random incoming meat samples are cut, defrosted, weighed, inspected, and re-frozen at this new facility, enabling inspectors to use one central location instead of the 5 other waterfront stations previously utilised.

The chief component of the building is the large, well-lighted, well-ventilated, and sanitary inspection room. Walls are ceramic tile, the floor has quarry tile, and the ceiling is of acoustical tile.

Up to 50 containers of meat a day will be inspected at this modern facility.

SPECIALISED CARGO HANDLING FACILITIES: Also see "Berthing".

Berthing at all berths normally effected on a rising tide. It is the practice of the port for deep draft vessels to pump part cargo overtide in order to bring vessel to a safe draft by the next Low Water. Berthing at Sprague, North Weymouth is usually starboard side to, which involves swinging vessel.

LNG/LPG: There are 2 facilities in Boston Harbour which handle LNG (Liquid Natural Gas – methane). Boston Gas at Commercial Point, Dorchester, Mass., and Distrigas on the Mystic River, Everett, Mass., have storage capabilities for LNG.

The Exxon Everett facility receives and stores LPG (Liquefied Propane Gas).

The Captain of the Port (COTP) has issued very specific requirements for vessels transiting the harbour and transferring cryogenic cargoes. The Coast Guard team consisting of Port Safety Station, representing the Captain of the Port, and Marine Inspection Office boarding officers and the men assigned to the escort and monitoring details are charged with the responsibility for ensuring compliance with these regulations which are detailed in the 60-page LNG/LPG Contingency Plan issued by the Captain of the Port. Included in the plan are the following General Regulations:

The vessel must:

(1) Hold a current Letter of Compliance for the carriage of methane/propane issued by the Commandant and a Certificate of Financial Responsibility for Oil Pollution.

(2) Enter the harbour only during daylight hours. Additionally, vessels transiting Dorchester may only do so within 2 hours of high water. Weather permitting, the COTP may authorise night departures providing the vessel does not have a full or partial cargo.

(3) Enter the harbour only during periods of good visibility. If the visibility is less than 2 miles the vessel must:

(i) If at sea, not enter the port without the COTP's permission.

(ii) If in port, notify COTP of position and then proceed to berth or anchorage, whichever nearer.

(4) Maintain a radio watch on Channel 13 (156.65 MHz) while underway in the port area. Additionally, a watch should be maintained on Channel 16 (156.8 MHz).

(5) Not commence offloading cargo prior to the satisfactory completion of the arrival safety inspection by Coast Guard Marine Inspectors (CMI) and the issuance of the Permit to Handle Explosives or Other Dangerous Cargo (CG Form 4260).

Additionally:

(1) The vessel must moor either bow to seaward and be prepared to get underway on short notice, should an emergency so require, or have a tug standing by during all cargo operations. A tug standby will be required on a vessel's first visit to this port.

(2) The vessel will normally be boarded while anchored in President Roads by COTP/CMI Inspectors unless, prior to the vessel's arrival, the Master sends a message to COTP stating that:

"To the best of my knowledge and belief there are no known casualties to this vessel or its machinery which might affect the seaworthiness. I further state that all cryogenic handling and detection equipment is in proper operating condition."

If this message has been received, the inspection will be made at the dock unless it is the vessel's first visit to Boston. On a vessel's first visit to Boston the boarding will always be made in President Roads. If the vessel does not hold a Letter of Compliance the boarding will be made in Broadsound and the vessel will not be allowed to enter the port until a temporary Letter of Compliance is issued.

(3) Venting gas to the atmosphere is not permitted in port.

(4) All cargo operations must cease if electrical storms are present.

(5) If interpreters are not available, all ship's personnel directly involved in the transfer operation shall readily speak the English language.

(6) If the vessel is at anchorage a permanent bridge watch shall be maintained. A round of bearings fixing the vessel's position shall be taken hourly followed by a report, every 4 hours, to USCG Group Boston on Channel 16 FM reporting anchor holding and operations normal or any significant change in position or deviation from the normal.

Also, whenever an LNG/LPG vessel is transiting Boston Inner or Outer Harbour (to the seaward entrance of the Boston North Channel) no other vessel will be allowed to be underway in an area 2 nautical miles ahead and 1 nautical mile astern of the LNG/LPG vessel in transit. This concept can be thought of as a "moving restricted area" centred on the LNG/LPG vessel. For vessel movement in an area of the Port other than that described above, express permission from COTP Boston must be obtained.

Furthermore, the maximum allowable speed for any vessel movement during an LNG/LPG vessel transit will be 6 knots. A Coastguard escort craft will always be present during an LNG/LPG vessel transit and will vigorously enforce these vessel movement restrictions. The maximum penalty for violation of any of the rules established under the above authority is imprisonment for not more than 10 years and a fine of not more than $10,000.

It should be noted that these rules establishing a restricted envelope around the LNG/LPG vessel and the 6 knot speed limit apply not only to other vessels but to the LNG/LPG vessel itself. Therefore, the LNG/LPG vessel may not approach any closer than 2 nautical miles to another vessel underway, thus eliminating a possible collision should another vessel lose steerage or suffer a casualty. These rules prohibit crossing, meeting or overtaking situations from occuring in Boston Harbour out to the seaward entrance to the North Channel. However, other vessel movements during an LNG/LPG vessel transit may be allowed with permission of the Captain of the Port.

LNG/LPG Vessel Inspections: Before an LNG/LPG vessel is allowed to conduct cargo operations in the Port of Boston, the vessel must undergo a joint COTP/CMI Boston inspection to determine if all cargo handling and detection systems are in proper working order. One of the tests involves the introduction of a properly certificated amount of test gas (span gas) into the vessel's gas detection system. This allows the Inspector to determine if the gas detection system is functioning properly and is able to detect the presence of LNG or LPG should an actual leak occur somewhere on the vessel. Until recently, if a vessel did not have on board a cylinder of the properly certificated span gas, the Coast Guard Inspectors would provide this service. However, due to the increasing costs of the gas (LNG over $40.00 and LPG over $63.00), the vessel will be required to provide the span gas with a valid certificate attesting to its composition before the inspection can begin. Also, for the inspection to continue, shipboard or civilian technicians must be available to rectify any problem that may develop.

STEVEDORES: Available at various rates.
FRESH WATER: Plentiful supply of excellent water in Boston. It is supplied by terminal at prevailing rates.
FUEL: All grades available in various viscosities. Normally supplied by barge subject to advance notice.
CUSTOMS ALLOWANCES: At the discretion of Customs officers. Normal allowance is 200 cigarettes or 2 lb. of tobacco and 1 quart wine or spirits per man. Additional allowances may be given if considered necessary, due to length of vessel's stay in port.

IDENTIFICATION CARDS: Standard U.S. Immigration Forms I-95 to be made up for each crew member on arrival. Not necessary for crew man already holding Form I-95, issued for the same vessel.
GANGWAY/DECK WATCHMEN: Available at prevailing prices.
OPENING/CLOSING HATCHES: Performed by stevedores.

REPAIRS/DRY DOCKS: Any type of repair undertaken.
Boston Shipyard Corp:

East Boston, Massachusetts	*Length*	*Capacity*
Floating Dry Dock No. 1	622 ft.	18,000 tons
Floating Dry Dock No. 2	479 ft.	20,000 tons
Graving Dry Dock No. 4	256 ft.	

Modern facilities for repair, overhaul, and conversion of vessels of all sizes:

(*a*) a 10,000 ton capacity floating dry dock serviced by 2×150 ton overhead cranes with a yoked capacity of 350 tons. The 5-section dock is 415 ft. long, 120 ft. wide, and has an inside dimension of 85 ft. 7 in.
(*b*) 3 building basins (actually a 3-positioned graving dock). 2 are 132 ft. wide, 867 ft. long; 1 is 150 ft. wide, 938 ft. long. Each basin serviced by 2 Whirley type cranes of 75 and 50 ton capacity.
(*c*) 4 outfitting piers capable of handling up to 10 ships simultaneously provide adequate space for dockside work and for mooring personnel or service barges.
(*d*) 3 conventional "sliding" ways capable of handling ships up to 1,000 ft. in length.

Major Shops: 2-bay fabricating shop served by 17 bridge cranes. Machine shop equipped with large vertical and horizontal mills planers, lathes and a complete small machine complement. Fully equipped sheet metal, joiner, boiler, blacksmith, pattern foundry, galvanizing, pipe and copper, and electrical shops. Complete facilities for inspection of all types including non-destructive testing such as radiography, magnetic particle, liquid penetrant and ultrasonic.
REPATRIATION: Good facilities exist.
AIRPORT: Logan International Airport.
HOLIDAYS: New Year's Day (1st January); Washington's Birthday (22nd February); Patriots' Day (19th April); Memorial Day (30th May); Bunker Hill Day (17th June); Independence Day (4th July); Labour Day (first Monday in September); Columbus Day (8th October); Veteran's Day (22nd November); Thanksgiving (fourth Thursday in November); Christmas Day (25th December).
Note: "Or any day celebrated in lieu thereof".
TIME: Eastern Standard Time, GMT minus 5 hours. Daylight saving time, GMT minus 4 hours from April to October.
AUTHORITY: Massachusetts Port Authority, Transportation Building, Ten Park Plaza, Boston, Massachusetts, U.S.A. 02116-3971. *Tel.* (617) 973-5500. *Telex:* 940365. *Contact:* Martin C. Pilsch, Port Director.
AGENT: Rice, Unruh Co., Beebe Building 129 South Street, Boston, Massachusetts 02110. Tel: Area Code 617 482-7303 (4 lines) (Note: Answering service in attendance outside normal working hours) Telex: 940309, TWX: 710-321-6870 "Riceunruh Boston". Cables: "Riceunruh Boston".

BRIDGEPORT, Connecticut: 41.07 N. 73.11 W.

(See Plan)

DOCUMENTS: Refer to "New York".
PILOTAGE: Vessel usually notifies Agent 48 hours before arrival, who will arrange Pilot boarding. Pilot boards either at Brenton Reef in position Lat. 41° 25′ N., Long. 71° 23′ W. or Point Judith in position Lat. 41° 17′ N., Long. 71° 29′ W.
Note: Non-U.S. flag vessels and U.S. flag vessels under registry approaching from Block Island embark Pilot about 2.5 miles South of Point Judith.

U.S. flag vessels under enrolment approaching from Block Island embark Pilot 1.4 miles East of Old Harbour - Block Island.
ANCHORAGE: 2 miles South of the entrance with depths in excess of 50 ft.
APPROACHES: *Via New York:*

Charts: 12339, 12366, 12367, 12363, 12369.

Vessels leaving New York bound for Bridgeport will be transitting New York's East River and Western Long Island Sound. All shoals and rocks are well marked and the close proximity to the shore line provides an excellent radar target for position checking. During Summer months, thick fog will present a hazard on this route. Long Island Sound is also a major yachting centre, so extreme care must be exercised while transitting this area. There are several dangers to be wary of when making the passage from New York to Bridgeport.
In order of approach they are:

1. East River and Hell Gate are areas of strong tidal currents averaging 4.6 knots for the ebb current which sets in Southwesterly direction. Vessel drawing up to 35 ft. may transit Hell Gate at slack High Water only. Sluggish handling vessels should arrange for tug assistance up the East River and through Hell Gate.
2. 26-ft. bouy "32A" usually passed well clear to the South.
3. Cable and Anchor Reef usually passed to the South.

Via Block Island:

Charts, 13205, 13215, 13209, 12354, 12369.

Block Island's Southern shore high rock cliffs provide a good radar target. Also, bearings can be taken from the RDF station at S.E. Light. Care should be exercised by vessels deeper than 30 ft. to always approach Block Island to East in views of the numerous shoals on the Western side of the Island.

It is also advisable to remain at least 1 mile to the East of Block Island due to the numerous shoals close in shore.

There are numerous dangers to be wary of when making the passage from the pilot station to Bridgeport. In order of approach they are:

1. Block Island North Reef buoy "1B1" marks a dangerous shoal and should be passed well clear.
2. The Race is a narrow channel into Long Island Sound. Strong East to West currents exist during maximum ebb or flood and knowledge of position should be maintained in view of the possibility of unusual set. Valiant Rock may be passed on either side.
3. Great caution should be exercised during the Summer months when transitting through Block Island and Long Island Sound due to the heavy small boat traffic, especially the area in proximity to The Race.
4. Dense fog is prevalent during the Summer months. Good judgement should be used before transitting the area during fog.

Good water is found in Long Island Sound from The Race to Bridgeport as long as the mid-channel buoys "P1" and "CF" are passed close aboard and care is taken so as not to pass North of Twenty-Eight Foot Shoal buoy.

Vessels usually pass one mile to the South of Stratford Shoals light before altering course for Bridgeport. Radar is the best navigational aid in this area. There are numerous RDF stations that can be used in conjunction with echo sounder readings to ascertain positions.

RESTRICTIONS: Entrance channel has a project depth of 35 ft. at MLW, is 400 ft. wide and 3 miles in length.

Normal time allowed for transit from outside to off the dock is 30 – 40 minutes. Docking time varies from 30 minutes to 1 hour, dependent on which terminal is the destination, and weather conditions.

The New Haven – Bridgeport Pilots Association believe 4 ft. of water in excess of the ship's draft is needed. As a rule of thumb, 31 ft. at low to 37 ft. at high. Any variations from this, a Pilot should be directly consulted. The range of tide is 6.7 ft. Wind strongly affects the tide in the main entrance channel. Flood and ebb cross the channel at a right angle, and velocities depend on the rise of tide for the day.

Vessels up to 70,000 d.w.t. and LOA 825 ft. call at the port.

MAX. SIZE: See "Berthing and Restrictions".

HEALTH: Vessel to cable Agent 24 hours prior to arrival of any illness on board, otherwise Radio Pratique not necessary.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Vessels arriving from North use Chatham Radio. Vessels from South use Amagansett Radio on Long Island.

TUGS: Tugs available from Red Star. The Despatcher monitors VHF and is available 24 hours a day through Channel 24 at Bridgeport.

BERTHING: *Cilco Terminal:* Cilco is a bulkhead dock, length approximately 1,100 ft. Vessels dock port or starboard side to. Two ships can moor at the same time. This is a dry cargo facility. Ships load or discharge all kinds of products. Several mobile cranes are available. Depth 33 ft. at MLW. Bunkers are only available by truck. Fresh water is available.

TANKERS: *Bridgeport Shell – Buckley Bros.:* The Shell berth is located on the East side at right angles to the main entrance, and ships must be turned 90° to approach the dock. The dock is approximately 200 ft. long with 2 main dolphins and catwalks to shore. Head lines and stern lines are run ashore by a messenger. The size of vessels is governed by manifold distance. Light oil products 300 ft. and heavy oil 350 ft. Vessels of length 700 ft. have been moored, 38 ft. at MLW in ship berth. Ships dock port side to.

Bunkers and fresh water are available.

United Illuminating: Berth is 0.6 miles inside the breakwater on the West side of the channel. A turn to port of 120° must be made into a dredged cut 140 ft. wide. The dock is concrete caissons on pilings with catwalks and centre platform. Depth 32 ft. to 37 ft. at MLW. Vessels of 70,000 d.w.t. call, but bow to manifold distance governs size of vessel. (350 ft. – 375 ft.). Vessels dock starboard side to.

Fresh water is available, but bunkers are not. Every tanker, when moored here, has an anti-pollution boom placed around it.

FRESH WATER: Available at all berths.

FUEL: No fuel barge service available. In emergency tank truck delivery can be arranged.

MEDICAL: All facilities available.

AIRPORT: Bridgeport Airport about 3 miles away. New York airports about 50 miles distant.

CONSULS: All countries represented in New York.

HOLIDAYS: New Year's Day (1st January); Lincoln's Birthday (12th February); Washington's Birthday (18th February); Good Friday; Memorial Day; Independence Day (4th July); Labour Day; Columbus Day (14th October); Veterans' Day; Election Day (5th November); Thanksgiving Day (28th November); Christmas Day (25th December).

TIME: Daylight Saving Time, GMT minus 4 hours from April to October.

SERVICES: Ship's stores and launch service available from New Haven. Vessels must provide their own gangway at all docks.

AUTHORITY: City of Bridgeport, Office of the Harbour Master, City Hall, Room 223, 45 Lyon Terrace, Bridgeport, Connecticut 06604. *Tel:* (203) 576 7288. *Contact:* Gilbert Zawadski, Harbour Master. *Tel:* (203) 334-2585 (Home).

BROWNSVILLE, Texas: 25.54 N. 97.28 W. (See Plan)

DOCUMENTS: See "Houston".

PILOTAGE: When a vessel is scheduled to arrive at Brownsville, the vessel's Agent notifies the Harbour Master's office of the approximate ETA. Later, when a firm ETA is received, the Harbour Master's office notifies the pilot office that the vessel is expected on the bar at a certain time and also gives the time which she would like to enter.

The telegraphic address of the pilot office is: Brazos-Santiago Pilots, 411 First National Bank Bldg., Brownsville, Texas.

If possible, it is desired that the Harbour Master's Office be notified 2 hours in advance of the ETA of any vessel.

The VHF Channel to be used when contacting the pilot boat and Harbour Master is 16. When contact is made, this will be switched to Channel 13.

The pilot boat is a steel hull length 43 ft., beam 16 ft. and draft 8 ft. 250 h.p. diesel. Gross tonnage 36 tons.

No light or sound signals are necessary from vessels requiring a Pilot, although light signals may sometimes be used at night – ordinarily a vessel is picked up by visual sighting.

The pilot boat is located on the South tip of Padre Island – the Pilot station is adjacent to the entrance to ship channel with a clear view of the approach to the jetties.

The Pilot is taken on board an incoming vessel at the sea buoy which is located 2 miles off shore.

The anchorage for a vessel awaiting Pilot is 1.5 miles North of sea buoy.

ANCHORAGES: Anchorages are marked on charts.

RESTRICTIONS: *Brazos Island Harbour:*

Name of Channel	*Dredged Dimensions*			*Minimum depths in channel entering from seaward*		
	Width (ft.)	*Length (miles)*	*Depth (ft.)*	*Left Outside Quarter (ft.)*	*Middle Half of Channel (ft.)*	*Right Outside Quarter (ft.)*
Brazos Santiago Pass:						
Entrance Channel	300	1.9	38	40.0	39.0	37.0
Channel across Laguna Madre	200	2.9	36	38.0	38.0	38.0
Brownsville Channel:						
Junction Basin to Boca Chica Passing Basin	200	4.0	36	38.0	38.0	38.0
Boca Chica Passing Basin to Goose Island Passing Basin	200	5.4	36	38.0	38.0	38.0
Goose Island Passing Basin to Brownsville Turning Basin	200	2.8	36	37.0	38.0	37.0
Brownsville Turning Basin (extension)	500	1.4	36	37.0	38.0	37.5
Brownsville Turning Basin	500-1000	0.5	36	36.0	37.0	35.0

MAX. SIZE: The max. permissible length 850 – 900 ft., beam 160 ft., draft 34.5 ft.

RADIO: ETA cables to Agent, etc., should be addressed to the Agent via Mackay Radio at Galveston or RCA in Port Arthur. When within 60 miles range of the port, calls may be made through the Harbour Master's office on VHF Channel 16 and the calls will then be transferred to land lines to any point. Also Brownsville Marine Operator, VHF Channel 26.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

VHF: A vessel approaching the port of Brownsville may contact the Harbour Master's office on VHF Channel 16.

TUGS: Tugs normally join an incoming vessel 1.25 miles before she enters the turning basin. The tug's lines are used for which there is no charge.

BERTHING: Cargo facilities include over 7,500 ft. of modern, marginal dry cargo wharves, 14 deepsea docks and 10 barge berths, together with over 583,000 sq.ft. of transit shed space. In addition there is 242,000 sq.ft. of open storage space at the deep-draft docks and 271,000 sq.ft. of open storage at the shallow draft docks.

BULK HANDLING FACILITIES:

Public Grain Elevator: Located at the approach to the Turning Basin, the port-owned and operated elevator has a capacity of over 3,800,000 bushels. An adjacent bulk plant provides flat storage for all types of dry bulk commodities.

Two large gantry cranes handle the loading of vessels. The maximum spout clearance for loading vessels is 45 ft. above the water.

Equipped with two truck dumps and two hopper car dumps, the elevator has the rated loading capacity of 1,200 short tons per hour (1,000 L/T per hour on bulk carriers without wing tanks and 600 L/T per hour on tween deckers).

The 400 ft. wharf is 12 ft. above water and has an unlimited berth length. The draft at dockside is 34 ft. and the channel control depth is 36 ft.

The grain elevator also has the flexibility of unloading vessels (barge unloading capacity is 300 t.p.h.).

Liquid Bulk Handling: Liquid Terminals, Inc., is a new facility that was built to handle and store all types of liquid commodities in bulk. The large storage tanks vary from 5,000 to 20,000 barrels each, providing a total of more than 125,000 barrels capacity for the entire installation. The modern liquid dock adjacent to the facility accommodates vessels with a deep draft of up to 34 ft. Loading racks provide for the efficient transfer of liquids to either truck or rail.

Four oil and chemical docks are located on the North side of the ship channel and are utilised by companies such as Exxon, Texaco, Union Carbide, Petroleos Mexicanos, Line Service, Continental and Permian Oil to handle bulk petroleum and chemical products. Also see "Tankers".

CRANES: Two large floating cranes, rated at 150 metric tons each, are available for heavy lifts at any dockside location in the port area.

STEVEDORES: To arrange for gangs the vessel needs to notify the ship's Agent of ETA; the Agent will in turn notify the stevedores. It is necessary that the Agent be advised of an ETA before 1900 hrs. for an 0800 hrs. start.

Main commodities and average load discharge rates:

Grain	Bulk carrier 1,200 t.p.h.
Grain	tween deck 600 t.p.h.
Cotton	100 bales per hour per gang
Lead and zinc pigs	40 tons per hour per gang
Citrus in boxes	22 tons per hour per gang
Onions and carrots in bags	22 tons per hour per gang
General cargo	25 tons per hour per gang

MEDICAL: When medical attention is required, advance notice should be given to the Agent by ship's radio.

TANKERS: Ballast facilities are available up to 6,000 barrels per hour. The port loads refined petroleum products. The port has 4 tanker berths, with 34 ft. 7 in. max. draft.

Vessels proceeding to Brownsville normally turn in the basin and berth Port side to. Berthing at Port Isabel Oil Wharf also generally Port side to. Mooring boat employed.

DENSITY: The average density is 32 parts per 1,000.

FRESH WATER: Fresh water is available and can be delivered to a vessel through hose or pipe-line at 150 gallons per minute.

FUEL: No fuel is available locally. It must be barged in from Corpus Christi – advance arrangements are necessary.

FIRE PRECAUTIONS: Tankers are required to berth head out.

GANGWAY/DECK WATCHMEN: Such services are necessary only when detainees are held on board.

OPENING/CLOSING HATCHES: This work is done by the stevedores.

IDENTIFICATION CARDS: Immigration requires form No. I-95 Landing permit.

CONSULS: Mexico: tel. 542-4431.

REPAIRS: Marathon, located at the port, is equipped to handle all normal temporary ship repairs.
DRY DOCKS: None available.
REPATRIATION: There are facilities for this service.
AIRPORT: The local airport is located 2 miles from the port. Ozark Airways operates 4 flights daily.
TIME: Local Time is 6 hours behind GMT.
HOLIDAYS: The following holidays are observed here: Veterans' Day (4th Monday of October); Thanksgiving; Christmas; New Year; Washington's Birthday (Feb. 22nd); Texas Independence Day (March 2nd); Emancipation Day (June 20th); July 4th; Labour Day (1st Monday in September); Decoration Day (last Monday in May).

No work shall be performed on Labour Day or Christmas Day except in case of fire or where property is in danger. When holidays fall on Sunday, the following day will be recognised as the holiday. Also, no work will be performed between 1600 and 1900 hrs. on election days.
POLICE/AMBULANCE/FIRE: Sheriff 546-2451; Brownsville Fire Dept. 542-4375; Ambulance Service 542-2121.
TELEPHONES: Telephones are not available for placing on ships.
SERVICES: Tank cleaning service is available at the port. Ballast facilities are available at Oil Docks 1, 2 and 3. P.I.B. can take care of compass adjusting, etc.
DELAYS: There are no delays unless an incoming ship has been assigned to a berth now occupied. Bunkers must be barged in; arrangements may be made ahead of time to avoid delay.
DEVELOPMENTS: The Federal Government has made an appropriation to initiate a study on deepening ship channel from 36 ft. to 42 ft. and to widen the channel from 200 ft. to 300 ft., bottom width. Plans are being made to build another grain elevator/bulk materials dock, and another chemicals dock in the future.
AUTHORITY: Brownsville Navigation District, Port of Brownsville, P.O.Box 3070, Brownsville, Texas 78523-3070. *Tel:* (512) 831-4592. *Telex:* 766612. *Contact:* James M. Beaman, Director of Trade Development.

BRUNSWICK, Georgia: 31.09 N. 81.30 W. (See Plan)

DOCUMENTS:
- Crew Lists: 1 certified copy for Immigration; 2 copies uncertified for Customs.
- 1 copy Pratique.
- 3 copies Inward Customs Manifests.
- 3 copies each Stores, Curio & Narcotics List.

PILOTAGE: Compulsory. 24-hour Pilot service arranged by Agent with 48 – 24 hour prior notice from ship. Pilot boards vessel day or night approximately 1 mile outside "STS" buoy (Lat. 31° 03′ 20″ N., Long. 81° 15′ 20″ W.). Distance to East River Terminals is 13 miles. Pilot contacted on VHF Channels 12, 14 and 16. Pilot boat is 25 ft. white hull. Marking is "Pilot" on hull.

Brunswick Bar Pilots' Association, 411 Arnold Road, St. Simons Island, Ga. 31522. Tel: (912) 638 2380.
ANCHORAGES: 3 miles S.E. of buoy "STS" sand and mud bottom. In event of deep draft (30 ft.) and high winds, anchorage obtained near Ocean Buoy "2B" and inform Pilot as in "Pilotage". Vessels in need, or for other good reason, may anchor in St. Simon's Sound, depth 10 fathoms.
APPROACHES: The harbour is located about midway between Savannah and Jacksonville. The harbour is reached by a channel from the Atlantic Ocean, running between St. Simons and Jekyll Island. The channel has a minimum width of 500 ft. and a depth of 32 ft. to St. Simon's Sound, thence a width of 400 ft. and a depth of 30 ft. to Sidney Lanier Bridge, where the channel divides, 13 miles from sea. The Northern branch leads to Lanier Dock, State Dock and the city, 400 ft. wide and 30 ft. deep. The other branch leads N.W. to the pulp plant dock, chemical docks and electrical generating plant, 300 ft. wide and 30 ft. deep.
RESTRICTIONS: Vessels with a draft of 28 ft. may enter at any time and over 28 ft. on flood tide. Max. size vessel is Panamax. Vessels with draft of 34 ft. may proceed to or from Colonel's Island on high tide. Vessels with 30 ft. draft berth in the East River on high tides. Tidal range 6 – 8 ft.
MAX. SIZE: Max. permissible length 650 ft. Max. d.w.t. over 33,000 tons.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Miami Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
RADIO: Prior arrival, use commercial Lantana, Chatham Radio for advices to Agent, 48-24 hours in advance.
TUGS: Tugs join vessel near Sidney Lanier Bridge if inbound for the East River and Mayor's Point Terminals and just West of Lanier Bridge if bound for Colonel's Island. Harbour pilot on board vessel carries out the docking manoeuvre with tugs. 3 small tugs (500 h.p.)
BERTHING: 1,600 ft. continuous marginal wharf; steel and concrete construction, 57 ft. wide apron. Vessels normally turned to moor port side alongside unless deck cargo or other vessel obstruction means cargo may not be worked over port side. Gantry crane of 27 tons capacity available.

The Brunswick Port Authority operates a bulk commodity terminal at Lanier Dock. The facility is 500 ft. long and constructed of steel and concrete, with a project depth of 30 ft. MLW (mean low water), equipped with a grab bucket, conveyors and marginal tracks for handling bulk cargoes at rates up to 600 t.p.h. It operates covered warehouses with a capacity of approx. 60,000 tons. A limited amount of open storage space is available equipped with a conveyor system and reclaim facilities. Lanier Dock lies directly adjacent to the Brunswick State Docks and warehouses. Both wharves have a turning basin of 1,000 ft. in length and 600 ft. wide with a project depth of 30 ft. MLW also Barge Dock facility 250 ft. long.

Colonel's Island: Multi-product dry bulk facility. 1×2,400 t.p.h. travelling ship-unloader, outreach 100 ft. Length of berth 600 ft. Storage area 135,000 sq.ft.

Mayor's Point: 3 berths. Total length 1,500 ft. 235,000 sq.ft. of transit sheds and 5 acres of open storage.
BRIDGES: Lanier Bridge lift bridge; 235 ft. horizontal clearance between fenders, 139 ft. vertical clearance in up position at HW. Vessels under control of Pilot and tugs when passing through.
STEVEDORES: Radio to Agent 48-24 hours prior arrival with number of gangs, working hatches and space in hatch, and special factors, e.g. pilferable cargo, autos, heavy-lifts, etc.
MEDICAL: Advance notice to Agent, or notify on arrival.
TANKERS: Liquid bulk cargo is pine oil distillates loading. Petroleum storage 310,000 barrels, 3 tanks.

Outward Passage – Cautionary Advice: The berth is located just up river from the Sidney Lanier Bridge.

In view of the short distance to the bridge and the fact that a considerable course alteration must be made to port just before reaching the bridge, it is essential that the ship is properly lined up on the bridge before proceeding into the bridge passage.

It is advisable that the Master acquaints himself with the Pilot's plan for the approach and passage of the bridge.

An anchor detail should be standing by and anchors should be ready to let go. Special attention should be given to make certain that the helmsman accurately follows the Pilot's orders.
DENSITY: Average 1.0166 (high) to 1.0141 (low). Water inside considered brackish.
FRESH WATER: From shore connections at 20 t.p.h.
FUEL: Bunker "C" available at piers. Distillate and blends by barge, if required. 72 hour advance notice to Agent, giving type and quantity.
GANGWAY/DECK WATCHMEN: Not required but available.
OPENING/CLOSING HATCHES: "MacGregor" hatches must be opened by vessel prior working. All others may open at discretion to save turn-around time.
CERTIFICATES: Registry, U.S. tonnage tax, CFR Pollution, Load line, SOLAS, Derat.
CUSTOMS ALLOWANCES: Tobacco, 2 cartons. Customs will open bonded stores on request. Spirits, reasonable amount.
IDENTIFICATION CARDS: U.S. Immigration Landing Permits.
CONSULS: None. Consulates at Savannah, Ga., and Jacksonville, Fla., may be used as required by vessel.
REPAIRS: Limited to minor replacement parts to engine, radio, radar of standard makes. Major repairs may be arranged with shipyards of Savannah or Jacksonville.
DRY DOCKS: None.
SURVEYORS: American Bureau of Shipping (912) 232-3793. Atlantic Marine Surveying, Inc. (912) 354-9938. Coleman, Kenney & Silas, Inc. (912) 352-7420. International Adjusters Southern Ltd. (912) 352-7420. National Cargo Bureau, Inc. (912) 236-1527. SGS Control Services, Inc. (912) 232-1995. L. O. Smith, Inc. (912) 233-9876. Southeastern Marine Surveying Company (912) 233-4157. J. W. Tarver, Jr. (912) 233-6661. Charles T. Theus, Inc. (912) 233-3588.
REPATRIATION: Through Agent.
AIRPORT: 20 minutes' drive from quays; 4 flights daily.
TIME: GMT minus 5 hours. Daylight Saving Time, April through last Sunday October. April: advance; October: retard.
HOLIDAYS: 1st January, 22nd February, 30th May, 4th July, 1st Monday in September, 4th Thursday in November, 25th and 26th December.
POLICE/FIRE/AMBULANCE: Numbers given in Boarding Brochure.
TELEPHONES: None placed aboard. Public pay (coin) telephones on quay clearly marked.
GENERAL: Brunswick, Georgia, is a small port specialising in export of woodpulp in bales, pine-tree products in drums. Imports bulk salt, oil, fertiliser materials and gypsum, some break-bulk general cargo. Vessel requirements handled by Agent in residence, communication by wireless or R/T essential in advance.
AUTHORITY: Brunswick Port Authority, P.O.Box 1039, South Yards, Brunswick, Georgia 31521-1039. *Tel:* (912) 265-3700. *Telex:* TWX 810-7825071. *Contact:* Robert W. Turner, General Manager.

BUFFALO, New York: 42.55 N. 78.55 W. (See Plan)

DOCUMENTS: For vessels arriving from foreign ports:
- 3 Unfreighted copies of Complete Manifest covering all cargo to be discharged in the Great Lakes.
- 4 Personal Effects Lists.
- 4 Crew Lists.
- 4 Narcotics Lists.
- Vessel's Registry and copies of Paid Tonnage Tax Certificates.
- Health Pratique.
- Clearance from previous port.

PILOTAGE: Not compulsory. Seaway Pilots will assist if required.
ANCHORAGE: Inside South Breakwater, depth 27 ft.
MAX. SIZE: Limited by Seaway Locks. 730 ft. length and Seaway draft.
RESTRICTIONS: St. Lawrence Seaway navigation season. Approximately from 1st April to 15th December. Controlling depth 27 ft.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to New York Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
TUGS: Available, but not normally required.
RADIO: WBL – Buffalo.
BERTHING: Outer Harbour: Total berth space 2,400 ft.; depth alongside 27 ft. LW. 2 transit sheds – total of 184,000 ft. dry dock space; sprinkler system equipped, seaway piers for bulk cargoes. South and North Piers 3,506 ft. of berth space, 200 acres open storage area. Depth alongside 27 ft.

BULK HANDLING FACILITIES: *Grain:*

Frontier

Operator: General Mills, Inc. Berthing Space - 705 ft. Max. OA Dimensions (with turning) 647×70 ft. Storage Capacity: 4,200,000 Bushels.

SPECIALISED CARGO HANDLING FACILITIES: A mobile gantry crane capable of handling lifts of 55 tons at 40 ft. and portable bulk conveyors. Crawler crane, capacity 230 tons. Conveyor, capacity 2,200 t.p.h. Additional heavy lift equipment available from the Port of Buffalo and commercial sources.

STEVEDORES: Gangs to be ordered by 1700 hrs. for 0800 hrs. start following day, ample gangs available.

DENSITY: Fresh water.

MEDICAL: U.S. Public Health Outpatient Clinic as well as numerous hospital facilities.

FRESH WATER: Available at most berths.

FUEL: All grades available by tank truck delivery or by harbour tank barge.

CONSULS: Canada, Costa Rica, Ecuador, France, Germany F.R., Italy, Mexico, Netherlands and Sweden.

REPAIRS: Machinery and above-water repairs available.

AIRPORT: 5 miles, served by 4 regular airlines.

SHORE LEAVE: No restrictions when cleared by US Immigration Officials.

GENERAL: Refer to "Great Lakes Pilot".

AUTHORITY: Port of Buffalo, 901 Fuhrman Blvd., Buffalo, New York 14203. *Tel:* (716) 852 1921. *Telex:* 855-7443. *Contact:* Noel Painchaud, Port Director.

BURNS HARBOUR, Indiana: 41.38 N. 87.11 W. (See Plan)

The entrance to Burns Waterway Harbour is at Lat. 41° 38′ N., Long. 87° 11′ W., and is located on the South shore of Lake Michigan at Portage, Indiana, some 30 miles East of Chicago in an area known as the Indiana Dunes.

PILOTAGE: Available.

RESTRICTIONS: Average Navigation Season: Domestic cargo by lake freighters – March 15th to February 1st. Ocean going vessels via Seaway – April 1st to December 15th. Lake river barges – 12 months.

Approach to Harbour: Controlling depth of water at harbour entrance 30 ft., entry is from deeper water. Length and beam limitations – none. Approach open 24 hours per day.

Harbour: Controlling depth of water for outer harbour 28 ft.; East and West harbour arms 27 ft. Turning basin – 1,600 ft. radius with water depth of 28 ft. Accessible 24 hours a day. Length and beam limitations – none.

TUGS: Available if required.

BERTHING: The port provides 30 ft. depth at the entrance channel, 28 ft. at the inner harbour, and 27 ft. at berths. The harbour is protected by an all weather breakwater.

The port has 10 modern berths plus a mooring facilitiy specifically designed for self-unloader ships. Ultimately the port will have 15 ship berths. Recently completed are 2 modern, heated, sprinkler-equipped transit sheds providing 146,000 sq.ft. of space for general cargo, which are being operated by competent stevedores.

A refrigerated storage building is in operation.

CRANES: 3×150 ton crawler cranes; 3×75 ton crawler cranes; 3×60 ton crawler cranes.

FRESH WATER: Available.

DEVELOPMENTS: 1 berth, length 700 ft. under construction.

AUTHORITY: Burns International Harbour – Port of Indiana, Indiana Port Commission, 143 West Market Street, Suite 204, Indianapolis, IN. 46204. *Tel:* (317) 232-7150. *Telex:* 510-601-4224. *Contact:* James H. Hartung, Port Director.

BURNSIDE, (including Convent and St. James), Louisiana: 30.08 N. 90.55 W. (See Plan)

DOCUMENTS/PILOTAGE: For all general information refer to "New Orleans".

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made out to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

TUGS: Not normally required see "Tankers".

BERTHING: Bulk Marine Terminal: Berth 800 ft. long, 40 ft. depth.

Ormet Corporation: Berth 825 ft. long, 50 ft. depth. Situated at Mile Point 169. Max. LOA 305 m. Max. beam 41 m. Max. draft 12.19 m. (60,000 d.w.t. or 130,000 d.w.t. part load) 2 travelling gantry cranes (1,000 t.p.h. each) and 1 shiploader (1,500 t.p.h.). Height above LWL 27.5 m., outreach 19.2 m. Travel 198 m. Loading rate 600 – 1,000 t.p.h.

Rogers Terminal and Shipping (Cargill Inc.): Floating feed transfer facility at Convent. 330 ft.×75 ft. Loading rate to vessels 1,300 t.p.h.

TANKERS: *Shell – St. James:* The facility is located on the West bank of the Mississippi River at Mile 160 above Head of Passes (AHP).

There are 2 berths, one of which is 800 ft. long and the other 1,100 ft. long. At the newer dock there are 2×16 in. arms and the berth is capable of unloading 28,000 bbls.p.h.

The depth alongside these berths is 55 ft. to 60 ft. However, the draft of the vessel is limited to that available at Southwest Pass.

It is important to note that due to the design of this terminal it is impracticable for vessels to receive stores at this location. Additionally there are no bunkers provided at this terminal nor is there any fresh water available from the terminal and there is no authorised anchorage in the immediate area of this facility. Vessels expecting less than 24 hours delay awaiting berth are generally anchored at New Orleans and then proceed to the terminal (which is a different port of entry for Customs) otherwise vessels would have to anchor at Burnside which is about 10 miles up river from St. James.

Because of an underwater pipe-line near the dock, the terminal management requires all vessels using their facility to have at least 1 tug of 1,800 h.p. to assist in docking and undocking.

As a point of reference it generally takes approximately 15 or 16 hours transit from Southwest Pass to St. James Terminal for most vessels.

Texaco – Convent: The Texaco dock is located 167 miles AHP. The berths are located near the edge of the navigable channel and interaction caused by downbound laden vessels can result in excessive surge by deeply loaded vessels docked alongside.

Current in the river at this location varies between 3 and 8 knots, depending on the height of the river.

The docks are located near an area of revetment, therefore anchors should not be used while alongside.

Cargo Handled and Shore Installations: Berth No. 1 handles mainly clean products and petrochemicals, e.g., aviation gas, jet fuel, unleaded gasoline, hi-test gasoline, etc., and serves mainly as a loading dock.

Berth No. 2 handles clean as well as dirty products including crude oils, charge stocks, petrochemical feed stock, furnace and fuel oils, etc. This dock both ships and receives cargoes.

All cargo transfer is made through 12 in. chicksan arms which are bolted at the ship's manifold. Maximum rail pressure for discharging vessels is 125 p.s.i.

An emergency loading stop control is located in each dock house and portable unit is provided for vessels docked at the berths.

Docking: Docking is always performed by the River Pilot or Docking Master, with the aid of at least 2 tugs. 2×1,800 h.p. tugs are required for vessels up to 60,000 d.w.t. docking and undocking, vessels larger than 60,000 d.w.t. are required to use 3×1,800 h.p. tugs for these operations. Approach is made parallel to the berths, stemming the current with 2 or 3 tugs on the port side. Mooring lines, either wire or synthetic, are run to mooring dolphins by boat.

At least 12 mooring lines are required for all vessels, i.e., 2 head lines, 2 stern lines, and a combination of 4 breast and or spring lines, depending on available leads, both forward and aft.

Nylon messengers or heaving lines are not permitted and will be refused by line handlers in the boats or on the docks.

Bunkers and Fresh Water: Bunker-C and fresh water are available upon request; however, no barges are allowed alongside vessels at any time.

Ballast/Slop Facilities: A maximum of 10,000 bbls. of oily slops may be discharged ashore for storage/treatment.

FRESH WATER: Available ex-berth.

FUEL: Not available.

DENSITY: Fresh water, 1000.

NOTICE:

Agent to Shipmaster:

Vessels over 100,000 Summer Deadweight:

This is to advise you that the Pilots will not allow your vessel to transit outbound between Pilottown and Southwest Pass during darkness hours if your vessel is at a draft in excess of 35 ft. fresh water upon arrival at Pilottown outbound. The times involved are from 1600 hrs. until 0700 hrs. the next day.

We feel certain with various ballasting procedures you will be able to comply with this draft upon reaching Pilottown even though you may leave the *St. James Berth* at a greater draft. If you cannot comply, please advise your Agent boarding with this letter in order that he may inform all parties interested.

By anchoring at Pilottown you will be costing yourself an additional $3,500 minimum in tug and Pilot expense. Therefore, we sincerely require your utmost co-operation.

SHIPMASTER'S REPORT: February 1979.
Location: St. James – West Bank.
Documents: Ship's stamp on cash receipts.
Anchorage: Usually at Grandview in the Customs District of Gramercy, where launch service available and about 1 hour's drive to New Orleans. From Capline (St. James) about 45 minutes' drive to Baton Rouge.
VHF: All berthing and river pilotage on Channel 13.
Tugs: 3 tugs recommended.
Berthing: Always port side to. No shore gangway, moorings 4, 2, 2 each end for tankers of 100,000 d.w.t. and upwards.
Cranes: Not available.
Tankers: Require ship's gangway at No. 2 berth.
Consuls: Honorary British Consul at New Orleans. (321 St. Charles Avenue). Open 1000 hrs. – 1200 hrs. and 1400 hrs. – 1600 hrs.

AUTHORITY: Greater Baton Rouge Port Commission, P.O.Box 380, Port Allen, Louisiana 70767. *Tel:* (504) 387-4207. *Contact:* John B. Dutton, Executive Director.

CAPE COD CANAL, (including Sandwich Oil Terminal), Massachusetts: (See Plan)

The Cape Cod Canal is a sea-level canal, extending from a point on Cape Cod Bay about 50 miles S.E. of Boston Harbour, Mass., to the head of Buzzards Bay, Mass. In general direction the Canal trends from Cape Cod Bay Westerly to Buzzards Bay.

PILOTAGE: The Corps of Engineers, Department of the Army, does not maintain pilot service but independent Pilots, licensed by the U.S. Coast Guard, are usually available at the canal. Messages will be transmitted to Pilots with the understanding that the Government will assume no responsibility in connection therewith.

Pilotage is compulsory and available 24 hours.

Pilot boards:

1. East Entrance: Position Lat. 41° 47.9′ N., Long. 70° 28.5′ W., midway between the Sea Buoy and the breakwaters.
2. West Entrance: Near West end of Cleveland Ledge.
3. By special request: Near Brenton Reef Light (Lat. 41° 25.6′ N., Long 71° 23.4′ W.) or 2 nautical miles South of Point Judith Light Buoy No. 2 in position Lat. 41° 19.2′ N., Long. 71° 28.5′ W.

Pilots are available from the following associations:

Northeast Marine Pilots Incorporated, Newport, Rhode Island (Tel: 401-847 9050 (HJ), 401-331 4824 (HN)).
Interport Pilots Associates. Tel: 201-291 1310.
Boston Pilots, East Boston. Tel: 617-569 4500.
Associated Coast Pilots. Tel: 201-887 7114.
Association of East Coast Pilots. Tel: 609-435 1239.

RESTRICTIONS:

	Width bottom (ft.)	*Length (miles)*
Easterly Entrance to Station 430	480*	8.4
Station 430 to Wings Neck (Hog Island Channel)	500	4.3
Wings Neck to Cleveland Ledge (Cleveland Ledge Channel)	700	4.7

*Except narrows to 450 ft. opposite State Pier.

The canal and approach channels have been dredged to the project depth of 32 ft. below MLW.

RADIO: Direct communication with the Cape Cod Canal sub-office, New England Division, Corps of Engineers, is available at all hours by means of telegraph, telephone, or radio. The telephone number is 759-4431 or 789-4432.

The nearest ship to shore telephone stations are at Scituate, call letters (WOU) and Chatham, call letters (WCC). Bridge to bridge radio-telephone facilities are available on 156.65 MHz, 156.6 MHz, 156.7 MHz and 156.8 MHz. Vessels equipped for communications with the Cape Cod Canal are requested to keep their radio-telephone tuned to the above frequencies.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Boston Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

VHF: Pilot Office and pilot vessel on Channels 16 and 13. Tugs on Channels 13 and 18A. Pilot listens 1 hour before vessel is expected.

BERTHING: Mooring basins are located at the East and West ends of the canal. The East Mooring Basin, located on the North side of the canal is 2,500 ft. in length, 350 ft. in width and is maintained at a depth of 25 ft. at MLW. The West Mooring Basin, located on the S.E. side of the Hog Island Channel is 3,300 ft. in length, 350 ft. in width and is maintained at a depth of 32 ft. at MLW. Mooring dolphins are provided in both mooring basins.

BRIDGES: 2 fixed span high-level highway bridges and 1 vertical lift railroad bridge cross the canal.

The minimum bridge clearance for the available width of channels are as follows:

	Horizontal Clearance	*Vertical Clearance (MHW)*
Highway Bridges	480 ft.	135 ft.
Railroad Bridge (vertical Lift)	466 ft.	135 ft. (open) 7 ft. (closed)

TANKERS: See "Shipmaster's Report".

COASTGUARD STATION AND WEATHER SIGNALS: A U.S. Coastguard Station is located near the Eastern entrance.

TRAFFIC LIGHTS: Red, green and amber electric lights, visible for a distance of about 2 miles in clear weather, day or night, are located at the following points:

(a) Eastern or Cape Cod Bay entrance, on South side of entrance at an elevation of about 55 ft. above high water.

(b) Western or Buzzards Bay entrance, Wings Neck, near Wings Neck Light at an elevation of about 48 ft. above high water.

SHIPMASTER'S REPORT: September 1984.
Sandwich Oil Terminal: 41° 46.3′ N., 70° 30.9′ W. (See "Plan").
Location: 2,200 m. inside North Breakwater from Cape Cod Bay, South side of Cape Cod Canal.
Max. Draft: 40 ft. (salt water).
Salinity: 1025.
Anchorage: Good anchorage N.E. of Breakwater.
Berthing: Berthing and unberthing only when slack tide.
Berthing Port side alongside when arrival from Cape Cod Bay.
Berth must be approached with care.
Ship's gangway to shore.
Derrick rigged to take onboard two cargo hoses 10 in. diameter.
After discharging vessel to proceed through Cape Cod Canal as there is no turning basin. Max. draft 28 ft. Airdraft 135 ft. when passing 3 bridges.
Vessel can also enter from Buzzard Bay but draft according to Canal Control is 28 ft.

AUTHORITY: Department of The Army, Division Engineer, New England Division, Corp of Engineers, 424 Trapelo Road, Waltham, Massachusetts 02254-9149. *Contact:* Statistics Section.

CASTLE ISLAND, Alaska: 56.39 N. 133.11 W.

Located in Duncan Canal off Kupreanof Island between Wrangell and Petersburg. Open all year.

DOCUMENTS: See "Anchorage, Alaska".

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Anchorage Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

PILOTAGE: From sea via Dixon Entrance up Clarence Strait to Guard Island. Under pilotage from Guard Island.

MAX. SIZE: Harbour depth 45 ft.

TIDES: Diurnal range 16 ft. Also see "Berthing".

ANCHORAGE: Fair weather anchorage only.

CUSTOMS: Quarantine and Immigration available from Guard Island. Customs available from Petersburg or Guard Island.

BERTHING: Alaska Barite facility: Dolphins and 2 floats. Present facilities limited to about 22,000 ton ships. Loading equipment consists of 1 loading spout for bulk cargo. Production average of 1,000 t.p.h.

TUGS: From Wrangell, 3 available 500 h.p. each.

STEVEDORES: Sufficient to work ore loading facility 24 hours a day when necessary.

REPAIRS/WATER/FUEL: None.

MEDICAL: Facilities available in Petersburg or Wrangell.

AIRPORT: Charter airplane only.

CHARLESTON, South Carolina: 32.47 N. 79.56 W. (See Plan)

DOCUMENTS:
3 Crew Lists.
3 Curio Lists.
3 Stores Lists.
3 Manifests.
At least 1 copy of Bill of Lading, if provided by shipper, and 1 copy of Parting Crew List.

PILOTAGE: Shipmasters to notify Agent 48, 24 and 12 hours prior arrival at C-2 Buoy. Pilot may be contacted by VHF Channels 16 and 18. Pilot boards on lee side from black-painted launch with "Pilot" painted in white letters on the side. Normally vessel is berthed by Docking Master from tug company.

Charleston Branch Pilots Association: 2 North Adgers Wharf, Charleston. Tel: (803) 577-6695. Monitors VHF Channel 16 and 18A, Channel 14 also available.

Masters please advise ETA and deepest draft and changes in ETA as soon as possible. If no contact is made please announce ETA and draft over the air. Savannah and Cape Fear Pilot Stations will also pass on this information for you.

Pilot vessels: Call sign WZF 7266 "Carolina" 55 ft. length; "Palmetto State" 55 ft. length; "Sis" 37 ft. length.

Pilot vessel when on station guards following frequencies: VHF Channel 16; VHF Channel 13; VHF Channel 18A, 156.95 MHz.

Location of pilot station: Charleston C-2 Buoy Lat. 32° 40.7′ N., Long. 79° 42.9′ W., in 42 ft. of water.

Pilot ladder requirements: Have ladder in good repair, clean and approximately 6 ft. above water. Please provide escort to and from bridge. Personal portable VHF transceivers are carried by Pilots.

Distances from pilot station to all berths approximately:

	Nautical Miles
Union Pier	12
Columbus Street	12.5
Exxon Dock	14.5
Wando Terminal	14
Ship Yard River	15 – 16
Navy Yard	16 – 19
Other Oil Docks	19 – 20
State Port Terminals	21
Army Transportation Docks	22
Naval Weapons Station	25
Cainhoy	22.5

ANCHORAGES: Rarely required.

RESTRICTIONS: Only restriction affecting operation relates to channel depth of 35 ft. at low tide.

MAX. SIZE: Can handle vessels 930 ft. long. Present private tanker facilities measure 475 ft. from centre of discharge pipe-line to end of dock.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Washington, D.C. Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Normal procedure. No special or unusual procedures required.

RADAR/VHF: Services required are handled through Agent.

Tug Companies: Marine Contracting and Towing: 723-7442 Radio frequency Channel (7A).

White Stack Towing: 577-6556 Radio frequency Channel (19A).

Marine operator on Channel 26 VHF.

Weather Station on Channel 39 VHF.

TUGS: Tugs usually join tankers between Cooper River Bridge and Coal Pier, approximately 0.5 miles from dock. Tug lines used. No charge made for this service.

Tugs are required for any vessel docking at or sailing from any state port berth which has a crane.

BERTHING: *Union Pier:* State Pier No. 2: 4 berths. Break-bulk terminal, length 2,471 ft. Depth 35 ft. 1×30 ton gantry. LASH barge handling capabilities, and 87,453 sq. ft. of open storage area.

Columbus Street Terminal: State Pier No. 8. 6 berths. Length 3,875 ft. Depth 35 ft. Terminal handles break-bulk and containers. One 440 ft. banana berth. 1×75 ton gantry crane, 1×50 ton gantry crane and 1×150 ton gantry crane serve 1,940 ft. of berthing space along the South end of the pier. 1×475 ton capacity sheer-leg, 1×90 ton truck crane and 2×40 long ton container cranes.

North Charleston Terminal: State Pier 15: Total length 2,500 ft. One container berth length 600 ft., one grain berth length 675 ft. 2 container berths each 930 ft. length. 4×50 ton container cranes, one grain elevator, capacity 1.5 million bushels. Additional 25 acres of container storage area under construction.

Wando Terminal: 3 container berths, each 809 ft. length. 4 container cranes each 40 tons capacity. Max. draft 35 ft. Paved container storage area being extended to 155 acres.

BULK HANDLING FACILITIES: *Shipyard River Coal Terminal:* Operator: Massey Coal Terminal Corp. Max. size: 50,000 d.w.t. Max. draft 38 ft.

Accommodation includes a single ship berth at the confluence of the Shipyard and Cooper Rivers. The pier is served by a travelling and shuttling shiploader with telescopic chute, which has a maximum capacity of 2,500 t.p.h. and loads at an average of 1,650 t.p.h.

CRANES: 1×40 ton, 1×90 ton, and 2×140 ton mobile cranes are available to work any Port Authority Terminal.

BRIDGES: *Cooper River Bridges Specifications:* Main Channel Span: 150 ft. above MHW at Centre Line, 750 ft. horizontal.

Town Creek Span: 135 ft. above MHW at Centre Line, 750 ft. horizontal.

STEVEDORES: *Working Hours:* Labour may be ordered for work to start at the following times: 0800, 1000, 1200 and 1900 hrs. Labour will usually work as long as necessary; shift system not used in this port.

MEDICAL: Advance notice when possible.

TANKERS: *Private Facilities:* Discharge lines all 8 in. dia. and 1 solvent line 8 in. Adapter to conform to ship's discharge lines supplied. Draft not to exceed 35 ft. low tide. Tanker berths operated by Humble Oil, Shell Oil, Hess Oil, BPT, and Phillips Petroleum, all suitable for 35 ft. draft. Gulf Oil Berth, max. draft 30 ft. Texaco Berth, max. draft 32 ft.

Report: *Exxon Terminal:* The berth, located 14.5 miles from the sea buoy, is of marginal type construction, and traffic passes in close proximity to the facility. Passing traffic combined with tidal conditions experienced on ebb tide require that a vessel be moored as follows:

Vessels arriving at the Port of Charleston with a draft in excess of 33 ft. (salt) are scheduled to commence channel transit 2 hours after LW slack at the channel entrance. This schedule allows the vessel to berth and be fully secured prior to the start of the strong ebb current out of Shipyard Creek. (See Chart: US 11524).

On arrival the vessel is breasted into the berth port side to, and 1 forward spring run to assist in spotting and maintaining vessel's position.

With vessel positioned, attending tug will work bow of vessel in. Once an angle of 5° is attained, vessel will then run 5 head lines and 3 forward breast lines. Efficient stoppers shall be available to "stop off" mooring lines during transfer from winch to bitts without loss of tension. With aforementioned lines all fast, attending tug will then work stern of vessel in; any required adjustment of head and/or breast lines to attain equal tension on all leads shall be undertaken during this period. With vessel in position, an additional forward spring line will be used. Recommended stern leads are as follows:

(a) 2 spring lines.
(b) 2 breast lines.
(c) 3 stern lines.

Mooring lines are to be kept taut during cargo transfer. Any required slacking of head lines shall only be attempted during flood tide. Vessel to consult tide tables for times of HW and LW. Also see "Plan" for mooring arrangements.

Vessels arriving with a draft of less than 33 ft. begin transit approximately 1 hour after LW slack at the channel entrance and follow the same procedures when mooring.

The U.S. Coast Guard has recommended that moored vessels maintain a listening watch on VHF Channel 13 and to pay close attention to moorings while deep draft vessels are transitting the North Charleston and Filbin Creek Reaches. Since maintaining a bridge watch to monitor VHF during the entire discharge is not practicable, nor is it permissible to operate radio equipment at any time during cargo transfer, it is suggested that vessels consult with the Agent to obtain advice on expected times of transit of passing vessels. Prior to vessels passing, crews should exercise particular care in maintaining a close watch on mooring lines to make certain vessel is alongside and mooring lines are in taut condition.

Failure of vessels to moor in a safe and proper manner will result in terminal's refusal to connect cargo hoses. Tidal conditions experienced at the berth require a full deck and engine room watch be kept; failure to comply will result in suspension of cargo transfer.

FRESH WATER: Available via 2.5 in. hose at a rate of 500 bbls.p.h.

FUEL: Bunker "C" at API of 14.4 to 16.6 (approx.) and blended Bonded Intermediate grades from 1 to 30.

FIRE PRECAUTIONS: Normal precautions.

GANGWAY/DECK WATCHMEN: Supplied by Agent upon request from Shipmaster only.

CERTIFICATES: Normal International Certificates.

CUSTOMS ALLOWANCES: Tobacco, Wine and/or Spirits, governed by length of time in port and existing Customs Regulations.

CONSULS:

Chile: Dr. Carlos Salianis, 948 Equestrian Dr., Mount Pleasant, S.C. 29464, Tel: (803) 792-2489, (803) 884-6224.

CHICAGO, Illinois: 41.50 N. 87.45 W. (See Plan)

DOCUMENTS:

For Agent in Montreal:

3 unfreighted copies of Complete Manifest for Seaway Toll purposes covering all cargo to be discharged in the Great Lakes.

In first U.S. port: a "Traveller" is made up by the Customs Inspector with the following documents:

2 complete sets of U.S. Cargo Manifests, plus 6 copies for Agents.
1 set Manifest of Cargo for first U.S. port.
4 Stores Lists.
4 Personal Effects Lists.
4 Firearms and Ammunition Lists.
4 Crew Lists, Form I-418.
4 Narcotics Lists.
4 Vessel's Itinerary Lists.
Vessel's Registry and copies of Paid Tonnage Tax Certificates.
Health Pratique.
Clearance from previous port.
2 sets Bills of Lading.
3 copies Stowage Plan.

In subsequent U.S. ports the following are required:

5 sets Manifest of Cargo for that port.
The "Traveller" and Permit to Proceed issued in previous port.
2 Stores Lists.
2 Personal Effects Lists.
2 Firearms and Ammunition Lists.
2 Crew Lists.
2 Narcotics Lists.
2 sets Bills of Lading.
3 copies Stowage Plan.

PILOTAGE: Compulsory unless Master holds exemption "B" license. 24 hours' notice of arrival required by Agents who arrange Pilot.

ANCHORAGES: In Chicago Harbour, anchorages A and B designated for merchant ships and marked on charts. In Calumet Harbour vessels should not anchor within 1,000 ft. of the breakwaters.

RESTRICTIONS: St. Lawrence Seaway navigation season approx. from April 1st to December 15th. Controlling depth 27 ft.

MAX. SIZE: Limited at Seaway Locks. 730 ft. length, 26 ft. draft. Depth alongside terminals 27 ft.

RADIO: Port can be contacted by Illinois telephone station WAY.

Notice of arrival; Master must give at least 24 hours' notice to Commander 9th Coast Guard District, Cleveland, Ohio, of the vessel's ETA at Snell Lock. Also at least 24 hours' notice of ETA at first U.S.A. discharge port is required.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Chicago Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

TUGS: Available, not compulsory and not required at Iroquois landing terminals, but recommended for downriver transit to Lake Calumet berths.

BERTHING: Two 100,000 sq. ft. terminal warehouse facilities. 90 acres of the 194 acre site has been set aside for maritime operations adjacent to the 3,000 ft. of berthing space on the South side of the Calumet River entrance from Lake Michigan.

Calumet River Terminals: Iroquois Landing Lakefront Terminals. Operator: Ceres Marine Terminals. Facilities at the mouth of the Calumet River. Handles general cargoes, steel products and containers. The terminal has 3,000 ft. of berthing space. Heavy lift cranes run from 75 to 140 tons in capacity. Also numerous lift trucks, with capacities to 46,000 lb.

Federal Marine Terminals Inc. handles general cargo, steel products and containers. This facility has 730 ft. of berthing space, 34,000 sq. ft. of covered storage space and 11 acres of open storage space. Heavy lift cranes at Federal Marine range from 20 to 150 tons. Lift truck capacities range up to 52,000 lb.

The Rail to Water Transfer Corp. (RTW) on the Calumet River specialises in handling, storing and distributing raw materials or dry bulk commodities. RTW's twin bulk loading facilities offer 2 deep-water berths, each more than 700 ft. long. The facility has railroad yards that accommodate 2,200 rail cars adjacent to the dock. The twin loading towers provide fast handling at up to 2,500 t.p.h.

Lake Calumet Terminals: Stolt Terminals (Chicago) Inc. in Lake Calumet transfers liquid bulk cargoes – animal fats, vegetable oils and chemicals. Bulk Terminals has 600 ft. of berthing space, with storage capacity of more than 750,000 barrels and 16,000 sq. ft. of drumming warehouse space. This facility has a transfer capacity of approximately 200 t.p.h. Bulk also has 5 miles of internal railroad trackage and a switch engine.

Ceres Terminals (North), Inc. at Lake Calumet handles steel, ores, pig iron, scrap and containers. The terminal was designed for easy interchange of cargoes to and from deep sea vessels. Mississippi River barges, Great Lakes vessels, railroads and trucks – both local and interstate. Truck and railcar weighing services are available also. Ceres has 1,500 ft. of berthing space; 45,000 sq. ft. of covered storage and 27 acres of open storage. Heavy lift equipment includes 5 cranes ranging from 125 to 150 tons. Lift truck capacities range up to 50,000 lb. per unit.

Ceres Marine Terminals facilities on Lake Calumet also have 176,000 sq. ft. of transit shed (60,000 heated); 100,000 sq. ft. of general storage, warehouse and distribution area (50,000 heated), and 50,000 sq. ft. of open storage. Equipment includes lift trucks, capacities up to 52,000 lb. North Pier services barge traffic to and from locations along the entire inland waterway system, and as far South as the Gulf, in addition to serving deep draft vessels.

Emesco (Dockside) Terminals warehousing and marine terminal facilities on Lake Calumet are designed for efficient handling of steel, machinery, containers, scrap, pig iron, ferro-alloys and other metallic bulk commodities. Emesco's 800 ft. of heavy duty bulkhead and 2×75 ton gantry mounted cranes operating over 3,700 ft. of tracks provide more than 1,000,000 sq. ft. of open storage under cranes. Emesco has 100,000 sq. ft. of heated warehouse. Other features are 25 acres of open storage, miscellaneous auxiliary cranes, an electronic truck and rail scale, 25,000 ft. of railroad track, ship to barge transfer.

Trade Zone Distribution, Inc.: Operates Free Trade Zone No. 22 for warehousing, storage and distribution. 200,000 sq.ft. covered warehouse and 25 acres of open storage area have FTZ designation.

BULK HANDLING FACILITIES: Continental Grain Company's Elevator "B" on the Calumet River has a storage capacity of 6,800,000 bushels. Elevator "B" has 5 loading spouts with a shipping capacity of 40,000 bushels per hour. Unloading capacity from barges is 15,000 bushels per hour. Receiving capacity from rail cars is 10,000 bushels per hour and from trucks 15,000 bushels per hour. The berthing space at elevator "B" is 1,025 ft.

The Cargill Inc. grain elevator on the Calumet River has a capacity of 23 million bushels. In addition to grain, this facility handles salt, molasses, and grain by-products. Cargill has 3,600 ft. of berthing space – 1,200 ft. of this for elevator use, and 20 acres of open storage. Loading capacity is 60,000 bushels per hour, while unloading is 12,500 bushels per hour. Cargill has 3 marine legs, and 5 loading spouts.

The Gateway Elevator of the Indiana Grain Co-Operative at Lake Calumet offers storage capacity of 6,500,000 bushels for bulk grains. The 8 loading spouts have a capacity of 20,000 bushels each per hour. Unloading speed is 10,000 bushels per hour. Berthing space is 1,000 ft.

Continental Grain's Elevator "C" at Lake Calumet has a capacity of 6,500,000 bushels of bulk grain and grain products. The 8 loading spouts have a capacity of 20,000 bushels each per hour. Unloading capacity is 10,000 bushels per hour. This facility has 1,000 ft. of berthing space.

DENSITY: Fresh water.

MEDICAL: Doctors, hospital and all facilities available.

FRESH WATER: Available at most berths.

FUEL: All grades available, ex-wharf, or delivered by barge.

AUTHORITY: Chicago Regional Port District, 12800 Butler Drive, Lake Calumet, Chicago, Illinois 60633. *Tel:* (312) 646-4400. *Contact:* Gilbert J. Cataldo, General Manager or Richard H. Van Derzee, Port Director.
AGENT: Norton Lilly Intl., 230 N Michigan Avenue, Suite 1600, Chicago, Illinois 60601. Tel: (312) 641-3555. Telex: 6871702. Twx: 910-221-1164.

CLEVELAND, Ohio: 41.31 N. 81.43 W. (See Plan)

DOCUMENTS:
For Agent in Montreal:
3 unfreighted copies of Complete Manifest for Seaway Toll purposes covering all cargo to be discharged in the Great Lakes.
In first U.S. port: A "Traveller" is made up by the Customs Inspector with the following documents:

2 complete sets of U.S. Cargo Manifests, plus 6 copies for Agents.
1 set Manifest of Cargo for first U.S. port.
4 Stores Lists.
4 Personal Effects Lists.
4 Firearms and Ammunition Lists.
4 Crew Lists, Form I-418.
4 Narcotics Lists.
4 Vessel's Itinerary Lists.
Vessel's Registry and copies of Paid Tonnage Tax Certificates.
Health Pratique.
Clearance from previous port.
2 sets Bills of Lading.
3 copies Stowage Plan.

In subsequent U.S. ports the following are required:

5 sets Manifest of Cargo for that port.
The "Traveller" and Permit to Proceed issued in previous port.
2 Stores Lists.
2 Personal Effects Lists.
2 Firearms and Ammunition Lists.
2 Crew Lists.
2 Narcotics Lists.
2 set Bills of Lading.
3 copies Stowage Plan.

It is especially important that vessels try to have their visaed Crew List on board which is required by U.S. Immigration at first U.S. port. Failure to have this visaed Crew List can result in all personnel being detained on board. Visa waivers are applied for and granted fairly regularly but Immigration has the discretion to refuse these at will.
PILOTAGE: Compulsory, unless Master has a "B" Certificate on board. Vessels are not permitted to transit the lakes from Port Colborne to Cleveland without either a "B" Certificate on board or a special Waiver from the U.S. Coastguard.
ANCHORAGE: In the outer harbour, 28 ft. depth, mud and sand bottom.
RESTRICTIONS: St. Lawrence Seaway navigation season approx. from April 15th to December 15th. Controlling depth 25 ft. to 27 ft. Access to berths in the River is limited by height restriction of 97 ft. above waterline.
MAX. SIZE: Limited at Seaway Locks, 730 ft. length, 26 ft. draft.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Chicago Quarantine Station.
AGRICULTURE: See "Agriculture" first U.S.A. port (Albany).
TUGS: Available and use is compulsory in Cuyahoga River and Old River Channel.
RADIO: U.S. Coast Guard can be contacted by R/T on 2182 kHz.
Notice of Arrival: Master must give at least 24 hours' notice to Commander 9th Coast Guard District, Cleveland, Ohio, of the vessel's ETA at Snell Lock. Also at least 24 hours' notice of ETA at first U.S. discharge port is required.
BERTHING: General Cargo Docks: See Table below.
BULK HANDLING FACILITIES: See Tables on pages 1728 and 1729.
DENSITY: Fresh Water.
MEDICAL: Doctors, hospital and all facilities available.
TANKERS: See Table on page 1729.
FRESH WATER: Available at most berths.
FUEL: Marine gas oil and diesel oil readily available, ex-wharf or delivered by barge.

COOS BAY, Oregon: 43.22 N. 124.13 W. (See Plan)

DOCUMENTS: Local Port Authority does not require any documents from merchant vessels entering this harbour. This does not preclude United States Customs requirements for documents.

PILOTAGE: No specified amount of advance notice of ETA required. Radio contact may be made on frequency 8182 kHz, also on frequency 2182 kHz. Most used frequency is VHF Channel 16. Pilot will be taken on board at entrance to Coos Bay Channel. No designated anchorages for vessels awaiting a Pilot.

ANCHORAGES: North of Entrance Buoy.

MAX. SIZE: Max. permissible length is 725 ft., breadth 110 ft. A 2 ft. clearance under keel is considered necessary for safe navigation. Vessels entering Coos Bay from sea draw down about 0.166 in. per foot of draft because of difference in density.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Seattle Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Pilots, Agents and stevedores monitor VHF Channel 16.

TUGS: Pilot vessel acts as Tug. Emergency small harbour tugs available and ship's lines generally used.

BRIDGES: 2 bridges cross the main ship channel. The Southern Pacific railway drawbridge 9 miles from the entrance and the Coast Highway Bridge 9.6 miles from the entrance. Clearance height of the Highway Bridge is 149 ft. in the centre of the span at MLW. Clearance width of swinging railway bridge 194 ft.

BERTHING: *Note:* All berths with the exception of oil berths dredged to 35 ft. in 1979.

'T' Dock: Distance from entrance 6 miles.

Barge Facility: Distance from entrance 6.5 miles.

Roseburg Lumber Co. Dock: Length 635 ft. Depth alongside at MLW 35 ft. No fresh water available. Distance from entrance 8 miles.

Ocean Terminals Dock: Length 400 ft. Depth alongside at MLW 35 ft. No dock cranes available. Fresh water available. Distance from entrance 11 miles.

Weyerhaeuser Dock: Length: (Lumber Dock) 1,433 ft. (Wood Chip Dock) 694 ft. Depth alongside at MLW 35 ft. No dock cranes available. Fresh water available. Distance from entrance 12 miles.

Fibrex and Shipping Co. Dock: Length of floating walkway 700 ft. Depth alongside at MLW 35 ft. Wood chip loaded by pneumatic pipe. Fresh water available. Distance from entrance 12.5 miles.

Bayshore Dock: Length 504 ft. Depth alongside at MLW 35 ft. No dock cranes available. Fresh water available. Distance from entrance 13 miles.

Dolphin Terminals: Vessels moor to dolphins adjacent to apron 60 ft. long and 26 ft. wide which is joined to the shore by a causeway length 190 ft. and width 12 ft. Depth alongside at MLW 35 ft. Fresh water available. Distance from entrance 13 miles.

Central Dock: Length 1,348 ft. Depth alongside at MLW 35 ft. No dock cranes available. Fresh water available. Distance from entrance 13.5 miles.

Portland Dock: Length 576 ft. Depth alongside at MLW 35 ft. No dock cranes available. Fresh water available. Distance from entrance 15 miles.

Coos Bay Dock: Length 1,326 ft. Depth alongside at MLW 35 ft. No dock cranes available. Fresh water available. Distance from entrance 15 miles.

STEVEDORES: Should have minimum of 48 hours to arrange gangs. Also see "Radio".

MEDICAL: Advance notice of required medical attention is desirable, in order to expedite use of ambulance, if necessary.

TANKERS: 2 tanker berths, Standard Oil and Union Oil Co., draft 30 ft. Tankers discharge into tank farms. Union Oil Co. is the bunkering Agent.

FRESH WATER: Available. Cost per ton is negotiable.

FUEL: 24 hours advance notice desirable, both bunker and diesel fuel available.

GANGWAY/DECK WATCHMEN: Service of watchman at discretion of ship's Master.

OPENING/CLOSING HATCHES: Normally by stevedores.

IDENTIFICATION CARDS: Not required by local authorities.

CONSULS: None.

REPAIRS: Only minor deck and engine repairs possible.

DRY DOCKS: Largest dry dock handles vessels not exceeding 220 ft.

REPATRIATION: Repatriation through local Customs and Immigration Office.

AIRPORT: All docks within 5 miles of airport. Airport served by regular airlines.

TIME: GMT minus 8 hours, clocks advanced 1 hour in May, clocks retarded 1 hour in November.

HOLIDAYS: All legal holidays observed, plus state-wide elections. Cargo work through negotiations with stevedore contractors.

POLICE/AMBULANCE/FIRE: Police: Coos Bay 269-1181, North Bend 756-3161; Ambulance 756-3234; Fire: Coos Bay 267-4123, North Bend 756-6111.
SHORE LEAVE: Crew members allowed ashore except when Federal Directives may be applied to a specific vessel.
SHIP SUPPLY SERVICE: For general ship stores: Day Ship Supply, 602 W. Hemlock St., Coos Bay, Oregon 97420. Tel: (503) 267-3813.

For transportation of personnel: The Coos Bay Pilots' Association, P.O.Box 254, Coos Bay, Oregon 97420. Tel: (503) 267-4186 would be the initial contact.

There are also numerous charter boat operators who provide charter services.

For emergency services the U.S. Coast Guard maintains a helicopter squadron in port. They bring sick crew members directly to the hospital. Their information phone number is (503) 756-4142, and their emergency number is 756-4141.
DELAYS: No delays in berthing, loading or discharging, or bunkering can normally be expected.
GENERAL: New enterprise zone and foreign trade zone within port district.
DEVELOPMENTS: Depth of channel at entrance 45 ft. MLLW. Inner channel, to head of channel 35 ft. MLLW. An additional anchorage (Turning Basin) will be installed, directly East of Beacon 17.
AUTHORITY: Oregon International Port of Coos Bay, Port Building, Front and Market Streets, Coos Bay, Oregon 97420. *Tel:* 267 – Port. *Telex:* 360315. *Contact:* Frank Martin, Jnr., General Manager.

CORDOVA, Alaska: 60.33 N. 145.46 W.

Located at S.E. side of Prince William Sound at the head of Orca Inlet. Open harbour year round.
APPROACHES: Via Prince William Sound.
DOCUMENTS: See "Anchorage, Alaska".
PILOTAGE: Pick-up point is Sheep's Point. Prior arrangements required.
ANCHORAGES: Good holding ground. Mud bottom between Spike Island and Municipal dock.
MAX. SIZE: Recommend max. draft 25 ft. Tidal variation: 18 ft. – 19 ft.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Anchorage Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
RADIO: Contact port on VHF Channels 19 and 26; Citizens Band, Channel 5 or SSB 2509 kHz.
TUGS: Limited availability. Prior arrangements need to be made.
BERTHING: Berthing Permit required. Advance notice of 48 hours requested.

Municipal Dock: 18 ft. deep, 400 ft. long, 72 ft. wide. Open storage of 10 acres. One 140 ton P & H mobile crane.
Container and Ro/Ro facilities: Movable ramp, 4.57 m. wide, available for Ro/Ro operations. 4 ha. container staging area.
STEVEDORES: ILWU No. 66, Box 416, Cordova, Alaska, 99574. Tel: (907) 424-7224.

Working hours – 24 hours.
REPAIRS: Radio, radar, welding, machining and light engine repairs can be effected.
FRESH WATER: Available at docks.
FUEL: No bunker "C" available. Fuel oil available.
MEDICAL: 22 bed hospital and a medical clinic, with 3 doctors, 1 dentist also public health nurse.
CUSTOMS: Quarantine – local. Immigration and Customs from Anchorage, Alaska.
AIRPORT: 13 miles from city centre. Small plane field near town, available for charter air service.
HOLIDAYS: None.
TIME: Yukon Standard time.
POLICE/FIRE/AMBULANCE: All available. Tel: (907) 424 7475.
AUTHORITY: City of Cordova, Box 1210, Cordova, Alaska 99574. *Tel:* (907) 424-3351. *Contact:* Joseph L. Graham, Harbour Master/Port Director.

CORPUS CHRISTI, Texas: 27.48 N. 97.23 W.

(See Plan)

PORT LIMITS: Corpus Christi's port limits include all of Nueces County, which has been officially designated as Port of Corpus Christi Authority of Nueces County, Texas. The Corpus Christi Turning Basin, Avery Point Turning Basin, Chemical Turning Basin, Tule Lake Turning Basin and the Viola Turning Basin are interconnected by the Industrial Canal; the Tule Lake Channel and the Viola Channel constitute the Corpus Christi Inner Harbour. Other Bay points included in the Port of Corpus Christi area are: Harbor Island, the North end of Mustang Island, near the inner end of the Aransas Pass Entrance, and Port Ingleside and La Quinta along the route of dredged deepwater channels on North side of Corpus Christi Bay; and the Rincon Barge Canal System. All of the ship channel has now been deepened from 40 ft. to 45 ft. to the Chemical Turning Basin. The channels and basins to Viola Basin are 40 ft. deep.

DOCUMENTS:
3 copies Cargo Manifest (Form 1302), the original showing all cargo on board, and 2 copies showing only cargo for this port.
2 copies Crew Manifest (Form 1304).
2 copies Stores List (Form 1303).
2 copies Passenger List (Form I–418).
2 copies Crew List (Form I–418).
Customs Boarding Officer will also examine Ship's Register, Load-Line Certificate, Safety Equipment Certificate and Certificate of Financial Responsibility. In addition, the following documents will be required for formal entry to be made within 48 hours of arrival from abroad, or 24 hours from arrival from a United States port:
Master's Oath (Customs, 2 copies Form 1300).
General Declaration (2 copies Form 1301).
All Foreign clearances.
U.S. Certificates of payment of tonnage tax (Customs Form 1002).
Certified Crew List.

PILOTAGE: Pilot boards off Port Aransas.
RESTRICTIONS: No restrictions, 24 hour service. The Port of Corpus Christi is situated on the West side of Corpus Christi Bay, in South-Western Texas. Port facilities at Inner Harbour lie along a 9.5 miles stretch of dredged channels and basins about 18 miles from Aransas Pass entrance at the Gulf of Mexico. Channel depth 40 ft., width 400 ft.

Turning Basins: 5 turning basins in the Inner Harbour are each minimum 1,000 ft. wide and more than 1,000 ft. in length.
MAX. SIZE: Cargo vessels: 39 ft. draft. Tankers: 40 ft. draft. Harbor Island has tanker docks with 45 ft. draft. Also see "Berthing".
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Miami Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
RADIO: KLC ITT-Radio-Arcadia, Texas. KLC RCA-Radio-Galveston, Texas.
VHF: KKQ 769 – Harbour Master – Channels 12 and 16. WR 8879 – Pilot Boat. KQU – Pilot Office – Aransas-Corpus-Christi Pilots Channels 12 and 16. KBP 384 – Harbour Tugs – Channel 12. U.S. Coast Guard – Channels 16 and 22. Pilot Office KQU 371.
TUGS: Tug assistance available. Tugs join vessels berthing at Harbor Island in Jetty channel. Tugs accompany vessels entering Inner Harbour outside Corpus Christi Harbour Bridge.

BERTHING: The Corpus Christi Turning basin is over a mile long and 1,000 ft. wide. There are 4 additional basins in the Inner Harbour, which extends Westward from Corpus Christi Harbour Bridge for 9.5 miles. The water in all basins, channels and canals is 40 ft. deep.

Draft for public docks will be furnished upon request to the Harbour Master or steamship Agent. Draft for private docks will be furnished upon request to the dock owners or steamship Agents.

Also see "Port Limits" and "Developments".

Inner Harbour – Public Docks: The length limit indicator is not of necessity the max. length for a vessel as larger vessels can berth if adjacent berth is not occupied.

Cargo Docks No.	*Length Limit ft.*
1 – 2	700
3 – 6	1,300
8	600
9	750
10 – 11	700
12	700
14 – 15	1,000
Bulk Materials Dock	835
Public Grain Elevator Dock	900

Inner Harbour – Private Docks: (Other than oil docks).
PPG Industries Inc., Cargo Dock: Length of pier 450 ft. Length of Head 100 ft.
Producers Grain Port Terminal Elevator Dock; Lone Star Cement Corp. Dock; Berry Contracting Company; Centex Cement Company.

BULK CARGO FACILITIES: *Ore, Minerals, Coal, Petroleum Coke:* Bulk Materials Dock with travelling unloading tower capable of direct discharge from vessels to railcars or trucks at rate of 1,000 t.p.h.

A new Bulk Loading Terminal to load vessels directly from trucks, railcars or stockpiles at rate of 1,500 t.p.h. is in operation. The new dock has a 45 ft. draft alongside, 63 ft. airdraft and 1,300 ft. slip length.
Grain: 2 export grain elevators are located in the Inner Harbour. The Corpus Christi Public Elevator has a 5,000,000 bushel capacity. Rated truck unloading capability is 1,000 t.p.h.; railcars can be unloaded simultaneously at 2,000 t.p.h. The Interstate Grain Port Terminal Elevator is privately owned and has a 6,400,000 bushel capacity.

TANKERS: Between Corpus Christi Turning Basin and Viola Basin are 11 public and 10 private Oil Docks, some capable of berthing tankers of 150,000 d.w.t. capacity. Also see "Berthing".

Inner Harbour – Public Docks:

Oil Dock	No. 1	Length Limit 965 ft.
	No. 2*	Length Limit 350 ft.

  - Oil Dock No. 1 (barge only).
  - Oil Dock No. 2.
  - Oil Dock No. 3.

Outside of Inner Harbour – Private Docks:
- Harbor Island
  - American Petrofina Oil Dock.
  - Exxon, Oil Dock No. 1.
  - Exxon, Oil Dock No. 2.
- Ingelside
  - Sun Pipe Line Co. Oil Dock.
- La Quinta Channel
  - Du Pont Ship Liquid Chemicals Dock.
  - Du Pont Ship Liquid Chemicals Barge Dock No. 1.
  - Du Pont Ship Liquid Chemicals Barge Dock No. 2.
  - Reynolds Metals Co. Bauxite Unloading Pier.
  - Reynolds Metals Co. Alumina Loading Dock.

Report: *Cautionary Advice:* Special precautions and procedures are required for all vessels calling at Exxon's Harbor Island Dock No. 1 because of tidal current, wind conditions and passing traffic. Masters must ensure that their vessels are properly moored at all times to minimise the effect of these conditions and prevent the vessel from breaking out of the berth.

The special precautions and procedures, for deep-loaded vessels (34 ft. draft or deeper) are:

Deep-loaded vessels experience maximum effect from tidal current during the flood tide which forces the vessel away from the dock, particularly when clearance between the keel and bottom is 5 ft. or less.

Accordingly, deep draft vessels are docked at the end of the flood tide to allow ample pumping time so that maximum underkeel clearance be attained before the next flood tide reaches full strength.

(Vessels should anchor off the sea buoy to await the suitable stage of the tide.)

Vessels equipped with segregated ballast capability should not commence ballasting these systems until draft is 30 ft. or less.

If during the flood tide the vessel's draft is in excess of 34 ft. (mean), a tug should be in attendance to assist the vessel in staying alongside the dock. To ensure tug availability, the Master should advise the Agent 3 hours in advance if planned pumping does not proceed to permit a lesser draft than 34 ft. at the full strength of the next flood tide.

Vessels with drafts that exceed 34 ft. (mean) should be equipped with 12 mooring wires. If they are not so equipped, the Dockmaster will require the vessel to use additional mooring ropes.

Wind Conditions: Winds from the Northern quadrants, which occur particularly during the Winter months, place heavy loads on mooring lines when a vessel is in a fully light condition.

A contract weather service provides an alert to Masters (via the Agent and/or Dockmaster) and to the Dockmaster when abnormal weather conditions are predicted. The Dockmaster will require cargo transfer shutdown when wind velocity exceeds established limits.

In order to minimise wind effect, the vessel's segregated ballast tanks should be filled before completion of cargo discharge.

Combined Wind and Tide Conditions: Particular attention should be paid to unfavourable combinations of wind, tide and current which will place high loads on mooring lines.

Passing Traffic: The close proximity of the Exxon Berth to the Corpus Christi Channel results in interaction from passing traffic. This can be severe, depending on the speed and displacement of the passing vessel.

Propeller wash from vessels (mooring/unmooring) at the Petrofina berth and the wash from assisting tugs also have an unfavourable effect. Special attention must be given to spring lines to ensure they are kept taut at all times.

The Exxon Terminal at Harbor Island has established wind and current limitations at which cargo operations should be stopped. Cargo operations are also stopped if a vessel moves off the berth. Hoses are disconnected by the terminal when required due to wind, current, etc.

Port Approaches: Vessels should approach Aransas Pass through the prescribed Safety Fairways, exercising due caution at all times as the lanes are unmarked. Numerous fishing vessels may be encountered. The low shore lines will start to show on radar at a range of between 15 and 20 miles. A large number of shore lights in the background make it difficult to distinguish the navigational aids. The entrance channel through Aransas Pass is protected by jetties. The outer bar channel, the Jetty channel and the inner harbour basin have project depth of 45 ft.

Tugs: Tugs will come alongside at Buoy Nos 9 and 10. A minimum of 3 tugs are usually required for a loaded vessel and 2 for a vessel in ballast under good conditions. Tugs up to 3,200 h.p are available.

CARGO GEAR: 7 locomotive cranes including 4×30 tons, 1×25 ton, and 1×45 ton. Heavy lift facilities: Derrick at Cargo Dock 14 has 100 ton capacity, at 53 ft. radius, and can handle containers 40 ft. or larger; otherwise ship's gear used. Heavy lift facility also available at Bay, Inc.

Facilities are available for all types of liquid cargo, dry bulk and general cargo, but cannot handle restricted cargo such as ammunition and explosives.

BRIDGES: Corpus Christi Harbour Bridge: Vertical clearance at MHW is 138 ft.

Upper Harbour Lift Bridge: Vertical clearance at MHW when raised is 138 ft.

MEDICAL: Ample hospital and dental facilities available.

FRESH WATER: Water available at all public docks for $2.50 per 1,000 gallons; minimum charge of $25.00 for each connection.

FUEL: 24 hours notice required.

Bunker C, Marine diesel, Light diesel – Pipe-line or Barge, Truck.

FIRE PRECAUTIONS: No working barges alongside (except bunkering barges) and normal precautions such as shut down cargo operations during lightning, storm, etc.

REPAIRS: See "Services".

SURVEYORS: American Bureau of Shipping; J. E. Orrell, Lloyd's Sub-Agency and National Cargo Bureau.

GANGWAY/DECK WATCHMEN: Not necessary.

HATCHES: Hatches may be opened by crew before entering harbour, after the ship has entered harbour it is carried out by stevedores.

CUSTOMS ALLOWANCES: 300 cigarettes per man. 1 quart liquor per man.

POLICE/AMBULANCE/FIRE: Police 882-1911, Ambulance 882-5571, City Fire 884-5563 or 911, Refinery Terminal Fire Co. 882-7801.

EMERGENCY CO-ORDINATION CENTRE: U.S. Coast Guard Marine Emergency (512) 937-1898.

TELEPHONES: No arrangements exist.

AIRPORT: Approximately 7.75 miles from Port. Serviced by 5 regular airlines.

TIME: Daylight Saving Time from last Sunday in April to last Sunday in October (minus 5 hours GMT). Central time remainder of year (minus 6 hours GMT).

HOLIDAYS: New Year's Day (January 1st); Martin Luther King's Birthday (January 15th); Lincoln's Birthday (February 12th); Washington's Birthday (3rd Monday of February); Texas Independence Day (March 2nd); Good Friday (varies); Memorial Day (last Monday of May); June 20th; July 4th; Labour Day (First Monday of September); Columbus Day (2nd Monday of October); Veterans' Day (4th Monday of October); Thomas W. Gleason's Birthday (November 8th); Thanksgiving (4th Thursday of November); Christmas Day (December 25th).

Possible to work on any holiday, except Labour Day or Christmas, only in case of fire or danger to property. If holiday falls on Sunday, Monday is observed.

SHORE LEAVE: Possible.

IDENTIFICATION CARDS: Standard Immigration Forms I-95 to be made up for each crew member on arrival. Not necessary for crew man already holding Form I-95, issued for same vessel.

DEVELOPMENTS: Port plans include deepening the Inner Harbour to 45 ft.

AUTHORITY: Port of Corpus Christi Authority, P.O.Box 1541, Corpus Christi, Texas 78403. *Tel:* (512) 882-5633. *Telex:* 910-876-1446 Ccpe Coc. *Contact:* Harry G. Plomarity, Executive Director. Doug Marchand, Managing Director. Fred Bingham, Harbour Master.

DESTREHAN, Louisiana: 29.56 N. 90.21 W.

East bank of Mississippi River about 121 miles from sea.

DOCUMENTS/PILOTAGE: For all general information refer to "New Orleans."

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

FRESH WATER: Available ex-berth.

FUEL: Not available.

DENSITY: Fresh (1000).

TUGS: At least 1 tug required for mooring/unmooring.

BERTHING: (a) St. Charles Elevator, berth 1,000 ft. length, Minimum 41 ft. depth. Loading rate, Max. 75,000 bushels per hour; 2 loading belts. Storage capacity 168,000 tonnes.

(b) Bunge Grain Elevator, berth 700 ft. length, Minimum 41 ft. depth. Loading rate, Max. 70,000 bushels per hour; 2 loading belts. Storage capacity is 115,000 tonnes.

(c) ADM Midstream loading buoys – 2 mooring facilities.

OPERATOR: (a) St. Charles Grain Elevator Company, P.O.Box 267, Destrehan, Louisiana 70047. *Telex:* TWX 810-955-5503.

(b) Bunge Corp., P.O.Box 156, Destrehan, Louisiana 70047. *Telex:* 587386 Bunge Dstr.

DETROIT, Michigan: 42.19 N. 83.05 W. (See Plan)

Refer to "St. Lawrence Seaway" for important general information.

PILOTAGE: Compulsory unless Master holds exemption "B" licence. 24 hours' notice of arrival required by Agents who arrange Pilot.

ANCHORAGES: In depths from 29 ft. – 51 ft. in the Detroit River off the marine terminals and away from main channel.

RESTRICTIONS: St. Lawrence Seaway navigation season approx. from April 15th to December 15th. Controlling depth 27 ft. Minimum depth of 25 ft. in the Detroit River. The Amherstburg Channel has a depth of 27 ft. 6 in. for upbound traffic.

MAX. SIZE: Limited at Seaway Locks. 730 ft. length, 26 ft. draft.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Chicago Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

TUGS: Available, not compulsory but recommended for some terminals.

BERTHING: *Detroit Marine Terminals (Clark Street):*

2,325 ft. dock with 27 ft. LW depth.
4 berths.
Container Freight Station – U.S. Customs approved. 100,000 sq.ft. covered storage.
Total 25 acres of which 20 acres dedicated to container operation.
1×200 ton heavy lift crane with automatic container spreader.
3×85,000 lb. top-loading container handlers.
1×25,000 lb. empty container handler.
1×250 ton diesel crawler crane.
1×200 ton diesel crawler crane.
1×50 ton diesel electric travelling gantry crane.
1×25 ton diesel electric travelling gantry crane.
1×15 ton diesel electric travelling gantry crane.
1×150 ton rail scale.
Fork trucks up to 45,000 lb. capacity.
Lift trucks up to 80,000 lb. capacity.
1×80,000 lb. top loader for 20 ft. – 40 ft. containers.

Detroit Marine Terminals (River Rouge):

1,400 ft. dock with 27 ft. LW depth.
2 berths.
45,000 sq.ft. covered storage.
200,000 sq.ft. storage pads.
Total 45 acres.
2×250 ton crawler cranes.
1×150 ton crawler crane.
4×140 ton crawler cranes.
1×50 ton gantry crane.
3×40 ton railroad cranes.
1×25 ton gantry crane.
2×600 h.p. switch engines.
1 rail scale 212,000 lb. capacity.
1 truck scale 212,000 lb. capacity.
7 magnets.
8 clam buckets.
Yard and warehouse lift trucks up to 70,000 lb. capacity.

Nicholson Terminal & Dock Company (Ecorse Dock):

3,400 ft. dock with 27 ft. LW depth.
6 berths.
70,000 sq.ft. covered storage.
Total 34 acres.
2 cranes, 70 ton capacity at 40 ft. radius and 50 ton capacity at 60 ft. radius.
4×12 ton gantry cranes.
6×30 ton diesel locomotive cranes.
1×85 ton mobile crane.
1×200 ton crawler crane.
3×1,000 h.p. diesel yard engines.
1×290 h.p. diesel yard engine.
1×150 ton railroad scale.
1×72 ft. combination rail and truck scale 400,000 lb. capacity.
2×87 in. magnets.
11×65 in. magnets.
5×55 in. magnets.
12 buckets: 1.5 yds. to 15 yds. capacity.
1 forklift truck, 50,000 lb. capacity.
1 forklift truck, 40,000 lb. capacity.
25 forklift trucks, various capacities.
3×12 yd. bucket front end loaders.

Nicholson Terminal & Dock Company (Summit Street Dock):

1,530 ft. dock with 28 ft. LW depth.
2 berths.
250,000 sq.ft. covered storage.
Total 16 acres.
2 crawler cranes, 200 ton capacity.
12 forklift trucks; 12,000 lb. to 45,000 lb. capacity.
1×60 ft. truck scale 300,000 lb. capacity.

DENSITY: Fresh water.

MEDICAL: Doctors, hospital and all facilities available.

FRESH WATER: Available at most berths.

FUEL: All grades available, ex-wharf, or delivered by barge.

DONALDSONVILLE, Louisiana: 30.05 N. 91.00 W. (See Plan)

SHIPMASTER'S REPORT: September 1980 (updated 1986).

The report was compiled over 4 visits between August 1979 and August 1980.

APPROACHES: The coastline is low at the mouth of the river and consequently does not give a good radar return. The Racon on East jetty shows up between 12 to 17 miles. Fog and mist is a complication as it is very prevalent with the added problem of the oil rigs. These are located mainly on the East side of the safety fairway but in August 1980 construction was proceeding on a structure right on the Western boundary of the safety fairway about 4 miles S.W. of the East pier.

The sea buoy is difficult to locate, vessel should approach as per the leading line indicated.

A strong West flowing current across the entrance can be encountered.

Draft restriction varies throughout the year and should be ascertained in good time. August 1980 at 40 ft.(FW) but patches of 39 ft. 6 in. in places. (Mud, so no difficulty.)

Officially the Bar at the S.W. Pass is the limiting factor but in practice other areas of the river up to New Orleans are as much of draft restriction factor.

Above New Orleans to Baton Rouge a battle is being fought against silting up and a large dredging programme will have to be commenced soon otherwise the draft will be severely limited – still at 40 ft. officially.

A new road bridge about 15 miles above New Orleans is under construction called 'Ascension', clearance is likely to be 150 ft., the lowest on the river, at zero gauge or about 130 ft. at High River.

PILOTAGE: Pilot boards at Sea buoy from a fast cutter. Ladder/gangway arrangements 6 ft. from water, normal port gangway at S.W. Pass.

Change at Pilot Town about 1 hour 45 minutes above S.W. Pass and New Orleans about 6 hours above Pilot Town.

If at anchor and requiring a Pilot a minimum of 3 hours' notice is required. Normally order Pilot through Agent. The Baton Rouge-New Orleans Pilots may only berth ships at Donaldsonville about 3 times per year.

ANCHORAGES:

Belle Chase	Mile post 75	1 hour below New Orleans
12 Mile Pt.	Mile post 81	30 minutes below New Orleans
Bonte Carre	Mile post 128	2 hours above New Orleans
Burnside	Mile post 169	4 hours above New Orleans

All anchorages are standing moor operations, if proceeding down river 2 tugs will be required to swing vessel into current, this is *essential* in High River season.

The bank is steep and muddy and as long as vessel lies quietly onto bank little damage can result. In fact this is preferable to hanging out in midstream and getting hit by passing barge strings and shipping.

VHF: Public correspondence as per ALRS. Moving upriver-Venice, New Orleans, Convent (Channel 25) and Baton Rouge. Just about in coverage all the way up from Pilot Town to berthing, all stations very busy in working hours.

Pilot ordered through Agent and on Channel 16.

USCG: Follow VTS booklet.

Boat service: At 12 Mile Point anchorage a launch service operates on Channel 20. Pilots and Agent board by this service.

TUGS: Normally two low powered 'Watson' tugs of 1,200 h.p. (approximately). 1 forward (tug's line) and the other pushing.

'Crescent' tugs of around 2,000 h.p. are stationed at Burnside which are available if not handling larger vessels.

BERTHING: *Berth approach and depths:* This is the cause of most concern at Donaldsonville. The channel is at its narrowest off Triad Berth (the downstream berth 0.5 miles below C.F. Industries at Mile Post 173.5), having a minimum depth of 30 ft. (Zero Gauge at Donaldsonville) over a width of 140 ft. and is steep to, falling to 20 ft. over 180 ft. in width.

Gauge reading can vary from about + 5 ft. after a dry Summer to + 26 ft. or more at the end of the Winter season when the snows to the North are melting.

There is a set onto the Triad Berth varying with the main current. Again as the river height increases, the current varies from 0.5 knots in late Summer to upwards of 5 knots or more in late Winter. Effect is increased by a Northerly wind.

Berth Approach: Head upriver on berthing, unberth stern first until clear of shoal, approximately when bow is 50 ft. downriver of lower Dolphin on Triad Berth, then swing with aid of tugs. Actual depth alongside (Zero Gauge) C.F.I. Berth = 44 ft. (minimum) Triad Berth = 41 ft. (minimum).

Guidelines for berthing as follows:

C.F.I. Berth: Berthing or unberthing at night possible. No vessels to be on Triad, berthing or unberthing.

Triad Berth: Night movements dependent on wind, tug power, etc.

The question of taking bunkers thereby increasing the draft arises. If berthing at Triad only, can take before berthing. If also berthing at C.F.I. it is best left until clear of C.F.I. berth.

Berths: C.F.I. Berth: Reasonable condition. Short steel jetty with 2 dophins plus mooring buoy at either end, the nearest dolphins either side of the jetty are interconnected by a catwalk.

At 26 ft. the maindeck is level with dolphins so gangway must be turned in. B.O.T. type gangway by pilot ladder position to after dolphin. Port side alongside.

Berth also used for loading bulk fertiliser. Watch the bulk boom as it is left unsecured and can be fouled.

Triad: 0.5 miles downstream from C.F.I. (plants back onto each other).

Basically the same as C.F.I. but dolphins not connected to jetty. No mooring buoys, all dolphins, not as good condition as C.F.I. Bulk fertiliser also loaded. Port side alongside, B.O.T. type gangway amidships.

Moorings: Basically 3, 2, 2, crossed after springs each berth. Mooring boat which moors forward first then aft. Lets go aft first – very handy as propeller is clear quickly. (See "Plan") – have moorings ready before arrival.

CARGO: Ammonia only at both berths plus bulk fertiliser. Labour on both berths assists in connecting up.

C.F.I.: Ship's 12 in. to 8 in. reducer plus shore 150 – 300 ASA spool piece.

No vapour return line, no venting. Loading at 450 t.p.h. but depends on pumps available, normally two. Emergency stop for ship operation.

Triad: Ship's 12 in. to 8 in. reducer. No VRL, no venting. Loading at 350 t.p.h. but again depends on available pumps. Shore tanks are set back further than C.F. Industries and line heating is apparent.

FRESH WATER: Not available at Triad berth. Available at C.F.I. Berth (Rate 1 t.p.h.). Barge from New Orleans cost about $1,500.

TELEPHONE: On both berths through the terminal operator. Local calls free, long distance calls collect.

GENERAL: Donaldsonville Town nearby, about $5.00 in a taxi. Baton Rouge about 45 minutes away. The International Airport at New Orleans is about 1.5 hours away.

Stores: Lorries can back down jetty roadway to within a few feet of manifold area. A permit has to be obtained at both berths.

USCG: Usual pre-arrival hazardous ship reports to Coast Guard Captain, New Orleans.

Necessary to have a Coast Guard escort through New Orleans. Check must be made that the Pilot is advising the USCG of the vessel's position and that she requires an escort. Escort with blue flashing light (fast patrol launch) joins off Algies Point and goes through to Huey P. Long Bridge, and vice versa.

THE FOLLOWING REPORT (Dated November 1980) IS TO BE READ IN CONJUNCTION WITH THE REPORT ABOVE.

SW Pass: The West flowing current is very strong, about 5 knots across entrance and in region of Fairway Buoy. Steer well to the East.

9 Mile Anchorage: Boat charges $35.00 per boat, any number persons, 24 hour basis. Runs on hour every hour for shore leave purposes by arrangement. Call 'Port Ship Services Poydras' on Channel 20. Minibus to New Orleans at $5.00 per person can be arranged.

Tugs/Pilot: Minimum 2 hours' notice, order through Agent.

VHF: Agent: On Channel 16 and 73, Tricon (Trammo Agent) on Channel 16 and 73. Chandler: Sarussen Marine, on Channel 16 and 9.

Films: Sea View Films: Best to cable direct as per Walport Instructions. Also change Vidpack. Change from launch if required when passing New Orleans.

Burnside Anchorage: Boat Charges: $20 per boat plus $5 per person. Call "Webber Marine" Burnside on Channel 16 and 18A.

Agents: Call Tricon Burnside on Channel 16 and 73 (Trammo Agents).

Donaldsonville: Depths – See latest chart, shoaling alongside CF Industries and off Triad.

Berthing/Leaving scraped alongside Triad berth, maximum 30 ft. off.

Turn when one ship's length below "Triad", lower dolphin.

Three "Parish" tugs used in and out.

To line up manifold at C.F.I., pilot ladder gate should be in line with gangway on lower dolphin.

Water rate is 5 t.p.h. from fire hydrant stand pipe, not hose.

Water by barge from Baton Rouge at $4.00 per tonne. Minimum 100 tonnes plus $85.00 per hour for tug. Minimum 4 hours = $740.00.

No bunkers officially allowed alongside, but can probably take diesel at night.

Agents: Tricon in Burnside are now Trammo Agents.

AUTHORITY: *Operator:* C. F. Industries, Inc. P.O.Box 468, Donaldsonville, Lousiana 70346. *Tel:* (504) 473-8291. *Contact:* Arne M. Christiansen, Port Captain.

DULUTH-SUPERIOR, Minnesota: 46.49 N. 92.09 W.

Refer to "St. Lawrence Seaway" for important general information.

PILOTAGE: U.S. or Canadian Pilot compulsory except when Master or officer specially qualified to navigate waters concerned. Pilots obtained from Upper Great Lakes Pilots Inc., 802 Garfield Avenue, Duluth. Duluth entry – Pilots picked up at point 2 miles due East of pierhead lights. Superior entry – pick up Pilot 2 miles N.N.E. of lighthouse. Advise Agents 24 hours in advance of ETA for scheduling Pilot, Customs, Immigration, and Agricultural Inspection. Masters should hold to the South of convergence of shipping lanes at the Duluth Entry and to North of this convergence at Superior Entry when approaching to embark a Pilot.

ANCHORAGES: Anchorage areas near Duluth and Superior entries are South and Eastward and North and Eastward respectively of main channel through harbour. Marked by anchorage buoys. Vessels must only anchor clear of channels at all times.

RESTRICTIONS: Because of varying conditions of wind and current, no restriction placed on speed passing through entry piers at either Duluth or Superior entry. Speed throughout harbour limited to 7 knots. Speed through bridges other than the Aerial Bridge at Duluth entry limited under normal conditions to 6 miles per hour. Because of current conditions at inner end of Duluth entry, both inbound and outbound vessels must leave vertical black/white striped mid-channel or traffic buoy on starboard hand. This gives outbound ships maximum straight run.

MAX. SIZE: Draft 26 ft. Duluth Harbour Entry: Duluth ship's canal, minimum width 300 ft. Superior Entry: Minimum width 500 ft. minimum depth at inner end of 27 ft.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Chicago Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Prior to entering harbour vessels must make "Security Call" on Channel 51 from 10 to 20 minutes in advance advising intended movement. All vessels should monitor Channel 51 at all times when under way to determine position and intent of other vessels moving in constricted areas within harbour and approaches.

TUGS: Available, not compulsory.

BRIDGES: Aerial Bridge spanning Duluth entry vertical clearance of 138 ft. Signal for opening bridge shall be given by vessels approaching from lakes, in all circumstances, when not less than 1 mile from bridge. A flashing amber light on harbour side of Aerial Bridge warns outbound vessel of approach of inbound vessel in lake.

BERTHING: *Clure Marine Terminal.* Also see "Developments".

Length of dock: 6,600 lineal ft., 9 ship berths, 5 for unloading/loading, 4 for fitting, cleaning, standby, etc. Water depth: 30 ft. 2×90-ton Clyde gantry cranes for container handling. 1×35-ton mobile crane.

13 grain loading berths.

Duluth Iron & Metal	– length of berth 1,586 ft.	– water depth 26 ft.
Meehan Seaway Services Ltd.	– length of berth 1,059 ft.	– water depth 22 ft.
Hallet 3	– length of berth 2,080 ft.	– water depth 23 ft.
Hallet 5	– length of berth 2,373 ft.	– water depth 23 ft.
Hallet 6	– length of berth 2,060 ft.	– water depth 23 ft.
Northern Pacific No. 2	– length of berth 2,415 ft.	– water depth 22 ft.
Paper Calmenson-Duluth	– length of berth 853 ft.	– water depth 21 ft.
Paper Calmenson-Superior	– length of berth 700 ft.	– water depth 20 ft.

St. Lawrence Cement Co.: The unloader uses a series of high-speed screw conveyors to discharge at the rate of 675 tonnes per hour. The unloader can also travel the length of the ship berth, discharging the cement on to dockside conveyor belt systems. Length of berth 700 ft. Storage capacity 43,000 tons.

CONTAINER HANDLING FACILITIES: A container terminal, together with all the back-up facilities located near the S.W. corner of Clure Terminal is now available. The container crane will be a Paceco Economy Portainer with a capacity of 30 tons, outreach 84 ft., back reach 22 ft. The Portainer is equipped to handle 20 ft., 35 ft., and 40 ft. containers.

MEDICAL: All medical assistance available.

DENSITY: Fresh water.
FRESH WATER: Available at most docks in both ports.
FUEL: Available from dock or by barge.
FIRE PRECAUTIONS: No open fire permitted on deck of any vessel while in harbour. This restriction does not apply to a vessel at a shipyard which will be governed by the shipyard's local rules, nor to vessels in lay-up or fit-out status at ore docks.

Ocean vessels, upon docking, shall put on off-shore side of vessel, wire rope lines fore and aft as tow lines for use in pulling ship off dock face in case of fire. Such tow line shall be securely made fast to bitts with eye about 1 ft. above the water.

CERTIFICATES: Masters are required to present Safety Inspection Certificate of cargo handling equipment and gangways to stevedoring companies and other employers of harbour labour upon request.
IDENTIFICATION CARDS: Required by Immigration.
REPAIRS: All ship repairs can be effected.
DRY DOCKS: At Superior, one 831 ft. by 95 ft. and one 628 ft. by 76 ft.
SHORE LEAVE: Allowed.
AUTHORITY: Seaway Port Authority of Duluth, P.O.Box 16877, Duluth, Minnesota 55816 – 0877. *Tel:* (218) 727-8525. *Telex:* 910-561-0052 Norcenter Dul. *Contact:* Davis Helberg, Port Director. Bill Cortes, Public Affairs Director.

EL SEGUNDO, California: 33.54 N. 118.27 W.

OPERATOR: El Segundo is a Chevron U.S.A. offshore multi-buoy marine terminal and refinery.
LOCATION: The terminal Sea Buoy is located approximately 600 yards W.S.W of Berth No. 3 in 102 ft. of water at Lat. 33° 54′ 28″ N., Long. 118° 27′ 29″ W. This lighted bell buoy is painted red with 6 in. high white letters reading, "2 ES". It exhibits a white flashing light every 4 seconds (flash 0.4 secs., eclipse 3.6 secs.). The lantern is 11 ft. above water.

In addition to the many tanks of the El Segundo Refinery, the chimneys of power plants adjacent to the Marine Terminal form prominent landmarks. Two 334 ft. chimneys painted with alternating red and white horizontal stripes mark the Los Angeles Department of Water and Power Scattergood Steam Plant located just North of the Terminal. Directly South of the Terminal is a set of 4 shorter chimneys at the Southern California Edison Co. Power Plant.

DOCUMENTS: Five copies each of the following documents are required for entry and clearance:
Crew List (I-418)
Crew's Effects Declaration (1304)
Ship's Stores Declaration (1303)
Inward Foreign Manifest (1302: If vessel is to discharge at more than one port, each port, with its cargo, must be listed on a separate manifest).

MAX. SIZE:

Berth No.	*Maximum Draft* (ft.)	*Maximum Length* (ft.)	*Vessel Tonnage* (d.w.t.)	*Water Depth at MLW* (ft.)
1	28	550	Up to 30,000	38
2	42	650	Up to 50,000	50
3	51	1,000	Up to 150,000	63
4	56	1,000	Up to 150,000	65

RADIO: *Pre-arrival radio message to ship:*

The vessel's Agent will normally advise the vessel by radio of the following general information when the vessel is approximately 3 days out:

Mooring Master boards 2 miles S.W. sea buoy Lat. 33° 54.5′ N., Long. 118° 27.5′ W.

Have starboard hose boom derrick rigged (if so equipped) and 7 good strong mooring lines ready – 3 main deck forward, 3 main deck aft, 4 poop deck (polyester lines only).

Sumatran Crude average cargo temperature must be 125°F on arrival.

Anchor in anchorage "A" or "B" as directed by message from shore.
Have pilot ladder rigged on starboard side.
Assure 125 p.s.i. pressure on riser during discharge.
Any Customs, quarantine, etc., special information.
Advise if all cargo pumps are in good operating condition, and best average discharge rate.

Radio Communication Prior to Arrival:

Estimated time of arrival (ETA) and requirements for services should be directed to the ship's Agent. ETAs should be sent 7 days, and repeated 3 days and 24 hours, prior to arrival.

Within 2 hours of arrival, communications may be established with the mooring launch via VHF radio Channel 10.

Radio and Telephone Ship to Shore Communications:

UHF Radio. The Mooring Master is equipped with a UHF radio for direct communications with the Terminal Control room at all times from the start of mooring until the vessel has cleared the mooring on departure.

BERTHING: It is expected that the vessel will provide berthing and messing facilities for the 3 man launch crew as well as for the Mooring Master.

Mooring Gear: Each anchor shall be equipped with no less than 10 shackles of chain. Vessels over 50,000 d.w.t. shall have at least 12 shackles on each anchor. Wires on mooring winches should be at least 1,000 ft. (preferably 1,200 ft.) and should be 1.25 in. to 1.625 in. in diameter, depending upon the size of the vessel. Constant tension winches must be braked by means of manual brake.

Synthetic fibre lines of dacron or polyester must be at least 9 in. in circumference and 120 fathoms in length.

NOTE: Polyester/Dacron lines are the only lines acceptable. If vessel is not so equipped polyester mooring lines can be rented from the terminal.

Mooring lines should be located as follows:
1. At least three lines on the main deck forward
2. At least three lines on the main deck aft
3. At least four lines on the poop deck.

If vessel over 100,000 d.w.t. fittings must permit doubling of all lines. Each synthetic line requires a separate bitt.

Mooring Facilities: Berth No. 1 is a 6-point mooring and is used for transfer of refined stock, primarily lub oils and chemical. The unlighted spar buoys mark the offshore end of the pipe-lines and is located approximately 1 mile East of the sea buoy and 1,100 yards offshore. There are also 3 hose marker buoys, one for the end of the chemical hose string and one for the end of each lub oil string. The chemical hose string consists of seven 8 in. diameter × 25 ft. lengths. The lube oil strings are a parallel set of seven 8 in. diameter × 25 ft. lengths which are connected at the ship-end by a piping manifold which the ship provides.

Berth No. 2 is a 6-point mooring and is used for transfer, of light oils (primarily gasoline and jet fuel). It is located approximately 700 yards N.W. of Berth No. 1 and 1,600 yards offshore.

Berth No. 3 is a 7-point mooring used for the transfer of fuel and crude products. It is located approximately 750 yards West of Berth No. 2, and 2,400 yards offshore.

Berths Nos. 2 and 3 are each equipped with 1 unlit spar buoy and a can buoy. The seaward spar buoy marks the location of the offshore end of the submarine hose when the hose is on the bottom. A can buoy, or hose marker buoy, is connected to the end of the submarine hose by a chain. The submarine hose string in Berth No. 2 consists of nine 12 in. diameter × 25 ft. lengths of which one is over-the-rail, connected to the seaward end of a 16 in. submarine pipe-line leading to the shore facility. The submarine hose string in Berth No. 3 is connected to the seaward end of a 26 in. submarine pipe-line and a 12 in. line for circulation, by seven 16 in. diameter × 25 ft. lengths of hose followed by one 12 in.×25 ft. length hose and one 12 in. diameter × 30 ft. long over-the-rail hose.

Berth No. 4 is equipped with 1 unlit spar buoy and 1 unlit can buoy. The inshore spar buoy marks the end of the 36 in. submarine line and 14 in. circulation line. One hose string comes off the main 36 in. submarine line. The hose string consists of 5×35 ft. long lengths of 20 in. hose, followed by a reducer and then 2×25 ft. long lengths and 1×30 ft. long over-the-rail length of 16 in. hose. The end of the hose string is connected to a can buoy by a chain.

NOTE: All berths are equipped with UHF direct dial radio telephones. VHF marine operator is also available, marine operators are located at Redondo Beach and San Pedro.

Hose Handling: The vessel will be expected to have suitable equipment on deck and ready for making the connection to the submarine hose.

Berths No. 1 and 2 require lifting capacity of at least 5 long tons.

Berth No. 3 requires a lifting capacity of at least 7 long tons for vessels up to 30,000 d.w.t. and at least 8 long tons for vessels over 30,000 d.w.t.

Berth No. 4 requires a lifting capacity (calculated load) of 10 long tons.

Procedure for Discharging: At the completion of most cargo discharges the vessel will be required to receive a 150 bbl. hose wash displacement of cutter stock or gas oil. This is to prevent the hose from plugging while not in use.

Product Transfer Rates, Pressure and Temperature: Lubricants and chemicals are transferred at Berth No. 1 at varying rates depending on the particular product, the maximum rate being approximately 2,100 bbls.p.h. Hoses are rated to 275 p.s.i.

Gasoline and jet fuel loaded at Berth No. 2 are usually transferred at 7,000 – 12,000 bbls.p.h. with a pressure at the ship's rail not to exceed 50 p.s.i. Gasoline and jet fuel are discharged at Berth No. 2 with a pressure not to exceed 125 p.s.i. at the ship's rail. Hoses are rated to 150 p.s.i.

Fuels and crude are loaded at Berth No. 3 at rates to 20,000 bbls.p.h. No. 3 Berth hoses are heavy duty 275 p.s.i. rated. Vessels are expected to maintain discharge pressure of at least 125 p.s.i. at the ship's rail and/or a flow rate of 20,000 – 25,000 bbls.p.h.

No. 4 Berth hoses are heavy duty 275 p.s.i. rated, and the system has a normal working pressure of 180 p.s.i. On this one hose system, vessels are expected to maintain flow rates of up to 50,000 bbls.p.h.

Sumatran crude cargo will not be accepted by the facility unless the ship's average tank temperature is at least 125°F. However, the average temperature for Sumatran crude should not exceed 130°F. in order to avoid excessive vaporization of the light fractions in the crude. Heavy viscous residue fuel cargo will not be accepted from a ship unless the ship's average tank temperature is at least 130°F.

MEDICAL: Several hospitals are available in the area. US Coast Guard or local ambulance service may be expected to know what hospital is best suited to handle a particular emergency.

FRESH WATER: Potable water is not available at this mooring. Water barge service is not available in the area. Closest supply is the harbour at San Pedro.

FUEL: Bunker fuel for ship's use is not available in the moorings of the El Segundo Marine Terminal, but may be arranged through Chevron International, San Pedro.
BALLAST: No ballast can be accommodated at the Terminal.

CONSULS: Consulates of most of the maritime Nations are maintained in both the cities of Los Angeles and Long Beach.
AIRPORT: The Terminal is located approximately 2 miles South of Los Angeles International Airport.

TIME: Standard Time along the entire West Coast of the United States is GMT minus 8 hours. Daylight Saving Time is used all along the coast. Clocks are advanced 1 hour in Summer.

TELEPHONE: Each berth is equipped with telephone service. To call El Segundo Terminal, ask Mooring Master. To call local outside numbers within the Los Angeles area, ask Mooring Master.

WINDS/TIDES/CURRENTS: *Winds:* Westerly, onshore winds usually prevail. Gales are very rare in Santa Monica Bay, but the local thermal winds blowing from a Northerly direction sometimes necessitate interruption of transfer operations and require moving a ship from the mooring to anchor.

Northerly winds occur during the period from October through May.

In the Autumn and Spring, duration averages 4 to 6 hours

In November, December and January, duration averages 10 hours.

Velocities up to 52 knots have been recorded.

Tides and Currents: Normal tides of approximately 6 ft. pose no significant problems in this open roadstead.

Currents run unpredictably North or South along the coast in the vicinity of the Terminal. The current is most commonly from North to South and is stronger in Summer than in Winter.

GENERAL: *Supplies:* Modest quantities of supplies may be taken aboard while at the moorings if absolutely necessary, provided the Mooring Master gives prior approval. This practice is discouraged in view of the sea swell and wind conditions that can develop in the open roadstead of the moorings, as well as the long distances to normal marine supply facilities.

Launch service: A company operated launch may be chartered for vessel's use through the vessel's Agent at the option of the Owner's representative. This launch operates between the moorings and the Port-O-Fino Dock in King Harbour, Redondo Beach, on a published 4 hours' schedule which may be obtained from the Mooring Master. A one-way trip takes approximately 40 minutes. There is a waiting room for use by all tanker personnel awaiting the launch. The waiting room is in the second building facing the yacht moorings. Blue arrows are painted on the side walk between this waiting room and the launch ramp, to assist in identifying the waiting room.

Pilot Ladder: The vessel shall rig a safe and secure pilot ladder or pilot hoist (not accommodation ladder) for the Mooring Master and Government Officials to use in boarding and leaving the vessel.

Air Pollution: Any vessel showing visible smoke in excess of 3 minutes is in violation and may expect to be cited and required to pay substantial fines.

Dumping of Garbage: Dumping of rubbish or garbage overboard within 50 miles of the coastline is prohibited.

AUTHORITY: *Operator:* Chevron Shipping Co., P.O.Box 910, San Pedro, California 90733, U.S.A. *Tel:* (213) 832-6478. *Telex:* TWX 910-345-6396. *Contact:* Captain Gary R. Roberts, Port Superintendent/Mooring Master.

U.S.C.G., Captain of the Port, Los Angeles/Long Beach, 165 N. Pico Avenue, Long Beach, CA 90802. Tel: (213) 590-2315.

El Segundo is an open roadstead marine terminal with no official Port Authority other than U.S.C.G.

ERIE, Pennsylvania: 42.10 N. 80.05 W. (See Plan)

Refer to "St. Lawrence Seaway" for important general information.

PILOTAGE: Not compulsory. Seaway Pilots will assist if required.

RESTRICTIONS: Navigation season from 14th April to 26th December approx. The port is connected to Lake Erie by an entrance channel, depth 28 ft. Vessel's size restricted by Seaway locks.

MAX. SIZE: 730 ft. length; 26 ft. draft.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Quarantine Station. Quarantine procedure undertaken at Quebec City for incoming vessels from foreign ports.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Master must give at least 24 hours' notice to Commander 9th Coastguard District, Cleveland, Ohio, of the vessel's ETA at Snell Lock. Also, at least 24 hours' notice of ETA at first U.S. discharge port is required.

TUGS: Available. Not compulsory, but sometimes necessary in bad weather.

BERTHING:

City of Erie Grain Elevator: Owned by the Port Authority, leased by the Port Authority, berthing length 980 ft., depth of water alongside 24 ft., 2.5 million bushel capacity.

Erie Marine Inc. (subsidiary of Litton): New ship assembly yard with graving dock (largest on Great Lakes), available for dry dock repairs.

Ore Dock: 1,000 ft. long, 26 ft. – 27 ft. of water alongside. The ore dock has 400,000 ton storage pad available for lease.

Port Authority East Bay Industrial Site: 75 acres available for sale or lease.

Erie International Marine Terminal: Leased to Codan Corporation, stevedores for the Port of Erie; 1,400 ft. long, with 28 ft. of water. Terminal used for bulk and general cargo; 23 acres; 750,000 sq. ft. of warehousing and transit sheds with truck and rail loading facilities; 200, 140 and 125 ton mobile cranes equipped with magnets, buckets and gear for heavy lifts, also 300 ton stiff leg crane. Terminal served by ConRail with reciprocal switching for N&W and B&LE railroads. A total of more than 100 acres of waterfront property is available where an industrial complex may be constructed.

DENSITY: Fresh water.

MEDICAL: All facilities available.

FRESH WATER: Obtainable by pipe-line at all docks.

FUEL: All grades available by pipe-line at all docks.

REPAIRS: Local shipbuilding company can handle most repairs. Dry dock available.

AUTHORITY: Erie-Western Pennsylvania Port Authority, Room 507, Municipal Building, Erie, Pa. 16501. *Tel:* (814) 456-8561. *Telex:* 91-4429. *Contact:* Joseph G. Rosenthal, Port General Manager.

EUREKA, California: 40.48 N. 124.10 W. (See Plan)

DOCUMENTS: In addition to the documents detailed below, Agent will present to Master normal Customs forms to be signed, such as Master's Oath, Permit to Lade, Inward & Outward Manifest, etc. These forms will be filled out by local Agent and Customs Broker and presented to local Customs house when entering and clearing vessel:

Foreign Flag Vessels:

I. Entering from another U.S. port:
- 3 Crew Lists.
- 3 Passenger Lists (only if passengers on board).
- 3 Curio Lists.
- 3 Store Lists.
- Permit to Proceed (issued at last U.S. port).
- Travelling Manifest (only if there is foreign cargo on board).
- Ship's Register.

II. Entering from a foreign port:
- 3 Crew Lists.
- 3 Passenger Lists (only if passengers are on board).
- 3 Curio Lists.
- 3 Store Lists.
- Travelling Manifest.
- Permit to Proceed.
- Ship's Register.
- Ship's tonnage tax Certificate.
- Clearance from a foreign port.

PILOTAGE: Telegraphic address of Pilot station "Humbar". 24 hours advance notice of ETA; in case of change in ETA give minimum 4 hour notice. Contact pilot boat on VHF 156.8 MHz (Channel 16). Radio watch is maintained 2 hours prior to arrival at sea buoy on Channel 16. Working Channels are 6, 13, 18A and 77.

No Pilot boat on station. Local Pilots use tug "Thor" length 65 ft. 800 h.p. Tug colours: red funnel, red and white superstructure and black hull. As no Pilot boat on station, sound signals not required. Visual international flag and light signals observed. Pilot will board vessel within 1 mile radius North, South and West of sea buoy. Sea-buoy located 1.4 miles from end of North jetty lined up with range lights bearing 105 degrees true.

Specific requirements: *(a)* Pilot ladder with spreaders in accordance with Solas regulations, and 9 ft. above water. *(b)* At night – brilliant light to illuminate ladder. *(c)* Recommended anchorage outside Humboldt Bay located 1 mile South of sea-buoy in 15 fathoms of water.

ANCHORAGES: Inside harbour, weather permitting. Light draft vessel (22 ft. or less) South of Fairhaven Dock (Simpson) and West of Standard Oil Dock. Deep draft vessels (22 ft. to 32 ft.) will anchor North of Union Oil Terminal and South of Samoa Channel entrance buoys.

RESTRICTIONS: Humboldt Bay is a 24 hour port; restrictions if any would depend upon manoeuvrability and horsepower of vessel during peak tide. Range of tide normally 8 ft., extreme cases 10 ft.

MAX. SIZE: Max. LOA 740 ft., max. beam 115 ft. Max. draft 35 ft.

HEALTH: See "Health: All ports" before first U.S.A. port (Albany). Illness reports made to Chicago Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Send cables through one of the following stations:

ITT World Communications, Inc. – San Francisco Marine Radio Station KFS.

RCA Global Communications – San Francisco Marine Radio Station KPH.

TUGS: 3×650 h.p. tugs available, 1 tug acts as pilot boat, other tug joins vessel when in harbour. Tug's lines are normally used, occasionally a ship's line is used. No extra charge assessed for use of tug's line. Two tugs minimum are used.

BERTHING: No specific requirements relating to berthing; normal procedures prevail. Vessel normally docks stemming the tide.

Berths presently available at Eureka as follows:
- Simpson Pulp Co.
- Eureka Forest Products.
- Louisiana-Pacific Corporation.
- Humboldt Dock & Shipping Co.
- Olson Terminal.
- Standard Oil of California.
- Union Oil of California.
- North Coast Exporting Co.

Harbour channels maintained to 35 ft. zero tide except for South Bay Channel to Olson Terminal which is maintained at 26 ft. Most of berths at above-mentioned docks also maintained at 35 ft. zero tide; however, some occasionally fill in and recommended check with Agent as to depth available at specific dock where vessel intends moor and load.

Also see "Developments".

STEVEDORES: 6 local gangs available. Groups ordered at 0630 hrs. in the morning for both day and night gangs. Therefore essential that local Agent or stevedore company receives accurate ETA by 0600 hrs. in the morning. Normally, vessel will advise arrival sea-buoy with a 24-hour ETA and correct ETA at a later time if necessary. The basic commodities exported from Eureka are woodpulp, woodchips, logs and lumber.

Westfall Stevedore Co. Cable Address: Westfall, Eureka. Tel. (707) 443-5688.

MEDICAL: Not necessary for Agent to receive advance notice of required medical attention unless ambulance and doctor are required on arrival. 3 hospitals in immediate area. Inoculation and vaccination certificates should be up-dated.

TANKERS: 2 tanker berths available: Standard Oil of California – deepest draft 35 ft. at zero tide. Union Oil – deepest draft 35 ft. at zero tide. Normally only Company tankers use own facilities. Facilities privately owned and are not available for bunkering other vessels.

DENSITY: 1024-1026 (depending on time of year).

FRESH WATER: Available all berths. Delivery by hose. Rate of delivery: 10 t.p.h.

FUEL: If bunkers required, Agent must go through major contractors, who in turn will inform their local supplier of requirements. Generally speaking bunkers are only supplied to vessels on an emergency basis in limited quantities. The bunkers usually diesel grade and delivered by truck on a prearranged schedule.

GANGWAY/DECK WATCHMEN: Services of gangway guards available if required by ship.

OPENING/CLOSING HATCHES: Normally stevedores' work unless done prior to docking. Vessel's crew may assist in opening and closing hatches, if hatches require special attention.

CERTIFICATES:

Ship's register.
Load-line Certificate.
Derat Certificate.
Cargo Gear Certificate.
Tonnage Tax Certificate and all other usual certificates required.

CUSTOMS ALLOWANCES: Tobacco, 200 cigarettes and 1 lb. of tobacco. Wine and/or Spirit, 1 bottle (approx. 1 quart).

CARGO GEAR: Must be in good order and safe operating condition and all cargo gear certificates must be valid.

IDENTIFICATION CARDS: Alien seamen require Crewman Landing Pass (U.S. Form I-95).

CONSULS: None. Nearest consuls at San Francisco.

REPAIRS: Small welding jobs, and minor machine work only. Major repairs normally carried out in San Francisco.

DRY DOCKS: None.

REPATRIATION: Normally done in conjunction with San Francisco, Portland, Los Angeles or Seattle Agent.

AIRPORT: Airport located approximately 20 miles North of Eureka. Limousine service available. Major airline, Republic Air Lines. At present 3 flights per day to San Francisco and 1 flight per day to Portland.

TIME: Local time is Pacific Standard Time and is GMT minus 8 hours. However, from the last Sunday in April to the last Sunday in October, Eureka is on Daylight Saving Time.

HOLIDAYS: No work performed on following holidays: New Year's Day (January 1st); Thanksgiving Day; Christmas Day (December 25th).

POLICE/AMBULANCE/FIRE: Eureka City Police 442-4545; Eureka City Ambulance 442-4551; Eureka Fire Department 443-5656; Humboldt County Sheriff Department 443-5671; Arcata Fire District 822-2424; Humboldt Fire District No. 1 442-1212.

TELEPHONES: No arrangements for placing telephones on board; however, there are pay phones nearby at each dock as well as phones in nearby offices.

SERVICES: Specific services such as tank cleaning, compass adjusting, tank washing,etc., are not normally performed in the port of Eureka and are usually performed in one of the close major ports such as San Francisco; however, there are facilities available for minor repair.

SHORE LEAVE: Crew members allowed ashore unless restricted for Customs or Immigration reasons.

DELAYS: Berthing delays seldom incurred primarily due to the fact that the prime Agents are always in contact with the local Agent at Eureka informing them of vessel's ETA and prime Agent is always advised with regard to all arrivals and possible berth conflicts at this port.

AUTHORITY: Humboldt Bay Harbor, P.O.Box 1030, Eureka, California 95502-1030. *Tel:* (707) 443-0801. *Contact:* Jack B. Alderson, Chief Executive Officer.

EVERETT, Washington: 47.59 N. 122.13 W. (See Plan)

DOCUMENTS, PILOTAGE, etc.: Refer to "Tacoma".

PILOTAGE: Pilot boards off Port Angeles Pilot Station.

ANCHORAGE: Unlimited deep water anchorage in Possession Sound.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Seattle Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

TUGS: Available, join vessel off berth. 17 tugs, 150 to 900 h.p.

BERTHING:

Weyerhaeuser Berth: Length 700 ft.

Pier No. 1 South: Usable berth length 520 ft.; Approach water depth 90 ft.; Water depth at pier 35 ft. MLLW; Plank and piling; 20 ft. Apron; Transit shed with 57,960 sq.ft. on pier; Access by road, barge and rail.

Pier No. 1 North: Usable berth length 600 ft.; Approach water depth 90 ft.; Water depth at pier 40 ft. MLLW; Multi-purpose 35-ton bridge crane (Containers – convertible for bulk cargo handling); Rail spur on dock; Plank and piling; 40 ft. Apron; Transit shed with 36,000 sq.ft. adjacent to pier; Access by road, barge and rail.

Pier "B": Usable length 450 ft.; Approach water depth 32 ft.; Water depth at pier 40 ft.; Plank and piling; 50 ft. Apron; Access by road and barge.

Pier "D": Usable length 500 ft.; Approach Water depth 32 ft.; Water depth at pier 40 ft.; Two 35-ton Whirley cranes; Plank and piling construction; 45 ft. Apron; Access by road and barge.

Pier "E": Usable length 450 ft.; Approach water depth 32 ft.; Water depth at pier 40 ft.; Plank and piling construction; 45 ft. Apron; Access by road and barge.

Norton Terminal: Usable length 703 ft.; Approach water depth 90 ft. Channel and berth depth 37 ft. 20 acres terminal (max. terminal development – 80 acres). Container cranes available. 36,000 sq.ft. warehouse. Rail spur on terminal.

STEVEDORES: 11 local gangs, additional gangs may be imported if required.

HOLIDAYS: See "Tacoma".

MEDICAL: Doctors and local hospital available.

DENSITY: Changes daily as port is at the mouth of a fresh water river.

FRESH WATER: Available at wharves.

FUEL: Available by barge from Seattle.

GANGWAY/DECK WATCHMEN: Required only if detainees aboard.

CUSTOMS ALLOWANCES: No definite quantities prescribed; reasonable allowance at discretion of Customs Inspector.

AIRPORT: Seattle – Tacoma International Airport is 45 miles South of city of Everett on excellent highway. Driving time is approx. 45 minutes.

POLICE/AMBULANCE/FIRE: Port of Everett Security: 259 – 3164; Everett City Police: 259 – 8711; Everett City Fire Dept.: 252 – 1111; Ambulance Service: 252 – 1234.

TELEPHONES: Will be placed on board vessel on request. Charges are only for calls made. Arrangements should be made through ship's Agent.

SHORE LEAVE: Crew members are able to visit Everett at all times.

AUTHORITY: Port of Everett, 2928 Terminal Avenue, P.O.Box 538, Everett, Washington 98206. *Tel:* (206) 259 – 3164. *Telex:* 4740140-Poeui. *Contact:* John G. Belford, Executive Director.

FALL RIVER, Massachusetts: 41.42 N. 71.10 W.

DOCUMENTS: If first port of call in U.S., 2 complete Customs Manifests describing all cargo on board and ports of discharge. Also 1 Cargo List for Fall River cargo; 3 Crew's Lists; 3 Stores Lists; 3 Curios Lists; Ship's Register, Load-line Certificate and Tonnage Tax Certificate.

PILOTAGE: Vessel first contact ship's Agent for Pilot and tug arrangements. Northeast Pilots' Association radio call letters KDF-375 on frequency 156.9 MHz, Channel 18. Usual Pilot pick-up is at Brenton Reef Light Tower off Newport, R.I.

RADIO: Chatham Radio or Amagansett Radio.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Boston Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

TUGS: Tugs for N.E. Power Station meet at Buoy 6; all other berths North, meet tugs at Buoy 10. Tugs provide own lines at no extra charge.

2 tug companies serve Narragansett Bay and Port of Fall River.

4 tug boats – 24 hour dispatching service. 2×3,000 h.p. boats.

BERTHING: *State Pier:* Principal maritime cargo terminal at State Pier. Berth 600 ft. long with depth of 35 ft. MLW alongside.

New Ro-Ro facility 80 ft. wide beam by 42 ft. inboard depth completed in 1979. (8° incline at water's edge – concrete deck on wood piling).

All utility services available. Further information telephone 617-674-5707 or ship Agents.

BRIDGES: All bridges have 135 ft. clearance with exception of Brightman Steel Bridge at approach to Montaup Electric Co. and Shell Oil docks. This bridge has a draw clearance of 97.5 ft. and passage allowed for vessels with less than 75 ft. beam. No unusual requirements. Practice is to depart on flood tide. (See "Developments".)

TANKERS: Berth at Shell Oil Docks. Depth alongside 35 ft.

FRESH WATER: Available at most berths. State Pier delivery is at 125 pounds pressure.

OPENING/CLOSING HATCHES: Usually performed by stevedores.

CERTIFICATES: All certification of vessel, safety conditions and radio facilities should be available for U.S. Coast Guard.

CARGO GEAR: No additional safety requirements.

TELEPHONES: Available at most berths. Contact Agents.

IDENTIFICATION CARDS: Standard U.S. Immigration Forms I-95 to be made up for each crew member on arrival. Not necessary for crew man already holding Form I-95 issued for the same vessel.

TIME: Eastern Standard Time, GMT minus 5 hours. Daylight Saving Time, GMT minus 4 hours from April to October.

HOLIDAYS: New Year's Day (January 1st); Washington's Birthday (February 22nd); Patriots' Day (April 19th); Memorial Day (May 30th); Independence Day (July 4th); Labour Day (1st Monday in September); Columbus Day (October 12th); Veterans' Day (November 11th); Thanksgiving Day (last Thursday in November); Christmas Day (December 25th); or any day celebrated in lieu thereof.

SHORE LEAVE: Permitted, but consult Agents.

DEVELOPMENTS: Plans for construction of a new 150 ft. wide draw bridge to replace the existing Brightman Street Bridge. This will mean unobstructed use of the entire port area.

AUTHORITY: Fall River Port Authority, State Pier, Water Street, Fall River, Massachusetts 02721. *Tel:* (617) 674-5707. *Contact:* William J. Torpey, General Manager.

FERNDALE, Washington: 48.49 N. 122.43 W. (See Plan)

Mobil Oil Tanker Terminal

DOCUMENTS/HEALTH/etc.: Refer to "Seattle".

PILOTAGE: Compulsory. Pilot boards at Port Angeles.

TUGS: Tug escort required if vessel is loaded and is larger than 40,000 d.w.t. Tug horsepower must be 5% of d.w.t. Available up to 3,000 h.p. Additional tugs ordered from Seattle if required.

RESTRICTIONS: Vessels enter any hour day or night.

Regulations prohibit tankers larger than 125,000 d.w.t. in U.S. waters East of a line from Discovery Island Light to New Dungeness Light.

MAX. SIZE: Length 1,000 ft.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Seattle Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

BERTHING: Terminal used for crude and product discharging. Vessels berth alongside finger pier, lines to quick release hooks. Inner berth for barges only. Outer berth 900 ft. long, depth alongside 40 ft. at MLW. Dirty ballast water 3,000 long tons with prior notification.

OPERATOR: Mobil Oil Corporation, Ferndale Refinery, P.O.Box 8, Ferndale, Wa. 98248. *Tel:* (206) 384-1011. *Telex:* 910-449-2412. *Contact:* W. D. Robb, Refinery Manager.

FORT PIERCE, Florida: 27.27 N. 80.19 W.

PILOTAGE: Compulsory. Pilot boards at sea buoy. Send vessel's ETA to Agent 72 hours, 48 hours and 24 hours prior to arrival.
ANCHORAGE: Vessel anchors and awaits Pilot 0.5 miles seaward of sea buoy.
RESTRICTIONS: Vessel is able to berth and unberth during hours of darkness if the weather is clear. The leading lights are good but the channel is narrow and marked by unlit buoys. Diameter of turning basin 1,000 ft. Least depth of water in the channel from sea to berth 26 ft. (dredging in progress).
MAX. SIZE: Max. draft 25 ft. (1 ft. keel clearance in the turning basin required). Range of tide 1 ft. 3 in.
TUGS: One 500 h.p. tug and one 1,000 h.p. tug available. Not advisable to manoeuvre without use of tug.
RADIO: Lantana Radio.
VHF: Channels 16 and 13. Watch only maintained when vessel expected.
BERTHING: The berth is located in Fort Pierce inlet. Length of jetty 411 ft. At present only 1 berth available on the North side of the jetty. Dredging is under way on the South side. Distance from entrance to berth 3 miles.

All moorings placed on the jetty and vessels lay quietly alongside. However, with a Southeasterly wind it may be difficult to keep the after end of the vessel alongside. Vessels are able to dock and undock at any stage of the tide, however, if vessel's draft is over 25 ft. suggest vessel waits for HW.

CARGO HANDLING FACILITIES: There are no facilities for bulk cargoes. No quay cranes. Ro/Ro facilities available for island type trade. There is sufficient mechanical equipment for handling palletised cargoes. Equipment or storage space for containers is available. An insulated/refrigerated storage shed has been built at the jetty.
FRESH WATER: Available.
FUEL: Not available in the port but could be supplied by barge or tanker truck.
MEDICAL: Doctor and hospital available.
AIRPORT: Local airport 5 miles from port, nearest international airport is within 2 hours by car.
SERVICES: Fresh provisions, laundry services, groceries and meats available.
REPAIRS: No facilities available.
GENERAL: Fort Pierce harbour is at present in the early stage of development. For many years the port has been used only for barge traffic and small craft and the inlet allowed to silt up. Over the last year a company, DNE Sales International, has bought the jetty and the adjacent land for the initial purpose of exporting Florida citrus.

The stevedoring company packing sheds are all owned by DNE Sales International. Ship chandlery is available.

At present depths in the turning basin which is approximately 1,000 ft. are no more than 26 ft. and the basin is not marked at its extremities so care should be taken to swing as near as possible on the leading lights. Alongside the wharf depths are 27 ft. with soft sand bottom and in the channel the least depth is 26 ft. but there are no official surveys yet in print. The latest information on U.S. chart 11475, gives depths of 25.7 ft. in entrance range and 20.5 ft. to 22.3 ft. for inner range, latest information in British Notice to Mariners gives 26 ft. depth, which in fact has been confirmed.

The buoys marking the edge of channel are unlit, although U.S. chart shows lighted buoys.

It is early days for this port, dredging is in progress and if all the projected improvements are carried through, including the deepening of the channel Fort Pierce will be a safe and efficient port. The controlling factor for "fruit vessels" is the length of the jetty, however if exports increase as anticipated there is a proposal to lengthen the jetty by 100 ft.

Most vessels arrive or depart at any tide or hour.

Stevedores are good and excel in citrus loading.

All Agency and stevedoring personnel are keen, helpful and anxious to co-operate fully to promote good relations.

AUTHORITY: Fort Pierce Port & Airport Authority, 2300 Virginia Avenue, Fort Pierce, Fl. 33450. *Tel:* (305) 461-6400. *Contact:* W. B. Lewis, Manager.

FREEPORT, Texas: 28.57 N. 95.21 W. (See Plan)

DOCUMENTS: See "Houston".
PILOTAGE: VHF Channels 6, 8, 12, 13, 14, 16 at sea buoy. Pilot Office (tel. 233-1120), 200 West 2nd, Freeport, Texas; Pilot boards 0.25 mile North of sea buoy. Anchor 1 mile from sea buoy if awaiting Pilot.
ANCHORAGES: 1 to 2 miles from sea buoy.
RESTRICTIONS: Depth 36 ft. at bar.
MAX. SIZE: Length 670 ft., draft 36 ft. for ships from bar to within upper turning basin, 30 ft. from upper turning basin to Public Facilities. Tide governing these dimensions – plus or minus 3 ft.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Miami Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
RADIO: Galveston Marine Operator.
TUGS: Join vessel at shore line. Tug's lines to be used, and no charge for use of lines.
BERTHING: 1 hour to reach berth. Deep water terminals at Public Facilities consist of 1,250 linear ft. of deep water bulkhead wharf with 3 modern transit sheds consisting of 200,000 sq.ft. 1 berth of 250 linear feet of deep water bulkhead wharf with transit shed of 36,000 sq.ft. In addition a back-up warehouse is available consisting of 60,000 sq.ft. The large transit sheds and back-up warehouse have railroad tracks under cover, permitting all-weather work and preventing cargo damage.

Ro-Ro facility in operation.

A new public liquid barge dock and tank farm in operation (in connection with the Old River Co.).

The Navigation District owns a total of 9,700 acres of land for future Port and industrial development, 6,500 ft. of this land is situated on the Brazos River.

CRANES: Vessel is required to use own gear, shore cranes are available in area for hire.
STEVEDORES: Obtained through Agent.
MEDICAL: Obtained through Agent and advance notice required. Doctors, hospital available.
TANKERS: Facilities operated by Phillips Petroleum, Dow Chemical and Seaway Pipeline Inc.
Report: Entering and Berthing: Vessels inbound over 630 ft. LOA are to enter harbour only during daylight hours from sunrise to:

1. 30 minutes before sunset going to berths below Phillips Terminal.
2. 1.5 hours before sunset going to berths at Phillips Terminal and above when loaded.
3. Vessels under 630 ft. judged unsafe for handling after dark will be limited to daylight hours.
4. Inbound operations will be suspended during times when weather conditions do not permit safe navigation.

DENSITY: 1020.
FRESH WATER: Available ex-wharf at Brazos Harbor.
FUEL: All grades available by barge from Houston.
GANGWAY/DECK WATCHMEN: None required but available through Agent.
OPENING/CLOSING HATCHES: Stevedore contract.
CUSTOMS ALLOWANCES: Local Customs Agent control.
IDENTIFICATION CARDS: None needed.
CONSULS: None. Nearest at Port Arthur or Houston.
REPAIRS: Available.
DRY DOCKS: None.
REPATRIATION: Possible, through Agent.
AIRPORT: Houston Intercontinental Airport – Houston, Texas (80 road miles to Brazos Harbor; Metro Airlines – Shuttle to Angleton, Texas (15 miles from Brazos Harbor).
TIME: GMT minus 6 hours. Daylight saving time starts last Sunday in April and ends the last Sunday in October – GMT minus 5 hours.
HOLIDAYS: New Year's Day (January 1st); Martin Luther King's Birthday (January 15th); Lincoln's Birthday (February 12th); Washington's Birthday (Third Monday in February); Good Friday; Texas Independence Day (March 2nd); St. Patrick's Day (March 17th); Decoration Day (Last Monday in May); Emancipation Day (June 19th); Independence Day (July 4th); Labour Day (First Monday in September); Columbus Day (Second Monday in October); Veteran's Day (November 11th); Thomas W. Gleason's Birthday (November 8th); Thanksgiving Day (Fourth Thursday in November); Christmas Day (December 25th). No work on Christmas Day or Labour Day.

If any of the above holidays fall on Saturday or Sunday the following Monday will be recognised as the holiday.

POLICE/AMBULANCE/FIRE: Police 239-1211; Fire 233-2651; Ambulance Service 233-2651.
TELEPHONES: No arrangements exist for placing telephones on board.
BANKS: First Freeport National. Tel: (409) 233-4401.
SERVICES: Tank-cleaning facilities available locally. Compass adjusting available from Houston.
SHORE LEAVE: Crew members allowed ashore.
DEVELOPMENTS: In May 1986 the port will commence a dredging and widening project, which will on completion give a channel depth of 45 ft. and an alongside depth of 36 ft. The main channel will be widened to 400 ft.

Berth Nos. 1 and 2 to be extended Eastward to provide a new berth (Berth No. 3) with a length of 640 ft. Berth will be dedicated to rice export.

Berth 'A' is to be extended by 400 ft.

AUTHORITY: Port of Freeport, Brazos River Harbor Navigation District of Brazoria County, 1001 Pine Street, P.O.Box 615, Freeport, Texas 77541. *Tel:* (409) 233-2667. *Contact:* A. J. Reixach, Port Director.

GALVESTON, Texas: 29.17 N. 94.50 W. (See Plan)

DOCUMENTS:

1 visaed Crew List.
3 Passenger Lists.
3 or more copies of complete Manifests of Cargo for discharge at all United States ports.
2 or more copies of Manifest of Cargo for each United States port.
1 Souvenir List.
1 Stores List.
Ship's Register.
Tonnage Tax.
Load Line Certificate.
Nationality Certificate.
No health document required.

PILOTAGE: Radio to local Agent who arranges Pilot and specifies boarding time. United States Coast Guard require 24 hours' notice of arrival at Galveston Bar. Contact pilot boats and pilot station on VHF Channel 12. Pilot boats marked "HP No. 1", 53 ft. long; "HP No. 2", 61 ft. long; "HP No. 3", 106 ft. long. Pilot boats can be signalled by light in international code. Pilot taken on board at sea buoy No. 1 located 6.7 miles from Galveston.
ANCHORAGES: In Bolivar Roads, 6.7 miles inwards from sea buoy No. 1. Depths 32 ft. – 34 ft.
RESTRICTIONS: Prolonged North winds can reduce water level as much as 4 ft. in Winter. Channel depth 40 ft.
MAX. SIZE: No length restrictions. Draft according to berth depth.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Miami Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
RADIO: International Telephone and Telegraph station Galveston, call sign KLC.
TUGS: Available if required.
BERTHING:

Grain elevators	Union Equity/Bunge Corp.	Depth alongside 40 ft.
Bulk loading	Pier 14 East	,, ,, 36 ft.
	Duval Sulphur Terminal	,, ,, 40 ft.
	Imperial Sugar Dock	,, ,, 36 ft.
	Sullivan Enterprises Terminal	,, ,, 40 ft.

East End Container Terminal, wharf 1,346 ft. length, equipped with 4 container cranes handling 40 tons under the spreader or 60 tons with cargo hooks at 100 ft. outreach – depth alongside 40 ft.

Bulk loading rate at Union Equity is 2,000 t.p.h. (2 spouts) and at Bunge 1,250 t.p.h.

Note: Water depths are based on MLW. Depths may be less due to siltation.
STEVEDORES: Order before 1700 for 0700 or 0800 hrs. following day. During day can be ordered at 2 hours' notice. Gangs must be ordered before 1900 hrs. on Saturday for Sunday or holiday.
MEDICAL: All medical assistance available.
FRESH WATER: At all wharves.
FUEL: All grades available. Delivery only by barge from Houston.
GANGWAY/DECK WATCHMEN: Required only if crewmen detained by Immigration.
OPENING/CLOSING HATCHES: By stevedores only.
CUSTOMS ALLOWANCES: Each man 300 cigarettes, or 100 cigars or 1 lb. tobacco; 1 quart wine/spirits.
IDENTIFICATION CARDS: Immigration form I-95 required.
CONSULS:

Chile
Dominican Rep.
Finland
Guatemala
Haiti
Iceland
Italy
Mexico
Netherlands
Norway
Sweden
Venezuela

DRY DOCKS: 1×18,000 tons capacity. 1×40,000 tons capacity (Todd Shipyards).
TIME: Central Standard Time. Daylight Saving Time effective from April to October.
HOLIDAYS: January 1st; January 15th; February 12th; February 22nd; March 2nd; Good Friday; May 30th; June 20th; July 4th; First Monday in September; Second Monday in October; November 11th; Fourth Thursday in November; December 25th; No work on Labour Day or Christmas Day.
POLICE/AMBULANCE/FIRE: All services provided.
SHORE LEAVE: No restrictions unless detained by Immigration.
AUTHORITY: Port of Galveston, P.O.Box 328, Galveston, Texas 77553. *Tel:* (409) 765-9321. *Telex:* 76-5436. *Contact:* Doug J. Marchand, General Manager; M. J. Sunseri, Director of Operations, or Oscar Molina, Harbour Master.
AGENT: Strachan Shipping Company, Post Office Box 689, Galveston, Texas 77553. Tel: (713) 763-2351. Telex II: 910-885-5205. Telex I: 76-5412. Cables: "Strachan".

GEISMAR (Including Sunshine), Louisiana: 30.13 N. 91.01 W. (See Plan)

East bank of Mississippi River, about 187 miles from sea.
DOCUMENTS/PILOTAGE: For all general information, refer to "New Orleans".
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Miami Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
TUGS: Available if required; normally not used (see "Tankers").
BERTHING: BASF Corporation: Berth 620 ft. long, 32 ft. depth. BASF Corporation Chemical Division, P.O.Box 457, Geismar, Louisiana 70734. Tel: (504) 473-9871. Telex: 510-600-7967. Contact: Plant Security.
TANKERS: *Wyandotte Chemical – Geismar:* General: The Wyandotte Chemical Dock is located on the North side of the river, approximately 180.4 miles above Head of Passes (AHP). A series of mooring dolphins interconnected by rubber faced steel pile fenders form a 615 ft. berthing face. Electric driven warping winches on the dock and mooring dolphins handle vessel's mooring lines.

Cargo Handled and Shore Installations: Various chemicals are handled at this dock, e.g., methanol, ethylene dichloride, perchloroethylene, caustic soda, etc. All chemicals are generally loaded through 6 in. hoses connected to shore lines which are generally 6 in. diameter and vary in length from 0.5 miles to 4 miles.

An emergency loading stop control is located on the dock.

Docking: All vessels are required to use a 600 h.p. tug for assistance in docking and undocking. Vessels should approach the dock stemming the current with a tug on the port bow. The vessel is then manoeuvred alongside for a starboard side to docking.

Docking and undocking are generally performed by the River Pilot.

Nordix/No. 1 – Sunshine: General: The Nordix Dock is located on the left descending bank of the Mississippi River, approximately 170 miles AHP. The dock consists of a hose platform attached by catwalk and fender system to several mooring dolphins for a total dock length of 960 ft.

River current at the dock varies from 1 knot to 4 knots depending on the height of the river.

Cargo Handled and Shore Installations: Crude is transferred through 2×8 in. hoses at a maximum discharge pressure of 100 p.s.i. on the dock.

Docking: Docking is strictly starboard side to and is performed by the River Pilot. 2×1,200 h.p. tugs are required for all docking/undocking operations.

The normal mooring arrangement calls for 2/3 head lines, 2 stern lines, 1 spring line forward and 1 spring line aft. The leads for breast lines are poor.

Willow Glen/No. 1 – Sunshine: General: The Willow Glen Terminal, approximately 180 miles AHP is on the left descending bank of the Mississippi River. The dock consists of a 150 ft. hose handling platform, 2 breasting dolphins and 4 mooring buoys. All mooring points are equipped with electric capstans for line handling. The dock is normally served by barge but is capable also of handling tankers.

Current at this dock varies between 1 knot and 4 knots, depending on river height.

Cargo Handled and Shore Installations: No. 2 and No. 6 fuel oil are the only products handled. These are transferred to the dock through 4×8 in. chicksan arms at a maximum discharge pressure of 100 p.s.i. Portable jacks are provided by the terminal to support the cargo arms on the ship.

Docking: Docking is performed by the River Pilot and is strictly starboard side to, vessels of 30,000 d.w.t. or greater are required to use 2 tugs for docking and undocking; smaller vessels are required to use a single tug for these operations.

The normal mooring arrangement calls for 2 head lines, 1 breast line forward and 1 aft, 1 spring line forward and 1 aft and 2 stern lines. Wire or synthetic mooring lines may be used.

Petro United – Sunshine: General: The Petro United Dock is located approximately 170 miles AHP on the left descending bank of the Mississippi River. The dock consists of a 65 ft. hose handling platform and 6 mooring dolphins interconnected by 2 catwalk and fender systems.

At high river the current often causes swirling eddies off the dock which should be accounted for when approaching, docking and undocking.

Shore Installations: 4×10 in. and 2×12 in. hoses are available for the transfer of cargo.

Docking: 2 tugs are normally required for docking and undocking operations. All tugs must come from St. James or Baton Rouge so that a minimum of 2 hours advance notice must be given to the terminal and Agent prior to docking or undocking. Extensive delays have been known to occur due to tug unavailability and insufficient advance notice of docking/undocking requirements.

Docking is performed by the River Pilot and is strictly starboard side to.

The terminal generally requires the use of 3 head lines, 2 stern lines, 2 breast lines forward, 2 breast lines aft, 3 spring lines forward and 2 spring lines aft.
FRESH WATER: Availabale ex-wharf.
FUEL: Not available.
DENSITY: Fresh water (1000).

GEORGETOWN, South Carolina: 33.22 N. 79.17 W. (See Plan)

PILOTAGE: Available. Make contact on VHF Channel 16. Pilot boards at Sea Buoy "2WB" in position 33° 11.6′ N., 79° 05.4′ W. for the 14 mile passage to Georgetown.
ANCHORAGE: Vessels wait for berth at Buoy "2WB".
RESTRICTIONS: Vessels over 600 ft. LOA dock during daytime only.
MAX. SIZE: Max. LOA 700 ft. Max. beam 100 ft. Depth at all terminals 27 ft. MLW.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Washington, D.C. Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
VHF: Pilot and tug on Channel 16. Port Authority have no facilities.
TUGS: 2×1,000 h.p. tugs assist vessels from Buoy 28 to the dock.
BERTHING:

Berth No.	Wharf Length (ft.)	Depth at LW (ft.)
1	500	27
2	700	27
Steel Dock	600	27

CRANES: 1×90 ton P & H truck crane at the terminal. A 140 ton P & H truck crane available at 72 hours notice.
STEVEDORES: Advise requirement 1600 hrs. day prior to arrival in order to commence work 0800 hrs. next day.
MEDICAL: Georgetown Memorial Hospital 3 miles from port.
TANKERS: No facilities.
FRESH WATER: Available.
FUEL: Bunkers available through ship's Agent.
CONSULS: None locally.
REPAIRS: Minor repairs and small engine repairs possible.
DRY DOCKS: Tugs and barges only.
SURVEYORS: Available.
GANGWAY/DECK WATCHMEN: Ship's gangway used. Watchman available.
OPENING/CLOSING HATCHES: Opened by crew or stevedores.
REPATRIATION: Facilities available.
AIRPORT: 35 miles from port.
TIME: Eastern standard time. Clocks advanced 1 hour last Sunday in April until last Sunday in October.
POLICE/AMBULANCE/FIRE: Police 527-4454. Ambulance 546-8140. Fire 546-5151.
AUTHORITY: South Carolina State Ports Authority, 119 Screven Street, P.O.Box 601, Georgetown, South Carolina 29442, U.S.A. *Tel:* (803) 527-4476. *Telex:* 810-677-2265. *Contact:* Claude Baker, Port Director.

GOOD HOPE (including Norco), Louisiana: 29.59 N. 90.24 W. (See Plan)

East bank of Mississippi River, 126 miles above Head of Passes.
DOCUMENTS: For all general information, refer to "New Orleans".
ANCHORAGES: South of berth in river for unlimited number of ships.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Miami Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
TUGS: 1 tug used for mooring/unmooring.
BERTHING: General American Tank (GATX) storage terminal; 4 tanker berths, 40 ft. depth alongside. 2 × 12 in. arms or 8 in. hose. Loading 20,000 bbls.p.h. No ballast facilities.
Norco: Shell Oil Co. 2 tanker berths (80,000 d.w.t., 900 ft. LOA downstream, 55,000 d.w.t., 750 ft. LOA upstream) 16 in. and 8 in. loading arms for transfer, transfer rate variable, ballast line 12 in., capacity 20,000 bbls.

Berthing always starboard side to. Requires 2 tugs to assist in berthing. Forward and aft mooring lines handled simultaneously.

Report: *Norco – Shell/Amoco:*

General: The berth at Norco is approximately 130.1 miles AHP and consists of a single dock constructed of steel pilings and a concrete deck. A continuous fender system of wood-faced steel piles provides continuity between the dock and mooring dolphins.

All cargo is handled through 6×12 in. loading arms with 8 in. reducers. The arms are arranged so as to permit washing of the arms into a slop tank ashore; thus, grade changes may be made without removing the arms.

Cargo Handled and Shore Installations: Various products are handled through a common shoreline including crude, asphalt, clean products, jet fuel, kerosene, diesel and heating oil.

The maximum allowable rail pressure for discharging vessels is 150 p.s.i.

An emergency shutdown system to stop loading is located in the dock office.

Docking: Docking is normally performed by the River Pilot and is strictly starboard side to. 1×800 h.p. tug is required for both docking and undocking operations.

Vessels should approach the dock with a tug on the port bow, stemming the current, at a maximum angle to the dock of 10° and at a velocity no greater than 5 ft./sec.

Communications: A public telephone located at the head of the dock is available for use by ship personnel.

Gangway: The ship's gangway must be used and should be properly rigged and illuminated.

Bunkers and Fresh Water: Bunker C is available in unlimited quantities and is delivered to vessels through an 8 in. or 10 in. line at a maximum rate of 8,000 bbls.p.h.

Fresh water is also available at Norco.

Ballast/Slop Facilities: Ballast and slop facilities are available. The shore storage/treatment tank has a 150,000 bbls. capacity and is connected to the dock manifold by a 14 in. shore line.

FRESH WATER: Available ex-wharf at Shell Oil Co. Berth.
FUEL: Bunker "C" not normally available ex-wharf at Shell Oil Co. Berth.
DENSITY: Fresh water, 1000.
SURVEYORS: Surveyors and Cargo Inspectors available.
STORING: See "Prelims".

1. Yes.
2. Not allowed when loading Grade A and B products.
3. Alongside ship at loading manifold.
4. Yes.
5. Yes.
6. Yes.

SHIPMASTER'S REPORT: February 1979.
Restrictions: Not allowed to take bunkers, lub oils or stores from dock while alongside. Large tankers often require 2 tugs pushing all the time to keep them alongside, especially when river is in flood. This at GATX No. 4.
VHF: Standby on Channel 13 during pilotage and when anchored. Agents normally place walkie-talkie aboard for their direct communication.
Berthing: Always starboard side to. Forward will have 2 backsprings to jetty, 4 headropes, 2 breasts to buoys, lashings not required, same aft. Only one boat used and secures the bow first.
Telephones: Not available at GATX No. 4 but there is one on next jetty upriver.

AUTHORITY: General American Tank.
Shell Oil – Shell Chemical, Norco Manufacturing Complex, P.O.Box 10, Norco, Louisiana 70079.

GRAMERCY (including Garyville and Pauline), Louisiana: 30.03 N. 90.41 W.

DOCUMENTS/PILOTAGE: For all general information, refer to "New Orleans".
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Miami Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
TUGS: Available if required; normally not used.
BERTHING: Colonial Sugar Refinery: Berth 600 ft. long, 40 ft. depth. Kaiser Aluminium and Chemical Corp: Berth, 40 ft. depth.
TANKERS: *Garyville:* The Marathon Dock is located on the right ascending bank of the Mississippi River, approximately 145.4 miles above Head of Passes (AHP). It consists of 2 separate berths fitted with quick connecting hydraulic chicksan arms for cargo transfer and quick release hooks on all mooring points.

Each dock is equipped with an emergency stop at the chicksan arm assembly.

Cargo Handled and Shore Installations: Both docks handle asphalt, No. 6 fuel oil, unleaded gasoline and No. 2 diesel oil. Each dock can effect the transfer of No. 6 fuel oil through 2×16 in. arms, No. 2 diesel oil through 2×16 in. and/or 3×12 in. arms, unleaded gasoline through 2×12 in. arms and asphalt through a 1×16 in. arm. All cargo is transferred to or from storage tanks 1 mile away through 16 in. to 24 in. shore lines.

Docking: The River Pilot normally docks vessels at these berths; docking is strictly starboard side to. Vessels of 600 ft. LOA or greater are required to use 2 tugs for assistance in docking and undocking; smaller vessels may use a single tug.

Approach to the docks is made with the vessel stemming the current at slow speed. Tugs assist in positioning the vessel alongside.

The Marathon Terminal requires that vessels use 2 head wires or 4 synthetic head lines, 3 forward spring lines (wire or synthetic), 2 spring lines aft (wire or synthetic) and 2 stern wires or 3 stern ropes. All mooring points are equipped with quick release hooks.

Communications: Public telephones are available for use by ship's personnel.

Gangway: The vessel's gangway must be used and should be properly rigged and illuminated.

Bunkers and Fresh Water: Bunker C and diesel fuel are available on request; however, no bunker barges are allowed alongside a vessel docked at either berth.

Ballast/Slop Facilities: Ballast and slops can be received by the docks in limited quantities.

FRESH WATER: Available ex-wharf.
FUEL: Not available.
DENSITY: Fresh water, 1000.

SHIPMASTER'S REPORT: December 1979.
Port: Pauline.
Location: 3 miles up river from Gramercy at St. Elmo Point.
Anchorage: A waiting anchorage is situated 2 miles down river from the elevator at Grand View Reach.
Tugs: Available from Gramercy.
Berth: Peavey Grain Elevator. Depth of water alongside is 60 ft. Loading rate with one spout is 1,000 t.p.h.

The berth is a concrete pier on steel girders with 4 weak fenders. Spring lines are run to the pier, and head and stern lines to dolphins.
Fresh Water: Available from pier, rate 6 t.p.h. (approx.)
Fuel: Not available from quay.
Services: Provisions available from New Orleans, will be delivered by launch from Gramercy as pier can only be reached on foot over a catwalk 700 ft. long including stairs.

AUTHORITY: South Louisiana Port Commission, 152 Belle Terre Boulevarde, P.O.Box K, Laplace, Louisiana 70068. *Tel:* (504) 652-9278, 568-6269. *Telex:* 58364 Nln. *Contact:* Ray J. Matherne, Director.

GRAYS HARBOR, Washington: 46.55 N. 124.08 W. (See Plan)

DOCUMENTS, etc.: Refer to "Tacoma".
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
PILOTAGE: A vessel approaching requested to give 24 hours advance notice of arrival to Grays and Willapa Pilots through Everett Radio, KLB which runs on a calling frequency of 500 kHz and VHF Channels 6, 8, 12 and 16. Pilot boat, "Mercury", 65 ft. long, with an 18 ft. beam, powered by a 330 h.p. GM diesel engine. "Mercury" moored at Westport Fishing Basin, and delivers Pilots to vessels outside Grays Harbor Bar.
ARRIVED VESSEL: Vessels must be inside Grays Harbor Bar to be considered an "arrived vessel".
ANCHORAGES: No specific areas in Grays Harbor have been designated as anchorage grounds. The best area is Southward of Sand Island Shoal in depths of 35 ft. to 40 ft.; the holding ground is good.
RESTRICTIONS: Bar Channel and Approach Channel, depth 30 ft. MLLW. Mean tidal range about 10 ft.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Seattle Quarantine Station.
BERTHING: 6 wharves in port dock. Depths alongside from 15 ft. – 35 ft.
BULK CARGO FACILITIES: 1 bulk cargo berth, 1 Ro/Ro berth. No liquid chemical or LPG berths. One berth with container capability.
STEVEDORES: 20 local gangs. Additional gangs imported if required.
HOLIDAYS: See "Tacoma".
MEDICAL: All medical facilities available. Local hospital.
DENSITY: Salt water.
FRESH WATER: Available at all wharves.
FUEL: Available at berth or anchorage. Capacity of barge 15,000 bbls.
GANGWAY/DECK WATCHMEN: Required only if detainees aboard.
CUSTOMS ALLOWANCES: No definite quantities prescribed; reasonable allowance at discretion of Customs Inspector.
AUTHORITY: Port of Grays Harbor, P.O.Box 660, Aberdeen, Washington 98520. *Tel:* (206) 533-9530. *Contact:* Henry E. Soike, General Manager.

GREEN BAY, Wisconsin: 44.32 N. 88.02 W. (See Plan)

For important general information refer to St. Lawrence Seaway.
DOCUMENTS: No special documents required. All necessary Customs and St. Lawrence Seaway documentation should be accomplished prior arrival.
PILOTAGE: Pilot not compulsory although some Masters prefer Pilot aboard. Pilot boards prior to arrival.
CHANNEL: From Grassy Island, outside mouth of Fox River, to C&NW Railway bridge, channel is maintained 24 ft. below low-water-datum (576.8 ft. above Father Point, Quebec) and 300 ft. width except through bridges. Above C&NW Railway bridge channel and turning basin is maintained at 20 ft. below low-water-datum. From Grassy Island lakeward channel maintained at 26 ft. below low-water-datum varying in width from 300 ft. to 500 ft. for approximately 8 miles. 24 ft. deep turning basin maintained at confluence of Fox River and East River opposite Leicht's North Dock. Currents will flow up and down river and will influence channel depths at times. Present high-water will add 2-4 ft. to channel depths.
RESTRICTIONS: Entry may be made at any time of day or night subject to Master's discretion.
MAX. SIZE: Subject water depths and width of bridge openings.
HEALTH: See "Health: all Ports" before first U.S.A. port (Albany). Illness reports made to Chicago Quarantine Station.
Pratique may be obtained prior to entry of St. Lawrence Seaway. Suspected disease should be reported locally.

Rat guards required on all lines.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
RADIO: Ships' Agents located at Milwaukee and Chicago, ETA should be directed accordingly.
TUGS: Join vessel at any designated point. Charges should be obtained from tug operators. Use ship's lines.
BERTHING: General cargo at Leicht's North Dock, 1,500 ft. length, full channel depth. Discharge by ship's gear and shore based equipment. Bulk cargo handled at several docks.
CRANES: Shore based lifting devices to 20 tons. 100 ton stiff-legged derrick available for heavy cargo.
BULK CARGO FACILITIES: Available at several places for coal, salt, fertiliser, chemicals, liquid cargo, stone, pig-iron, etc.
BRIDGES: No bridge opening restrictions for railroad bridges. Highway bridges permit vessels of 300 tons or over to transit at any time. However, heavy land traffic occurs about 0730 – 0830 hrs., 1145 – 1315 hrs. and 1630 – 1730 hrs., and co-operation of Masters is urged during these times so that city bridges may remain closed.
STEVEDORES: Services performed by Leicht Transfer and Storage Co. and arrangements should be handled by ship's Agent or directly with Leicht's.
MEDICAL: Subject to regulations of U.S. Customs and Immigration and St. Lawrence Seaway Authorities. 3 excellent hospitals.
TANKERS: The major oil companies have facilities. Limited only by harbour dimensions.
DENSITY: Fresh water.
FRESH WATER: Available through ship's Agent and water company.
FUEL: Fuel oil available in any quantity. Normal fire precautions.
SURVEYORS: Available through ship's Agent.
GANGWAY/DECK WATCHMEN: Available at ship's option.
OPENING/CLOSING HATCHES: By stevedores.
REPATRIATION: Available through local Immigration officials.
CONSULS: No consuls. Nearest are at Milwaukee, Chicago, and Minneapolis.
REPAIRS: Topside and engine repairs available. Complete repair service available at Sturgeon Bay, 45 miles North.
DRY DOCKS: No local facilities. Available at Sturgeon Bay, Wisconsin.
AIRPORT: 8 miles from port. Served by regular airlines with over 30 flights daily.
TIME: Central standard time. Central daylight saving time in effect from the last Sunday in April to the last Sunday in October.
HOLIDAYS: January 1st (New Year's Day), May 31st (Memorial Day), July 4th (Independence Day), 1st Monday in September (Labor Day), Last Thursday in November (Thanksgiving Day), December 25th (Christmas).
POLICE/AMBULANCE/FIRE: Police: Green Bay – Administrative calls 436-3800, Emergency 911, Sheriff 911, Ambulance 432-0305, Fire Dept. Rescue – 911, Fire: 911.
TELEPHONES: On board service. Contact Wisconsin Telephone Co.
SERVICES: Tank cleaning, fumigation, waste disposal, chandler.
SHORE LEAVE: Permitted.
IDENTIFICATION CARDS: Proper identification should be carried.
DELAYS: Expect no delays for berthing or harbour movement.
DEVELOPMENTS: Authorisation has been given for a 27 ft. channel.
AUTHORITY: The Port of Green Bay, Brown County Board of Harbor Commissioners, P.O.Box 1600, 305 E. Walnut Street, Green Bay, Wisconsin, 54305. *Tel:* (414) 436-3265. *Contact:* John A. Seefeldt, Port Director.

GULFPORT, Mississippi: 30.21 N. 89.05 W. (See Plan)

DOCUMENTS: See "New Orleans".
PILOTAGE: Compulsory from Outer Sea Buoy to docks, provided by Gulfport Pilots Association, arranged through Agent. Pilot boards at Sea Buoy.

Pilot boat has red hull, white superstructure with "Pilot" in black lettering. When pilot boat is underway, contact can be made by VHF Channel 16.
RESTRICTIONS: The Gulfport Channel is 12 miles long running between Ship Island and Cat Island. Channel is 225 ft. wide and has a minimum depth throughout of 30 ft. at MLW. Harbour is dredged rectangular basin about a 0.25 mile wide and 0.5 mile long, this area being protected by piers. Depth in harbour and along wharves is 30 ft. with a 2.5 ft. tide variation. No entry restrictions as to time.
MAX. SIZE: Length of vessel is restricted to approximately 900 ft. by turning basin, no breadth restrictions.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Miami Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
RADIO: Gulfport Radio KNBB 777 – VHF Channel 16. Continuous service.
TUGS: 2 tugs available but not required unless requested to assist in berthing.
CARGO HANDLING: 4 gantry banana terminal capable of unloading 16,000 boxes per hour. 50,000 sq.ft. transit shed refrigerated facility.

Multi-purpose 35 tonne container crane in operation. Ship's gear usually used but mobile cranes available with 48 hours' notice.
STEVEDORES: Must have 12 hours' notice to arrange stevedore gangs. Normal work day 0800 – 1200 hrs., and then 1300 – 1700 hrs. Monday to Friday.
MEDICAL: No advance notice required for medical attention, doctor and hospital care readily available.
FRESH WATER: Fresh water is available. Rate 10 t.p.h.
FUEL: Bunker service available.
DENSITY: Brackish.
GANGWAY/DECK WATCHMEN: Port guards.
CONSULS: Many countries have consuls within a 100 mile radius of Gulfport.
REPAIRS: Most deck and engine repairs could be arranged within port facilities.
SURVEYORS: Available from Mobile or New Orleans.
AIRPORT: Gulfport Municipal Airport is approximately 4 miles from the port and served by regularly scheduled airlines.
REPATRIATION: Can be arranged.
TIME: The Port of Gulfport is on Central Standard Time, GMT minus 6 hours; clocks are moved ahead 1 hour during Summer months.
HOLIDAYS: United States national holidays are observed, cargo work can be arranged on these days at a penalty time.
POLICE/FIRE/AMBULANCE: Telephone number for all emergency services is 911.
TELEPHONE: Can be placed aboard only by special arrangement; not normally available.
DEVELOPMENTS: A 30 ton gantry crane is to be erected at the West Pier Container Terminal in Spring 1986.
AUTHORITY: Mississippi State Port Authority at Gulfport, P.O.Box 40, Gulfport, Mississippi 39501. Street Address: Corner Highway 90 and 30th Avenue (Shipping). *Tel:* (601) 865–4300. *Contact:* William J. Duke, Port Director.

HAINES, Alaska: 59.15 N. 135.25 W. (See Plan)

In Lutak Inlet. Located 5 miles N.W. of Haines. Open all year.
APPROACHES: Lynn Canal to Lutak Inlet.
DOCUMENTS: See "Anchorage, Alaska".
PILOTAGE: Pilot pick-up point located in vicinity of Point Retreat.
ANCHORAGE: Lutak Inlet.
MAX. SIZE: Harbour depth 36 ft. at zero tide. Tides: Diurnal range 16 ft. Also see "Berthing".
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Anchorage Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
CUSTOMS: Quarantine, Immigration and Customs locally.
TUGS: 3 available.
BERTHING:

1. Haines dry cargo dock can be secured by request through City of Haines (Telephone: Area code 907 number 766-2231). Berthing length – 967 ft. and an open surface of over 300 ft. in width. Depth at face of dock – 36 ft. MLLW. No covered sheds, 6 acre open staging area. Crane may be available. Continuous to 300 ft. Alaska State Ferry facility.

Ro/Ro cargo facility at N.W. end of Dry Cargo Dock.

2. Schnabel Lumber Co. Dock: Berthing length – 640 ft. long and 80 ft. wide. Depth at face of dock – 45 ft. No covered storage. Open storage. 35,000-ton capacity for bulk cargo storage. Chip loader with 350 t.p.h. capacity. Crane available.

STEVEDORES: 4 gangs.
REPAIRS: None.
FRESH WATER: Available in small quantities in temperate seasons only.
FUEL: None.
MEDICAL: Doctor/dentist available.
TRANSPORTATION: Air, ferry. Haines Highway principal route connecting Southeast Alaska with the Alcan Highway leading to the interior of Alaska and Canada.
AUTHORITY: City of Haines, P.O.Box 576, Haines, Alaska 99827. *Tel:* (907) 766–2231, 766–2448. *Contact:* Larry Monroe, Harbour Master.

HAMPTON ROADS DISTRICT, Virginia: (See Plan)

NORFOLK, 36.51 N. 76.19 W.
NEWPORT NEWS, 36.59 N. 76.26 W.
PORTSMOUTH, 36.50 N. 76.17 W.

DOCUMENTS:

3 copies Cargo Manifest (Forms 1302), the original showing all cargo on board, and 2 copies showing only cargo for this port.
2 copies Crew Manifest (curio list).
2 copies Stores List.
2 copies Passenger List (Form I-418).
2 copies Crew List.

Customs Boarding Officer will also examine ship's Register and Load Line Certificate. In addition, the following documents will be required for formal entry to be made within 48 hours of arrival from abroad, or 24 hours of arrival from a United States port:

Health Pratique.
Master's Oath (Customs Form 1300).
All foreign clearances.
U.S. Certificates of payment of Tonnage Tax (Customs Form 1002).
Certified Crew List.
F.M.C. Certificate of Financial Responsibility.

PILOTAGE: Compulsory; is generally arranged through port Agent. Vessels approaching port may use VHF telephone, Channel 16, radio telephone 2738 kHz. Advance notice of 24 hours is required of ETA. Pilot Lookout Tower located at Cape Henry, Virginia, the entrance to Chesapeake Bay.

The Virginia Pilot Association can be contacted by telephone at (804) 496-0995. Pilot monitors tower VHF-FM Channel 11 and VHF-FM Channel 16.

ANCHORAGES: 4 deep draft anchorages have been dredged at Hampton Roads. Two of the anchorages at Sewell's Point, one of which was dredged to 45 ft. and the other to 40 ft. The other 2 anchorages at Newport News are each 40 ft. deep.

Additional deep draft anchorages exist in the protected waters of the Chesapeake Bay at Cape Charles and Lynnhaven. These 2 anchorages, located near the entrance to the Hampton Roads harbour, have a water depth ranging to 47 ft. and can accommodate approximately 120 additional vessels. In addition, the inner harbour anchorage areas of lesser depth can accommodate up to 40 vessels.

Anchorage Regulations: A change in U.S. Coast Guard regulations permits colliers and other bulk carriers, such as grain ships, to use the Big Stone Anchorage in Delaware Bay. Previously, the anchorage was open only to oil tankers. The new rules are advantageous to super colliers that are able to carry up to 150,000 tons, taking advantage of the anchorage's minimum natural depth of 55 ft. The super colliers then can be partly loaded up to about 90,000 tons, at Hampton Roads, Virginia, and topped off at the Stone Anchorage by two 30,000 ton barges.

RESTRICTIONS: Ships entering Hampton Roads from the sea follow a course between the Virginia Capes, across the lower end of Chesapeake Bay via Thimble Shoal Channel into the deep waters of Hampton Roads.

2 improved deep water channels extend through Hampton Roads. One channel, 19.6 miles long, extends Southward into Norfolk, Portsmouth and Chesapeake via the Elizabeth River and its Southern Branch. The other channel, 4.8 miles long, extends Westward to Newport News and thence up the James River, 68 and 90 miles, respectively, to the ports of Hopewell and Richmond.

The present project depth from the Virginia Capes to a point just South of the NW Railway coal piers at Lambert's Point is 45 ft. A 40 ft. channel extends from the coal piers to the NW Railway Bridge on the Southern Branch. Beyond this point a 35 ft. channel extends 4.6 miles to a point 0.8 miles above the Interstate 64 Bridge where the channel connects with the Atlantic Intracoastal Waterway route through the sounds of North Carolina to the South Atlantic Coastal states.

The Eastern Branch Channel has an authorised depth of 25 ft. from its junction with the Southern Branch to the NW Railway Bridge at the Ford Plant, a distance of 2.5 miles.

The Channel to Newport News project depth is 45 ft. over a width of 800 ft.

Thimble Shoal Channel is 1,000 ft. wide and 45 ft. deep.

The width of Norfolk Harbour Channel is 1,500 ft. from its outer end to a point opposite the Norfolk International Terminals; thence, 800 ft. to the NW Railway Coal Piers; thence, 750 ft. to the junction of the Eastern and Southern Branches; thence, up the Southern Branch 450 ft. wide to the Belt Line Railroad Bridge; thence, 375 ft. wide for one mile to the NW Railway Bridge; thence, 250 to 500 ft. wide to its junction with the Atlantic Intracoastal Waterway route.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Washington, D.C. Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Radio-telephone communications in the Hampton Roads area are furnished by the Chesapeake and Potomac Telephone Company of Virginia. A regular ship-to-shore channel transmits to ship on 2538 kHz and the ship returns the call on 2142 kHz. A "day-time" ship-to-shore channel transmits to ship on 2450 kHz and the ship returns the call on 2366 kHz. In the very high frequency band, "XY" ship-to-shore is available which transmits to the ship on 161.9 MHz and the ship returns the call on 157.3 MHz. A second "day-time" ship to shore channel transmits on Channel 20 and monitors Channel 16.

TUGS: Tugs are arranged for by the vessel's Agent according to ETA information. The required number of tugs and the horsepower are determined by the assigned tonnage, handling characteristics and final berth destination. Should vessel be unable to manoeuvre normally, Master to advise the Agent and request additional tug power. There are 17 tugs with horsepower up to 4,300 available in the port.

BRIDGES: Sufficient clearance at all times.

BULK HANDLING FACILITIES: Grain: *Norfolk:* Cargill Inc.: One berth. Length 500 ft. depth 39.5 ft. (41 ft. at HW), airdraft 55 ft. 2 Peco gantry shiploaders with combined loading rate of 60,000 bushels per hour. Storage for 6.8 million bushels of grain and shed for storage of 15,000 tonnes of soyabean meal and/or bulk products.

Continental Grain Co.: Length 1,035 ft., depth 40 ft., airdraft 42 ft. 3 shiploaders can load at rate 80,000 bushels per hour and a marine leg can unload barges at rate of 20,000 bushels per hour. Elevator storage capacity 3,300,000 bushels.

Coal:

Newport News: Pier No. 14, 2 berths, 1,090 ft. long, max. airdraft 47 ft. 45 ft. depth. 2×4,500 t.p.h. loading towers; Pier No. 15, 1 berth, 1,000 ft. long and 38 ft. depth. Max. LOA 600 ft. Max. beam 85 ft. Max. airdraft 39 ft.

Massey Coal Terminal Pier 9: Two berths, length 1,200 ft., width 88 ft., airdraft 75 ft., depth 46.5 ft., max. size – LOA 1,000 ft., beam 155 ft., draft 45 ft. Shiploader: Travel 650 ft., max. outreach from fender face 103 ft. Loading rate 6,500 t.p.h. Also see "Plan".

Dominion Terminal Associates: 2 berths. Length each side 1,221 ft. Depth 46.5 ft. Airdraft 79 ft. Max. loading rate 6,500 t.p.h. best 8 hour shift 44,091 tons. Best 24 hour shift 99,840 tons. Max. draft 46.5 ft.

Norfolk: Pier No. 5, 1 berth, 980 ft. long, 36 ft. depth, Max. airdraft 43 ft., 1×1,000 t.p.h. conveyor; Pier No. 6, 2 berths, 1,800 ft. long, 46.5 ft. depth. Max. airdraft 55.5 ft. Loading rate 16,000 t.p.h. – 20,000 t.p.h. max.

TANKERS:

Operator	*Location*	*Length (ft.)*	*Depth (ft.)*	*Remarks*
Amoco	Chesapeake	60	27-29	1×3 ton derrick with 2×45 ft. booms for hose handling. 655,000 barrels storage for gasoline, light fuel oil, bunker C and asphalt.
Minote Man Fuels	Chesapeake	600	14.5	
BP Oil Inc.	Portsmouth	317	30.0	4×8 in. and 5×6 in. pipe-lines. 16 storage tanks, total capacity 410,000 barrels.
Crown Central Petroleum Corp.	Chesapeake	40	30-31	3×6 in. pipe-lines. 8 storage tanks. Total capacity 9 million gallons. Products handled are No. 2 fuel oil and gasoline.
Gulf Oil	Portsmouth	1,020	30-32	1×10 in., 7×8 in., 10×6 in., and 2×4 in. pipe-lines. 20 storage tanks. Complete range of marine fuels.
Exxon	Sewell's Point Norfolk	1,300 (N. side) 1,300 (S. side) Barge berth	40.0 40.0 12-26	1×24 in., 2×18 in., 1×16 in., 2×14 in., 3×12 in., 4×8 in. and 3×6 in. pipe-lines to storage tanks.
Koch Fuels Inc.	Newport News	Tanker Dock Barge Dock	35.0 19-27	1×20 in., 5×12 in., 2×10 in. and 2×8 in. pipe-lines to storage tanks total capacity 520,000 barrels. Products handled are diesel fuel oil, bunker fuels, asphalt, cement and coal tar.
Mobil Oil	Chesapeake	45 ft. Face	36.0	3×12 in. and 4×10 in. pipe-lines with 8 in. Tanker connections. 14 storage tanks – 10 million gallons of gasoline, 6.7 million gallons of kerosene, 9 million gallons of fuel oil, 2 million gallons of diesel oil and 11 million gallons of bonded bunker and marine diesel fuel.
Swann Oil	Chesapeake	50 ft. Face	35.0	1×14 in., 2×10 in. and 2×8 in. pipe-lines to 9 storage tanks (850,000 barrels). 2×10 in. loading arms for off-loading ocean going tankers. Products handled: fuel oil, bunker oils and asphalt.
Tenneco-Cities Services	Chesapeake	200 ft. Face	27.0	2×14 in. and 2×12 in. lines to 6 storage tanks (capacity 350,000 barrels).
Texaco Inc.	Chesapeake	600 ft. Face	32.0	1×12 in, 3×10 in., 4×8 in. 5×6 in. and 13×4 in. Pipe-lines extend to 163 tanks on shore. Products handled: fuel oil, gasoline, lubricating oil and asphalt.
Union Oil Co.	Chesapeake	45 ft. Face	15-20	4×8 in. mechanical loading arms with 10 in. pipe-line. 7 storage tanks (capacity 400,000 barrels). Products handled: gasoline, fuel oil and diesel oil.
Atlantic Energy Inc.	Chesapeake	–	32	Extreme dolphins 800 ft. apart 2 breasting dolphins 125 ft. either side of dock. 1×14 in. line for propane or butane 1×6 in. vapour return line. 1×12 in. hydraulically operated marine arm on dock. Safe working height of arm 55 ft. at MLW. Storage capacity 20 million gallons.

Amoco: The terminal of the Amoco Company is located on the Southern Branch of the Elizabeth River, in Chesapeake, about one mile South of the Norfolk Naval Shipyard. This company has a site comprising 80 acres, with a splendid waterfront, on which are erected a ship and barge pier, pipelines, storage tanks, boiler house, tank-car and truck loading racks, and other facililties requisite to a modern petroleum storage terminal.

The terminal has storage capacity of 705,000 barrels for handling gasoline, kerosene, light fuel oil, bunker C and asphalt.

Vessels carry petroleum products to its terminal from various refineries located in the U.S.A. and from abroad. Petroleum products are also received through the Colonial Pipeline system.

Fuel oil deliveries may be made to vessels at the company's wharf. Deliveries are also made by barge to any section of Hampton Roads, Richmond, various other points in the Chesapeake Bay area and its tributaries. Loading equipment for making such delivery consists of barges with the necessary pumps, hose, flanges and other equipment for making up connections.

Exxon: The Exxon Terminal at Norfolk (Sewell's Point) can handle vessels up to 88,000 d.w.t. Maximum length allowed is 810 ft. and maximum beam allowed is 125 ft. Total maximum draft allowed is 41.5 ft. with a maximum draft forward of 40 ft. Water at this berth is brackish.

Exxon's bunkering terminal is located on the Norfolk side of the harbour 2 miles from the Sewell's Point anchorage.

Exxon operates self-pumping barges which can deliver bunker C fuel oil, marine diesel fuel oil, intermediate fuels and marine gas oil to ships anywhere in the harbour.

Rates for this service may be obtained from the supplier or local shipping agents.

Exxon lubricants are available for delivery to any location in Hampton Roads.

Gulf: The Gulf Oil Terminal at Norfolk can accommodate vessels up to 28,000 d.w.t. Maximum length allowed is 630 ft.; maximum draft allowed is 29 ft. This terminal is located on the Southern Branch of the Elizabeth River on the main 40 ft. ship channel. It has a storage capacity of 800,000 barrels of petroleum products.

Mobil: The Mobil Oil Corporation's terminal is located on the Southern branch of the Elizabeth River. Terminal facilities include bulk storage for 10 million gallons of gasoline, 6.7 million gallons of kerosene, 9 million gallons of fuel oil, 2 million gallons of diesel, and 11 million gallons of bonded bunker and marine diesel fuel.

The Mobil Oil terminal can accommodate vessels up to 32,000 d.w.t. Maximum length allowed is 660 ft. with maximum beam up to 90 ft. Maximum draft allowed is 35 ft. Water at this berth is brackish.

Swann: The Swann Oil terminal complex is located on the Southern branch of the Elizabeth River. This is a deep water port that can accommodate vessel drafts of 35 ft. and lengths up to 630 ft. with beams to 90 ft.

The Company's facility has a storage capacity of more than 550,000 barrels and handles a complete range of industrial fuel oils. The terminal operates around-the-clock and is connected with the Colonial Pipeline system.

Koch: The Koch Terminal is situated adjacent to the C&O Railroad yards in Newport News. It has a storage capacity in excess of 520,000 barrels for handling diesel fuel, No. 2 fuel oil, No. 6 fuel oil, bunker fuels and asphalt.

Products are received into the terminal by tanker and barge. This is a deep water port that is located 24 miles from the sea buoy. Maximum draft allowed is 34 ft. Max. length of vessel allowed is 630 ft. with a beam up to 90 ft.

Limitations from environmental factors on berth operations do not exist. The tidal current sets across the approach. Vessels generally sail at any stage of the tide. Controlling depths in the navigation channel are 45 ft. and at the berth the controlling depth is 33 ft. Flood tide is in a N.W. direction, ebb tide is in a S.E. direction. Current velocities are between 1.1 knots and 1.4 knots.

Equipment available at the terminal to contain oil spills include: 200 ft. of boom, launch, oil snares, and absorbent material. Firefighting equipment on the pier is limited, but includes: 2×150 lb. dry powder extinguishers, and 2×20 lb. dry powder extinguishers. There is no water under pressure on the pier. A public telephone is the only means on the pier used for fire emergencies.

CRANES: 350 ton capacity floating crane operated by Tidewater Construction Corp.

Capacities short tons	Outreach from edge of barge.
350	50 ft.
299	60 ft.
218	80 ft.
154	100 ft.

STEVEDORES: Labour arranged through International Longshoremen's Association.

1. Straight Time – work between the hours of 0800 and 1200 and between the hours of 1300 and 1700 daily except Saturdays, Sundays and holidays.
2. Double Time – hours daily between 0600 to 0700 and 1200 to 1300, 1800 to 1900, 2400 to 0100 hrs. and all Sundays.
3. Time and one-half – shall be all those hours not included above, except holidays.

DENSITY: Average 40% fresh.

FRESH WATER: Available at all berths. Barge service available if required.

FUEL: All grades available at oil company berths. Delivery by barge to all other locations.

GANGWAY/DECK WATCHMEN: Not required unless crew members detained by Immigration.
CERTIFICATES: Cargo Gear Certificate, Derat, Radio, Safety Equipment, and Ship's Register.
CUSTOMS ALLOWANCES: At the discretion of Customs Officers. Normal allowance is 200 cigarettes or 2 lb. tobacco and 1qt. wine/spirits per man. Additional allowances may be given if considered necessary, due to length of vessel's stay in port.
IDENTIFICATION CARDS: Identification required by Immigration for shore passes.
CONSULS: The following countries are represented at Norfolk:

Brazil
Costa Rica
Denmark
Dominican Republic
Finland
France
Germany F.R.
Great Britain
Iceland
Italy
Mexico
Netherlands
Norway
Panama
Senegal
Sweden

REPAIRS: Newport News Ship Building and Dry Dock Company in James River; 5 outfitting piers up to 1,160 ft. length. Floating cranes up to 67 tons capacity. Gantry crane to 900 tons capacity. Other repair facilities and cranes also available.

Norfolk Ship Building and Dry Dock Corporation, situated on East Branch of Elizabeth River. Channel depth 25 ft.; 7 piers equipped for ship's repairs. 4×30 ton diesel locomotive cranes.

Other repair companies in addition.

DRY DOCKS: Norfolk: 1 dry dock 450 ft. long, 57 ft. beam. Berkley plant features the Titan Steel floating dock 950 ft. long, with lifting capacity of 54,250 long tons and second floating dock 670 ft. long, 126 ft. wide lifting capacity 20,000 tons.

Newport News: Dry docks:

	Length inside gate	*Width of entrance*	*Depth of water over sill MHW*
No. 1	649 ft.	92 ft.	33 ft.
No. 2	862 ft.	118 ft.	31 ft. 3 in.

AIRPORT: Norfolk International Airport, and Patrick Henry International Airport at Newport News, over 100 flights daily.
TIME: Eastern standard time, GMT minus 5 hours. Daylight saving time, GMT minus 4 hours, from last Sunday in April to last Sunday in October.
HOLIDAYS: New Year's Day; Lee-Jackson-King Day (3rd Monday in January); Washington's Birthday (3rd Monday in February); Good Friday; Memorial Day (Last Monday in May); Independence Day (July 4th); Labour Day; Election Day (1st Tuesday after 1st Monday in November); Veterans Day (November 11th); Thanksgiving Day; Christmas Day. No work can be arranged on New Year's Day, Labour Day or Christmas Day.
TELEPHONES: Onboard telephones only available at shipyards.
DEVELOPMENTS: *Portsmouth:* Coal terminal to be constructed to handle vessels up to 170,000 d.w.t., draft 55 ft. at one shiploader (rate 7,000 t.p.h.) 60,000 d.w.t. at a second shiploader.

Virginia Port Authority Proposed 1986-88 Capital Outlay Projects:

Newport News Marine Terminal:
  Grading, Paving (C&O Acq.) 17 acres.
  Storage Yard Crane (1).
  Grading, Paving Pier B Yard – 10 acres.
Norfolk International Terminals:
  Dual Hoist Cranes 3×40 tons to be installed.
  Complete (1987) Berth Structure – 1,540 ft.
  T-5 Paving – 10 acres.
Portsmouth Marine Terminal:
  West Waterfront – Demolish Silos and Pave 6.8 acres.
  Storage yard Cranes (4) to be installed.
  High Speed Container Crane to be installed June 1987.

Dredging: Outbound channel to be dredged to approximately 50 ft. Completion expected mid-1988.

4 Passenger Lists.
Customs Documents.
Clearance, Travelling Manifest.
Local Manifests.
Health Documents.
Bill of Health and Vaccination Certificates.
4 Manifests.
4 Bills of Lading.
Ship's Papers.
Certificate of Registration or Enrolment.
Annual Inspection Certificate.
Load-line Certificate.
Derat Certificate.
Drinking Water Certificate.
Radio Certificate and Licence.
4 Store Lists.

PILOTAGE: Pilots boats have VHF. Contact is made on VHF Channel 16, then switch to Channel 12. Pilot service is provided on a 24-hour basis upon suitable advance notice.

At Hilo, Pilot boards on starboard side in position 0.75 mile due East of Paukaa Light. In picking up Pilot, vessels should be on Southerly course with enough speed for steerageway. Special instructions will be given by radio telephone.

At Kawaihae, Pilot station in position 1 mile 287° true from No. 2 Buoy. Pilot usually boards on port side with vessel on course for the entrance at dead slow speed.

ANCHORAGES: No safe anchorages either Hilo or Kawaihae for vessels awaiting Pilot. In this situation, a vessel should heave to or steam. Under good weather conditions, safe anchorage can be had in Hilo Bay. Anchorage is inside pilotage waters and requires local knowledge for safety; vessels should not anchor without Pilot.
RESTRICTIONS: At Hilo, under good weather conditions, vessels with draft up to 32 ft. 6 in. can be handled at any time.

At Kawaihae, vessels with draft up to 33 ft. handled anytime.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Honolulu Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
RADIO: Communicate through RCA or ITT stations in Honolulu.
TUGS: Tugs join vessels at entrance at Kawaihae and at Coconut Island at Hilo. Tug's lines are usually used at no extra charge.
BERTHING: There are many factors which affect berthing at Hawaii Island ports, the most important of which are surge and wind. Vessels should be well equipped with long mooring lines and sufficient additional line to make up 2×900 ft. buoy lines. In all instances, berthing instructions will be given after details concerning vessel and her cargo are received.

Pier No. 1 in Hilo handles bulk sugar vessels and container vessels, 1,220 ft. of berthing space.

Pier No. 3 in Hilo handles tankers, 575 ft. of berthing space.

Kawaihae has one overseas berth which handles both bulk sugar vessels and tankers, 605 ft. of berthing space.

CRANES: Shore cranes available, max. capacity 90 tons.
STEVEDORES: Hilo Transportation and Terminals Co. (Hilo) and Kawaihae Terminals Inc. (Kawaihae).
MEDICAL: All facilities available.
DENSITY: Variable in Hawaii area due to fresh water run-off.
FRESH WATER: Available from county of Hawaii by pipe-line.
FUEL: Can be supplied subject advance notice.
GANGWAY/DECK WATCHMEN: Required for tankers. Other ships as may be necessary due to special circumstances.
OPENING/CLOSING HATCHES: Normally carried out by stevedores.
CUSTOMS ALLOWANCES: 200 cigarettes, 50 cigars per man, and one U.S. quart bottle, wine or spirit.
IDENTIFICATION CARDS: Seamen's passports only required.
REPAIRS: Limited repair service available; almost any type of machine work, welding and ordinary electrical repairs can be handled.
REPATRIATION: Direct air service to Continental United States and to Honolulu International Airport.
AIRPORT: About 1 mile from Port of Hilo and is served by regular airlines.
POLICE/AMBULANCE/FIRE: *Hilo:* Police 9353311; Ambulance and Fire 961-6022.

Kawaihae: Police 8857334; Ambulance 885-7334; Fire 961-6022.

TIME: GMT minus 10 hours all year round.
TELEPHONES: Special arrangements may be made with Hawaiian Telephone Co.
SHORE LEAVE: Allowed.
AUTHORITY: State of Hawaii, Department of Transportation, Harbours Division, Port of Hilo, Hilo, Hawaii 96720. *Tel:* (808) 935-4877. *Contact:* Ian Birnie, District Manager.

AGENT: See "Honolulu".

HOMER Alaska: 59.36 N. 151.25 W. **(See Plan)**

APPROACHES: Via Cook Inlet. Port located at mouth of Kachemak Bay on Kenai Peninsula.

DOCUMENTS: See "Port of Anchorage, Alaska".

PILOTAGE:

(1) Homer Pilots' Association, Radio KTE 21, Tel. 235-8526. Pilot boards 1 mile South of Homer Spit Light on Coal Point.

(2) The Southwest Alaska Pilots' Association serves all ports in Cook Inlet, Prince William Sound, Resurrection Bay, Kodiak Island, the Aleutian Islands, Bristol Bay and Bering Sea. The pilot station for vessels entering Cook Inlet waters is Lat. 59° 36.2′ N., Long. 151° 24.5′ W., approximately 1 mile South of Homer Spit Light on Coal Point. The pilot station cable address is "Homerpilot". The pilot station stands by on VHF Channels 10 and 16, 24 hours a day; call sign "WAB-917 Southwest Pilots". The pilot station also stands by on single side band radio as follows:

8284.4 kHz between 0800 and 1200 hrs. Alaska time, weekdays.
4136.3 kHz between 1300 and 1700 hrs. Alaska time, weekdays.
Call sign "WAB-917 Southwest Pilots".

MAX. SIZE: Harbour depth 40 ft. MLLW. Tidal range 28 ft. (−6ft. to +22 ft.) Max. draft for berthing 30 ft. at MLLW.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Anchorage Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

ANCHORAGES: Kachemak Bay is excellent anchorage for vessels of any size. Foreign vessels may enter bay to anchor, but must have a Pilot aboard to come to dock.

RADIO: Homer Port Radio monitor CB Channel 17. Callsign "KCN 7188 Port of Homer".

VHF: Homer Port Radio monitor Channel 16. Call sign "WAB 935".

TUGS: 1 tug available.

BERTHING: Homer City Dock, 410 ft. long and 50 ft. wide. Limited to draft of 30 ft. 3 privately owned mobile cranes available. Capacity 15, 35 and 70 tons.

410 ft. face with sloping bottom suitable for vessels with 20 ft. draft or less at chine. Inside and outside storage is available for holding and staging. Water, gasoline and diesel are available on dock.

FRESH WATER: Available from the berth.

FUEL: Available for small craft only.

REPAIRS: No facilities for repairs.

MEDICAL: Homer Hospital is a 38 bed hospital with 5 full-time doctors.

EMERGENCIES: Police department and a volunteer fire department are available plus a rescue truck.

AIRPORT: Daily air service.

AUTHORITY: City of Homer, 4350 Homer Spit Road, Homer, AK 99603-8005, U.S.A. *Contact:* Harbour Master.

HONOLULU, Hawaii (including Barber's Point and Pearl Harbour): 21.19 N. 157.52 W. **(See Plan)**

(A) HONOLULU AND PEARL HARBOUR

DOCUMENTS:

4 Crew Lists.
4 Passenger Lists.
Customs Documents.
Clearance, Travelling Manifest.
Local Manifests.
Health Documents.
Bill of Health and Vaccination Certificates.
4 Manifests.
4 Bills of Lading.
Ship's Papers.
Certificate of Registry.
Annual Inspection Certificate.
Load-line Certificate.
Derat Certificate.
Radio Certificate and Licence.
4 Stores Lists.

Vessels scheduled to call at Pearl Harbour are required to furnish 6 copies of crew lists and passenger lists, if applicable, at least 1 working day prior to arrival, for Naval security requirement.

The United States Immigration Service requires that the Master of vessels manned by alien crew members arriving from a foreign port present the United States Immigration and Naturalisation Service's Officer with a current crew list (Form I-418) properly visaed in their possession. An I-94 should be prepared for each passenger prior to vessel's arrival.

U.S. Immigration Department representatives are not stationed at any Hawaiian outports. Customs Officials, however, are stationed at all entry ports and accomplish both Customs examination and Immigration.

The United States Agriculture Service examines and seals ship's stores from restricted ports. Special arrangements for garbage disposal may also be required by this Agency, if for example meat aboard has been purchased in a port where there is a high incidence of "hoof and mouth" disease. All garbage should be disposed of prior to arrival in port.

All regulatory bodies assess overtime charges for services of their personnel if rendered on Saturdays, Sundays, holidays or after hours on week-days.

PILOTAGE: Pilot requested by Agent. Channels 16, 12 and 9, call "WXZ 456". Pilot boat, 37 ft. cabin cruiser, yellow with black striping. Only "H" flag necessary for vessel requiring Pilot. Pilot station, Lat. 21° 16′ 12″ N., Long. 157° 53′ 24″ W., no alternative.

RESTRICTIONS: Entry at any time subject to harbour control signals. 24 hours' notice of arrival is obligatory.

MAX. SIZE: *Entrance Channel:* Depth 45 ft. *Harbour:* Depth 40 ft. Some piers accept no draft greater than 33 ft.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Honolulu Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany). Illness reports made to Honolulu Quarantine Station.

RADIO: VHF Channel 16, call KFQ907, Aloha Tower Harbour Control Station.

TUGS: Tugs normally join vessel within harbour limits. Both ship's lines and tug's lines used depending on conditions.

BERTHING: Berthing given on a "first-come-first-served basis" according to type of vessel and particular requirements as to cargo, bunkering, etc. Must be arranged through a local shipping Agent.

STEVEDORES: Gangs must be ordered 24 hours in advance. General cargo, average load per hour: 15 long tons; average discharge per hour: 15 long tons.

MEDICAL: Agents would like as much advance notice as possible. Complete medical facilities available. Vaccinations in accordance with U.S. Public Health requirements.

TANKERS: 4 tanker berths, max. draft 36 ft. No slop discharge facilities.

Barber's Point: Tanker berths, tugs not normally required. Mooring Master attends berthing procedure. Fresh water not available. Fuel available ex-pipe-line.

Hiri Sea Berth: Effective late November 1986, Hiri Sea Berth will be converted to CALM-type SPM at same location as the 8 buoy mooring. (See "Late Reports").

New Hiri Marine Terminal is designed to handle vessels up to 150,000 d.w.t. using 3 floating hose strings. 2×16 in. hose strings with 12 in. over the rail connections available for crude oil/black products. 1×12 in. hose available for clean products. There is no change to the submerged pipelines to the refinery. Vessel's port derrick is to be rigged to lift the floating hoses.

Terminal designed for max. 150,000 d.w.t., LOA 945 ft. Initial limitations may be somewhat less (100,000-120,000) until operating experience gained. Water depth at buoy is 100 ft. with 2,000 ft. distance to 10 fathom curve on inshore side.

Maximum pumping rate is 32,000 bbls.p.h. per hose at 150 p.s.i. Anticipated max. discharge rate from crude tankers at 150 pound rail pressure is approximately 45,000 bbls.p.h. Loading rate for black products is approximately 12,000 bbls.p.h. max. clean products approximately 10,000 bbls.p.h.

Hiri pump house, "KTD 466", monitors VHF Channel 16 and guards Channel 9 when berth is occupied.

Hiri Mooring Master will board in the vicinity of the marine terminal on arrival, as daylight and current restrictions no longer apply.

Mooring hawser is 16 in. grommet type with standard OCIMF chafe chain 'B' (76 mm.) and 'D' (54 mm.). Pick-up rope is 9 in. polypropylene, 500 ft. long with soft eye. Vessel required to provide suitable messenger, preferably 8 in. mooring line, to workboat from bow for connection to pick-up line.

Equipment provided by vessel to be in accordance with OCIMF standards for equipment employed in the mooring of ships at single point moorings.

Bunkers available from Hiri at marine Terminal, by barge in Honolulu harbour or off port and at piers 29A, 32 – 35 in Honolulu harbour. Products available are MGO, MDO, IF180, bunker C, intermediate grades. Bunker orders: Telex: 7430292. Telephone: (808) 547-3269 or 547-3205.

Pearl Harbour: U.S. Navy Terminal. Max. LOA 800 ft. Max. draft 38 ft. 6 in.

DENSITY: Pure salt water, no fresh water allowance.

FRESH WATER: Delivered via 2.5 in. fire hose with meter on pier. Rate of delivery between 30 t.p.h. and 60 t.p.h., depending on the berth.

FUEL: All U.S. grades available, no advance notice other than establishment of credit.

FIRE PRECAUTIONS: Fire wires required by tankers berthed alongside. Permit required for hot work whilst in port.

GANGWAY/DECK WATCHMEN: Services of watchman recommended, usually arranged by Agent.

OPENING/CLOSING HATCHES: Normally carried out by stevedores.

CUSTOMS ALLOWANCES: 200 cigarettes, 50 cigars per man, and 1 bottle, U.S. quart, wine or spirits.

IDENTIFICATION CARDS: Seamen's passports needed.

REPAIRS: All types of deck and engine repairs possible. Hull repairs below water-line in accordance with dry dock capacities.

DRY DOCKS: Commercial within Honolulu Harbour. Dry dock: 2,800 long ton lifting capacity, 385 ft. long, 56 ft. wide. Floating Dock: Lifting capacity 2,620 tons. Length 200 ft. Width 100 ft. Marine railway: 1,400 long ton lifting capacity, 223 ft. long, 65 ft. wide.

Commercial within Barber's Point Harbour. Dry dock: 7,875 long tons lifting capacity, 516 ft. long, 110.5 ft. wide.

REPATRIATION: All facilities, crews generally leave State within 24 hour period.

AIRPORT: International airport, served by all major airlines, 5 miles from harbour.

HOLIDAYS:

New Year's Day	January 1st or following Monday
President's Day	Third Monday in February
Kuhio Day	Third Monday in March
Good Friday	Friday before Easter
Memorial Day	May 30th or nearest Monday or Friday
Kamehameha Day	June 11th or nearest Monday or Friday
Admission Day	Third Friday in August
Labour Day	First Monday in September
Discoverer's Day	Second Monday in October
General Election Day	First Tuesday after First Monday in November (election year)
Veteran's Day	November 11th
Thanksgiving Day	Last Thursday in November
Christmas Day	December 25th

POLICE/FIRE/AMBULANCE: Police, Ambulance, Fire dial 911.

TIME: GMT minus 10 hours all year round.

TELEPHONES: Telephones can be placed on board at any dock.

SERVICES: All services found in major U.S. ports are available.

CONSULS: The following countries are represented in Honolulu:

American Samoa
Australia
Austria
Denmark
Finland
France
Germany F.R.
Great Britain
Guatemala
India
Indonesia
Italy
Japan
Korea
Mexico
Monaco
Nauru
Netherlands
New Zealand
Norway
Panama
Philippines
Portugal
Sweden
Switzerland
Thailand
Western Samoa

SHIP SUPPLY SERVICE:

Name & Address	*Vessels*	*Services*
Dillingham Tug & Barge Pier 21, Honolulu, HI 96817 (Tel: 5439325)	MOHA, HUKI, MA'A	Ship stores and fuel.
P & R Water Taxi, Pier 40, Honolulu, HI 96817 (Tel: 8412113)	HIKINO, KEOKI	Water taxi, ship stores, spare parts.
Sause Bros., Pier 20, Honolulu, HI 96817 (Tel: 5215082)	Fuel barge, HANALEI	Fuel only.
Uaukewai Diving Salvage & Fishing, Inc. 1750 Kalakaua Ave., #1205 Honolulu, HI 96826 (Tel: 9476881; 7374312)	HUKI NUI, NAHOA	Diving, mooring, ship support service.

Helicopters:

AG Helicopters Inc., Maui, Tel: 878-1202 or 879-1637.

Helicopters Hawaii, Tel: 836-3315.

Jetcopters Inc., 228 Lagoon Dr., Rm. 102, Tel: 839-3001.

Kenai Helicopters, 550 Paiea, Rm. 219, Tel: 836-2071.

M&H Helicopters Inc. (Based at Hotel Inter-Continental Maui Maui) Tel: 879-1601.

Moore's Hawaiian Helicopters Inc., Tel: 623-9862.

Papillon Helicopters Ltd., Hanalei, Kauai, Tel: 826-6591; Kapalua, Maui, Tel: 669-4884.

Paradise Helicopters Ltd., Tel: 847-2191.

Royal Helicopters Inc., Tel: 836-2868.

SHORE LEAVE: No restrictions if papers are in order.

DEVELOPMENTS: *Sand Island:* Pier 52 extended 120 ft. to the West, will also be paved.

New container yard at Pier 52/53. Approximate area of 36 acres.

Piers 52 and 53 consist of 1,400 linear ft., draft alongside is 40 ft.

Also see "Max. Size".

SHIPMASTER'S REPORT No. 1: August 1978.

HIRI Seaberth, Barber's Point: Position 21° 16′ 22″ N., 158° 05′ 27″ W.

Operators: Pacific Resources Inc., Honolulu.

Documents:

3 Crew Lists.
3 Store Declarations.
3 Cargo Declarations.
3 General Declarations.
3 Crew's Effects Declarations.
3 Master's Oath of Entry.

Pilotage: In case vessel has received order to berth on arrival, H.I.R.I. Mooring Master boards vessel in a position 3 miles due South of Barber's Point Lighthouse. When approaching Honolulu, vessel must remain South of a line Barber's Point Light/Diamond Head Light and await Pilot from Hawaii Port Pilots' Association. Pilot will then bring vessel to outside anchorage.

Radio Pratique: Not required.

Advance Notice: Refer to Charterer's/Owner's instructions. ETA cables to be sent via San Francisco Radio KFS or KPH since Honolulu Radio Station has closed down.

Communication: H.I.R.I. controller is listening VHF Channel 16, working Channel is 9. Call sign is "KTD 466".

Aloha Tower, call sign "KFQ 907" is listening Channel 16, working Channel is 12.

Tugs: While vessel in berth a workboat is continuously standing by.

HIRI Seaberth/Mooring: Mean depth in the berth is about 40 m.

Repairs: Minor repairs are possible through workshops in Honolulu.

Supplies/Services: Provisions, stores, laundry available. Stores, etc. cannot be loaded on the ship while in the berth, vessels usually receive same off Honolulu.

Fuel and marine diesel oil available and can be loaded in mooring berth after discharge operations are completed.

In this vessel's case, however, vessel was berthed in Honolulu at Piers 30/31 for the purpose of bunkering and storing. Fresh water is available alongside piers. Crew changes are possible, shore leave is possible. The launch from Barber's Point to Honolulu Pier 10 takes about 2.5 hours.

Weather/Wind: The Hawaiian Islands are dominated in all seasons by the N.E. Trade Winds, which are present about 75% of the time. The average velocity is 12.5 m.p.h. They rarely exceed 20 m.p.h., however, gusts of 100 m.p.h. are possible. October to April is the "Kona" season which refers to occasional storms from the South. During these storms heavy rainfall and cloudiness can be expected. The average temperature is between 24° – 28° Celsius.

Tides/Current: The predicted times and heights of high and low water are published for Honolulu. The rise of tide is only 1 – 2 ft. Strong winds may effect the tides. Velocity of current is 1 – 2 knots, mostly setting in Westerly direction, however, counter-currents have been observed.

References: B.A. Chart Nos. 1308, 1378. List of Lights Vol. G; Coast Pilot No. 62 Vol. 3.

SHIPMASTER'S REPORT No. 2: August 1977. Also see "Tankers".

Barber's Point Sea Berth: Entering Inwards: Hawaii being a full State, the entering documentation and procedures are as for any mainland USA port. It is important to note however, that under normal circumstances the vessel proceeds to a point 3 miles South of Barber's Point Lighthouse, where the Mooring Master and his Assistants join and tugs attend. The official boarding party will not, therefore, board until *AFTER* vessel is securely moored. This does not apply to a Coastguard Officer who comes with Mooring Master (or Pilot, off Honolulu) and who *MUST* be satisfied that his requirements have been met, before vessel is allowed to anchor, berth, enter port etc. (see Coastguard Regulations).

In the event that the vessel is unable to berth for a few hours an anchorage can be obtained to the Eastward of the H.I.R.I. Berth and Southwest of S.O.C.A.L. Berth. If, however, there is to be a delay of some 24/48 hours, the vessel has to be anchored in the appropriate *recognised explosives anchorage* off Pearl Harbour. This will require the services of a Honolulu Pilot and possession of US Charts (B.A. Charts are small scale and do not show the anchorage areas with sufficient detail). This berth is but 7 cables from the surf line, though the new airport runway embankment acts as a perfect Radar distance guide at all times. It is preferred for inward clearance, being but 3.5 miles from the Customs Pier, whereas H.I.R.I. Berth is 13.5 miles along the coast and takes 1 hour in a normal launch. In view of the problem of Southerly winds (a 16,000 ton T2 tanker grounded recently, while trying to enter Honolulu Harbour), it is important that any vessel at anchor is kept ready to weigh anchor and sail to seaward, to avoid any danger of dragging ashore.

Note: Vessels must *not* cross the limits of Honolulu Harbour while awaiting the Pilot and are further delayed when the Coastguard boards to inspect vessel's emergency steering and power systems, log book entries and other items as required.

Communications: Honolulu has an excellent network of public and private radio communication stations. The US Coastguard (Channel 16, 14 and 12) have an excellent range, while the various Agents offices have their own units for direct contact, in normal hours. On Channel 27 there is the Marine Operator which is a local private organisation that can connect a vessel via satellite telephone to any part of the world, as well as to Agents out of hours. However, they will require the Agent's "BANKER NUMBER" i.e. the coded number that will settle accounts locally, hence it is best to obtain this first from Agent.

N.B. The misuse of Channel 16 will bring Coastguard Authority down on any vessel breaking the code of conduct.

Bunkers and Fresh Water: No fresh water is available at Barber's Point.

Stores: A full range of provisions and dry stock is available and most deck or engineer's stores can be obtained from either the ship chandler or Dillingham Dockyard (which owns the tugs and is part of Oahu Railway & Land Co., Dillingham Corporation were Agents for the vessel).

When launches have to be used stevedores are employed to load the wire baskets at the pier and at least 2 to hook same to vessel's runner.

Repairs and Reconditioning: There would appear to be very little that cannot be handled or promoted in the mechanical, electrical and electronic fields and agencies exist for most major manufacturers, both U.S. and foreign.

Consuls: There is no longer a British Consul in Honolulu.

Launch service: This can be arranged through the Agents, the usual vessel being licensed for 28 persons only, while a substitute tug was allowed only 12 persons per trip. The cost is $130 per round trip, straight time to the Honolulu Anchorage (+$11.00 Port Fee minimum) and $263 per 2.5 hour round trip straight time to H.I.R.I. Berth at Barber's Point. If there are vessels at both S.O.C.A.L. & H.I.R.I. Berths, the schedule and costs are supposed to be shared and thus the number who can be ashore at any one time is even more limited. All costs are increased on overtime.

Medical Service: In common with most US ports no doctor will attend aboard unless under special circumstances, hence the medical list has to be divided to ensure sufficient fit men are at all times aboard the vessel in case of weather problems, which would cause the launch service to be suspended, or prevent men re-boarding the ship in swell.

Coastguard Regulations: Since the 17 tanker disasters of 1976 in US waters, the Coastguard have been empowered to conduct an off-limits inspection of all laden tankers requiring to enter a US anchorage or port area. This initial survey is to ensure that all the vessels' emergency gear has been tested within 12 hours of arrival and a log entry made of same. This includes steering, lighting, inert gas plant and any safety gear of electrical nature while radar, gyro compass and any such navigational gear must be working and in use together with up to date large scale charts and both International and US Inland Rules 1977 Edition.

He will also require to see the ship's manoeuvring data, squat and trim table and all information regarding draft together with engine movements in answer to telegraph plus internal communication systems. (A proposal is before Congress that all vessels be fitted with US made LORAN C equipment). Until he is satisfied the Pilot is not allowed to take the vessel inside official Port Limits.

After agreeing to allow vessel to enter, the Coastguard Officer remains on bridge to monitor all movements, responses, etc., and will thereafter conduct the anti-pollution survey as laid down in Federal Register Vol. 37 Number 246 Part II of December 21st, 1972. If, however, he is of the opinion that the standard of navigation in response to the Pilot's instructions are such as to constitute a potential hazard to navigation and therefore, to become a pollution risk, he has the authority to prevent the vessel from proceeding inwards and can cause the Pilot to take the vessel to sea or to an anchorage until the defects or bridge organisation plan or engine room responses are satisfactory to again proceed.

(*N.B.* The IYCS Bridge Procedures Guide is an invaluable help with the above in conjunction with the Trials Data).

AUTHORITY: State of Hawaii, Department of Transportation, Harbours Division, Oahu District, P.O.Box 397, Honolulu, Hawaii 96809. *Tel:* (808) 5486255. *Contact:* Captain D. E. Gately, Oahu District Manager.

AGENT: Theo Davies Marine Agencies, Inc., P.O.Box 3020, Honolulu, Hawaii 96802. Head Office: 608 Fort Street (Pier 10), Honolulu, Hawaii 96813. Tel: (808) 531-8531. Telex: ITT 743-0018 Steam, RCA 723-8305 Davs HR. Cables: Dracosteam.

HOUSTON, Texas: 29.45 N. 95.20 W. (See Plan)

DOCUMENTS:
1 Visaed Crew List.
3 Passenger Lists.
3 or more copies of complete Manifests of Cargo for discharge at all U.S. ports.
2 or more copies of Manifest of Cargo for each individual U.S. port.
1 Souvenir List.
1 Stores List.
Ship's Register.
Tonnage Tax.
Load-line Certificate.
Nationality Certificate.
No health document required.

PILOTAGE: Compulsory. Radio to local Agent who arranges Pilot and specifies boarding time. U.S. Coast Guard requires 24 hours' notice in advance of arrival Galveston Bar. Pilot boats and station on VHF Channel 66, Bridge to Bridge is Channel 13 and tugs for docking and off-docking on Channel 14. 3 Pilot boats marked "HP No. 1" – 53 ft., "HP No. 2" – 61 ft. and "HP No. 3" – 106 ft. in length. Pilot boats contacted by light in International Morse code; no sound signal. Pilot taken on board at Sea Buoy No. 1, located 6.7 miles from Galveston. Seldom, if ever, is water too rough for boarding at above location. Anchorage located in Bolivar Roads, 6.7 miles inward from Sea Buoy No. 1.

ANCHORAGES: Anchorage for Houston is only in Bolivar Roads in Galveston, Texas, which has ample space and depth for all Houston bound vessels.

RESTRICTIONS: None with respect to time of day or night, or with state of tide.

Houston Ship Channel Dimensions:

Section of Channel	*Miles*	*Width (ft.)*	*Depth (ft.)*
Bolivar Roads to Morgan Point	25.6	400	40
Morgan Point to Exxon Co. Slip	4.8	400	40
Exxon Co. Slip to Shell Oil Co. Slip	8.8	400	40
Shell Oil Slip to Hunting Bayou	4.6	300	40
Turning Point at Hunting Bayou	0.2	600	40
Hunting Bayou to Sims Bayou Turning Basin	2.8	300	40
Sims Bayou Turning Basin	0.2	1,000	40
Sims Bayou Turning Basin to Wharf No. 15	3.6	300	36
Turning Basin	0.8	250 to 970	36
Total miles	51.4		

MAX. SIZE: Max. 850 ft. long, 115 ft. breadth and 39 ft. draft. Tide minimal, affected primarily by wind only. Should a vessel's draft exceed 39 ft., permission to enter must be obtained from the U.S. Coast Guard.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: International Telephone and Telegraph – ITT – Galveston call letters KLC.

TUGS: Tugs come alongside just off dock or immediately prior to entering turning basin if vessel is to turn, or at Pilot's discretion.

BERTHING: No special requirements other than authority from terminal operator local Agent.

Petty Terminal Corporation (PETCO) Dock: Deep-water shipside terminal located on South side of channel. One ship berth 720 ft. long with water depth of 40 ft. One covered warehouse 100,000 sq.ft. with rail track inside warehouse and on outside concrete apron. Complete services available for discharging and shipping general cargo. Owned by Intercontinental Terminals Company and operated by Petty Terminal Corporation.

Care Shipping Inc.: Located 12 miles East of Houston. Deep-water terminal. Length 500 ft. Depth alongside 38 ft.

Manchester Terminal Company: 3 ship berths – 1,650 ft. in length (including 1 piling cluster).

Served by 1 marginal track and 2 outside tracks behind docks plus loading tracks to all other facilities. Special loading-unloading docks for motor trucks available.

Equipment: 62 lift machines; 7 tractors; 1 towmotor, 30,000 lbs. capacity; 4 sweepers, 3 scrubbing machines.

Manchester Terminal Company also has 18,000 cargo pallets.

New Terminal Warehouse Corporation: Capacity 3 ship berths. Wharf 1,400 ft. long. Open storage areas of 50,000 sq.ft. Covered storage areas of 200,000 sq.ft.

Other Wharf Facilities: In addition to the for-hire terminals Port of Houston has some 43 ship berths plus various barge facilities on the Ship Channel maintained and used exclusively by industries. Most of these facilities are tanker ship berths at the refineries. There are also 4 liquid-bulk terminals for hire: Amerada Hess Terminal and General American Tank Storage Terminals, the latter having 2 separate locations; South Coast Terminals; Robertson Terminals, Inc.

Barbours Cut Terminal: The Port of Houston Authority continues development of its massive intermodal facility. Barbours Cut Terminal represents an investment to date of nearly $160 million. Barbours Cut is located 2.5 hours from open sea where the Houston Ship Channel enters Galveston Bay. The facility is equipped to handle container, Roll-On/Roll-off (Ro/Ro), and LASH services. There are 4 container berths each 1,000 ft. in length, representing 4,000 ft. of continuous quay. The channel is dredged to a depth of 42 ft. Additionally, 8 Paceco Portainers service the 4 container berths. The 4 container berths are backed up by approximately 125 acres of container marshalling are suitable for both grounded and wheeled operations. 11 rubber tyred yard cranes handle the stacking of containers in the container yard.

A Ro/Ro platform is provided for vessels equipped with ramps. There is a 100,000 sq.ft. Ro/Ro transit shed as well as 28 acres of concrete paved open storage for heavy equipment and automobiles. A "U" head pier and mooring dolphins provide for berthing of LASH ships. Additionally, a barge fleeting area and barge mooring dolphins are provided.

There is a container freight station with 55,000 sq.ft. of covered storage and rail service available. A railroad yard or ramp point with 1 lead track, 1 storage track and 2 working tracks provides a facility to unload containers and trailers to and from flat cars. The car capacity on the working and storage tracks is approximately 138×55 ft. long cars.

Container and chassis repair services are available on and off terminal. Container storage areas are available adjacent to the terminal as are automobile storage and preparation facilities.

Bayport Division: A 300 ft. wide by 42 ft. deep Bayport Ship Channel and its 1,600 ft. diameter turning basin connects with the Houston Ship Channel in Galveston Bay and extends approximately 2 miles inland to provide berths for deep-draft tankers and bulk freighters. Petro United Inc., Celanese Corporation, American-Hoechst Corporation and Hudson Oil Company have docks and facilities on the Bayport Ship Channel.

BULK HANDLING FACILITIES:

Public Grain Elevators: Back of Wharves 14 and 15. Capacity 6,000,000 bushels.

Equipped to unload from 110 to 120 cars in 10 hours, or deliver a combined total of 80,000 bushels per hour to 2 ships. 6 mechanical grain trimmers are in use at the Elevator as well as other major equipment including 2 car dumpers and 7 hopper scales of 150,000 lbs. capacity. 2 modern grain truck dumpers can unload up to 30 trucks per hour.

Public Bulk Materials Handling Plant: At Greens Bayou. Loading capacity 1,800 short t.p.h., unloading capacity 1,200 short t.p.h. free digging rate. Fully automatic plant handles dry bulk commodities rapidly to and from ships and barges through the loading and unloading towers, conveyor systems, hoppers, pits, surge bins and scales; with rail and truck facilities and ample ground storage. Rail cars are rapidly moved with large rubber-tyre tractors. These tractors are equipped with two-way radios for instant communication with unloaders. Boom of unloading tower reaches 76 ft. from face of dock, bucket capacity is 12 tons; loading tower boom reaches out 66 ft. from dock face and is equipped with automatic trimmer. Both towers can travel the full length of the dock. Mooring facilities for a waiting vessel have been installed next to existing dock. Also available: a boxcar unloading system (Augermobile), 2 heavy-duty front-end loaders and 4 heavy-duty car shakers.

Elco Shipside Elevator Company: 2,000,000 bushel capacity elevator which loads up to 25,000 bushels per hour to vessels berthing at Dock No. 2 of the Port Authority's Manchester Wharves. Length of berth 650 ft. Depth 36 ft.

Goodpasture, Inc. and Continental Grain Company: Grain elevator with 12,000,000 bushel capacity – 4 ship berths. Also general cargo handling. Max. draft 38 ft. Loading rate 1,000 t.p.h.

Union Equity Co-Operative Exchange: Grain elevator with 6,000,000 bushel capacity, 1 grain berth, 1 lay berth, each 980 ft. long, water depth of 40 ft. for all berths. Loading rate 1,200 t.p.h.

Adams Terminal: Phillips Terminal Company. 2,700 linear ft., capacity 5 vessels. Bulk cargo loading conveyor system rated at 400 t.p.h.; horizontal boom, hammerhead-type clamshell unloader equipped with five-yard ore bucket, rated at 150 to 250 t.p.h.; 2 gantry cranes, capacity 40 tons at 30 ft. radius; Robbins heavy-duty car shakeout; 20-ton truck mounted crane. One D & H gantry crane modified to handle five-yard bucket for bulk ore discharge. 100 t.p.h. Specialists in import and export bulk cargo. Covered storage – 73,000 sq.ft.

International Terminal Corp.: Shiploading Rate 3,000 t.p.h. Depth in turning basin 42 ft. Storage capacity 150,000 tonnes (corn, soya, wheat, etc.).

Jacintoport Terminal: Deep-water shipside terminal located on the North side of the Ship Channel some 15 miles downstream from the Turning Basin.

Three ship berths with water depth alongside the wharf at 32 ft. 24,000 sq.ft. of transit sheds; 60,000 sq.ft. of back covered storage warehouse space, and 300 acres available for open storage. Rail service by the PTRA and Missouri Pacific. 200 igloos provide storage with less than 4° change in temperature year around. 500 cargo pallets. Slip is 4,200 ft. long and 400 ft. wide. 3,600 ft. marginal trackage. Owned and operated by Bethlehem Steel Corporation.

Cargill, Inc.: Grain elevator with a capacity of 5,600,000 bushels. 2 ship berths. Max. draft 40 ft. Loading rate 70,000 bushels per hour to 140,000 bushels per hour.

CRANES: (Capacities 1 ton=2,000 lbs.)
Mobile Crane – Diesel: Capacity 80 tons
Gantry, American Revolver R-25 Electric: Capacity at 65 ft. radius – 50 tons
Gantry, Clyde Whirley, Diesel Electric: Capacity at 45 ft. radius – 30 tons
Gantry, Portainer, Electric: Capacity at 81 ft. reach – 27.5 tons
Gantry, Portainer, Diesel Electric: Capacity at 113 ft. reach – 44 tons
Gantry, Portainer, Electric: Capacity at 140 ft. reach – 30 tons
Stiff Leg Derrick, Electric: Capacity at 50 ft. reach – 75 tons

BRIDGES: Two bridges cross channel, one immediately East of Public Wharf 31, clearance of 135 ft. and the other immediately West of the Shell Terminal, clearance 175 ft.

STEVEDORES: Stevedore, on advice from representative of local Agent, must order labour prior to 1700 for 0700 or 0800 hrs. start the following day. Can order at 0800 for 1000, 1100 for 1300 and 1700 for 1900 hrs. start. Gangs must be ordered prior to 1700 hrs. on Saturday for Sunday or holiday.

MEDICAL: Give sufficient notice to order doctor or ambulance. Numerous hospitals available. Seaman's health certificate required.

TANKERS: No specific requirements for oil carriers with respect to load/discharge lines. Tankers must be gas free to enter turning basin area. 12 tanker berths available

Limitations: Houston Ship Channel Limitations are set by the Pilot Association:

(a) Bolivar Roads to Barbours Cut: 950 ft. LOA, 135 ft. beam, 95,000 d.w.t., 40 ft. draft.
(b) Baytown to Boggy Bayou (Shell Terminal): 860 ft. LOA, 120 ft. beam, 80,000 d.w.t., 40 ft. draft.
(c) Boggy Bayou to Sims Bayoy (Arco Terminal): 750 ft. LOA, 116 ft. beam, 55,000 d.w.t., 40 ft. draft.

Note: For vessels with beam from 105 ft. to 116 ft. no passing traffic above the Shell Terminal at Boggy Bayou.

(d) Sims Bayou to Turning Basin: 750 ft. LOA, 106 ft. beam, 45,000 d.w.t., 38 ft. draft.

Note: For vessels greater than 700 ft. LOA and/or 37 ft. draft daylight transit only.

All dead ships and LPG/LNG vessels greater than 550 ft. LOA daylight transit only through the entire Houston Ship Channel.

Arco/Sims Bayou: General: The Arco Refinery Terminal consists of berths "B" and "C". This terminal is located in the vicinity of Sims Bayou, approximately 48 miles from Sea Buoy.

Mooring and Berth: At both berths 2 or 3 tugs are used for docking, while only 1 is necessary for undocking. The tugs and Docking Master meet the vessel 1 mile below the berths and turn the ship at the Arco Turning Basin for a starboard side berthing. The terminal does not provide a gangway.

Cargoes handled at both berths include crude, gasoline, distillate, lube oil, av. gas, jet fuel, and petro-chemicals. Sizes of cargo hoses are 4 in., 6 in. and 8 in. All cargoes are pumped at 100 p.s.i. Both berths can receive ballast and slops. Only av. gas and jet fuel are handled by a common pipe-line.

Charter International Oil – Traweek: General: The Charter International Oil Company Berth is the Traweek Dock located 49 miles from the Sea Buoy on the Houston Ship Channel.

Mooring and Berth: Tug requirements are determined by the vessel's Master. Vessels are generally turned, if light, in the vicinity of the berth and moored starboard side to. Breasting units keep the vessels directly off the side of the dock. All lines are doubled-up. Long bow/stern leads allow considerable fore and aft movement of the vessel. To counter the movement good spring lines are required. Hooks on shore are secured to 2×1.625 in. wires to a "deadman" on the upper bank. All lines are handled by a workboat. The terminal does not provide a gangway.

Passing ships in the Ship Channel affect vessels at this berth. Strict attendance to mooring lines is essential.

Cargoes handled at this terminal include gasoline, fuel oils, jet fuel, No. 6 fuel oil, and kerosene. All cargoes are transferred through 8 in. lines and hoses at a maximum pressure of 100 p.s.i. Connections at the manifold are made with bolted flanges. Both ballast and slops can be received at this berth.

Crown Central Petroleum Co.: General: The Crown Central Petroleum Co. Berth is located 50 miles from the Sea Buoy on the Houston Ship Channel.

Mooring and Berth: 2 or 3 tugs are used for docking and 1 or 2 tugs are used for undocking. Tugs meet the vessel below the berth depending on existing conditions and turn the vessel prior to docking. No gangway is provided at this terminal.

Cargoes handled at this terminal include distilliate, gasoline, petro-chemicals, heavy fuel oil and crude oil. Petro-chemicals are handled through 6 in. lines at 40 p.s.i. All other products and crude are handled through 8 in. lines with pressures varying between 30 p.s.i. and 100 p.s.i. All cargo hose connections are ASA-type connections. Ballast and slops are received at this terminal.

GATX No. 1 and No. 2 – Galena Park: General: The Galena Park Terminal of GATX consists of 2 berths, No. 1 and No. 2.

Mooring and Berth: 2 tugs are used for both docking and undocking. Vessels are usually turned when in the light condition. The terminal does not provide a gangway.

Cargoes handles at both berths include heavy fuel oil, special petroleum products, solvents, and other clean products. Heavy fuel oils are handled through 8 in. lines only. All other products are handled through 4 in., 6 in. and 8 in. lines. Maximum pumping pressure for all products is 100 p.s.i. All connections are ASA flange connections.

GATX – Pasadena: Mooring and Berth: Tug requirements are determined by the vessel's Master. Vessels are normally turned in the light condition. The berth is close to the Houston Ship Channel and vessels can be affected by passing traffic. Vessels moored at this berth should be well moored and all lines kept taut. The terminal does not provide a gangway.

This terminal handles a variety of products. Crude oil or products requiring heating are not handled by this terminal. All products are handled through 4 in., 6 in. and 8 in. lines at 100 p.s.i. Hose handling may be expected to be slow on account of the limited equipment on the pier.

Hess No. 1: General: The No. 1 Ship Dock of the Amerada Hess Corp. is located 48 miles from the Sea Buoy on the Houston Ship Channel.

Mooring and Berth: Vessel's Master determines tug requirements for docking and undocking. The vessel proceeds past the berth when docking and backs into the berth for a port side berthing. The stern will be approximately 100 ft. from the North bulkhead of the berth. The terminal does not provide a gangway. Gangway placement is critical.

Cargoes handled at this terminal include crude oil, fuel oil, light oil and gasoline. Fuel oil is handled through a 10 in. line at 150 p.s.i. All other cargoes are handled through 12 in. lines at 150 p.s.i. Connections are all "quick connections". There are no ballast or slops storage space at this terminal.

Hess No. 2: General: The Amerada-Hess Corp. No. 2 Ship Dock is located 45 miles from the Sea Buoy on the Houston Ship Channel.

Mooring and Berth: A minimum of 2 tugs are used for docking and undocking. Loaded vessels approach from the channel, normally starboard side to. After discharging the vessel is than turned to seaward. A loaded vessel can be turned should a port side mooring be required. All lines are carried to mooring dolphins by a small boat. A gangway is not provided by the terminal.

Intercontinental No. 1: Mooring and Berth: 2 tugs are required for docking and undocking. The vessel is met by the tugs and Docking Master near Lynchburg Crossing. As the vessel approaches Slough, tugs assist in turning the vessel broadside to the channel and in line with the berth. The vessel is then manoeuvred into the berth. Most vessels are moored starboard side to. A gangway is not provided by the terminal.

Various clean products are handled by this terminal. There are no facilities for receiving ballast or slops.

Oil Tanking No. 1, No. 2 and No. 3: General: These berths are located at the Oil Tanking of Texas Terminal which is 42 miles from the Sea Buoy on the Houston Ship Channel.

Mooring and Berth: 2 or 3 tugs are used for docking and 2 tugs are used for undocking. Vessels docking at Berth No. 1 are turned to starboard for a port side mooring. Vessels are moored head-in, starboard side to in Berth No. 2 and port side to, head-in at Berth No. 3. At Berth No. 2 and No. 3 mooring lines are handled by a launch. Bollards on the outer breasting/mooring platform are fitted with hooks on steel wire pennants so as to be accessible to the boat crew. The terminal can provide a gangway at all 3 berths.

Vessels should use extra spring lines leading aft as there are no stern line leads available. The terminal plans to install a mooring buoy between the platform and the nearer channel line.

Crude oil and clean products are handled at Berth No. 1. Crude oil is the only product handled at Berth No. 2 and No. 3. All cargo transfer lines are 16 in. Connections are made with ASA flanges, reducers are furnished by the terminal. There are no facilities for ballast or slops.

Paktank No. 1 – Deer Park: Cautionary Advice: There is a considerable chance that passing traffic and/or wind could cause a ship exceeding 630 ft. LOA to break away from the berth, which could lead to disastrous consequences with regard to oil pollution.

General: The Paktank Terminal is located at Deer Park which is 36 miles from the Sea Buoy on the Houston Ship Channel.

Mooring and Berth: A mooring buoy has been installed by the terminal to secure stern lines. This mooring buoy is apparently inadequate both from a standpoint of proper location and strength.

2 tugs are normally used for docking and undocking. The vessel is turned into the berth directly off the channel, upbound. A complement of mooring wires and leads are used at this terminal.

Crude oil, petro-chemicals, and various refined petroleum products are handled by this terminal. All transfer hose and lines are 6 in. or 8 in. Connections to the manifold are bolted. Maximum pumping pressure is 100 p.s.i. There are no facilities for receiving ballast or slops.

Shell No. 1, No. 2, No. 3 and No. 4 – Deer Park: General: The Shell Oil Company Refinery is located 42 miles from the Sea Buoy on the Houston Ship Channel.

Mooring and Berthing: When docking at any of the 4 berths at this terminal, 1 or 2 tugs are used. 1 tug is normally used for undocking. Vessels are turned prior to docking for a starboard mooring. The usual complement of mooring lines and/or wires are used at these berths. Constant attention must be paid in keeping proper tension on all lines due to the surging effect caused by passing ships in the channel. Gangways are provided by the terminal at all 4 berths.

Crude oil, No. 6 fuel oil, gasoline, diesel fuel, jet fuel, aviation fuels, and other refined petroleum products are handled at this terminal. All cargoes are transferred through 8 in. lines with bolted connections to the ship's manifold. Maximum pumping pressure for all products is 100 p.s.i. The terminal has facilities for handling ballast and slops.

Warren Gas No. 2 and No. 5: General: The Warren Gas Terminal Berth No. 2 and No. 5 are located 46 miles from the Sea Buoy on the Houston Ship Channel.

Mooring and Berthing: Tug requirements for undocking and docking are determined by the Master. Vessels proceed directly into Berth No. 2 for a port side mooring. A motor launch is used to run wires or lines to the mooring points. Gangways are only provided when requested prior to arrival.

Propane and butane are handled at Berth No. 2 and No. 5. All transfer lines are 12 in. at Berth No. 2 and 16 in. at Berth No. 5. Connections to ship's manifold are bolted. Maximum pumping pressure is 100 p.s.i at Berth No. 2 and 150 p.s.i. at Berth No. 5.

DENSITY: Classed as full fresh but varies with rainfall and tide, usually 4 in. to 5 in. allowance on full draft.

FRESH WATER: Available at all terminals through pipe and hose.

FUEL: All grades and viscosities available.

FIRE PRECAUTIONS: All standard precautions per code of Federal Regulations plus local ordinances. Tankers, unless gas free, not permitted at wharves in the immediate turning basin area.

GANGWAY/DECK WATCHMEN: Not required, but are available and can be arranged by local Agent at Master's request.

OPENING/CLOSING HATCHES: By stevedores only – vessel will be charged for this work if done by crew.

CUSTOMS ALLOWANCES: Tobacco, 300 cigarettes, 100 cigars, 1 lb. of tobacco or combination for each man. Wine and/or Spirit, 1 quart bottle for each crew member.

CARGO GEAR: Cargo gear safety certificate required.

IDENTIFICATION CARDS: Immigration Form I-95 card required.

REPAIRS: All types available.

DRY DOCKS: Todd Shipyard, 12,000 ton dry dock at Greens Bayou and 14,000 ton capacity (length 400 ft.) dry dock in the Houston Ship Canal.

REPATRIATION: Danner Guard Service can handle all phases.

AIRPORT: Approximately 0.5 hours by car; served by regular airlines.

TIME: Central Standard with daylight saving time effective from April to October.

HOLIDAYS: January 1st; January 15th; February 12th; 3rd Monday in February; March 2nd; March 17th; Good Friday; last Monday in May; June 19th; July 4th; First Monday in September; 2nd Monday in October; November 8th; November 11th; 4th Thursday in November; December 25th. When holiday falls on Saturday or Sunday the following Monday will be holiday.

POLICE/FIRE/AMBULANCE: All services provided or available.

TELEPHONES: Currently no arrangements for placing telephones aboard but easily accessible on wharves.

SERVICES: All services available.

SHORE LEAVE: Shore leave granted except when individual not qualified.

DEVELOPMENTS: Channel depths to be maintained at 40 ft.

Bayport development East and South of Morgans Point to have deep draft berths for liquid bulk and general cargo.

Construction to start early 1987 on Berth Nos. 5 and 6 at Barbours Cut.

SHIPMASTER'S REPORT:

Customs:

Bond remained sealed.
2 Copies of Curio Lists.
2 Copies Store Lists.
1 Crew List.

Immigration:

No visit. 1 Crew List.

Agents:

Given Travelling copies of Clearance last port, Tax Tonnage receipt last port plus cargo manifests.

Agricultural Dept. Re-sealed meat and vegetable rooms. Inspected Galley Messrooms, etc. Garbage cans to be covered.

Provisions and Stores. Satisfactory. Select own ship chandler.

Laundry. Facilities available but not used.

Coast Guard. No visit.

National Cargo Bureau: Same as New Orleans.

Watchmen: None placed on board. Security at gate strict.

Telephone: None placed on board. Use dock office.

Fresh Water: Available.

Fuel: Available by barge if required. Do not over stem.

Engineering and Repairs: Efficient and satisfactory. Price high compared to N.Z.

Radio Messages: Send ETA after departure New Orleans to Agents and Houston Pilots with draft. Notify Agents of any explosives.

Stevedores: Hours of work. 0800 to 1200 hrs., 1300 to 1800 hrs., 1900 to 2300 hrs. Weekday gangs will work through meal hours to finish. At weekend, day labour works right through to midnight if necessary on time and a half then double time for meal hours.

Crew must not clean hatches. Labour has claim on cleaning and has to be paid in addition to crew. Crew open and close hatches, but not until hatch foreman present. Not before labour working hours.

Working heavy lifts with ship's gear loading rate very slow, especially at end of shift. Due to nature of deck cargo; 11 ton lifts 52 ft. long. Constant supervision needed for deck cargo.

Head stevedore checks Factory Act Book before starting.

If detailed plan is required for break bulk (general cargo) additional clerk must be ordered.

General: Pilot boards from large grey metal cutter off fairway buoy. Flash every 2.5 seconds. Give good lee and have ladder 8/10 ft. above water with usual manropes, heaving line, etc.

If you have to anchor, most vessels use the Eastern anchorage about 1.5 miles East of fairway buoy and clear of fairway marked channel. Soft mud bottom. Use plenty of cable.

Berth: Ships spaced very close to each other. Rise and fall of tide about 1 ft.

Moorings: at least 4 head lines and stern lines plus 2 springs each end. Ships frequently passing and channel narrow consequently a good deal of surge. Lines to be frequently looked at and kept tight. Parted 3 springs in as many days!!! Gangway also to be watched. General rule is to use ship's gangway. Wide apron in front of sheds with rail lines but fork-lifts used most.

Agents have office on wharf with direct line to city office and outside lines.

Wooden piling which acts as fenders. Bollards of the large cleat type. Sufficient but not plentiful. Two linesmen each end when arriving and departing. No permanent cranes but mobile ones can be hired. Quay about 25 ft. above water.

Recommended not to walk about or up to bus especially at night. Better for 2 or more to get a taxi. Fairly good, 3–4 dollars to Houston.

Seaman's Mission near by. Very good, new and modern.

Tugs: Used for berthing and unberthing. Had 2 on arrival due to strong wind and close proximity of mast top to bridge.

Sailing had 1 tug lashed up alongside forward shoulder.

Tugs use own lines.

Bridge: There is a bridge above Upper Clinton Bend from Manchester on the South to Clinton Park on the North. This is a relatively new bridge to be passed under with a clearance of only 135 ft. Check the rise of tide on way up.

SHIPMASTER'S REPORT: August 1980.

Tenneco Terminal – Vessel discharged ammonia.

Approaches: BA Chart 975.

The safety fairway is usually very busy and it is advisable to ensure that you are in fact keeping to the starboard side.

At the entrance to the fairways there are many oil rigs. With the predominately low lying coast, radar positions are extremely difficult. Satellite navigator is highly useful in this respect. The first good check is off the buoys in the final safety fairway. These showed on radar at about 7 miles.

Some radar echoes are received from Galveston itself.

The charted rigs in anchorage 'A' are in fact in those positions.

Pilotage: If anchored, the pilot boat will call vessel into the "Whistle Buoy" for boarding.

The cutter is a large, fast launch and usually lies inside until working a vessel.

Pilot ladder about 8 ft. from the water to clear the boarding platform.

Contact can be made via Galveston Pilots initially on Channel 16 who will relay the messages. Houston Pilots themselves work on Channel 14.

One Pilot, the length of pilotage is about four hours to the first line ashore. Two tugs used.

No night time pilotage for a vessel of this size (32,000 g.r.t.) and type.

There is a TV video surveillance system operating throughout the length of the channel.

Berth: About 4 miles below Warren Terminal.

Plant and terminal now owned by Occidental (Oxy) but Tenneco rent the berth.

Berth is far too small for this vessel, at least as far as the moorings are concerned. Typical American 'T' barge jetty, the head of which is only about 25 m. long, with walkways leading to 3 dolphins at each end. The bow and stern overlap these mooring dolphins and head and stern lines are taken to posts on the river bank. These are only breast lines and it is advisable to make advance preparations to put out as many as 4 springs at each end. There is a great deal of traffic passing continuously.

Gangway: The gangway should remain stowed until in position. Whether vessel can use the accommodation ladder will depend on draft. If vessel deeper than 26 ft. there will not be sufficient clearance from the fender so a "B.O.T." type gangway resting on accommodation turntable will have to be used.

When the accommodation ladder is used it has to be turned through 120° and landed on the aft dolphin immediately adjacent to the jetty head.

Discharge: 12 in. flexible hose 150 ASA used. 'T' piece, two shore hoses.

Max. back pressure allowed is 50 p.s.i. Vapour return line is 4 in.

The plant ashore is only equipped to export cargo and its reliquefaction plant is small.

A shore walkie-talkie is placed with the officer of the deck.

Discharge rate can vary (October 1979 – 260 t.p.h., August 1980 – 550 t.p.h.).

Shore surveyors figure taken for bill of lading. Density 1001.

USCG: No inspection prior to commencement, apparently this is normal. The port is far too busy for them to visit every ship. But be prepared, they are very particular on navigation equipment and Officers' Certificates and experience.

General: It is possible to load bunkers by barge alongside the terminal if prior arrangements and permission are obtained but it depends on Agent and Authorities.

Fresh water is available from the jetty, at a very low rate.

Storing can present difficulties as the after crane does not plumb the dolphin. By arrangement, vessel can use shore crane when the operation is not too difficult.

Public telephone on dock – minimum charge 25c.

Liferaft service available, 24 hours' service.

A considerable distance from the city, which rather complicates services and communications.

Agents leave a radio onboard for contact with Agent and office, but often outside range, office on maximum range.

No private transport (taxis) allowed into refinery area. Transport to the gate by their own minibus and then telephone for taxi. Crew transport service allowed into berth area with pass from Agent.

AUTHORITY: Port of Houston Authority, P.O.Box 2562, 1519 Capitol Avenue, Houston, Texas 77252-2562. *Tel:* (713) 226–2100. *Telex:* 910–881–5787. *Contact:* Richard P. Leach, Executive Director. J. R. Curtis, Director of Operations. J. C. Green, Deputy Director Port Operations.

AGENT: Strachan Shipping Company, Post Office Box 52490, Houston, Texas 77052. Tel: 713-683-3500. Telex I: 79-1837. Telex II: 910-881-6283. Cables: "Strachan".

HUENEME, California: 34.09 N. 119.12 W. (See Plan)

PORT LIMITS: No laytime boundary. "Arrived Ship" status commences at berth dockside.

DOCUMENTS: See "San Francisco".

PILOTAGE: It is requested that ships entering port stand-by 1 mile off harbour entrance just seaward of the Port Hueneme seabuoy designated "R2" (Fl. R. 4 secs. Bell) and await port Pilot who will board from a tug. The U.S. Coast Guard Station at the Channel Islands Marina maintains a radio beacon. Contact Pilot or "Port Hueneme" on VHF Channel 16, shifting to Channel 14 for working.

All vessels 300 g.r.t. and over or carrying a foreign flag entering, leaving and shifting within the Port of Hueneme, including area of the Oxnard Harbour District, must be piloted by a port Pilot duly licensed to perform the services of piloting vessels within the Port of Hueneme. The Oxnard Harbour District does not maintain Pilots; licensed Pilots are available on a 24-hour-a-day basis from Port Hueneme Pilots' Association (Captain Carl Dingler at (805) 646-0469).

ANCHORAGES: If there is a wait for Pilot caused by weather, visibility, congestion in harbour, or any other reason, the best anchorage area is W.S.W. of the harbour entrance where there are no hazards and there is some protection afforded by the natural curve of the coastline.

RESTRICTIONS: The length of entrance channel is 2,300 ft. The narrowest width of harbour entrance channel is 330 ft. However, because of prevailing fresh winds, this is a one-way channel; thus, deep-draft ships not able to manoeuvre easily in a restricted channel have precedence over smaller craft. Vessels may enter/leave at any time day or night.

MAX. SIZE: Due to the 1,400 ft. 1,200 ft. turning basin, vessels with greater length than 700 ft. requires U.S. Navy permission to enter. Longest vessel berthed in harbour was 826 ft. Vessels draft normally to be 2 ft. – 3 ft. less than water depth.

RADIO: The "Port Hueneme Wharfinger" guards Channel 16 and will normally shift to Channel 14 for administrative purposes. The harbour tugs guard Channel 16 continuously. The harbour Pilots, when expecting a commercial merchant vessel guard Channel 16 voice circuit and voice call "Port Hueneme Pilot".

Tugboat working frequency is VHF Channel 65A (156.275 MHz).

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Los Angeles Quarantine Station.

Ships required to pass quarantine may enter port and moor. "Q" Flag is to be flown. Upon mooring, ship must post gangway watch until ship has passed quarantine. When Port of Hueneme is its port of first arrival in the United States from foreign ports or from States other than California, a ship must be inspected by the Department of Agriculture. There is a local representative in Oxnard. The Oxnard Harbour District will order officials if requested by ship or Agent.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

TUGS: Tug services for Port of Hueneme are furnished by the Oxnard Harbour District, Port Hueneme, California. Requests for tug services may be made to the Executive Director or Director of Operations of the Oxnard Harbour District, who will act as Agent for ship in forwarding them. 3 tugs are available on a 24 hour basis. The tugs are 3,000 s.h.p. single and twin screw vessels. The number of tugs to be used on any movement is determined by port Pilot in charge of the movement. Tugs are not available for deep-sea towing, except in case of emergency to save life or property. As a service to all vessels, the Oxnard Harbour District, acting as Agent for vessel, will pay all tug fees to United States Government when necessary, subject to reimbursement conditions as arranged between the vessel, her Owners, or Agents, and the Executive Director, Oxnard Harbour District. Seldom are tug charges more than the minimum due to the short transit time to berths.

BERTHING: Berthing arrangements should be made with the Director of Operations by Agent as far in advance of arrival date as possible, specifying dates of arrival and sailing, and nature and quantity of cargo to be handled. The Oxnard Harbour District also has a licence agreement with the U.S. Naval Construction Battalion Center, Port Hueneme, for the use of additional berths and terminal facilities on an "as available" basis. Prior arrangements must be made, should use of these additional facilities be desired or necessary. The Port of Hueneme has 4×600 ft. berths with depth 35 ft. MLW and appropriate terminal facilities. At the present time there are 10 deep-draft berths within the entire port area.

Bottom is sand and mud. Mean low water is + 1.5 ft. Height of wharf above the MLLW is 13 ft. 6 in.

CRANES: Many land cranes available which can handle loads up to 100 tonnes in most cases.

STEVEDORES: Stevedore work is presently performed by resident stevedores, the Marine Terminals Corporation and Stevedore Services of America, who also have offices in San Francisco, Long Beach, etc. MTC maintain an office at 111 Ponoma Street, Port Hueneme and SSA at 241 Market Street, Suite 1. They provide modern handling equipment to suit cargo's need. There is no special fixed bulk handling equipment available as yet. Longshoremen are members of the International Longshoremen's and Warehousemen's Union and conform to the Pacific Coast Longshore Agreement. Hours of work are as outlined in this agreement. Longshoremen at this port do all covering and uncovering of hatches and rig the gear. There are 8 gangs available in the port. Day and night gangs for Tuesday through Saturday (except Monday through Saturday, 1900 hrs. initial start) must be ordered by 1500 hrs. the previous day. Night gangs required Monday for a 1900 hrs. initial start, and Sunday and Monday gangs must be ordered by 1100 hrs. Saturday. Cancellation time is same as ordering time, if gangs which have been ordered are cancelled after the aforementioned deadlines, the agreement's 4 hour minimum applies. Normal day shifts begin at 0800 hrs. and normal night shifts at 1800 hrs. Each shift consists of 8 hours and on sailing day 10 hours may be worked by the final shift. There are no obstructions on the wharf to keep all hatches from being worked concurrently.

MEDICAL: Patients are provided with medical attention at the Medical Center, Port Hueneme, or St. John's Hospital, Oxnard California. Temporary visa must be obtained from Department of Immigration and Transportation if a crew man or passenger must remain after the ship sails.

FRESH WATER: Fresh water is available. There are hydrants along the wharves and delivery to ship is effected by hose. Water is good to taste but is hard. It is not suitable for boilers. Contact wharfinger on duty for delivery of water. Boiler feed water is available by truck upon request.

FUEL: Diesel oil and bunker fuel is available by pipe-line at Wharf No. 1 and by truck at all wharves.

REPAIRS: Minor repairs may be made in port. Machine shops in Ventura and Oxnard are qualified for normal voyage repair work.

GANGWAY/DECK WATCHMEN: Gangway or special wharf watchmen are available upon request.

TELEPHONES: 4 pay-telephone booths are located at the West end of Wharf 2 adjacent to the wharfinger's office and 2 at the West end of warehouse No. 2 and maintained for the convenience of ships berthed at Wharf 1. The wharfinger's office has a telephone which may be used by people calling in to contact the ship. This telephone is manned 24 hours a day for convenience. Its number is (805) 488-4615. The Port of Hueneme office telephones are available to ship's officers and Agents for local calls or collect long distance calls. Wharf lines permit a telephone to be installed at a nominal charge if desired by Agent.

HOLIDAYS: U.S. Federal and State holidays are observed by the Port and Terminal management. If stevedoring is required on holiday it is performed in accordance with the International Longshoremen's and Warehousemen's Union-Pacific Coast Longshore Agreement.

DEVELOPMENTS: Wharf No. 2 may be extended by 700 ft. Eastwards.

AUTHORITY: The U.S. Navy (Commanding Officer, U.S. Naval Construction Battalion Center) exercises overall Port Control Authority; the Oxnard Harbour District is solely responsible for its commercial operations.

Port of Hueneme, Oxnard Harbour District, P.O.Box 608, Port Hueneme, California 93041-0608. *Tel:* (805) 488-3677. *Contact:* Edward J. Millan, General Manager. Robert K. Harmuth, Director of Terminal Operations.

HUNTINGTON BEACH, California: 33.38 N. 118.00 W. (See Plan)

LOCATION: Approximately 1.3 miles off Huntington Beach as shown on United States West Coast California San Pedro Channel Chart 18746, published by the U.S. Department of Commerce National Oceanic and Atmospheric Administration.

A lighted Bell Buoy "2HB" is located 2,242 ft. from the spare buoy at the Western approach to the Seaberth. It is a private aid to navigation and is shown on the above chart.

PILOTAGE: Mooring Master will board the vessel in the Los Angeles area for an inspection and acceptance of the ship's mooring facilities. He may accompany this vessel, after agreement, to the Seaberth. On repeat visits, he may join vessel at Seaberth area.

RESTRICTIONS: In addition to max. size, wind force, wave height and direction in conjunction with mooring lines, sizes, place limits on conditions for remaining in the mooring. When these conditions are approached or predicted the vessel will return the submarine hose to the seabed after flushing, as necessary, to avoid damage to the crude unloading facilities. The determination of these limitation conditions is made by the Mooring Master in conjunction with the Terminal Supervisor.

MAX. SIZE: Length 1,000 ft., beam 150 ft., draft 43 ft.

TUGS: A mooring vessel will run the ship's lines to the buoys and serves also as a first response Pollution Control Vessel. It has aboard, for immediate deployment, 1,000 ft. of 14 in. Expandi Boom.

BERTHING: *Multi Point Mooring:* Consists of 8 buoys. Water depth 50 ft. Tidal range 5 ft. to 6 ft. Bottom sand. Current max. 1.7 knots, excluding storm conditions.

Normal Mooring: Bow anchors and 7 buoys are used.

Mooring Equipment: Require 14 lines, either 9 in. synthetic or 1.25 in. wire rope minimum. Minimum length for 9 in. synthetic rope 720 ft. Minimum length of 1.25 in. wire rope on drum 1,200 ft. Both bow anchors serviceable with an appropriate length of chain for vessel's size according to Lloyd's or ABS requirement. Usual mooring conditions require 8 to 10 shackles of chain in the water.

To allow flexibility in the charter market or vessel availability, the 1,200 ft. wire rope on drum requirement can be reduced to 900 ft. provided 720 ft. is usable at the rail and a 2,500 h.p. to 3,000 h.p. tug is utilised, charged to the vessel's account. The tug will normally only be needed during the mooring operation if the vessel cannot slip its wire mooring lines off the drums. A tug, again, may be necessary for the vessel's account in unmooring.

If mooring wires are used, the synthetic tail or eye, if so fitted, must be in good condition and of 125 per cent breaking strength of the wire. The tail or eye, if so fitted, shall be connected to the wire with a Mandell Shackle or equal. A minimum pennant length of 60 per cent, if possible, is requested for ease of handling by the mooring vessel.

Mooring Gear: If ship's gear and winches preclude fast deployment of mooring lines a tug may be required. This applies primarily to vessels with hydraulic winches and is dependent on the size of vessels, sea and wind conditions.

General: The moorings at seaberth have been modified to allow handling of vessels up to 150,000 d.w.t. under certain wind, wave and sea conditions. This modification includes the repositioning of all buoys, increasing the size of the dip and riser chain to 3.125 in. and the installing of additional 5 ton anchors to supplement the 10 ton existing anchors.

No. 4 or D buoy, which is at the stern of the vessel, has 2×3.125 in. dip and riser sections and 4 shackles of 3.125 in. chain. Mooring lines to this buoy are doubled during each mooring operation. Weight has been added to each buoy to decrease the buoyancy. An additional buoy, No. 8 or H, was added to allow the moorings to be used by barges.

DISCHARGING: *Lifting Equipment Requirements:* Derrick that can be utilised to lift the 12 in. hose from the seabed and swing the hose to the ship's manifold. Minimum lifting capacity, 5 tons.

Products Received: Crude, Naphtha and other refinery requirements.

Discharge Rate: Maximum 22,000 bbls./p.h. through 8 or 9 lengths (200 ft. – 225 ft.) of hose, 12 in. diameter into 22 in. I.D. sealine. Emergency flush possible from cross connected 10 in. line from shore. Pumping distance to shore tanks 9,479 ft. Height to shore tank 3 ft. – 4 ft. Tank height max. 39 ft. 6 in.

Temperature Limitation at Rail: Maximum product, Crude or Fuel Oil temperature of 150°F.

General: Refinery will furnish the Mooring Master with pertinent information on crude pours and vessel charter conditions, e.g. pump rates or lay time, in order that the Mooring Master can be fully appraised of the Charter Party Terms and conditions. Deviations from the Charter Party Terms furnished, if not correctable in discussions with the vessel's Master, will be discussed via radio with the Supervisor of Pipe-lines and Terminals to determine if a protest should be filed.

FRESH WATER: Not available.

FUEL: Not available.

BALLAST: No facilities.

AUTHORITY: Berth within Los Angeles Customs District.

Operator: Golden West Refining Co., 13539 E. Foster Road, Santa Fe Springs, CA 90701. Postal address: P.O.Box 2128, Santa Fe Springs, CA. 90670. *Tel:* (213) 921-3581. *Telex:* 910-583-4797 GWR-CO-SFES-UD. *Contact:* Manager, Shipping and Receiving.

HURON, Ohio: 41.24 N. 82.35 W.

Refer to St Lawrence Seaway for important general information.

PILOTAGE: None required other than what is required for Great Lakes.

ANCHORAGES: Depth 3 to 10 fathoms.

MAX. SIZE: Length 716 ft., breadth 75 ft., draft 26 ft.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Chicago Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: WMI Lorain.

TUGS: Meet vessel at the pier head. Use ship's lines.

BERTHING: Norfolk and Western Ore Dock, operated by the Lake Erie Dock Co., can handle 15,000 tons of ore in 8 hours. Ore slip is 1,400 ft. long with 26 ft. of water.

Limestone Dock, 700 ft. length with 26 ft. of water.

Grain loading facilities operated by the Pillsbury Company. Load speed, 20,000 bushels; unload speed, 15,000 bushels; berthing space, 832 ft.; max. length 610 ft.

STEVEDORES: None available.

FRESH WATER: Available.

FUEL: None available.

IDENTIFICATION CARDS: Required by Immigration.

CONSULS: Nearest at Cleveland.

REPAIRS: No facilities.

REPATRIATION: No facilities.

AIRPORT: 50 miles from port (Cleveland International Airport).

POLICE/AMBULANCE/FIRE: 433-4114.

SHORE LEAVE: Allowed.

AUTHORITY: The Huron Joint Port Authority, P.O.Box 468, Huron, Erie County, Ohio 44839.

JACKSONVILLE, Florida: 30.20 N. 81.40 W. (See Plan)

DOCUMENTS:

Public Health:

Maritime Quarantine Declaration Form HSM 13.19.

Customs:

3 U.S. Customs Manifests for cargo to be discharged at first port of entry.
2 U.S. Customs Manifests covering all other cargo on board vessel for discharge at other than first port of entry.
3 Stores Lists.
3 Crew Lists.
3 Passenger Lists.
3 Curio and Crew Personal Items Lists.
Vessel's Clearance from last port.
Vessel's Register and Load Line Certificate.
Vessel Utilisation and Performance Report.
Form MA.578 for dry cargo vessels.

Immigration:

1 Certified Crew List and Landing Permit form I-95 for each crew member.
Valid passport for each crew member.

PILOTAGE: Vessels approach Pilot Entrance Buoy STJ No. 2 (Red) approximately 6 miles at sea off jetty entrance to St. John's River. Pilot station located just inside jetty on river channel at Mayport Naval Station. Pilot station operates both VHF and HF frequencies, VHF Channels 16 and 18 A. HF Frequencies 2738 and 2182 kHz. Pilot cable address "Jaxpilot". Pilot boards from pilot boat "Jaxpilot" just East of Entrance Buoy STJ No. 2. Pilot boat does not maintain station at sea but answers call or is dispatched on information by vessels' Agents. Vessels anchoring awaiting Pilot should anchor as near Entrance Buoy as safely possible.

ANCHORAGES: 2 anchorages located inside harbour near dock sites with depth of about 31 ft.

RESTRICTIONS: For vessel drawing not more than 38 ft. water no restrictions and vessel can enter and clear harbour on 24 hour basis. Pilots and tug assistance available all hours day or night. Vessels drawing more than 38 ft. required to await tide.

MAX. SIZE: Draft should not exceed 38 ft. for dry cargo vessels and tankers.

Note: St. John's Bar Pilot Association advises max. draft 37 ft. (20th April, 1982).

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Tropical Radio, Miami, Fla. Call letters WAX. Lantana Radio, Boynton Beach, Fla. Call letters WOE.

TUGS: Under normal conditions with vessels able to proceed under own power, tugs approach vessel in vicinity of pier at which vessel is to dock. Tugs use own lines but no charge made.

BERTHING: Vessels can dock day or night. Transit time from pilot station to berths about 2 hours.

Blount Island Terminal: Operator: Jacksonville Port Authority. Length of berth, 4,700 ft. Depth alongside at MLW 38 ft. (11.5 m.). Containers, autos, paper and general cargo are handled.

Blount Island has 3 on-terminal transit sheds with a total cargo floor area of 372,000 sq. ft. There are also 220 acres of paved open storage area, with more under construction. For cargo handling, Blount Island offers 3×40 ton capacity container cranes 3×70,000 lb. container stackers; a 100 ton capacity gantry crane; a 40 ton Le Tourneau straddle hoist; a 50 ton capacity gantry crane; 2×80,000 lb. movable Ro/Ro ramps; 2 self-propelled multi-level rail car automobile loading ramps; and 200 reefer outlets.

Tallyrand Docks and Terminals: Operator: Jacksonville Port Authority. Length of berth 2,880 ft. Depth alongside at MLW 38 ft. Cargo handled – general, cars, lumber, containers, steel, coffee and petroleum.

There is over 400,000 sq. ft. of warehouse space available, with 500,000 cu. ft. being refrigerated. Talleyrand's cargo handling equipment includes 1×50 ton capacity gantry crane; 1×100 ton multi-purpose crane: a dry bulk conveyor system; 2×35 ton straddle carriers; 9 container stackers; 2 self-propelled multi-level rail car automobile loading ramps; and tanker discharge facilities

Talleyrand and Blount Island are served by railroad and truck service. 2 surface tracks on the pier apron and 2 platform-level tracks serve both facilities.

Sealand Terminal: Operator: Sea-Land Service, Inc. Adjacent to Tallyrand Docks and Terminals (See "Plan"). Length 1,200 ft. Depth alongside at MLW 34 ft. 2 container cranes, capacity 27.5 tons and 30 tons.

8th Street Terminal: Operator Joyserv Ltd. Adjacent to Sealand Terminal (See "Plan"). Length of berth 707 ft. Depth alongside at MLW 34 ft. Cars are handled.

Commodore Point Terminal: Length of wharf 2,750 ft. Depth alongside 34 ft. Cargo handled: Oil, cement and liquid chemicals. Terminal also occupied by North Florida Shipyards. Storage facilities: Charter Oil; 340,000 barrels. Glidden – Durkee: 60,171 barrels for chemical storage. Atlantic Cement; 6 silos capacity 40,000 tons. Universal Atlas Cement; 6 silos capacity 32,000 tons.

Jacksonville Bulk Terminals: A subsidiary of Occidental Petroleum. Length of loading berth 1,000 ft. Depth at MLW maintained at 36 – 38 ft. 2 fixed loading towers capable of loading vessel at a rate of 2,850 long tons of phosphate per hour. Maximum outreach 81 ft., clearance above MLW of 40 ft. Terminal also capable of loading superphosphoric acid, phosphate rock, zircon sand (of sufficiently low moisture), granular fertilisers, tachonite, ilmenitite and mullite. Storage facilities: 6 concrete silos, each with a designed capacity of 5,000 tons of phosphate rock. Six tanks with capacities of 15,000 tonnes of superphosphoric acid each.

Dunns Terminal: Length of wharf 1,000 ft. Depth 38 ft. Leased for exclusive use by Military Sea Transportation Services.

Celotex Corp: Tel: (904) 751-4800. Berth: 635 ft. (205 m.) with dolphins. Depth: 32 ft. (9.8 m.). Terminal for receipt of gypsum rock by self-unloading vessels.

BRIDGES: Only 1 bridge that vessel would have to negotiate and that only if docking at Commodore Point terminal.

STEVEDORES: Master should keep Agents closely advised by radio of ETA and any amendments to first ETA given. Recommended that Master give ETA 72, 48 and 24 hours in advance of arrival. Enables ordering gangs or cancelling gangs ordered in event of delayed ETA.

MEDICAL: Hospital facilities available. International Vaccination Certificates required by all crew members.

TANKERS: All petroleum terminals provide own hose ranging from 8 in. to 12 in. Prior to arrival, Master should request information from Terminal Company size of connection required.

Private Terminals:

Amerada Hess: Tel: (904) 765-4427. Berth: 200 ft. (60.1 m.) with dolphins. Depth: 30 ft. (9.2 m.). Tank storage capacity: 460,000 barrels. Receipt of petroleum products.

Alton Box Board Company: Tel: (904) 353-3611. Berth: 750 ft. (230 m.) with dolphins. Depth: 24 ft. (7.2 m.). Receipt of residual fuel oil.

Eastern Seaboard Petroleum Company: Tel: (904) 355-9676. Berths 250 ft. (80 m.) with dolphins (1); 160 ft. (48 m.) with dolphins (2). Depth: 18 ft. (5.5 m.). Tank storage capacity: 1,266,000 barrels.

Shipping of petroleum products by barge; loading of barges for bunkering vessels at berth in the harbour; fueling of tugs and small vessels.

Gulf Oil & American Oil: Berth: 200 ft. (60.1 m.) with dolphins. Depth: 33 ft. (11.5 m.). Tank storage capacity: 900,000 barrels.

Gulf: Tel: (904) 765-5541.

American: Tel: (904) 768-2583.

Receipt of petroleum products and loading of barges.

Phillips Petroleum Company: Tel: (904) 353-6740. Berth: 205 ft. (60.2 m.) with breasting dolphins. Depth: 34 ft. (10.5 m.). Tank storage capacity: 243,000 barrels. Receipt of petroleum products.

Shell Oil Company Wharf: Tel: (904) 355-5521. Berth: 230 ft. (98 m.) with dolphins. Depth: 33 ft. (10 m.). Tank storage capacity: 448,500 barrels. Receipt of petroleum products; occasionally fuels towboats and loads barges for bunkering vessels at berth in the harbour. Light marine diesel fuel only.

Standard Oil Company Terminal: Tel: (904) 353-1094. Berths: Barge – 300 ft. (92 m.) with dolphins; Tanker – 760 ft. (230 m.) with dolphins. Depth: Barge – 10 ft. (3.1 m.); Tanker – 32 ft. (9.8 m.). Tank storage capacity: 595,000 barrels. Receipt and shipment of petroleum products. No bunkering of vessels.

Texaco Pier: Tel: (904) 356-6344. Berth: 550 ft. (167 m.) with dolphins. Depth: 32 ft. (9.8 m.). Tank storage capacity: 320,000 barrels. Receipt and shipment of petroleum products; fuels towboats.

REPORT: *Approaches:* The Jacksonville Sea Buoy lies outside the entrance of the St. Johns River on the edge of the Gulf Stream where a strong Northerly current is usually experienced. The Sea Buoy ("2STJ") is a red/white, lighted and whistle (Morse (A)) buoy. A counter current setting to the South is usually found close along the coast just inshore of the Sea Buoy. Both the direction and velocity of currents and counter currents vary depending on past and prevailing weather conditions.

Broken ground with least depths of 4 to 5 fathoms lies from 4 to 6 miles from the coast for a considerable distance Northward and Southward of the St. Johns River entrance.

Numerous fish havens are Eastward of the entrance to St. Johns River; the outermost, marked by a private unlighted buoy, is about 27 miles Eastward of St. Johns Light.

All vessels should approach Jacksonville Sea Buoy from between S.E. and N.E. to avoid shallow water along the coast. There are many bright lights ashore at night which would cause confusion or mistaken identity with navigation lights. Refer to current N.O.S. charts regarding danger and cautionary areas.

Sea traffic, especially Southbound ships steaming inshore near the Sea Buoy to avoid the force of the Gulf Stream and take advantage of the counter current, may be encountered.

Naval vessels may be encountered entering and departing Mayport and may also be encountered on exercises outside the Sea Buoy area.

Entrance Channel: A Federal project provides for a channel depth of 42 ft. from the ocean to St. Johns Point. A lighted whistle buoy is about 2 miles off the entrance to the river. The 800 ft. wide entrance channel between 2 converging rubblestone jetties is marked by lighted buoys. Two-way traffic is normal.

The echo sounder should be monitored continuously for any silting that may occur and findings reported.

Anchorages: Vessels waiting outside the entrance to St. Johns River can anchor in depths of 36 ft. – 50 ft. N.N.E. of the jetties if wind and sea permit. Anchorage South of the jetty is not recommended because of heavy shrimp boat activity in that area.

Pilots sometimes anchor vessels in the channel opposite Mayport Basin or at St. Johns Bluff in emergencies or while waiting for weather to clear upstream; however, these anchorages are not recommended due to strong currents. A tug should be stationed alongside to assist turning during change of tide.

St. Johns River Designated Permanent Anchorages:

General (Upper) Anchorage: Located on the South shore off Commodore Point between Miller Creek and Empire Point. Vessels remaining in the anchorage more than 24 hours require a permit from the USCG Captain of the Port.

Quarantine (Lower) Anchorage: Located in the area off the Tallyrand Docks and Terminal. Use requires permit from the USCG Captain of the Port.

The holding ground in both anchorages is only fair and both are somewhat constricted. It is not recommended that vessels with drafts over 34 ft. use these anchorages.

DENSITY: Varies from fresh water 1.000 density to mixed salt water 1.0075 density. St. John's River is fed from fresh water sources and for most practical purposes may be considered fresh.

FRESH WATER: Potable water is available through hose connections at all berths operated by the Port Authority. No water barges.

FUEL: Most grades marine fuels available ranging from bunker "C" to light marine diesels with intermediate blends in between. Most major oil companies have bunkering facilities.

FIRE PRECAUTIONS: No smoking except in officers' lounge and crew's lounge. No open flames. No sparking from funnel.

GANGWAY/DECK WATCHMEN: Watchmen services available but not necessary.

OPENING/CLOSING HATCHES: Crew may open hatches prior to vessel's arrival at dock. After arrival at dockside this work reserved for longshoremen. Vessels equipped with McGregor type or other automatic opening devices, crew may open hatches at any time. Longshoremen do not open and close these type hatches.

CERTIFICATES: Vessel Register, Load Line, Gear Certificate, Derat.

CUSTOMS ALLOWANCES: Tobacco: 200 cigarettes per man. If vessel remains in port over extended period of time, sea stores can be opened under Customs supervision and additional allowances made. Wine/Spirits: No specific limits as to quantity allowed per man; Customs accept Masters' recommendations for allowances so long as they are reasonable. This applies to beers, wines and spirits.

IDENTIFICATION CARDS: Form I-95A only.

CONSULS: Denmark, Dominican Republic, Finland, France, Germany F.R., Guatemala, Italy, Norway, Sweden, Uruguay.

REPAIRS: All types engine and deck repairs possible. 2 well-equipped shipyards.

DRY DOCKS: 3 large dry docks of 18,000 to 33,000 tons capacity and 6 smaller with capacity of 1,000 to 12,000 tons.

Cable: CG Captain of the Port Jax. Contact: Captain Walter McDougal, Captain of the Port; Officer in Charge, Lt. Schmincke, Senior Investigating Officer.

Certification of U.S. merchant vessels, port safety and security; licensing and certificating of merchant vessel personnel, documentation, and marine environmental protection.

U.S. Coast Guard, Group Mayport, State Road A1A, P.O.Box 385, Mayport, FL 32267. Tel: (904) 246-7341 (No TWX. or Telex). Contact: Lt. Cmdr. H. Bruce Dickey, Commanding Officer.

Search and rescue, and law enforcement between Savannah, Georgia, and Cape Canaveral, Florida. 24 hour monitor; Channel 16, FM-VHF and 2182 kHz; HF-SSB emergency radio communications.

SHORE LEAVE: No restriction on shore leave if not detained by Immigration.

STORING: See "Prelims".

1. Vessel can be stored by barge or truck.
2. No regulations concerning barge storing except when vessel is loading or discharging dangerous cargo.
3. Trucks can proceed alongside at the berth.
4. Yes, fork lift trucks can be used on the jetty to handle stores.
5. Customs regulations in force regarding storing – ship's stores usually supplied free of U.S. excise taxes and supplies (such as alcoholic beverages and tobacco products) must be loaded under the supervision of the U.S. Customs Service for tax exemption to apply.
6. If possible, local Riggers can be employed to assist with storing but usually deliveries are made directly by the supplier.

REGULATIONS: No garbage to be disposed overside, no pumping of dirty ballast into river. Smoke emissions must be controlled to minimum.

BANKS: Atlantic National Bank of Florida, 200 West Forsyth Street, General Mail Center, Jacksonville, FL 32231. Tel: (904) 632-6767. Telex: 5-6311. Answerback: ATL/BK Intl Jax. Cables: Atlane.

TELEPHONES: No facilities available for placing phones on board vessels except in shipyards.

SERVICES: Compass-adjusting, radar, navigational equipment. No tank-washing or tank-cleaning services available.

DEVELOPMENTS: The entire river channel from the jetties on the Atlantic Ocean to Mile 20 has been dredged to a minimum depth of 38 ft. MLW.

AUTHORITY: Jacksonville Port Authority, P.O.Box 3005 (2831 Talleyrand Avenue), Jacksonville, Florida 32206. *Tel:* (904) 633-5240. *Telex:* 810-827-1323. *Contact:* Paul D. de Mariano, Managing Director.

AGENT: Strachan Shipping Company, P.O.Box 4010, Jacksonville, Florida 32201. Tel: (904) 356-0711. Telex I: 80-3632. Telex II: 810-827-5504. Cables: "Strachan".

JUNEAU, Alaska: 58.18 N. 134.24 W.

Located at N.E. side of Gastineau Channel, 8 miles from Stephens Passage. Juneau is the capital of Alaska. Open all year.

APPROACHES: Via Chatham Straits, Lynn Canal and Stephens Passage.

DOCUMENTS: See "Anchorage, Alaska".

PILOTAGE: Pick-up point is Guard Island.

ANCHORAGE: 16 fathoms in centre of Juneau Harbour.

Restrictions: A Safety Zone has been established, comprising the area between the shore and a line extending 9 cables N.W. from No. 2A light-buoy. Within this zone, which is effective from June 1st to September 30th annually, no vessel other than passenger carrying vessels of 500 gross tons and over (including cruise ships and ferries) may anchor without the express consent of the Captain of the Port. There is no restriction on vessels navigating within the area.

MAX. SIZE: Harbour depth 15/19 fathoms. Tides: diurnal range 16.4 ft. Also see "Berthing".

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Anchorage Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

CUSTOMS: Quarantine, Immigration and Customs, locally.

BERTHING:

1. Foss Alaska Line Dock: berthing length 550 ft. 36 ft. LW. No cranes.
2. Juneau Cold storage: berthing length 250 ft., 36 ft. LW. Cranes, 2 electric hoists, 3 lift trucks, 40,000 sq. ft. covered shed space. Fresh water.
3. Juneau Ferry Terminal: berthing length 400 ft. 32 ft. LW. No cranes. This is a Ro/Ro facility for wheeled vehicles and self-propelled or towed. 35 tons capacity. No covered shed space. Fresh water.
4. Coast Guard Dock: 750 ft. long, 31 ft. deep at face. No storage. Restricted use.
5. Trucano Construction Co. Dock: Length 500 ft. Crane with 90 ft. boom available, capacity 50 tons.

STEVEDORES: 1 gang.

REPAIRS: Engine repairs possible.

WATER: Available.

FUEL: Available.

MEDICAL: Hospital available.

TRANSPORTATION: Air and ferry.

AUTHORITY: The City and Borough of Juneau, Harbor Department, 155 South Seward Street, Juneau, Alaska 99801. *Tel:* (907) 586-5255, 9425. *Contact:* Ron Raykowski, Harbour Master.

PILOTAGE: Request for Pilot normally made through Agent or through Captain K. Bohlin, Tel: 572-7343. Contact Pilot on VHF Channel 12. Pilot boards 0.25 mile East of Waihee Reef lighted Buoy No. 2. Anchorage 0.5 mile East of Buoy.

ANCHORAGES: No anchorage inside breakwaters. Only anchorage 0.5 mile East of Waihee Reef lighted Buoy No. 2 in 9 to 12 fathoms.

RESTRICTIONS: 24 hours' notice of arrival is obligatory. No tide restrictions.

MAX. SIZE: Max. length 700 ft. Max. draft 32 ft. 6 in.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Honolulu Quarantine Station. (Health: Tel: 244-4273.)

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany). (Agriculture: Domestic Overseas Arrivals Tel: 877-7801. Foreign Arrivals Tel. 244-3882.)

RADIO: Communicate through RCA or ITT stations in Honolulu.

TUGS: 1 × 1,500 h.p. tug stationed at Kahului. Additional tugs dispatched from Honolulu if necessary. Tug joins vessel between breakwater and Waihee Reef Lighted Buoy No. 2. Tug's lines normally used. No extra charge.

CARGO HANDLING: Kahului has 1 berth specially equipped to load bulk sugar. Matson Navigation Company operates a straddler to move Matson containers.

Young Brothers Ltd. operate a forklift to move containers.

Dock Load Limits: 500 lb./sq.ft. over the area supported by piles, cylinders or seawall. 1,000 lb./sq.ft. over the area supported by land or fill.

STEVEDORES: To be ordered by 1500 hrs. of day prior to operations.

MEDICAL: Hospital facilities available. Tel: 244–9056.

TANKERS: Discharge only. 12 in. line for molasses, 12 in. line for heavy fuel oil, 6 in. lines for light fuel oils. No slop discharge facilities. 2 berths available for tankers, max. draft 32 ft. 6 in.

FRESH WATER: Available from 2 in. water line at each berth. Rate of delivery about 200 gallons per minute.

FUEL: Small amount of diesel fuel and heavy fuel available in an emergency only.

GANGWAY/DECK WATCHMEN: Services of watchman recommended, usually arranged by Agent.

OPENING/CLOSING HATCHES: Normally carried out by stevedores.

CUSTOMS ALLOWANCES: 200 cigarettes, 50 cigars per man, and 1 bottle wine or spirits. (Customs Port Director Tel: 877-6013).

REPAIRS: Minor deck and engine repairs only.

AIRPORT: Distance to airport 1.5 miles. Served by Inter Island Airlines.

TELEPHONES: Arrangements made with Hawaiian Telephone Co. (Tel: 242-5211), to install on board.

DELAYS: Occasional delays due to limited berthing space and shortage of stevedore gangs.

POLICE/FIRE/AMBULANCE: Police 911; Ambulance 911; Fire 911.

EMERGENCY CO-ORDINATION CENTRE: U.S. Coast Guard: Tel. Honolulu 536-4336 or Locally Tel. 244-5256.

TIME: GMT minus 10 hours all year round.

STORING: 48 hours' free time for domestic cargo. 120 hours' free time for foreign cargo. Trucks allowed alongside to handle special cargoes; bulk and heavy lifts.

AUTHORITY: State of Hawaii, Dept. of Transportation, Harbors Division, P.O.Box 216, Kahului, Maui, Hawaii 96732. *Tel:* (808) 877-6051. *Contact:* Harold T. Campbell, District Manager and Harbour Master.

AGENT: See "Honolulu".

KETCHIKAN, Alaska: 55.20 N. 131.38 W.

DOCUMENTS: See "Anchorage, Alaska".

APPROACHES: Port located on Revillagigedo Island. Open all year round. Ships coming from Hecate Straits or outside Graham Island proceed into Dixon Entrance to vicinity of Guard Island where the Pilot will meet them.

Vessels coming up the inside passage from Vancouver, B.C., are met at Lucy Island Pilot Station.

PILOTAGE: South Eastern Alaska Pilots' Association, Box 1539, Ketchikan, Alaska 99901. Telegraphic address; Alaska Pilots Ketchikan.

The Alaska Pilot Service requires 5 days, 48 hours, and 12 hours advance notice of ETA and can be contacted on Channel 16 VHF or 2182 kHz.

The pilot boat "Magdalene" (WA 7513) normally rendezvous with the vessel 0.75 miles from Guard Island.

ANCHORAGE: Safe anchorage can be obtained in the area for deepdraft vessels; however there are no specified anchorage areas.

MAX. SIZE: The largest vessel to be berthed to date is a 26,000 ton freighter; however larger vessels could be accommodated.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Anchorage Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Cables to Agent, Receivers, and Pilots can best be routed through AKM Juneau.

TUGS: Tugs can be arranged through the ship's Agent. Lines from tug are normally used with no additional charge.

BERTHING: City Berth I-S: Length 450 ft., depth 33 ft. LW.

City Berth I: Length 375 ft., depth 26 ft. at North end.

City Berth II: Length 575 ft., depth 33 ft.

Ketchikan Pulp Company (at Wards Cove, 6 miles North of Ketchikan): private dock, berthing length 800 ft., depth 33 ft. at low water. 50 ton crane on rails, also mobile units and fork lifts.

STEVEDORES: Stevedores obtained through shipping Agent. 24 hours' notice normally required.

4 or possibly 5 gangs available dependent on obtaining casual labour.

MEDICAL: Medical matters may be referred to shipping Agent. Excellent hospital and out-patient treatment facilities are available.

FRESH WATER: Water available at City Berths. Contact Harbour Master for service charge.

FUEL: Fuel available for deepdraft vessels: No. 2 Diesel and gasoline.

TANKERS: Tow lines (fire wires) required fore and aft.

GANGWAY/DECK WATCHMEN: Recommend security watch for passenger vessels. Watchmen can be arranged through the shipping Agent.

OPENING/CLOSING HATCHES: Done by longshoremen.

IDENTIFICATION CARDS: Crew identification cards are required by Immigration Officials.

CONSULS: The nearest Consul is in Anchorage, Alaska.

REPAIRS: Excellent welding and machine-shop services are available.

DRY DOCKS: Ketchikan Shipyard, 600 ft., depth 30 ft.; 434 ft. floating dry dock. Facility in first stage of shipyard development.

REPATRIATION: Repatriation matters can be handled through the shipping Agent and Immigration Officials.

AIRPORT: Daily flights to and from Seattle as well as points North may be obtained.

TIME: Ketchikan is on GMT minus 8 hours during the Winter and GMT minus 7 during the Summer. Time changes the third Sunday in April through the third Sunday in October.

AUTHORITY: City of Ketchikan, 334 Front Street, Ketchikan, Alaska 99901.

Supervisor, U.S. Coast Guard, Marine Safety Detachment, c/o U.S. Coast Guard Base, Ketchikan, Alaska.

KINGS BAY (Submarine Naval Base), Georgia: 30.49 N. 81.31 W.

NO LONGER A PUBLIC PORT FACILITY.

DOCUMENTS:

Crew List, from foreign movements, 1 Crew List visaed by American Consul in or near foreign port of departure; Coastwise U.S.A. 3 copies, 1 for Customs, 1 for Immigration and 1 for the Agent's office.

Curio List, 3 copies, from both foreign and coastwise movements.

Stores List, 3 copies, from both foreign and coastwise movements.

5 copies of Foreign Manifest.

Permit to sail from foreign port.

International Vaccination Certificates and/or other health certificates.

PILOTAGE: Channel entrance is between Cumberland and Amelia Islands, and is approximately 14 miles in length, 400 ft. wide and 38 ft. deep at MLW. Cumberland Pilots usually boards vessels at the St. Mary's Entrance Sea Buoy No. 2. Cumberland Pilots may be reached by marine telephone (ship-to-shore) Fernandina Beach, Florida, Tel: 261-3158. Naval Submarine Base Kings Bay is in the Northwestern part of Cumberland Sound, about 6 miles above its Southern entrance.

HEALTH: See "Health: All Ports" before first U.S. port Albany). Illness reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

VHF: Port Services: VHF Channels 13, 16 and 17, Tel: 912-673-2550.

BERTHING: Day or night. Naval Submarine Base has a 1,996 ft. concrete pile wharf with depths of 38 ft. reported alongside in January 1984; deck height is about 14 ft. A rail spur line connects the terminal with the Seaboard System Railroad; 2 transit sheds, 2×30 ton mobile and 1×70 ton mobile hoists are available. 2×70 ton YD-243 and YD-239, one ARDM, 4 YTB tugs and 3 Civil Service Pilots are on site. There is 1 turning basin, 1,996 ft. long by 800 ft. wide with project depth of 38 ft. at MLW.

STEVEDORES: Riggers and crane operation supplied by Civil Service.

FRESH WATER: Plenty of fresh water available, pumped into ship's tanks by hose, bilge water via hose.

FIRE PRECAUTIONS: Smoking in the warehouse, on wharf or on any unit while unloading or discharging any flammable or explosive cargo is strictly prohibited. In the event of a fire occurring on board any unit, Tel: 2263/3333.

EMS Dispatcher: 2222.
Safety Manager: 2525.
Emergency: 2222/3333.

GANGWAY/DECK WATCHMEN: Required.

TIME: Eastern Standard Time and Eastern Daylight Saving Time.

HOLIDAYS: New Year's Day, Washington's Birthday, Memorial Day, Independence Day, Labour Day, Columbus Day, Veteran's Day, Thanksgiving Day, Christmas Day. In the event one of the above holidays falls on a Sunday, the following Monday will be observed.

POLICE/AMBULANCE/FIRE: Police Departments St. Mary's and Kingsland, Georgia, plus County Sheriffs and Naval Security. Ambulance, Kingsland. Fire, both Kings Bay and St. Mary's, Georgia.

TELEPHONES: Navsubase Operator Autovon and FTS lines, Commercial, 912-673-2000, Autovon, 860-2111, FTS, 970-2112.

SHORE LEAVE: Naval bus and taxi on base only.

GENERAL: *Recreational Services:* Theatre, swimming pool, bowling centre, library, Officer's Club Lounge, Chief Petty Officer's Club Lounge, Enlisted Club Lounge, Deli/Hungry Dolphin, Consolidated Package Store, Gymnasium.

DEVELOPMENTS: The channel from the dock area to the sea to be dredged to 44 ft. – 46 ft. Completion expected late-1986.

AUTHORITY: United States Department of the Navy, Washington.

Naval Submarine Base, Kings Bay, Georgia 31547. *Tel:* 912-673-2000 (commercial). *Contact:* Port Services Officer.

KODIAK, Alaska: 57.47 N. 152.24 W. **(See Plan)**

Located near the N.E. tip of Kodiak Island in the Gulf of Alaska, South of Anchorage and East of the Alaska Peninsula.

DOCUMENTS: See "Port of Anchorage".

PILOTAGE: Pilot can be contacted through South West Pilots' Association in Homer, Alaska, Tel: (907) 235-8783. 24 hours' notice should be given when requesting a Pilot. Pilot station: Lat. 57° 42′ 24″ N., Long. 152° 14′ 12″ W. (St. Paul Rocks Morris Alfa Buoy). Pilot boat is tug "Kodiak King". Tel: (907) 486-5503. VHF Channels 10, 13 and 16. Single Side Band 4125 kHz.

APPROACHES: North Entrance Buoy No. 4 off Spruce Cape.

Pickup Point: Hutchinson Reef Buoy.

East Channel Entrance: Humpback Rock off Cape Chiniak. Steer 280°T until reaching St. Paul Buoy.

ANCHORAGES: Safe anchorage between Puffin and Gull Islands East of shipping channel.

MAX. SIZE: Harbour depth in excess of 30 ft. Tides: Range approximately 10 ft.

HEALTH: See "Health": All Ports before first U.S.A. ports (Albany). Illness reports made to Anchorage Quarantine Station.

RADIO: Stevedoring Agent: Alaska Terminal and Stevedoring, Inc. Tel: (907) 486-4001 or 4002. Call Signs WAN46. City Dock VHF Channel 16.

Harbour Master's Office Tel: (907) 486-5438. Call sign WAB918. VHF Channels 12, 14 and 16.

TUGS: Alaska Tug and Salvage: Tel: (907) 486-5503. Radio Call Sign WYN6116. VHF Channel 10 and 16. SSB 4125 kHz.

BERTHING: Pier 1/Ferry Dock: 204 ft.×28 ft., 28 ft. at MLLW. Use: Mooring, loading and unloading and bunkering.

Pier 2/City Dock: 360 ft.×64 ft., 38 ft. at MLLW. Use: Loading and unloading commercial freight vessels, moorage for fishing vessels. Covered warehouse space available. 20 ton and 90 ton cranes available. Various size forklifts.

Pier 3/Container Terminal: 360 ft.×64 ft. (655 ft. bollard to bollard), 38 ft. at MLLW, container services/general cargo, 27.5 ton gantry crane available.

CRANES: See "Berthing".

STEVEDORES: Alaska Terminal and Stevedoring, Inc. Tel: (907) 486-4001 or 4002, 24 hours' notice for gang arrangements.

REPAIRS: Limited facilities. Divers available.

MEDICAL: Ample hospital facilities available. Also doctors, dentists and optometrists.

FRESH WATER: Available.

FUEL: Light fuels only. 2 fuel companies. 24 hour service available.

SURVEYORS: Norm Holm, Box 365, Kodiak. Tel: (907) 486-5616.

DRY DOCKS: None available for large vessels.

AIRPORT: 7 miles. Various flights available depending on time of year. Ferry service available March to December.

POLICE/FIRE/AMBULANCE: Emergency 911, Police (907) 486-3221, Fire & Ambulance (907) 486-5728.

EMERGENCY CO-ORDINATION CENTRE: Coast Guard, Search and Rescue (Kodiak Island) Zenith-5555 anywhere in Alaska. VHF Channel 16.

SERVICES: Gyro compass repairs, radar repairs, all types electronic equipment repairs. Divers available for surveys and underwater repairs.

AUTHORITY: City of Kodiak, P.O.Box 1397, Kodiak, Alaska 99615. *Contact:* George V. McCorkle, Harbour Master, Tel: (907) 486-5438.

LAKE CHARLES, Louisiana: 30.13 N. 93.15 W.

(See Plan)

PORT LIMITS: Buoy No. 26, In Calcasieu Ship Channel, 3 miles off Cameron, Louisiana.

DOCUMENTS:

U.S. Customs: If foreign cargo on board for discharge at any port:

3 copies of Cargo Manifest of all Cargo.
3 copies of Crew List.
3 copies of Store List.
3 copies of Curio List (crew personal effects).
3 copies of Passenger List if carrying passengers.

If vessel in ballast, only 2 copies of above documents required.

If vessel in ballast and carrying passengers, 3 copies of above documents required.

1 copy of Clearance from last port.
2 copies of Customs Form 1300 (Master's Oath).
2 copies of Customs Form 1301 (General Declaration).

U.S. Customs Boarding Officer must examine Load Line Certificate, Safety Equipment Certificate, Tonnage Tax Receipt, Certificate of Financial Responsibility (Oil Pollution), Ship's Register and Ship's Certificate of Nationality (if any).

2 copies of Customs Form 721 (Inbound Utilisation Report).
1 copy of Certified Crew List (If American Ship).

Bonded lockers will be sealed by Customs.

U.S. Immigration:

1 copy of Visaed Crew List from Ameican Consul at foreign port of clearance (if any).
1 I-95 (Identification Card) for each crew member on board.

All passports must be validated for each crew member.

U.S. Bureau of Etomolgy:

All meat lockers and freezers with restricted meat will be sealed. All fruit from prohibited countries will be confiscated. All animals or birds from foreign countries must remain on board.

PILOTAGE: Radio Agent ETA, who will arrange Pilot board at Calcasieu Bar.

ANCHORAGE: At Calcasieu Bar only.

RESTRICTIONS: Entrance channel 40 ft. depth. Distance 40 miles.

During LNG/LPG movements, special restrictions may be placed on the waterway by the local Coast Guard Captain of the Port.

MAX. SIZE: 1,000 ft. length, 38 ft. draft.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first USA port (Albany).

RADIO: Tropical – New Orleans, WNU.

VHF: Pilots may be contacted on Channel 12, 13, 65 and 66.

TUGS: Meet vessel 30 minutes away from berth. Use tugs' own lines. 2 for berthing, 2 for unberthing.

BERTHING: General Cargo Berths: 10 with total length: 5,675 ft. All have draft of 36 ft. (fresh water).

CRANES: Mobile pneumatic and track cranes available with lifts up to 50 tons.

BULK HANDLING FACILITIES: 3 bulk-loading berths: No. 1, West bank of Calcasieu River, 8 miles below main port facilities, 1,200 ft. length, 40 ft. depth, loading rate 1,600 t.p.h. Clam bucket type ship unloading crate, unloading rate of 600/800 short tons per hour.

No. 2, Contraband Bayou Section, main port, 920 ft. length, 35 ft. depth, loading 480 t.p.h. 16,000 long tons storage facilities.

No. 3, Contraband Bayou Section, main port, 320 ft. length, 35 ft. depth, loading rate (bulk rice) 180 t.p.h. from stationary tower. Twin 1,250 tons storage tanks adjacent.

No. 4, Bulk unloading facility, length 850 ft., depth 30 ft. Barite and petroleum coke unloaded, rate 250 t.p.h.

SPECIALISED CARGO HANDLING FACILITIES: 1 berth suitable for Ro/Ro traffic. 2 berths at main port for liquid chemicals, No. 5 for creosote oil import and No. 6 for import/export. Private berth for private company for receiving LNG.

BRIDGES: One bridge with vertical clearance of 135 ft.

STEVEDORES: Notice of firm ETA and request for gangs must be received prior to 1600 hrs. CST for work following day.

TANKERS: Citgo Petroleum Corp. B-Dock, 673 ft. length, 36 ft. depth; C-Dock, 660 ft. length, 34 ft. depth; D-Dock 665 ft. length, 36 ft. depth. Also see "Shipmasters Report No. 1".

Continental Oil Co. Berth 1, 1,000 ft. length, 40 ft. depth; Berth 3, 1,000 ft. length, 40 ft. depth.

PPG, 700 ft. length, 40 ft. depth.

Olin Corp. Dock: 400 ft. length, 28 ft. depth. Also see "Shipmaster's Report No. 2".

MEDICAL: Hospital facilities available.

DENSITY: Salt water in Summer, fresh water in Winter. Allow density 1000 for drafts.

FRESH WATER: Available at all berths.

FUEL: Bunker "C" and diesel available at Cities Service berths; other berths served with bunkers by barge.

FIRE PRECAUTIONS: Usual precautions.

DRY DOCKS: None.

SURVEYORS:

1. Cargo inspectors are available.
2. Surveyors are available.

GANGWAY/DECK WATCHMEN: Not required.

HATCHES: Rigging performed by stevedores. McGregor-type hatches opened by crew, others by stevedores.

CARGO GEAR: Shore cranes available at ship's request.

CUSTOMS ALLOWANCES: At the discretion of Customs officers. Normal allowance is 200 cigarettes or 2 lb. tobacco and 1 quart wine or spirits per man. Additional allowances may be given if considered necessary, due to length of vessel's stay in port.

REPAIRS: Small repairs carried out only; very limited facilities.

REPATRIATION: Facilities exist. Arrange through Agent.

AIRPORT: 7 miles from port. 26 flights per day.

TIME: CST, that is GMT minus 6 hours.

HOLIDAYS: Only 2 days affected on which no work carried out – Labour Day and Christmas Day.

POLICE/AMBULANCE/FIRE: Police or Fire, 911. Fire only 491–1350. Police only 491–1311. Ambulance 433–1677, 433–1707 and 433–1668.

EMERGENCY CO-ORDINATION CENTRE: United States Coast Guard, Sabine, Texas. Tel: (713) 971–2361.

TELEPHONES: None on board ship.

SHORE LEAVE: Allowed if not detained by Immigration.

IDENTIFICATION CARDS: Standard U.S. Immigration Forms I-95 to be made up for each crew member on arrival. Not necessary for crew man already holding Form I-95, issued for the same vessel.

BANKS:

Calcasieu Marine National Bank, 844 Ryan Street, Lake Charles, Louisiana 70601.

First National Bank of Lake Charles, 3401 Ryan Street, Lake Charles, Louisiana 70605.

Gulf National Bank, 825 Ryan Street, Lake Charles, Louisiana 70601.

Lakeside National Bank, One Lakeside Plaza, Lake Charles, Louisiana 70601.

American Bank of Commerce, 1011 Lakeside Drive, Lake Charles, Louisiana 70605.

National Bank of Commerce, 535 Kirby Street, Lake Charles, Louisiana 70601.

STORING: See "Prelims".

1. Vessel can be stored by barge or truck.
2. Vessel can be stored during loading/discharging as long as it does not interfere.
3. Trucks can proceed alongside berth.
4. Forklifts can be used on docks.
5. No customs regulations for United States stores.
6. Longshoremen must be employed to assist in storing.

SHIP SUPPLY SERVICE: *Offshore Waters Personnel Transfer:*

Air: ERA Helicopters, Inc., P.O.Box 6566, Lake Charles, La. 70606. Tel: (318) 478-6131.

Boat: McCall Boat Service, P.O.Box 186, Cameron, La. 70631. Tel: (318) 775-5685.

Inland Waters Personnel Transfer:

Land and Water: Port Shuttle, Inc., P.O.Box 1772, Lake Charles, La. 70601. Tel: (318) 433-1613.

DELAYS: Very few delays encountered at any berth.

DEVELOPMENTS: Transit Shed No. 15 being enlarged.

SHIPMASTER'S REPORT No. 1: 1977.

Cities Services Oil Co., Clifton Ridge:

Location: Lat. 30° 09′ 32″ N., Long. 93° 19′ 30″ W.

Max. Size: Length 805 ft., beam 115 ft., draft 39 ft. (FW).

Density: 1005.

Restrictions: Vessels may berth and unberth at any stage of the tide day or night.

Anchorage: At Bar: 2 miles East of seabuoy in depth of 42 ft. For Bunkering: South of Clooney Island in Old Calcasieu River Channel in midstream.

Distance to Berth: Seabuoy to berth 45 miles.

Terminal Information: 2 × 10 in. Chicksan arms. Max. discharge pressure 150 p.s.i. Derricks not required. Accommodation ladder not required.

Services: Fresh water, provisions, fuel oil, diesel and lube, doctor, hospital, airport and laundry.

The following services are not available: Repairs, drydocks, Lloyd's Surveyor and slop tanks.

Telephone Numbers: Dock 318-583-2432. Terminal Supervisor 318-491-6121, 318-491-6437.

SHIPMASTER'S REPORT No. 2: 1979. Olin Chemical Berth.

Approach: If without Loran "C" or satellite navigator the approach at night can be awkward, best made in daylight.

Due to flat coastline, lack of European navigation aids (Decca and Racon) plus numerous oil rigs the entrance to Calcasieu River (like Sabine) is difficult to make.

Calcasieu and Sabine D/F good.

Numerous oil rigs South of buoyed channel which are either side of safety fairway. This corridor can be clearly seen on radar and provides a good longitude.

The soundings, in particular the 100 fathom line, give a good latitude.

The wreck buoy on chart 975 – (Approach to Calcasieu River) at Lat. 29° 19.5′ N., Long. 93° 12′ W. has been removed.

'CC' buoy was picked up at 6 miles.

Pilot/Channel: (B.A. chart 975). The channel is easy to follow as long as US system of buoyage is remembered. Vessels under 30 ft. can go out of the channel on their starboard side leaving starboard hand buoys to port. This is quite in order up to Pilot Area No. 1. Do not go on port side or West as this is spoil ground.

A Westerly current sets across channel 90% of the time and up to 1 knot. The boarding area is as Vol. No. 6 ALRS. If vessel takes a Pilot at Area No. 3 it costs $300 more than No. 1 (not necessary unless vessel restricted by draft – 24 hour service).

Pilot boat is an ex-fishing cutter. White, very fast and strong. Minimum notice for Pilots: Boarding at Area No. 1 four hours, Area No. 3 six hours. For sailing from Lake Charles 2 hours. From Area No. 1, one Pilot to Lake Charles, from Area No. 3, two Pilots. Pilot will *not* use hoist.

VHF: Calcasieu Pilots Channels 12, 13 and 16. Difficult to contact pilot station until well into channel North of 'CC' buoy.

Public Correspondence: Several stations in area – Port Arthur, Cameron, Erath, Lake Charles, a number, notably Erath and Lake Charles have the "80" Channels which they use in preference to "20" Channels. Very busy, but if you search around you can get through fairly quickly. As with all U.S. Marine Operators, overseas ships have difficulty if not calling 'Collect'.

Calcasieu Channel: About 35 miles to Lake Charles from breakwaters. 5 hours from Pilot Area No. 1 to 'Olin' Chemical Dock.

With Northerly wind and heavy rain on ebb, a current of up to 5 knots at Cameron at entrance just North of breakwater.

Bridge: Highway 102 gives 135 ft. clearance HW. 3.75 hours North of breakwater.

Draft: Max. transit draft of 38 ft. 6 in. (FW) from No. 30 buoy to Lake Charles Docks. We consistently had 39 ft. on echo sounder.

Tugs: 2 tugs of 2,500 h.p. and 3,200 h.p. secure in American style, port side, at bridge 102 and leave in same area.

Berthing: Olin Chemical.

Dock: At head of seagoing navigation at bridge interstate 10. In cut, so no traffic passing. New concrete pier upgraded from barge dock. Min. depth 30 ft. Head in, starboard side to. Vessel left at 0200 hrs. without difficulty.

Moorings: 3 headlines, 2 breast lines and 2 springs each end. Springs go on to bollards on the jetty and breast lines and stern lines on to hooks on the bank.

Cargo Hoses: 8 in. × 300 ASA and spool piece to 12 in. × 150 ASA. 3 lengths, ship connects. Takes about 1 hour to connect and disconnect.

VRL: No.

Venting: No, on shore there are detectors on the tanks for ammonia. Generally the wind is onto the works which makes the detection of venting immediate. Vessel has to wait for a change of wind from the North.

Samples: Taken by chemist of tank atmosphere before loading. Must have min. 97% NH_3 by volume before loading.

Rate: Max. 330 t.p.h. (15 minutes of notice if possible, to stop).

Nitrogen: Available but not for hose purge.

Fresh Water: Water on berth very acid. Difficult to get hold of fresh water barge.

Stores: Ship's crane can reach end of jetty. Also small crane on hose platform on jetty which can be used for stores. Lorry cannot get to ship's side.

Gangway: No difficulties. Some ships have to use pilot ladder.

Developments: LPG dock at Beacon 85/86 about half way up the canal owned by Citgo Petroleum Corp. Good mooring facilities. 1 Chicksan. Dredged area 1,000 ft. long, 45 ft. deep.

AUTHORITY: Lake Charles Harbor and Terminal District, Port of Lake Charles, 150 Marine Street, P.O.Box AAA, Lake Charles, Louisiana 70602–3753. *Tel:* (318) 439–3661. *Telex:* 50–2449 Port Lk Chas. *Contact:* James E. Sudduth, Port Director.

LONG BEACH, California: 33.45 N. 118.13 W.

(See Plan)

DOCUMENTS:

Certificate of Registry.

International Load Line Certificate – Tonnage Certificate (Admeasurement).

Inspection Certificate.

Derat Certificate.

Safety Radio Certificate.

Inbound cargo for discharge – United States must have a Travellers' Manifest (Form 7527), original manifest, and dock inspection copy covering cargo to be discharged at first U.S. port of entry, Custom's Utilisation Form 1302 (Inbound), Form 1302A (Outbound) must be filed within 10 working days after vessel's entry at first U.S. port. Landing permits must be made out prior to arrival (Form I-95) for each crewman of alien origin for the U.S. Department of Immigration (and Form I-418 for each passenger of alien origin). 3 sets of crew lists (Form I-418) must be presented to U.S. Customs, plus 2 sets to the Immigration Inspector, and 1 for the U.S. Public Health Service (Quarantine), and 3 sets stores lists plus 3 sets curio purchases list for U.S. Customs.

American Ships from Foreign Ports:

Safety Equipment Certificate.

Cargo Ship Safety Construction Certificate.

Customs Form CF 226 Affidavit of Repairs Abroad.

Certified Crew List.

Foreign Ships:

1 copy of Visaed Crew List for Immigration (Form I-418 & 5 copies). Other forms may be necessary under certain circumstances, but normally can be taken care of after the vessel's arrival.

If a foreign vessel from a foreign port departs for a foreign port, 2 copies of (Form I-418) covering crew changes in the United States must be submitted to the Department of Immigration upon sailing of the vessel.

(*a*) Number of copies required: all single except as noted.

(*b*) The reports mentioned above are all government laws, requested by U.S. Customs, U.S. Immigration, Department of Agriculture, Public Health Service, and B.I.A.

(*c*) Purpose of documents: to record all vessel movements such as cargo, crew changes, health standards, etc.

(*d*) Procedure of presenting documents: documents must be presented to Quarantine Boarding Officer and Customs Broker and/or Agent, during or immediately after Quarantine.

PILOTAGE: Pilots ordered by local Agents. Order placed by telephone to 435-6354/5. Pilots require 1 to 2 hours notice prior to arrival. Pilot station contacted on VHF radio Channel 12 (156.6 MHz) or Channel 16 (156.8 MHz). Call sign KMA – 372 Long Beach Pilots. Pilot boats motor cruisers, light grey, fly International Flag "H". Local whistle signal for a Pilot on ship's whistle, 1 short and 1 long blast. Pilot boat normally meets vessels in vicinity Long Beach Sea Buoy or approximately 1 mile South of breakwater entrance. Vessels should have a Pilot ladder on starboard side, weather permitting. In bad weather vessels may be required to proceed inside breakwater entrance prior to Pilot boarding. Pilot boat on VHF Channel 13.

ANCHORAGE: Preferably outside anchorage approximately 0.5 mile S.E. of Long Beach Sea Buoy in 66 ft. of water. Inside anchorage available N.E of channel in outer harbour at approximately 8 fathoms of water depth. Special explosive anchorages available by request, on both sides of entrance channel in 48 ft. of water.

U.S. Coast Guard Anchorage Regulations:

1. The Master of every vessel upon anchoring shall notify the Captain of the Port giving vessel name, anchorage number and time anchored.

2. The Master of every vessel upon departing anchorage shall notify the Captain of the Port giving vessel name, anchorage number, time underway and destination; i.e., bound for sea or for berth number.

RESTRICTIONS: Vessels with dangerous cargoes aboard or loading or discharging such cargo within port district shall obtain permit from U.S. Coast Guard, countersigned by Long Beach Fire Prevention Bureau and Long Beach Port Authority, subject to safety inspection prior entry to assigned anchorage or berth. (Application for entry or handling dangerous cargoes must be requested by Steamship Company or authorised Agent and approved prior entry.)

Also see "Tankers" last paragraph.

MAX. SIZE: (1) Designed depth of water at general cargo berths is 30 ft. – 36 ft. at MLLW.

The Entrance Channel is maintained at 60 ft. MLLW.

(2) No restriction as to length or breadth of vessel at general cargo berths.

(3) Dry bulk facility berths designed depth at MLLW is 40 ft. to 50 ft. No restriction on length. However, ships with over 130 ft. beam might experience some difficulty in loading without turning ship.

There are 5 bulk oil facilities, 1 with 70 ft., 1 with 52 ft. of water at MLLW and 3 with 36 ft. to 40 ft. of water at MLLW alongside berths. It is feasible that vessels over 1,000 ft. in length could use the deep-water oil facilities. There are no restrictions as to beam.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Los Angeles Quarantine Station.

QUARANTINE: Quarantine Station, U.S. Public Health Service, 200 World Way, L.A. International Airport, Los Angeles, CA 90045, Tel: 215-2365. Hours: 0600 – 1800 hrs. regular boarding hours. 1800 – 0600 hrs. overtime boarding hours.

STANDARD PROCEDURE FOR MARITIME BOARDING

Dockside Boarding: Vessels subject to Quarantine Inspection are normally boarded upon arrival in berth.

A vessel crewman should be stationed at the gangway to prevent any crew member from going ashore and shore personnel from coming aboard until the vessel has been passed by the Quarantine Boarding Officer.

Vessels are boarded at anchor.

Boarding in the Stream: Vessels are boarded at anchor:

Only if ship is to be at anchor for some time, such as waiting berth, etc. Or upon special request by the ship's Agent.

Effective July 1st, 1973, Radio Pratique as a method of quarantine clearance was discontinued at all ports under control of the United States. Changes in regulations, policies, and procedures concerning Maritime Public Health Clearance has been promulgated.

Vessels Subject to Routine Inspection: Only vessels in the following categories will be subject to on board Public Health Inspection upon arrival at ports under control of the United States:

A. Vessels which, during the 15 days prior to arrival in the United States, or since the last U.S. port (whichever period is shorter) have or have had on board among passengers or crew any of the following conditions or illness signs or symptoms:

1. Temperature of 100°F (38°C) or greater (a) which persisted for 2 days or more; or (b) which was accompanied or followed by any one or all of the following: rash, jaundice, glandular swelling; *or*

2. Diarrhoea severe enough to interfere with work or normal activity; *or*

3. On board occurrence of death, regardless of the signs and symptoms above.

B. Vessels which have been in plague infected country in the 60 days prior to arrival in the United States.

Procedures: Vessels in any of the categories A or B above will be granted Provisional Pratique and boarded upon arrival for inspection. In addition, vessels boarded for quality control may be boarded upon or subsequent to arrival. IN ACCORDANCE WITH REGULATIONS YOU MUST INFORM THE QUARANTINE STATION, THROUGH YOUR VESSEL AGENT, AT OR NEAREST THE INTENDED PORT OF YOUR VESSEL'S FIRST ARRIVAL IN THE UNITED STATES OF THE OCCURRENCE OF ILLNESS AS SPECIFIED IN A ABOVE. Based on information you provide your Agent, or information your Agent already possesses regarding your vessel's itinerary, your Agent will notify the Quarantine Station if your itinerary included a plague infected country.

ARRIVING VESSELS NO LONGER NEED TO COMPLETE A MARITIME PUBLIC HEALTH DECLARATION UNLESS BOARDED FOR INSPECTION AS DESCRIBED ABOVE. THE BOARDING INSPECTOR WILL PROVIDE THE DECLARATION.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Station KOU Marine Operator, San Pedro.

Channel 1 — ship transmit on 2009 kHz
ship receive on 2566 kHz
Channel 4 — ship transmit on 2126 kHz
ship receive on 2522 kHz

Station KOU also monitors Channel 16 (156.8 MHz) and Channel 26 (157.3 MHz) for distress, safety and calling.

Hours of report 0805, 2005 PST. Operator gives notice 5 minutes prior to each report. No ship traffic is handled during report period.

RADAR/VHF: Radar service provided to vessels only if Pilot aboard, in which case radar advisory information will be fed from shore-based radar at Pilot Station.

Station	*Channel*	*Frequency* (MHz)
Distress, Safety and Calling	16	156.8
Marine Exchange	12	156.6
	14	156.7

San Pedro Telephone	26	157.3
Marine Operator	24	157.2
Station KOU	26	157.3
Mandatory Bridge to Bridge	13	156.65

TUGS: Tugs will meet vessel inside breakwater prior reaching inner harbour area. Pilot and tugs are in communication.

BRIDGES: No restrictions into Port of Long Beach. The Gerald Desmond Bridge over Back Channel has vertical clearance of 155 ft. Cerritos Channel which connects Long Beach through Back Channel to Port of Los Angeles has 2 bridges which must be opened for passage of vessels.

Signal for Opening: 3 long blasts on horn or whistle. During inclement weather, call through a megaphone or make a loud and distinct stroke on a bell.

BERTHING: No requirements as to time of entry providing berthing arrangements have been made with Port Authority. Assignments classified as follows:

Preferential Assignments. Secondary Assignments, Subordinate Right granted for use of Preferential Assigned Berth. Temporary Assignment – temporary permission granted to use certain berth.

Note: All berth assignments shall be held by Assignee subject provisions of Port of Long Beach Tariff as to charges, rates, rules and regulations applicable thereto, and to all of terms, conditions and provisions contained in such assignment.

General Cargo:

	No. of berths	*Total length* (ft.)	*Depth* (ft.)
Pier A	5	2,917	30
Pier D	2	783	36 – 42
Pier F	4	2,467	32 – 36
Piers 1 and 2	4	3,097	36
West 7th St. Pier	1	600	36 – 40

BULK HANDLING FACILITIES: *Berths 32 – 33:* Length 824 ft., depth 36 ft. Screw type unloader unloads to conveyor system, direct to silos. Highest elevated vert. screw – 42.5 ft., lowest elevated vert. screw – 38 ft. Max. reach 94 ft. from face of wharf (concrete) 91.5 ft. from PHL. Unloading capacity 600 t.p.h. – 800 t.p.h. Storage capacity 50,000 tons. Cargo handled: Cement. 3×10 in. pipe-lines from Berth 32 to storage tanks. Storage capacity 6.7 million gallons.

Products handled: Tallow, vegetable oils (coconut oil, palm oil, cotton seed oil).

Berths 210 – 211 (Grain Terminal): Length 1,100 ft., depth alongside 45 ft. (9ft. out). Travelling Gantry ship loader having a loading capacity of 65,000 bu.p.h. (travel 432 ft., radius 105 ft.) connected to an overhead shipping gallery and belt conveyor system. This belt conveyor system connects to another transfer gallery extending from the grain elevator and silos (2,225,000 bushel storage capacity).

The grain terminal is equipped with the latest state-of-the-art dust collection system. There is an airveyor system for ship discharging.

Berths 212 – 215 (Bulkloader): Length 2,110 ft., depth alongside 50 ft. Breasting camels 20 ft. wide available. Stockpile area 85,682 sq. ft. (7,960 sq. m.). 2 electric, travelling, bulk shiploaders with retractable, straight-line bridge boom having 58 ft. outboard reach-height of 60 ft. above MLLW. Boom equipped with 48 in. electric belt conveyor and a telescopic loading spout with mechanical trimming head. Shiploader travels along rear of face. Bulk materials are handled by 48 in. and 60 in. (Berth 212 – 213 shiploader), electric belt conveyor system extending to shiploader through tunnel reclaim from car unloading sheds and storage areas. Sulphur plant, entirely closed system. 2 storage tanks. Load rate to vessels approximately 1,000 t.p.h. Types of cargo handled: iron ore, coke, coal, white products and sulphur.

Open storage: 225,000 tons.
Covered storage: 270,000 tons.

	Berth 212 – 213	*Berth 214 – 215*
Depth	50 ft.	32 ft. (40 ft. with camels)
Shuttle Boom	Yes	Yes
Single Spout	Yes	Yes
Outboard Reach	58 ft.	77 ft.
Clearance Above MLLW to Spout	48 ft.	65 ft.
Shiploader Conveyor	60 in.	72 in. (2 speed)
Loading Rate (Coal/Coke)	3,500 t.p.h.	5,000 t.p.h.

CONTAINER HANDLING FACILITIES: *Pier A (Berths 6 – 10):* 3 berths. Length 2,758 ft. Depth alongside 55 ft. 88 acre terminal. 4×40 ton gantry cranes. Leased by Long Beach Container Terminal. Scheduled to be completed by mid-1986.

Piers B (Berths 12, 13, 17, 18 and 19) and C (Berths 20 – 27): Length 6,790 ft., depth alongside 37-42 ft. 115 acre container and 4 Ro-Ro terminals. 4×40 ton container cranes. Storage space for 13,000 TEU containers, 1,000×40 ft. chassis, receptacles for 360 refrigerated units, 7 lane main gate and 6 scales. Terminal leased to California United Terminals.

Berths 227 – 228: Length 1,100 ft., depth alongside 42 ft. A 36.5 acre (26.3 hectares) container terminal leased to Sea-Land Service Inc. This terminal is complemented by a 16.3 acre, (6.6 hectares) container freight station, also leased to Sea-Land. The terminal includes a reinforced concrete wharf, 2 travelling 30 long ton container cranes and 1 travelling 40 ton gantry crane with 100 ft. span and 115 ft. outreach, surfaced storage area. There is space for storing 3,670 TEU containers, including 242 spaces for refrigerated containers.

Berth 229: Length 750 ft., depth alongside 42 ft. 28.5 acre container terminal leased to Maersk Line (Maersk Line will be relocating to Berth 243 – 244 in mid-1986). The terminal includes 2 travelling 30 long ton container cranes, plus surfaced area for storing 2870 TEU containers including 84 spaces for refrigerated units.

Berth 230: Length 750 ft., depth alongside 42 ft. 2×30 long ton, travelling container cranes with 100 ft. span and 115 ft. outreach. Has space for storing 1,784 TEU containers, including 50 spaces for refrigerated containers. Terminal leased to United States Lines.

Berths 232 – 233 – 234: Length 2,300 ft., depth alongside 36 ft., 36 ft., 42 ft. respectively. 4×30 long ton electric, travelling Paceco container cranes, each with hinged cantilevered boom with 113 ft. outboard reach. 8 Paceco 30 – 40 ton capacity transtainers. Has space for storing 6,000 TEU on ground and 2,500 TEU containers on chassis, 264 spaces for refrigerated containers. Terminal leased to International Transportation Service, Inc.

Berths 243 – 244: Length 1,200 ft., depth 42 ft. 2 travelling 40 ton container cranes and 6 ton transtainers. Space for storing 3,600 TEU containers. Complete repair facilities and reefer container pre-trip facility. Terminal leased to Long Beach Container Terminal. (Long Beach Container Terminal relocating to new container facility in mid-1986).

Berths 245 – 246 – 247: Length 2,100 ft., depth alongside 36 ft. (40 ft. at 8 ft. off berth). 4 travelling shore container cranes of 40 tons capacity and 3×40 ton transtainers. Expansion of container freight station provides 88,600 sq.ft. inside storage area. Has space for storing 8,000 TEU containers and 72 refrigerated units (container freight station to be torn down by 1987. Additional land fill is planned for added container storage). Terminal leased to Pacific Container Terminal.

SPECIALISED CARGO HANDLING FACILITIES: *Berths 32 – 33 (Tallow, Coconut Oil):* Length 824 ft., depth alongside 36 ft. 2×6 in. pipelines extend from Berth 32 to 9 coconut oil storage tanks, total capacity 7,750,000 lb.; 12 tallow storage tanks, total capacity 48,211,300 lbs. (24,105 short tons). These berths used primarily for handling bulk cement (see "Bulk Facilities").

Berth 34 (Steel, General Cargo): Length 750 ft. Depth alongside 36 ft.

Berths 82 – 83: Length 1,300 ft., depth alongside 38 ft. These berths are shared by Port Auto Terminal No. 1, operated by Toyota Motor Sales and covering 55 acres, and Port Auto Terminal No. 2, operated by the Pasha Group and covering 40 acres. Toyota's facility provides for offices, warehousing, dewaxing, painting, repairing and accessory installation, and storage for automobiles. Pasha's facility furnishes an automobile preparation centre, offices and dewaxing operation, with storage area for automobiles.

Berth 83 (Gypsum, Oil, Gasoline): Length 600 ft., depth alongside 38 ft. Vessels unload gypsum rock into an adjustable, elevated, receiving hopper at pier face, served by an elevated 36 in., electric belt-conveyor system extending to a 60,000 ton capacity dome-roof storage building in rear. Unloading rate 800 t.p.h. – 900 t.p.h. Open storage: 335,075 sq.ft.

Berth 122: Length 600 ft., depth alongside 40 ft. An adjacent 21 acre storage area is available for lumber.

Berth 208 (Bananas): Length 600 ft., depth alongside 40 ft. Max. beam without turning vessel 70 ft. 4 electric, travelling banana unloaders, total capacity 17,000 banana boxes per hour. Electric, belt-conveyor system transfers banana boxes from unloaders to 2 rail car and truck loading platforms and to interior of harbour banana warehouse. Banana warehouse is divided into cold storage and ripening areas. Truck loading platform along West side.

Berth 209 (Salt): Length 550 ft., depth alongside 40 ft. Vessels unload bulk salt into a receiving hopper at outer end of a movable, inclined, 48 in., electric belt conveyor. This conveyor serves an adjustable elevated receiving hopper at outer end of an elevated, 48 in., electric belt-conveyor system extending to a large open storage area in rear. Unloading rate: 800 t.p.h.

Berth 242 (Liquid Bulk): Length 700 ft., depth alongside 36 ft. Storage capacity 13,000,000 gallons. Product handling equipment: the pumping and pipe-line system is designed to load and unload products to and from barges, ships, rail cars and trucks. Large, heavy-duty pumps efficiently handle a variety of bulk liquids and bunker fuel.

Pier G (coke): Petcoke vessels berth at Pier G which is operated by Metropolitan Stevedoring Company.

Working Range 213.4 m.
Air Draft 19.82 m.
Max. Ship Size 100,000 d.w.t.
Draft 15.24 m.
Open Storage 120,000 tons
Closed Storage 270,000 tons

CRANES: Barge cranes available capacity 45 tons – 275 tons. A U.S. Navy floating crane capacity 385 tons available for hire.

MEDICAL: Advance notice preferable. Adequate hospital and medical facilities available for providing necessary or emergency care. From information available, Public Health Department may, if required, request certain information prior to granting Free Pratique for inoculations, Vaccination/Fever Certificates.

TANKERS:

Pier A:

Terminal Operator:	Exxon
Cargoes Handled:	Petroleum products and bunker fuel
Special Facilities/Equipment:	Storage tankage for bunker fuel: 400,000 bbls. Discharge rate: 1,700 to 3,500 bbls. per hour. The Long Beach Marine Terminal is the central pumping station for 55 valve box locations throughout the Harbour.

Berth 209:

Length of Berth:	550 ft. (167.6 m.)
Unloading Platform Height:	10.3 ft. (3.14 m.)
Design Depth of Water at berth:	40 ft. (12.2 m.)
Terminal Operator:	Exxon
Cargoes Handled:	Petroleum products and bunker fuel
Special Facilities/Equipment:	Storage tankage for bunker fuel: 400,000 bbls. Discharge rate: 5,000 bbls. per hour.

Berths 209 – 210:

Length of Berths:	1,123 ft. (342.3 m.)
Wharf Height:	19.1 ft. (5.8 m.)
Design Depth of Water at Berth:	40 ft. (12.2 m.)
Terminal Operator:	Namolco – Exxon
Cargoes Handled:	Petroleum products and bunker fuel
Special Facilities/Equipment:	Storage tankage for bunker fuel: 2,220,000 bbls for Exxon and 66,000 bbls. for Namolco. Discharge rate: 10,000 bbls. per hour.

Berth 211A:

Length of Berth:	240 ft. (73 m.)
Terminal Operator:	Exxon
Cargoes Handled:	Petroleum products and bunker fuel
Special Facilities/Equipment:	Storage tankage for bunker fuel: 400,000 bbls. Discharge rate: 5,000 bbls. per hour. Bunker barge loading facility.

Pier E:

Berths 118 – 119:

Length of Berths:	1,210 ft. (368.8 m.)
Wharf Height:	21.6 ft. (6.6 m.)
Design Depth of Water at Berth:	55 ft. (18.6 m.)
Terminal Operator:	ARCO
Cargoes Handled:	Petroleum products and bunker fuel
Special Facilties/Equipment:	5×12 in. (30.5 cm.), hydraulic-operated, marine swivel-jointed loading arms mounted on elevated steel structure on centre wharf. Discharge capacity is 50,000 bbls. (7,950,00 litres) per hour.

Berth 121:

Length of Berth:	1,100 ft. (335 m.)
Wharf Height:	22 ft. (6.7 m.)
Design Depth of Water at Berth:	70 ft.
Terminal Operator:	Four Corners Pipe Line Company
Cargoes Handled:	Crude oil and petroleum products
Special Facilities/Equipment:	4×16 in. diameter articulated crude unloading arms and 1×8 in. diameter articulated bunker/diesel loading arm; 275 p.s.i. maximum working pressure; design to accommodate tankers from 50,000 to 265,000 d.w.t. tankers; arms to be FCM Chicksan with hydraulic couplings. Storage tankage available at ARCO facilities in Carson and the inner harbour via 42 in. and 24 in. pipelines.

Berths 82, 83:

Length of Berths:	1,200 ft. (366 m.)
Wharf Height:	14.4 ft. (4.4 m.)
Design Depth of Water at Berth:	38 ft. (11.6 m.)
Other:	Capacity for petroleum products: 410,000 bbls.
Terminal Operator:	Long Beach Terminal Co.
Cargoes Handled:	Gasoline and Naphtha

Berths 84 – 87:

Length of Berths:	1,972 ft. (601.1 m.)
Wharf Height:	16.3 ft. (5.0 m.)
Open Storage Area:	471,300 sq. ft. (43,784 sq.m.)
Design Depth of Water at Berth:	52 ft. (15.8 m.)
Terminal Operator:	Texaco Inc.
Cargoes Handled:	Crude oil, petroleum products, bunker fuel
Special Facilities/Equipment:	Discharge capacity 32,000 bbls. per hour; 24 in. pipe-line to storage and tank farm. Storage capacity: 245,000 bbls.

The following is part of a letter sent by the Captain of the Port to a tanker operator:

The safety of the port and the VLCC tankers using the harbour for bunkering and provisioning is of paramount concern to the Coastguard. Consequently the following guidelines have been established for all such vessels 200,000 d.w.t. and larger when utilising the Outer Harbour (inside of the breakwater) of the ports of Los Angeles/Long Beach:

a. Vessels may enter or depart the harbour areas inside the breakwater only during daylight if over 56 ft. draft.
b. Minimum visibility of 1 mile is established for vessel movement.
c. Adequate tugboat assistance shall be provided when passing through the breakwater entrances upon entering or departure, and when navigating inside the breakwater to and from anchorages.
d. A qualified Pilot must be onboard when entering or departing the harbour. One way traffic is to be maintained during the VLCC's transit through the breakwater entrance.
e. Vessel must have a 10% draft clearance under the keel when crossing either the Los Angeles or Long Beach entrance.
f. No "dead ship" status will be permitted without prior approval of the Captain of the Port.
g. No vessel with a beam in excess of 200 ft. shall enter either harbour without the permission of the Captain of the Port.

DENSITY: Local water density 1.025 grams per millilitre or pure sea water at all stages of tide.

FRESH WATER: Potable fresh water available all Municipal berths through 2 in. lines. Rental charge for use of each 50 ft. length water hose when furnished.

FUEL: All grades (viscosities) of bunker fuels available in any amount through pipe-lines at most Municipal berths, and by barge at anchor or at berths if desired. Notify quantity and type desired to local Steamship Company or Agent.

FIRE PRECAUTIONS: 2 fire boats and 1 fire station; in addition City fire service available.

Special fire precautions required at all berths handling petroleum products or dangerous cargoes. In addition to all applicable provisions of Long Beach Municipal Code, flammable and combustible liquids and flammable gases shall be handled and stored at Marine Petroleum Terminals in accordance with minimum fire safety requirements promulgated by Chief, Department of Fire, City of Long Beach.

GANGWAY/DECK WATCHMEN: Normally used, but only compulsory when detainees aboard.

OPENING/CLOSING HATCHES: Crew can open or close hatches at sea or at anchor. If closed or opened at dockside, the use of longshoremen compulsory.

CUSTOMS ALLOWANCES: Tobacco, each crew member entitled to 300 cigarettes, 50 cigars and 3 lb. of tobacco or combination of above. If the stay in port is such that additional tobacco is required, Customs will so issue. Wine and/or Spirit, not to exceed 1 quart of alcoholic beverage each adult non-resident. This exemption for alcoholic beverages may be applied to more than one kind but not to an aggregate volume of more than 1 quart for each adult crew member.

Note: Upon arrival of vessel from foreign port, or vessel engaged in foreign trade from a domestic port, sea stores and ship's stores not required for immediate use or consumption on board while vessel in port, and articles acquired abroad by officers and members of crew, for which no permit to land has been issued, shall be placed under seal, unless Customs Officer is of the opinion that circumstances do not require such action.

CARGO GEAR: Employer shall not use ship's cargo handling gear until he has ascertained that vessel has a current and valid Cargo Gear Register and Certificate indicating that cargo gear has been tested, examined and annealed in accordance with requirements of International Labour Organization Convention No. 32.

IDENTIFICATION CARDS: U.S. Department of Justice, Immigration and Naturalization Service Form I-95-A (Form I-94 for passengers) must be completed.

CONSULS: (Consul Generals, Consul or Vice-Consul). In Los Angeles. (Area code 213)

2. Pacific Cargo Inspection Bureau, Pier A, Berth 4, Long Beach, CA 90802. Tel: 435-7861.

Jacobsen and Associates, Inc., 1324 N. Avalon Blvd., P.O.Box 248, Wilmington, CA 90748. Tel: 834-4553.

REPATRIATION: Through U.S. Department of Justice, Immigration and Naturalisation Service, and clearance of personal effects by U.S. Customs.

AIRPORT: Los Angeles International Airport approximately 18 miles from port, and provides regular scheduled and international airline service.

TIME: GMT minus 8 hours. United States observes Daylight Saving Time, begins at 0200 hrs. on last Sunday of April each year and ends at 0200 hrs. on last Sunday of October of each year.

HOLIDAYS: The subject Legal holidays are defined as follows: New Year's Day (1st January); Lincoln's Birthday (12th February); Washington's Birthday (3rd Monday February); Memorial Day (Last Monday May); Independence Day (4th July); Labour Day (1st Monday September); Admission Day (9th September); Columbus Day (2nd Monday October); Veterans' Day (11th November); Thanksgiving Day (4th Thursday November); Christmas Day (25th December).

Notes: (1) Also, every Statewide Election is a holiday.

(2) Also, any other legal holiday that may be proclaimed by State or National authority is a holiday.

(3) When one of the above days falls on Sunday, the following Monday shall be observed as a holiday.

EMERGENCY CO-ORDINATION CENTRE: U.S. Coast Guard, Captain of the Port, 165 N. Pico Ave., Long Beach, CA 90802. Tel: (213) 590-2326.

POLICE/AMBULANCE/FIRE: Port of Long Beach – Police 590-7320 (routine), 435-6711 (emergency); Fire Department and Paramedics 436-8211; Harbour Security Officers 590-4195; U.S. Customs 590-2457.

In an emergency dial 911.

TELEPHONE: Installation of telephone aboard ship at Municipal berths.

SERVICES: All services from tank cleaning to compass and instrument repair available at various locations within greater port area.

STORING: See "Prelims".

1. Vessel can be stored by barge or truck by prior arrangement.

2. No restriction on storing from barge while vessel is discharging or loading except when the vessel is handling hazardous cargo, petroleum products or bunkering.

3. Truck can proceed alongside the berth for the purpose of delivering or receiving stores and chandlery supplies.

4. Forklift trucks may be used on the berth to handle stores with approval of the stevedoring company.

5. Custom regulation regarding storing: Stores *not in bond* may be taken on board the vessel on an export declaration certified by the Customs' Inspector on duty. Stores *in bond* must be signed off by the bonded warehouse on a vessel supply export document and received on board the vessel by the Customs' Inspector on duty.

6. Riggers employed to assist with storing, stevedores or longshoremen assist with the stores on the wharf but the storing on board vessel is done by the ship's crew.

SHIP SUPPLY SERVICE: See "Los Angeles".

SHORE LEAVE: Crewmen allowed shore leave providing necessary application presented to U.S. Immigration Officer is approved and crewmen's Landing Permit issued (Form 5129). Customs declaration required for articles to be landed by crew members (1 quart of alcoholic beverage with seal broken is allowed).

DELAYS: Arrival at berths are normally on time as scheduled. However, there are times of inclement weather or lack of cargo at a berth which create a short delay. Shortage of longshoremen can also cause a delay in discharging or loading cargo. No delay experienced in bunkering.

GENERAL: For information regarding various social organisations, call 436-9041. Long Beach Recreation Department, for information.

DEVELOPMENTS:

(1) The complete containerisation complex consists of 25 cranes and 18 berths. 578 acres.

(2) An Omni terminal – an ultra modern multi-purpose cargo facility handling containers, Roll-on/Roll-off and break bulk cargoes.

(3) Sulphur prilling plant.

(4) World Trade Center, ground breaking mid-1986.

AUTHORITY: Board of Harbor Commissioners, Port of Long Beach, P.O.Box 570, (925 Harbor Plaza), Long Beach, California 90801 – 0570. *Tel:* (213) 437-0041. *Telex:* 656452. *Cables:* Portobeach. *Contact:* James H. McJunkin, Executive Director. Stan Westover, Director of Operations.

AGENT: Norton Lilly Intl., 2001 John Gibson Blvd., San Pedro, CA 90731. Tel: (213) 547-1156. Telex: 6831863. Twx: 910-341-6827.

LONGVIEW, Washington: 46.10 N. 122.55 W.

(See Plan)

DOCUMENTS:

3 Complete Cargo Manifests.
3 Stores Lists.
3 Possessions Lists.
3 Crew Lists on Immigration forms.
Vessel's Documents.
Tonnage Tax Statement.
Quarantine Form completed.

At first port of arrival, ship is boarded and inspected by Customs, Immigration, Public Health and Agriculture officials. At each subsequent port only Customs Agent will board prior to docking.

PILOTAGE: See "General – Pilotage" before first U.S.A. port.

ANCHORAGE: Safe anchorages indicated by Columbia River Pilots.

RESTRICTIONS: None in regard to arrival time or state of tide. Channel depth 40 ft. at mean low water and tidal range varies between 2.5 ft. and 4 ft.

MAX. SIZE: No limitation on length or breadth. Depth alongside 40 ft.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Seattle Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

TUGS: Columbia River Pilots have knowledge of tug positions and other knowledge pertaining to tugs aiding a vessel.

BRIDGES: One bridge crossing Columbia River at Longview has sufficient clearance so as not to present a problem. Clearance 169 ft. – 185 ft. depending on season.

BERTHING: 7 berthing facilities are available at Port Longview, starting adjacent to the Lewis & Clark Bridge and extending upstream for a distance of nearly a mile.

Berths 1 through 4 are located on one continuous wharf 2,350 ft. long. Berths 1, 2 and 3 are equipped to handle general cargo, bulk feed grains, bulk ores, chemicals and petroleum products. 2 gantry cranes serve Berths 1 and 2 and a 600-ton capacity heavy lift is located at Berth 3. A paved 2.8 acre assembly area fronting Berth 2 is suitable for handling lumber or multi-commodity project shipments. Both gantry cranes can be used at this facility. 3 transit sheds and 1 gear locker are located near the three berths which are also served by 1,500 ft. of surface track on the wharf apron plus 2 spur tracks under the gantry cranes.

Berth 4 is used for receiving and shipping grain and is served by a 5 million bushel grain elevator operated by the Continental Grain Company. The overhead grain gallery extending along the wharf is served by 6 gravity-fed loading spouts. A marine leg located at the inland side of the wharf is used for unloading grain barges.

Berth 5 is a 515 ft. wharf and is an exporting facility for the shipment of bulk chemicals. It is also available for the loading of logs using ship's gear from the water side of the vessel, and handling barges.

Berths 6 and 7 form a continuous wharf 1,500 ft. long. The ship-side container crane is located at Berth 7, with a 50 ton gantry crane at Berth 6. Both cranes are rail mounted. An open cargo handling area of 54 acres is located adjacent to the 2 berths. On the dock is one large transit shed (100,666 sq.ft.) and a gear locker. 3 rail tracks are located along the length of the apron. There is a rail spur on the inland side of the transit shed.

With the exception of the grain elevator facility, Port Longview operates its own facilities and performs all terminal services between ship's tackle and consignees or inland carriers.

In addition to these facilities operated by the Port, there are 9 other berths operated privately in the Longview Port District. Weyerhaeuser Company owns 6 berths and Reynolds Metals Company, International Paper Company and Longview Fibre Company each operate 1 berth apiece. 6 of the 9 berths are used primarily for export while the other 3 are used mainly for receiving raw materials used by the mills.

BULK HANDLING FACILITIES:

Containers: Port Longview's container facility centres around a 30 long ton, electrically operated, rail mounted crane.

The crane has a rated lifting capacity of 30 long tons below the spreader and 37 long tons below the cargo beam. The telescopic spreader can be adjusted to handle 20 ft., 27 ft., 35 ft. and 40 ft. ISO/Sealand containers. It is designed to handle 20 load/discharge containers per hour.

The boom can be raised and lowered to provide clearance of ship superstructure and is designed for through-leg rapid load-handling.

With an outreach of 124 ft. from the waterside rail and a vertical reach of 110 ft., the crane can service Panamax size vessels.

Utilising a unique "trailer-train" system, a continuous flow of containers can be maintained between storage and staging areas to sustain loading/unloading operations.

A 40-acre area located behind Berth 6 – 7 is for use as a container storage yard.

Containers received from the vessel can be immediately inspected and rerouted either to warehouses for devanning or to rail or truck for ongoing movement. Export containers are staged to the vessel in loading sequence in the adjacent cargo assembly area.

Grain: The Continental Grain Company operates the 5,165,000 bushel capacity grain elevator at the Port of Longview Terminal.

Pellets/Coke/Fertilizer: Port Longview has three dry bulk shipping facilities. Sugar beet pulp pellets are loaded at Berth No. 1 through a 600 t.p.h. loader.

A "portable" belt conveyor and loader for handling bulk dry products (200 t.p.h.) is available at Berth No. 3.

Atlantic Richfield Co. uses a calcined coke storage/loading facility at Berth No. 5.

Two portable hoppers with belt conveyors are available to handle inbound free flowing dry bulks unloaded by ship's gear or dock Whirley cranes equipped with clams.

Roll-on/Roll-off: A 240 ft. extension to the upstream end of Berth 7 to accommodate Ro/Ro vessels is available at the Port of Longview. 96 ft. of the extension is constructed at a level 8 ft. lower than the remainder of the dock and serves as the loading/unloading area to accommodate a Ro/Ro vessel's stern ramp.

CRANES: 2 electric-powered gantry cranes serve Berths 1 and 2 on 550 ft. of track. They are readily adaptable for handling various types of bulk cargoes, containers, logs, machinery and large equipment. 1 crane is equipped with a 130 ft. boom and has a capacity of 60 tons at a 45 ft. radius. The other crane has a 120 ft. boom with a 50 ton capacity at a 45 ft. radius. Both cranes are served by two 400 ft. railroad tracks permitting direct handling between rail cars and vessels.

A third gantry crane serves Berth 6 on 500 ft. of track. This crane has a 165 ft. boom with a capacity of 50 tons at a 45 ft. radius. 2 × 1,000 ft. rail tracks are located between the crane tracks for handling rail cars at shipside.

The 'Columbia Giant', a 600-ton capacity shore-based crane located at the port, is one of the largest capacity lifting facilities on the West Coast. The twin booms of the derrick reach 130 ft. above the dock and have a tested lifting capacity of 660 tons. The blocks can be hoisted separately or in tandem. The lifting system is certified by Federal and State agencies and has passed safety requirements for heavy lifting of AEC controlled projects. The 'Columbia Giant' is available for single lifts ranging from 65 short tons up to its rated capacity of 600 short tons.

Also see "Berthing" – Berth Nos. 6 and 7.

STEVEDORES: At least 24 hours notice necessary to arrange gangs before ETA. Arrange through Port Office via Ship's Agent.

MEDICAL: Hospital facilities available.

TANKERS: No facilities.

DENSITY: Columbia River is fresh water at Longview.

FRESH WATER: Available through 8 in. line with 2.5 in. connections. Rate of delivery approx. 14.5 t.p.h.

FUEL: Not available.

GANGWAY/DECK WATCHMEN: Not needed, but arrangements can be made if necessary.

OPENING/CLOSING HATCHES: Work carried out normally by stevedores.

CUSTOMS ALLOWANCES: See "Portland, Oregon".

IDENTIFICATION CARDS: Advisable but not necessary.

CONSULS: At Portland, Oregon.

REPAIRS: Some deck and minor engine repairs are possible at Longview.

REPATRIATION: No facilities for effecting crew changes or repatriations.

AIRPORT: Nearest airport served by regular airlines is in Portland. Charter flights may be arranged from a small local airport.

TIME: GMT minus 8 hours. In addition, clocks are moved ahead 1 hour on the last Sunday in April and returned back 1 hour on the last Sunday in October, at 0200 hrs. local time on those 2 days.

POLICE/FIRE/AMBULANCE: Police 911; Fire 911; Ambulance 636-3120.

TELEPHONES: Available at dockside.

HOLIDAYS: New Year's Day (January 1st); Washington's Birthday (February 22nd); Memorial Day (May 30th); Independence Day (July 4th); Labour Day (first Monday in September); Veteran's Day (November 11th); Thanksgiving Day (fourth Thursday in November); Christmas Day (December 25th). Cargo work can be arranged on most of these holidays.

SHORE LEAVE: Crews allowed ashore if papers are in order.

BANKS: Rainier National Bank and Seattle First National Bank.

STORING: See "Prelims".

Official Language: English.

U.S. Coastguard: Captain of the Port of New Orleans (00230) 701 801.

The LOOP Inc. deepwater port and associated facilities are designed for unloading crude oil cargoes from deep draft tankers. The marine terminal is located in open waters of the Gulf of Mexico approximately 29 km. (18 statute miles) offshore from the State of Louisiana.

The port is owned and operated by LOOP Inc. under licenses granted by the Government of the United States of America and the State of Louisiana. The port is governed by the laws of the United States in the same manner as if the port were an area of exclusive federal jurisdiction located within a state.

LOOP shall not permit a tanker registered in a foreign state or flying the flag of a foreign state to utilise its facilities unless the foreign state involved, by specific agreement with the United States, has agreed to recognise the jurisdiction of the United States over the tanker and its personnel while the tanker is located within the safety zone of the port, and unless the tanker owner or operator has designated an agent in the United States for receipt of service of process in the event of any claim or legal proceeding resulting from activities of the tanker or its personnel while located within the port safety zone, and unless the tanker owner carries insurance or demonstrates financial responsibility as required by Title 33, United States Code Annotated, Section 1517.

LOOP shall also maintain a list, as provided by the Office of the Secretary of Transportation, of such foreign states that have executed agreements of U.S. jurisdiction.

At the time of nomination of a tanker, LOOP shall require the person nominating the tanker, or his authorised agent nominating the tanker, to provide LOOP with the name and address of the tanker's designated agent in the United States and to present evidence of compliance with the financial liability requirement, as defined by Title 33, United States Code Annotated, Section 1517.

The U.S. Coastguard's Captain of the Port, whose office is in New Orleans, has governmental authority over all ports in the area, including LOOP.

LOOP's Port Superintendent has overall authority over the marine terminal and port. This encompasses all personnel at the port, including contract personnel, and all vessel and aircraft operations at the port. During emergency conditions all response activities at the port are directed by the Port Superintendent. This includes the shutdown of tanker cargo discharge. Emergency conditions are those that, in the Port Superintendent's judgment, involve or could involve safety, environmental protection, personnel injury or property damage.

Examples of these emergencies include, but are not limited to, the following, if they occur at the marine terminal, or on a tanker, or other vessel or aircraft, or at any other location anywhere in that portion of the deepwater port that lies within the safety zone:

(a) Oil spill.
(b) Fire or explosion.
(c) Tanker collision, actual or potential, with another vessel or with the pumping platform complex.
(d) Tanker grounding.
(e) Electrical power failure on the platform.
(f) Disruption of communications between shore and the port.
(g) Aircraft disaster.
(h) Serious illness, injury or death.
(i) Presence of poisonous gas.
(j) Evacuation operation of the platform (usually due to impending hurricane).

The Port Superintendent is present at the port at all times.

ABBREVIATIONS:

AMM – Assistant Mooring Master
ANSI – American National Standards Institute
AST – Atlantic Standard Time (ZD + 4)
CFR – Code of (U.S.) Federal Regulations
CST – Central Standard Time (ZD + 6)
EST – Eastern Standard Time (ZD + 5)
FERC – Federal Energy Regulatory Commission
GCLW – Gulf Coast Low Water (Datum)
GPM – Gallons Per Minute
M – Thousands (used with barrels of oil)
MBH – Thousands of barrels per hour
mi – Miles
MM – Mooring Master
n – Nautical (used with the word *miles*)
NOAA – National Oceanographic and Atmospheric Administration
PLEM – Pipe-Line End Manifold (at the SPM)

PLATFORMS:

Pumping Platform Complex:

The marine terminal pumping platform complex consists of the pumping platform and the control platform. The two platforms are connected by a walkway bridge between the lower decks. The top of the lower deck of each platform is 21.3 m. (70 ft.) above MHW.

The pumping platform measures 61 m.×65.5 m. (200 ft.×215 ft.) and contains equipment for receiving, measuring, sampling, controlling and pumping oil to assist in cargo unloading.

The control platform contains a control room manned 24 hours a day for communications, traffic control, monitoring and surveillance purposes. Also, a supervisory control and monitoring system provides the capability for the control room personnel, when so directed, to assume control of all marine terminal processes otherwise normally initiated from the Operations Centre located near Galliano, Louisiana. The control platform is a two-deck structure measuring approximately 21.3 m.×21.3 m. (70 ft.×70 ft.). The lower deck contains platform utility equipment and supporting facilities. The upper deck supports a two-level control building.

DOCUMENTS: See "New Orleans".

PILOTAGE: See "Tanker Arrival".

MAX. SIZE: See "Berthing".

TANKER ARRIVAL:

Arriving from Seaward: There is a 63 mile Safety Fairway leading to the safety zone. *Note:* A tanker in LOOP's safety zone shall keep at least 5 nautical miles (9.3 km.) behind any other tanker ahead of her in the safety zone. The Mooring Master and Assistant Mooring Master will normally board and the Mooring Master will be on the bridge prior to the vessel entering the safety zone. The arrival time for a tanker is recorded as the time and date the inbound tanker arrives at the boundary between the safety zone and the safety fairway. *Tankers are not to enter the safety zone or proceed to the anchorage unless a Mooring Master is on board and the tanker is cleared by the Vessel Traffic Controller.*

The tanker should have on her port side for SPM No. 3 and on her starboard side for SPM's No. 2 and No. 4 a pilot ladder and, when so instructed, an accommodation ladder on the port side properly prepared for use by the Mooring Master and Assistant Mooring Master. The mooring and connecting equipment supplied by LOOP is handled on the port side for SPM No. 3 and on her starboard side for SPM's No. 2 and No. 4., so the tanker's derrick should be topped and rigged on the port side for No. 3 and on the starboard side for No. 2 and No. 4 in preparation for lifting the equipment aboard and for handling the hose after mooring. The derrick block should be plumb with the tanker's rail at the manifold centreline. Tankers are asked to turn and make a lee in order to allow for a safer boarding and an easier equipment-handling operation. Large tankers normally use SPM No. 2.

Speed:

(a) Specific tanker speeds will be recommended by the Mooring Master to the vessel.
(b) Tankers should not exceed the minimum speed necessary to maintain steerage. Inbound tankers shall not enter or be underway in the terminal section of the safety zone at speeds exceeding 3 knots through the water.
(c) Tankers departing in ballast shall not exceed 10 knots through the water anywhere in the safety zone, and shall not exceed such lesser speed as what may be determined prudent by the Mooring Master because of other vessel traffic or prevailing sea or weather conditions.

Proceeding into the Safety Zone: After the Mooring Master is aboard, the tanker may proceed under his guidance into the safety zone, either to the designated anchorage or to the assigned berth for mooring. The shipper and tanker owner shall be responsible and liable to LOOP for any damage or injury done by his tanker to any LOOP facility, equipment or personnel. Services of the Mooring Master, Assistant Mooring Master, mooring launches and their crews, and such other LOOP personnel as may be required aboard the tanker are provided with the express understanding that the Master of the tanker has and accepts the ultimate responsibility for the tanker and crew.

If it becomes necessary for the Master of a tanker to disregard a Mooring Master's advice in order to ensure the safety of his ship, it is requested that a written report from the Master be submitted promptly to LOOP.

Tanker Boarding by Mooring Master and Assistant Mooring Master: Specific instructions are communicated to each arriving tanker for bringing aboard the Mooring Master, Assistant Mooring Master port-furnished equipment. Basic procedures for proceeding to a mooring, are as follows:

(a) The Vessel Traffic Controller advises the tanker of the Mooring Master's boarding point and of equipment to be made ready prior to arrival of the tanker at the boarding area. Included is advice for preparation of an accommodation ladder and/or pilot ladder and equipment hoist.
(b) The Mooring Master and Assistant Mooring Master will board the tanker and port furnished equipment is picked up by the tanker prior to arrival at the boundary between the safety zone and the safety fairway. The boarding area is usually at the North end of the safety fairway where it turns and joins the approach section of the safety zone. The entrance to the safety zone is marked at the lateral boundaries by buoys 1 and 2.
Also see "General" – Helicopter Transfer.
(c) Equipment brought aboard the tanker for use in the mooring arrangement is transported to the tanker's bow by the tanker's personnel. Supervised by the tanker's designated officer, and advised by the Assistant Mooring Master. Tanker personnel prepare and arrange the tanker's mooring equipment and fittings for the mooring operation to the satisfaction of the Assistant Mooring Master and tanker's Master.

Navigational Assistance: During the mooring operation the Mooring Master and the Assistant Mooring Master perform the following functions:

(a) The Mooring Master advises the tanker's Master on operational and ship control matters and regulations that are peculiar to the port, such as navigational aids, location of crude oil and gas lines in the area, depth and current characteristics of the manoeuvring area during existing conditions, mooring equipment and procedures, and the port's vessel control procedures. The Mooring Master will maintain communications with the Vessel Traffic Controller, mooring launches and the Assistant Mooring Master until the mooring operation has been completed.
(b) The Assistant Mooring Master is stationed on the forecastle of the tanker during mooring operations to assist the Mooring Master by reporting position approach data relative to the SPM and to advise the tanker's personnel in the handling of mooring equipment peculiar to the port.

Vessel Routeing and Approach to Moor: Tankers enter and depart the port via the approach section of the Safety Zone with the assistance of the Mooring Master aboard the tanker. *Prior to entry into the safety zone, anchors must be housed and windlass brakes must be checked for absolute tightness in order to prevent the anchors from being accidentally dropped, with resultant damage to submarine pipe-lines.*

Transiting the Approach Section and Anchorage Section: The Master of the tanker, a competent deck watch officer and a competent helmsman must be on the bridge at all times while the ship is manoeuvring in the approach section and anchorage. A competent deck officer is to be on the bow along with one seaman as lookout, who is capable on command of letting go the anchor, if necessary. A watch engineer and sufficient crew to operate the power plant shall be in the engine room.

Transiting the Terminal Section and Approach to Moor: The Master of the tanker, a competent deck watch officer and a competent helmsman must be on the bridge at all times while the tanker is transiting the terminal section of the Safety Zone and approaching an SPM to moor.

A competent deck officer is to be on the bow along with one seaman as lookout. Sufficient qualified engineers should be in the engine room to operate the plant properly and safely.

Anchor Watch: While the tanker is at anchor in the anchorage section of the Safety Zone, a competent deck officer shall be stationed at all times on the bridge to watch for any dragging of the anchor which can be detected by taking radar ranges or rounds of bearings as necessary on the pumping platform or on any other fixed object.

Manoeuvring Capabilities: LOOP SPM buoys are located on a radius of 2,438 m. (8,000 ft.) from the Marine Terminal Pumping Platform Complex, with spacing between buoys of 1981.2 m. (6,500 ft.). Tankers must have the capability to perform the manoeuvring required to approach and depart from an SPM within an area not greater than 1,524 m. (5,000 ft.) radius from the buoy at speeds not exceeding 5.5 km/hr. (3 knots). LOOP may require evidence of a tanker's capability to approach and enter the safety zone. The Mooring Master may determine this by pre-berthing checks of a tanker's manoeuvring characteristics.

Berthing Order: LOOP reserves the right to take tankers in an order that will meet operational and crude oil compatibility requirements at LOOP's storage, although normally tankers are taken in the order of their position in the queue. Generally, positions in the queue are determined by LOOP based on an arrival window. If LOOP takes a tanker out of the queue for operational reasons, it will be done in accordance with LOOP's published Rules and Regulations, which are available on request from LOOP.

VESSEL REQUIREMENTS:

Navigation Equipment: Any vessel calling at LOOP must meet the U.S. Coastguard navigational equipment requirements for a vessel entering U.S. waters; i.e. Part 164.35, Title 33, of the United States Code of Federal Regulations. Coastguard personnel will board selected arriving vessels to ensure compliance with Federal Regulations.

Pre-arrival, Connection and Transfer:

Preparations, procedures, tests and inspections to be followed both by the tanker and by the LOOP platform during the pre-arrival time, connection and transfer must meet the requirements of Part 155, Chapter 33, Section 150, Sub-part D, of the United States Code of Federal Regulations, and the recommendations of the OCIMF Safety Guide.

The Mooring Master will have a LOOP check list, which includes a Declaration of Inspection, that shows all the items to be tested or inspected in order to comply with the Federal Regulations and with current OCIMF recommendations. This check list is to be signed both by the tanker's Master and by LOOP's Mooring Master.

Oil Transfer Equipment:

All tankers must meet the requirements of Part 155, Title 33, of the United States Code of Federal Regulations with regard to oil transfer equipment. *Cargo hoses must be connected by the tanker's personnel, under the guidance of the Mooring Master or the Assistant Mooring Master.*

Physical Parameters of Vessel:

Tankers to be accepted by LOOP must:

(a) Have oil transfer equipment that conforms to the technical recommendations of the Oil Companies' International Marine Forum (OCIMF). (Any OCIMF recommendations that change after issuance of this manual are overriding to LOOP's requirements).
(b) Be equipped with shipboard mooring fittings installed and located for safe and effective mooring to an SPM.
(c) Be equipped with a derrick, located near the cargo manifold for hose handling, capable of lifting and sustaining a safe working load of 10 tons to a height of 13.7 m. (45 ft.) above deck level. (ULCCs should have a 15 ton crane because of the extra hose weight due to their greater freeboard).
(d) Not exceed maximum mooring load limitations of SPMs. See "Berthing".
(e) Have serviceable pumping equipment.
(f) Be capable of delivering a cargo size or quantity that is in accordance with LOOP's published Rules and Regulations.

Deck Floodlighting:

Illuminated Locations:

In addition to the light usually displayed, tankers are required to furnish adequate additional lighting for night operations including:

(a) Proper safety lighting of the accommodation ladder for personnel embarkation and disembarkation. This is particularly essential for arriving and departing tankers when the Mooring Master and Assistant Mooring Master board or depart the tanker. A deck officer is required to supervise these procedures.
(b) Lighting of the forecastle area.
(c) Lighting of areas encompassing the derricks, deck and water during equipment and hose handling operations.
(d) Lighting to illuminate the cargo manifold.
(e) Proper safety lighting for any bunkering or transfer of supplies or equipment.
(f) Portable or hand-held safety lanterns for inspections and other deck activities that may require particular attention.

Type of Equipment: Only explosion-proof lighting equipment and electrical apparatus certified intrinsically safe for use in a hazardous area is permitted to be used on deck while a tanker is at an SPM. Portable electric lamps or other apparatus with flexible cable shall not be used without permission from the ship's officer-in-charge and from the responsible LOOP representative aboard the tanker. In this regard, the recommendations of ISGOTT paragraph 2.4.2 should be followed.

Accommodation:

Tankers discharging at LOOP must provide meals and accommodation for the Mooring Master and the Assistant Mooring Master during their time on board and for an independent Petroleum Inspector during his required time on board. In addition to these men there is at times a United States Coastguard Inspector, who also may need accommodation.

NAVIGATION AIDS:

SPM Buoys: In addition to the port name "LOOP" and an SPM number, each SPM buoy is painted white on top with yellow sides and is equipped with the following navigational aids:

(a) A quick flashing (0.3 seconds "on", 0.7 seconds "off") white light installed on the buoy at a height of 5.5 m. (18 ft.). The light can normally be seen through 360° of arc at a range of 7.4 km. (4 nautical miles). It is actuated by a solar photo-electric switch.
(b) A 406.4 mm. (16 in.) diameter all-directional radar reflector mounted on the highest point of the buoy.
(c) Buoy number daymarks at 90° intervals around the buoy hull.

Platform Complex Beacon Light: A rotating beacon which shows a flashing white light (6 flashes per minute) is mounted above the pumping platform atop the communications tower at an elevation of 64 m. (210 ft.) above MHW and it is visible all around the horizon. It is actuated from the control platform. The light is 47,000 candela and is visible for at least 18 miles.

Platform Complex Obstruction Lights: Obstruction lights are installed at each corner of both platforms and one on the bridge connecting the structures. The lights on the pumping platform are 25 m. (82 ft.) above MHW and on the control platform are 23 m. (76 ft.) above MHW. They are quick flashing white (0.3 seconds "on", 0.7 seconds "off") (60 flashes per minute). They flash in unison and are placed so that at least one light can be seen for a minimum of 5 n.miles from any approach angle to the platform complex. They are actuated from the Control Platform at night and in periods of low visibility.

Platform Complex Fog Signals: 2 fog horns are installed at the platform complex. One is hung below the lower deck near the middle of the Northwest edge of the pumping platform about 21.3 m. (70 ft.) above MHW, and the other is hung below the lower deck on the Southern edge of the control platform. The signals are synchronized to sound a 650-800 Hz 2 second blast every 20 seconds and can be heard for at least 3.7 km. (2.0 n.miles). They are actuated from the control platform.

Buoys: The following table lists the characteristics of the buoys marking the approach section of the safety zone:

Buoy Daymark	*Buoy Colour*	*Water Depth Metres*	*Feet*	*Lantern Colour*	*Radar Reflector*	*Fog Signal*
No. 1	Black	47.5	156	Green	X	X
No. 2	Red	46.3	152	Red	X	None
No. 3	Black	37.5	123	Green	X	None
No. 4	Red	36.9	121	Red	X	None

From seaward, buoys No. 1 and 3 define the port (left) lateral limits of the approach section and buoys 2 and 4 the starboard (right) lateral boundary. Buoys No. 1 and 2 are located at the entry to the approach section when proceeding from seaward. *It is mandatory that a Mooring Master be aboard before a tanker may enter or be underway in the safety zone.* The boarding and disembarking point for the Mooring Master is determined in accordance with weather, traffic and safety conditions existing at the time of each tanker's arrival. Instructions as to the boarding point are given to tankers during the initial VHF radio contact when 20 miles out (see "Radio")"

Safety Zone Boundary Marker Buoys: The safety zone is shown in "Plan Section" together with the location of floating aids to navigation and marine terminal components. International "Rules of the Road" apply in the safety zone. The purpose of a deepwater port safety zone is to define an area in which any activity that may directly or indirectly increase the environmental and safety risks associated with port operation may be minimized or prohibited. The Inter-Governmental Maritime Organization (IMO) vessel routing measure known as a precautionary area; i.e. a routing measure comprising an area within definite limits where ships must navigate with particular caution and within which the direction of traffic flow may be recommended, has been adopted as the concept for U.S. deepwater port safety zones. The safety zone is made up of 3 parts; the approach section, the anchorage section, and the terminal section. Inside the terminal section there are 4 "areas to be avoided"; 1 is 600 m. in radius around the pumping platform complex and 3 are 500 m. in radius around each of the SPMs. "Areas to be avoided" conform to IMO measures to keep ships or certain classes of ships outside a delineated area. 4 navigational marker buoys define the boundaries of the approach section of the safety zone. Proceeding from seaward, the 3.7 km. (2.0 n.miles) wide approach section extends 9.3 km. (5 n.miles) from the safety fairway to the terminal section. The buoys have the following characteristics:

Daymarks:	Reflective, located at 90° intervals around buoy superstructures; visible range 3.7 km. (2 n.miles) minimum.
Lights:	Installed at 4 m. (13 ft.) above the water; slow flashing (0.6 seconds "on", 5.4 seconds "off"); light intensity 116 candela, actuated by solar photoelectric switches.
Radar Reflectors:	All-directional; detectable from at least 14.8 km. (8.0 n.miles) by typical shipboard radar systems.
Fog Signal:	(Buoy 1 only) minimum audible range approximately 1 km. (0.5 n.miles); programmed to send Morse code "L" at 20 second intervals. This buoy's fog signal operates continuously.

Safety Fairway: The LOOP safety fairway, shown in NAV 3A, "Plan Section", has no marker buoys. To lessen the chance of accidents, ships enter and leave U.S. Gulf Coast ports via safety fairways. The fairways are 2 miles wide. No offshore drilling rigs or structures are permitted in them. LOOP recommends that tankers enter or leave the LOOP Safety Fairway at its Southernmost point or at least South of 28° 18′ N. Federal Regulations require that tankers do not enter or depart the safety zone except via the safety fairway, unless under force majeure (33 CFR 150.337 (a)). NOAA Chart 11359 has details of the LOOP Deepwater Port including pipe-lines within the safety fairway and safety zone.

Service Vessel Mooring Buoys: The 2 buoys provided for mooring port service vessels at the marine terminal are white with a horizontal blue band between the top of each buoy and the waterline. The buoy identification is reflective. Battery powered, slow flashing (0.4 seconds "on", 3.6 seconds "off") white lights are installed 2.4 m. (8 ft.) above the water, and are actuated by solar photoelectric switches.

Also see "Anchorage".

ANCHORAGE: *Anchorage Section Marker Buoys:*

The designated anchorage section of the safety zone is a 3.7 km. (2.0 nautical miles) wide area beginning at safety zone Buoy No. 2 and extending 7.4 km. (4.0 nautical miles) along and adjacent to the Eastward boundary of the safety zone. Buoys "L-B" and "L-A" mark the corners and define the outer boundaries of the anchorage section. The anchorage section buoys have characteristics as follows:

Daymarks:	Reflective, located at 90° intervals around buoy superstructures; visible range 3.7 km. (2.0 nautical miles) minimum.
Lights:	Installed at 4 m. (13 ft.) above the water; slow flashing (0.6 seconds "on", 5.4 seconds "off"), actuated by solar photoelectric switches.
Radar Reflectors:	All-directional; detectable at 15 km. (8.0 nautical miles) by typical shipboard radar systems.

Buoy Daymark	*Buoy Colour*	*Water Depth Metres*	*Feet*	*Lantern Colour*	*Radar Reflector*	*Fog Signal*
L-B	White	45.7	(150)	White	X	None
L-A	White	37.1	(122)	White	X	None

Also see "Tanker Arrival".

RADIO/VHF: *Notices of Arrival:*

The Master of a tanker bound for LOOP should send his first arrival advice message as nearly as possible to 7 days before his expected date of arrival, even if he is in port at the time. If his trip to LOOP is less than 7 days he should also send another arrival advice as soon as possible after leaving his loading port. His next arrival advice should be sent 72 hours before the estimated time of arrival. The arrival advices should be transmitted and updated again at 48 hours and again not later than 24 hours before the estimated time of arrival. An arrival advice message can and should be sent at any time when there is a significant change in a previously estimated arrival time. These arrival advice messages should be sent to LOOP INC. The first message should contain, at a minimum, the following:

1. Tanker's name and call sign.
2. Estimated time of arrival at LOOP.
3. Draft fore and aft.
4. Type(s) and amount(s) of cargo on board.
5. Preferred order of cargo discharge by type.
6. Cargo manifold size and type, if 16 in. not available.
7. Type of mooring equipment installed.
8. Expected discharge rate.
9. Expected number of ballast hours upon completion.
10. Any special requirements which need early actions.

These messages can be sent by Western Union International TWX (810) 950-5875 LOOP M. T. GALO or by radio to coast stations WNU Slidell, WLO Mobile or WPA Port Arthur. It is suggested that ETA advices also be sent to tanker's Agents, with logistics requirements.

Single Side Band: LOOP maintains a high frequency single side band (HF-SSB) radio system for long range communications with tankers up to a range of approximately 1,000 n. miles from LOOP's port.

In addition to sending the official arrival message, the Master of a tanker bound for LOOP should also establish direct contact with the Port on the single side band radio. This is so that any misunderstandings in the official messages or any equipment problems needing advance action can be discussed. The SSB system operates on assigned frequencies in the HF band, call sign WXZ-596.

LOOP maintains the following schedules on the HF-SSB at its Control Platform and at its Harvey office (all times local).

0930 – 0945 and 1430 – 1445 — 4125.0 kHz (USB 4126.4)
0945 – 1000 and 1445 – 1500 — 6218.0 kHz (USB 6220.0)

24 Hour Message: By regulation, the 24 hour arrival message shall be addressed both to the Coastguard Captain of the Port (NOLA) and to LOOP INC. This message should contain the following:

1. Name, gross tonnage, and draft of the tanker.
2. Type and amounts of cargo on board.
3. Any condition on the tanker that may impair its navigation, such as fire, malfunctioning propulsion machinery or steering equipment, or limitations on navigational or radiotelephone capabilities because of equipment or material malfunctions.
4. Any leaks, structual damage, or machinery malfunctions that may impair cargo transfer operations or cause a discharge of oil.
5. ETA at the safety zone. If the information reported changes at any time before entering the safety zone, or while the tanker is in the safety zone, the Master of the tanker shall report the changes to the Coast Guard Captain of the Port and to LOOP INC. as soon as possible, by cable and single side band.

Radio Frequencies for Berthing: In addition to the above notices, radio communication on the International VHF Maritime Band (Channel 74, 156.725 MHz.) should be started at a distance of 20 n. miles from the safety zone, or more, if possible. This Channel should be used for a "twenty-mile", final arrival notice, and for communications with the terminal and with the Mooring Master, until he boards the tanker.

Radio Communications at the Port: While in the safety fairway, or safety zone, tankers must stand by on primary VHF Maritime Channel 74 and/or on secondary Channel 10, using equipment that is in good working order. The LOOP platform always guards the international distress, safety and calling frequency 156.800 MHz, Channel 16 and guards Channel 10 as well. Use of shipboard radar and HF radio is forbidden while moored to an SPM. While in port, LOOP communicates with the tankers via the Mooring Master's UHF portable radio.

LOOP's Communications Facilities: LOOP has the ability to use the following communications for vessels trying to contact the Port:

Type of Communications	*Frequencies*	*Call Sign*
HF-SSB Maritime Mobile (Upper Side Band)	(Carrier (assigned) in kHz)	WXZ596
	2182.0 (USB 2183.4)	
	2096.5 (USB 2097.9)	
	4125.0 (USB 4126.4)	
	6218.6 (USB 6220.0)	
	8291.1 (USB 8292.5)	
	12429.2 (USB 12430.6)	
VHF-FM Maritime Mobile	(Carrier assigned in MHz)	KR-7808
	156.500 Channel 10, Commercial Working.	
	156.800 Channel 16, Distress, Safety and Calling.	
	156.725 Channel 74, Port Operations.	

Transit Traffic: LOOP maintains a VHF Maritime radio system and a Citizens' Band radio capable of communicating with vessels other than tankers or LOOP support vessels if such vessels are equipped with comparable equipment. When necessary to communicate with vessels of unknown communications capabilities, the Vessel Traffic Controller will attempt to contact such vessel on VHF Channel 16 or CB Channel 9. If such efforts at radio commuhication are unsuccessful, a LOOP mooring launch or personnel boat will be dispatched to advise the vessel of any potential danger to the vessel as observed by the Vessel Traffic Controller's surveillance and also to advise the vessel operator of the port's precautionary areas and areas to be avoided.

When requested by a Master of a vessel other than a LOOP support vessel or tanker, the Vessel Traffic Controller shall furnish information concerning tankers, support vessels, and other vessels underway or moored in the safety zone.

Weather Advisory System: Coastguard radio stations make two types of marine information broadcasts: radiotelephone (voice) for all seagoing users, and radiotelegraph (CW) for vessels carrying trained radio operators. Scheduled radiotelephone broadcasts include routine weather reports, small craft warnings, storm warnings, navigational information and other advisories on working frequencies, following a preliminary call on the voice international distress and calling frequencies. Urgency and safety broadcasts are made upon receipt of the information, urgency information is repeated 15 minutes later, and both are included in the next schedule broadcast unless cancelled before that time. Additional broadcasts may be made at the discretion of the originator. Urgency broadcasts are preceded by the signal: "PAN" for radiotelephone and "XXX" for radiotelegraph. Both the urgency signal and message are transmitted on 2182 kHz and 156.80 MHz (Channel 16). Safety broadcasts are preceded by the signal: "SECURITE" for radiotelephone and "TTT" for radiotelegraph. After a preliminary call on 2182 kHz, or 156.80 MHz, the station shifts to its assigned working frequency for the broadcast.

The following Coastguard Radio stations in the Gulf of Mexico area and its approaches make urgency, safety and scheduled marine information broadcasts preceded by a preliminary call on 2182 kHz or 156.8 MHz, at the times and on the working frequencies indicated:

Station	*Working Frequency*	*Time(s)*
NCF, Miami Beach, Florida	2670 kHz.	0400, 0600, 0800, 1050, 1300, 1900 and 2250 EST
	157.10 MHz (Channel 22)	0630, 1200 and 1730 EST
NOK, Key West, Florida	157.10 MHz (Channel 22)	0600, 1200 and 1700 EST
NMA-21, St. Petersburg, Florida	2670 kHz	0920 and 2320 EST
	157.10 MHz (Channel 22)	0650, 1250 and 1750 EST
NMG, New Orleans, Louisiana	2670 kHz	0430, 0630, 1030 and 1630 CST
	157.20 MHz (Channel 22)	0450, 1050 and 1650 CST
NMG-15, Grand Isle, Louisiana	157.10 MHz (Channel 22)	0445, 1045 and 1645 CST
NOY, Galveston, Texas	2670 kHz	0450, 0650, 1050 and 1650 CST
NOY-3, Port Aransas, Texas	157.10 MHz (Channel 22)	0440, 1045 and 1645 CST
NCH, Port Isabel, Texas	2670 kHz	0440, 0640, 1040 and 1640 CST
	157.10 MHz (Channel 22)	0435, 1035 and 1635 CST
NMR, San Juan, Puerto Rico	2670 kHz	1100 and 2300 AST
	157.10 MHz (Channel 22)	0710, 1310 and 1810 AST

Scheduled radiotelegraph broadcasts include routine weather reports, small craft warnings, storm warnings, navigational information and other advisories on working frequencies following a preliminary call on the radiotelegraph international distress and calling frequency 500 kHz. Urgency and safety broadcasts are made as follows:

(a) Safety broadcasts are made upon receipt of the information; urgency broadcasts are also made upon receipt of the information except within 10 minutes of the next silent period.

(b) Safety and urgency messages are made during the last 15 seconds of the first silent period after receipt, and are repeated at the end of the first silent period which occurs during the working hours of one-operator ships, unless the warning has been cancelled or superseded by a later warning message. Urgency broadcasts are preceded by the signal "XXX". Both the urgency signal and the message are transmitted on 500 kHz. Safety broadcasts are preceded by the signal "TTT". After the preliminary call on 500 kHz, the station shifts to its assigned working frequency to transmit the broadcast. The following Coast Guard radio stations in the Gulf of Mexico area and its approaches make urgency, safety and scheduled marine information broadcasts preceded by a preliminary call on 500 kHz at the times and on the working frequencies indicated:

Station	*Working Frequency*	*Time(s)*
NMA, Miami, Florida	440 kHz	1100 and 2000 EST
NMG, New Orleans, Louisiana	428 kHz	1120 and 1820 CST
NMR, San Juan, Puerto Rico	466 kHz	1220 and 2120 AST

LOOP also has weather and sea monitoring equipment installed at the Marine Terminal and receives private and government weather advisories. Upon request, weather information will be transmitted to tankers in the vicinity.

In addition, NOAA gives continuous weather information, forecasts and warnings on the following frequencies:

WX1 162.500 MHz WX2 162.400 MHz.

RADAR: *Navigation Advisory System (Surveillance Radar):* 2 radar surveillance systems, X-band and S-band frequencies, are installed at the marine terminal. The systems provide coverage from the platform complex to a range of about 50 km. (27 nautical miles) for tankers, and include, among other things, a collision avoidance system. After an incoming tanker makes radio contact on the VHF system about 20 miles from the safety zone, the Vessel Traffic Controller will advise of the location of navigational hazards as well as relative positions and estimated courses and speeds of other vessels within radar range of the platform.

Radar Beacon: The LOOP radar beacon (RACON) operates 24 hours daily on the X-band frequency from 9300 to 9500 MHz. The transponder is mounted on top of the communications tower 64 m. (210 ft.) above MHW. The RACON will respond to incoming signals by transmitting Morse coded letter "O" as the identifying signal for the marine terminal platform complex. The RACON has a range of about 40 km. to 48 km. (22 nautical miles to 26 nautical miles), depending on the height of shipboard radar antennas.

TUGS: Support Vessels: *List of Characteristics by Vessel Name:* The following 2 launches are operated by LOOP for the primary purpose of assisting in mooring operations:

Names: "Loop Line" and Loop Loader".
Length overall: 26 m. (85 ft.).
Beam: 7.9 m. (26 ft.).
Draft: 2.1 m. (7 ft.).
Propulsion: 2 model 16V-92 GM diesel engines, twin screw, 1,200 h.p. total.
Maximum speed: 14 knots.
Bollard pull: 3,629 Kg. (8,000 lb.) line pull.
Navigation and Communications: Sitex 48 mile radar, digital fathometer, SSB and VHF radios (Channel 10, 16 and 74 plus an 8 Channel LOOP UHF radio).
Construction material: Steel.
Fuel Capacity: 75,708 litres (20,000 gallons).

The LOOP maintenance vessel functions primarily for inspection, servicing, and maintenance of marine terminal components.

Name: "Loop Lifter".
Length overall: 61 m. (200 ft.).
Beam: 15.2 m. (50 ft.).
Draft: 3.7 m. (12 ft.).
Propulsion: 2 D-399 Caterpillar engines, twin screw, 3,000 h.p. total.
Maximum speed: 11 knots.
Navigation and communication: Auto pilot, Sitex 48 mile radar, fathometer, SSB and VHF radios (Channels 10, 16, and 74), plus an 8-Channel LOOP UHF radio.
Construction material: Steel.
Fuel Capacity: 80,000 gallons.
Fire pump: 302,832 litres per minute (2,500 GPM).
Pollution control equipment: 610 m. (2,000 ft.) of oil containment boom.

LOOP will also employ a crew boat for transporting LOOP personnel between the small boat harbour and the marine terminal.

BERTHING: LOOP single point moorings (SPM) are the single anchor leg mooring (SALM) type, designed for tankers up to 700,000 d.w.t. The SPMs are numbered clockwise and are described as follows:

SPM 102:

Water Depth	35.1 m. (115 ft.)
Maximum Tanker Draft*	28.7 m. (94.3 ft.)
Maximum Tanker Length	427 m. (1,400 ft.)
Minimum Tanker Length	230 m. (755 ft.)
Maximum Mooring Load	650 tons
Tail/Rail Hose Diameter	406 mm. (16 in.)
Maximum Discharge Rate	15,900 cu.m./h. (100 MBH)

SPM 103:

Water Depth	35.7 m. (117 ft.)
Maximum Tanker Draft*	29.4 m. (96.3 ft.)
Maximum Tanker Length	427 m. (1,400 ft.)
•Maximum Tanker Length	230 m. (755 ft.)
Maximum Mooring Load	650 tons
Tail/Rail Hose Size	406 mm. (16 in.)
Maximum Discharge Rate	15,900 cu.m./h. (100 MBH)

SPM 104:

Water Depth	35.1 m. (115 ft.)
Maximum Tanker Draft*	28.7 m. (94.3 ft.)
Maximum Tanker Length	427 m. (1,400 ft.)
Minimum Tanker Length	230 m. (755 ft.)
Maximum Mooring Load	650 tons
Tail/Rail Hose Diameter	406 mm. (16 in.)
Maximum Discharge Rate	15,900 cu.m./h. (100 MBH)

*The maximum drafts shown here allow for a gross underkeel clearance of 6 m. (19.7 ft.) during Gulf coast LW and calm seas. The maximum drafts result in a clearance of 2.9 m. (9.4 ft.) above the SPM base U-joints, since the U-joints are 3.4 m. (11.3 ft.) above the ocean bottom. Gross underkeel clearance means the distance between the keel of a tanker and the ocean bottom when the tanker is moored in calm seas. Net underkeel clearance means the distance between the ocean bottom and the keel of a tanker that is anchored, considering ship motion in response to wind, wave, tide and current conditions. It is required that there be a net underkeel clearance of 4.7 m. (15.3 ft.) during bad weather. Underkeel clearance during bad weather when a tanker may be pitching or rolling must be taken into consideration.

MOORING:

Mooring Equipment: In accordance with OCIMF recommendations LOOP will provide, in addition to the mooring hawser assemblies, the supporting equipment needed to connect the mooring lines to the tanker. Such equipment includes snotters, shackles, and devices for holding the mooring while connection is made. This equipment will include such items as special mooring gear and a hawser load monitoring device to be used at the bow, gaskets, bolts, tools, elbows, and adapter spool pieces (when required). Mooring equipment and other associated gear supplied by LOOP is lifted aboard the tanker from the mooring launch which transports the Mooring Master and Assistant Mooring Master. *Prior to arrival the ship should notify LOOP of the type of mooring equipment installed on the ship in order for required port-furnished equipment to be readied to be put aboard the tanker.* As recommended by the Oil Companies' International Marine Forum (OCIMF) the shipowner, depending on tanker mooring equipment, should supply as a means of securing the mooring chafe chain:

(a) Bow chain stoppers, designed to accept the 76.2 mm. (3 in.) section of the chafe chain; or
(b) Smit type brackets built to specified dimensions; or
(c) Mooring bitts, suitably positioned and of adequate strength; and
(d) Bow fairleads spaced near the tanker's bow and capable of accepting two 76.2 mm. (3 in.) chafe chains;
(e) Pedestal roller fairleads and winch drums or capstans to provide proper leads and clearances (drum end of anchor windlass is acceptable). Tankers are requested to remove the blank flanges from their discharge manifolds before mooring so as to expedite the connecting of the floating hoses.

Mooring Hawser System: Before a tanker is accepted for offloading, LOOP may require information necessary to determine whether the mooring equipment installed on the tanker is capable of sustaining the safe working load that will be imposed on it when the tanker is moored at a LOOP SPM. It is recommended that tankers calling at LOOP be fitted with properly installed and positioned bow chain stoppers or Smit type towing brackets and bow fairleads for mooring at SPMs. Other arrangements are acceptable when evidence is provided that such arrangements will not be below the required safe working load for the tanker. The exact arrangement will be determined by the Assistant Mooring Master after inspection of ship's fittings and equipment. *Mooring and unmooring is to be done by the crew of the tanker with the advice of the Assistant Mooring Master.*

Two launches will normally assist in mooring. One launch will tend the hawser systems. Successively for each of the two hawser systems, the launch personnel will secure the tanker's messenger line to a pick-up line in order for the hawser system chafing chains to be winched aboard the tanker and secured to the shipboard mooring fittings. The second launch tends the floating hose strings during the tanker mooring, drawing the hoses aside from the tanker's track during the approach and mooring. LOOP has no tugs to assist in mooring.

Hawser Monitoring: Each SPM is provided with a hawser load monitoring system, with strain gauges mounted in pins in mooring couplers on the mooring buoy.

Also see "Tanker Arrival".

HOSES:

Floating Hoses: The floating hoses, which extend approximately 1,100 ft. from each buoy, consist of 2×24 in. inside-diameter crude oil discharge hoses with 16 in. inside-diameter tails, each with 150 ANSI flanges for connection to the tanker's manifold. Each hose has a one-candela yellow light on a pick-up buoy at its end, along with a pick-up wire. In order to avoid delays in connecting hoses, tankers should have an adequate number of reducing spools to fit 16 in. standard ANSI flanges. *Connecting and disconnecting of the cargo hoses is to be performed by the crew of the tanker under the advice of the Assistant Mooring Master.*

Hose Handling: Mooring launches tow each floating hose into position beneath the tanker's lifting derrick. The derrick runner is lowered to the launch and secured to the hose pick-up wire. After the hose is lifted above the level of the tanker's rail, it is swung inboard. Snubber wires connected on each side of the hose at the connection between the first and second hose-lengths are then used to control its angle; i.e., to guide it towards its proper place on the cargo manifold. When the hose has been raised enough to span the distance between the tanker's rail and the cargo manifold, the snubbers can be made fast. The hose end is then lowered to the manifold and connected to it. Upon completion of discharge, each hose is disconnected from the manifold after its weight is borne up by the derrick runner. It is then swung outboard, lowered to the water, and released.

Care in Raising and Lowering the Hose: Care is necessary in raising the hoses before discharge and particularly in lowering them after discharge. At these times they are especially vulnerable to kinking.

Damaging Configurations for the Hose: While the cargo transfer hose is connected to the tanker, certain positions that the tanker might take relative to the SPM could cause the hose to bend excessively and thus could damage it.

For example, if a tanker overrides the buoy, it could damage both the hose and the buoy. This condition can be corrected by the tanker's going astern or being pulled astern.

Another damaging position could happen if the SPM seabed swivel does not turn as the tanker swings around it. In such a case the Mooring Master will seek LOOP's assistance. If this situation is not immediately resolved, the Port Superintendent or the Mooring Master should issue the order to stop pumping cargo.

Also see "Tanker Arrival".

CARGO OPERATIONS: *Discharge Operation:*

The discharge operation will be controlled and personally supervised by a ship's officer, to the satisfaction of the Mooring Master or the Assistant Mooring Master. Upon being informed by the ship's officer on watch that the tanker is ready to begin discharging, the Mooring Master will request the discharge operation to proceed according to a previously agreed upon plan regarding start-up rates and maximum discharge rates. *In the event of any emergency, either on board the tanker or on the operating platform, or anywhere in the LOOP system, all oil transfer must be stopped and all oil transfer valves closed.* These emergencies are:

(a) Fire or explosion of a tanker, on the platform, or anywhere on the LOOP system.
(b) Loss of power or steering on a tanker underway in the safety zone.
(c) Breakage of a hawser.
(d) Rupture of a floating hose.
(e) Any confirmed pipe-line rupture in the LOOP system.
(f) Total loss of the computerised supervisory control and monitoring system for the LOOP complex.
(g) Power failure at any LOOP pipe-line facility.

(h) Severe electrical storm in the area of the port. (Ballast receipt must also be stopped during such electrical storms.)
(i) Failure of the UHF radio communication system.

In the event of failure of the UHF radio communication system, the tanker will sound 5 long blasts on her whistle. Cargo discharge is then stopped until communications are re-established.

Oil Transfer Watch: One crew member will be stationed at the bow and an additional crew member stationed at the cargo manifold area. A licensed officer and pumpman will be based in the cargo control room, with the pumpman moving onto the deck as necessary. During the cargo transfer, the watch organisation must provide the capability to shut down pumping on short notice and to stay in constant communication with LOOP personnel both on board the tanker and on board the pumping platform. Communications for cargo handling will be directly with the Mooring Master through the LOOP UHF portable radio system. (NOTE: Each Tanker shall have an officer who is fluent in English on duty at all times.).

Crude Oil Washing (COW): Crude oil washing of cargo tanks is allowed after LOOP is assured that the operation will be done safely. In order for crude oil washing to be undertaken, the tanker and the tanker's personnel must satisfy the following requirements:

(a) Strict compliance with USCG Regulations 33 CFR 157. A copy of this regulation must be aboard the tanker and readily available to key shipboard personnel.
(b) Strict adherence to "Guidelines for Tanker washing with Crude Oil", published by OCIMF. A copy must be aboard the tanker and readily available to key shipboard personnel.
(c) Notwithstanding the above regulations and guidelines, no COW will be permitted until the Mooring Master is satisfied that:
1. All cargo tanks have discharged at least 1 m. of cargo depth in order to eliminate any water that may have accumulated on the bottoms of cargo tanks.
2. The Chief Officer or the person in charge of the COW operation has participated at least twice in crude oil wash operations aboard the tanker making the request or aboard a tanker similarly equipped.
3. There is a sufficient number of adequately trained personnel onboard to assist in the dual operations of transferring cargo and crude oil washing, in order to ensure that:
    (i) Gun nozzles are rotating in proper sequence.
    (ii) Enough source product remains in the tank supplying the cleaning oil.
    (iii) The on-deck piping system carrying the cleaning oil is continuously watched.

Departure Readiness: Vessels at moorings or anchorage must maintain engines and propulsion machinery in readiness to clear the marine terminal area under full power on short notice. No repairs are permitted which would interfere with this requirement. Masters of tankers are advised to have sufficient personnel aboard to enable them to depart upon advice from the Vessel Traffic Controller. The Master of a tanker may, in an emergency, for the protection of life or property, depart without clearance from the Vessel Traffic Controller if the Master advises the Vessel Traffic Controller of the circumstances, by radio, at the earliest possible moment.

DEPARTURE: *Normal Departure Procedure:* Upon completion of the cargo discharge, the tanker's Master or Chief Officer and the Mooring Master together estimate the time needed to prepare the tanker for departure. This time will be given to the Vessel Traffic Controller on the control platform, so that clearance for departure can be planned and so that a mooring launch can be summoned to assist the tanker in the operations of unmooring.

When the tanker is ready to leave the SPM, the Assistant Mooring Master on the bow recommends the use of the tanker's engines in order to ease the load on the mooring lines. When the load is eased enough, the tanker's crew can then disengage the mooring hawser and lower the mooring lines to the water.

Departure time is the time when the last mooring line is cast off. After the tanker is unmoored, she manoeuvres to go clear of the SPM buoy and to take a course for departure through the safety fairway.

Departure from the SPM to the disembarking point of the Mooring Master is done under the Mooring Master's guidance and the Vessel Traffic Controller's surveillance.

Emergency Departure Procedures: An emergency departure can be initiated either from the control platform or from the tanker. If initiated from the platform, the Mooring Master is so notified. The tanker's engines must then be made ready for immediate service, and if cargo is being discharged, the tanker's pumps must be shutdown in accordance with the seriousness of the emergency. *If an abrupt shutdown of the platform's booster pumps is necessary, it is essential that the tanker's pumps either be immediately shutdown or else immediately shifted to a recirculation mode.* In accordance with the nature of the emergency, cargo hoses may be lowered by line-slipping to the water. All other procedures are the same as those for a normal departure. An emergency departure may also be initiated from the ship. The Master of a tanker may, in an emergency, for the protection of life or property, depart from an SPM without clearance from the control platform.

Emergency Shutdown: Following are the procedures to be followed in case the offload pumping must be quickly stopped because of some emergency.

(a) LOOP's Pumping Platform Supervisor notifies the tanker's watch officer and the Mooring Master of the emergency shutdown, or for some shutdowns a taped voice is triggered to announce it automatically by UHF radio.
(b) The LOOP system automatically goes into a pumping rate reduction, and shuts down the pumps and meters as the flow rate dictates.
(c) The tanker's manifold valves and the hose end butterfly valves are closed as soon as LOOP's pumps and the tanker's pumps are shut off.
(d) The Pumping Platform Supervisor shuts LOOP's PLEM valves.
(e) If the emergency is one that makes a quick departure of the tanker necessary, the emergency departure procedures of the preceding paragraph will then be followed.

MEDICAL: Agents can arrange medical and dental treatment as well as consultation and hospitalisation at short notice.

FIRE PRECAUTIONS: As per the "International Safety Guide for Tankers and Terminals".

FRESH WATER: Not available.

FUEL: LOOP does not provide any bunkering services or facilities to tankers operating in the LOOP deepwater port area. Such bunkering will be conducted by private concerns under arrangements made with the owners or operators of tankers. Bunkering will be allowed only when at anchor or when moored to an SPM. Bunkering will not be allowed to interfere with the safe and expeditious unloading of crude oil from tankers. All companies, craft, equipment and personnel involved in bunkering inside LOOP's deepwater port area *must* have LOOP's prior approval and must also follow LOOP's Bunkering Guidelines and Regulations, which are available upon request from LOOP.

REPAIRS: Skilled craftsmen are available for all on-board repairs through Agent.

SURVEYORS:
Petroleum Inspectors: LOOP shall make all necessary arrangements for independent inspection of all custody transfer measurement of Crude Petroleum off-loaded at LOOP. Shipper shall have the right to have representatives present to view the independent inspection of any of its custody transfer measurement of Crude Petroleum off-loaded at LOOP.

AIRPORT: New Orleans International Airport is serviced by major airlines with world wide connections. The airport is located 90 miles from LOOP.

REPATRIATION: Crew changes and repatriation of crew members can be arranged through Agent.

WEATHER: *Waves and Currents:* At the port, significant wave height is less than 1.8 m. (6 ft.) for 72% of the time, and greater than 3 m. (10 ft.) for 5.4% of the time. Waves usually arrive from an Easterly direction. Currents take generally Westerly direction 56% of the time, and a generally Easterly direction 25% of the time. Average current speed is 0.72 knots, but 3% of the time the current can rach a speed of 2 knots.

Weather at the Port: LOOP's marine terminal is located in a semi-tropical zone. Average Summer temperature is 29°C (84°F), and average Winter temperature is 14°C (57°F). Lowest temperature recorded is −12°C (10°F) and highest is 38°C (100°F).

Thunderstorms in Summer and cold fronts in Winter develop quickly and can be quite severe, with storm winds (up to force 10) developing for short periods. The Terminal is in a hurricane zone, and although such storms are an infrequent occurrence at the port, the area is often affected adversely between the months of June and November by hurricanes passing East or West of the port. Poor visibility occurs most often in January when visibility of 2 nautical miles or less occurs 2% of the time.

Weather Operating Rules: As a general rule, the LOOP Port Superintendent will use the following guidelines in deciding whether various port activities will be allowed to begin or continue, or whether they will be terminated:

(a) Bunkering is generally allowed in significant seas of up to 1.5 m. (5 ft.)
(b) Tanker mooring and hose hook-up generally are allowed in significant seas of up to 2 m. (6 ft.)
(c) Operation of the mooring launches and work boat, as well as cargo discharge, are generally considered safe in significant seas of up to 4 m. (12 ft.)
(d) In seas of 4 m. (12 ft.) or more, cargo discharge may be stopped and cargo hoses disconnected, especially if a storm is building up.
(e) Tankers may be required to depart:
    (1) if seas become greater than 5 m. (15 ft.);
    (2) if winds become greater than 22 m. per second (44 knots);
    (3) if current becomes greater than 1 m. per second (1.8 knots) and is aligned with winds of 20 m. per second (40 knots) or more;
    (4) if current becomes 0.6 m. per second (1.2 knots) and is perpendicular to 20 m. per second (40 knot) winds.
(f) The complete shut-down of all systems and the evacuation of the port will be ordered when it is predicted that the centre of a hurricane will pass within 290 kilometers (180 statute miles) of the port. Normally evacuation orders will be issued 36 hours before the storm's expected arrival.
(g) A hurricane alert is issued 72 hours ahead of an approaching hurricane. No incoming tankers will be berthed after a hurricane alert, and berthed tankers will complete discharging as soon as possible and depart the port.
(h) A tanker may not be cleared to enter the Safety Zone or to be underway in the safety zone or to depart from a mooring or anchorage in the safety zone if the visibility is reduced to 4 km. (2 nautical miles).

Also see "Radio".

GENERAL:
Charts: The following official charts of the National Oceanographic and Atmospheric Administration (NOAA) are recommended for use when approaching LOOP's marine terminal:

11340 (U.S. Gulf Coast – Mississippi River to Galveston).
11358 (U.S. Gulf Coast – Barataria Bay and Approaches).
11359 (U.S. Gulf Coast – Louisiana, LOOP Deepwater Port).

The latest editions of NOAA charts are listed in NOAA's publication "Dates of Latest Editions", which is issued quarterly and available free from National Ocean Survey, Division C44, Riverdale, Maryland 20840, U.S.A.

Support Vessel Base: National Oceanographic and Atmospheric (NOAA) Administration Chart No. 11358 shows the navigable route from the marine terminal to the small boat harbour located on the East shore of Bayou Lafourche near Belle Pass where the support vessels are based.

Onshore Components: Major onshore components are: the Clovelly Dome Storage Terminal for receiving and storing the oil coming from the marine terminal and for delivering it to connecting facilities; the Operations Centre for controlling and monitoring system operations; and the Fourchon Booster Station for helping to pump the crude oil from the marine terminal to Clovelly Dome Storage Terminal.

Services: LOOP does not provide facilities for logistic services to tankers using the port. The company is not an "Agent", but does render to all tankers calling at its terminal the services necessary to effect a prompt, efficient turnaround. LOOP provides those services and facilities necessary for scheduling, receiving, mooring, unloading of cargo and departure of tankers calling at the port. Arrangements for logistic services must be made through each tanker's agent. Lists of logistic services can be obtained from the Agents. Messages concerning such requirements, except in an emergency, will not be accepted by LOOP.

Vessel used to deliver bunkers and tanker supplies will have to be approved by LOOP. Such vessels must apply for approval in accordance with the LOOP Guidelines and Regulations covering logistical service. Lists of currently approved vessels are available from LOOP on request. No telephone service is available to the ships.

Included in tanker services that need to be arranged through tankers' agents are mail services and medical services. There are no facilities for handling mail. *It is important that mail for tankers not be addressed to LOOP Inc.* There is no medical service on LOOP's offshore platforms. Medical service ashore, as well as helicopter service for medical evacuation, is available through the Agents.

Helicopter Transfer of Personnel and Supplies: Helicopter operations are sanctioned on tankers, subject to the Master's and the Port Superintendent's approval, for the following situations:

(a) Medical evacuation, personnel transfer and replenishment of supplies by helicopter is permitted on an individual basis. The Port Superintendent has authority to determine when conditions are not safe for such helicopter operations. Shoreside treatment for medically evacuated patients must be arranged by the tanker through the tankers' agent. LOOP will assist with communication relays for emergency medical purposes but will not act as agent.

(b) When weather conditions dictate, helicopters may be used for transfer of Mooring Masters and other port personnel at the discretion of the tanker's Master. The Mooring Master and the Port Superintendent jointly decide when such a condition exists.

(c) In order to facilitate decisions about the safety or feasibility of helicopter operations on tankers, LOOP sends in advance to tanker Masters the characteristics of any helicopters that LOOP itself dispatches.

Personnel Transportation: LOOP provides no boats for transportation of tankers' personnel to shore. When transportation is required, it must be arranged through tanker's agents. There is almost no public transportation on land from towns near the LOOP platform. Any such land transportation should also be arranged in advance through tanker's agents.

Small Boats and Visitors: No boats are permitted or authorised to come alongside tankers calling at the port except those required by LOOP or by the ship to furnish services or carry out official business, and then only after clearance from the Vessel Traffic Controller and Mooring Master.

It is strongly recommended to Masters of tankers that visitors to the ship be restricted to a minimum, because of the hazards involved. Visitors to the ship are not allowed to embark or disembark by the way of LOOP's platforms or launches.

Masters of vessels are advised that decks and the ship's ladders should be well lighted and ladders should be kept well clear of the water during unloading to prohibit unauthorised persons from boarding the ship.

Cargo Documentation: The cargo quantity and quality report, which is a LOOP document, will be filled in as much as possible by LOOP personnel before each tanker's arrival. After the tanker finishes discharging, the Mooring Master receives the necessary figures by radio from the control platform so that the document can be completed before sailing. Cargo quantity is measured by representatives of LOOP by using turbine meters and provers on the pumping platform. Cargo quality is monitored by automatic sampling devices on the platform, and for accounting purposes manual tests are done on samples taken from the automatic sampler on the platform. LOOP furnishes United States Customs authorities with the necessary documentation.

Quality Bank: A quality bank, administered by LOOP, makes just and non-discriminatory adjustments among shippers. These adjustments are for differences in density, sulphur and residual content between each shipper's crude oil that is offloaded into the LOOP system and delivered out of it. All shippers who ship through LOOP must be members of the Quality Bank.

Pollution: Discharge of oil or oily slops into the sea is strictly forbidden. LOOP has no facilities for receiving any oil residues or oily ballast water. Tankers wishing to offload such substances must do so elsewhere. Tankers that release oil or oily ballast water either at the SPMs or in the anchorage area will be held responsible for all clean-up costs. The U.S. Coastguard Regulations concerning water discharges at sea are contained in Parts 157.25 through 157.49 Title 33, of the United States Code of Federal Regulations. Regulations in 33CFR 159.7 require an operable marine sanitation device aboard all vessels in U.S. waters. For purposes of these regulations the LOOP safety zone is considered U.S. waters.

NOTE: All ballast and bilge overboard discharge valves are to be shut and sealed and all deck scuppers plugged while at a LOOP SPM or anchorage, although scuppers can be temporarily opened to drain off rainwater.

Safety: LOOP maintains a vigorous safety programme. The Mooring Master, as LOOP's safety representative on board, will discuss and review LOOP's safety requirements and procedures with tanker's Master and Chief Officer before cargo discharge begins. Coastguard Inspectors will board all foreign vessels, at least annually, to ensure compliance with federal regulations, including Part 164, Title 33 of the United States Code of Federal Regulations, Navigation Safety.

Customs: LOOP furnishes customs authorities with documentation of volumes and evidence of quality of cargoes received into the system based on measurements at the marine terminal pumping platform. Arrangement for the posting of such sureties and payment of fees or duties, and for other documentation that may be required, is the responsibility of the importer and/or operator of the tanker. The importer's customs broker, or his other authorised representative, will advise the importer regarding procedures and the amount of duty or fees levied on oil shipped through the port complex.

Tariffs: Tariffs governing rates, charges rules and regulations and supplements thereto, effective or proposed to become effective, on file with the Federal Energy Regulatory Commission (FERC) are available upon request to LOOP. Questions about tariffs can be directed to LOOP's Administration Department.

Federal Liability Fee: LOOP is required by law to charge cargo owners 2 cents per barrel offloaded for a liability fund whose purpose is to pay for clean-up costs and uncompensated damages that are due to oil spills at the port. Each tanker calling at LOOP must have on board a certificate of financial responsibility for water pollution, in accordance with Subpart D., Title 33, of the United States Code of Federal Regulations.

Storage: Procedures and charges for storage of crude oil by shippers in excess of normal residence time are covered in the rules and regulations tariff of the Federal Energy Regulatory Commission.

State Fees: There are presently no usage fees directly assessed by Louisiana to shippers and tankers at the deepwater port. If Louisiana imposes fees in the future, tankers will be responsible to pay them.

Regulated Vessels Activities: Vessel activities permitted and prohibited at the port, controls on those activities, and the specific safety zone areas in which the controls apply are set forth in Part 150.345, Chapter 33, of the United States Code of Federal Regulations.

Provisions: All deck and engine room stores are available in quantity. High quality fresh and frozen provisions available through Agent.

AUTHORITY: LOOP Inc. (See "Operator").

LOS ANGELES, California: 33.43 N. 118.17 W.

(See Plan)

PORT LIMITS: The seaward boundary of the port of Los Angeles is, for most purposes, the breakwater through which arriving vessels pass at Angels Gate Light.

DOCUMENTS: First Port of Arrival.

1 Complete Manifest deposited with Customs, original and traveller.
1 Complete Manifest returned to vessel.
1 Manifest of first port cargo deposited with Customs broker.
2 Quarantine Declarations (Form PHS 43).
2 Agriculture Declarations (Form AIQ 43).
1 Visaed Crew List (Form I-418) 5 additional copies.
1 Crewman's Landing Permit (Form I-95A) for each crew member and (Form I-94) for each passenger.
1 Dangerous Cargo Manifest deposited with Captain of the Port. 1 copy in hands of Chief Officer for review by the Fire Department.

The Coastguard Captain of the Port must be informed of vessel's ETA 24 hours prior to vessel's arrival.

Second and each subsequent Port of call in U.S.

2 Manifests of Cargo for second U.S. port left with Customs.
1 Travelling Manifest returned to Master.

(*Note:* Travelling Manifest is carried and deposited with Customs at final port of discharge in U.S. – in addition to above required documents 4 additional copies should be available.)

PILOTAGE: Request made through Agent. Contact can be made through VHF Channels 14 (156.7 MHz) or 16 (156.8 MHz). Call: KMB 466 Los Angeles Pilots. Tel: 519-3805. Not less than 1 hour's notice of arrival or departure. 1 long and 1 short blast on ship's whistle or siren, or international signal. Pilot will board in vicinity of sea-buoy ("LA" entrance buoy, lighted bell buoy "L.A." red and white vertical stripes. Radar reflector).

Under normal weather conditions, the pilot ladder should be on the starboard side 1 m. above water.

Arriving vessels should keep to Eastward of Los Angeles Sea-Buoy.

Departing vessels should keep to Westward of Los Angeles Sea-Buoy.

Masters or Agents are requested to advise the pilot station whenever there is a change in the arrival or sailing time.

Note: Ships arriving can usually make good VHF radio contact except between Point Vicente and Point Fermin.

ANCHORAGES: Anchorages defined on charts. No permit required to anchor less than 10 days. Permit for over 10 days obtained from Captain of the Port, USCG and Harbour Department Port Warden. Permit is required for Explosives anchorage.

APPROACHES: Vessels approaching the ports of Long Beach/Los Angeles should use the prescribed traffic separation scheme. Be advised that the traffic separation scheme has been temporarily modified, pending adoption of permanent changes by the Maritime Safety Committee. The modification reconfigures the Western approach to the Los Angeles/Long Beach precautionary area in the following manner: a portion of the TSS separation is reduced from 2 miles to 1 mile in width and merges with the existing separation zone at a slightly adjusted turn point; the outbound lane has been shifted 1 mile South of its present charted location; and the precautionary area is reduced in size on its Eastern side. Vessel charts should be corrected as per most recent Notice to Mariners for geographical positions of these changes.

Large tankers should pick up the Pilot 1 to 2 miles South of the sea buoy and Pilots should have the opportunity to board without excessive way on the vessel so as to have her under control before entering the breakwater area. All vessels entering the port should pass Eastward of the respective sea buoy and vessels outbound shall pass Westward of the sea buoy. The Master should use extreme caution in the Precautionary Area due to proximity of outbound traffic and numerous small craft, when at night, their lights are not easily distinguishable in and around breakwaters or against the background of harbour lights. Outbound vessels should avoid setting course before clearing South of the sea buoys and adjoining anchorages and be alert for crossing traffic.

MAX. SIZE: Restrictions on draft only. Supertanker terminal in outer harbour has fairway of 51 ft.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: International Telephone and Telegraph, call letters "KOK" Los Angeles Radio.

RADAR/VHF: The Los Angeles Harbour Pilot's station equipped with radar for use of Pilot. The Pilots also monitor VHF Channels 14 (156.7 MHz) and 16 (156.8 MHz). Also see "Long Beach" and "Services".

TUGS: On stand-by 24 hours a day. However, should be ordered prior to arrival. Tugs join vessel in main channel, tug lines used, except when towing astern.

BERTHING: Generally arranged through Agent. Berthing under control of Port of Los Angeles' Chief Wharfinger. There are 32 general cargo berths with depth alongside 45 ft. (See "Max. Size".)

Berth No.	*Depth (ft.)*	*Remarks*
37–40	35	
45–47	51	Supertanker oil terminal (berths 45-48)
49–50	51	Coal (berths 49–53). Loading rate 1,400 t.p.h. Travel 600 ft.
51–55	35	
56	35	
57–60	30–35

265–267	12–20	

BRIDGES: Highway suspension bridge (Vincent Thomas) crosses main channel between Berth 95 and Berth 225; overhead clearance of 185 ft. in centre. 2 bridges on Cerritos Channel separating Los Angeles and Long Beach harbours, 1 double leaf-bascule (Badger Avenue Bridge) the other is a lift bridge (Schuyler F. Heim), as these bridges are less than 50 ft. apart they will be treated as one, overhead clearance 155 ft. at centre of Heim Bridge.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Los Angeles Quarantine Station.

Quarantine: U.S. Quarantine Station, P.O. Box 90834, Los Angeles, California 90009. Tel: (213) 642-5966.

1982 Standard Procedure: Radio Free Pratique clears vessel to enter harbour without inspection provided there is no illness on board.

Inspection officer boards ships in the following categories:

A. 15 days prior to entering a U.S. port any crew member or passenger exhibits these symptoms.

1. Temperature of 100° or higher for 2 days or is accompanied by: a. rash; b. jaundice or c. glandular swelling.
2. Diarrhoea severe enough to prevent performing duties.
3. Death aboard ship.

B. Any ship visiting a plague-infested country within 60 days prior to entering a U.S. port.

If subject to inspection, boarding hours are 0600 – 1800 Monday – Saturday regular; 1800 – 0600 overtime including Sundays and holidays.

CONTAINER HANDLING FACILITIES:
See Tables on pages 1767 and 1768.

SPECIALISED CARGO HANDLING: Bulk loading facility, especially designed to handle coal and other dry bulk materials. Wharf length 800 ft. Depth alongside 51 ft. Loading rates up to 3,000 t.p.h., and unloading 500 t.p.h.

The grain and tallow terminals at Berth 174 have 13 silos that hold 410,000 bushels. Vessels can be loaded at a rate of up to 400 t.p.h. Accommodating vessels up to 35 ft. draft, any length. (See "Max. Size".)

Other specialised facilities include the GATX Petrochemical Terminal, designed especially to receive petrochemicals; the Hugo Neu Corporation installation, where old automobiles are reduced to scrap metal for export; Coos Head and Louisiana Pacific Terminals; United Brands Company's Banana Terminals; and the processing and shipping plant of the U.S. Boron Company.

TANKERS: Load and discharge lines have 6 in. and 8 in. standard flanges (super-tanker terminal has 12 in. lines with standard flanges). If not so equipped ship must furnish its own "C" clamps. Recommend ship have reducers on board to handle 6 in. and 8 in. flanges. Residue discharge facilities available for limited quantities. All types and grades of petroleum available. Also see Long Beach – "Tankers".

Berth No.	*Length (ft.)*	*Depth (ft.)*	*Operator*	*Remarks*
45–47	898	51	Union/Mobil	Crude, bunkering, products. 5 loading arms. Pipe-line 1.4 miles by 30 cm. 2 conveyor belts for stores.
70–71	575	45	GATX	Petrochemicals, petroleum products. 111 tanks, capacity 578,000 barrels. Pennzoil use berth 71 for lube oils.
97	848	32	Chevron	Petroleum, bunker fuel, diesel, lube. 21 tanks, capacity 660,000 barrels. Access by road only.
107	805	32	Chevron	
118–119	821	35	GATX	GATX have 4×30 cm. and 2×15 cm. pipe-lines from wharf to 11 storage tanks, total capacity 535,000 barrels. B.P. North American Petroleum also use this public berth.
120–121	418	35	Western Fuel Oil Co.	Petroleum, LPG and chemicals. 30 cm., 25 cm. and 15 cm. pipe-lines to Western Fuel, Petrolane, B.P. and GATX tanks.
145–151	1,344	45	Union Oil	Refined products.
163–164	892	45	Golden Eagle	Used by Golden Eagle, Chevron and Champlain, receives fuel oil, diesel and unrefined oil.
165–166	679	45	Borax	Exports borates. Rate 1,000 t.p.h.
167–169	1,249	45	Shell	Receives crude, receives and ships petroleum products. 16 storage tanks, capacity 672,000 barrels.
171–173	1,412	45	GATX	Public terminal. Receives crude, ships petroleum products. 19 storage tanks, total capacity 1,000,000 barrels.
187–190	—	45	Wilmington Liquid Bulk Terminals Inc.	No length limitation. Public terminal for storage and shipping of various liquids (lube, diesel, caustic, coconut oil, etc.). 51 tanks, capacity 626,000 barrels.

CRANES: *Barge Cranes:* 1×350 tons capacity (Crowley Construction) and 1×386 tons capacity (U.S. Navy).

STEVEDORES: Agents make necessary arrangements.

MEDICAL: Necessary to notify Agents of required medical attention: this can be done when final ETA is determined. Hospital facilities available (private).

Vaccinations/fever certificates, etc., shall conform with rules and models prescribed by the International Sanitary Regulations.

DENSITY: Average density 1026 (exception during or after heavy rain).

FRESH WATER: Availability unlimited, delivery universal, rate of delivery 100 t.p.h.

FUEL: Unlimited fuel, all grades at attractive rates. 48 hours' advance notice generally required.

FIRE PRECAUTIONS: Whenever vessel bunkering, sufficient serviceable fire hose with suitable nozzles attached to reach all parts of vessel shall be connected to fire main on vessel and made ready for instant use at all times during bunkering operations. If no adequate water pressure available on board, connections shall be made to shore lines to obtain adequate pressure. All tankers shall be moored bow seaward and have wire towing pendants rigged fore and aft readily available for emergency use, fire hoses shall be connected as above at all times while vessel in port.

International fire signals will be used in case of fire (5 prolonged blasts of ship's whistle or siren of 4 to 6 seconds duration).

GANGWAY/DECK WATCHMEN: Gangway watch recommended. Tankers and vessels handling dangerous cargo required to have gangway and deck watch.

OPENING/CLOSING HATCHES: Automatic hatches may be opened and closed by crew, manual hatches opened and closed by stevedores.

CERTIFICATES: *Passenger Vessels:*

Safety Certificate, with 50 or more passengers.
Load-Line Certificate.
Radio Certificate.
Radio Telephone Certificate, if aboard.

Cargo Vessels:

Safety Equipment Certificate.
Load-Line Certificate.
Certificate of Inspection/Home Certificate.
Trading Certificate.
Cargo Gear Certificate.
Radio Certificate, Radio Telephone Certificate, if aboard.
If carrying passengers from U.S. ports, vessels must have PAC (Persons in Addition to Crew) Certificate issued by USCG.

Tanker Vessels:

Same as cargo. Exception: if carrying exotic cargo, required to have cargo facilities plan reviewed and approved by USCG, Washington, D.C. On vessel's first visit it will be inspected and receive a letter of compliance.

CUSTOMS ALLOWANCES: Tobacco, either 300 cigarettes, 50 cigars, or 3 lb. of smoking tobacco, for the personal use of crew member. Wine and/or spirit, 1 quart for personal use of crew member.

CARGO GEAR: Gangway net attached between ship and dock; extending 5 ft. beyond turntable in one direction and 5 ft. beyond point of intersection of gangway and stringpiece in the other direction. Preventer guy must be rigged separately to head of boom from working guy. Exception if cast head of boom is capable of withstanding the stress of all the lines attached thereto. (This is a West-Coast requirement.)

IDENTIFICATION CARDS: 1 crewman's landing permit (Form I-95A) or Immigration card (Form D-1).

REPAIRS: All types of deck and engine repairs possible.

DRY DOCKS: Largest dry dock 659 ft. by 97 ft., 22,000 displacement tons. 3 smaller dry docks (17,500, 15,000, 10,000 tons).

Todd Shipyards Corp. have a 48,000 tonnes deadweight capacity synchrolift. Capacity – LOA 780 ft.×beam 105 ft.×39 ft. draft.

SURVEYORS: ABS, Det Norske Veritas, Lloyd's Register and NKK.

REPATRIATION: Arrangements can be made through Immigration on request of Agent to have crewman change ship or return to home port.

AIRPORT: Approximately 20 miles to International Airport which serves all major airlines.

TIME: Standard Time, GMT minus 8 hours. Daylight saving time GMT minus 7 hours (April through October).

HOLIDAYS: Cargo may be worked on holidays with holiday pay scale.

POLICE/AMBULANCE/FIRE: The telephone numbers are Fire (213) 832-4241, Police (213) 832-7211, Ambulance (213) 832-4243. Fire Alarm boxes adjacent to all cargo sheds.

EMERGENCY CO-ORDINATION CENTRE: Coastguard Rescue Co-ordination Centre. Tel: 590-2225.

TELEPHONES: Connections for passenger vessels at passenger terminals only.

SERVICES: A ship-reporting service "The Marine Exchange" located at entrance to main channel, Los Angeles harbour. They monitor Channels 14 (156.7 MHz) and 16 (156.8 MHz) VHF and have Channel 9 (156.45 MHz) VHF as their own. Primary duties are reporting arrivals, departures and locations of vessels.

SHORE LEAVE: Crew members are allowed ashore.

BANKS: Over 50 international banks.

SHIP SUPPLY SERVICE:

Far East Marine Supplies, 804 W. 14th Street, Long Beach, Ca. 90802, U.S.A.

Griffith Ship Supply, 1365 Daisy Ave., Long Beach, Ca. 90802, U.S.A.

L.A. Harbor Supply Co., 601 W. 14th Street, Long Beach, Ca. 90802, U.S.A.

Trans Intermodal Transport Inc., 530 E. Wardlow Rd., Long Beach, Ca. 90802, U.S.A.

Unitor Ship Service Inc., 1416 W. 15th Street, Long Beach, Ca. 90802, U.S.A.

REGULATIONS: Permits required for hot work (welding, cutting, etc.). Permit required for any dangerous cargo. Permit to discharge ballast (clean water) required. Restrictions on bunkering operations (scuppers plugged, valves closed).

DELAYS: No delays in berthing, load or discharge or bunkering can be expected.

DEVELOPMENTS: Depths at Los Angeles will be increased from 51 ft. to 65 ft. in the Outer Harbour.

Berth 135 – 139: Container terminal under construction. Length of berth 1,850 ft. Berth to be equipped with 3 gantry cranes. Completion expected mid-1987. The berth will probably be leased to Mitsui OSK Line.

Berth 174 – 181: Container terminal under construction on Morman Island. Length of berth 1,000 ft. Completion expected early 1987.

AUTHORITY: Port of Los Angeles, P.O.Box 151, (425 S. Palos Verdes Street), San Pedro, California 90733-0151. *Tel:* (213) 519-3456. *Telex:* LTX 18-2387. *Contact:* Executive Director.

AGENT: Norton Lilly Intl., 2001 John Gibson Blvd., San Pedro, CA 90731. Tel: (213) 547-1156. Telex: 6831863. TWX: 910-341-6827.

MANITOWOC, Wisconsin: 44.06 N. 87.38 W.

LOCATION: Situated on the Western shore of Lake Michigan, 70 miles North of Milwaukee. Port open all year round.

DOCUMENTS: Vessels cleared by Quarantine Officials at Quebec. Customs Officer stationed at Green Bay.

PILOTAGE: Not locally required or available. Pilots should be taken on board prior to entering harbour.

MAX. SIZE: Max. draft 21 ft., vessels up to 600 ft. LOA can berth.

HEALTH: See "Documents".

TUGS: Not available.

BERTHING: 2 breakwaters protect the harbour. Entrance dredged to 25 ft. Outer harbour from pier heads to inner red light dredged to 23 ft. Inner harbour up to Medusa Cement Company dredged to 21 ft. Maximum depth alongside docks, 19 ft. Turning basin, 600 ft. radius.

All berths owned by private industry and located as follows from harbour entrance:

1. Manitowoc Public Utilities: 2 slips capable of handling 400 ft. car-ferries which handle railroad freight cars or Ro/Ro vehicles. Located port side at a right angle to river channel South side of harbour.
2. C. Reiss Coal Company, 509 Jay Street: A 900 ft. slip just inside car-ferry docks, at a right angle to river channel, South side of river.
3. Manitowoc Company Inc. 500 South 16th Street: 800 ft. long. South side of channel, parallel docking.
4. Busch Agricultural Resources Inc., 605 Washington Street: 490 ft., South side, has marine leg for unloading grain.
5. McMullen & Pitz Construction Company, 901 Commercial Street: 300 ft. North side of river between 8th and 10th Street bridges.
6. Soo Line Railroad Company, 923 Commercial Street: 300 ft. North side of river just above 10th Street bridge. This includes an unused car-ferry slip capable of handling a 400 ft. car-ferry. Also, 600 ft. North side just above car-ferry dock but is unimproved.
7. Manitowoc Company Inc., 500 South 16th Street: Approximately 8 berths varying in length from 180 ft. to 850 ft., port side bordering the peninsula.
8. Medusa Cement Company, 1801 Spring Street: Final large dock upriver, 1,200 ft. starboard side.
9. Consumers Steel & Dock, 1311 Spring Street: 330 ft. starboard side just prior to Medusa dock.
10. Burger Boat Company, 1811 Spring Street: 300 ft., starboard side, just beyond Soo Line Railroad swing bridge.

CRANES: Manitowoc Company Inc.: One fixed crane max. 80 tons lift. Travelling crane max. 70 tons lift.

Burger Boat Company: One stiff leg derrick, 40 tons max.

BRIDGES: Operating regulations in effect. Contact City Police or the Harbour Master in advance.

DENSITY: 1000.

FRESH WATER: Available.

FUEL: Available.

REPAIRS: Can be undertaken by Bay Shipbuilding Co.

DRY DOCKS: Floating dock available. Length 604 ft., width 70 ft., depth over blocks 13 ft., max. LOA 640 ft. – Bay Shipbuilding Co., Sturgeon Bay, Wis.

Bay Shipbuilding Co. have 1 drydock which will accept vessels of 1,000 ft. LOA and 35,500 gross tons. Depth over sill 17 ft.

SURVEYORS: Lloyd's surveyor available from Cleveland.

TIME: GMT minus 6 hours.

AIRPORT: Manitowoc County. N.W. side of City off Monasha Avenue. Simmons Airlines, commercial feeder line, passenger and freight.

AUTHORITY: Harbour Commission, Office of the Mayor, City of Manitowoc, Wisconsin 54220. *Tel:* (414) 683-4440. *Contact:* B. M. Brennan, Harbour Master. Tel (414) 684-9192.

METLAKATLA, Alaska: 55.08 N. 131.35 W.

LOCATION: Located on Annette Island. Open all year.

DOCUMENTS: See "Anchorage, Alaska".

PILOTAGE: Ships coming up from the Hecate Straits or outside of Graham Island proceed into Dixon Entrance to the vicinity of Point McCartey where the Pilot will meet them. Vessels coming up the inside passage from Vancouver, B.C. are met at Lucy Island Pilot Station.

ANCHORAGES: Good anchorage in gravel and mud.

MAX. SIZE: Depths in harbour 120 ft. Tides: diurnal range – 14.7 ft. Also see "Berthing".
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Anchorage Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
CUSTOMS: Quarantine, Immigration and Customs, from Ketchikan.
VHF: Harbour Master monitors Channel 16.
TUGS: Available in Ketchikan.
BERTHING: 2 berths: 1. City Dock: 400 ft. long and 60 ft. wide. More than 35 ft. deep. Due to shallow water at East end, a starboard landing is usually made. No covered storage, temporary open storage. 4 fork lifts, 2 of 20,000 lb. capacity.

2. Annette Island Canning Co.; 200 ft. long and 23 ft. deep. 15 ton crane and 2 fork-lifts. 1×25 ton fork lift.
STEVEDORES: 4 gangs available.
REPAIRS: Facilities at Ketchikan.
SURVEYORS: Cargo Inspectors and Surveyors available in Ketchikan.
SUPPLIES: Bonded and unbonded stores from Ketchikan.
WATER: Available.
FUEL: Not available.
MEDICAL: Hospital available in Ketchikan; small clinic in Metlakatla.
AIRPORT: Small charter plane only. Jet to Juneau and Seattle via Ketchikan Airport only.
BANKS: National Bank of Alaska.
EMERGENCY CO-ORDINATION CENTRE: At Ketchikan.
STORING: See "Prelims".

1. By truck.
2. Yes.
3. Yes.
4. Yes.
5. None.
6. Yes.

DEVELOPMENTS: New state ferry pier under construction, completion December 1986
AUTHORITY: Port of Metlakatla, P.O.Box 8, Metlakatla, Alaska 99926. *Tel:* 886 – 4646. *Contact:* Casey Nelson, Harbour Master, P.O.Box 434. *Tel:* 886 – 4385 (Residence).

MIAMI, Florida: 25.46 N. 80.10 W. (See Plan)

PORT LIMITS: The Miami harbour embraces the artificial basins, slips and channels that have been dredged along the bay front of Miami and in the bay and through the shoal water of Biscayne Bay to the ocean, and is located generally at Lat. 25° 46' N., Long. 80° 10' W.
Administration: The Port of Miami is a "non-operating" port, taxpayer-owned and administered by the Seaport Department, a function of Metropolitan Dade County Government. Permanent facilities are leased to port users and operators. All equipment (except the gantry cranes) is owned and operated by private companies. The gantries are lease-operated under Seaport Control. Berth space is authorised by the Port Director, and scheduled by Seaport Operations. The U.S. Coast Guard serves as Captain of the Harbour.
Physical:
Total port land area: 600 acres (242.83 hectares).
Dodge Island: 300 acres (121.41 hectares).
Lummus Island: 300 acres (121.41 hectares).
Total lineal dimension: 30,000 ft. (9.144 km.).
Bulkhead berth space: 11,510 ft. (2.18 miles) (3.51 km.).
Container berth: 3,000 ft. (914.4 m.) piling-supported concrete.
Lineal balance 17,635 ft. (3.34 miles) (5.38 km.) under development.
Dodge and Lummus Islands connected by two-lane partial, temporary connecting causeway.
DOCUMENTS:
Customs: All foreign and "in bond" goods entering the Port/Country are subject to Customs examination and duty. Manifest of foreign cargo inbound must be presented to the Customs Boarding Officer prior to commencing discharge.

Ship's Agent must notify Customs 48 hours prior to the ship's arrival. Regular working hours, Monday through Friday 0800 – 1700, telephone 350 – 5261. Outside normal working hours, telephone contact 526 – 2875; overtime is charged.
Forms required:

2 Master's Oath on Entry of Vessel in Foreign Trade	Form 1300
2 General Declaration	Form 1301
2 Ships Manifests	Form 1302
2 Ship's Store Declaration	Form 1303
2 Crews' Effects Declaration	Form 1304
Crew Members' Declaration (1 Declaration for each Crew member)	Form 5129
1 Application – Permit – Special License (Unloading, loading, overtime services)	Form 3171
2 Passenger Lists	I – 418
2 Crew Lists	I – 48
Customs Declaration (Passengers) (1 Declaration for each family)	6059 – B
2 Declarations of foreign repair to vessels (U.S. flag vessels only)	3415

Immigration: An Immigration Inspector will meet all ships entering port. Valid travel documents/passport/visa/entry permit are required in some cases.

Ship's Agent must notify Immigration at least 1 hour prior to ship's arrival. Regular working hours, Monday through Friday 0800 – 1630, telephone 350 – 5739. Outside normal working hours, telephone contact 526 – 2626; overtime is charged.
Forms required:

Crewmen's Landing Permit	Form I – 95
Alien Passengers' Landing Permit	Form I – 94
Passenger List	I – 418
Crew List	I – 418

PILOTAGE: All foreign vessels are required to take a Pilot who boards near the Outer Sea Buoy, 2.5 miles offshore.

Request Pilot through Biscayne Bay Pilots Association, 24 hours in advance, call sign KGW 303, VHF Channel 16, direct from ship or through vessel's steamship Agent accompanied by particulars of draft and berthing assignment. Ship to confirm on VHF Channel 16 one hour prior to arrival. Channel 16 is monitored 24 hours and station can monitor VHF Channels 10, 12 and 14. Ship may cable pilot station direct through RCA Radio Lantana, Florida, call sign, Miami Pilots. Estimated time of departure should be made when ship docks and must be confirmed by phone (672 – 7643 or 672 – 7644) 1 hour prior to the Pilot boarding.

ANCHORAGES: The prescribed anchorage area for vessels anchoring outside the harbour is located Eastward of a line about 1.5 nautical miles offshore and Northward of a line about 0.2 miles nautical miles North of the sea buoy at the entrance to the ship channel. The entire anchorage area lies North of the entrance channel to Miami. The Northern and Southern extremities of this area are marked by spar buoys. Vessels desiring to anchor off the entrance to the Harbour of Miami are required to do so within this area, to avoid possible damage to cables laid on the ocean bottom in the vicinity. Refer to anchorage area 202.188 on Coast and Geodetic Survey Chart No. 547.

RESTRICTIONS: *Locations:* Main Turning Basin: Lat. 25° 47' N., Long. 80° 11' W. Sea Buoy and Channel Entrance: Lat. 25° 46' N., Long. 80° 06' W. (approx.).
Channels, Turning Basins: The main channel is marked by 2 sea buoys about 2 miles (3.38 km.) East of the port, at the Western fringe of Gulf Stream shipping lanes. From that point, at which the depth is 40 ft. (12.19 m.), the channel runs 1.02 miles (1.65 km.) at 256° magnetic to a bend, changing to a control depth of 38 ft. (11.58 m.) and turning to 296° for 3.64 miles (5.82 km.), terminating in a 1,700 ft. (518.16 m.) (along North-South axis) by 1,650 ft. (502.92 m.) (East-West) turning basin. MLW depth in the main channel, at Northside berths and in the turning basin, is 36 ft. (10.96 m.). At a distance of 1.3 miles (2.08 km.) from the entrance channel bend at the outer bar cut, the Fisherman's Channel (South Channel) branches off due West for 1.01 miles (2.69 km.), then turns parallel to the main channel for another 1.01 miles, then turns to 247° for 1,500 ft. (467 m.) to intersect the Intracoastal Waterway. Depth along the entire Fisherman's Channel is 25 ft. (7.62 m.), except for the Easternmost 3,300 ft. (975.36 m.), where it is 38 ft. deep. Width of the main channel is 400 ft. (121.92 m.) from the sea buoys, for 3.65 miles (5.84 km.), and 900 ft. (247.32 m.) wide along Dodge Island and into the main turning basin. Width of Fisherman's Channel is 500 ft. (152.4 m.) along its entire length.

MAX. SIZE: No limit to length at port complex. Dodge Island has 4,300 ft. (1,310.64 m.) of lineal berthing space for general cargo, quarter ramp and side ramp vessels plus 4,740 ft. (1,444.75 m.) for 13 Ro-Ro berths at MLW depths from 25 ft. (7.62 m.) to 36 ft. (10.97 m.). Lummus Island container berth has 3,000 ft. (914.40 m.) of berthing with a MLW depth of 38 ft. (11.58 m.). Container berth channel at 38 ft. MLW is 3,200 ft. (975.36 m.) in length.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Miami Quarantine Station.

Ship's Agent must request quick clearance, "Pratique", from United States Public Health Department.
TUGS: Large tugs up to 3,000 h.p. available 24 hours per day. Request tug service via pilot station. Big tugs privately owned by Belcher Towing Company who work closely with Pilots. Smaller tugs available on Miami River and operated by Backus Towing Inc.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

An Agriculture inspector will board all foreign, coastwise and domestic ships on arrival.

Ship's Agent must notify Agriculture at least 1 hour prior to ship's arrival. Regular working hours, Monday through Friday 0800 – 1630, telephone contact 350 – 4758. Outside normal working hours, telephone contact 526 – 2821; overtime is charged.
Forms required:
1 Copy of Cargo Manifest.
1 Report of Ship's Stores and Port of Origin.
Forms provided by and filled out by the inspector:
Cargo Form 210
Boarding Report 288

RADIO/VHF: The Coast Guard and pilot station can be raised on VHF Channel 16. Telephone contact to Agents, receivers, etc., can be made via Miami Marine Operator.

Port of Miami maintains a guard on VHF Channel 16, call letters "KCE 254".

BERTHING: Berths are all marginal berths, no piers or slips. 9,040 ft. (2,755.40 m.) at MLW depths of 25 ft. (7.62 m.) and 36 ft. (10.97 m.). Dock aprons are 68 ft. (20.72 m.) wide. Large ships are able to turn at berthside in the 900 ft. (274.32 m.) wide main (North side) channel or may continue into the 1,700 ft. (518.16 m.) × 1,650 ft. (502.89 m.) turning basin. The new (Fisherman's Channel) South Channel is 500 ft. (152.40 m.) wide and 38 ft. (11.58 m.) depth at the Eastern end for a distance of 3,200 ft. (975.36 m.) and continues Westerly at a depth of 25 ft. (7.62 m.) for its remaining 10,000 ft. (3,048 m.) with 3 turning basins: one at the confluence with the main channel, one midway and one (under construction) at the Western junction with the Intracoastal Waterway. There are 13 Ro-Ro berths for bow and stern loading vessels. Lummus Island container berth at port's Eastern end is 3,000 ft. (914.40 m.) long with a MLW depth of 38 ft. (11.58 m.).
Gear and Heavy Lift Equipment: 20 shipside cranes, all truck-mounted, rubber-tyred with outriggers, capacity 40 to 90 tons; 2×140 tons, 2×150 tons, 1×165 tons, 1×180 tons and 2×200 tons; 6 container movers ("port packers") to 85 tons, 2×35 ton forklifts, 7 forklifts from 15 to 31 ton capacities, and about 125 smaller forklifts from 3,000 lb. to 30,000 lb. capacities.

Cruise Ship Piers: Marginal berthing for 9 cruise ships, each with modern air-conditioned passenger lounge and Custom Inspection areas.
Container Handling: 3 new 40 long ton (with rotating or telescoping spreader; 45 long tons w/hook and beam) gantry cranes which service a 3,000 ft. (914.40 m.) concrete container berth along the new South Channel at the Easternmost end of the port's new 300 acre (121.41 hectare) expansion area/container terminal, just 2.3 miles (3.7 km.) from ocean shipping lanes, went into operation in 1982. Each container crane has duty cycle of 20 load-on, 20 load-off cycles/hr. Cranes have an outreach from the face of the bulkhead to load of 110 ft. (33.5 m.) and a backreach of 204 ft. (62.2 m.). Containers clear 100 ft. (30.5 m.) above MLW and cranes place containers inside ship to 48.5 ft. (14.8 m.) below apron level. Plans call for up to eight more such cranes at new container terminal.
Cold Storage Cargo: Not in port but ample on the mainland by commercial companies. (Cold store under construction in the port).
Commercial Warehouses: Ample on the mainland. On Port, 81,754 sq.m. in 7 modern transit cargo buildings.

STEVEDORES: All receiving, recording, moving, loading and discharge of cargo is performed by the stevedoring companies. They employ longshoremen members of the International Longshoremen's Association (I.L.A.). Normal working hours 0800 – 1700. Overtime is charged for Saturdays, Sundays, and holidays. Port open 24 hours per day.

BRIDGES: There are no bridges between the open sea and the port, or the Miami River. The new South Channel provides direct access from shipping lanes and the river, as well as all berthing on the seaport's South side. A highway and rail bridge spans the Intracoastal Waterway between the island seaport and the mainland, and is manned 24 hours per day. It is primarily used for pleasure craft. The bridge maintains a guard on VHF Channel 16, call letters KCE 254. Only smaller ships enter the Miami River, which is dredged to 15 ft. at HW and is 150 ft. wide for a distance of 3 miles above entrance. A bridge about 0.5 miles from entrance is closed from 0700 hrs. to 0900 hrs. and 1600 hrs. to 1800 hrs. local time.
MEDICAL: Clinic available.

TANKERS: No slop (residue) discharge facilities in the Port.
Private facility: Belcher Oil Company, Fisher Island – No slop (residue) discharge facilities. One tanker berth available, 760 ft. Max. draft of 34 ft. at MLW. No special fittings required. Telephone contact 672-1065.
Report: Cautionary Advice – Approaches: All approaches to the Sea Buoy should be made from the East to avoid shoal areas to the North and South of the Entrance Channel. The Gulf Stream current running to the North may be felt just outside the Sea Buoy. A counter current usually sets to the South in the vicinity of the Sea Buoy and Southbound traffic is usually encountered 1 mile off the Sea Buoy.
Miami has numerous passenger ships calling at this port. Most movements between Sea Buoy and berths take place between 0500 to 0700 hrs. and again at about 1700 hrs.
Care must be taken to carefully identify each navigation light to avoid mistaken identity with bright lights along the coast.
Vessels may anchor to the Northward of the Sea Buoy outside the 50 ft. depth line.
Entering and Berthing: Vessel should have full manoeuvring power available and competent helmsman at the wheel. The currents around Fisher Island are strong (3 to 4 knots reported), and the ebb tide runs from a direction of 270° at the berth to approximately 300° in the Main Channel. Ranges and buoys are used to identify channel limits. The Outer Channel is 500 ft. wide and the Main Channel starting between the jetties narrows to 400 ft. The distance between Sea Buoy and Fisher Island is 4.5 miles.
The draft of a tanker berthing at Fisher Island is limited due to depth limitation at the berth and just offshore of the bow and stern areas of a vessel in the berth. (See "Plan").
Berthing is limited to beginning of ebb tide period in order to take advantage of higher water level as well as to stem the outgoing tide. The ship is difficult to control in the Turning Basin off the berth with a strong current running. Unberthing is carried out during flood tide when current is weak.
The berth at Belcher Oil Terminal has a total berthing face of 700 ft. with a total of 8 pier bollards spaced 100 ft. apart. The ship berths port side to the pier.
Gangway: There is no pier gangway available. There is ample room on the pier deck for the ship's gangway.

FRESH WATER: Available every 240 ft. at Port of Miami, Dodge Island. Delivered via hose.
FUEL: All grades; bunker, intermediate and marine gas oil, Diesel, bunker C. Ships fuelled at dockside from Belcher Oil Co. barges.
Also available from Florida Fuels, Inc., 1040 Port Blvd, Suite 406, Miami, Florida 33086 U.S.A. Tel: 305/358-3835. Telex: 853274 Flor Fuel. Cables: Florfuel Miamiflorida.
All deliveries in both ports are made by barge. Forida Fuels can deliver all grades of bunker fuels including Bunker 'C', all IFO's, MDO, and MGO.
FIRE PRECAUTIONS: Usual safety precautions on smoking, flying "B", mooring pendant available, ample persons aboard to fight fires, fire hose led out, etc.
Belcher Oil Company tugs equipped with fire fighting equipment.
GANGWAY/DECK WATCHMEN: Usual shipboard watches to tend lines. Special guards (security) through Wackenhut, Burns Security, etc.
OPENING/CLOSING HATCHES: Work normally done by longshoremen.
CUSTOMS ALLOWANCES: See "Jacksonville".
IDENTIFICATION CARDS: Definitely needed in order to return to ship at night. A security guard at Port of Miami will check.

CONSULS: (Area Code 305).

Many American banks also available.

SERVICES: All types of special services such as tank cleaning, compass adjusting, admeasurement, radar/radio repairs, rathometer repairs, etc., available.

SHORE LEAVE: Crew members are allowed ashore after clearance by Customs, Immigration and Quarantine.

AUTHORITY: Port of Miami, 1015 North America Way, Miami, Florida 33132, U.S.A. *Tel:* (305) 371-7678. *Telex:* 52-2745 Port Mia. *Contact:* Mr. Carmen J. Lunetta, Port Director.

AGENT: Oceanic - Strachan Shipping Company. Postal Address: Flagler Station, P.O.Box 015359, Miami, Florida 33101. Location: 1007 North America Way, Miami, Florida, 33132. Tel: 305-374-6400. Telex: ITT 441276 (OSCI UI), WU 807053 (OCEANIC SS MIA).

MILWAUKEE, Wisconsin: 43.01 N. 87.53 W. (See Plan)

PORT LIMITS: The Port of Milwaukee limits are generally considered to be the harbour breakwall housing the harbour entrance lighthouse. However, unless specifically declared to the contrary in the covering charter party, a vessel will be considered an "arrived ship" upon anchoring outside the harbour breakwall, in the event that a proper berth and/or anchoring space inside the harbour breakwall is not available.

DOCUMENTS:

Vessels from Canadian ports:

Dominion clearance and Public Health Pratique (both issued at Montreal).

Vessels from all other nations:

Inward Foreign Manifest(s)
Stores Lists, over Master's oath.
Curio Lists, over Master's oath.
Permit to Lade and Unlade.
Discharge Manifest.
Inspection by U.S. Dept. of Immigration (Crew List).
Inspection by U.S. Dept of Agriculture.
Receipt of Entrance fee.
Receipt of Tonnage Tax.

Additional documents may be required, dependent on commodity involved in the carriage, point of origin, flag or any unusual circumstances existing.

PILOTAGE: Pilot boards at Montreal and at several other stations along St. Lawrence Seaway route.

ANCHORAGES: The chart does delineate anchorage area for large vessels and shows the 28 ft. depth just East of South Piers 1, 2, and Liquid Cargo Pier. This deep area, about 2,400 ft.×5,400 ft., used by large vessels for anchorage.

MAX. SIZE: 739 ft. × 75 ft. with 27 ft. draft. No tidal effect, although lake levels vary seasonally. Minimum depth above low water level 27 ft.

HEALTH: See "Health: All Ports" before first U.S. port (Albany). Illness reports made to Chicago Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Radio station at City Heavy Lift Dock. Harbour Master and Dock Superintendent can be reached at this facility Monday through Friday between 0800 and 1630 hrs.; 156.8, 156.6 and 156.5 MHz.

TUGS: Normally pick up vessel inside breakwater. Tugs optional at discretion of ship's Master. Fee for use of tug's lines.

BERTHING: The time of passing harbour entrance lighthouse establishes order of berthing, provided vessel is ready to work.

BRIDGES: (Inner Harbour only) Bridges closed between 0730 and 0830 hrs. and 1630 and 1730 hrs. except on Sundays and 8 legal holidays. In addition, 2 hours' notice required for opening bridges across Milwaukee River North of and including Buffalo Street.

SPECIALISED CARGO HANDLING FACILITIES: In addition to the 3 general cargo terminals of approx. 340,000 sq. ft. covered area (9 berths), and dry bulk terminal, the port is served by a refrigerated warehouse of 10,000 sq. ft.; 1 open dock area (2 berths) for handling bulk commodities such as pig iron; 1 open dock (3 berths) for heavy lifts and equipped with a 220-ton stiff leg crane and 2 gantry cranes of 70 and 50 tons; 1 liquid cargo pier for edible and inedible fats, greases and tallow; 2 grain elevators of 3.5 million and 2.5 million bushel capacity and 2 scrap iron loading facilities. The port is also equipped with a mobile heavy lift/container crane, of 200 tons capacity, capable of serving all berths.

STEVEDORES: Vessel should provide a stowage plan, manifest of inbound cargo and exceptions list (unusual vessel or cargo characteristics affecting facilitation of cargoes). Vessel should comply with the U.S. Dept. of Labor's safety regulations.

MEDICAL: Advance notice desirable. Hospitalisation available.

TANKERS: Diameter of load lines and discharge lines 8 in. and 10 in. Slop residue facilities. 4 berths available, with draft to seaway depth.

FRESH WATER: Potable water available at most berthing areas.

FUEL: All grades of fuel oil available by truck delivery at shipside, also 24 hour refueling berths available for bunkering.

GANGWAY/DECK WATCHMEN: Not necessary, but available on request.

OPENING/CLOSING HATCHES: At the option of ship.

CERTIFICATES:

Registry of Ship.
Master's Licence.
1st, 2nd and 3rd Officer's Licences.
Radio Licence.
Wireless Operator's Licence.
Derat Certificate (done each year).

(Additional certificates may be required, dependent upon Registry, cargo, trade route engaged in, nationality of crew, etc.).

CUSTOMS ALLOWANCES: Tobacco, 10 packages or 200 cigarettes in possession at any time. Wine and/or Spirits, 1 bottle per officer.

IDENTIFICATION CARDS: U.S. Immigration rules.

CONSULS: The following countries are represented:

Belgium
Costa Rica
Denmark
Dominican Republic
France
Nicaragua
Norway
Sweden
Yugoslavia

REPAIRS: Full service repairs, except large vessel dry docking.

REPATRIATION: Local Agents effect repatriation.

AIRPORT: 5 miles distant.

TIME: U.S.A. Central Time. Central Daylight Time from late April to late October – 5 hours behind GMT. Central Standard Time from late October to late April – 6 hours behind GMT.

HOLIDAYS: Memorial Day, Columbus Day, Veterans Day, July 4th (if on a Sunday, Monday is a holiday); First Monday in September; Fourth Thursday in November; Christmas Day; New Year's Day. Cargo can be worked on these days at holiday pay.

POLICE/AMBULANCE/FIRE: Police – non-emergencies Tel: 273-8660; Emergency, including emergency ambulance service Tel: 765-2323; Fire, including rescue squad service Tel: 347-2323.

TELEPHONES: Can be arranged, but unnecessary because sufficient phones available in dockside offices.

SHORE LEAVE: Crew allowed ashore.

DELAYS: No delay.

GENERAL: Chandlery services for foodstuffs, ship complements and laundry services available. Garbage and waste disposal are available through private operators, chandler usually making the arrangements.

The Liquid Cargo Pier is also available for non-petroleum liquid cargoes and vessel bunkering.

DEVELOPMENTS: Full service Seamen's Club operational in Port. Milwaukee inner harbour berth for maximum size bulk vessels undergoing comprehensive site enhancement.

AUTHORITY: Port of Milwaukee, 500 North Harbor Drive, Milwaukee, Wisconsin 53202, U.S.A. *Tel:* (414) 278-3511. *Telex:* TWX 910-262-3042. *Cables:* Milharcomil. *Contact:* Rear Admiral Roy F. Hoffmann USN (Ret.), Municipal Port Director.

MOBILE, Alabama: 30.40 N. 88.02 W. (See Plan)

DOCUMENTS:

3 copies Cargo Manifest (Form 1302), the original showing all cargo on board, and 2 copies showing only cargo for this port.
2 copies Crew Manifest (curio list).
2 copies Stores List.
2 copies Passenger List (Form I.418).
2 copies Crew List (Form I.418).

Customs boarding Officer will also examine Ship's Register and Loadline Certificate. In addition, the following documents will be required for formal entry to be made within 48 hours of arrival from abroad, or 24 hours from arrival from a United States port:

Health Pratique.
Master's Oath (Form 1300).
All foreign clearances.
U.S. Certificates of Payment of Tonnage Tax (Customs Form 1002).
Certified Crew List.

PILOTAGE: Pilotage is compulsory.

ANCHORAGES: If berth is congested, vessel may anchor at the bar (35 miles from harbour).

RESTRICTIONS: Controlling depth: 40 ft. for entrance, channel and anchorages. Mean tidal range 1.5 ft. Nature of bottom: soft mud. Vessel can dock and sail at any hour at any stage of the tide.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to New Orleans Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
TUGS: There are 7 tugs, available 24 hours, with max. 2,600 h.p.
BERTHING: There are 34 berths at most of which, direct loading or unloading can be effected from quayside tracks.Ro/Ro berth available.
Public Grain Elevator: Depth alongside 42 ft. 2 berths, each with 5 loading spouts. Unloading rate for grain 40,000 bushels/hour at each berth. Loading rate 115,000 bushels/hour for grain.
McDuffie Terminals: 2 berths. No. 1 with dolphins, total length 320 m., No. 2 length 170 m. Bulk coal handling plant, depth alongside the berth is 40 ft. Shiploaders can load over 4,000 t.p.h. or 7,000 t.p.h. combined. The stacker/reclaimer can handle 4,000 t.p.h., a rail car tipple rated at 4,000 t.p.h. and 3 barge unloaders that work 3,500 t.p.h. each. A conveyor belt system connects the entire complex.
Bulk Handling Plant: 3 berths, depth alongside 40 ft. Total quay length 1,600 ft. 2 unloading towers which can unload 3,000 t.p.h. and 2 loading conveyors, rate 2,000 t.p.h.

Depth alongside other public berths as follows:

Pier 2	38 ft. MLW	Pier River End B	38 ft. MLW
Pier 3	38 ft. MLW	North Pier B 1	40 ft. MLW
Pier 4	38 ft. MLW	Pier North B 2	40 ft. MLW
Pier 5	38 ft. MLW	Pier North B 3	40 ft. MLW
Pier 6	38 ft. MLW	Pier South C1	41 ft. MLW
Pier 7	38 ft. MLW	Pier South C 2	41 ft. MLW
Pier 8	38 ft. MLW	Pier South C 3	41 ft. MLW
Pier South A	37 ft. MLW	Pier River End C	38 ft. MLW
Pier River End A	30 ft. MLW	Pier North C 1	39 ft. MLW
Pier North A 1	38 ft. MLW	Pier North C 2	37 ft. MLW
Pier North A 2	38 ft. MLW	Pier D Cold Storage	37 ft. MLW
Pier North A 33	38 ft. MLW	Berth 1 tipple	Under repair
Pier South B 1	41 ft. MLW		
Pier South B 2	41 ft. MLW	Berth 2 tipple	44 ft. MLW
Pier South B 3	41 ft. MLW	Berth 3 tipple	40 ft. MLW

CRANES: 1,600 ton capacity (1,200 tons at 208 ft.) crane, 75 ton stationary crane, 50 ton mobile crane, 80 ton floating crane and 45 ton container crane available.
TANKERS: Max. length 950 ft. restricted by turning basin. American Bituminals & Asphalt Co. – Jetty berth dredged to 38 ft.
Magazine Point: Hess Terminal: Jetty berth dredged to 43 ft.
FRESH WATER: Available ex wharf at all berths.
FUEL: Most grades fuel/diesel available via pipe-line, barge or truck.
STEVEDORES: Normal working hours for the port are 0800/1700 hrs. Monday through Friday.
DENSITY: 1,000 (Fresh Water).
REPAIRS: *Alabama Dry Dock & Shipbuilding Company* – Dry Docks ranging from 5,000 to 18,000 tons displacement all serviced by 51 ton gantries. Dock length range from 380 ft. to 620 ft. Also available is a 70 ton floating crane. Any type of repair can be effected.
Bender Ship Repair. 1 dry dock of 2,500 tons displacement. Majority of repair work is top-side. 100 ton floating crane available.
CUSTOMS ALLOWANCES: At the discretion of customs officers. Normal allowance is 200 cigarettes or 2 lb. tobacco and 1 quart wine or spirits per man. Additional allowances may be given if considered necessary, due to length of vessel's stay in port.
IDENTIFICATION CARDS: Standard U.S. Immigration Forms I-95 to be made up for each crew member on arrival. Not necessary for crew man already holding Form I-95, issued for the same vessel.
HOLIDAYS: Absolutely no work is performed on New Year's Day, Easter, July 4th, Labour Day and Christmas Day. Working holidays are Mardi Gras Day, Veteran's Day and Thanksgiving Day.
DEVELOPMENTS: The 400 ft. wide ship channel to be dredged to 45 ft. in the first phase and at a later stage to 55 ft. with a width of 550 ft.
AUTHORITY: Port of Mobile, Alabama State Docks Department, P.O.Box 1588, Mobile, Alabama 36633, U.S.A. *Tel:* (205) 690-6047. *Telex:* TWX 810 – 741 – 7748. *Contact:* E. G. Browning, Jr., General Traffic Manager.

AGENT: Strachan Shipping Company, P.O.Box 2127, Mobile, Alabama 36652. Tel: 205-433-5401. Telex I: 50-5423. Telex II: 810-741-1221. Cables: "Strachan".

MOREHEAD CITY, N. Carolina: 34.43 N. 76.42 W.

(See Plan)

DOCUMENTS:

3 copies Cargo Manifest (Form 1302), the original showing all cargo on board, and 2 copies showing only cargo for this port.
2 copies Crew Manifest (curio list).
2 copies Passenger List (Form I-418).
2 copies Crew List (Form I-418).

Customs Boarding Officer will also examine Ship's Register and Load-line Certificate. In addition, the following documents will be required for formal entry to be made within 48 hours of arrival from abroad, or 24 hours from arrival from a United States port:

Health Pratique.
Master's Oath (Form 1300).
All Foreign Clearances.
U.S. Certificates of Payment of Tonnage Tax (Customs Form 1022).
Certified Crew List.

PILOTAGE: Pilots obtained from Morehead City Pilots' Association, Morehead City, North Carolina 28557. Tel: 726-6134.

The Port Terminal at Morehead City is 3.5 miles from the Sea Buoy. The port is located on the Intracoastal Waterway and is situated 75 miles S.W. of Cape Hatteras and 14 miles West of Cape Lookout.

Pilots should be given 24 hours notice and then contacted by VHF Channel 16 about 2 hours before arrival at Sea Buoy R "2BI".

Pilot boat is about 40 ft. long, with white hull and superstructure; the hull is marked with "PILOT" in black letters on both sides.

RESTRICTIONS: The channel and basin at Morehead City are maintained at a controlled depth of 40 ft. – MLW.

The wharf is constructed of concrete and steel and has marginal tracks and crossovers for full length. Truck ramps are located at various points for easy Roll-on/Roll-off access.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Washington, D.C. Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
TUGS: Available. Service provided by Carteret Towing Co. Inc., Radio Island, Morehead City, North Carolina 28557. Tel: 919-726-5440.
BERTHING: The wharf is 5,300 ft. long. This length enables the port to provide berths for 10 × 500 ft. general cargo ships and 1 petroleum tanker at any given time.

Adjacent to the general cargo dock area is a 1,000 ft. deep water berth for out-loading through the bulk handling facility.

Morehead City also provides a barge terminal with 1,200 ft. of modern berths. This terminal was developed as a part of the bulk handling facilities, but is also used for the loading or off-loading of a variety of cargoes.

The bulk handling facilities of the port terminal at Morehead City are designed to out-load bulk and aggregate cargoes at a rate of 3,000 t.p.h.
Wharf: 5,300 ft. of continuous concrete wharf. 1,000 ft. deep-water berth for bulk-handling facility.
Bulk Handling Facilities: 3,000,000 ton annual capacity bulk facility for receipt, conveyance, storage and shipment of bulk cargoes. Loading capacity 3,000 t.p.h.
CRANES: 2×115 ton capacity gantry cranes.
FUEL: Available from Colonial Oil and Texaco Inc.
CONSULS: Royal Norwegian Consulate, Wilmington, North Carolina 28401. Tel: 763-8271
IDENTIFICATION CARDS: Standard U.S. Immigration Forms I-95 to be made up for each crew member on arrival. Not necessary for crew man already holding Form I-95, issued for the same vessel.
REPATRIATION: This is possible but should be avoided as there is no Immigration Office. Closest airport is about 1 hour's drive from the town.
TIME: Eastern Standard Time, GMT minus 5 hours. Daylight Saving Time, GMT minus 4 hours from April to October.
SERVICES: There are no shipyards in the port. Service on any kind of electronic equipment is not available.
AUTHORITY: North Carolina State Ports Authority, P.O.Drawer 829, Morehead City, North Carolina 28557. *Tel:* (919) 726-3158. *Telex:* 510 924-2983. *Contact:* Robert D. McMahan, Port Manager.

MYRTLE GROVE (incl. Davant), Louisiana:

29.38 N. 89.57 W.

LOCATION: West Bank of Mississippi River, about 82 miles (via Southwest Pass) from sea (at mile 61.5 above Head of Passes).
DOCUMENTS/PILOTAGE: For all general information refer to "New Orleans".
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Miami Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
TUGS: Minimum of 2 tugs required for berthing and unberthing. Additional tugs at Elevator Management's discretion.
BERTHING: *Mississippi River Grain Elevator, Inc.:* Distance between bollards 1,000 ft., alongside 500 ft. dock, depth 40 ft. (consistent with Southwest Pass). Loading rates, 80,000 to 120,000 bushels per hour. Loading Spouts: 4 spouts in use with 1 additional planned. Total distance between 5 spouts after completion (pivot to pivot) 500 ft.
International Marine Terminal: Max. LOA 290 m. Max. draft 12.2 m. Max. beam 48 m. Berth length 312 m. Length of travel of loader 244 m. One loading spout. Max. loading rate for coal 9,000 tonnes per hour.
Davant:
Electro Coal Transfer Corporation: Terminal located 55 miles above Head of Passes opposite Myrtle Grove. Total length of dock 3,000 ft. Channel depth 12.19 m. Depth alongside 18.0 m. One fixed loader, rate 4,840 tonnes per hour and one travelling loader, rate 6,000 tonnes per hour.

There is to be a Topping-Off operation 2 miles from the S.W. Pass entrance using 4×600 t.p.h. cranes mounted on a 38,000 d.w.t. ocean-going barge.

FRESH WATER: Not available.
FUEL: Not available.
DENSITY: Fresh Water (1000).
AUTHORITY: Plaquemines Port, Harbour and Terminal District, Woodlawn Building, Rt.1, Box 53A, Braithwaite, Louisiana 70040. *Tel:* (504) 682-0081.

Mississippi River Grain Elevator, Inc., Main Office: Suite 2730, Energy Centre, 1100 Poydras St., New Orleans, Louisiana, 70163-2730. *Tel:* (504) 582-2200.

Elevator: Rt. 1-Box 606, Belle Chase, Louisiana 70037. *Tel:* (504) 656-2212. *Telex:* 209330. *Contact:* P. Grand, General Manager. J. T. Dugas, Traffic Manager.

NAWILIWILI, Hawaii (including Port Allen): 21.57 N. 159.21 W. (See Plan)

DOCUMENTS:
4 Crew Lists.
4 Passenger Lists.
Customs Documents.
Clearance, Travelling Manifest.
Local Manifests.
Health Documents.
Bill of Health and Vaccination Certificates.
4 Manifests.
4 Bills of Lading.
Ship's Papers.
Certificate of Registration or Enrolment.
Annual Inspection Certificate.
Load-line Certificate.
Derat Certificate.
Drinking Water Certificate.
Radio Certificate and Licence.
4 Store Lists.

PILOTAGE: Vessel's Agent orders Pilot 48 hours in advance by telephone, correcting ETA as necessary with 4 hours final notice if a last minute change occurs. Tug-boat *"H. A. Walker"* serves as pilot boat for Nawiliwili and Port Allen, 75 ft. long, black hull, white house, topsides red. Radio telephone within 1 hour of arrival and while tug is working. Channels 12, 16 and 18. "WYB 8343". Pilot boards 1 mile East of Nawiliwili and 0.5 miles South of Port Allen. Signals in accordance with International Code.

ANCHORAGES: Nawiliwili: Between Nawiliwili Light and Carters Point in 5 – 9 fathoms. Not good in strong trade-wind weather. Fair holding ground. Not recommended.

Port Allen: 0.5 miles South of Port Allen Breakwater Light in 5 – 10 fathoms. Fair holding ground. Untenable in Kona or S.W. storms which occur from November to March.

RESTRICTIONS: 24 hours notice of arrival is obligatory. Nawiliwili: Arrivals sunrise, departures sunset time. From October 21 to March 21 Pilot boards at 0630 hrs. Balance of year 0600 hrs. Port Allen: No time restrictions.

MAX. SIZE: Nawiliwili: Length 687 ft., draft 32 ft. 6 in.

Port Allen: Length 687 ft., draft 32 ft. on North side and 28 ft. on South side. Pier is 600 ft. long, so larger vessels overhang.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Honolulu Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Communicate through RCA or ITT stations in Honolulu. Also KQM marine operator for radio telephone and telephone to Kauai.

TUGS: One 1,500 h.p. tug meets vessels off port and in outer harbour. Both ship's lines and/or tug's line may be used. Has radio telephone, "WBY 8343" and Channel 12 is usually used. Extra tugs available from Honolulu.

BERTHING: Limited to 1 large vessel at Nawiliwili and 1 at Port Allen. Considerable barge traffic. Prior reservations by Agent necessary with District Manager. Berth conflicts usually solved in Honolulu by rerouting of Island ports.

New Ro/Ro barge facility at Pier 1.

CARGO HANDLING FACILITIES: Nawiliwili has 2 sugar loading gantries on Pier 2; no equipment or storage to handle grain, ore, coal, sulphur. Fertiliser is discharged by self-unloading barge, and the bulk hauled away via truck. There is a container yard but no facilities to off-load containers. Weekly service is by a self-unloader. Roll-on/Roll-off cargo is moved on ramps furnished by barges. LPG and petroleum product lines are privately owned.

STEVEDORES: All stevedoring by McCabe Hamilton and Renny Co. Ltd., with headquarters in Honolulu and branches in outports. 48 hours notice by Agent for labour and equipment. Inward cargo is containers, general, bulk fertiliser, petroleum products, and building and construction materials. Outward is raw sugar, general and molasses. Foreign vessels are subject to heavy fines for carrying stevedore gear inter-island without Customs clearance.

MEDICAL: 2 hospitals on Kauai with 2 doctors under contract to United States Public Health Service. Standard international inoculations and vaccination required. Advance notice by Agent desirable but not necessary.

TANKERS: All piers have pipe-line connections for incoming cargo and outgoing molasses. Fuel oil 10 in., molasses 10 in., water line 6 in., gasoline, kerosene and diesel 8 in. These are the main lines under the wharves. Hose connections to ships vary with the type of riser and hose so size of fittings should be checked with Agent. No slop discharge facilities available. 4 tanker berths available.

DENSITY: Varies from full salt to brackish in periods of heavy rainfall with freshets in the streams. No specifics available.

FRESH WATER: Available from 2 in. dock hydrants via ship's hose. About 100 gallons per minute.

FUEL: Bunker C not available for large vessels. Diesel fuel available via tank truck with 6 hours notice. Weekend and holidays order previous day.

GANGWAY/DECK WATCHMEN: Tankers discharging gasoline required to have uniformed dock watchman. Usually off duty policeman. All ships provide own gangway and deck watch.

OPENING/CLOSING HATCHES: Normally done by stevedores. A few foreign ships prefer doing it with own crew.

CUSTOMS ALLOWANCES: 200 cigarettes, 50 cigars per man, and one bottle, U.S. quart, wine or spirits.

IDENTIFICATION CARDS: Desirable but not required by law.

CONSULS: All in Honolulu.

REPAIRS: Light machine shop, welding and burning and pipe work available. Plantations may do some heavy repairs if part can be sent to their shop. Their engineers are helpful in emergencies. Heavy or technical repairs must be done in Honolulu.

REPATRIATION: Agent can arrange by air via Honolulu. Immigration clearance necessary.

AIRPORT: Lihue is 3 miles from Nawiliwili and 20 miles from Port Allen; served by inter-island regular carriers. Numerous lines, and charter flights available.

TIME: GMT minus 10 hours, all year round.

HOLIDAYS: National: New Year's Day (January 1st); President's Day (February 22nd); Memorial Day (May 30th); July 4th; Labour Day (first Monday in September); Election Day (first Tuesday in November); Veteran's Day (November 11th); Thanksgiving Day and Christmas Day (December 25th). Cargo can be worked but at penalty rates.

POLICE/AMBULANCE/FIRE: Emergency calls – Dial 911 for all services, or dial "O" for operator.

EMERGENCY CO-ORDINATION CENTRE: Coast Guard Search/Rescue Centre, Tel: 245-4521.

TELEPHONES: Arrangements by Agent.

SHORE LEAVE: Permitted after Immigration check. Iron Curtain or Communist visitors may be restricted.

DEVELOPMENTS: Turning basin may be enlarged to handle liners and large bulkers. Project depth 35 ft.

AUTHORITY: State of Hawaii, Department of Transport, Harbours Division, P.O.Box 946, Lihue, Kauai, Hawaii 96766, U.S.A. *Tel:* (808) 245-6996. *Contact:* Charles E. Scharsch, Harbour District Manager.

AGENT: See "Honolulu".

NEW BEDFORD, Massachusetts: 41.38 N. 70.55 W. (See Plan)

DOCUMENTS: See "Boston".

PILOTAGE: Compulsory. 3 Massachusetts State Pilots available, ordered through Agent. VHF Channel 16 monitored. Pilot on station only after 12 hours notice. Small pilot vessel with basic communication equipment. Pilots board all vessels at Buzzards Bay Buoy at the entrance to New Bedford Outer Harbour situated at Lat. 41° 30′ 42″ N., Long. 70° 50′ 07″ W.

ANCHORAGE: It is recommended that vessels delayed due to weather, etc., anchor 0.5 miles South of Buzzard's Bay Bell Buoy.

RESTRICTIONS: A modern harbour approach begins at Buzzard's Bay Buoy and runs a straight course of 7.5 miles direct to the pier facilities. The channel is 350 ft. wide and has a depth of 30 ft. MLW. The channel leads into a moderate size (1,000 yd.) turning basin.

MAX. SIZE: 700 ft. length. Vessels over 30 ft. draft restricted by tides.

HEALTH: See "Health: All Ports" before first U.S. port (Albany). Illness reports made to Boston Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: RCA Chatham Radio, New Bedford Marine Operator for VHF, and Boston Marine Operator for ship to shore frequencies.

VHF: Pilot vessel on Channels 16 and 13. Pilot office on Channels 16 and 18A.

TUGS: Tugs join vessel in inner harbour. Tug lines used. 2 tugs available. Tugs are not normally used at the State Pier in docking and undocking of deep-water vessels. The large turning harbour basin, the wind-sheltered position of the pier and lack of tidal current minimise use of tugs. In extreme weather conditions tugs are used.

BERTHING: At State Pier, berthing space for 3 ships:
North side 600 ft. length, South side 775 ft. length, East side 450 ft. length.
Depth of water at all berths is 30 ft. MLW.

Maritime Terminal, depth 27 ft.

BRIDGES: Passage to upper reaches of harbour to Maritime Terminal requires navigation through the New Bedford and Fairhaven Bridge only in daylight for larger vessels over 250 ft. length.

STEVEDORES: 24 hour notice required for New Bedford Stevedoring Corporation to prepare gear. 25 tons discharged or loaded per hour as average production per gang. Nearly all cargoes handled.

MEDICAL: 24 hours notice required. Excellent hospital facilities available.

TANKERS: Hurricane dyke barrier gate 150 ft. wide with depth of 30 ft. MLW.

DENSITY: Static, since tidal variations light. Density same as ocean water.

FRESH WATER: Fresh water available.

FUEL: All types available, to be ordered in advance.

GANGWAY/DECK WATCHMEN: Watchmen available. Non police or police.

OPENING/CLOSING HATCHES: Depends on negotiated contract and cargo handled.

CUSTOMS ALLOWANCES: Designated by U.S. Customs with regard to particular circumstances.

CONSULS: Most Consuls available in Boston, 50 miles or 1 hour away.

REPAIRS: All types of minor ship repairs available.

REPATRIATION: Agent can handle formalities.

AIRPORT: 3 airports within 1 hour's drive. All international services.

HOLIDAYS: New Year's Day (January 1st); Washington's Birthday (February 22nd); Patriot's Day (April 19th); Memorial Day (May 30th); Independence Day (July 4th); Labor Day (first Monday in September); Columbus Day (October 12th); Veterans' Day (November 11th); Thanksgiving Day (last Thursday in November); Christmas Day (December 25th).

TELEPHONES: No telephones on board, but exist adjacent to pier.

SERVICES: All services can be obtained if required.

SHORE LEAVE: If U.S. Immigration has cleared crew member, he is allowed ashore.

SHIPMASTER'S REPORT: December 1982.
Documents: See "Boston"
Pilotage: Compulsory. Pilot boards at "BB" in Buzzards Bay. Advise Agent 6 hours prior to arrival.
Restrictions: Vessels enter and leave on rising tide during daylight hours. The approach is hazardous as vessel has to pass through hurricane barrier (width 150 ft.) and swing bridge (width 94 ft.).
Max. Size: LOA. 600 ft. Beam 85 ft. Draft 25 ft. Underkeel clearance of 5 ft. required in channel. Mean tidal range 3 ft.
Radio: Chatham Radio.
Tugs: 3 tugs available (2,000 hp.). 2 tugs are normally sufficient for berthing/unberthing.
VHF: Pilot on VHF Channel 16.
Berthing: Maritime Terminal Wharf: Distance from "BB" Buoy to Berth is 9 miles. U.S. and U.K. pilot books indicate 30 ft. to 31 ft. at berth. Least depth in Channel from sea to berth 30 ft. Nature of bottom at berth – very soft mud. Density 1025. Good security. Palletised cargo and 20 ft. and 40 ft. containers handled. Ample storage space for containers.
Services: Fresh water, fresh provisions, limited repair facilities, Lloyd's Surveyors (at Boston), Salvage Surveyor (New York), laundry service, (Boston). Bunker fuel oil, diesel oil, lubricating oil, doctor, hospital, groceries and meats (Boston).

AUTHORITY: City of New Bedford Harbor Development Commission, Pier 3, Wharfinger Building, New Bedford, Massachusetts 02740. *Tel:* (617) 993-1770. *Contact:* Paul F. Saunders, Director.

NEW HAVEN, Connecticut: 41.14 N. 72.55 W.

(See Plan)

DOCUMENTS: Refer to "New York".
PILOTAGE: Compulsory. State Pilots are available on a 24 hour basis and are usually arranged through the ship's Agent or directly by shipping companies. Pilot will board vessel in vicinity of New Haven Sea Buoy, marked "N.H." – short and long flash; black and white vertical stripes. Boarding will be from a 44 ft. steel launch named *New Haven Pilot* – blue hull with "Pilot" marked on both sides in white letters, or from a tug-boat. Contact can be made via VHF telephone, Channel 13 (156.65 MHz), Channel 16 (156.80 MHz), or Channel 19A (156.95 MHz).
Pilotage Association Report: The New Haven – Bridgeport Pilots maintain a tide gauge, from where they depart to meet vessels. The normal tidal range is 6 ft. They believe that 4 ft. of water in excess of the ship's deep draft is necessary for a safe transit. A rule of thumb, used by them, is 31 ft. on LW, and 37 ft. on HW. (For any variation of this, a Pilot should be consulted.) A normal transit time from the entrance buoy to any of the berths in the inner harbour is 45 minutes to 1 hour. Docking time of 30 minutes to 1 hour should be added to this average, dependent on where the ship is berthing, as well as possible weather conditions.

There was a maintenance dredging of New Haven Harbour, completed in 1983. The after-dredging survey submitted to them by the US Army Corps of Engineers shows a controlling depth, with rock bottom of 35 ft. at MLW. This rock is located at South West Ledge Light at a point where a 35° turn is executed by the ship.

Prevailing winds are Westerly, and have a decided effect on the rise of tide. The tide gauge is the determining factor as to the time of entry when wind conditions do exist.
ANCHORAGES: Vessels awaiting berth, and or tides, will find good anchorage up to 40 ft. draft within 1 mile S. – S.E. of the "N.H." Buoy.
APPROACHES: *From New York:*

Charts: 12339, 12366, 12367, 12363, 12354, 12371.

Vessels leaving New York bound for New Haven will be transiting New York's East River and Western Long Island Sound. All shoals and rocks are well marked and the close proximity to the shore line provides an excellent radar target for position checking. During summer months, thick fog will present a hazard on this route. Long Island Sound is also a major yachting centre, so extreme care must be exercised while transiting this area.

There are numerous dangers to be wary of when making the passage from New York to New Haven. In order of approach they are:

1. East River and Hell Gate are areas of strong tidal currents averaging 4.6 knots for the ebb current which sets in a Southwesterly direction. Vessels drawing up to 35 ft. may transit Hell Gate at HWS only. Sluggish handling vessels should arrange for towboat assistance up the East River and through Hell Gate.
2. 26 ft. Buoy "32A" usually passed well clear to the South.
3. Cable and Anchor Reef usually passed to the South.
4. Stratford Shoals deep draft vessels pass at least 1 mile off the South of the shoal then alter course to New Haven Sea Buoy.

From Block Island:

Charts: 13205, 13215, 13209, 12354, 12371.

On approaching Block Island from the Southerly direction, Block Island's Southern shore is mainly high rock cliffs, and a good radar target is obtained along with bearings taken from the RDF station at Southeast Light.

Care should be exercised by vessels deeper than 30 ft. to always approach Block Island to the East due to the numerous shoals found on the Western side of the island.

It is also advisable to remain at least 1 mile to the East of Block Island due to the numerous shoals close in shore.

There are numerous dangers to be wary of when making the passage from the pilot station to New Haven. In order of approach they are:

1. Block Island North Reef Buoy "1B1" marks a dangerous shoal and should be passed well clear.
2. The Race is a narrow channel into Long Island Sound. Strong East to West currents exist during maximum ebb or flood and knowledge of position should be maintained in view of the possibility of unusual set. Valiant Rock may be passed on either side.
3. Great caution should be exercised during the summer months when transiting through Block Island and Long Island Sound due to the heavy small boat traffic, especially in the area in proximity to The Race.
4. Fog is prevalent during the summer months and is heavy. Good judgement should be used before transiting the area during fog.

Good water is found in Long Island Sound from The Race to New Haven as long as the Mid-Channel Buoys "P1" and "CF" are passed close to and care is taken so as not to pass North of "Twenty-Eight Foot Shoal" lighted bell buoy. When a vessel is within 4 or 5 miles of New Haven, the depth of the water is reduced, so caution is again needed. Radar is the best navigational aid in this area. There are numerous RDF stations that can be used to ascertain positions. Also fathometer readings will be helpful.
RESTRICTIONS: Vessels can proceed to and from berths in New Haven Harbour at any hour during the day or night, weather and tide permitting. Entrance channel dredged to 35 ft. MLW and width 400 ft.
MAX. SIZE: Draft up to 38 ft. subject weather and tides. Vessels of 50,000 d.w.t. with part cargo, do call occasionally, but should consult with the Pilot and terminal concerned.
HEALTH: See "Health: All Ports", before first U.S.A. port (Albany). Illness reports made to Boston Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
RADIO: Vessels arriving from North use Chatham Radio. Vessels from South use Amagansett Radio on Long Island.

Bridgeport Marine Operator on VHF Channels 24 and 27.
TUGS: Red Star Towing Company operates tugs based in New Haven and serves Long Island Sound Ports. The office is on Channel 19A. Tugs monitor 19A, 16 and 13. Dispatchers can be reached 24 hours a day on Channel 19A. The number for Red Star is area code (212) 536-3841 or (800) 225-5470. 3 tugs 1,600 h.p. – 1,800 h.p.
BERTHING:
Wyatt Inc.: Ships are not docked on the West side at ebb tide, though ships in ballast can sail whenever ready, regardless of flood or ebb tide. The East berth docking is done on flood or ebb, with draft to be considered. In the Spring of 1983, this terminal was dredged to 37 ft. on the West side, and 32 ft. on the East side. Fresh water and bunkers are available, with steam on the East side available through a 2 in. line, with 125 lb. pressure.

Ships of 715 ft. are regularly docked here. Vessels are docked port side to on the West side, and would be delayed if the East berth is occupied by a ship.
Gulf Terminal: The Gulf Dock is located parallel to the channel on the East side of the inner harbour, and ships of 35,000 d.w.t. with draft of 35 ft. and LOA of 675 ft. are considered to be maximum size. (350 ft. from bow to manifold.)

The dock parallels the channel and consists of 2 main caissons, a centre platform and dolphins connected by a catwalk. Ships consigned for T.A.D. Jones Terminal use this facility.
T.A.D. Jones: This dock is on the East side of the harbour, a 500 ft. finger pier at a 90° angle to the channel. The North side has 27 ft. of water and the South side is used for barges. Tankers, or dry cargo ships no longer call at this pier.
Arco Terminal: Arco Dock parallels the main channel, and is 750 ft. long, with 2 main caissons, dolphins, and platform, connected by catwalks. Ships up to 50,000 d.w.t., and 35 ft. draft use this berth arriving on the rising tide, and 35 ft. on LW in berth. Ships are docked starboard side to.

Bunkers are not available, though fresh water is, but only in mild weather.
New Haven Terminal, Inc.: This facility has 3 ship berths on a 90° heading from the channel, dredged in 1983. The Scrap Dock, as it is called, is a continuous pier, with a wearing strip cushioned by a rubber backing. The pier is 650 ft. long, with 35 ft. at MLW. Scrap is loaded from here and all types of dry cargo handled. Two gantry cranes are on the dock and additional mobile cranes are available. Railroad cars can be brought on to the dock. Ships berth port side to.

The Finger Pier on the North side is a continuous pier, 650 ft. long, and is mainly used as a tanker berth. Bow to manifold is 350 ft. (additional hoses can be added to increase this distance.) The slip is 196 ft. in width, and 2 ships may be accommodated at the same time, as long as 30 ft. is allowed for a tug boat between the ships. Depth 35 ft. at MLW.

The South side is a tanker or general cargo berth, with 40 ft. at MLW. Bow to manifold is 350 ft. and additional hoses may be used. Ships of 700 ft. may be secured at all 3 of these berths.

Bunkers can be trucked in, and fresh water is available at all berths.
Exxon Terminal: Exxon Dock parallels the main channel. The dock is 750 ft. long with 2 main caissons, dolphins, and platform connected by a catwalk.

Ships of 50,000 d.w.t. call at this dock, with a draft of 36 ft., docking on the rising tide. Ships are docked starboard side to. Bunkers are not available, though fresh water is.
TANKERS: See "Berthing".
BALLAST: There are no slop lines available.
FUEL: Available from oil terminals or delivered by barge.
FRESH WATER: Available at all terminals.
MEDICAL: All facilities available.
CUSTOMS ALLOWANCES: At the discretion of Customs Officers. Normal allowance is 200 cigarettes or 2 lb. of tobacco and 1 quart wine/spirits per man. Additional allowances may be given if considered necessary, due length of vessel's stay in port.
AIRPORT: New Haven Airport 1 mile distant. New York International Airport 70 miles distant.
CONSULS: All countries represented in New York.
HOLIDAYS: New Year's Day (1st January); Washington's Birthday (22nd February); Memorial Day (30th May); Independence Day (4th July); Labor Day (first Monday in September); Columbus Day (12th October); Veteran's Day (11th November); Thanksgiving (fourth Thursday in November); Christmas Day (25th December).
TIME: Eastern Standard Time, GMT minus 5 hours. Daylight Saving Time, GMT minus 4 hours from April to October.

SERVICES: Professional Sea Services (monitor Channels 16 and 19A) of New Haven offers launch service to ships at anchor, movement of stores, and skin divers. Tel: (203) 932-2159.

GENERAL: Through a co-operative agreement, all the terminals have a slick boom, skimmers and absorbent available at all times.

There are no slop tanks available in this port for pumping ballast.

None of the terminals supply gangways; ships must use their own.

AUTHORITY: U.S. Coast Guard, Captain of the Port, New Haven. *Contact:* Captain D. V. Monks, New Haven-Bridgeport Pilots' Association Inc., 23, Highland Drive, Wallingford, Connecticut 06492. *Tel:* (203) 878-8667.

NEW LONDON (Including Groton): Connecticut: 41.21 N. 72.06 W. (See Plan)

DOCUMENTS: Refer to "New York".

PILOTAGE: Vessel usually notifies Agent 48 hours before arrival, who will arrange Pilot boarding. Pilot boards at Sarah's Ledge, which is close to anchorage at harbour entrance.

ANCHORAGES: In Thames River, and in Long Island Sound, approx. 2 miles W.S.W. of New London Ledge Light bounded by lines connecting points which are following bearings and distances from New London Ledge Light: 246°, 2.6 miles; 247°, 2.1 miles; 233°, 2.1 miles; and 235°, 2.6 miles.

RESTRICTIONS: Pilots recommend daylight docking but can dock at night if necessary. Entrance channel 40 ft. deep.

MAX. SIZE: Dry cargo vessels and tankers 700 ft. long are using the harbour.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Boston Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Vessels arriving from North use Chatham Radio on Cape Cod. Vessels from South use Amagansett Radio on Long Island. However, either one may serve the purpose.

TUGS: Usually join vessel at Ledge Light if a dry cargo vessel, and off Sarah's Ledge if a tanker. Tugs use ship's lines; if tug's lines are used this is part of charge.

BERTHING: Advance ETA must be made for berthing, and it is suggested to dock during daylight hours when possible.

State Pier No. 1: depth, 32 ft. - 36. ft. MLW.
Dow Chemical Co. Wharf: depth, 22 ft. MLW.
City Wharf Ferry Terminal: depth, 22 ft. MLW.

BRIDGES: There are no bridges across Main Ship Channel. However, at New London, at the head of the Main Harbour, the Thames River is crossed by 1 drawbridge and a twin fixed bridge: the Amtrak Railroad bascule bridge with a horizontal clearance of 151.5 ft. and a vertical clearance of 30.9 ft. at high water and a fixed highway bridge with a horizontal clearance of 200 ft. and a vertical clearance of 135 ft. at high water.

STEVEDORES: ETA of 72, 48 and 24 hours is required, as gangs must be requested by 1500 hrs. on weekdays. Average discharge, about 20 tons per gang per hour.

TANKERS: Hess Oil Dock: Depth alongside 36 ft. (Lines 10 in. and 12 in.).

Texaco Wharf: depth alongside 18 ft.
Pfizer Wharf: depth alongside 18 ft.

Report: Port Approaches – Cautionary Advice: When approaching Block Island from the South or East, prior to picking up the Pilot, all mariners should be aware of the precautionary zone to the S.E. of Block Island. Usually ships bound for Long Island Sound will make for 1 mile East of Block Island S.E. lighted whistle buoy then, traffic permitting, head due North, to pick up the Pilot. All traffic is this area should be monitoring VHF Channels 13 and 16. Principal navigational aids used in making landfall are RDF stations at Montauk Point, S.E. Point, Point Judith, Brenton Reef Light and Buzzards Bay Light Tower. The high bluffs on the South side of Block Island also provide excellent radar targets for position fixing. For ships whose draft exceed 30 ft., care should be taken to approach the pilot station from the East side of Block Island due to the numerous shoals found on the island's Western side. There are numerous dangers to be wary of when making the passage from the pilot station to Groton. In order of approach they are:

Block Island North Reef Buoy "1B1" marking a dangerous shoal which should be given a wide berth.

"The Race" which is a narrow channel leading into Long Island Sound. Strong Easterly and Westerly currents exist during maximum flood and ebb tides (flood set to the West) and an accurate position should be maintained at all times so that any unusual set may be observed.

It should also be noted that sport fishing boats frequent the area in great numbers practically all year round. Tugs with large barges on long hawsers can also be expected. Valiant Rock, in the middle of "The Race", may be passed on either side. Security broadcasts should be made on VHF Channels 16 and 13 when approaching the area and passing situations discussed before entering "The Race".

Cautionary Advice: Extreme caution should be exercised during the Summer months when transiting through Block and Long Island Sounds due to heavy small boat traffic, especially in the area around "The Race".

Submarine operating areas are in the approaches to New London Harbour and off the Northern end of Long Island. Submarines may be operating either surfaced or submerged in these areas.

Fog is prevalent during the Summer months and can be very dense. Prudent judgement should be used before transiting the area during fog because of the aforementioned hazards.

Berthing: (Hess Oil – Groton): The harbour provides excellent room for manoeuvring. Currents of up to 0.5 knots exist but set fair with the channel. The tidal range averages 2.6 ft. with a spring range of 4.3 ft. Vessels under 30,000 d.w.t. dock with the assistance of 1 tug; vessels over 30,000 d.w.t. require 2 tugs. All vessels require 1 tug for undocking. Vessels approach the berth at a small angle stemming the last of the ebb tide. All vessels dock starboard side to. Once alongside the platform, the bow will be secured first, followed by the stern. The Platform is well protected by rubber fenders. Lines are run to offshore piles and a mooring buoy by a small boat. 12 mooring lines are used under normal weather conditions. (See "Plan").

MEDICAL: All facilities available.

FRESH WATER: Available at pier side through 2.5 in. and 1.5 in. hoses.

FUEL: Available at tanker berths or by barge.

GANGWAY/DECK WATCHMEN: Not required and not recommended.

OPENING/CLOSING HATCHES: Performed by stevedores.

IDENTIFICATION CARDS: Not required.

CONSULS: Nearest at New York.

REPAIRS: 3 waterfront marine repair plants are equipped to repair vessels at the port. The Nelseco Navigation Co. and Thames Shipyard Inc. each owns and operates a plant at New London on the right bank of the Thames River; the General Dynamics Corp., Electric Boat Division owns and operates a shipyard and marine repair plant at Groton on the left bank of the river.

DRY DOCKS: 1 floating dry dock, 1 graving dock and 3 marine railways are available to the public at 2 of the marine repair plants.

1 floating dry dock, steel construction, with a lifting capacity of 6,500 tons, located on the West side of the pier E, has an overall length of 448 ft. length of 435 ft. 6 in. on the keel blocks, overall width of 97 ft. inside clear width of 70 ft. and depth of 26 ft. of water over the keel block when submerged.

1 graving dock, located South of Piers A, B, C, and E, has length of 515 ft., width of 70 ft., and 35.5 ft. depth of water over the sill and 34.5 ft. over the keel blocks at MHW.

REPATRIATION: Facilities exist.

AIRPORT: Nearest airport is Groton - New London Airport, situated about 3 miles East of Groton, Connecticut. There are scheduled commercial airlines serving this field. Pilgrim Airlines and Business Express Airlines run frequent connecting flights to Bradley and Kennedy International Airports.

TIME: Eastern Standard Time, GMT minus 5 hours. Daylight Saving Time, GMT minus 4 hours, from April to October.

HOLIDAYS: New Year's Day (1st January); Lincoln's Birthday (12th February); Washington's Birthday (22nd February); Good Friday; Memorial Day (30th May); Independence Day (4th July); Labour Day; Columbus Day (12th October); Veteran's Day; Thanksgiving Day; Christmas Day (25th December). Cargo work can be arranged on holidays.

POLICE/AMBULANCE/FIRE: Police, Tel: 443 – 4315; Ambulance, Tel: 443 – 4388; Fire, Tel: 443 – 4381.

TELEPHONES: Available if required.

SHORE LEAVE: Allowed.

DELAYS: Availability of berthing might cause some delay.

AUTHORITY: State of Connecticut, Dept. of Transportation, Bureau of Waterways, State Pier, New London, Connecticut 06320, U.S.A. *Tel:* (203) 443-3856. *Contact:* Francis M. McDermott, Director Bureau of Waterways.

NEW ORLEANS, Louisiana: 29.56 N. 90.04 W. (See Plan and Late Plans)

DOCUMENTS:

3 copies Cargo Manifest (Form 1302), the original showing all cargo on board, and 2 copies showing only cargo for this port.
2 copies Crew Manifest (curio list).
2 copies Stores List.
2 copies Passenger List (Form I-418).
2 copies Crew List (Form I-418).

Customs boarding officer will also examine Ship's Register and Load Line Certificate. In addition, the following documents will be required for formal entry to be made within 48 hours of arrival from abroad, or 24 hours from arrival from a United States Port:

Master's Oath (Customs Form 1300).
All foreign clearances.
Certified Crew List.

The Bureau of Customs at New Orleans, Louisiana, will not, regardless of the circumstances, accept Customs Entry Papers from vessels unless they are on the proper U.S. Customs Forms and properly prepared.

Specially referred to are Customs Forms 1303 (Ship's Stores Declaration), 1304 (Crew Effects Declaration) and 1302 (Inward Foreign Manifest).

U.S. Customs at New Orleans require that the 1303 be completed, that is all stores (deck, engine, etc.) be listed on the form; it must also include firearms and medicines. They will not accept "as per attached list".

Form 1304, Crew Effects List, must likewise be properly completed. All effects and curios will have to be listed on the form. The term "souvenirs" is not sufficient and may not be used. All values have to be listed. Attachments to the 1304 are not permitted. (This does not apply to American Flag vessels using the Form I-418 Crew List with Crew Declaration numbers listed for their souvenir list.)

Also see "Berthing – Ama (Shipmaster's Report) – General" regarding Customs' areas of jurisdiction.

PILOTAGE: Advise Agents ETA at sea buoy 48 hours in advance. Agent will arrange for Pilot. Pilot boat 46 ft. long, red hull, white cabin, flying blue and white Pilot flag. Pilot boards at sea buoy, requires Pilot ladder 6 ft. above water level. Pilot boats can be contacted by VHF, Channel 9 when 30 to 40 miles off, or ship-to-ship Channel 13. Bar Pilot is exchanged for River Pilot at Pilottown, Head of Passes.

Following Advice Received from Crescent River Port Pilots' Association:
Cable: Crespilots, New Orleans.

Vessels bound to any destination on the Mississippi River and Mississippi River Gulf Outlet (MRGO) are requested to supply the following information via Coastal Radio Telegraph addressed to Crespilots, New Orleans:

(1) ETA – 24 hours before expected arrival at pilot station (Sea Buoys), and any change of ETA in excess of 2 hours.

(2) Indicate if vessel is arriving Mississippi River or Mississippi River Gulf Outlet.

(3) Deepest fresh water draft and speed of vessel.

(4) Please contact pilot station at entrances via VHF Radio Phone on Channel 16 (156.80 MHz), Channel 9 (156.45 MHz), or, Channel 13 (156.65 MHz) at least 2 hours prior to arrival for boarding instructions.

Your co-operation will greatly assist in expediting the dispatching of Pilots and avoid costly delays to your vessels.

ANCHORAGES: Safe anchorage within 2 miles of South Pass or S.W. Pass entrance. At the Point, below New Orleans, vessels may anchor without tug assistance.

APPROACHES: *Operator's Report:* 1984.

The coastline of the Mississippi River delta is low lying and generally swampy, having no easily distinguished geographic characteristics. The oil rigs and drilling platforms off Southwest Pass are usually sighted well before any navigational aids or landmarks. The first navigational aid to be seen is normally the Southwest Pass Entrance Light near the end of the East Jetty, a red tower on a white dwelling, 85 ft. above the water. The Entrance Light is also equipped with a Racon displaying Morse K (—-—) and Radio Beacon "OT" (307 kHz). The East End Jetty is also a conspicuous navigational aid consisting of a red triangular daymark on a red skeleton tower, 50 ft. above the water.

The sea buoy ("SW") is a red/white light (Morse (A)) buoy located approximately 1.6 miles South of the jetties and may be difficult to distinguish at long range due to the numerous oil wells and other lights in the vicinity.

Entry and transit should not be attempted during dense fog or any other unfavourable conditions.

River Transit: *General:* The Army Corps of Engineers has the responsibility for maintaining a project depth of 40 ft. in the entrance to and along the navigable channel in the Mississippi River. However, even with regular dredging, there will be occasions when the project depth cannot be maintained, resulting in a reduction of the transit draft. A decrease in water depth is most likely to occur when:

(a) the river stage is at its lowest usually between October and March, and

(b) the river current velocity decreases causing siltation primarily after major Winter and Spring run-offs of rain and melted snow.

The influence of the above factors on water depth cannot be accurately predicted, neither for the day nor the location in the river. While this is not of concern for many miles of the river where deep water is always available, it is of particular concern within the 9 crossings between New Orleans and Baton Rouge.

Within these crossings it is, therefore, necessary for the Corps of Engineers to take frequent soundings not only to keep track of where the least water depth is, but also to determine the priority crossing for dredging.

Soundings taken for this purpose are very comprehensive, i.e., lines of soundings within each crossing are along the centre line ranges as well as along parallel lines 125 ft. to 250 ft. on either side of the centre line; soundings are recorded on these lines at about 150 ft. intervals. The maximum allowable transit drafts within the river are determined by the available water depth in the deepest 250 ft. wide channel in the 500 ft. wide crossings. As a result, Pilots in selecting such a navigable route may not always proceed on the centre line ranges of a crossing. The maximum draft will never exceed 40 ft.

Currents in the river vary according to the stage of the river (currents due to tides are a negligible factor) being of greater strength and velocity during high river flood stages and of lesser velocity during low river stages. High river stages normally occur in April and the low stages in October. Vessels transitting the river during flood stages should take precautions to avoid wash damage to the banks.

Extra caution is required in navigating the river in the vicinity of Algiers Point, particularly when the river is high. When the Carollton Gauge reaches 10 ft. on a falling stage, all vessels in the vicinity of Algiers Point shall be governed by the Governor Nichols and Gretna traffic lights. Furthermore, low powered vessels should not navigate the area unless they can clear Algiers Point during daylight.

When transitting the river it should be noted that since the VTS is not mandatory, the information generated by the service can only be as complete and accurate as the information received from participating vessels. Thus, the mariner may be confronted at any time with unreported hazards. It is important, therefore, that all Pilot rules and other applicable rules and regulations be strictly adhered to.

Six bridges cross the Mississippi River between Head of the Passes and Baton Rouge, with the following clerances:

Mile (AHP)	*Bridge*	*Horizontal Clearance* (ft.)	*Vertical Clearance* (ft.)	*Span*
94.0	Hale Boggs	1,400	170.0	A
95.7	Greater New Orleans	1,400	170.0	A
106.1	Huey P. Long	725	153.0	A
121.7	Luling & Destrehan	1,200	154.9	A
167.4	Sunshine	750	168.0	B
229.3	Baton Rouge I-10	500	172.5	A

Note: The vertical distance is measured at zero elevation of the river at the nearest gauge on the river. For example: the Baton Rouge I-10 bridge shows a clearance of 172.5 ft. at zero on the gauge. When the gauge shows 10 ft., the clearance is 172.5 ft. – 10 ft. = 162.5 ft.

Ferries transport passengers and cars across the river at Destrehan, Reserve, Lutcher, Donaldsonville, White Castle and Plaquemine.

When fog is predicted for the lower Mississippi River and/or Gulf, outbound vessels above New Orleans should anchor around Norco or above. Vessels below New Orleans should anchor well above Pilottown unless the weather can be expected to remain clear up to the entrance of the pass.

Draft/Speed Relationship: It is important to take account of the effect of "squat" when navigating within the crossings of the Mississippi River. For your guidance, the increase of draft due to "squat effect" is approximately 1 ft. for each 5 knots of speed.

River Crossings: The 9 crossings are critical areas, therefore, it is desirable to obtain either from the Pilot or local Agent the most recent information on locations where soundings indicate water depth less that the project depth 40 ft. You should discuss with the Pilot what the intended track within a crossing should be in order to remain within the deepest water. In order to further reduce the risk of bottom touching, a reduction in speed is considered necessary in these circumstances. Reduction of speed should be discussed with the Pilot to ensure that the effect of "squat" is compensated for while in a crossing. Since it is important to ensure the desired ship response to rudder movements while in a crossing, speed reduction has to be carried out before entering a crossing.

The manoeuvres required at the crossings are rather unique. In most cases the channel is not parallel to the river current, and the Pilot will, therefore, utilise the set of the current to negotiate the crossing. Speed has to be sufficient to compensate for the effect of the current, while at the same time maintaining a balance with increased draft due to "squat". Full sea speed is to be avoided.

When entering or leaving a crossing, the Pilot may manoeuvre close to the bank and on occasions take adantage of bank rejection to aid the manoeuvre.

Experienced helmsmen are required during the entire river transit between New Orleans and Baton Rouge.

River Traffic: Surging caused by passing channel traffic is a common problem. To avoid damage to Chicksan/hose connections and the parting of wires or lines, special attention should at all times be given to the condition and tautness of moorings. It is recommended that one or several qualified crew members be assigned exclusively to the tending of mooring lines and winches.

RESTRICTIONS: Draft governed by Southwest Pass, project depth 40 ft. Entrance day and night. New Orleans is 115 miles upriver.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

TUGS: Available, and join vessel off berth if required. One tug normally used for berthing/unberthing at New Orleans.

BRIDGES: 6 bridges. 3 bridges cross river at New Orleans, 1 at Baton Rouge, 1 at Destrehan and 1 at Donaldsonville. Sufficient clearance at all times.

BERTHING: *Public Grain Elevator:* No. 2 Berth, 670 ft. long, 40 ft. depth; No. 3 Berth, 650 ft. long, 40 ft. depth; No. 4 Berth, 635 ft. long, 40 ft. depth.

Loading Rates 20,000 bushels per hour per belt, in Berths Nos. 2 and 3; up to 40,000 bushels per hour per belt, in Berth No. 4. Each berth has 2 loading belts.

Southern Scrap Material Co.: Berth 550 ft. long, 32 ft. depth. Loading 200 t.p.h. with cranes.

Kaiser: Chalmette Wharf: Aluminium discharge facilities, max. draft 38 ft.

Westwego: Continental Grain Elevator: Berth 600 ft. long, 40 ft. depth; loading 3,000 t.p.h., 2 loading belts. Louisiana Dock: 28 ft. alongside, bulk oil products loaded 200 t.p.h. Pacific Molasses Co.: Berth 35 ft. alongside.

Ama: Shipmaster's Report: February 1985.

Berth: Farmers Export Elevator Co.

Location: Lat. 29° 56.4′ N.,Long. 90° 18.5′ W. On the S.W. bank of the Mississippi about 122 miles from the Southwest Pass (New Orleans Customs Zone).

Health/Agriculture: See "U.S.A. – General" before first Port.

Tugs: Tugs normally used.

Berth: Length of berthing face about 550 ft.

Port side to, head up. Head, stern, breast lines to dolphins. Springs to wharf or dolphins according to size. Strong current along berth. River traffic passes close by. Substantial moorings required, with regular adjustment. Poop gangways generally do not reach wharf. A contractor's gangway normally on wharf but is charged for delivery, collection in addition to rental. Access road very narrow, no vehicles allowed on wharf. Road deliveries must be collected manually from levee 300 yards away. Otherwise delivery by boat from Fairview Wharf. All provisions, laundry, etc., from New Orleans. Public telephones on wharf.

Loading: Loading rate about 1,500 t.p.h. – 2,000 t.p.h. Using 4 "Buhler" arms simultaneously. Sometimes there is a delay in back weighing cargo for preparation of documents.

Fuel: By barge at anchorage only.

Density: 1000.

General: The River is divided into 3 Customs divisions, namely Baton Rouge, Gramercy and New Orleans. To pass from one to another requires a new port entry with fresh copies of Crew Lists, Store Lists, Crew Personal Manifests, etc. Additional copies should be prepared at the same time as those for the first entry, as the Agents can then go ahead with the formalities.

It is a common practice for ships to anchor below New Orleans for clearance by Customs, N.C.B. and U.S.D.A. before going on towards the loading terminal. Bunkers are generally taken during this period as the grain elevators normally refuse permission to do this alongside.

Authority: Farmers Export Company, P.O.Box 97, Ama, La 70031.

CONTAINER HANDLING FACILITIES: Handled at most docks. Full container facilities at Morrison Yard wharf, length 430 ft. France Road berth No. 1 with 830 ft. leased to Sea-Land. Napoleon Avenue wharf 1,520 ft. Nashville/Henry Clay wharf 2,820 ft.

France Road Berth No. 4, wharf 700 ft. France Road Berth No. 5, wharf 900 ft. Berth No. 6, 800 ft. Berth No. 4 leased to Navieras de Puerto Rico and Berths No. 5 and 6 leased to New Orleans Marine Contractors, Inc.

France Road Berth 6, with Ro/Ro pier.

STEVEDORES: Working hours 0800 – 1200 and 1300 – 1700, Monday to Friday.

MEDICAL: All facilities available.

TANKERS:

Chalmette: Humble Oil Terminal: Tanker berth 30 ft. depth; Tenneco Oil Terminal: Tanker berth 35 ft. depth.

Amesville: Texaco tanker loading berth, 34 ft. alongside. 2×8 in. hoses loading up to 12,000 bbls.p.h. No ballast facilities.

Avondale: American Liberty Tank Terminals Berth, 60 ft. alongside. 4×6 in. hoses loading up to 18,000 bbls.p.h. No ballast facilities. International Tank Terminals Berth, 45 ft. alongside. 12 in. hoses loading 150 t.p.h.

Gretna: Publicker Chemical Corp.: Berth 30 ft. alongside. Southern Pacific Company: Berth 600 ft. long, 35 ft. depth; dry cargo discharging only. Industrial Molasses Corp: Berth 27 ft. depth; 2×10 in. pipe-lines, loading 200 t.p.h.

Marrero: Hess Terminal Corp: Tanker berth 38 ft. depth; 6×12 in. hoses loading 500 t.p.h. Texaco: Tanker berth 35 ft. depth; 6×16 in. lines loading 250 t.p.h. No ballast facilities.

St. Rose: Cities Service: Tanker berth 35 ft. depth; International Tank Terminals: Berth 35 ft. depth; no fresh water available.

Operator's Report:

Pilottown: General: The Texaco Terminal is located on the East side of the river, 1.7 miles AHP and is a crude oil terminal consisting of a single berth. The dock, mooring dolphins and walkway are constucted of steel and concrete. The dock itself is a 'T' head dock 60 ft. in length; the total cluster of mooring dolphins, however, spans 1,000 ft.

Water at the berth is brackish with an approximate tidal range of 1 ft.

The berth is isolated and far from any commercial centre or district. Launch service to Venice, a small fishing village 8 miles upriver from Pilottown, may be available on request.

Cargo Handled and Shore Installations: Crude oil is loaded to vessels from an 820,000 bbls. capacity storage tank through a 22 in. shoreline leading into 3×8 in. hoses; maximum loading rate is 24,000 bbls.p.h. The hoses are supported by a steel boom at the top of the hose handling structure on the dock.

The berth is equipped with an emergency shutdown system located on the dock; the vessel is provided with a similar piece of equipment for emergency use.

Docking: The River Pilot berths the vessel. No tugs are required for docking or undocking; docking is strictly starboard side to.

Vessels should approach the dock stemming the current, dropping the port (offshore) anchor when off the dock. The anchor is then used to help manoeuvre the vessel alongside the dock. When undocking, the anchor is hove up as the vessel manoeuvres away from the dock.

Mooring bollards on the main dock structure are rated at 100 tons; mooring hooks on the dolphins are rated at 60 tons or more.

Gangway: The ship's gangway must be used and should be properly illuminated and rigged.

Bunkers and Fresh Water: No bunkers or fresh water are available at the dock.

Ballast/Slop Facilities: No ballast or slop facilities are available at Pilottown; vessels arriving with dirty ballast should plan for this.

Venice: General: Getty No. 1 dock is a crude oil loading dock located on the West bank of the river approximately 11.8 miles AHP.

The 3 arms provided for loading cargo have a designed maximum rail to manifold distance of 12.5 ft. Vessels with a manifold inset greater than 12.5 ft. must use a 10 ft. long spool, provided by the dock, to connect the loading arms.

Cargo Handled and Shore Installations: Crude, the only cargo handled, is loaded through 3×12 in. Chicksan loading arms fitted with 8 in. manifold connections. Maximum loading rate is 40,000 bbls.p.h. The terminal requires that a minimum rate of 10,000 bbls.p.h. be maintained throughout the loading.

Emergency shutdown systems are located in the dock office and on the approach to the dock. The vessel is provided with a portable emergency stop.

Docking: Port side to docking is required and is normally performed by the River Pilot. No tugs are required for docking or undocking; the vessel's starboard anchor is usually used to control the vessel's movement during these manoeuvres. Approach should always be made with the vessel stemming the current.

Gangway: The ship's gangway must be used and should be properly rigged and illuminated.

Connecting Hoses: Chicksan arms are connected to the ship's manifold by ship's personnel.

Communications: A public telephone located at the terminal site, near the dock, is available for use by ship personnel.

Repairs: Only emergency repairs which do not involve hot work are allowed.

Bunkers and Fresh Water: No fuel or fresh water are available at this berth.

Ballast/Slop Facilities: A single 64,000 bbls. capacity tank is available for ballast storage/treatment. The maximum permissible discharge pressure is 150 p.s.i.

The terminal specifies that ballast shall not be loaded or discharged while handling bulk cargo and requests that vessels arrive with the minimum possible amount of ballast under the prevailing weather/river conditions.

Empire: General: The Chevron Terminal is a crude oil loading dock and is located at mile 26.7 AHP on the East bank of the river. The dock consists of a 'T' head hose handling platform, 2 breasting dolphins and 5 mooring buoys (3 upsteam of the platform and 2 downstream). The dock is connected to shore by a 12 ft. wide pier capable of supporting 2-ton loads.

Cargo Handled and Shore Installations: Crude is loaded through 3×12 in. hoses attached to a loading arm assembly on the hose platform. The maximum delivery rate is 40,000 bbls.p.h.

An emergency shutdown system is located on the hose handling platform with a portable remote control unit aboard the ship.

Docking: Docking is generally performed by the River Pilot and only starboard side to dockings are allowed. No tugs are required for docking or undocking as the vessel uses its offshore anchor to manoeuvre alongside the dock.

Approaches should be made stemming the river current and the port anchor should be dropped when the vessel is above the dock to facilitate manoeuvring into position. The anchor is hove up as the vessel leaves the dock.

Repairs: Only emergency repairs which do not involve hot work are allowed.

Communications: A public telephone located on the hose handling platform is available for use by ship's personnel.

Gangway: The vessel's gangway must be used and should be properly rigged and illuminated.

Bunkers and Fresh Water: No bunkers or fresh water are available at this dock.

Ballast/Slop Facilities: All dirty ballast and slops must be pumped to the shore ballast tank, (capacity 80,000 bbls.) connected to the hose platform by a 16 in. pipe-line. Ballast and cargo operations cannot be handled simultaneously.

Maximum discharge rate for ballast is 20,000 bbls.p.h. at a maximum rail pressure of 125 p.s.i.

Bellechase: General: The Gulf/Alliance dock is a multiple product berth located on the right descending bank of the river, approximately 65.6 miles AHP.

Transfer of cargo is made through a set of 10 in. hoses attached to a loading arm assembly on the dock. Shore lines vary in size from 8 in. for toluene and benzene to 20 in. for crude oils.

Tank washing while alongside the dock is strictly prohibited.

Cargo Handled and Shore Installations: Products commonly handled by the dock include xylene, LPG, crude, naphtha, carbon black, toluene, benzene, gasolines, jet fuel and heating oil.

Maximum allowable rail pressure for discharging vessels is 100 p.s.i.

An emergency loading stop is located on the dock; another, portable, unit is placed aboard the ship.

Docking: The River Pilot normally handles docking and undocking operations. Docking is port side to only and generally requires the aid of a 1,200 h.p. tug. Small tankers are occasionally allowed to dock without the aid of a tug, using their starboard anchor instead. However, since dock regulations prohibit the use of an anchor while alongside, it is recommended that a tug be used by all vessels calling at the berth.

Approach to the dock should be made stemming the current with a tug on the vessel's starboard bow. The vessel is then manoeuvred into position alongside the dock.

Repairs: Minor repairs, excluding hot work, may be undertaken with written consent from the dock's Chief Operator countersigned by the offsite Shift Supervisor.

Gangway: The ship's gangway must be used and should be properly rigged and illuminated.

Bunkers and Fresh Water: Bunkers are not available at Gulf/Alliance. Fresh water, however, is available and can be delivered at a maximum rate of 7 t.p.h.

Ballast/Slop Facilities: All slops and ballast must be discharged ashore. The shore storage tank has a 100,000 bbls. capacity; ships discharge ballast/slops into this tank through an 18 in. line at a maximum rate of 12,000 bbls.p.h.

Meraux: General: Murphy Oil Refinery is located on the North side of the Mississippi River, approximately 75 miles AHP. The tall stacks and cracking towers of the refinery are prominent features of the shoreline.

The berth serves as a primary receiving dock for crude oils which are refined into various petroleum products for transfer by ship and barge to other ports.

Cargoes Handled and Shore Installations: Crude is received at a maximum rate of 20,000 bbls.p.h. or a maximum 125 p.s.i. rail pressure. Refined products (gasolines, jet fuel, etc.) are loaded on to vessels at an average rate of 5,000 bbls.p.h. All cargo transfer is made through 8 in. hoses.

Docking: Docking is normally performed by the River Pilot and is strictly starboard side to. All vessels are required to use a minimum of 1 tug for docking and undocking; more tugs may be used at the Master's discretion. Vessels approach the refinery dock stemming the current with a tug on the port bow. The tug assists vessels manoeuvring into position alongside.

Communications: A public telephone located at the head of the dock is available for use by ship's personnel.

Gangway: The ship's gangway must be used and should be properly rigged and illuminated.

Bunkers and Fresh Water: Bunker-C, diesel fuel and fresh water are available upon request.

Ballast/Slop Facilities: No ballast or slop facilities are available at this dock.

Chalmette: General: The Exxon dock is a small dock with 310 ft. of dock face consisting of a concrete deck on steel pilings. Mooring bollards on the dock and mooring dolphins are serviced by air driven capstans for hauling ship's mooring lines.

Cargo Handled and Shore Installations: Marine diesel and Bunker-C are handled at this dock. The dock is equipped with a loading arm assembly to which 3×8 in., hoses are attached for the transfer of cargo. Maximum allowable discharge pressure at the rail is 125 p.s.i.

An emergency loading stop control is located on the dock.

Docking: Docking and undocking are performed by the River Pilot and require the aid of an 800 h.p. tug. Vessels approach the dock stemming the current with a tug on the port bow and are then manoeuvred into position, starboard side to, alongside the dock.

Gangway: The ship's gangway must be used and should be properly rigged and illuminated.

Bunkers and Fresh Water: Bunker-C, inter-fuel, diesel fuel and fresh water are available upon request.

Ballast/Slop Facilities: There are no ballast or slop facilities available at the berth.

Harvey: General: The Commercial Solvents Wharf is located on the South side of the river near Harvey Canal; and consists of an 'L' shaped dock with 370 ft. of dock face and 6 mooring dolphins.

Cargo Handled and Shore Installations: Various clean speciality products are handled. The product most frequently handled is methanol. Cargo is transferred through a single 6 in. hose with a 6 in flanged connection at the vessel's manifold. Maximum rail pressure for vessel's discharging is 100 p.s.i., maximum loading rate is 2,500 bbls.p.h.

Docking: Docking is performed by the River Pilot and is strictly port side to. 2 tugs are required for docking operations and a single tug for undocking. The general mooring arrangement calls for 2 head lines, 2 stern lines, 1 breast line forward, 2 breast lines aft, 2 forward spring lines and 2 after spring lines for a total of 11 mooring lines.

Gangway: The ship's gangway must be used and should be properly rigged and illuminated.

Bunkers and Fresh Water: No fuel or fresh water are available at the dock.

Ballast/Slop Facilities: There are no ballast or slop facilities at the terminal.

St. Rose: General: The International Matex Tank Terminal berths are located on the North side of the river, approximately 103 miles AHP. The terminal consists of two individual tanker berths (No. 1 and No. 5) and a barge dock.

No. 1 Dock, upstream of No. 5 Dock, consists of a small 'T' head dock with 5 mooring buoys to accommodate head, stern and breast lines. No. 5 Dock has a longer dock face which can accommodate all but the head and stern lines. Both docks are connected to shore by catwalks.

The velocity of the river current at both berths varies between 1 knot and 4 knots, depending on river conditions.

Cargo Handled and Shore Installations: No. 1 Dock handles mainly the receipt of crude oils and the shipment of Bunker-C, No. 2 fuel and naptha. The cargoes most frequently handled at No. 5 Dock are No. 6 fuel oil and No. 2 diesel oil.

No. 1 Dock is fitted with a set of 12 in. Chicksan arms. Cargo at No. 5 dock is transferred through a maximum of 3×8 in. hoses. Maximum discharge pressures are 100 p.s.i. at No. 1 Dock and 90 p.s.i. at No. 5 Dock.

Docking: Docking is performed by the River Pilot and is strictly starboard side to at both berths. All vessels are required to use at least 5 tugs for docking and undocking; 3 tugs are required when the river is above 15 ft. on the St. Rose gauge.

The general mooring arrangement at No. 1 Dock call for 4 head lines, 2 breast and 2 spring lines forward, 2 spring lines aft and 2 stern/breast lines. The lead for stern lines is poor. Wires may be used on all bollards and hooks except those on the loading platform. The terminal prefers polypropylene lines to wires for docking at No. 5 Dock. This dock requires 2 head lines, 2 stern lines, and one breast and one spring line both forward and aft.

Communications: Public telephones located on each dock and at the shoreside end of each catwalk are available for use by ship's personnel.

Gangway: The vessel's gangway must be used and should be properly rigged and illuminated.

Bunkers and Fresh Water: Fuel (Bunker-C, inter-fuel and diesel) and fresh water are available at each dock upon request.

Ballast/Slop Facilities: No ballast or slop facilities are available at either dock.

Marrero – Texaco: General: The Texaco tanker berth is located on the South side of the river some 86.5 miles AHP. The berth consists of a 'T' head dock with pontoons and mooring buoys alongside forming a 750 ft. berthing space.

Cargo Handled and Shore Installations: Various products are shipped and received by barge; the only product handled by tanker is bonded heavy fuel oil. This product is received through a single 10 in. hose at a maximum pressure of 100 p.s.i. on the dock.

Docking: Docking is normally performed by the River Pilot and is strictly port side to. Tugs are recommended, but are not compulsory, for docking and undocking operations.

Approach is made stemming the current and parallel to the dock. When no tugs are used for docking, the vessel's starboard anchor must be used to manoeuvre the vessel alongside.

Gangway: The ship's gangway must be used and should be properly rigged and illuminated.

Bunkers and Fresh Water: Fresh water is available upon request; fuel, however, cannot be obtained at this berth.

Ballast/Slop Facilities: There are no ballast or slop facilities at the terminal.

Marrero – Hess: General: The Hess tanker dock is a concrete structure with steel pilings and 320 ft. of dock face. Mooring dolphins provide a location for head, breast and stern lines.

Current at this dock varies from 2 knots to 4 knots, depending on river conditions.

The dock is located on the South or left descending bank of the river approximately 86 miles AHP.

Cargo Handled and Shore Installations: Crude oils, Bunker-C and heating oil are commonly handled at this berth. All cargo transfer is made through 8 in. or 10 in. Chicksan arms.

Maximum loading rate for crude oil is 25,000 bbls.p.h. and for other products approximately 6,000 bbls.p.h. Maximum rail pressure for discharging vessels is 100 p.s.i.

An emergency loading stop control is located near the dock manifold.

Docking: Docking is strictly port side to and performed by the River Pilot. Vessels under 35,000 d.w.t. are required to use 2 tugs for docking and undocking; vessels greater than 35,000 d.w.t. are required to use 3 tugs. During extremely high river stages all vessels are required to use 4 tugs for docking and undocking operations.

Berth mooring requirements specify that 4 head lines, 4 spring lines forward, 2 after spring lines, 2 after breast lines, and 4 stern lines be used by all vessels (a total of 16 mooring lines.)

Gangway: The ship's gangway, properly rigged and illuminated, must be used.

Bunkers and Fresh Water: Bunker-C, diesel oil, inter-fuel and fresh water are all available upon request.

Ballast/Slop Facilities: No ballast or slop facilities are available at the terminal.

DENSITY: Fresh water (1000).

FRESH WATER: Available ex-wharf.

FUEL: Only available by barge. Oil companies can supply Bunker "C" ex-terminals at Amesville and Marrero.

GANGWAY/DECK WATCHMEN: Recommended if any crew detained by Immigration.

CONSULS:

REPAIRS: 7 berths available.

CUSTOMS ALLOWANCES: At the discretion of Customs Officers. Normal allowance is 200 cigarettes or 2 lb. tobacco and 1 quart wine or spirits per man. Additional allowances may be given if considered necessary, due to length of vessel's stay in port.

IDENTIFICATION CARDS: Standard U.S. Immigration Forms I-95 to be made up for each crew member on arrival. Not necessary for crew man already holding Form I-95, issued for the same vessel.

AIRPORT: New Orleans International Airport, served by most airlines.

TIME: Central Standard Time GMT minus 6 hrs. Daylight Saving Time from May to October GMT minus 5 hrs.

HOLIDAYS: New Year's Day (1st January); Martin L. King's Birthday (15th January); Good Friday; Memorial Day (30th May); Independence Day (4th July); First Monday in September (Labour Day); Veteran's Day (Last Monday in October); Fourth Thursday in November (Thanksgiving); Christmas Day (25th December). No work on New Year's Day, Independence Day, Labour Day and Christmas Day.

POLICE: Harbour Police Department has jurisdiction over harbour area. Tel: 528-3371 or 3372.

BANKS:

American Bank and Trust Co., International Branch – ITM Building, New Orleans, LA 70130. 504/525-7761.

Banque de L'Union Europeenne, New Orleans Representative Office, 408 Magazine St., Suite 201, New Orleans, LA 70130. 504/523-6077.

Barclays Bank International Ltd., 365 Canal St., Canal Place One, Suite 2040, New Orleans, LA 70130. 504/529-4343.

Citizens and Southern Intl. Bank of New Orleans, ITM Building, New Orleans, LA 70130. 504/581-1586. Telex: 58-7409

First National Bank of Commerce, 210 Baronne Street, New Orleans, LA 70112. 504/561-1371.

Hibernia National Bank of New Orleans, P.O.Box 61540, New Orleans, LA 70161. 504/586-5353.

Whitney National Bank of New Orleans, 228 St. Charles Avenue, New Orleans, LA 70130. 504/586-7272.

SHORE LEAVE: Allowed for any crew member not detained by Immigration.

DEVELOPMENTS: Jourdan Road Terminal Complex comprising of a two berth facility with 290,000 sq.ft. of open space, 144,000 sq.ft. transit shed complete with crane rails and marginal track, plus 440,000 sq.ft. marshalling area. Marshalling area adjoining the terminal complex consisting of 10 acres with an additional 34 acres of preload area to be developed in fiscal year 1987.

Lower Mississippi River to be dredged to 45 ft. Completion expected 1988.

SHIPMASTER'S REPORT: 1975.
Customs: Stores List. Curio List. 1 Crew List. Sealed High Duty Bond, Unchecked.
Immigration: Visaed Crew List. Seaman's Red I.D. Card or Passport along with American Crew Pass. Typed. Question asked by Officials "How long at sea?" I.D. Card handed back to seaman with American Pass stamped. Department very thorough and efficient.

No mail or money to be distributed until Immigration completed, also no persons permitted ashore or onboard until formalities completed except for Agents and Officials.

If no visaed crew list Master signs official form. Cost US$10.0 for whole ship's company.
Port Health: Radio Pratique not granted as seamens' cards not completed. No representative visited vessel. Report any death through Agents.
Agriculture Dept.: Inspected vessel. Galley, Messrooms, Store-rooms, etc. Meat and Vegetable rooms sealed.

Garbage bins to be covered (Collection expensive, retain on board until sail if possible).

Ratguards to be used.
Provisions and Stores: Select own supplier. Prices comparable U.K. with good quality expensive. Stores and Medicines ordered through providore.
Laundry: Satisfactory. Billed by weight. 24 hour service.
Watchmen: None placed on board but security police at section openings.
Telephone: None placed on board. Use office on quay side.
Water: Plenty available. Shore connections used.
Bunkers: Delivered by barge. Charged for what is ordered. Do not over stem. Barge hired from private firm. Any bunkers not taken paid for and revert to barge owners.
Walport Films: Exchanged.
Coast Guard: Require number of Oil Pollution Certificate (Certificate of Financial Responsibility). Whether AMVER participant. Require ship's particulars including horsepower. Displacement tonnage on sailing. Name of Master and Chief Officer. Dangerous cargo particulars and stowage.
National Cargo Bureau: Representative from National Cargo Bureau comes onboard and requests ship's particulars also ports of call to and from. Inspector looked at hatches where cargo to be loaded. He then issues a Certificate of Readiness. Loading can then commence.
Code of Federal Regulations: Each ship should have a copy. Difficult to come by. Acquired 1970 copy from Agents. Equivalent to our 'Blue Book'.
Repairs: Select own firm. Anxious to please. Unable to judge as little work contracted out.
Money: Delivered by separate security firm. Satisfactory.
Radio Messages: Send ETA at least 48 hours before arrival to Agents and Branch Pilots with draft. Notify Captain of the Port of any explosives for discharge or in transit. If all healthy and documentation correct ask for Radio Pratique. Confirm ETA at 24 and 10 hours. Inwards send ETA to Agents after passing Pilot Town. Agent will notify if Radio Pratique granted. Not necessary to fly "Q" flag going up river.
Stevedores: Hours of work 0800 to 1200 hrs., 1300 to 1700 hrs. Straight time. Weekday gangs will work until 1800 or 1900 hrs. to finish. Night: 1800 hrs. to midnight, 0100 to 0600 hrs. Head Stevedore checks Factory Act Book. Gangs will work continuously except for 3 hours in any 24 hours. 4 different Union Contracts. Plan maker makes own plan then airmails same to ports of discharge. Crew open hatches also close same. Crew not to do any cleaning.
General: Use S.W. Pass at all times. South Pass has only 18 ft. of water and shoaling all the time.

Pilot boards on lee side at Sea Buoy – Flash "A" (· –) from fast launch painted black. Ladder about 6 ft. from water level. Branch Pilot takes vessel to Pilot Town where River Pilot takes over. Ladder usually starboard side inward and port side outward 8 ft. above water. First come first served at sea buoy. About 1.5 to 2 hours from Sea Buoy to Pilot Town and about another 6 hours to berth. Proceed up river at harbour full speed. Reduce speed occasionally for long tows, dredgers and ships on loading berths.

River Pilot docks vessel.

Signals by day "H" flag. By night nothing.

Inland waterways rule of road applies.

We had clear daylight run up river and down at night. Mid December. Start of fog. Low fog experienced on water also some patches, fairly thick. If fog does develop it is worth remembering that once past Pilot Town Southbound, few if any places to anchor and one has to continue on.

Racon at entrance useful. Anchorages as per charts. When arriving contact Pilot on VHF Channels 9, 12, 13.
Berth: Satisfactory. 24/29 Market Street. Just past bridge. Quite a long walk to open section to get out of docks. Recommend at night get taxi back and if walking into town by day at least 2 persons.

Sufficient bollards. No cranes. Berth head up. Usually starboard side to.

Moorings. 4 headlines, 4 sternlines plus 2 springs each end. Passing traffic fairly heavy with considerable wash. Ratguards a requirement.

Ship's gangway. Quay about 25 ft. above water level. Wooden pile fenders very effective.
Tugs: Used for berthing and unberthing. 1 only alongside port forward shoulder. 2 tug's lines. When making fast tug passes portable Walkie Talkie on board to send up to Pilot on bridge. Pilot left by tug which used own ladder.
Radar: Satisfactory repairs carried out.

SHIPMASTER'S REPORT: 1979.
South West Passage:

Pilotage: Pilots prefer accommodation ladder together with pilot ladder but will sometimes use pilot hoists, on larger vessels.

Restrictions: For 100,000 d.w.t. vessel max. draft for S.W. passage is 35 ft., (fresh water) to sail out at any time.

SHIPMASTER'S REPORT: 1979.
Mississippi Lightening Area:
Port Limits: Centred at Lat. 28° 00′ N., Long. 89° 30′ W. and within 15 nautical miles radius.
Documents: Officials take photostat copies of Bill of Lading and give receipt for cargo, and take one copy of Notice of Readiness.
Pilotage: They are equipped with Loran "C".
Anchorages: Very deep. Vessel drifted 7 nautical miles N.N.E. in 11 hours (February) with wind N.E. – 3. Checked with satellite navigator.
Health: No formalities.
Radio: Initial contact on W/T via "WLO" Mobile then by R/T 12427.5 kHz A3J. When close enough Channel 16 VHF; then Channel 11 for all operations. If vessel fitted with bridge wing VHF extension then best to give all engine room orders over Channel 11 so that lightening vessel can also hear.
Berthing: As per OCIMF/ICS SSTG (P). Require 2 headlines and 1 stern line from STBL after putting aboard their lines which are all polypropylene except springs which are wires with nylon tails. Steamed at about 3.5 knots. They throw across heaving lines and carry all necessary equipment. Do not require derrick, they have gangway and 4 'Yokohama' fenders.
Tankers: STBL can load at up to 10,000 t.p.h. They prefer to use 2 centre manifolds with reducers down to 16 in.
Identification Cards: Required.

AUTHORITY: Board of Commissioners, Port of New Orleans, P.O.Box 60046, New Orleans, Louisiana 70160, U.S.A. *Tel:* (504) 522-2551. *Telex:* 58-7496. *Contact:* Denis B. Grace, Trade Development. Kenneth Parker, Docks.

AGENT: Strachan Shipping Company, 2640 Canal Street, New Orleans, Louisiana 70119. Tel: 504-827 8600. Telex I: 5-8210. Telex II: 810-951-5070. Cables: "Strachan".

NEW YORK, New York and New Jersey:

40.43 N. 74.00 W. **(See Plan)**

DOCUMENTS:

3 copies Cargo Manifest (Form 1302), the original showing all cargo on board, and 2 copies showing only cargo for this port.
2 copies Crew Manifest (Curio List).
2 copies Stores List.
2 copies Passenger List (Form I – 418).
2 copies Crew List (Form I – 418).

Customs boarding officer will also examine Ship's Register and Load Line Certificate.

In addition the following documents will be required for formal entry, to be made within 48 hours of arrival from abroad:

Health Pratique.
Master's Oath (Form 1300).
All Foreign Clearances.
U.S. Certificates of payment of Tonnage Tax (Customs Form 1002).
Certified Crew List.
Vessel's certificates may be inspected by a Coastguard Boarding Officer during the vessel's Port call. Some of the certificates that may be required by the Coastguard Boarding Officer include:
Certificate of Financial Responsibility (Mandatory).
National Cargo Bureau Certificate (Optional).
Load Line Certificate (Mandatory).
Oil Record Book (Mandatory).
International Oil Pollution Prevention Certificate (IOPP Mandatory).
SOLAS Safety Equipment Certificate (Mandatory).
SOLAS Safety Construction Certificate (Mandatory).
Radiotelephone Certificate (Optional).
Radiotelegraphy Certificate (Mandatory).
Vessel's Deck Log (Mandatory).

Note: The vessel's navigational charts are also subject to Coastguard inspection and should be corrected up to date using the latest Notice to Mariners.

PILOTAGE: Compulsory for foreign flag ships, and U.S. ships bound to and from foreign ports.

24 hours notice of ETA required. Pilot boat should be contacted on VHF Channel 16, call "Ambrose Pilot", pilot vessel also on Channels 13, 8 and 18A or ship-to-ship Channel 2638 or 2738. Vessels requiring Pilot should hoist signal letter "G" in daytime. In foggy weather the letter "X" should be sounded on whistle.

Pilot boat is generally found about 1.5 miles West of Ambrose Light Tower. In bad weather Pilot tries to stay windward of normal pilot station.

In poor visibility an inbound ship should make Ambrose Tower and then proceed at slow speed to the Ambrose Channel Sea Buoy while blowing the letter "X" on her whistle. If no Pilot is obtained by the time she is in the vicinity of the sea buoy she should then anchor about 0.5 mile to 1 mile North of the line from Ambrose Tower to the sea buoy and await Pilot.

ANCHORAGES: For ships entering from Sandy Hook there are anchorages in Lower New York Bay, Gravesend Bay, Raritan Bay, and Arthur Kill off Perth Amboy. In the Upper Bay, anchorages available off Bay Ridge for 30 days, off Jersey City for 72 hours, and off Stapleton for 48 hours. For vessels entering via Long Island Sound there are anchorages in the Western end of the Sound and in the East River.

Vessels must notify the Captain of the Port when it anchors, of the vessel's name, length and draft and its position in the anchorage.

Regulations for anchorages may be found in the 33 Code of Federal Regulations, Part 110.155.

Vessels entering New York Harbour are required to have 2 working anchors, by U.S.C.G. regulations.

Also see "Approaches".

APPROACHES: Ambrose Channel, 2,000 ft. wide, is the principal entrance from the Sea to the Lower Bay and onward to The Narrows between Staten Island and Brooklyn, which is 15 miles from Ambrose Tower. The project depth of this channel is 45 ft. MLW. Vessels proceeding up Sandy Hook Channel are limited by a project depth of 35 ft. MLW and an 800 ft. wide channel.

Vessels arriving at the Port of New York normally utilise General Anchorages No. 23 and No. 24 which are North of the Verrazano Bridge and adjacent to the Stapleton Quarantine Station or Anchorage No. 21 off Bay Ridge. However, at times it may be necessary to direct inbound tonnage to the Gravesend Anchorage, No. 25, South of the Verrazano Bridge. Occasionally, due to congested conditions at the above locations, vessels may be directed to anchor at the newly established anchorage adjacent and N.W. of Ambrose Tower. Vessels instructed to use the anchorage off Ambrose Tower must pick up a Pilot for proper selection of an anchorage location.

For limits of anchorages generally used in the Port of New York see "Plan". Use of Charts 12349 and 12334 is strongly recommended.

Specific operating and safety procedures have been agreed upon with the Pilot's Association, as follows:

1. Flood Tide Procedure:

Vessels with an LOA in excess of 800 ft. or a draft of more than 40 ft. (salt water) will not be brought in from sea to the General Anchorages off Stapleton, Staten Island (Southern part of No. 23 and entire area of No. 24) on the flood tide. This will avoid the need to turn around in order to anchor at a location which may be congested with traffic and ships at anchor.

2. Transit Restrictions:

Ambrose Channel: Guideline for starting in from Ambrose Tower during normal weather conditions. (Suggested max. draft 45 ft.).

Vessels with drafts of 45 ft. (44 ft. 6 in. – 45 ft.). 30 minutes after HW, Sandy Hook.

Vessels with draft of 44 ft. 6 in. (43 ft. 6 in. – 44 ft. 6 in.). From 30 minutes after HW, Sandy Hook to 1 hour and 30 minutes after HW, Sandy Hook.

Vessels with drafts of 43 ft. 6 in. (42 ft. 6 in. – 43 ft. 6 in.). From 30 minutes after HW, Sandy Hook to 2 hours and 30 minutes after HW, Sandy Hook.

Vessels with drafts of 42 ft. 6 in. (41 ft. 6 in. – 42 ft. 6 in.). From 30 minutes after HW, Sandy Hook to 3 hours and 30 minutes after HW, Sandy Hook.

Vessels with drafts of 41 ft. 6 in. (40 ft. – 41 ft. 6 in.). From 30 minutes after HW, Sandy Hook to 5 hours after HW, Sandy Hook.

The procedures outlined above are guidelines only. Weather conditions, tides, currents and ship capabilities should, of course, be taken into consideration.

3. Anchoring Procedures:

The Pilot Association has notified the Pilots to stay aboard all arriving ships at anchorage until the following procedures are carried out:

(a) The anchor chain is to be brought up and ship is to be stationary.
(b) The Pilot will point out landmarks so proper bearings may be obtained and plotted on the charts.
(c) Pilots will inform the Master of conditions that he may encounter at the anchorage.
(d) The Master will be briefed on currents and time of tide change.
(e) All Pilots must record the ship's bearings on the back of their Pilot Orders.

In order to assist the attending Pilot, the Master should inform him on boarding of any special characteristics of his vessel, such as port manoeuvring speeds, turning circle, compass error and exact draft.

4. Anchor Watch:

Due to usually congested anchorages, strong tidal current, occasional fresh winds and traffic, all Masters are cautioned to maintain a continuous bridge anchor watch by a deck officer with engine on standby. Anchor bearings should be taken frequently and plotted to ensure proper anchor holding. During change of tides, the anchor windlass should be in readiness with a deck officer standing by.

If an anchorage becomes dangerously congested after a ship has been anchored, the ship's Master may request Agent to (a) send a Pilot to relocate vessel to a safer anchorage, or (b) send a tug to assist vessel in turning during a change in tide, or to stand by during fresh wind conditions.

RESTRICTIONS: Ambrose Channel, 10 miles long, maintained to a width of 2,000 ft. and a depth of 45 ft. MLW. The Northern approach to the harbour is through Long Island Sound into the East River. Main channels in the port are maintained to a depth of 45 ft. MLW.

MAX. SIZE: Restricted only by berth depth and location.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to New York Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

VHF: All vessels over 100 tons gross are required to keep continuous watch on VHF Channel 13 when in areas where U.S. Inland Water Regulations apply.

V.T.S. in operation. Channels used are 16, 13, 11, 12 and 14.

TUGS: Over 50 private towing and transportation companies registered in the port.

BERTHING:

Brooklyn: 8 berths at South Brooklyn Marine Terminal, including 2 container berths; 4 berths at 23rd Street Pier; 7 berths at Red Hook Marine Terminal.

Hudson River: Passenger Ship Terminal on Manhattan Shore between 48th and 52nd Streets provides 6 ship berths.

Hoboken Port Authority Marine Terminal: 2 piers, 4 general cargo berths.

Jersey City: 2 berth container facility at Port Jersey (Global Terminal) with 5 gantry cranes.

Newark, N.J.: Port Newark (22 general cargo, 5 specialised, and 4 container berths). Depth range alongside 30-34 ft. Berth Nos. 10 and 12 handle coal with 3 floating cranes, rate 10,000 tonnes per day.

Elizabeth, N.J.: Elizabeth Port Authority Marine Terminal, 22 full container berths, channel depth 35 ft.

Department of Ports and Terminals: The Department of Ports and Terminals of the City of New York is responsible for maintaining, leasing, and developing City-owned waterfront property. One of the principal maritime agencies in the nation's busiest port, the Department is actively involved in harbour affairs. As part of its commitment to the economic vitality of the Port, the Department plays a leading role in pressing for streamlined dredging operations, improved transportation connections, expansion of marine terminals, and a foreign trade zone within the harbour.

Terminals: The Department is the sole lessor for five major cargo facilities in the port. Additionally, Ports and Terminals is a participant in a joint venture operation on the Brooklyn waterfront.

Howland Hook Container Terminal – Staten Island:

Operator: Staten Island Operating Corporation.

Shipping Line: United States Lines.

Situated on 187 acres in N.W. Staten Island, this facility offers 2,500 ft. of berthing space with a depth of 35 ft. 4×40 long-ton and 1×50 long-ton capacity container cranes on rail tracks move the entire length of the wharf so that vessels may be worked simultaneously by any combination of cranes. Special features include 360 reefer outlets, 22,000 sq.ft. of refrigerated warehouse space, plus 21,000 sq.ft. of hazardous cargo storage area. Shedded space of 280,000 sq.ft. is exclusively devoted to LCL shipments. The terminal handled 1,370,535 long-tons of cargo in 1980.

Expansion over the next decade by 300 acres will increase the facility's cargo capacity from 182,000 to 500,000 containers, extend the wharf by 800 ft., and include a foreign trade zone 60 to 70 acres in size. Channel depth will be dredged to 45 ft., and an additional 50 long-ton crane and Ro/Ro ramp will be installed.

A Chessie System rail turnout directly links Howland Hook with Conrail track at Staten Island Junction in New Jersey. The terminal's location offers excellent access to the New Jersey Turnpike and Metropolitan New York.

South Brooklyn Marine Terminal:

Operator: International Terminal Operating Co., Inc.

Shipping Lines: Bank Line Africa Service, Constellation Line, Empremar, Frota Amazonica S.A., Hoegh Lines, Holland Pan-American Line, Mexican Line, P.T. Trikora Lloyd, Scindia Steam Navigation, Safmarine, Sitram, Waterman Isthmiam Line, Prudential Line, Inc.

Located directly off the Buttermilk Channel, this multi-purpose terminal can service as many as 9 vessels – container, LASH, Ro/Ro and breakbulk – simultaneously. Special features on this 110 acre site include a 90 ft., 75 ton capacity Ro/Ro ramp and 137 outlets for refrigerated containers. The terminal has a 70 short-ton, 2×50 long-ton capacity container cranes and a 140 long-ton P&H mobile crane. Also available is 705,000 sq.ft. of shedded space.

This terminal handled approximately 306,353 long-tons of breakbulk exports and 574,310 long-tons of container exports in 1980. The Terminal is adjacent to the New York Cross Harbor Railway, an intermodal rail yard, providing carfloat/bridge and overland service connecting the terminal and Bayridge rail line with Oak Point Yard in the Bronx to points throughout the U.S., Canada and Mexico. Connections via Interstate 278 provide direct access to the region's major truck routes and airports.

Expansion plans for the Terminal include 130 additional acres between 39th and 51st Streets, from 1st Avenue to U.S. Pierhead Line. This addition to the terminal will involve a landfill as well as the laying of a crane rail along the North and West side of the site.

As a result of the expansion, the facility will be able to handle about 2 million long-tons of both breakbulk and containerised cargo.

Red Hook Container Terminal – Brooklyn:

Operator: Universal Maritime Service Corporation.

Shipping Lines: Elma-Empresa Lineas Maritimas-Argentinas-Elma, A. Bottacchi S.A. de Navegacion, Antilles and Amazon Line, Bangladesh Shipping Corp., Chilean Line, D. B. Turkish, Egyptian National Line, Grandcolombiana, Pakistan National Shipping, Peruvian State Line, RMC Lines, Torm Lines, Transnave, Venezuelan Line, CTM, Ivaran Lines.

The newest cargo terminal in the harbour, Red Hook, is a joint venture between the City of New York, New York State and the Port Authority of New York and New Jersey. Situated on the 40 ft. deep Buttermilk Channel, this 31 acre facility offers 1,000 ft. of container berthing space serviced by 3×40 long-ton capacity container cranes, 660 ft. of Ro/Ro berthing space, and 1,390 ft. of breakbulk berthing space. Water depth alongside the container berth is 40 ft. (MLW) and 35 ft. (MLW) by the Ro/Ro and breakbulk berths. Approximately 200,000 sq.ft. of cargo consolidation and breakbulk handling space is available at dockside. A computerised inventory control system provides maximum efficiency and security.

Red Hook's convenient location saves 3 hours sailing time over most New Jersey terminals and saves in tugboat costs. Direct rail access to the New York Dock floatbridge is available, allowing for direct delivery of boxcars and flatcars. Connections via Interstate 278 provide direct access to the region's major truck routes.

Expansion now underway to add 10 acres of container handling area, an additional container crane on rails and the extension of the multi-gate truck complex.

Pier 36 Terminal – Manhattan:
Operator: International Terminal Operating Co. Inc.
Shipping Lines: Netumar Lines, America Africa Line.

Situated on 10 acres off the East River, Pier 36 is the sole marine terminal in Manhattan capable of handling breakbulk, Ro/Ro and containerised cargo. In 1980, 80,799 long-tons were handled. The facility offers 1,300 ft. of berthing space with a dockside depth of 32 ft. and 175,000 sq.ft. of covered transit shed space. Its location offers direct access to the lucrative Manhattan market, as well as convenient access to major truck routes in the Metropolitan area.

Pier 42 Terminal – Manhattan:
Operator: International Terminal Operating Co. Inc.
Shipping Lines: Standard Fruit and Steamship Company.

Devoted exclusively to handling imported bananas, pineapples and coconuts, Pier 42 is located on the East side of Lower Manhattan. 4 specialised gantry cranes and a highly mechanised operation enable this terminal to move 150,000 boxes of fruit per day. The facility handled 267,142 long-tons of fruit over the course of calendar year 1980. The terminal contains over 120,000 sq.ft. of warehouse space including an air-conditioned storage area. Water depth at dockside is 32 ft. 48 truck loading bays ensure that goods move quickly from dockside to the road.

CONTAINER FACILITIES: *Atlantic Container Line Terminal/Elizabeth:* Location: South side of Elizabeth Channel (Berths 68, 70, 72, 74 and 76).
Owner or Lessee: The Port Authority of NY and NJ.
Terminal Operator: Atlantic Container Line.
Address and Telephone: 2170 North Fleet Street, Elizabeth, NJ 07201. Tel: (201) 289-3000 or (800) 526-6802.
Total Area of Terminal: 102 acres.
Length of Ship Berths: Berths 68 to 74: 2,825 ft. Berth 76: 750 ft.
Container Cranes: 3×30 tons (Paceco).
Equipment: 5 Clark straddle carriers (31.5 tons.) 15 Ottawa hustlers (25-ton capacity). 13 Ottawa hustlers (35-ton capacity). 1 Ottawa hustler (125-ton capacity). 1 P & H truck crane with 70 ft. boom (90-ton capacity). 2 Hyster cranes (5-ton capcity). 41 Hyster trucks (capacities ranging from 2.5 tons to 23 tons). 1 Kalmar truck (25-ton capacity).
Stuffing and Stripping Facilities: 145,880 sq.ft. 88 truck bays. Served by rail siding.
Ro/Ro Accommodations: 2 ramps×60 tons.
Rail Service: Conrail.

Global Marine Terminal/Jersey City: Location: West shore of Upper New York Bay at the Jersey City-Bayonne boundary (part of the Port Jersey industrial complex).
Owner or Lessee: Global Terminal and Container Services, Inc.
Terminal Operator: Global Terminal and Container Services, Inc.
Address and Telephone: P.O.Box 273, Jersey City, NJ 07303. Tel: (201) 451-5200 or (212) 344-7020.
Total Area of Terminal: 100 acres.
Length of Ship Berth: 1,800 ft.
Container Cranes: 3 Star×40 tons. 1 Krupp×40 tons.
Toploader: 1 Taylor×30 tons.
Sideloader: 1 Taylor×8 tons.
Mobile Yard Gantry Cranes: 3 Drott×30 tons. 2 Krupp×40 tons EP.
Fork Lift Trucks: 1×26 tons, 1×30 tons, 2×15 tons.
Stuffing and Stripping Facilities: 140,000 sq.ft. 150 truck bays. Served by rail siding.
Rail Service: Conrail and Port Jersey R.R.
Chassis Vertical Stacking: 18 racks with a total capacity of 324 chassis stored vertically.

Howland Hook Terminal/Staten Island: Location: Staten Island on the Arthur Kill just North of Goethals Bridge.
Owner or Lessee: The Port Authority of NY & NJ.
Terminal Operator: Howland Hook Marine Terminal Corp.
Address and Telephone: 300 Western Avenue, Staten Island NY 10303. Tel: (718) 448-8900.
Total Area of Terminal: 187 acres.
Length of Ship Berth: 2,500 ft.
Container Cranes: 4 IHI×40 tons, 1 Peiner×50 tons with rotating spreader, 2 Paceco×50 tons (2 on order).
Fork Lift Trucks: 19×10 tons to 50 tons.
Stuffing and Stripping Facilities: 208,000 sq.ft., 150 truck bays, 22,000 sq.ft. refrigerated warehouse plus MID defrost and inspection facility, 21,000 sq.ft. Special cargo warehouse.
Equipment: 4 heavy fork lifts (11.5 tons to 30 tons), 4 top loaders×50 tons, 3 top loaders×35 tons, 1 top loader×30 tons, 48 yard tractors, 79 hilos×2.5 tons.
Rail Service: Delaware Otsego Corp. (SIRC).

Maher Terminal/Fleet Street, Elizabeth: Location: South side of Elizabeth Channel (Berths 62, 64 and 66).
Owner or Lessee: The Port Authority of NY and NJ.
Terminal Operator: Maher Terminals, Inc.
Address and Telephone: 202 North Fleet Street, Elizabeth, NJ 07201. Tel: (201) 527-8200 or (212) 962-6322.
Total Area of Terminal: 94 acres.
Length of Ship Berth: 2,000 ft.
Container Cranes: 2 Star×40 tons, 2 Star×30 tons.
Equipment: 20 straddle carriers, 30 yard hustlers, 14 fork lifts×15 tons, 15 fork lifts×4 tons, 30 fork lift×2.5 tons.
Stuffing and Stripping Facilities: 155,000 sq.ft. 120 truck bays. Served by rail siding.
Rail Service: Conrail.

Maher Terminal/Tripoli Street, Elizabeth: Location: Newark Bay (Berths 78, 80, 82, 84 and 86).
Owner or Lessee: The Port Authority of NY and NJ.
Terminal Operator: Maher Terminals, Inc.
Address and Telephone: 4010 Izmir Street, Elizabeth, NJ 07201. Tel: (201) 527-8400.
Total Area of Terminal: 243 acres.
Length of Ship Berth: 3,150 ft.
Container Cranes: 3 Paceco×40 tons (low profile), 1 Canron×30 tons, 3 Morris×30 tons.
Equipment: 80 yard hustlers, 12 stackers (15-ton capacity), 7 top-loaders×40 tons, 40 fork lifts×2.5 tons, 60 fork lifts×4 tons, 4 transtainers.
Stuffing and Stripping Facilities: 371,000 sq.ft., 238 truck bays. Served by rail siding.
Rail Service: Conrail.

Maersk Line Terminal/Port Newark: Location: North side of Elizabeth Channel (Berth 51).
Owner or Lessee: The Port Authority of NY and NJ.
Terminal Operator: Maersk Container Service Co., Inc.
Address and Telephone: 231 Tyler Street, Port Newark, NJ 07114. Tel: (201) 465-1000.
Total Area of Terminal: 61.8 acres.
Length of Ship Berth: 764 ft.
Container Cranes: 2 Paceco×30 tons.
Equipment: 1 top loader×50 tons, 1 top loader×35 tons, 1 top loader×13 tons, 1 stacker×15 tons, 70 hilos×5 tons to 7 tons.
Stuffing and Stripping Facilities: 198,000 sq.ft., 154 truck bays. Served by rail siding.
Rail Service: Conrail.

Navieras de Puerto Rico Terminal/Elizabeth: Location: South side of Elizabeth Channel (Berths 52, 54, 56, 58 and 60).
Owner or Lessee: The Port Authority of NY and NJ.
Terminal Operator: Puerto Rico Marine Management, Inc.
Address and Telephone: P.O.Box 1910, Elizabeth, NJ 07207. Tel: (201) 352-2700 or (212) 775-7330.
Total Area of Terminal: 97 acres.
Length of Ship Berth: 2,875 ft.
Container Cranes: 3 Paceco×30 tons.
Stuffing and Stripping Facilities: 116,700 sq.ft., 163 truck bays. Served by rail sidings.
Ro/Ro Accommodations: 3 ramps for side port operations.
Rail Service: Conrail.

Red Hook Container Terminal/Brooklyn: Location: Brooklyn Waterfront, near entrance to Brooklyn-Battery Tunnel.
Owner or Lessee: The Port Authority of NY and NJ.
Terminal Operator: Universal Maritime Service Corp.
Address and Telephone: Building 115, foot of Hamitlon Avenue, Red Hook, Brooklyn, NY 11231. Tel: (212) 875-0777.
Total Area of Terminal: 79 acres.
Length of Ship Berth: 3,030 ft.
Container Cranes: 3 Paceco×40 tons.
Equipment: 11 top handlers, 2 fork lifts×26 tons, 5 fork lifts×15 tons, 33 yard hustlers, 16 flatbed trailer, 125 hilos×3 tons.
Stuffing and Stripping Facilities: Break-bulk consolidation shed, 200,000 sq.ft., 80 truck bays.
Ro/Ro Accommodations: 660 ft. berth.
Rail Service: New York Dock Railway.

Sea-Land Terminal/Elizabeth: Location: Newark Bay (Berths 88, 90, 92, 94, 96 and 98).
Owner or Lessee: The Port Authority of NY and NJ.
Terminal Operator: Sea-Land Service, Inc.
Address and Telephone: P.O.Box 1050, Elizabeth, NJ 07207. Tel: (201) 558-6000.
Total Area of Terminal: 232 acres.
Length of Ship Berth: 4,519 ft.
Container Cranes: 6 Paceco×40 tons.
Equipment: 3 top loaders×30 ton capacity, 45 fork lifts×2.5 tons to 12.5 ton capacity, 60 yard hustlers.
Stuffing and Stripping Facilities: 306,000 sq.ft., 328 truck bays. Served by rail siding.
Rail Service: Conrail.

South Brooklyn Marine Terminal/Brooklyn: Location: Brooklyn shore of Upper New York Bay.

Owner or Lessee: The City of New York.

Terminal Operator: International Terminal Operating Co. Inc.

Address and Telephone: Foot of 39th Street, Brooklyn, NY 11232 Tel: (718) 499-3900.

Length of Ship Berths: 1,535 ft. container berth plus 7 general cargo berths.

Container Cranes: 1 Star×50 tons, 1 Star×70 tons, 1 Kone×50 tons

Equipment: 9 Valmet straddle carriers, 6 Clark straddle carriers, 10 Ro-Ro yard Tractors, 8 stackers, 65 fork lift trucks (varying capacity).

Stuffing and Stripping Facilities: 705,050 sq.ft., 4 separate LTL sheds 446,000 sq.ft. CFS and general cargo sheds.

Roll-On/Roll-Off Accommodations: 2

Rail Service: New York Cross Harbour Railroad Terminal Corp.

Universal Terminal/Port Newark: Location: North side of Elizabeth Channel (Berths 53, 55, 57 and 59).

Owner or Lessee: The Port Authority of NY and NJ.

Terminal Operator: Universal Maritime Service Corp.

Address and Telephone: 221 Starboard St., Port Newark, NJ 07114 Tel: (201) 589-6200.

Total Area of Terminal: 85 acres.

Length of Ship Berth: 3,058 ft.

Container Cranes: 3 Paceco×40 tons.

Equipment: 11 top handlers, (42-ton capacity), 2 fork lifts, (26 tons), 5 fork lifts (15 tons), 33 yard hustlers, 16 flatbed trailers, 25 hilos (3 tons).

Stuffing and Stripping Facilities: Break-bulk shed 400,000 sq.ft. Served by rail sidings.

Rail Service: Conrail.

Also see "Berthing".

CRANES: Mobile floating cranes with capacity up to 500 tons available.

STEVEDORES: 13 stevedoring firms are active in the port, many of whom are also terminal operators. Normal working hours 0800 – 1700 hrs. Bulk Cargo work usually continues through 24 hours.

TANKERS: There is a history of repeated breakouts in the New York area due to sudden wind gusts of up to 60 knots, particularly associated with squalls. Moorings should, therefore, be kept tight and winch brakes tightened up after moorings have been adjusted.

Brooklyn: Paragon Oil Terminal, 2 berths, depth 37 ft.; Patchoque Oil Terminal, 2 berths, depth 29 ft. and 35 ft.; Whale Oil Terminal, 1 berth, depth 36 ft.

Hudson River: Tappan Oil Co., 1 berth, 35 ft. depth.

Bayonne, New Jersey: Public Oil Terminal, 3 berths, 32 ft. depth; Humble Oil Terminal, Constable Hook, up to 38 ft. depth; Belcher Oil Co., 3 tanker berths up to 38 ft. depth; Texas Oil Co., 4 tanker berths, up to 32 ft. depth; Texaco, 4 berths up to 32 ft. depth. Constable Terminal: 1 berth for handling caustic soda, chemicals, vegetable oil and molasses.

27 tanks (9 million gallons). Max. draft 31 ft. MLW.

Kill Van Kull: Lehigh Tanker Terminal, chemicals, 35 ft. depth; Humble Oil Co., 3 tanker berths, up to 38 ft. depth; Texas Oil Co., 4 tanker berths up to 32 ft. depth; Ross Oil Co., 1 berth up to 32 ft. depth.

Newark, New Jersey: 4 berths, 31 ft. and 32 ft. depth.

Elizabeth New Jersey: Chevron Oil Company, 1 tanker berth, 26 ft. depth; Crown Central, 1 tanker berth, 30 ft. depth.

Arthur Kill: **Perth Amboy,** Chevron Oil Co. (tanker berth, 26 ft. depth); Hess Oil Co. (tanker berth 30 ft. depth); Cities Service (tanker berth, 34 ft. depth); **Stolt-Nielsen,** (tanker berth max. draft 38 ft.); **Sewaren,** Royal Petroleum Co. (tanker berth, 32 ft. depth); Public Service Co. (tanker berth, 35 ft. depth); Shell Oil Co. (tanker berth, 35 ft. depth). **Port Socony,** Mobil Oil Co. (2 tanker berths, 27 ft. and 30 ft. depths). **Carteret,** American Oil Co. (tanker berth M, 25 ft. depth); General American (2 tanker berths, 25 ft. and 35 ft. depth). **Linden,** Cities Service (tanker berth, 32 ft. depth); Humble Oil Co. (tanker berth, 35 ft. depth); Sinclair Oil Co. (tanker berth 31 ft. depth). **Gulfport,** Gulf Oil Co. (tanker berth, 32 ft. depth).

Lightering Operations: Most crude and black oil tankers and an occasional clean oil tanker entering the Port of New York must be lightered before proceeding to their assigned discharge berths. All such vessels are assigned an anchorage either off Stapleton, Bay Ridge, or Gravesend Bay. (See "Anchorages" and "Approaches").

Lighters used in the New York area range from 1,000 – 12,000 d.w.t. capacity.

The U.S. Coastguard has established regulations for oil transfer operations in U.S. waters as a means to avoid oil pollution. These regulations are enforced. The principal items covered by the new regulations are as follows:

1. Designation of person(s) in charge.
2. Qualifications of person(s) in charge.
3. Oil transfer procedures.
4. Emergency shutdown.
5. Records.
6. Requirements for oil transfer.
7. Connections, drip pans.
8. Declaration of Inspection.
9. Supervision by person in charge.

In most instances, an oil Company employed Oil Pollution Prevention Inspector will board vessel at anchorage to assist with the USCG requirements. In any case, the lighter officer must contact vessel for a joint inspection and completion of a Declaration of Inspection before oil transfer can be started.

Exxon Bayonne Terminal: The Exxon Bayonne Terminal at Bayonne, New Jersey, is located on the Northside of Kill Van Kull, 1.6 miles East of the Bayonne Bridge.

The terminals structure is a 700 ft. long concrete pier having a hose gantry and shore gangway. 2 teflon faced fenders breast the vessel out into the dredged basin.

Lube Dock – Pier 1: Docking/Mooring: Usually all vessel dock portside to at Bayonne with 2 tugs assisting. Vessels should arrive off the berth at slack water, turn, and head into the slip. Care should be taken not to have too much headway or to set down on the corner of the pier which is not fendered. Vessels should be taken completely into the slip before landing on the fenders. Fenders are teflon faced and will not slow the forward motion of the vessel. Once in position, 2 tugs will hold the ship while lines are run out. If the vessel extends past the end of the pier, then extra lines should be used aft as a precaution for the tidal current and passing traffic. Vessels having a bow thruster can undock with 1 tug, at the discretion of the Master. (See "Plan").

Hoses/Pumping: All shore connections are 6 in. A maximum pressure of 125 p.s.i. is enforced. There are no slop facilities ashore.

Bunkers/Water: Bunkers are not available at this facility. Bunkering can be arranged at anchor. For bunker requirements, the vessel's Agent should be contacted prior to taking arrival at Ambrose. Fresh water is not available at the dock.

Weather: There is a history of repeated breakouts in the New York area due to sudden wind shifts accompanied by strong and gusty winds. Vessels alongside the dock must insure that mooring lines are taut and properly set. Vessels are strongly advised to maintain a VHF weather watch and to shut down operations if conditions warrant. The terminal closes the berth during sustained Westerly winds of 50 m.p.h. or during sustained winds over 73 m.p.h. from any direction. During these conditions, vessel must shut down and disconnect; a tug may be required to stand by.

Fuels and Specialty Dock – Pier 6: The Fuels and Specialty docks are located on the North side of Kill Van Kull, just off the Constable Hook Range. The terminal structure is a steel and concrete pier connected to a concrete capped turning dolphin and fender system on the offshore end.

Docking/Mooring: Prior to berthing the intended docking manoeuvres should be reviewed with the Pilot. Information on the velocity and direction of the current as well as water height should be obtained from the Pilot. Tidal data is recorded from stations at the Battery, New York and Bergen Pt., New Jersey every 6 minutes. Readings can be obtained through VHF Channel 9 KEH 567.

Generally, vessel is assisted by 2 tugs. One of the 2 tugs will make fast near the bow. The second tug stands by on the inboard berthing side forward without making fast. As the vessel approaches the berth the inboard tug moves aft along the ship's side. This tug then shifts to the outboard quarter of the vessel in order to assist in berthing the ship against the dock fenders.

If installed, bow thruster should be ready for immediate use.

Ships should arrive off the berth at slack water. Care should be taken approaching the berth with minimum headway. Vesel should be taken completely into the slip before landing on the dock fenders.

Occasionally, unexpected cross currents are experienced while approaching the berth. Immediate corrective action may be required to maintain the ship within the dredged area in the vicinity of the berth.

Vessels approaching Pier 6 for docking on the North berth will apear to be making an approach towards the South berth. When the vessel's bow is close to the dolphin a the end of Pier 6, the ship is moved laterally North and ahead a sufficient distance to clear the fender line of the North berth. This manoeuvre is necessary due to the shoal area North of the dredged basin. Once in position 2 tugs will hold the ship while lines are run out. If the vessel extends past the end of the pier, then extra lines should be used aft as a precaution for the tidal current and passing traffic. Vessels having a bow thruster can undock with 1 tug at the discretion of the Master. (See "Plan")

Hoses/Pumping: Presentation flange sizes are grade dependent and can be obtained from Agent prior to arrival. A maximum hose pressure of 125 p.s.i. is enforced. There are no slop facilities ashore.

Bunkers/Water: Bunker C is available at this facility. Other bunkers can be arranged at anchor. For bunker requirements, the vessel's Agent should be contacted prior to taking arrival at Ambrose. Fresh water is available in limited quantities at a rate of about 20 t.p.h.

Exxon Bayway Terminal: The Exxon Bayway Terminal, consisting of 2 marginal type berths, is owned and operated by Exxon Company, U.S.A.

It is situated on the West bank of the Arthur Kill just below the Goethals Bridge.

Proceeding from Anchorage to Bayway: The Pilot/Mooring Master and tugs join the vessel at the anchorage. One of the tugs will assist in holding the stern of the ship up against the tide if a turn is required in the anchorage. Departure from anchorage is timed so that the vessel will arrive off Bayway at HW slack.

Before leaving the anchorage, the Pilot will broadcast a message by VHF advising other ships and New York VTS of the position of the vessel and the route it will follow. Normally 2 tugs attend the vessel while proceeding from the anchorage through the Kill Van Kull and Arthur Kill (between Staten Island and New Jersey) to the berth.

Three bridges are passed:

Bayonne Bridge: Vertical clearance of 140 ft. over channel at MHW.

Lift Bridge: Vertical clearance of 135 ft. over channel at MHW.

Goethals Bridge: Vertical clearance of 137 ft. over channel at MHW.

Because of the heavy traffic situation in the Port of New York and the close proximity of berthed vessels, ships should proceed at a moderate speed during the entire passage to Bayway. Also, ship personnel should stand-by the anchors.

On entering the Kill Van Kull the tide will be setting Northwestward and attention is to be paid to stay well clear of the bank extending Southward from Robbins Reef.

As a rule, the Pilot will be aware in advance of seagoing vessels proceeding Eastward through the Kill Van Kull. Normally the vessel will not enter the Kill until such outbound vessels have cleared the entrance.

Extreme caution is to be exercised when approaching and passing Bergen Point (about 3 miles Westward of the entrance to the Kill Van Kull) where 3 channels converge. In this are the view is obstructed by the Bayonne Bridge and by oil storage tanks located on Bergen Point.

The Pilot will communicate (VHF Channel 13) with the Pilots on the other vessels approaching this point and make arrangements for the vessel to pass this area without encountering other seagoing ships. Traffic information is also obtained from the operators of the railroad drawbrige across Newark Bay.

At times, cargo ships with destination Port Elizabeth wait off Bergen Point for the drawbridge to open. Normally, the Pilot is aware of this situation well in advance and the speed is adjusted to ensure that such ships are not passed off Bergen Point.

Berthing: The dock is a substantial concrete marginal-type with bollards located on land and on the dock. Most breast lines are run to hooks located on the dock which are secured to the shore bollards by wires. Spring lines are generally passed to the dock first. Large vessels dock and undock with the assistance of 2 tugs.

Large ships are berthed starboard side to (see "Plan") heading Southward; LPG ships docking at No. 2 Berth may berth portside to. (See "Report" dated August 1984 below).

The dredged basin at No. 1 Berth requires that the vessel be stopped off the berth and breasted into position. During docking, when vessels are in position, tugs hold the vessel alongside until all mooring lines are passed.

Passing traffic could cause the ship to break away from the Berth if mooring lines are not maintained tight and if the ship is not kept snug alongside at all times.

The following minimum moorings are required at the Bayway Pier:

Forward	*Aft*
2 head lines	2 stern lines
2 breast lines	2 breast lines
2 spring lines	2 spring lines

Depending on circumstances, additional moorings may be run out.

Departure:

1. Ships under 660 ft. LOA and mast height up to 130 ft. are turned off the berth and proceed to sea along the route which was followed when entering. The same precautions have to be taken when approaching the area off Bergen Point outward.

2. Ships over 660 ft. LOA are not turned off the berth because of limited manoeuvring space. They proceed to sea via the Southern part of Arthur Kill and Raritan Bay. A tug will accompany the ship until it has cleared Tufts Point (about 4 miles South of Bayway). The depths in the channel Southward of Bayway limit the departure draft to 33 ft.

The bridge across the channel near the Southeastern tip of Staten Island has a clearance of 143 ft. over the channel at MHW. Rounding Tremley Point (about 2 miles South of Bayway) requires particular attention. The view in this area is obstructed, therefore, before reaching this point the Pilot should ensure that there is no traffic approaching from the South which could hamper safe passage. Off Tufts Point, a 70° course alteration to starboard has to be made. The manoeuvring space is limited, and if required, the attending tug will assist in making the turn.

Tidal Information: Off Bayway the HW levels vary between 2.5 ft. and 5.0 ft. above MLW. Extreme LW has been reported as low as 4.0 ft. below MLW level. Current velocities of up to 2.0 knots are experienced.

Loading Connections: Berth No. 1 has 3×10 in. Chiksan Arms for receipt of crude oil.

Berth No. 2 has 3×10 in. Chiksan Arm for LPG receipt.

Both berths can also handle many refined black and clean products with various hose sizes up to 10 in.

Bunkers and Fresh Water: No bunkers are available through the pier connections at Bayway. All grades of bunkers may be supplied by barge, either at anchorage or while alongside the pier, providing arrangements are made in advance.

Fresh water is available in unlimited quantities, at approximately 20 t.p.h. to 25 t.p.h.

Stores, Provisions, Lubricants: All kinds of stores and provisions can be made available and delivered by truck or lighter, if advance request of at least 24 hours is received. During normal working days, stores and provisions may be supplied on very short notice.

Weather: There is a history of repeated breakouts in the New York area due to a sudden wind shifts accompanied by strong gusty winds. Vessels alongside the dock must ensure that mooring lines are taut and properly tended at all times and that winch brakes are properly set. During wind shifts and frontal passages, vessels have been blown off the dock with vessel and dock damage as well as pollution resulting. Vessels are strongly advised to maintain a VHF weather watch and to shut down operations if weather conditions warrant. Dock personnel will also advise vessels to shut down operations if an electrical storm is in the vicinity or if winds exceed 30 m.p.h. At 35 m.p.h. to 40 m.p.h., hoses and/or arms may be disconnected.

Belcher Bayonne Terminal: The Belcher Terminal in Bayonne, New Jersey is located 1.1 miles East of the Bayonne Bridge on the North bank of Kill Van Kull. The dock's facilities consist of 2 concrete mooring islands protecting a 600 ft. long wooden pier on which all pipe-lines and the hose gantry are supported.

Transit from Anchorage to Terminal: The Pilot/Mooring Master will board and heave anchor approximately 1.5 hours to HW (Battery). Then proceed into Kill Van Kull. 2 tugs will assist the vessel in docking. (See also Bayway Terminal).

Docking and Mooring: All vessels dock starboard-side-to with the assistance of 2 tugs. Vessels approach the terminal at time of HW slack with minimal headway. Due to the shape of the dredged basin all vessels are normally spotted off the berth and then moved broadside into position alongside the breasting islands. Tugs hold vessel in position while a small line boat runs head and stern lines to pile clusters. Note that the head line cluster is placed well inshore resulting in long (460 ft.) head lines leads. Head and stern lines cannot be wire due to the inadequacy of the small line boat. See "Plan".

Due to heavy passing vessel traffic, all mariners are advise to run extra lines to ensure that the vessel will remain safely in berth at all times.

The minimum suggested mooring arrangement is as follows:

4 head lines
3 forward springs
3 after springs
4 stern lines

Due to the poor mooring line leads from the bow, extra care should be given to the tending of all lines during the discharge. *There have been reports of vessels being pulled from the berth by passing traffic; exceptional care must be taken to properly tend mooring lines at all times.*

Hoses and Pumping: Cargo manifolds should be prepared prior to docking. The proper size and number of reducers should be in place and the blanks removed. Prior to berthing, ask the vessel's Agent what number and size of reducers are required. This will vary depending on the particular cargo being delivered. All shore hoses are equipped with 8 in. American standard flanges. Maximum working pressure allowed at the manifold is 125 p.s.i.

Bunkers and Water: Some grades of fuel oil are available from the dock in emergency situations, but most vessels bunker by barge. Fresh water is available in unlimited quantities at approximately 20 t.p.h.

Weather: There is a history of repeated breakouts in the New York area due to sudden wind shifts accompanied by strong and gusty winds. Vessels alongside the dock must ensure that mooring lines are taut and properly tended at all times and that winch brakes are properly set. Vessels are strongly advised to maintain a VHF weather watch and to shut down operations if weather conditions warrant.

Shipmaster's Report: 1976.
Greater New York Terminal, Astoria, Long Island:

Location of Berth: Lat. 40° 47′ N., Long. 73° 53.7′ W.
Distance from Entrance to Berth: 28 miles.
Max. Size at Berth: LOA, 900 ft. Draft, Pilot stated 34 ft.
Restrictions: Vessel should be ballasted sufficiently to pass under Brooklyn Bridge, clearance 127 ft.

Vessels may berth and unberth day and night but only at certain stages of the tide.

Anchorage: At Stapleton as designated by USCG.

Terminal Information: Starboard side manifold to barge at Stapleton Anchorage, use 6 in. hoses. Port side manifold used at the berth, ship's hoses not required. The connection is 12 in. running into 18 in. Nearest shore tank 1,000 ft. from berth. Line fitted with steam jacket but not efficient. Max. pressure allowed 125 p.s.i. Shore gantry used at berth. Derrick used at anchorage for discharging into barge. Product handled: Fuel Oil (Heating Oil). No slop tanks available.

General: Pilotage compulsory. Ambrose Pilot requires 24 hours' notice of arrival. Radio station handling traffic is Chatham. Most services are available at the berth, however it is advisable to take stores and send laundry from Stapleton Anchorage as there is no means of delivery at the berth other than carrying by hand. Stapleton Launch Service, tel. 981-8333/8384. Fresh water may have to be taken by barge in very severe weather as shore lines become frozen.

Approaching: From a Line from Rockaway Inlet to Ambrose thence Highlands Light, vessel must remain on VHF Channel 13 for ship-to-ship communication. When Pilot on board he maintains this Channel and ship can use own VHF other Channels. Marine operator on VHF 26 (call). For the passage of East River (remember Brooklyn Bridge Clearance 127 ft.) one tug each bow alongside. After Hell's Gate and passing Port Morris to port, vessel cants to starboard to pass between North and South Brothers to starboard and Rikers Island to port through 500 ft. wide buoyed channel (some unlit) South to berth (inwards). It is preferable to come through Hell's Gate at HW or LW slack, thus avoiding cross currents between Brothers at other times.

Report: August 1984.
Exxon LPG Berth at Bayway:

United States Coastguard requires all vessels with cargo on board (other than heel) to both enter and depart via Southern Channel, regardless of length. If vessel discharges completely (only heel remaining), then vessel is considered non-dangerous by U.S.C.G., and may depart via North Channel (without turning). (If completely discharged, other gas carrier restrictions – daylight only, 2 mile visibility, etc. – also do not apply.)

There are obstructions to South of Exxon berth which limits distance between manifold and bow or stern to 330 ft. (May be stretched to 335 ft. by Exxon on case by case basis.)

Other limitations given by Exxon for berth:

Draft: 31 ft.
Beam: 100 ft. (may be stretched)
Manifold Position: 13 ft. to 68 ft. above water line, 6 ft. to 15 ft. from deck edge.

Therefore any vessel which sails with part cargo must be turned for departure to comply with U.S.C.G. although it is physically possible to turn vessels up to 725 ft. – 730 ft. LOA off Exxon Berth provided there is no vessel berthed opposite Exxon at Gulfport (it has been done). Exxon is afraid that vessel might damage sea water intake structure for refinery while turning, and therefore says vessels longer than 660 ft. (may be stretched to 680 ft.), cannot be turned.

Other possibilities for turning are:

Continue North about 1 mile to Elizabethport Container Terminal where channel is wider.

Back ship anywhere between a few ship lengths to 0.5 miles South of Exxon, and then turn. We were advised by East Coast Pilots that it is possible to turn ship up to 730 ft. LOA at that location, with draft limit 25 ft. forward, 30 ft. aft. However, others advise that although oil tankers customarily turn at that location, it involves touching bottom (mud) at bow, and is therefore inadvisable for gas tankers.

FRESH WATER: Available at most piers in the port district at a nominal rate. Water barge available to serve vessels at anchor in emergency but this is expensive.

FUEL: All grades of fuel readily available. Except for tankers loading or discharging, bunkers are normally delivered by barge. It may be economical to shift vessel to refuelling berth.
GANGWAY/DECK WATCHMEN: Available and recommended if any crew detained by Immigration.
CUSTOMS ALLOWANCES: 200 cigarettes or 2 lb. tobacco, 1 quart wine/spirits per man.
IDENTIFICATION CARDS: Standard U.S. Immigration Forms I – 95 to be made up for each crew member on arrival.

NIKISKI (including Kenai), Alaska: 60.41 N. 151.24 W.

(See Plan)

Located on West side of Kenai Peninsula between Homer and Anchorage. Pan and brash ice in Inlet from November to March. Never freezes solid. Open all year.
APPROACHES: Via Cook Inlet.
DOCUMENTS: See "Anchorage, Alaska".
PILOTAGE: Pilot pick-up point 1 mile South of Homer Split light. Also see "Homer" Pilotage.
ANCHORAGES: Good anchorage.
MAX. SIZE: Harbour depth in excess 40 ft. Max. size 80,000 d.w.t. Tides diurnal range 28 ft. Also "Berthing".
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Anchorage Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
CUSTOMS: Quarantine, local. Immigration and Customs from Anchorage, Alaska.
TUGS: From Anchorage.
BERTHING:

1. Port Nikiski Dock: 3 sided, 550 ft. long, 200 ft. on each side, 1,000 ft. wide, 12 feet at MLLW. 400 ft. by 75 ft. covered storage.

2. Three finger piers for tankers and bulk carriers. All exceed 40 ft. depth.

All 3 berths are dolphin berths ideal for rapid bulk loading. Main products:

(a) Union Chemical Dock: Bulk urea and ammonia gas. See "Shipmaster's Report".
(b) Phillips Petroleum Dock: Petroleum products and liquid natural gas.
(c) Kenai Pipe-line Dock: Refined and crude petroleum products.

STEVEDORES: Two gangs.
REPAIRS: Some at Kenai.
FRESH WATER: Limited.
FUEL: Not available.
TANKERS: Report: February, 1985.

Vessel to load ammonia at Kenai in position 60° 33′ N., 151° 16′ W.

Regulations:

1. Vessel must have on board 20-24 mooring lines, each a minimum of 400 ft. in length, depending on weather on arrival.

2. Fresh water and provisions cannot be obtained or loaded at the wharf.

3. No preventative engine maintenance can be allowed at the wharf and vessel's engines must be maintained in such a way as to permit immediate manoeuvring power at all times while vessel is alongside the berth.

4. Sufficient vessel personnel must remain on board during loading to handle any emergency situation and adequate deck watch must be maintained on a 24 hour basis.

5. For proper light ship survey vessel must arrive suitably trimmed and sufficiently submerged both fore and aft.

6. Ballast tanks must be either full or empty and all cargo holds must be totally devoid of any ballast.

7. Please also ensure vessel has all certificates in order, including Oil Pollution Certificate (Certificate of Financial Responsibility).

General:

Please obtain Master's acknowledgment and confirmation of all above. Advise Master that pilot station is located Lat. 59° 36.2′ N., Long. 151° 24.5′ W. Master should cable ETA Homer pilot station to Agent.

Master to monitor ITT KFS (San Francisco) while in transit. If ship has telex on board, please provide number.

Rental mooring lines available at US$300 each plus loading/unloading costs of US$1800. Advise how many lines onboard and Agent will request funds based on how many rental lines necessary.

Berth Operator sometimes makes exceptions to restrictions on a case by case basis.

IFO fuel is virtually unobtainable in Alaska. While there is one supplier at Kenai (and none elsewhere in Alaska), they have a long standing and firm 5,000 bbl. minimum requirement with no exceptions.

Vessel will vacate berth during purging and will either purge at anchor off berth or at Homer.

Load rate 400 tonnes/p.h., except during purging, when rate much slower.

Confirm vessel has Letter of Compliance issued by Coastguard and that vessel has been licensed to carry propane/ammonia simultaneously.
MEDICAL: Health Centre, 3 doctors, 3 dentists.
TRANSPORTATION: Highway to Anchorage and Homer. Air transport available.

SHIPMASTER'S REPORT: July 1985.
Union Chemical Dock: (Formerly Collier Pier):

In addition to the comments on the "Plan", which see; the following notes are to be considered as a advice to those entering the Port of Nikiski:

Mooring without tugs. There is a 24 hour mooring service.

No mooring during slack tide.

Currents from up to 1.5 knots to 6.0 knots experienced.

Whilst mooring present bow first as near as possible to the pier at an angle of about 25° to the pier.

Firstly pass 2 spring lines and 2 head lines forward, engines running ahead for riding off the current.

It is most important during the entire mooring operation to hold both forward springs and both head lines tight.

Send out 2 breast lines forward; tighten; put both head lines on the bitts making sure not to allow any slack.

Send out 2 spring lines and two stern lines aft and tighten.

Send out 2 breast lines afft as soon as both stern lines are on the bitts and heave the stern along. Keep both aft springs tight at all times.

Note: Ships loading urea have to shift alongside when changing to another hatch, as the conveyor belt is a single point loading type.

Whilst shifting along the pier be aware of strong currents, or ice in Winter season getting caught between pier and ship's bow.

NORTHPORT New York: 40.57 N. 73.20 W.

LOCATION: The Northport offshore oil discharge facility is operated by the Long Island Lighting Company. It is located in Lat. 40° 57′ 15.4″ N., Long. 73° 20′ 29.6″ W. approximately 10,000 ft. offshore from the power station, and approximately 2.6 miles East of Eatons Neck Point.
PILOTAGE: Vessels approaching from Block Island embark Pilot about 2.5 miles South of Point Judith.

U.S. flag vessels under enrolment approaching from Block Island embark Pilot 1.4 miles East of Old Harbour – Block Island.

The pilot boat 'Rhode Island Pilot' or 'Northeast Pilot' should be called via VHF Channel 16 approximately 1 hour prior to arrival at the pilot station.
APPROACHES: *Approaches to Pilot Station and Transit to Northport:* On approaching Block Island from the South, Block Island's high Southern shore provides a good radar target. Also, bearings can be taken from the RDF station at Southeast Light.

It is advisable to remain at least 1 mile to the East of Block Island due to the numerous shoals close in shore.

There are several dangers to be wary of when making the passage from the pilot station to Northport.

Block Island North Reef Buoy "1B1" marks a dangerous shoal and should be passed well clear.

The Race is a narrow channel into Long Island Sound. Strong East to West currents occur during maximum ebb or flood and knowledge of position should be maintained in view of the possibility of unusual set. Valiant Rock may be passed on either side.

Caution should be exercised during the Summer months when transiting through Block Island and Long Island Sound in view of the heavy small boat traffic, especially in the area in proximity to The Race.

Dense fog is prevalent during the Summer months.

Good water is found in Long Island Sound from The Race to Northport as long as the mid-channel buoys "P1" and "CF" are passed close by and care is taken so as not to pass North of "Twenty-Eight Foot Shoal" Buoy. "Stratford Shoal" should be passed to the South.

In the event that adverse weather restricts berthing, vessels should anchor, if necessary, North and East of the facility to avoid electric cables on the bottom. The submarine cables lie West of the facility and are shown on Chart No. 12363.

RADIO: *ETA:* Vessels are required to send ETA message 72, 48 and 24 hours in advance of arrival at Block Island Pilot Station. These messages are to be sent to Agent in New York. Advise arrival draft (salt water) in initial message.

VHF: Pilots can be contacted on VHF Channels 16, 13 and 18A.

BERTHING: *Precautionary Weather Information:* There is a history of repeated breakouts in the New York area due to sudden wind shifts accompanied by strong and gusty winds. Vessels alongside the platform must insure that mooring lines are taut and properly tended at all times and that winch brakes are properly set. Vessels are strongly advised to maintain a VHF weather watch and to shut down operations if weather conditions warrant.

The terminal requires suspension of transfer operations and possible clearing of the berth whenever sustained winds of 40 m.p.h. or greater are experienced. Southerly winds (off the platform) of 30 m.p.h. may require similar action. The terminal is equipped with an anemometer. Similarly, heavy swells may require the suspension of transfer operations.

Berth Facilities: The berth consists of 3 concrete platforms and 6 mooring buoys. The 2 outer platforms provide a breasting face of 310 ft. The centre platform is fitted with 2×12 in. chicksan arms.

A quick flashing white light is located 26 ft. above the extreme outboard end of each breasting platform.

Each mooring buoy is fitted with a quick release hook.

Berthing Operation: Vessels approach Sea Berth stemming current and/or wind.

Berthing port side to is recommended, weather permitting.

A minimum of 2 tugs are required for mooring and a minimum of 1 tug for unmooring. Terminal requires 1 tug in attendance while vessel is alongside. A launch is provided by terminal to run vessel's lines to the mooring buoys. Launch will stand-by throughout operations.

The minimum safe mooring arrangement for the facility is as follows: (see "Plan")

2 lines to Buoy "A" (synthetic or steel)
2 lines to Buoy "B" (synthetic or steel)
2 lines to Buoy "C" (mandatory steel cables)
2 lines to Buoy "D" (mandatory steel cables)
2 lines to Buoy "E" (synthetic or steel)
2 lines to Buoy "F" (synthetic or steel)
2 forward springs to breasting island (steel preferred)
2 aft springs to breasting island (steel preferred; synthetic acceptable)
2 forward breast lines from main deck to breasting island (synthetic)
2 aft breast lines from main deck to breasting island (synthetic)

The chicksan arms are designed to permit fore and aft drift and some lateral movement. However, vessel should maintain position at all times. Failure to observe this will result in suspension of operations and disconnection of unloading arms. Ship's crew connect and disconnect arms.

FRESH WATER/FUEL/STORES: Bunkers and fresh water are not available ex-berth. Stores cannot be loaded from dock.

Transfer of bunkers from barge is not permitted while alongside.

GENERAL: *Fire Fighting Facilities:* The terminal has very limited fire fighting equipment. 4×100 lb. CO2 extinguishers are provided; no fixed fire fighting gear is available. The standby tug is fitted with a low capacity fire pump hose.

Fire wires should be hung, one forward and one aft, on the offshore side for easy reach by a tug in case of fire.

The tanker should have all fire fighting equipment aboard in readiness to combat any fire that may arise.

Pollution: All U.S. harbours have stringent pollution regulations forbidding the discharge of oil into harbour waters or the emission of heavy smoke. Long Island Sound is a particularly sensitive area and all anti-pollution regulations are rigidly enforced. In the event of an emergency or pollution, the Agent should be contacted immediately.

OAKLAND, California: 37.50 N. 122.18 W. (See Plan)

See "San Francisco" *for Documents, Pilotage, etc.*

HEALTH: See "Health: all Ports" before first U.S.A. port (Albany). Illness reports made to San Francisco Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

BERTHING: *NOL Terminal:* Berth No. 5 (outer harbour), *Public Container Terminal:* Berth No. 6; Operator: Stevedoring Services of America, 1195 Maritime Street, Oakland, Ca. 94607. Tel: (415) 271-1800.

Berths: 2, length 1,839 ft., water depth 42 ft. MLLW.

Container handling facilities: 1 Paceco 30 ton container crane and 2 Krupp 40 ton container cranes; 6 Raygo Wagner Port Packers; 2 rubber tyred transtainers; 128 refrigerated container outlets; 4 truck scales; additional equipment as required. Combination, port packer/transtainer operation.

Bay Bridge Terminal: Berths 10, 11, 12: Operator: Pasha Maritime Services, 1625 Maritime Street, Oakland, Ca. 94626. Tel: (415) 456-5669.

Berths: 3, length 3,039 ft., water depth 35 ft. Multi-purpose cargo terminal designed to handle break bulk, heavy lift cargoes, automobiles, and Ro/Ro operations.

Sea-land Container Terminal: Operator: Sea-land Services, Inc., 1425 Maritime Street, Oakland, Ca. 94607. Tel: (415) 271-1000.

Berths: 2, Length 1,355 ft., water depth 35 ft. MLLW.

Container handling facilities: 3 Paceco, 30 ton cranes; 3 truck scales; 250 refrigerated container outlets. Chassis operation.

Matson Container Terminal: Operator: Matson Terminals, Inc., 3050 7th Street, Oakland, Ca. 94607. Tel: (415) 271-9756.

Berths: 3, including 1 for Ro/Ro operations. Length 2,220 ft., depth 35 ft. MLLW.

Container handling facilities: 3 container cranes – 27.5 ton Star; 30 ton Paceco; 33 ton Star. 1 truck scale; 200 refrigerated container outlets. Container yard is straddle carrier-type operation (containers stored 2 or more high). An additional 40 ton container gantry crane under construction.

Oakland Container Terminal: Operator: Oakland Container Terminal Co., 707 Ferry Street, Oakland, Ca. 94607. Tel: (415) 834-5822.

Berths: 2, length 309 m. depth 37 ft. MLLW.

Container handling facilities: 1 Modified "A" frame Paceco 40 ton container crane; 1 truck scale; 150 refrigerated container outlets. Container yard utilises a wheeled Paceco transtainer. Containers are stored 5 abreast and 2 or more high.

7th Street Public Container Terminal: Operator: Marine Terminals Corporation, 5190 7th Street, Oakland, Ca. 94607. Tel: (415) 839-6490.

Berths: Five. 3 container, 2 Ro/Ro and/or Combination break-bulk/container. Length 2,963 ft., water depth 35 ft. – 40 ft. MLLW.

Container handling facilities: 3 Paceco low-profile, 40 ton container cranes; 4 truck scales; 96 refrigerated container outlets.

United States Lines Container Terminal: Operator: United States Lines, 1579 Middle Harbor Road, Oakland, Ca. 94607. Tel: (415) 465-4010.

Berths: 2, Length 1,443 ft., water depth 35 ft. MLLW.

Container-handling facilities: 2×45 ton container gantry cranes; 7 truck scales and outlets for 100 refrigerated containers. Container yard is chassis-type operation.

Maersk Line Terminal: Berth 4: Operator: Marine Terminals Corporation, 909 Ferry Street, Oakland, Ca. 94607. Tel: (415) 763-4289.

Berths: 1. Length 900 ft., water depth 42 ft. MLLW. 190 Refrigerated container outlets, 2 truck scales, 1×40 ton Paceco container crane.

American President Lines Container Terminal: Operator: American President Lines, Inc., 1395 Middle Harbor Road, Oakland, Ca. 94607. Tel: (415) 271-8000.

Berths: 2. Length 1,300 ft., water depth 37 ft. MLLW.

Container handling facilities: 3×45 ton container gantry cranes; 3 truck scales; 108 refrigerated container outlets. Container yard is chassis-type operation.

Charles P. Howard Terminal: Operator: Stevedoring Services of America, One Market Street, Oakland, CA 94607. Tel: (415) 271-1880.

Berths: 3. Length 2,278 ft., depth 37 ft. – 42 ft. MLLW.

Facility: This 49 acre facility will handle full containership, combination Ro/Ro and conventional cargo ships. There are two 40 ton Hitachi modified "A" frame container gantry cranes with articulated booms.

9th Avenue Terminal: Operator: Marine Terminals Corporation, foot of 9th Avenue, Oakland, Ca. 94606. Tel: (415) 452-3742,.

Berths: 3. Length 2,052 ft., depth 35 ft. at MLLW.

Facilities: Import steel and bulk cargo-handling centre. 5 Manitowac crawler truck cranes (capacity 100 tons). Bulk-loading facilities with 10 steel storage silos capable of holding 9,750 cu.ft. each. Rail track alongside berth.

Schnitzer Steel Products: 2 private piers with 240 ft. of berthing space. Depth alongside 33 ft. Facility used for loading scrap metal.

CRANES: Privately owned derrick barge with crane of 325 tons capacity available 24 hours a day.

AIRPORT: Oakland International Airport.

DEVELOPMENTS: *Carnation Terminal:* New terminal under construction. Length 900 ft. Depth alongside 42 ft. 2×50 ton gantry cranes. Completion expected in 1988.

2×50 ton cranes will be installed at the outer harbour public container terminal in 1987.

1×50 ton crane to be installed at Charles P. Howard terminal in December 1986.

The outer harbour channel is to be deepened from 35 ft. to 42 ft. and widened. The inner channel is also to be deepened from 35 ft. to 42 ft. Both projects to begin in 1987.

AUTHORITY: Port of Oakland., (P.O.Box 2064, CA 94604), 66 Jack London Square, Oakland, California 94607. *Tel:* (415) 444-3188. *Telex:* 336334. *Contact:* General Manager, Marine Terminals Dept.

~~**AGENT:** See "San Francisco".~~

OGDENSBURG, New York: 44.42 N. 75.30 W. (See Plan)

Refer to "St. Lawrence Seaway" for important general information.
PILOTAGE: Seaway Pilot boards at Cape Vincent or Snell Lock and acts as docking Pilot.
ANCHORAGES: Anchorage area West of city at open roadstead area.
RESTRICTIONS: No tide. No restrictions other than Pilots' discretion as to wind and visibility.
MAX. SIZE: Largest vessel to enter 730 ft. long. Draft 27 ft.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to New York Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
RADIO: Western Union to OCN Corp. VHF Seaway Channel via Maria Radio Cardinal.
TUGS: No tugs necessary.
BRIDGES: Ogdensburg/Prescott International Bridge – 126 ft. clearance MWD.
BERTHING: By prior notice only. Port Authority Terminal, length 1,200 ft., depth 27 ft. One Grain Elevator capacity 500,000 bushels.
CRANES: Available, up to 82 tons capacity.
STEVEDORES: Order by 1800 hrs. day preceding arrival. Advise any change of ETA.
MEDICAL: Excellent medical service and availability of doctors. No vaccination necessary.
DENSITY: Fresh water.
FRESH WATER: Available by pipeline at Port Authority Terminal.
FUEL: One day's notice, all grades. Diesel, Bunker "C", Kerosene.
GANGWAY/DECK WATCHMEN: Normally not used.
OPENING/CLOSING HATCHES: By stevedores.
CUSTOMS ALLOWANCES: Tobacco, wine/spirits, normal Customs allowance U.S. Ports.
CARGO GEAR: 25 ton mobile crane, fork trucks to 13 tons capacity. Ship's gear to be in good working order.
IDENTIFICATION CARDS: Needed as per Immigration Department requirements.
REPAIRS: Limited dockside repairs available.
REPATRIATION: Can be arranged.
AIRPORT: (0.5 mile from city). Allegheny Airline – 3 flights daily to Syracuse, New York, etc.
TIME: Eastern Standard Time GMT minus 5 hours. Daylight Saving time in Summer GMT minus 4 hours.
HOLIDAYS: New Year; Washington and Lincoln's Birthdays; Memorial Day; 4th July. Labour Day, Veteran's Day.
POLICE/AMBULANCE/FIRE: Police, Tel: 393-1551; Ambulance, Tel: 393-1221; Fire, Tel: 393-1010.
TELEPHONES: Available at Pierside (315) 393-7580.
SHORE LEAVE: Crew members allowed ashore.
AUTHORITY: Ogdensburg Bridge and Port Authority, Bridge Plaza, Ogdensburg, New York 13669. *Tel:* (315) 393-4080. *Telex:* WUT 93-7486. *Cables:* Ogdenport. *Contact:* Salvatore L. Pisani, Port Director.

OLYMPIA, Washington: 47.00 N. 122.53 W. (See Plan)

PORT LIMITS: Vessel is to be considered an "arrived ship" at the Port of Olympia, Washington, when anchor is dropped in Budd Inlet or when the vessel is all fast at the dockside.
DOCUMENTS: See "Tacoma".
PILOTAGE: The vessel picks up Puget Sound Pilot at the Port Angeles Pilot Station located at the entrance to Puget Sound on the Straits of Juan de Fuca, and it is normal for the vessel's Agent to provide the pilot station with a 48-hour, 24-hour, 12-hour and 8-hour ETA. The pilot station monitors VHF Channel 13.
ANCHORAGE: Safe anchorage is located North of Olympia Shoal in 30 ft. to 45 ft. of water. The bottom is sandy and area is a sheltered inlet.
RESTRICTIONS: Channel depth 30 ft. MLW with a high tidal range of 14.4 ft. Also restricted turning basin of 800 ft. Vessels max. size would be governed by the turning basin of 800 ft. and draft of 30 ft. at MLW.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Seattle Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
RADIO: "KPH" San Francisco or Mackay Radio, Everett "KLB".
VHF: No VHF other than Pilot to tug or ship to tug available at Olympia.
TUGS: Tugs are dispatched from Tacoma, Washington, 30 miles to the North, and generally join the vessel at the outer channel limits. They use ship's lines to assist the vessel in turning at the turning basin and to moor.
BERTHING: Olympia has 4 deepwater berths, numbered 1 to 4 proceeding from South to North.

Berth No. 1 is a concrete dock with depth of 40 ft.

Berth No. 2 is a concrete dock with 40 ft. depth MLW.

Berth No. 3, 40 ft. depth MLW and supported by 2×50 ton gantry-type cranes.

Berth No. 4, 35 ft. depth, primarily used as lay-by berth or loading waterborne cargoes.

CRANES: 2 Washington whirley-type cranes available at Berth No. 3 with max. capacity of 50 tons. Presently rigged for 12 tons and primarily used in bulk unloading with clams.
BULK CARGO FACILITIES: Presently discharged with ship's gear at Berth No. 2 or shore cranes and clams at Berth No. 3. Primary backup cargo yard of approximately 12 acres handling coke, coal, pig iron and other bulk-type cargoes.
SPECIALISED CARGO HANDLING FACILITIES: Olympia has approximately 100 acres of open cargo yard; 28 acres are paved, however, it can be adapted for Ro-Ro traffic and is presently engaged in handling bulk cargoes such as coal, coke, etc.
Warehousing: Olympia has a 76,000 sq.ft. warehouse between Berth Nos. 1 and 2. The site has a 150 ft. apron from the face of the pier and is served by rail. In addition, there is another 40,000 sq.ft. of off-dock warehousing available for cargo storage.
BRIDGES: None pertinent to this area.
STEVEDORES: 3 stevedoring companies available in the Olympia area. 9 local gangs available for loading or discharging.
MEDICAL: Medical and hospital facilities are available without prior notification for emergencies; otherwise all medical and dental requirements can be taken care of by appointment.
TANKERS: No shore facilities for loading or unloading of tankers.
DENSITY: Salinity is on an average 29 parts per thousand.
FRESH WATER: Delivered to vessel by shoreside hose.
FUEL: Most grades available by barge from Seattle for fueling at dockside.
FIRE PRECAUTIONS: Standard for U.S. ports.
CONSULS: Most located at Seattle 60 miles to the North.
REPAIRS: All types of repairs possible.
DRY DOCKS: None available in Olympia. Nearest 60 miles to North at Seattle.
SURVEYORS: Lloyd's, A.B.S., N.V. available out of Seattle area.
GANGWAY/DECK WATCHMEN: Not required at Olympia under most circumstances unless crew members detained.
CUSTOMS ALLOWANCES: Sufficient quantities of tobacco, wine and spirits are permitted out of bond for each crew member sufficient to cover length of stay anticipated at the time of arrival. Actual quantities are at the discretion of the boarding customs officer.
CARGO GEAR: Generally vessels are loaded and/or discharged using ship's gear. However, 2 max. 50 ton capacity Whirley cranes are available for use for specific commodities and in the event of gear failure.
REPATRIATION: Facilities exist for repatriation of crew members.
AIRPORT: Local airport service by commuter airlines only. Major international airport (Seattle-Tacoma) located 40 miles to the North.
TIME: GMT minus 8 hours. Daylight saving time in effect during Summer months, hours from 0001 27th April to 0001 26th October.
HOLIDAYS: Official holidays observed by the State of Washington for 1980 were: January 1st, February 12th, February 18th, May 26th, July 4th, September 1st, November 11th, November 27th, November 28th and December 25th.

Work is available on an overtime basis on all days except Christmas, December 25th; January 1st, New Year's Day; and July 4th and 5th.

POLICE/AMBULANCE/FIRE: Telephone dispatch for emergency services, the numbers 911 dialled on any public telephone.
TELEPHONES: Public telephones are located within 100 ft. of any berth and are not provided on board the vessel.
SERVICES: Tank-cleaning, tank-washings, compass adjusting, etc., are all available from the Seattle area, located 60 miles to the North, and most services provide travelling repairs.
SHORE LEAVE: Crew are allowed shore leave by U.S. Immigration, depending on individual case.
IDENTIFICATION CARDS: Not issued by the Port of Olympia, and seaman's book is generally sufficient to allow Immigration to determine whether shore leave should be granted.
REGULATIONS: Similar to all North American ports; no special rules or regulations applied to vessels by the Port of Olympia. Rules are set forth in Tariff No. 6.
DELAYS: Only delays that should be encountered at the Port of Olympia would be in the event of berth congestion.
GENERAL: Rail Service: The Port of Olympia is served directly by the Burlington Northern and Union Pacific railroads.

Highway Access: The Port of Olympia is 0.7 miles from Interstate Highway 5, the major North-South highway on the West coast. Access to and from the Port is unobstructed.

DEVELOPMENTS: Berth No. 3 is scheduled for demolition and reconstruction. A new concrete structure will replace the existing wooden structure.
AUTHORITY: Port of Olympia, P.O.Box 827, Olympia, Washington 98507. *Tel:* (206) 754-1650. *Telex:* 152689. *Contact:* James J. Jackson, Director of Operations.

ORANGE, Texas: 30.06 N. 93.44 W. (See Plan)

DOCUMENTS: Crew Lists, Passenger List and Customs Documents.
PILOTAGE: Radio to Agent, 12 hours and Pilots 2.5 hours in advance of ETA. Pilots contacted by VHF Channels 12 and 13. Pilots board at Sabine Pass, Sea Buoy position 29° 36′ N., 93° 48′ W. or upon request board at 29° 25′ N., 93° 40′ W. Pilot boats FM (VHF) Channel 65 – 156.275 MHz.
ANCHORAGE: Off Sabine Bar – 40 ft.
RESTRICTIONS: Sabine River Channel: Project depth 30 ft.; bottom width 200 ft., including slip at port; marked and lighted for 24-hour navigation. Turning basin, 1,000 ft.×3,000 ft.
MAX. SIZE: Length – no limit, breadth – no limit, draft – 30 ft.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Miami Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
RADIO: RCA – Global Communications.
TUGS: Join vessel in port turning basin. Tug's line used, no charge.
BERTHING: 2,308 ft. mooring space to accommodate 4 deep-sea vessels; all concrete docks; additional berthing space in slip for laying-up 4 vessels. Lay-berth facilities also available. 9 finger piers ranging in length from 480 ft. to 900 ft.

STEVEDORES: 5 stevedore companies – handled through Agent.
MEDICAL: Local facilities – complete.
TANKERS: Limited to 30 ft. draft.
DENSITY: Brackish.
FRESH WATER: Ample fresh water, through 2.5 in. connection, rate of delivery about 500 gallons per minute.
FUEL: All grades available; 8 hours advance notice required.
FIRE PRECAUTIONS: No welding or burning without U.S. Coastguard welding permit; also special authority required for ships loading explosives.
CONSULS: None available locally.
REPAIRS: Facilities available.
DRY DOCKS:
Levingston Shipyard – Orange.
400 ft.×126 ft. 11,000 tons, 17 ft. draft over blocks.
350 ft.×60 ft. 3,000 tons, 15 ft. draft over blocks.
250 ft.×72 ft. 3,000 tons, 11 ft. draft over blocks.
SURVEYORS: National Cargo Bureau, Inc., 550 Fannin, Petroleum Building, Suite 821, Beaumont, Telex: 77701.

American Bureau of Shipping, 398 Pearl Street, Goodhue Building, Suite 806, Beaumont, Telex: 77701.

REPATRIATION: Can be arranged through area Immigration.
AIRPORT: Local, no scheduled airlines. Mid County Airport with scheduled airline service – 30 miles.
HOLIDAYS: New Year's Day; Martin Luther King's Birthday; Lincoln's Birthday; Washington's Birthday; Texas Independence Day; St. Patrick's Day; Good Friday; Memorial Day; Emancipation Day; Independence Day; Labour Day; Columbus Day; Veterans' Day; Ted Gleason's Birthday; Thanksgiving Day; Christmas Day; Any holiday which falls on Saturday or Sunday will be recognised on the following Monday. No work performed on Labour Day or Christmas Day.
POLICE/AMBULANCE/FIRE: Police Tel: 883-5654; Ambulance Tel: 883-6414; Fire Tel: 886-7431.
EMERGENCY CO-ORDINATION CENTRE: U.S. Coastguard tel: (713) 983 8230.
TELEPHONE: Can be connected on board.
BANKS:
First City National Bank of Orange, P.O.Box 848, Orange, Texas 77630.
County National Bank, P.O.Box 1029, Orange, Texas 77630.
Unitedbank, Orange, P.O.Drawer 969, Orange, Texas 77630.
STORING: See "Prelims".
1. Yes.
2. Yes.
3. Yes.
GENERAL: No strong tidal currents at the berths, excellent shelter during tropical storms.
DEVELOPMENTS: Additional 37 acre tract on Sabine River for future development.
AUTHORITY: Orange County Navigation and Port District, P.O.Box 516, Orange, Texas 77630. *Tel:* (409) 883-4363. *Telex:* 779325 *Contact:* Stephen E. Pomeroy, Chief Executive Officer.

OSTRICA, Louisiana: 29.22 N. 89.32 W.

LOCATION: East Bank of Mississippi river about 42 miles above Southwest Pass Entrance.
DOCUMENTS/PILOTAGE: For all general information refer to "New Orleans".
ANCHORAGES: Available in river downstream of docks.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to New Orleans Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
TUGS: Not normally required.
BERTHING: Gulf Refining Co. Terminal, tanker berth 45 ft. depth. 2×8 in. hoses loading 34,000 bbls.p.h. Ballast line 18 in. for slop discharge.
Report: General: The Gulf Terminal is located on the East bank of the river, approximately 23.2 miles AHP. The only access to the dock is by launch; a dock launch, however, is available for use at all times.

Cargo Handled and Shore Installations: Crude, heating oil, Bunker-C, premium, low-lead, and regular gasolines are types of cargo handled. Maximum loading rates vary from 34,000 bbls.p.h. for crude oils to 1,000 bbls.p.h. for Bunker-C, 4,000 bbls.p.h. for heating oil and 9,400 bbls.p.h. for gasoline.

Docking: No tugs are required for docking or undocking. Vessels should approach the dock stemming the current and drop the port anchor when above and off the dock. The vessel is then manoeuvred alongside with the aid of the anchor. The anchor is brought in as the vessel undocks.

Docking is starboard side to only and is normally performed by the River Pilot.

Gangway: The ship's gangway must be used and should be properly rigged and illuminated.

Bunkers and Fresh Water: Bunkers are available upon request and are delivered through a 16 in. line at a maximum rate of 900 bbls.p.h. There is no fresh water at the dock.

Ballast/Slop Facilities: Ballast and slop facilities are available at the terminal. Maximum discharge rate ashore is 15,000 bbls.p.h. at a maximum rail pressure of 125 p.s.i.
FRESH WATER: Not available.
FUEL: Bunker "C" available ex-wharf.
DENSITY: Fresh water (1000).

OSWEGO, New York: 43.28 N. 76.30 W. (See Plan)

LOCATION: Oswego Harbour is located on the South shore of Lake Ontario about 15 miles from its East end at the outlet to the Oswego River. It is the first major port on the Great Lakes off the seaway. It is also the Great Lakes entrance to the Great Lakes – Hudson River Waterway which connects with the Hudson River at Troy.
PILOTAGE: No requirements.
RESTRICTIONS: Average navigation season – April 1st to December 15th.
Approaches: Through entrance between the Arrowhead Breakwater pier heads and detached breakwater.
Entrance is 750 ft. wide with a depth of 25 ft. at LW datum.
Controlling depth of water 25 ft. at datum.
No vessel length and beam limitations.
Approach open 24 hours a day.
Navigation lights available
Harbour: Controlling depth – front of each terminal open for public use. 21 ft. on West side. 28 ft. on East side.
Turning Basin – 115 acres.
Accessible 24 hours per day.
No vessel length and beam limitations.
HEALTH/AGRICULTURE: See "Health" and "Agriculture" before first U.S.A. port (Albany).
TUGS: Towage facilities available on request.
BERTHING: The general cargo facilities are operated by the Port of Oswego Authority. The West Side Facility is a finger pier 1,000 ft. long providing 4 berths and has 21 ft. of water alongside at LW datum. 28,000 sq. ft. of covered storage is available with limited open storage. A million bushel grain elevator is situated on this pier. The East Side Facility is a marginal wharf 1,900 ft. long, providing 3 berths and has 27 ft. of water alongside at LW datum. 134,000 sq.ft. of covered storage is available with unlimited open storage.

Oswego exports general cargo. It imports grain, cement, wood pulp, petroleum and general cargo.
New Marginal Wharf: Length of berth 1,750 ft. Depth 25 ft. at LW datum.
BRIDGES: None.
CRANES: Mobile heavy lift equipment available.
BULK HANDLING FACILITIES: One 1,000,000 bushel capacity elevator equipped with 3 loading spouts, 2 Marine legs and 2 car pits.
FRESH WATER: Available at all general cargo docks.
FUEL: Seaway Terminal of Metropolitan Petroleum Corporation, 4 tanks – Capacity 327,000 barrels of No. 2 and No. 6 oil. Coal bunkerage available by truck delivery.
CONSULS: None.
REPAIRS: Above waterline repairs available.
AUTHORITY: Port of Oswego Authority, P.O.Box 387, Foot of East First Street, Oswego, N.Y. 13126. *Tel:* (315) 343-4503. *Telex:* 92-6060. *Contact:* Sherwood L. Hamilton, Executive Director.

PALM BEACH, Florida: 26.46 N. 80.03 W. (See Plan)

LOCATION: Port is located on a salt water sound known as Lake Worth and lies 1.3 miles from the 37 ft. contour of the Atlantic Ocean to which it is connected by an artificial cut at the North end of Lake Worth known as Lake Worth Inlet. The Inlet is located within the boundaries of the City of Riviera Beach, Florida.
PORT LIMITS: Sea Buoy at channel entrance. Dockage charges commence when vessel is made fast to wharf, and are on a 24 hour basis or fraction thereof.
DOCUMENTS: Basic Customs Documents for Entry:
2 copies Master's Oath, Form CF-1300.
2 copies General Declaration, Form CF-1301.
2 copies Arrival Crew Lists, Form I-418.
2 copies Passenger List, Form I-418.
2 copies Store Lists, Form CF-1303.
2 copies Crew's Effects Declaration, Form CF-1304.
1 copy Clearance from Last Foreign Port (if available).
1 copy Manifest of *All* Foreign Cargo onboard.
1 copy Manifest of Cargo for Discharge.
1 copy Form CF-3171 for formal entrance at Customs House.
Valid original vessel documents.

All vessels shall, upon arrival, report to Port Director all cargo to be discharged. Such report shall be in form of copies of Ship's Manifest, or certified statements, and shall show number of units, commodity, weight, destination, consignee, and all other information which Port of Palm Beach deems necessary for compilation of commercial statistics, for reserving of necessary warehouse or wharf space, or other purposes. (Also see "Jacksonville").
PILOTAGE: Compulsory. Provided by Pilots' Association of the Port of Palm Beach, 200 13th Street E, Riviera Beach, Florida, 33404. Tel: (305) 845-2628.

Pilot's communicate with vessel on VHF Channel 16; if no answer contact Marine Operator to call Pilots on land line. Tel: (305) 845-2628.

Notice of ETA and request for Pilot must be made to the Pilots at least 24 hours in advance. There is no telex facility.
CHANNEL: Entrance to the harbour is by a dog-leg channel running due West through the jetties and then turning South-westerly to the terminals. The channel is 400 ft. wide, narrowing to 300 ft. in width as it continues across the lake another 3,000 ft., leading into a trapezoidal turning basin, 1,400 ft. by 1,310 ft. adjacent to the port terminals on the West shore, with an extension of 672 ft. at 25 ft. depth to the New North Wharf and Loading Ramps. Present depth of entrance channel is 33 ft. at MLW.
ANCHORAGES: Anchorage is designated by the Bar Pilots, which in most instances is at sea. Port has no established anchorage.
MAX. SIZE: Vessels up to 620 ft. in length with draft of 33 ft. have used facilities.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Port has no communication equipment. U.S. Coast Guard Station, Peanut Island, Riviera Beach, Florida, can be reached on 2182 kHz – 2678 kHz or VHF Channel 16 (156.8 MHz). Pilots VHF Channel 16.

TUGS: Available to assist berthing. Service is provided by the Port Towing Corporation, P.O.Box 12425, Lake Park, Florida 33403. Office Tel: 622-6422 and 622-8688, nights and holidays 844-4244.

Tugs normally join vessel at jetty entrance. Tug's lines normally used.

BERTHING: 2 slips and 4 marginal wharves with 6 ramps including a 14 acre container facility.

No. 24	South Half Container Wharf	225	25
No. 25	North Half Container Wharf	225	25

Supplementing the berths are 183,775 sq.ft. of transit shed storage space. Open storage areas consist of approximately 40 acres. 29 acres dedicated to container handling.

All vessels, their Owners or Agents, desiring a berth at wharves, shall, as far in advance of date of docking as possible, make application to port specifying date of docking, sailing, nature and quantity of cargo to be handled, and name of the vessel.

SPECIALISED CARGO HANDLING FACILITIES: Ramps for Roll-on/Roll-off cargo and wharfside accommodation for equipment to handle containerised cargo only.

CRANES: See "Cargo Gear".

STEVEDORES: The recognised working hours of port are from 0800 until 1200 hrs. and from 1300 until 1700 hrs., Monday through Friday, holidays excepted. During the recognised working hours services will be charged for on a straight time basis.

When vessels are loading or discharging cargo the port may furnish checker-foremen to supervise release of cargo being loaded and/or check cargo being discharged. The charge for each man furnished will be based on labour-furnished rates for foremen, with the Port reserving right to furnish as many men as they deem necessary to protect their interests. Charges for this service will be rendered against the vessels, their Owners, or Agents.

MEDICAL: Full hospital facilities available without prior notice. Dentists available during normal work hours.

TANKERS: The port receives tankers each month in the 15,000 to 18,000 gross ton range. Petroleum tankers are handled in Slip Two, Berths 2/3 or 5/6. All petroleum tankers are boomed during pumping operations. No slop facilities at port.

Report: Port Approaches – Cautionary: All approaches to the Sea Buoy must be made from the East to avoid shoal waters near the coast to the North and South of the Entrance Channel. The Gulf Stream current running to the North may be felt a short distance East of the Sea Buoy. A counter current usually sets to the South in the vicinity of the Sea Buoy. However, this may vary depending on weather conditions. Southbound vessels, avoiding the Gulf Stream, are encountered in close vicinity of the Sea Buoy.

Care must be taken to carefully identify navigation lights to avoid mistaken identity with strong lights along coast.

Vessels may anchor S.E. of the Sea Buoy in approximately 75 ft. – 100 ft. of water.

Entering and Berthing: Vessel should have full manoeuvring power available and competent helmsman at the wheel. Vessels leaving the Gulf Stream usually set sharply to the South and care must be exercised to keep vessel in channel. Ranges and buoys are used to identify channel limits. The turning basin is situated adjacent to No. 2 slip where tankers berth. Tidal currents in Lake Worth Inlet set North on flood tide and South on ebb tide. Berthing has been limited to High Water Slack period, due to the limitation of tug horsepower. If a current is against the tide, an anchor is usually dropped and dragged into the berth. Due to the limited depths of water and the possibility of holing the ship's bottom if the anchor is run over, the use of anchor should be limited to emergency use.

The slip is 620 ft. in length with a width of 225 ft. Pier bollards are situated 50 ft. apart. The last soundings survey indicated depths of 35 ft. or more throughout area of slip with exception of extreme inside section where depths decreased to 30 ft.

FUEL: Private firms with trucks or barges available by prior arrangement through vessel's Agent.

FRESH WATER: Fresh water delivered to vessels at wharves or docks by pipe-line. Hoses can be supplied by port per tariff charges. Fittings on pipe-line are 2.5 in. Minimum charge of U.S.$10.00. Water $0.72 per ton of 240 gallons.

DRY DOCK/REPAIRS: No major facilities at port. Mobile repair companies available. No berths dedicated for repair work.

SURVEYORS: Marine surveyors representing Lloyd's, A.B.S., N.V., operate at the port or nearby ports.

C. L. Marine Inc., 825 Oleander Street, Boca Raton, FL 33432. Tel: (305) 391-8932.

Palm Beach Marine Survey, 2108 Ascott Road, Juno Isles, FL 33408. Tel: (305) 626-3424.

GANGWAY/DECK WATCHMEN: No requirement for watchmen required except for special vessel conditions or security reasons as determined by Port Director.

HATCHES: Normally opened and closed by ship's crew.

CUSTOMS ALLOWANCES: United States Customs Regulations.

REPATRIATION: Facilities exist for changes of crews and repatriation of seamen. Scheduled aircraft service Palm Beach area daily with additional flights from two nearby airports. Airports are 5 miles, 35 miles and 70 miles from port.

POLICE/AMBULANCE/FIRE: Police Tel: (305) 845-4123 or 911; Fire Department Tel: (305) 845-4111; Sheriff Tel: (305) 833-7471; Ambulance Tel: (305) 844-6577; Hospital Tel: (305) 844-6300.

FIRE PRECAUTIONS: Smoking is strictly prohibited in transit sheds, warehouses, or on apron of wharves and on vessels, handling dangerous, hazardous, or inflammable cargo. Smoking is also prohibited in any areas where gasoline or like materials are being handled or serviced to equipment.

Explosives and hazardous or highly inflammable commodities or materials may be handled over, or received on, the wharves or other facilities of Port of Palm Beach by special arrangements with and at the option of the Port Director, and the receiving, handling, or storage of such commodities shall be subject to Federal and State laws, rules and regulations.

In all cases where explosives and hazardous or highly inflammable commodities or materials are to be handled, prior consent by the U.S. Coast Guard must be received and a copy of the consent filed with the Port Director. Responsibility for safeguarding of life and property will be the duty of the shipper. Proof of sufficient liability insurance must be presented to Port Director prior to arrival of such materials.

CONSULS: Jordan, Consulate of, 338 Royal Poinciana Plaza, Palm Beach, FL 33480. Tel: (305) 655-1844.

CARGO GEAR: Crane capacity can accommodate single lifts up to 300 tons. Also available are 2×150 ton cranes, 3×200 ton crane, 1×65 ton crane and 1×40 ton crane also 1×23 ton fork lift. 5×40 tonne straddle carriers, 7×40 ton fork lifts, 3×25 ton fork lifts, 1×20 ton fork lift, 33 tractors in terminal (10×40 tons and 23×35 tons). Load/discharge operations can be performed by ship's gear or shore gear.

HOLIDAYS: New Year's Day; Washington's Birthday; Columbus Day; Decoration (Memorial) Day; Independence Day; Labour Day; Veteran's (Armistice) Day; Thanksgiving Day; Christmas Day. When any one of these falls on Sunday, the following Monday is observed as a holiday. When any one of these falls on Saturday, the preceding Friday is observed.

BANKS: *Banks with Foreign Departments:*

Atlantic National Bank, 302 Datura Street, West Palm Beach, FL 33402. Tel: (305) 655-8833.

Barnett Bank, 46 West 20th Street, Riviera Beach, FL 33404. Tel: (305) 844-4351.

First National Bank in Palm Beach, The Maritime Office Building, 4 East Port Road, Suite 130, Riviera Beach, FL 33404. Tel: (305) 863-1511.

First National Bank in Palm Beach, 255 South County Road, Palm Beach, FL 33480. Tel: (305) 655-7111.

Southeast Bank, 3700 Broadway, Riviera Beach, FL 33404. Tel: (305) 848-7232.

Royal Trust Bank of Palm Beach, N.A., 411 South County Road, Palm Beach, FL 33480. Tel: (305) 655-3900.

GENERAL: Marine terminal 1.3 miles from the open sea, served by U.S. Highway 1 and is directly connected by port-owned belt-line railroad to the Florida Coast Railway.

Broad aprons (80 ft.) with ship-side rail, and warehouses backed by open storage areas. The slips and wharves are located on a salt water sound, fully protected from the sea by barrier islands; departures from the slips average only 15 minutes through inlet to open sea.

DEVELOPMENTS: New 6 acre container marshalling area has been recently added. Raw sugar storage facility at Slip 2 capacity 20,000 tons, loading rate 600 t.p.h. Acquisition of additional land for port expansion underway. Port Administration Building completed offering Government Services and office space for Maritime companies located at the port. A foreign trade zone will be operational in late 1986.

AUTHORITY: Port of Palm Beach, P.O.Box 9935, Riviera Beach, Florida 33404. *Tel:* (305) 842-4201. *Telex:* 522343. *Contact:* Benson B. Murphy, Executive Director. Martin A. Mets, Operations Manager.

PANAMA CITY, Florida: 30.10 N. 85.40 W. (See Plan)

DOCUMENTS:

3 Passenger Lists.
3 Crew Lists.
3 Curio Lists.
3 Stores Lists.
Register.
Load-line Certificate.
Tonnage Tax Certificate.
Certificate of Financial Responsibility (Oil Pollution).

PILOTAGE: Compulsory. Pilots board at sea-buoy. Guard Channel 16 VHF. Safe anchorage at sea-buoy if waiting for Pilot. Pilot boat black hull with white lettering. Panama City Pilots' Association. Tel: (904) 769-0058.

ANCHORAGES: Several safe anchorages inside bay with 32 ft. or more depth.

RESTRICTIONS: Maximum safe draft over bar is 32 ft. No other restrictions except in case of bad weather.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Preferably WLO Radio, Mobile, Alabama, U.S.A. Also good service from RCA. Vessel should radio ETA and cash requirements.

TUGS: 2 tugs available. Tug is used only to assist in berthing. Always uses ship's lines.

BERTHING: Any time, except for unusual weather. Good safe port. Berths are about 1 hour from Pilot station.

Deepwater Terminal in St. Andrew's Bay:

1. 2,090 ft. of deepwater berthing:
   (a) 4 berths
   (b) Mean depth of water 32 ft.
   (c) Concrete apron 60 ft.
   (d) Construction steel sheet piling.
2. 4 Transit sheds totalling 237,060 sq.ft.
3. Bulk Warehouse (28,800 sq.ft.). Storage Silos (6,500 ton capacity) with scale weight in and out.
4. Depress rail serving each warehouse.
5. Truck dock serving each warehouse.
6. Marginal track capability.
7. Heavy lift capability by prior arrangement.
8. Security: 24 hour service.
9. Paved open storage – 75,000 sq.ft.

Barge Terminal in St. Andrew's Bay and Gulf Intracoastal Waterway:

1. 600 ft. of shallow draft:
   (a) Mean depth of water 12 ft.
   (b) Concrete apron
   (c) Construction steel sheet piling.
2. Transit shed totalling 30,000 sq.ft.
3. Bulk transfer capability.
4. Service for:
   (a) Rail loading and unloading,
   (b) Truck loading and unloading.
5. Paved open storage – 90,000 sq.ft.
6. Heavy lift capability by special arrangement.

Port Equipment:

1. 8 lift trucks, 5,000 lb. capacity.
2. 6 paper roll clamp machines, 7,000 lb. capacity.
3. 2 trackmobile switchers.
4. 1 diesel switch engine.
5. Rail tracks owned by Panama City Port Authority and capable of accommodating approximately 80 rail cars.
6. Sweepers.
   (a) Tennant.
   (b) Tractor with brush and front end loader.

STEVEDORES: 4 companies. Must have ETA by 1500 hrs. local time in order commence loading 0800 hrs. next day. Normal work day 0800 – 1200 hrs., then from 1300 – 1700 hrs., Monday through Friday.

MEDICAL: Medical and hospital service available.

TANKERS: No slop discharge facilities. 1 tanker berth – 29 ft. max. draft.

DENSITY: Salt water. 1.5 ft. tide range.

FRESH WATER: Available all berths but ships must supply hose.

FUEL: Limited amount of diesel oil available. No heavy fuel.

GANGWAY/DECK WATCHMEN: Only if required by ship's Owners or Master.

OPENING/CLOSING HATCHES: Only McGregor hatches may be opened by the crew.

CUSTOMS ALLOWANCES: Tobacco, 1 carton 200 cigarettes. Wine/Spirits, reasonable quantity – 1 or 2 bottles.

CARGO GEAR: Must show safety inspection if requested.

IDENTIFICATION CARDS: All crew must have U.S. Immigration Landing Permit.

CONSULS: None.

REPAIRS: Limited deck and engine repairs can be effected.

REPATRIATION: Available.

AIRPORT: Approximately 4 miles from port. Served by 2 scheduled air lines (Republic Airlines and Air New Orleans).

TIME: Central Standard Time (GMT minus 6 hours or 90° Meridian time). Central Daylight time in Summer (GMT minus 5 hours or 75° Meridian time).

HOLIDAYS: *No work holidays:* New Year's Day; Easter; 4th July; Labour Day; Christmas Day.

Working holidays: Lincoln's Birthday (February 12); George Washington's Birthday (Third Monday in February); Memorial Day (Last Monday in May); Veterans' Day (Fourth Monday in October); Fall Festival Day, Thanksgiving Day (Fourth Thursday in November).

POLICE/AMBULANCE/FIRE: Dial operator, or Tel: 785-6161.

TELEPHONES: Placed aboard only by very special arrangement – not normally available.

SERVICES: Most repairs to radio, radar and other such equipment. Advance notice required.

SHORE LEAVE: Any time – any berth.

DELAYS: Normally, delays infrequent and for short durations.

DEVELOPMENTS: The West Wharf is to be extended by 350 ft.

An existing bulkhead of 500 ft. being re-built, depth alongside 32 ft.

AUTHORITY: Panama City Port Authority and Foreign Trade Zone 65, P.O.Box 15095, 5321 West Highway 98, Panama City, FL 32406. *Tel:* (904) 763-8471. *Telex:* 324775 Port Pcusa. *FAX:* (904) 769-6088. *Contact:* H. R. Etheridge, Port Director. T. L. Berry, Assistant Port Director.

PASADENA, Texas: 29.43 N. 95.13 W.

Refer to "Houston" for all general information.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

PASCAGOULA, Mississippi: 30.21 N. 88.34 W. (See Plan)

PORT LIMITS: Subject to Charter-Party Terms, an "arrived ship", subject to jurisdiction of the Port Authority, occurs when a ship arrives at Horn Island Sea Buoy.

DOCUMENTS: See "New Orleans".

PILOTAGE: Compulsory. Pascagoula Bar Pilots' Association ((601) – 762 – 1151). Pilot boat to be contacted on VHF Channel 16, pilot boat has black hull with white house, International light and sound signals to be made by vessel requiring a Pilot. Pilot to be taken aboard vessel in vicinity of Horn Island sea buoy. Usual safety measures are required, with respect to boarding. Vessels may anchor in this area while awaiting Pilot, there is a 35 ft. to 50 ft. depth with good holding bottom.

ANCHORAGES: Only anchorages permitted are in vicinity of Horn Island Sea Buoy or seaward.

RESTRICTIONS: Under normal conditions there are no entry restrictions as to time or state of tide.

From Horn Island Sea Buoy to Horn Island Pass the channel is 350 ft. wide by 40 ft. deep; from Horn Island Pass to Pascagoula River Turning Basin the channel is 350 ft. wide and 38 ft. deep; the Pascagoula River Turning Basin is 950 ft. wide and 38 ft. deep.

Channel into Bayou Casotte (East Harbour) from Junction Buoy to mouth of Bayou Casotte Harbour is 225 ft. by 38 ft. deep; thence at inner harbour channel is 300 ft. wide and 38 ft. deep into the Bayou Casotte Turning Basin; the Bayou Casotte Turning Basin is 940 ft. wide and 38 ft. deep. All dimensions listed are project dimensions; depths refer to MLW datum.

No vessel or tow shall enter Bayou Casotte Channel outbound after a seagoing vessel or tow has passed Buoy 30 inbound, and; no vessel or tow shall enter Bayou Casotte Channel inbound after a seagoing vessel or tow has passed Buoy 11 outbound. Vessels or tows which are at a dock should remain at the dock until the inbound seagoing vessel or tow has passed, or until it has reached its berth, whichever occurs first.

MAX. SIZE: Length of vessel is restricted to approx. 900 ft. by turning basin, no breadth restriction, draft 38 ft. at MLW. Normal tidal range 1.6 ft.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Use of Pascagoula Marine Radio (KLU-775) is advisable for ETA cables to Agent. Stands by on VHF Channel 16 and operates on Channel 27 throughout 24 hours.

RADAR/VHF: Radar and VHF radio on pilot boat, Channel 16.

Every vessel shall, when entering the Horn Island Pass Channel, and the Bayou Casotte Channel, or when getting underway from a berth, or when approaching the Pascagoula Channel while transiting the Intracoastal Waterway:

(a) Maintain a radio watch on VHF – FM Channels 13 and 16 in accordance with Vessel Bridge to Bridge Telephone Regulations of January 1st, 1973.

(b) Check on other traffic operating in the area by transmitting on Channel 16:

"SECURITY, SECURITY, SECURITY
THIS IS .... (Vessel Calling)
ENTERING...
CHANNEL PROCEEDING FROM
..............................TO...............................
CHECKING FOR TRAFFIC, STANDING
BY ON CHANNELS 13 and 16,......................
..........................(Vessel Calling)........................OUT"

If other traffic replies, utilize Channel 13 for exchange of information relative to safe navigation.

TUGS: Tugs will join vessels in harbour or off docks. No escort required. Tugs lines normally are used.

BRIDGES: None affecting 38 ft. channels.

Two bridges across the Pascagoula River above the turning basin, not passed through between channel and harbour.

BERTHING: Private and public berths are available, by prior arrangement, in both the Pascagoula River Harbour (West Harbour) and the Bayou Casotte Harbour (East Harbour).

West Harbour – Public: Grain Elevator, 3,100,000 bushel capacity, 900 ft. berth at 780 ft. wharf and 38 ft. deep.

Terminal 'A' with transit shed, 500 ft. wharf and 38 ft. deep.

Terminal 'B' with transit shed, 544 ft. wharf and 38 ft. deep.

Terminal 'C' with bulk cold storage, 718 ft. wharf and 38 ft. deep.

Terminal 'D' with 737 ft. by 187 ft. open wharf by 38 ft. deep will be completed April, 1987.

South Clusters, 1 ship berth approximately 600 ft. by 24 ft. deep.

West Harbour – Private – Ingalls Shipbuilding: Note. These berths are normally occupied with ships being fitted out and are not normally available.

West Bank Shipyard, 4,410 ft. bulkhead, 5 berths by 38 ft. deep.

East Bank Shipyard, three 600 ft. piers, one 800 ft. pier, each 32 ft. deep.

M & M, a Division of Ham Industries, rig repair facility; 1,100 ft. wharf by 38 ft. deep.

East Harbour – Public:

Terminal 'E' with transit shed, 517 ft. wharf by 38 ft. deep;

Terminal 'F' with transit shed, 737 ft. wharf by 38 ft. deep;

Terminal 'G' with transit shed, 516 ft. wharf by 38 ft. deep;

Terminal 'G' Extension 695 ft. by 64 ft. open wharf by 12 ft. deep.

Terminal 'H' with transit shed, 556 ft. wharf by 38 ft. deep.

East Harbour – Private:

Chevron U.S.A. Inc., Wharf No. 1, 5 berths by 38 ft. deep;

Chevron U.S.A. Inc., Wharf No. 2, 1 berth by 38 ft. deep; (crude and coke dock).

Chevron U.S.A. Inc., Wharf No. 3, 1 berth by 38 ft.;

Mississippi Chemical Company, 2 loading docks each 475 ft. by 34 ft. depth;

Chicago Bridge & Iron Company, slip 900 ft. by 16 ft. deep.

SPECIALISED CARGO HANDLING: Chevron U.S.A. Inc., Wharf No. 1 has facilities for handling acid, caustic, ammonia, and LPG, in addition to petroleum products. Chevron U.S.A. Inc., No. 2 has facilities for handling coke and crude. Chevron U.S.A. Inc., No. 3 has facilities for handling crude.

Mississippi Chemical Company loading docks are equipped for handling phosphate rock and other bulk materials, liquid and dry.

Terminals E & F are equipped for exporting bulk ores.

Gulf Cold Storage Inc.:

Freezer Area: 1.5 million cu.ft. of −10°F. storage.

Cooler Area: 500,000 cu.ft. of +40°F. storage.

Blast Freezers: 2×−50°F. Capacity 160,000 lbs. per day.

Location: Approx. 3 miles South of 1 – 10 of the West Bank area of the port. Adjacent to dock on a 38 ft. channel.

CRANES: The Port has a heavy lift capability of 400 tons by an arrangement with Ingalls West Bank Facility. Truck cranes with capacity up to 110 tons also available in the port area.

STEVEDORES: 12 hours notice requested to arrange stevedore gangs. *Straight Time:* 0800 hrs. – 1200 hrs. and 1300 hrs. – 1700 hrs. Mondays through Fridays except Holidays. All other hours and days are overtime.

MEDICAL: Agents to be advised if immediate medical attention is required. Free Pratique granted except in case of communicable diseases aboard, inoculations required by Public Health Service, etc. Doctors and hospital services readily available.

TANKERS: Chevron U.S.A. Inc. owns and operates 3 wharves on East side of Bayou Cosotte harbour. Facilities have 6 in., 8 in. and 12 in. lines with adaptors, discharge tanks with a capacity of 60,000 tons, 3 tanker berths with a 38 ft. draft. Wharf No. 2 for receiving crude oil from large tankers. Wharf designed and built for 50 ft. draft, but presently limited to 38 ft. draft on account of channel and seaward. Wharf No. 2 also handles coke ships.

Also see "Shipmaster's Report" and "Specialised Cargo Handling".

DENSITY: Density varies with the state of tide and wind, from fresh to salt water.

FRESH WATER: Potable water is available at most berths. Water at public terminals can be delivered at flow rate of 50 g.p.m.

FUEL: Large vessels are bunkered at berth in the harbour by 2 tank barges, operated by Fuel Services, Inc. All grades of fuel are available.

FIRE PRECAUTIONS: Usual safety precautions required. Verify unusual procedures for approval of U.S. Coast Guard.

GANGWAY/DECK WATCHMEN: Port guards are furnished for the general cargo terminals at the port's expense. At least 1 person must be on duty aboard vessel.

HATCHES: Opening/closing hatches by the crew is at the discretion of the ship.

CUSTOMS ALLOWANCES: Each crew member is allowed either 300 cigarettes or 50 cigars or 3 lbs. of tobacco. In addition, each member is allowed 1 quart of alcoholic spirits as regulated by provisions of the Mississippi Alcoholic Beverage Commission rules.

CARGO GEAR: No requirements for cargo gear other than it be certified by a recognised International organisation.

CONSULS: Many countries have consuls within a 100 mile radius of Pascagoula. (Mobile and New Orleans).

REPAIRS: Most deck and engine repairs could be arranged within port facilities.

DRY DOCKS: Ingalls Shipbuilding Corporation, West Bank Shipyard, has 1 launch pontoon (dry dock) with 38,000 ton capacity.

Ingalls Shipbuilding Corporation, East Bank Shipyard, has 1 graving dock, 485 ft. inside length, 75 ft. wide gate, 34 ft. deep, with loading capacity of 1 ton per sq. ft.

Flechas Shipyard has one 600 ton dry dock.

There are several marineways in vicinity, capacities 50 – 100 tons.

SURVEYORS: Licensed Marine Surveyors are available in Port.

REPATRIATION: The City of Pascagoula is served by regularly scheduled transportation. Vessel's Agent to arrange clearance with Customs and Immigration officials.

AIRPORT: An airport is available approx. 35 miles from the city and is served by regularly scheduled airlines.

TIME: The port of Pascagoula is on Central Standard Time, GMT minus 6 hours; clocks are moved ahead 1 hour during Summer months. (Last Sunday in April to last Sunday in October).

HOLIDAYS: New Year's Day (January 1st); King's Birthday (January 15th); Washington's Birthday (3rd Monday in February); Mardi Gras (41 days before Easter – Tuesday); *Easter Sunday/Easter Monday (1st Sunday after 1st full moon after March 21st); King's Memorial Day (April 4th); Memorial Day (Last Monday in May); *Independence Day (July 4th); *Labour Day (1st Monday in September); Veterans' Day (November 11th); Thanksgiving Day (Last Thursday in November); *Christmas Eve (December 24th); *Christmas Day (December 25th); *New Year's Eve (December 31st).

(*Non-working). Non-working holidays are observed from midnight of the holiday through to 0700 hrs. of the following day with the exception of Christmas Eve and New Year's Eve when the non-working portion of the holiday commences at noon.

Should any of the above holidays except Easter, Christmas Eve, and New Year's Eve fall on a Sunday the following Monday will be observed.

Elevator employees observe Martin Luther King's Memorial Day instead of Birthday.

Saturday shall not be considered as a layday in determining time ships are in berth in this harbour.

POLICE/FIRE/AMBULANCE: Telephone numbers for emergency services are: Fire 762-1133; Police 762-2211; Ambulance 762-6266 or 762-4848. Universal emergency No. 911.

TELEPHONES: Not available.

SERVICES: Facilities are available for compass adjusting. Tank cleaning and receipt of tank washings can be arranged by contract services available in the area.

SHORE LEAVE: Allowed for any crew member not detained by Immigration Office.

IDENTIFICATION CARDS: Standard Immigration Form I-95 to be made up for each crew member on arrival. Not necessary for crewmen already holding Form I-95 issued for the same vessel.

DELAYS: Berths at Public Terminals and the South Clusters are assigned by the Harbour Master of the Port of Pascagoula. Berths at private docks are assigned by the respective owners. No exceptions to this are allowed. Berth at grain elevator is assigned by the Lessee-Operator, the Louis Dreyfus Corporation. No delays are encountered by following this procedure, emergencies excepted.

GENERAL: Some difficulty encountered by unscheduled tows who use harbour for shelter in inclement weather. Pilot Association aware of current situations. Study of traffic control system is being undertaken by the Port Authority, particularly considering hazards of tankers in Bayou Casotte 225 ft. wide channel. Ample barge storage is available in Barge Fleeting Area South of Ingalls Westbank Shipyard – capacity is 96 barges, operated by Colle Towing Company who may be contacted on VHF Channel 16 (KKV-933). Tel. (601) 762-5700.

SHIPMASTER'S REPORT: June 1980.

Vessel: 32,000 g.r.t., loading ammonia at Chevron Refinery.

Approaches: Charts BA. 3981 and 3380.

Approach made from the South East along the Safety Fairway using "Satnav" positions for the approach to the fairway entrance. Failing this the echo sounder may be used to good effect in conjunction with sights.

Two large oil rigs were sighted at the South East entrance to the fairway, but their positions were not plotted.

On the final approach visibility is often reduced due to industrial smog and the outlying islands are low and give no reliable positions until about 8 miles off. There are 4 conspicuous flares beside the Chevron Refinery which will give a good lead to the "HIP" buoy. These flares are not marked on either chart, but their approximate position is Lat. 30° 20.2′ N., Long. 88° 29.3′ W.

Petit Bois Island is the first to show but with no distinguishcng features until close to it. "HIP" buoy is easily identified at least 8 miles away and shortly afterwards the channel buoys may be identified on radar. These buoys are not marked on BA. 3380, but help indentify "HIP" buoys should there be fishing boats in the vincinity. There are numerous fishing vessels in the approaches but they do seem to keep the fairway clear. Many tugs and tows also in the area.

Pilotage: There is no berthing at night for vessels of this size (32,000 g.r.t.) due to having to turn in the turning area above the berth. Vessels may sail at night but careful consideration should be given to weather conditions before agreeing to do so.

Contacted Pilot Office on VHF Channel 16, thereafter working on Channel 13.

Pilot boards from a fast, black hulled launch off "HIP" buoy, ladder on lee side about 1 m. above water.

> *CAUTION:* The outer channel is well marked with conspicuous buoys but the configuration of the channel is liable to change. The approach may be swept with strong conflicting cross currents and, since the widest section is only 350 ft., very careful attention must be paid to steering.

Once inside Petit Bois Island the channel narrows to 225 ft. in places; the Pilots do have an unofficial 'one way traffic scheme' in progress but this is not always adhered to by tows and fishing vessels.

Proceeding inwards, the vessel is turned at the very head of the harbour with the assistance of 2 tugs; vessel is turned to starboard and the head tug then shifts from the port bow to the starboard bow for berthing. Berthing is always port side alongside.

There is not a great deal of room in the turning basin, although the Pilots say that vessels over 800 ft. are turned there regularly.

On sailing, with a deep draft (32 ft. maximum) special care must be paid to steering within the channel. With a width of just over 200 ft. there is no room for error. I would advise that the watchkeeping officer be in attendance on the helmsman throughout the passage.

Time from Pilot aboard to 1st line ashore is about 2 hours.

Berth: Chevron Refinery: Least depth sounded 12.2 m. Very good, with a substantial chicksan area and fairly good mooring arrangements.

Once made fast and loading a very careful watch must be kept on the moorings since large tankers pass up and down the harbour to the tanker berth close ahead; the shore personnel will not hesitate to stop loading if they think the moorings will allow the vessel to surge.

No motor access to the gate some 200 m. distant.

Telephone on the quay.

Loading: No difficulties were experienced. The facility is very keen on pollution and will watch the discharge of ballast very closely.

The refinery do require ballast to be discharged ashore but that is out of the question. A disclaimer will be presented for the ship to sign.

Since the upreach of the chicksan is not sufficient, the low extension or flexible hoses will have to be rigged prior to arrival. Shore connection is 8 in. 150 ASA and was done on this occasion by ship's personnel.

No vapour return line.

There is a recirculating system and there was no need to blow through lines on completion.

Product was cold at this call but 'warm' product has been experienced here in the past. Overall load rate was 343 t.p.h. which the shore personnel were extremely happy with. Hourly rates frequently over 500 t.p.h.

Shore Surveyor attended and all figures were based on ship's gauges.

Personnel generally helpful.

General: Fresh water available on the quay but reported as *not potable.*

Bunkers available.

Stores have to be manhandled along the jetty but there are small trolleys available.

Gangway: Best left turned in until in position thence no problem, being clear of obstructions.

No objection made to ship's crew "touching up" ship's side from quay.

U.S.C.G.: No inspection this call but they are known to carry out both cargo and navigational inspections.

Films: Exchanged by ship chandler: Bow and Stern Marine.

Consul: The nearest British Consul is at Houston or Atlanta, should any surveys be required.

AUTHORITY: Port of Pascagoula, 3033 Pascagoula Street, P.O.Box 70, Pascagoula, Mississippi 39567. *Tel:* (601) 762-4041. *Telex:* 510-990-3405. *Contact:* Paul W. Smith, Port Director. Allen E. Moeller, Harbour Master.

AGENT: Strachan Shipping Company. P.O.Box 1304, Pascagoula, Mississippi 39567. Tel: 601-762-0531 (Direct enquiries to Mobile). Cables: "Strachan".

PENSACOLA, Florida: 30.25 N. 87.13 W. (See Plan)

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

BERTHING:

Berth Number	*Length* (ft.)	*Depth at MLW** (ft.)	*Use*
No. 1	640	35	General Cargo and Bulk Handling Facilities
No. 2	400	35	General Cargo
No. 3	425	35	General Cargo and Lumber
No. 5	425	35	General Cargo
No. 6	580	35	General Cargo

*While the Port of Pensacola has 35 ft. depth at MLW in berths, the Corps of Engineers project draft of 33 ft. is the controlling draft for the Port.

Transit Sheds:

Warehouse	
No. 1	72,000 sq.ft.
No. 5	72,000 sq.ft.
No. 6	90,000 sq.ft.
No. 8	83,000 sq.ft.
Total	317,000 sq.ft.

BULK HANDLING FACILITIES: *Dry Bulk Handling:* Bulk warehousing capacity is 88,100 sq.ft. in 2 buildings. Each building with rail and truck loading capability. Bagging services provided on the port premises through arrangements with private stevedoring companies.

TANKERS: *Private:* Belcher Oil Co. of Pensacola. J.R. Sauls, Manager, Mid Gulf Area, Port of Pensacola P.O.Box 12626. Pensacola, FL 32574. Tel: 904-432-2471. Facilities: Industrial, Marine Fuels. 6 bulk oil tanks of 662,000 barrels capacity connecting by pipeline to berths 1, 2 and 3. 5 positions for loading and unloading. 5 bunkering stations and a truck loading facility.

Report: Port Approaches – Cautionary Advice: Vessels can approach the Sea Buoy with little or no difficulty. Deep loaded vessels should not enter past Buoy No. 1 without a Pilot. Currents in the Gulf of Mexico are varied, but will usually set in direction of the wind; sometimes approaching 4 to 5 knots during severe storms. When entering harbour full manoeuvring power and a good helmsman are essential as the current in the Entrance Channel can reach 5 knots. Currents inside the harbour are approximately 1 knot and set fair with channel. Vessel should anchor outside of Buoy No. 1 and off the centre of channel line when no Pilot is available to take them to the Inner Anchorage. Lightering is permitted at the Inner Anchorage. Harbour bottom consists of soft mud. There is very little harbour traffic.

Entering and Berthing: This harbour is serviced by one 1 Pilot organisation who knows all anticipated movements within the harbour, so no unexpected traffic should be encountered and all passing is done at desirable positions. Vessels can enter and berth at any stage of tide. Pilots will use West Channel for ships docking at No. 3 Berth on the pier face. When docking at No. 3 Berth, the Pilot approaches the berth dredging the vessel's anchor and passes her lines. When tugs are available in the harbour, Pilots will employ them.

CRANES: Mobile cranes up to 85 tons.

EQUIPMENT: Leased Equipment: 18×6,000 lb. fork lift trucks, 8×9,000 lb. fork lift trucks, 2×5,000 lb. fork lift trucks, 1 front end loader, 2 motorised driven sweeper, 1 motorised driven scrubber, 1 paper clamp and stevedoring equipment: Fork lift trucks have individual heights of 10, 14, 15, 16 and 17 ft. Attachments permit conversion for handling paper rolls and bales.

FRESH WATER: Available.

AIRPORT: Pensacola Regional Airport is served by both domestic and international air carriers in addition to intrastate airline service.

AUTHORITY: City of Pensacola, Marine Operations Department, P.O.Box 889, Pensacola, Florida 32594. *Tel:* (904) 436-4270. *Telex:* 702435. *Contact:* David A. Schaller, Port Director.

AGENT: Strachan Shipping Company, P.O.Box 951, Pensacola, Florida 32576. Tel: 904-423-8453. (Direct enquiries to Mobile). Cables: "Strachan".

PETERSBURG, Alaska: 56.49 N. 132.57 W.

Located on Mitkof Island, Northern end of Wrangell Narrows. Open all year.

DOCUMENTS: See "Anchorage, Alaska".

PILOTAGE: (From sea via Dixon Entrance up Clarence Strait to Guard Island.) Under pilotage from Guard Island.

ANCHORAGE: Good anchorage in Scow Bay, mud bottom.

MAX. SIZE: Harbour depth 24 ft. MLLW. Tides: Diurnal range 15.7 ft. Also see "Berthing".

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Anchorage Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

CUSTOMS: Immigration, Guard Island. Quarantine and Customs, local.

TUGS: 1×320 h.p.

BERTHING: Pacific American Fisheries Inc.: 75 ft. long, 65 ft. wide. Should dock at slack water. Strong current.

STEVEDORES: 1 gang.

REPAIRS: Marine ways to 35 tons.

WATER: State approved water available.

FUEL: Diesel and gasoline available.

MEDICAL: 21 bed hospital.

TRANSPORTATION: Scheduled and charter airlines and ferry.

AUTHORITY: City of Petersburg, P.O.Box 329, Petersburg, Alaska 99833. *Contact:* Tom Gustafson, Mayor.

PHILADELPHIA, Pennsylvania: 39.57 N. 75.10 W. (See Plan)

DOCUMENTS:

3 Crew Lists Form I-418 (suggest 6 be made).
3 Passenger Lists Form I-418 (suggest 6 be made).
3 Customs Stores Lists (suggest 6 be made).
3 Curio Lists (own ship Form) (suggest 6 be made).
3 Narcotics Lists (own ship Form) (suggest 6 be made).
Manifest (Ship Cargo List). If Philadelphia first port of call, require 1 copy for Customs and 1 copy to be used as "traveller" surrendered last port of call. If Philadelphia not first port of call, 2 copies required, all cargo to be discharged at Philadelphia.

For Immigration Service:

Visaed Crew List.
Valid passport or Seaman's Book for each person on board.
Crewman's landing card (Form I-95) for each crew member.

PILOTAGE: Pilotage is provided by members of the Pilots' Association for the Bay and River Delaware who maintain a shore station and operations tower at Cape Henlopen. The pilot station is in operation on a 24 hour basis and guards VHF Channels 16 and 14. Telegraphic address is: Delpilots, 214 S. Eleventh Street, Philadelphia, Pa. 19107. Arrangements for Pilot may be made by the local Agent although an ETA and draft either by cable or VHF radio will be greatly appreciated and will facilitate prompt boarding on arrival. The pilot boarding area is inside a line between Entrance Buoys No. 5 and 6, or approximately 2 to 2.5 miles S.E. of Harbour of Refuge Lighthouse. Pilots may board further off-shore upon special request.

ANCHORAGES: Large and deep draft vessels awaiting berth are encouraged to avail themselves of the deep water anchorage adjacent to the Breakwater near the pilot station. There are 13 anchorage areas available along the Delaware for moderate size vessels of lesser draft.

Shipmaster's Report: Good holding ground at Big Stone Anchorage. There is a launch service from Big Stone Anchorage to the shore, call VHF Channels 9 and 14.

RESTRICTIONS: There are no restrictions imposed upon entry except those dictated by vessel draft. Throughout most of its length, the Delaware river is dredged to 40 ft. at MLW. In addition there is a mean tidal range of about 5.7 ft. Vessels of 40 ft. fresh water draft (see "Notice" below) can safely transit the river on a rising tide.

Notice: October 1986.

The Pilot Association for the Bay and River Delaware has advised that the max. permissible draft for inbound vessels has been increased to 38 ft. fresh water and for outbound vessels 39 ft. fresh water. Sailings should be scheduled not later than 2 hours after LW.

Obstructions have been discovered in the 40 ft. authorised channel depth in the Bellevue Range on the Delaware River and work is going on to have them removed. The Pilots believe that vessels transitting the river within the above limits can do so without undue risk.

The Marcus Hook Anchorage is presently closed for dredging and in the meantime the Mantua Creek Anchorage has been opened for bunkering of overlength ships with the following restrictions:

1. Vessels between 700 ft. and 750 ft. LOA must have 1 tug standing-by.
2. Vessels over 750 ft. LOA must have 2 tugs standing-by.

MAX. SIZE: Deep-draft oil carriers are lightered in a special anchorage approximately 10 miles N.W. of the pilot station. Vessels are restricted to a max. draft of 55 ft. by Federal Law.

Notice: December 1986.

The Pilot Association for the Bay and River Delaware announced that with immediate effect the max. draft for inbound vessels has been increased to 39 ft. (fresh water) and for outbound vessels 39 ft. 6 in. (fresh water).

Chesapeake/Delaware Canal: See "Wilmington" – Delaware.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to New York Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

VHF: A port radio service operated by The Ports of Philadelphia Maritime Exchange on a 24 hour basis is also available to all vessels while transiting the Delaware River. VHF Channels 16 and 14 guarded for purposes of this service.

Ship reporting service in operation.

TUGS: Tugs normally join vessels adjacent to berth. Tug's lines are used.

BERTHING:

Northern Shipping Co. Terminal	6 berths, depth 30 ft. to 35 ft.
Tioga Terminal	7 berths, depth 40 ft.
Delaware River Terminal	4 berths, depth 29 ft. to 32 ft.
Port Richmond	10 piers, depth alongside 26 ft. to 36 ft.
Delaware River	21 piers, depth alongside 26 ft. to 35 ft.
Packer Avenue Terminal	5 berths, depth alongside 40 ft.
Greenwich Point	2 berths 850 ft. length, depth 40 ft. to 42 ft.
Girard Point	3 piers, depth alongside 31 ft. to 40 ft.
Camden	3 piers, depth alongside 30 ft. to 40 ft.
Holt Marine Terminal	7 berths, depth up to 45 ft.

CONTAINER HANDLING FACILITIES: *Tioga Marine Terminal:* Handles containerised and Roll-on/Roll-off cargoes. The terminal is equipped with 2 container cranes and a 300 ton mobile crane. Length of the marginal wharf is 3,300 ft., upper slip berth 725 ft. and lower slip berth 625 ft.

Packer Avenue Marine Terminal: Handles containerised and Roll-on/Roll-off cargoes. The terminal is equipped with 3 container cranes, one has a heavy lift capacity of up to 375 tons. The marginal wharf is 3,200 ft. in length and the Roll-on/Roll-off slip berth is 825 ft. in length.

Holt Marine Terminal: 2×35 ton container cranes. Ro-Ro facilities available.

BULK HANDLING FACILITIES:

Berth No.	*Location*	*Operator*	*Berth Length* (m.)	*Berth Depth* (m.)	*Loading Rate* (tonnes/p.h.)
Pier No. 124	Greenwich	Conrail	310	12.19	5,000 (coal)
Pier No. 122 South	Greenwich	Conrail	260	12.19	3,000 (ore)
Pier E	Port Richmond	Conrail	260	12.19	2,000 (coal)
Camden-Beckett Bulk Terminal	Camden	South Jersey Port Corp.	200	11.5	500 (coal)

STEVEDORES: Ship's Agents make arrangements for stevedore gangs. Agents should be kept advised of any change in ETA.

MEDICAL: Advance notice of requirements desirable to the extent possible. Hospital facilities are available.

TANKERS: There are 83 petroleum handling berths along the Delaware River. All terminals are equipped with reducers. There are slop (residue) facilities at most terminals. Some main terminals listed below:

Fort Mifflin	Atlantic Refining and Marketing Co.	40 ft. depth
Point Breeze	Atlantic Refining and Marketing Co.	32 ft. depth
	Ballast Wharf	32 ft. depth
Hog Island	Chevron U.S.A. Oil Terminal	40 ft. depth
Paulsboro	Mobil Oil Terminal	30 ft. and 40 ft. depth
	B.P. Oil Terminal	36 ft. depth
Marcus Hook	B.P. Oil Corp.	35 ft. depth
	Sun Oil Co.	40 ft. depth
Westville (Eagle Point)	Coastal Eagle Point Oil Co.	40 ft. depth
Pennsauken	Texaco Inc.	34 ft. depth
Girard Point	Chevron U.S.A.	33 ft. depth
Delair	Amerada Hess Corp.	31 ft. depth
Delaware City	Texaco Inc.	37 ft. depth

Atlantic Refining and Marketing Co. – Fort Mifflin:

Entering and Docking: There is a 5-knot tidal current that may cause extra care in tending lines while moored. Passing river traffic also requires constant attention to mooring lines. "A" and "B" Berths are 800 ft. in length and total mooring leads to each berth being 15. Maximum bow/manifold at "A" Berth is 375 ft.; head lines are 4 breast line leads. "A" Berth also requires 4 forward springs, 2 stern lines, 2 stern/breast lines and 4 after spring lines. "B" Berth requires 2 head lines, 2 forward breast lines, 4 forward spring lines, 2 stern lines, 2 after breast lines, 4 after spring lines. A gangway is not provided by the terminal.

Berthing: If the vessel is under 50,000 d.w.t., 2 tugs (1,000 h.p. – 2,000 h.p.) are required. Vessels in excess of 50,000 d.w.t. and equipped with a bow thruster may utilise 2 tugs. However, if the vessel is in excess of 50,000 d.w.t. and has no bow thruster, then 3 tugs should be used for docking. During normal conditions for vessels of any tonnage 1 tug (1,000 h.p. – 1,500 h.p.) should be employed for undocking. The vessel is normally turned off the dock prior to docking for starboard side mooring. Normal mooring is done approximately 1.5 hours prior to HW. A Pilot is required during docking and undocking. All hoses are 10 in. with bolted flanges. Cargoes handled are: crudes, gasolines, heating oil and kerosene. Maximum working pressure is 100 lbs. The terminal has no facilities for handling ballast or slops.

British Petroleum – Marcus Hook:

Pilotage and Docking: The services of a Pilot and Docking Master is both compulsory and recommended. When docking vessels of tonnages up to 30,000 d.w.t., 1 tug (1,700 s.h.p.) is required. Tonnages less than 50,000 d.w.t. require 2 tugs and vessels with a tonnage greater than 50,000 d.w.t. require 3 tugs when docking. For undocking vessels of any tonnage 1 tug is required.

Hose Connection: Crude oil is discharged through 2×10 in. and 1×8 in. arm. All cargo connections are made with hydraulic quick coupler loading arms. Maximum loading and discharge pressure is 100 lbs. Fuel oils and heating oil are discharged through 10 in. and 8 in. arms to the vessel. The terminal has storage facilities for up to 92,000 bbls. of ballast and does not handle slops.

Facilities and equipment available at the terminal for cargo control include check valves on the dock leading to the shore pipe-line system. An emergency control to stop loading is located at the dock manifold.

Bunkers: Fuel oil and diesel oil are available from an 8 in. line with a maximum delivery rate of 2,500 bbls.p.h Quantities delivered are as required. Fresh water is piped at a maximum rate of 20 t.p.h. through a 3 in. line, there are no restrictions on amount delivered.

British Petroleum – Paulsboro:

General: The BP refinery at Paulsboro is located 1.5 miles Eastward of Bramell Point (87 miles from the Sea Buoy). The terminal has 2 offshore wharves which provide 1,053 ft. of berthing space. Depths of 38 ft. are reported alongside, and deck heights are 11 ft. and 12 ft. There is a 3.5 million-barrel storage capacity. The terminal is used for receipt and shipment of petroleum products and bunkering vessels. The berths are parallel to the channel and each have 4 steel dolphins.

Vessels up to 675 ft. in length and a maximum of 38,000 d.w.t. can be accommodated at the Terminal Dock. Max. draft (fwd) is 37 ft. at the dock. Docking of vessels is done 2 hours prior to HW. Vessels up to 26 ft. can dock or undock at any stage of the flood tide. Vessels in excess of 26 ft. must wait for HW to dock or undock. Passing river traffic will cause some surge to take place. Proper tension should be maintained on all mooring leads. A gangway is not provided by the terminal.

Pilotage and Tugs: The services of a Pilot and Docking Master is both compulsory and recommended. Vessels tonnages in excess of 1,000 g.r.t. required tug assistance from 1 or 2 tugs depending on prevailing winds. For undocking vessels of any tonnage 1 tug is required. Due to shoaling adjacent to the berth, be advised that undocking vessels should be lined up on the Billingsport Range prior to the exchange of the Docking Master and Pilot.

Hose Connection: Clean products, No. 4 fuel oil and No. 6 fuel oil are handled at this terminal through 8 in. hoses. These hoses are connected with bolted flanges, there are 2 connections for each product. All products are pumped with a maximum pressure of 100 lbs. The terminal has no facilities for handling ballast or slops.

Bunkers: Fuel oil and diesel oil are available in desired quantities. Maximum delivery rate is 2,000 bbls.p.h. through 8 in. lines. Fresh water is not available.

Dupont – Gibbstown:

General: Deepwater Point, located 0.6 miles above the New Jersey end of the Delaware Memorial Bridge and 59 miles from the Sea Buoy, is the site of the Dupont Chemical Company plant. The 550 ft. wharf (Lat. 39° 41′ 37″ N., Long. 75° 30′ 40″ W.) at the plant can provide 600 ft. of berthing space with dolphins. Depths of 33 ft. are reported alongside; dock height is 10.5 ft. Liquid sulphur, acids, and chemicals are handled at the wharf.

Pilotage and Docking: Vessels up to 630 ft. in length, beam 90 ft. and 28,000 d.w.t. can be accommodated at the dock. Max. draft allowed is 32 ft. The dock has a limited strength. Shoaling in the berth places a limit on vessel draft. For drafts of 32 ft. docking is done 2 hours prior to HW. Undocking can be done at any stage of the tide. Passing river traffic will cause the vessel to surge in it's berth. Proper tension should be maintained on all mooring leads. A gangway is not provided by the terminal.

The services of a Pilot and Docking Master is compulsory and recommended. Recommended mooring is with the bow downriver. The vessel is turned off the dock with tug assistance. For docking, 2 tugs (approximately 2,000 h.p.) are required. When undocking 1 tug (approximately 2,000 h.p.) is sufficient. The dock runs parallel to the river channel. All vessels are moored port side to. No mooring cables can be employed. All leads must be manilla or polypropylene lines.

Hose Connection: Fuel oil is discharged through 2×10 in. lines. These lines are connected by a flange. Maximum pumping pressure is 100 lbs. Numerous cargo lines are located on the dock for handling barge shipments of petro-chemicals and acid. Assigned vessels are cautioned to keep mooring lines clear of cargo lines. Safety check-lists are employed at this facility. Personnel at the facility are familiar with and follow safety practices. The terminal has no facilities for ballast or slops.

Fresh Water: Fresh water is only available at the dock. Fresh water is piped at 20 t.p.h. and supplied in an emergency only.

Chevron Oil – Hog Island (Berth Nos. 3 and 4):

General: The Hog Island Wharf is located 90 miles from the Sea Buoy on the Mifflin Range section of the Delaware River at Lat. 39° 51′ 46″ N., Long. 75° 14′ 15″ W. The terminal is a deepwater berth providing 2,754 ft. of berthing space with dolphins. Depths of 37 ft. are reported alongside the dock and deck height is 16 ft. The terminal is used for receiving crude oil and shipping refined petroleum products. There is a 5.5 million-barrel storage capacity at the terminal.

Entering and Docking: Vessels up to 1,000 ft. in length, 135 ft. beam and 110,000 d.w.t. can be accommodated at both berths. Maximum fresh water departure draft allowed is 37 ft. Vessels over 35,000 d.w.t. have a maximum fresh water departure draft of 36.5 ft. For vessels making arrival to the Hog Island Berths that have pre-arrival displacements over 35,000 d.w.t. a lightering service is available in the vicinity of Big Stone Beach. Chevron provides Yokohama Fenders for the lightering operations. Vessels over 35,000 d.w.t. should have a minimum arrival draft of 36.5 ft. (salt) prior to transit up the Delaware River. A gangway is not provided by the terminal.

Pilot and Tugs: The services of a Pilot and Docking Master is compulsory and recommended. Vessels should arrive off the berth 2 hours prior to HW. All vessels are turned prior to docking for starboard-side berthing with the heading down-river. 2 tugs are required if the tug is between 1,000 h.p. and 2,000 h.p. 3 tugs are required for vessels exceeding 35,000 d..w.t. For undocking 1 tug is required for all tonnages. No gangway is provided by the terminal. Passing river traffic will cause berthed vessels to surge. All mooring lines and/or wires should be tended at all times. Additional spring lines are recommended for vessels in excess of 35,000 d.w.t.

Hose Connection: Crude oil is discharged through 4 loading arms at both berths. The hoses are 12 in. and are connected with a bolted flange. Max. discharge pressure is 100 lbs. All lines on shore are common crude lines. The terminal has no facilities for ballast or slops.

Fresh Water/Fuel: Fresh water when required by the vessel can be provided by the terminal. Max. delivery rate is 50 t.p.h. through a pipeline. Fuel oil can be delivered by barge only.

Mantua Petroleum – Mantua Fuel Pier:

General: The Mantua Fuel Pier is located at the S.W. limits of Mantua Anchorage, 81 miles from the Sea Buoy. The entrance of Mantua Creek is adjacent to the Western end of the Fuel Pier dolphin located at each end of the pier. The terminal is used for the discharge of crude oil, fuel oil, heating oil, jet fuel and petrochemicals.

Vessels up to 800 ft. in length, 125 ft. beam and 80,000 d.w.t. can be accommodated at the berth. Maximum fresh water draft allowed at the pier is 37.5 ft. Shoaling at the berth may place further limitations on the allowed fresh water draft.

Pilotage and Tugs: The services of a Pilot and Docking Master is compulsory and recommended. Following transit of the Delaware River on a rising tide, vessels should arrive off the dock 2 hours prior to HW. Vessels are turned around in the Anchorage Area North of the terminal with 2 tugs assisting. After completion of the turn the vessel is then breasted, port side, into the berth. The berth is almost parallel to the channel. 2 tugs are used for docking vessels of all sizes. 1 tug is used for undocking all vessels. Approximate tug horse-power required is 2,000 h.p. All vessels are moored port-side to. The terminal recommends that manila or polypropylene mooring lines be used at this location. Passing river traffic will cause surging of the vessels at the berth. To minimise this surging, the terminal recommends doubling of fore and aft springlines. All mooring lines should be tended constantly.

Hose Connection: Cargo handled at this terminal includes crude, heating oil, fuel oil and jet fuel. Jet fuel is handled through an 8 in. line. All other cargoes are handled through 10 in. lines. Connections of hoses are made with flanges. Maximum pumping pressure is 90 lbs. On completion of cargo discharge the terminal displaces the cargo in the hose with nitrogen. The terminal connects and disconnects all hoses and has no facilities for ballast or slops.

Bunkers and Freshwater: No fuel or freshwater is available at the berth. The terminal will not permit fueling of vessels at this berth.

Mobil Oil – Paulsboro:

General: The Mobil Oil Terminal is located at Bramell Point at the West end of the Paulsboro waterfront which is approximately 80 miles from the Sea Buoy. Facilities include a 2,453 ft. marginal wharf providing 2,254 ft. of berthing space. Depths of 39 ft. have been reported alongside and deck height is 12.5 ft. There is a 6.2 million-barrel storage capacity. The terminal is used for the receipt and shipment of petroleum products and bunkering vessels.

Vessels up to 900 ft. in length, unlimited beam and 80,000 d.w.t. can be accommodated at the terminal berths. Drafts to 38 ft. (freshwater) have also been accommodated at these berths. Shoaling at the berth may place further limitations on the allowed fresh-water draft.

Pilots and Docking: The services of a Pilot and Docking Master is compulsory and recommended. Vessels should arrive off the dock 2 hours before HW and are turned prior to docking for a port side mooring. After completion of the turn the vessel is breasted into the berth. Additional spring lines are recommended to prevent surging caused by passing river traffic. To insure a proper lead on the spring lines, the terminal recommends the spring lines be crossed. The terminal does not provide a gangway.

Tugs: Tug requirements for docking vessels include: 1 tug for vessels up to 30,000 d.w.t., 2 tugs for vessels over 30,000 d.w.t. For undocking vessels tug requirements include 1 tug for vessels up to 50,000 d.w.t. and 2 tugs for vessels in excess of 50,000 d.w.t.

Hose Connection: Crude is discharged at No. 1 Berth. 4 loading arms with 10 in. hoses using bolted flanges are connected to the ship. Max. discharge pressure is 125 lbs. Clean lubes are handled at No. 2 Berth, through 3 loading arms when loading and 4 loading arms when discharging. 8 in. hoses with bolted flanges are connected to the ship. Max. line pressure is 100 lbs. Lube oils are handled at No. 3 Berth in the same manner as No. 2 Berth. The terminal has limited facilities for handling ballast through a 6 in. line. There are no common pipe-lines for cargo in the terminal. Safety checklists and practices are followed by terminal personnel.

Bunkers and Fresh Water: All quantities of fuel oil, diesel oil and fresh water are pumped to the vessel as required.

Sun Oil – Marcus Hook:

General: Located at Mile 69 North, Marcus Hook is an important petroleum centre where large quantities of crude oil are received and refined petroleum products are shipped. Vessels can be bunkered at the rate of 1,500 and 5,000 bbls.p.h. Sunoco Wharf No. 3 (Lat. 39° 48′ 23″ N., Long. 75° 25′ 10″ W.), and Sunoco Wharf No. 2 (250 yards and Northeastward of Wharf No. 3) are both owned and operated by Sun Oil Company.

Wharf No. 2a can accommodate vessels up to 750 ft. in length, 125 ft. beam, max. 50,000 d.w.t. and max. fresh water draft 35 ft. Wharf No. 3a can accommodate vessels up to 810 ft. in length, 125 ft. beam, max. 76,000 d.w.t. and max. fresh water draft of 35 ft. Wharf No. 3c can accommodate vessels up to 1,000 ft., 125 ft. beam and draft 35 ft. Shoaling at the berth may place further limitations on allowed fresh water drafts.

Pilots and Docking: The services of a Pilot and Docking Master is compulsory and recommended. Vessels should arrive off the dock 2 hours prior to HW. Vessels are turned above the facilities prior to docking. Undocking is done at any stage of the water height. After completion of turn the vessel is then breasted into the berth for a starboard side mooring. Passing river traffic will cause moored vessels to surge unless proper tension is maintained on mooring leads at all times.

Tugs: Tug requirements for docking vessels include 2 tugs between 1,500 h.p. and 2,000 h.p. For vessels undocking 1 tug is sufficient.

Hose Connection: Crude and fuel oil are discharged at Berth Nos. 2a and 3a. Both berths have 4 loading arms, 12 in. hoses, and max. pumping pressure of 125 lbs. All connections are made with a bolted flange. Clean products are handled at all 3 berths through 8 in. or 12 in. hoses. Maximum pumping pressure is 125 lbs. Petro-chemicals are discharged at Berth No. 3a through a 10 in. line with a max. pumping pressure of 125 lbs. All connections for clean products and petro-chemicals are made with bolted flanges.

Bunkers and Fresh Water: Fuel oil and water is available at all berths. Fuel oil is delivered at 2,000 bbls.p.h. through an 8 in. line. Fresh water is piped at a rate of 45 t.p.h. Quantities available are enough to satisfy individual vessel requirements.

Swann Oil – Harkness Point, Schuylkill River:

General: The Schuylkill River is approximately 85 miles from the Sea Buoy on the Northside of the Delaware River. The junction is marked with a flashing red 4 sec. light mounted on a stone pile on the right side of the junction and Buoy "C1" on the lest side of the junction. A fog signal is located on the West side of the river junction. A lighted range (bearing 021.5°T) marks the entrance. Vessels proceeding to Harkness Point will pass under the Girard Point Bridge and Penrose Avenue Bridge, 0.6 miles and 1.3 miles, respectively, above the river mouth. Both bridges have fixed spans with clearances of 135 ft.

Pilotage and Docking: The terminal berth can accommodate vessels up to 630 ft. in length, 90 ft. beam, max. 28,000 d.w.t. and max. fresh water draft of 33 ft. There is a bow-to-manifold restriction and no proper breast line leads therefore the present mooring arrangement considered to be unsafe. Vessels should arrive at the Schuylkill River at HW slack for docking. Undocking can take place at any stage of the tide. A parallel approach is made when docking. A Pilot and Docking Master are compulsory and recommended. 2 tugs are assigned to all vessels when docking. For all vessels undocking 3 tugs must be employed. Undocking vessels have to be backed down the Schuylkill River to the junction with the Delaware River before turning can be accomplished.

Hose Connection: Fuel oil, heating oil, bunker and gasoline are all offloaded at this terminal. Bunkers are also loaded onto vessels at the berth. 4×10 in. lines are used for fuel oil and heating oil. All cargo lines are connected with a bolted flange. Max. pumping pressure on all lines is 100 lbs. 1×6 in. line is used for bunkers and 1×8 in. line is used for gasoline. The terminal has no facilities for ballast or slops. The dock manifold only permits the discharge of one grade at a time, this could affect the trim of the vessel.

Fresh Water/Fuel: Fuel oil and water is available at the berth. Fuel oil is delivered through a 6 in. line at 2,000 bbls.p.h. as per vessel requirements. Fresh water is piped at 40 t.p.h. maximum delivery rate.

Coastal Eagle Point Oil Co. – Westville Nos. 2 and 3:

General: The Terminal is located 90 miles from the Sea Buoy at Lat. 39° 52′ 43″ N., Long. 75° 09′ 30″ W. East of Eagle Point. The facility has an offshore wharf which provides 1,380 ft. of berthing space. Depths of 40 ft. are reported alongside and deck heights are 6 ft. and 16 ft. There are water and elecrical shore power connections. Vessels can be bunkered at the rate of 1,500 bbls.p.h.

The terminal can accommodate vessels up to 910 ft. in length, unlimited beam, max. 85,000 d.w.t. with a ma. fresh water draft of 38 ft. The controlling depth at the berth is 40 ft.

Pilotage and Docking: A Pilot and Docking Master are compulsory and recommended. Vessels dock at HW or first stage of ebb. Undocking takes place at any stage of the tide. For docking 2 tugs are recommended. For undocking the Master may decide to use 1 or 2 tugs, depending on the weather and tidal conditions. Vessels are turned prior to docking for a port side mooring. No gangway is provided by the terminal. A normal mooring arrangement is used. Distance between shore manifolds is 878 ft. The terminal requires 100 ft. clearance between vessel when Berth Nos. 2 and 3 are occupied simultaneously.

Hose Connection: Berth No. 2 handles off-loading of crude, No. 4 and No. 6 fuel oil through 12 in. and 8 in. hoses. All connections at both berths are bolted flanges. Max. pumping pressure at both berths is 100 lbs. for all cargoes except chemicals which are pumped at 95 lbs.

Berth No. 3 handles No. 4 and No. 6 fuel oil through 6 in. 8 in. and 12 in. hoses. The terminal can handle up to 10,000 tons of ballast providing the separator is operational. Slops can also be sent ashore. The shore ballast line is segregated. Fuel Oil and crudes are handled through a common line.

Fresh Water/Fuel: Available.

Dirty Ballast Facilities:

Marcus Hook (Sun): Line 8 in. Max. quantity acceptable 1,800 tons. Rate 250 t.p.h. Clean ballast may be pumped overboard.

Marcus Hook (B.P.): Line 8 in. Max. quantity acceptable 2,000 tons. Rate 250 t.p.h. Clean ballast may be pumped overboard.

Paulsboro (Mobil): Line 6 in. Max. quantity acceptable 2,000 tons. Rate 150 t.p.h. Clean ballast may be pumped overboard.

Paulsboro (Exxon): Line 10 in. Max. quantity acceptable 4,000 tons. Rate 800 t.p.h. Clean ballast may be pumped overboard.

Point Breeze (Atlantic): Line 6 in. Max. quantity acceptable, no limit. Rate 300 t.p.h. Clean ballast may be pumped overboard.

Eagle Point (Coastal): Line 10 in. Max. quantity acceptable, no limit. Rate 1,000 t.p.h. Clean ballast may be pumped overboard.

Girard Point (Chevron): Line 8 in. Max. quantity acceptable, no limit. Rate 500 t.p.h. Clean ballast may be pumped overboard.

General: Lighterage of deep drafted tankers effected at anchorage inside the Capes and before entering the main Ship Channel, i.e. at Big Stone Reach Anchorage, etc.

The holding ground in the upper river anchorages, such as Reedy Point, Marcus Hook, Mantua Creek, etc. is reported to be poor, whilst considerable siltation is also reported in these areas. Masters are therefore advised to take suitable precautions when having to use these anchorages.

Loading Fresh Water: This is effected at Mantua Creek Anchorage only.

Shipmaster's Report: September 1984.

Sun Oil Jetty (3C) at Marcus Hook.

Vessel: 140,000 d.w.t. LOA 270 m.

This is the only berth at Marcus Hook suitable for tankers of this size. Usually berth starboard side alongside, arriving off berth about 2 hours before HW. 1 tug each end, tugs' lines and usually made fast on main deck. 2 back springs first then 2 to 3 breasts and 2 to 3 head/stern lines. With this size of vessel it is better to have forward back springs from forecastle and use main deck moorings as head lines. Aft normally have back springs and stern lines from poop and breast lines from main deck.

Shore gangway and with an accommodation ladder about 20 m. abaft after manifold it is best to remove platform and land shore gangway there.

If bunkering then usual to pull off berth and anchor in Marcus Hook Anchorage.

Berthing Pilot boards off and normally uses accommodation ladder.

LNG/LPG: COAST GUARD REGULATIONS:
REQUIREMENTS FOR THE TRANSPORT AND TRANSFER OF LNG/LPG:

The following requirements are issued in the interest of port safety to supplement existing local, State, and Federal Regulations.

A. GENERAL REQUIREMENTS.

1. *Pre-arrival Conference:* Prior to a vessel's initial port call, or when such a vessel has not been to the port within six months, and is laden with LNG or LPG enroute to a facility under the jurisdiction of the Captain of the Port, Philadelphia zone, as defined in 33 CFR 3.15-25, a pre-arrival conference shall be held with all personnel concerned in the delivery and operation of the facility. The purpose of this conference is to disseminate and explain Captain of the Port requirements, local regulations, and establish emergency procedures for that vessel during the initial and subsequent port calls. The conference will include representatives of the Coastguard, the vessel's Agent and charterer or operator, terminal owner/operator, and local authorities including the fire department.

2. *Notification:* The Captain of the Port must be notified:

a. At least 72 hours in advance of a vessel's arrival at the Delaware Breakwater with confirmation 12 hours in advance, and certification upon arrival.

b. Of the vessel's ETA at Delaware Memorial Bridge.

c. Of the intended length of port call and estimated time of departure.

d. Of any changes in the intinerary.

B. VESSEL DOCUMENTS: Prior to proceeding past the Delaware Breakwater at Cape Henlopen, the Master of the vessel shall ensure the following documents are valid and can be produced on demand:

1. A Certificate of Financial Responsibility issued by the Federal Maritime Commission.

2. If U.S. Flag, a Certificate of Inspection endorsed for the product(s) carried.

3. If foreign flag, a Letter of Compliance (LOC) for the carriage of the product(s) carried.

a. Vessels not holding a valid LOC shall be boarded by a joint COTP/OCMI inspection party at the Breakwater Anchorage prior to proceeding upriver. The vessel shall be examined in accordance with 46 CFR, part 154. If the examination is satisfactory, the vessel will be permitted to proceed upriver to the facility. Compliance with part C of this chapter will be strictly observed.

C. TRANSIT RESTRICTIONS FOR VESSELS LADEN WITH LNG/LPG CARGO:

1. *Vessel Movement:* Vessel movement will be conducted only with prior approval of the Captain of the Port.

2. *Propulsion and Machinery Status Report:* No vessel may proceed past the Delaware Breakwater unless the Master sends a message to the Captain of the Port within 12 hours before arrival stating that "To the best of my knowledge and belief there are no known casualties to this vessel or its machinery and all cargo handling and gas detection equipment is in proper operating condition". Should any condition be present that precludes the sending of this message, the vessel shall be boarded by the Coastguard at the Breakwater Anchorage so that a determination can be made as to the vessel's seaworthiness and repairs necessary prior to transiting the river.

3. *Transits:* LNG/LPG laden vessels may only transit the Delaware Bay/River daytime during hours if the visibility is two miles or greater. After discharging, a vessel empty of LNG/LPG cargo may depart at any time.

4. *Intra-Harbour Movement:* An LNG/LPG carrier should submit 2 hours' advance notice of intra harbour movement to the Captain of the Port, earlier notice is desired if practicable.

5. *Radio Guards:* Continuous radio guard must be maintained on Channel 13 (156.65 MHz) and Channel 16 (156.8 MHz) during transit.

6. *Tug Escort:* No LNG/LPG laden vessels shall transit the Delaware River above Delaware Memorial Bridge without at least one commercial tug escorting.

7. *Coastguard Escort:* Unless specifically authorised by the Captain of the Port, no vessel may transit the Delaware River above Delaware Memorial Bridge without a Coastguard escort vessel.

8. *Meeting and Overtaking:* While transiting the river, the vessel will not overtake river traffic; nor will river traffic be allowed to overtake the vessel. The vessel shall be navigated so as not to meet other vessels at bends in the river channel. During meeting situations, neither vessel shall proceed in such a manner that they will meet at a relative speed greater than 20 knots.

9. *Emergency Situations:* In the event of an emergency situation, the Captain of the Port must be promptly notified of the vessel's position, draft, nature of emergency, time required to restore normal operations and future intentions. The vessel's Master or Agent shall have the authority to immediately enlist commercial assistance in an emergency situation or when the COTP deems that commercial assistance is required to prevent an emergency.

D. ANCHORAGE RESTRICTIONS AND REGULATIONS:

1. Transfer of product at anchorage is not permitted except in the event of an emergency such as to warrant, in the opinion of the Captain of the Port, specific authorisation.

2. A live bridge watch shall be maintained by a qualified watch officer. A round of bearings and/or ranges fixing the vessel's position shall be taken hourly followed by a report on the hour to COTP Philadelphia on Channel 16 FM reporting anchor holding and operations normal or any significant change in position or deviation from the norm. In addition to these requirements, during periods of sustained winds in excess of 25 knots, but less than 40 knots, the vessel must maintain the capacity of having engines on line within 30 minutes; if sustained winds are 40 knots or over, the main propulsion plant must be on line.

3. A continuous radio guard shall be maintained on Channel 16 FM while at anchor.

4. Vessels anchored in Mantua and Marcus Hook Anchorages may be required by the Captain of the Port to have tug assistance during the change of tide.

E. VESSEL TRANSFER OPERATIONS: (The Master shall be responsible for compliance with this section): Prior to the commencement of transfer operations, a Coastguard boarding party will examine the vessel. Cargo transfer shall commence only after satisfactory completion of the inspection and issuance of Coastguard Form 4260, Permit to Handle Dangerous Cargo.

1. The following is a partial list of items inspected by the Coastguard boarding party:

(a) Relief valve records and data.
(b) Gas detection system/alarms operation and records.
(c) Remote shutdown operation.
(d) Firefighting equipment.
(e) Boiler burn off system (if installed).
(f) Condition of piping, flanges, expansion joints, relief valves, cargo valves, and gauges.
(g) Intrinsically safe equipment.
(h) Automatic controls.

2. In addition to the above, the inspection party will ensure the following requirements are complied with:

(a) Person-in-Charge: The Master shall ensure a licensed officer or qualified supervisor is aboard the vessel throughout the entire cargo discharge/loading operation.

(b) Other Vessel Activities: Only such activities as bunkering, loading of stores, repairs i.e., normal ship maintenance and support activities as approved by the Captain of the Port at the pre-arrival conference, will be permitted – under such conditions as stipulated – while vessels are transferring LNG/LPG. No cutting, burning, welding or other hot work is allowed on the vessel without specific approval from the Captain of the Port.

(c) Smoking Areas: Smoking areas shall be designated by the Master and posted at the gangway.

(d) Bonding: The terminal manager shall ensure the vessel is electrically bonded to the shore ground prior to commencing transfer operations. The connection shall be maintained until transfer operations are secured. An approved connection shall be used for securing, i.e., alligator clamps are not acceptable. "C" clamps would meet minimum requirements, bolted connections are recommended. The Master shall not commence hookup until this action is taken.

(e) Mooring Requirements: The vessel shall, when possible, moor bow to seaward, and be prepared to get underway on short notice. It may be required to have a live tug standing by during operations. A wire rope towing hawser shall be made ready forward, amidships, and aft with the bight at water's edge.

(f) Operations During Storms: Cargo transfer operations shall cease if an electric storm occurs and at any time lightning is observed or thunder heard; cargo transfer connections may be maintained.

(g) Language Requirements: Ship's supervisory personnel directly involved in supervision of cargo transfer operations must be able to read, speak and understand the English Language.

(h) Transfer Connections: Each flange in the overall transfer operation will be secured with all bolts and properly gasketed, or with a Coast Guard approved quick disconnect device.

(i) Venting: Venting of boil off vapours is prohibited. LNG vessels must demonstrate the ability to contain or consume boil off vapours for a minimum of 21 days.

(j) Fire System: The Master shall ensure the vessel's fire main is linked to the waterfront facility fire fighting system so that the vessel will maintain a firefighting capability, even if its fire pumps are inoperative. The bonding hose shall never be charged unless in use during a fire.

(k) Personnel Aboard: A minimum number of personnel to be retained aboard the vessel shall be established during the pre-arrival conference or dockside inspection.

(l) Barge Personnel: In operations involving barges. a tankerman possessing an appropriate certificate for the product being handled shall be present during cargo operations.

F. FACILITY OPERATIONS: (The Terminal Manager shall be responsible for compliance with this section).

A pre-arrival conference shall be held in accordance with para A so that the following regulations may be explained and disseminated prior to the initial operation of a facility. Drawings indicating cargo routing from the dock to all storage tanks shall be provided to Coast Guard representatives. A current list of qualified cryogenic supervisors shall be maintained with copies provided to the COTP. The following regulations shall be complied with during all transfer operations.

1. *Facility Security:* All facility/terminal security zone areas are to be posted and restricted to personnel authorised by the terminal manager. Adequate physical security shall be provided, including a guard force to allow on authorised personnel, i.e., those persons who have an official need for presence on the facility, during operations.

2. *Equipment Inspections:* Immediately prior to handling cargo, the shore piping which is to be used in the operation shall be inspected for proper operation of automatic controls, gas detection, and instrumentation. If any of the system contains air, it shall be purged prior to handling the product by an inert gas, in special circumstances, by using low pressure LNG/LPG vapour. Care shall be taken in purging to minimise the volume of flammable mixtures present at *anytime.* Following the purging, piping shall be so cooled as to prevent excessive thermal stress.

3. *Supervisor and Personnel:* A designated cryogenics supervisor shall be in attendance at the waterfront facility in the proximity of and during all cargo operations. During all periods of cargo transfer, the terminal shall have one man on board the vessel and one man at the tank car or storage tank loading stations who shall be able to communicate with each other at all times with intrinsically safe equipment.

4. *Language Requirements:* All shore supervisory personnel directly involved in supervision of cargo operations must be able to readily read, speak and understand the English language.

5. *Smoking:* No smoking shall be permitted except in designated areas determined by the facility operator, subject to the approval of the COTP.

6. *Hot Work:* Hot Work will not be permitted without prior authority of the COTP.

7. *Notification:* The COTP shall be notified one hour in advance of the commencement and termination of the cargo transfer operations at the waterfront facility.

8. *Fire Equipment:* The terminal manager will ensure currently tested and inspected fire hoses are laid out and connected to hydrants in tank car and storage tank loading areas unless otherwise provided with approved, permanently installed facilities. The international shore connection shall be connected in accordance with para. E, Vessel Transfer Operations. Hydrants shall be tested for satisfactory flow prior to connecting hoses. In addition to portable equipment, the offshore mooring area or waterfront facility area shall have any combination of semi-portable dry chemical extinguishers totalling 600 pounds. A fire main water source and spray equipment must be available as well. It will be the terminal manager's responsibility to have his fire marshall and fire equipment present at the connecting and disconnecting stages of the operation.

9. *Lighting:* Adequate shoreside lighting in conformance with the National Electric Code shall be provided.

10. *Hoses:* Each hose used to handle cargo shall have been designed for handling such products and shall be tested at 1 – 1.5 times its maximum allowable working pressure or 250 psi, whichever is greater, prior to commencing the transfer operation.

11. *Vessel Protection:* Vessels moored to existing facilities and marginally to a channel, or when otherwise deemed necessary by the COTP, must be afforded protection through the use of barges or camels. Any such protection shall have specific approval of the COTP.

12. *Inspection of Reception Facilities:* All tank cars, tank trucks, barges and storage tanks shall be inspected prior to loading. Time of their last test shall be verified. Operability of overpressure protection devices shall be verified by a person designated by the terminal manager.

13. *Remote Shutdowns:* Remote cargo shutdowns shall be certified satisfactory by a person designated by the terminal manager.

14. *Transfer Completion:* Upon completion of all cargo transfers, the product line from pier head to tank car and/or storage loading stations in the type of operations where this applies, shall be unloaded into closed containers and not vented into the atmosphere. Where the operation of the LNG/LPG terminal is such that the product will be circulated continuously, it need not be unloaded – thus there will be no delay at the start of each cargo transfer operation while bringing the piping down to operating temperature, and a resultant reduction in cycling of thermal stresses. However, the unloading arms shall be drained, using nitrogen purge and left in a nitrogen atmosphere with the shipboard end of the unloading arm blanked off until ready for the next transfer operation.

15. *Bonding:* The terminal manager shall ensure the vessel is electrically bonded to the shore ground prior to commencing transfer operations. The connection shall be maintained until transfer operations are secured. An approved connection shall be used for securing, i.e., alligator clamps are not acceptable. "C" clamps would meet minimum requirements, bolted connections are recommended.

DENSITY: Philadelphia ports are fresh-water ports.

FRESH WATER: Fresh water normally not available directly at berth. Fresh water available by tank truck or through fire department. Water by barge available.

River Associates, Inc. of Philadelphia, Tel: (215) 922 – 6027, provides wash water in Philadelphia and Delaware Bay with two barges, 220 tonnes and 1,000 tonnes capacity.

FUEL: Bunker C and diesel fuel available at most oil terminals. Vessel's Agent should confirm berthing space at least 24 hours in advance.

GANGWAY/DECK WATCHMEN: These services are left to the discretion of the Master. It is often recommended by ship's P & I club that watchmen be engaged when seamen are detained by U.S. Immigration. Ship is subject to fines by U.S. Government if any detained seaman deserts vessel.

OPENING/CLOSING HATCHES: Normally by stevedores.

CERTIFICATES: Ship's Register and Load-Line Certificate are mandatory. If vessel is carrying passengers from the U.S. they will require a U.S. Coast Guard Certificate. This can easily be obtained in about 1 or 2 days subject to meeting the requirement for life-saving equipment.

CUSTOMS ALLOWANCES: No set rule. Reasonable amount allowed for personal use.

CARGO GEAR: For exceptionally heavy lifts, Pennsylvania Shipguilding Co. has a floating derrick with 800 tons lifting capacity.

CONSULS: The following countries are represented in Philadelphia:

Austria
Canada
Colombia
Costa Rica
Denmark
Dominican Republic
Ecuador
El Salvador
Finland
France
Germany F.R.
Great Britain
Guatemala
Haiti
Honduras
Israel
Italy
Japan
Lesotho
Mexico
Monaco
Netherlands
Norway
Panama
Portugal
Spain
Sweden
Switzerland
Venezuela

REPAIRS: All types of ship repairs can be effected.

DRY DOCK: Floating dock with capacity 70,000 tons.

SURVEYORS: American Bureau of Shipping, Tel: WA 5-2693 (after hours: 896-7586).

Caleb Brett, Tel: 521-1725.
National Cargo Bureau, Tel: WA 5-3546.
W. Saybolt, Tel: 727-1050.
Bureau Veritas, Tel: KI 3-5884.
China Corp. Register of Shipping, Tel: KI 3-5884.
Lloyd's Register, Tel: 836-7296.
Panama Bureau of Shipping, Tel: 543-5884.
U.S. Salvage Association, Tel: 544-4588.

AIRPORT: Philadelphia International Airport is located approximately 6 miles from central harbour area.

TIME: Standard Time GMT minus 5 hours. Daylight Saving Time (GMT minus 4 hours) is usually implemented about the last week-end in April.

HOLIDAYS: New Year's Day (1st January); Martin Luther King, Jr. Birthday (15th January); Lincoln's Birthday (12th February); Washington's Birthday (22nd February); Thomas Gleason Birthday (17th March); Richard L. Askew Birthday (6th April); Good Friday; Memorial Day (Decoration Day); Flag Day (14th June); Independence Day (4th July); Labour Day (1st Monday in September); Columbus Day (12th October); November Election Day (1st Tuesday in November); Armistice or Veteran's Day (11th November); Thanksgiving Day; Christmas Eve; Christmas Day; and any other national holiday as may be provided by executive authority.

POLICE/FIRE/AMBULANCE: Fire Tel: LO 3-6700; Police Tel: 231-3131; Port Disaster Tel: 609-WO 3-6420 or WA 5-8780.

SHIP SUPPLY SERVICE:
Fleet Helicopter Service. Tel: 282-4100.
Keystone Helicopter Corp. Tel: 644-4430.
Seaboard Air Charter, Inc. Tel: 563-1564, (302) 856-6545.
Baker, Carver & Morrell of Phila., Inc. Tel: 336-2700.
Delaware Bay Ship Chandlers. Tel: (302) 422-8088.
Delaware Ship Supply Co. Inc. Tel: HO.3 – 1700.
Delaware Bay Launch Service Inc. Tel: (302) 422-8088.
Delaware River Harbour Service. Tel: 365-9777.
Hueber Launch Service. Tel: (215) 872-3544, (215) 425-3155.

GENERAL: If garbage removal is required while in port, it must be done under supervision of the plant quarantine service.

DEVELOPMENTS: Cibro to build coal terminal at Port Richmond.

AUTHORITY: Philadelphia Port Corporation, 1020 Public Ledger Building, 6th and Chestnut Streets, Philadelphia, Pennsylvania 19106. *Tel:* (215) 928 – 9100. *Telex:* WUT 834 – 652.

AGENT: Rice, Unruh Co., 232 South Fourth Street, Philadelphia, Pennsylvania 19106. Tel: 215-629-1711 (11 lines) (Note: Answering service in attendance outside normal working hours). Telex: TWX 710-670-0171, TWX 710-670-0172. "Riceunruh Ph". Cables: "Riceunruh Philadelphia".

PINEY POINT, Maryland: 38.08 N. 76.32 W. (See Plan)

Steuart Petroleum Company Terminal on East bank of Potomac River, 82 miles from sea.

DOCUMENTS/PILOTAGE: Refer to "Baltimore".

ANCHORAGE: Unlimited, available in Chesapeake Bay.

RESTRICTIONS: Berthing 24 hours a day with max. draft of 38 ft. Vessels exceeding 725 ft. or 36 ft. draft, 2 tugs required docking and 1 sailing. Vessels under, 1 tug docking and sailing.

MAX. SIZE: Limited by depth at berth, 38 ft.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Washington, D.C. Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: WMH Baltimore Radio. VHF Channel 26.

TUGS: 2 tugs available for berthing, join vessel off berth. Tugs despatched from Baltimore.

BERTHING: 1 tanker berth only operated by Steuart Petroleum Company. Long lines required for first ashore.

FRESH WATER: Available at berth.

FUEL: Bunker "C" only, available at berth.

AIRPORT: Washington National (80 miles) or Baltimore-Washington (100 miles).

TIME: GMT minus 6 hours.

SHORE LEAVE: Allowed.

GENERAL: Nearest city with full services is Washington, 65 miles distance and Baltimore 110 miles.

AUTHORITY: Maryland Ports Administration, The World Trade Centre Baltimore, Baltimore, Maryland 21202. *Tel:* (301) 659-4550.
Operator: Steuart Petroleum Co., Piney Point, Maryland 20674.

PORT ADAMS, Texas: 29.45 N. 95.11 W.

Refer to "Houston" for all general information.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

PORT ANGELES, Washington: 48.08 N. 123.25 W. (See Plan)

DOCUMENTS, etc.: Refer to "Tacoma".

PILOTAGE: Compulsory for all vessels except those in coasting trade. Pilot station at Ediz Hook serves all vessels bound for Puget Sound ports. Pilot boards off Port Angeles.

APPROACHES: Depth at entrance 100 ft. – 160 ft. No bar.

ANCHORAGE: In harbour, depth at least 42 ft. MLLW.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Seattle Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

TUGS: Available from Foss Launch and Tug Co.

BERTHING: 3 pier berths and 2 dolphin berths, depth up to 45 ft. MLLW. One electric gantry crane, capacity 5 tons. Forklifts with capacity to 10 tons.

STEVEDORES: 8 local gangs, additional gangs may be imported if required.

MEDICAL: All medical facilities available. Local hospital.

DENSITY: Salt water.

FRESH WATER: Available at all wharves.

FUEL: Barge delivery only.

REPAIRS: Minor repairs only.

HOLIDAYS: See "Tacoma".

GANGWAY/DECK WATCHMEN: Required only if detainees aboard.

CUSTOMS ALLOWANCES: No definite quantities specified; reasonable allowance at discretion of Custom's Inspector.

AIRPORT: William R. Fairchild International Airport 3.5 miles from the harbour.

AUTHORITY: Port of Port Angeles, P.O.Box 1350, 338 W. 1st Street, Port Angeles, Washington 98362. *Tel:* (206) 457-8527. *Telex:* 469230. *Contact:* D. G. Hendricks, Executive Director. David H. Hagiwara, Director of Marketing.

PORT ARTHUR, Texas: 29.52 N. 93.56 W. (See Plan)

DOCUMENTS:

Entrance Direct from a Foreign Port:
Master's Oath on entry on vessel in Foreign trade, Customs Form 1300 (2 copies).
General Declaration, Customs Form 1301 (2 copies).
Ship's Stores Declaration, Customs Form 1303 (2 copies).
Crew Effects Declaration, Customs Form 1304 (2 copies).
Clearance from last Port.
Inward Foreign Manifest, Customs Form 1302 (2 copies)
Passenger/Crew List. Form I-418 (3 copies).

In event import cargo is onboard, an additional copy of each of the above Forms is required for travelling Manifest. A copy of the Manifest for each port is also required.

Entrance from Domestic Port:
Clearance from Last Port.
Crew Effect Declaration, Customs Form 1304 (2 copies).
Stores List, Customs Form 1303 (2 copies).
Crew List, Customs Form I-418 (2 copies).
Master's Oath, Customs Form 1300 (2 copies).
General Declaration, Customs Form 1301 (2 copies).

PILOTAGE: Come up in vicinity of the Sea Buoy. 24 hours notice of ETA should be given and revised if ship is delayed 1 hour or more. Telegraphic address is "Sabine Pilots, Port Arthur, Texas". Pilot station keeps 24 hour continuous watch on VHF Channel 12 – 156.6 MHz and on 2738 kHz. Pilot boat is motor vessel with black hull, white housing flying Pilot insignia by day and Pilot light by night. Location of pilot boat is in general vicinity of Sabine Pass Sea Buoy. Pilot ladder only on lee side of vessel.

Pilot will, upon request and at extra cost, board incoming vessels at buoy marked "SB" in position Lat. 29° 25′ N., Long. 93° 40′ W.

Gulf of Mexico Pilots

American Master Mariners licensed by the United States Coast Guard. They are experienced in handling vessels of all types and sizes, and have many years of experience in navigating the Gulf of Mexico.

Gulf of Mexico Pilots cover the entire Gulf and the Florida Straits. They are on call to board vessels wherever requested within the service area, on 48 hours advance notice.

Request for service may be directed to:
Gulf of Mexico Pilots, 3741 Memorial Blvd., Port Arthur, Texas 77640. Cables: Gompilots. Tel: (409) 982-2961.

The Gulf of Mexico Pilot will provide assistance and advise in heavily congested areas. He will utilise up-dated local knowledge of conditions peculiar to navigation in the Gulf of Mexico. He will assist with VHF radio communications, expedite arrivals and departures between the Gulf Ports resulting in savings of time and fuel, while easing the human-fatigue factor caused by the demanding duties of Shipmasters operating in unfamiliar environment and the continuously changing conditions therein.

RESTRICTIONS: The Port Arthur ship channel is in operation 24 hours per day. The only restrictions that might hamper vessel traffic would be the draft of the vessel (Port will be able to handle vessels taking up to 40 ft. of water) or extremely bad weather conditions such as fog or high winds. Also, vessels of the 85,000 ton or more class can only be moved during daylight hours.

MAX. SIZE: Port Arthur ship channel will be authorised to 40 ft. in depth and will vary from 400 to 800 ft. in width. Turning basin, which is located at mile 19 (only about 0.5 miles upstream from existing port facility) is 900 ft. in width. Bulk carriers going to grain elevator at Port Arthur or to one of the oil refineries would only be restricted by draft which would vary from 30 ft. to 40 ft. depending on load/discharge berth the vessel is en route to. See "Berthing".

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: For a vessel in the Gulf of Mexico, and en route to Port Arthur, the best way to route an ETA message is to radio "Port Arthur Radio" (Radio Marine Corporation of America) whose call sign is WPA. Port Arthur Radio will then either send the message through Western Union via its telefax machine or via telex if the receiver of the message has a telex machine. There are also radio stations located in Galveston, Texas (Mackay Radio, call sign KLC) and in Mobile, Alabama (call sign WLO).

TUGS: The exact position that the tug meets the vessel varies with each vessel but usually they meet just below Texaco Island. In some cases they meet as far up as Great Lakes Carbon Co. Berth (usually when vessel is in ballast and going to Gulf Oil Docks). Whether or not the tug uses the vessel's lines or its own lines depends entirely on the circumstances involved but the tugs usually use the ships lines. Port Arthur is served by 2 towing companies, (1) Moran Towing of Texas and (2) Sabine Towing & Transportation Company, Inc.

VHF: Pilot office on Channel 20. Pilot boat on Channels 12, 13, 16 and 65A.

BERTHING: The first procedure for obtaining a berth at Port Arthur is to submit a Berth Request Form. The Berth Request will contain the following information and will be submitted, in duplicate, to P.O. Box 1428, Port Arthur, Texas: Date of request; type and name of vessel; loading ports; registry or flag; where vessel is to arrive from; ETA; where vessel is to sail for; estimated date of departure; what inbound cargo, if any, consists of; what outbound cargo, if any, consists of; date you expect to begin receiving outbound cargo. The Form must be signed by the Agent or Owner of the vessel. (Berth Request Form will be made available by the Port.) Upon receipt of a Berth Request from the Agent or Owner, the Port will then, upon determining availability of berth, return one copy of the initial Berth Request to the Owner or Agent as an assignment of berth. Berths are assigned on a first come first served basis at all times. All changes in vessel's ETA must be given to the Terminal Office immediately. All mooring and unmooring will be done by the Port. Procedure may differ at the various private terminals which are not under the jurisdiction of the Port Arthur Navigation District.

Also see "Developments".

BULK HANDLING FACILITIES: *Pabtex Terminal Company:* Bulk Marine Terminal in the Port's deepwater industrial park is located at Mile 26, handles dry bulk commodities from rail cars to storage to vessels at rates up to 3,000 t.p.h. and has space available for shipper storage tanks on pads, with open storage for 300,000 tons. The terminal also includes a 750 ft. wharf and is located directly on the Sabine-Neches Waterway which presently offers an authorised channel depth of 40 ft. All terminals described above are served by subject waterway and limitations of depth will vary at the face of dock at individual terminals. Pabtex maintains 40 ft. depth at the face of their facility.

Great Lakes Carbon Co.: Length of berth 300 m. Max. LOA 210 m. Max. draft 10.5 m. 2 loaders with total loading capacity 500 tonnes p.h. Petroleum, coke and coal handled.

CRANES: 1×75 ton diesel electrical crane services Berth Nos. 1 – 3.

BRIDGES: There are no bridges that would require a vessel to arrive at any certain time at Port Arthur, however, the first bridge approached involves a vertical clearance of 136 ft. MHW.

STEVEDORES: Advance order for longshore gangs varies as to contract held by ILA (International Longshoremen's Association). In Port Arthur, gangs have to be ordered as follows: Order by 1900 hrs. for the next morning (either 0700 or 0800 hrs.); order by 1100 hrs. for 1300 hrs.; order by 1600 hrs. for 1900 hrs. Must order by 1900 hrs. day before for any starting time Sunday or Holiday.

MEDICAL: It is not usually required that the Agent be given advanced notice of required medical attention but in some instances it is helpful in arranging transportation to a hospital and in obtaining a bed in the event the hospitals are near full. Port Arthur is served by 2 hospitals; (1) St. Mary's Hospital and (2) Park Place Hospital, both of which are very well staffed and have adequate facilities for almost any emergency. Also, advance notice is helpful when vessel is scheduled to dock late in evening or during night, as doctors are not in their offices and have to be located.

Particular inoculations required by the Public Health Department vary as to the vessel's last foreign port of call. Any crew members who have not had the required inoculations can usually be given these inoculations on board either by the Public Health Officer or a Physician. This is usually arranged by the Agent or Owner.

TANKERS: There are 3 major oil companies: Gulf Oil Corporation; Texaco Oil Company, Inc.; and Petrofina Company. Gulf Oil Corporation and Texaco Oil Co., Inc. are 2 of the largest oil refineries in the country. The diameter of load/discharge lines range anywhere from 4 in. to 12 in. depending on the grade of the petroleum product being loaded. As far as slop discharge facilities are concerned there are ballast tanks at all major oil companies. Gulf Oil has 3,400 linear ft. of berth accommodation and Texaco Oil Co. has 5,299 linear ft. of berth accommodation together enough to accommodate 11 supertankers plus barges. Petrofina Co., being the smaller of the 3 oil companies, has berth accommodation for 3 vessels.

Report: Gulf Oil Terminal is located on the East side of the Taylor Bayou Turning Basin 30 miles from the Sea Buoy. The controlling depth of the channel and turning basin is 40 ft. The maximum size vessel normally received at this terminal is 50,000 d.w.t. The water about the terminal is salt. Docking and undocking occurs day and night. Vessels are cautioned of shoaling in the basin.

Vessels are normally turned upon arrival so as to head out. Wire ropes are not permitted unless fitted with fibre rope pennants of at least 3 fathoms in length. Fire wires must be rigged fore and aft.

Two tugs are normally used when docking unless vessel is over 34,000 d.w.t. when 3 would be used. When undocking, 2 tugs are used for vessels over 30,000 d.w.t., under 30,000 only one tug is used.

Amdel Pipe-line is located at the former ARCO Docks on the Neches River Channel 42 miles from the Sea Buoy and includes Berths 1, A, and B. Controlling depths for the channel, manoeuvring area/turning basin, and berth is 40 ft. The water at the berth is fresh to brackish. Attention to moorings by deck watch is required when passing vessels approach due to the close proximity of the berths to the channel.

Berth No. 1 is the largest and will accommodate vessels of approximately 50,000 d.w.t. Berth "A" normally accommodates vessels of 28,000 d.w.t. Berth "B" is normally used for crude oil and barge traffic. Loaded vessels normally moor starboard side to with standard mooring lines fore and aft. 2 tugs are used for both docking and undocking. Incoming vessels are met by tugs 1 mile below the berth. Vessels are turned just above Berth "B". Fire wires must be out fore and aft. For undocking 2 tugs are normally used.

DENSITY: Varies from fresh water (1000) to pure salt water (1025) depending on amount of rainfall and tide variations. According to figures obtained from the National Cargo Bureau, average density is 50% salt water or (1012.5).

FRESH WATER: The Port has 4 ships service outlets for fresh water, each of which is served by a 4 in. water line. Watering barges are available in the area for facilities which are not equipped to provide watering services.

FUEL: Almost any grade of fuel or marine diesel is available. In some instances there are fuel lines running directly to docks, but if not, bunkering barge is available. An advance notice is usually required by bunkering barge depending on number of vessels awaiting bunkering.

FIRE PRECAUTIONS: The Port has, in each of 4 equally spaced indentations along the front of its transit shed, a fire hose outlet fed by an 8 in. water line and there are numerous fire hose boxes throughout the transit shed. In addition to this a 24 hour guard service is constantly on the watch and is in direct communication with the Port Arthur Fire Department which is only seconds away. Authorized on-dock smoking areas are clearly defined for proper safety controls.

GANGWAY/DECK WATCHMEN: Under normal conditions a watchman is not necessary on most vessels. Under certain conditions such as a communicable disease or a malafide crewman, a watchman would be feasible but the decision is left up to Master or owner of the vessel. There is a $1,000 fine if a malafide crewman disembarks from the vessel.

OPENING/CLOSING HATCHES: Paragraph 2, Rule No. 1 of the Deep Sea Longshore and Cotton Agreement for Texas ports and Port of Lake Charles, Louisiana, states as follows: "When vessel is in loading or unloading berth, loading and laying of dunnage and the opening and closing of hatches, when in connection with the handling of general cargo and/or cotton, is longshore work and will not be done by ship's crew." This agreement, however expired in 1978.

CUSTOMS ALLOWANCES: Tobacco: Each crewman is allowed to keep 300 cigarettes out of bond while in port. Wine and/or Spirits; Each crewman is allowed to keep 1 quart of spirits out of bond while in port.

CARGO GEAR: A current certified Gear Certificate is required to be on board at all times and is to be kept up to date.

IDENTIFICATION CARDS: American crewman do not need any identification card. Foreign crewman need only the landing permit from Immigration Department in order to go ashore.

CONSULS: The nearest Consul-Generals are in Houston, Texas, approximately 90 miles from Port Arthur.

REPAIRS: All types of deck and engine repairs can be accomplished. Main ship repairers are: Vessel Repair, Inc., Bethlehem & Gulf Copper & Manufacturing Corp., Sabine Propeller Company and Coastal Marine Service, all of which are located in Port Arthur.

SURVEYORS: American Bureau of Shipping, Goodhue Building, Beaumont, Texas.

Captain Van. Inc., 550 Fifth Street, Port Arthur, Texas 77640. Tel: (713) 982-2911

National Cargo Bureau, 821 Petroleum Bldg., Beaumont, Texas 77701. Tel: (713) 839-4581

Sabine Surveyors. Inc., 6477 39th Street, Groves. Texas 77619. Tel: (713) 962-3500

Soutex Surveyors, Inc., 3727 Doctors Drive, Port Arthur, Texas 77640. Tel: (713) 983-2004

Triangle Marine, Inc., 8700 Ninth Avenue, Port Arthur, Texas 77640. Tel: (713) 722-1922

Underhill Adjustment Agency, 1335 Proctor Street, Port Arthur, Texas 77640. Tel: (713) 985-9329

World Marine Associates, Inc., 580 Fannin, Suite 718, Beaumont, Texas 77701. Tel: (713) 838-9980.

DRY DOCKS: 2 dry docks, largest being Bethlehem Steel's new full-service rig/vessel facility located 8 miles up-river from the Sabine Pass Anchorage. The dry dock at this new Bethlehem repair yard is big enough to lift any mobile offshore unit working the Gulf today. It will handle any jackup, whether mat-supported or independent-leg. Plus semi-submersibles, submersibles or drill ships. This sectional steel dock offers lift capacity of 56,000 long tons, 30 ft. of water over the blocks and it can be configured to provide a clear docking area of either 362×310 ft. or 825×122 ft., depending on the size and shape of the incoming vessel. The dock is outfitted with machine, pipe and other shops, and has the crane capacity to give it full repair service capacity. For especially heavy lifts Bethlehem's 400-ton capacity derrick barge is available.

The smaller dry dock is Vessel Repair, Inc., which occupies 60 acres with 3,200 linear ft. of frontage on Port Arthur Ship Channel. This yard also designs, constructs and repairs barges, tugs and other vessels. It has fully equipped shops, 2 marine railways with haul-out capacities of 1,000 and 1,500 tons and 1 floating dry dock of 3,000 ton capacity.

REPATRIATION: There are facilities for effecting crew changes and repatriation.

AIRPORT: Port Arthur is served by Mid-Jefferson County Airport which is located approximately 10 miles North of Port Arthur on Highway 69. The Mid-Jefferson County Airport is served by TIA (Texas International Airlines) and Delta Airlines.

TIME: Central Standard Time (GMT minus 6 hours) during Winter. Beginning April 28th until October 27th Central Daylight Time (clocks are moved ahead 1 hour).

HOLIDAYS: Longshore Holidays are: Columbus Day (Second Monday in Oct.), Veterans Day (Nov. 13th), Thanksgiving Day (Fourth Thursday in Nov.), Christmas Day (Dec. 25th), New Year's Day (Jan. 1st), Martin Luther King's Birthday (Jan. 15th), Lincoln's Birthday (Feb. 12th), Washington's Birthday (Third Monday in Feb.), Texas Independence Day (March 2nd), Good Friday, Memorial Day (Last Monday in May), June 19th, July 4th, Labour Day (First Monday in September). At Lake Charles, LA., Mardi Gras Day to be substituted for Texas Independence Day. No work shall be performed on Labour Day or Christmas Day, except in case of fire or where property is in danger.

When holidays come on Saturday or Sunday, the following Monday to be recognized as the holiday. No work to be performed between 1600 hrs. and 1900 hrs. on election days. When Christmas falls on Saturday or Sunday, Monday will be an overtime day and gangs will work as ordered.

POLICE/AMBULANCE/FIRE: Police Department Tel: 983-5101; Fire Department Tel: 985-5511; Ambulance Service Tel: 985-5504 or 983-5666.

EMERGENCY CO-ORDINATION CENTRE: Coast Guard Captain of the Port, 2875 75th St., Highway 69, Port Arthur, Texas 77640. Tel: (409) 724-4343.

TELEPHONES: Facilities for placing a telephone on a vessel by request. There is a coin-operated telephone on the dock for anyone's use.

BANKS: Allied Merchants Bank, 441 Austin Avenue, Port Arthur, Texas 77640. Tel: (409) 985-8851.

First Bank & Trust, 4000 Twin City Highway, Groves, Texas 77619. Tel: (713) 963-1141.

M-Bank Port Arthur, 8200 Highway 69, Port Arthur, Texas 77642. Tel: (409) 727-0123.

First National Bank of Port Neches, 1025 Port Neches Avenue, Port Neches, Texas 77651. Tel: (409) 722-4365.

Mid County Bank & Trust, 800 Magnolia, Port Neches, Texas 77651. Tel: (409) 727-2361.

Nederland State Bank, 1308 Boston, Nederland, Texas 77627. Tel: (409) 727-3161.

Sabine Bank, 3723 Gulfway Drive, Port Arthur, Texas 77640. Tel: (409) 982-5741.

SERVICES: Tank cleaning done in port must be done by longshore labour. All major oil companies have facilities for removing tank washings.

STORING: See "Prelims".

1. Vessels are generally stored by truck in the area but barge storing does occur on rare occasions.
2. There are no specific regulations covering barge storing while vessel is working other than what the individual terminal may deem proper.
3. Trucks normally deliver at shipside at the Ports' facilities but this will vary from terminal to terminal.
4. Fork lift trucks are never used on the jetty to handle stores.
5. None other than Bonded Warehouse products.
6. Can but are seldom used. Generally handled by ships crew or other less costly labour that is available in the area.

SHORE LEAVE: The question of whether shore leave is allowed is entirely up to the ship's Master. The only requirements being; each crewman on shore leave must have a landing permit issued by the Immigration Department and no malafide crewman may be granted shore leave. Port Arthur has no restrictions pertaining to shore leave.

DELAYS: Delays in berthing usually arise from vessels ETA being delayed and thereby causing a berth conflict. The port is on a first come, first serve basis.

GENERAL: On vessels arriving directly from a foreign port there are 3 Government Agency Representatives that must board. Already mentioned and explained are Customs and Immigration. The remaining one, Animal and Plant Inspection Services. The Meat Quarantine representative boards the vessel to seal up all meat with the exception of what will be needed while in port. In the event a vessel is detained in port for some reason and more meat is needed the Meat Quarantine Rep. must return to the vessel and personally break the seal and then re-seal the remaining meats. This representative boards all vessels entering the port whether from foreign or coastwise.

The Plant Quarantine Rep. boards all vessels entering from a foreign port to check all fresh fruits and vegetables for any foreign insects such as the Khapra Beetle.

NOTICE:

Notice from U.S. Coast Guard (dated May, 1983).

Liquified Gas Vessels.

This is to clarify U.S. Coast Guard policy regarding liquified gas vessels operating in the Calcasieu Waterway that seems to be causing some confusion. Synopsis of each is as follows:

(1) The Captain of the Port (COTP), Port Arthur, Texas, needs to be informed of the arrivals and departures of all liquified gas vessels, whether loaded or in ballast, a minimum of 4 hours advance notice is required to ensure that a Notice to Mariners is broadcast. The vessel is reminded to have a Calcasieu River Pilot's confirmation of movements prior to notifying the COTP at (409) 724-4330.

(2) The COTP has determined that it is an unsafe practice to bunker a loaded or partially loaded liquified gas vessel at anchor from a barge alongside. If you have a loaded vessel arriving that needs bunkering, make your arrangements so that the vessel is offloaded prior to bunkering. If an empty vessel arrives, make arrangements to have the vessel bunkered prior to loading.

If there are any questions concerning these guidelines, please contact Port Arthur (Tel: (409) 724-4337 or 724-4339) or Lake Charles, La (Tel: (318) 433-3765).

Signed: Captain, U.S. Coast Guard, Capt. of the Port, Port Arthur, Texas.

DEVELOPMENTS: Located only 19 miles from sea, the new Public Ocean Terminal of the Port is located on the Sabine-Neches Waterway, presently 40 ft. deep with a minimum bottom width of 400 ft. The initial facility encompasses 360,000 sq.ft. including 1 transit shed 180 ft. × 840 ft. or 151,200 sq.ft. Rail trackage totals 120 car-spots at dockside with a 150-car storage yard behind the wharves. The facility includes a Gantry Crane (handling dry bulk, magnet, container and heavy lift cargoes) which straddles 2 of the 3 marginal tracks, travelling the entire 1,200 ft. length of dock. Crane will lift 75 tons a distance of 75 ft. off the face of docks, with all areas brilliantly lighted for 24 hour cargo operations. In addition to the 25 acre facilities described above, the District owns a total of 73 acres or 1 mile of frontage for future development. The master plan calls for a total of 4 Transit Sheds, additional open-dock wharves and Roll-on/Roll-off facilities.

AUTHORITY: Port of Port Arthur Navigation District of Jefferson County, Texas, 430 Austin Avenue, P.O. Box 1428, Port Arthur, Texas 77640. *Tel:* (409) 983-2011. *Telex:* 779-421. *Contact:* Ben Goldstein, Port Director.

PORT CANAVERAL, Florida: 28.25 N. 80.35 W.

(See Plan)

DOCUMENTS: Vessels arriving in the Customs Territory of the United States, Bureau of Customs Documentary Requirements:

1. The vessel's Register, Load-line International Certificate, Tonnage Tax Certificates, Clearance from last Foreign Port, and Certificate of Financial Responsibility (Oil Pollution).

2. Additional Documents required:

(a) Original Manifest (lists) of:
All Cargo on Board – Customs Form 1302.
All Passengers on Board.
Stores List.
Crew Purchase List.
Crew List.
Narcotic List.

(b) All items listed in Nos. 1 and 2 *(a)* must be presented to the boarding Customs Inspector and later at the Customhouse for entry. In addition a Customs Form 1300 (Master's Oath) and Customs Form 1301 (General Declaration) must be presented at the Customhouse.

(c) Duplicate Manifest (lists) of:
1. All Cargo for discharge at this port.
2. All Passengers for discharge at this port.
3. Stores List.
4. Crew Purchase List.
5. Crew List.
6. Narcotic List.
7. CF3171 – Permit to Lade or Unlade (this will usually be furnished by the vessel's Agent prior to the arrival of the vessel).

(d) If vessel is proceeding coastwise from Port Canaveral with residue foreign cargo on board, prepare a Traveling Manifest which is a true copy of everything listed in the Original Manifest (2*(a)*). This must be presented to the boarding Customs Inspector and later at the Customhouse.

3. Other Documentary requirements: The Immigration Officer will require the original certificate crew list on Form I-418. The same for passengers. He will also require the presentation of all passports and documents of seamen and passengers as to their immigration status for entry into the United States. A supply of Seaman's Landing Permit Form No. I-95A and passenger Permit No. I-94 should be maintained and they should be typed and ready for landing.

The Immigration Officer will want to inspect the entire crew. The Customs and Agriculture Officers will want to inspect the food storage areas and the quarters of the crew. The Agriculture Officer will also require a stores list. The Customs Officer will place a seal on the Bonded Stores Locker.

PILOTAGE: Pilotage is compulsory for all foreign vessels and for United States vessels under register in the foreign trade. Pilotage is optional for United States coastwise vessels who have on board a Pilot licensed by the Federal Government. Vessel applies for Pilot through Agent or Port Authority. May also call Pilot Office direct, Tel: (305) 783-4645. Pilot will board at Buoys 3 and 4 (Lat. 28° 22.6′ N., Long. 80° 31.7′ W.). Pilot boat is 37 ft. long with black hull, white house and buff deck, has "Pilot" painted on sides. Standard day/night pilot signals are displayed. Pilot boat stations itself 1 mile S.E. of Buoys 3 and 4, 0.5 hours before ETA of vessel. Vessels may anchor anywhere in area. Pilot boat is equipped with VHF Channels 12 (156.60 MHz) and 16 (156.80 MHz), but no continuous radio watch is maintained. Advance notice of at least 24 hours should be given.

ANCHORAGES: Within the harbour itself, none. Vessels may anchor anywhere in the area of the Pilot Station, Buoys 3 and 4.

RESTRICTIONS: Docking and undocking carried on day and night. Draft restrictions – if draft exceeds 34.6 ft. vessel must await rising tide to enter port.

MAX. SIZE: Length and draft at Tanker Berth No. 1 and No. 2, 650 ft., with 35 ft. draft. Cargo dock, length unlimited – 35 ft. draft.

HEALTH: See "Health: All Ports" before first U.S.A. ports (Albany). Illness reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Pilot boat is equipped with VHF Channels 12 (156.60 MHz) and 16 (156.80 MHz) but no continuous radio watch is maintained. Advance notice of at least 24 hours should be given. Best to route ETA cables through Western Union Telegraph. Port Canaveral is equipped with VHF Port Operations frequency 156.6

TUGS: There are 2×1,800 h.p. tugs at Port Canaveral; most ships use the tugs for docking and undocking. Tugs normally join vessel inside jetties and tugs lines are used.

BERTHING: All vessels unless prevented by conditions will be turned around upon entering turning basin and will be berthed headed seaward. No berthing permitted without Port Pilot aboard.

Northside:

Piers 1, 2 and 3, all 35 ft. draft, general cargo, water available. Pier 4 will be completed mid-1987 with combined continuous length of 1,200 ft.

Southside:

Marginal Wharf with total length of 1,350 ft. 1,100 ft. at 35 ft. draft, 250 ft. at 24 ft. draft, general cargo, bunkers, water available.

Ro/Ro Ramp No. 1: 30 ft. width, elev. + 3 ft. MLW.

Tanker Berth No. 1: Dolphin type, 35 ft. draft, petroleum products, cement, bunkers, water available.

Tanker Berth No. 2: Dolphin type, 35 ft. draft, petroleum products, water available.

Cruise Terminals Nos. 2 & 3: 31 ft. draft, 1,300 ft. combined length.

Cruise Terminal 4: 31 ft. draft, 750 ft. berth.

Also see "Tankers".

STEVEDORES: Important vessel gives accurate ETA at least 24 hours in advance to enable Agent to order gangs.

TANKERS: Tanker Berth Nos. 1 and 2 available at present for discharge operations, with 35 ft. draft limit. No oil to be pumped overboard. Heavy fines imposed for oil pollution, however slight. The ship or ship's Agent will immediately report any spillage of oil on the wharf or on the water and the extent of the spill to the Port Manager and the Harbour Master. If spillage is considerable all cargo operations must stop and vessel prepare to undock.

FRESH WATER: All wharves have facilities for supplying fresh water, delivered by 4 in. water line.

FUEL: The general cargo wharf and Tanker Berth No. 1 have facilities for supplying fuel. 24 hours' notice requested. Fuelling by truck available at other berths.

FIRE: Ships discovering fire on board or close by on shore will sound repeated long whistle blast signals and use every other available means to report the fire.

Gasoline Tankers: All deck scuppers must be plugged before starting to discharge cargo. Supply of sand or sawdust must be on hand near the discharge headers. Static cable must be connected to wharf. Minimum 100 lb. pressure must be on water main and fire hose connected. Discharging must be stopped during severe lightning. Deck Officers must keep close check on hose connections for gasket leaks. Emergency Ship Movement Policy of Port Canaveral must be observed.

MEDICAL: Advance notice for Agents not required, but if available is appreciated. No Public Health Clinic in area, but there are good hospital facilities available. A contract physician's office of the U.S. Public Health Service is at Cocoa Beach, just South of the port.

GANGWAY/DECK WATCHMEN: Not usually employed, this service left to discretion of Master.

OPENING/CLOSING HATCHES: Usually done by stevedores.

CERTIFICATES:

Ship's Register.
Load Line Certificate.
Tonnage Tax Certificate.
Derat Certificate or Derat Exemption Certificate.

CUSTOMS ALLOWANCES: 300 cigarettes per crew member. Wine and/or spirits: 1 quart per crew member.

IDENTIFICATION CARDS: Required.

CONSULS: None.

REPAIRS: None – nearest port would be Jacksonville.

SURVEYORS: Surveyors are available on request.

REPATRIATION: All facilities available for effecting crew changes and arranging any necessary repatriations.

AIRPORT: Two airports available, serviced by regular airlines, Orlando International Airport, Orlando, Florida, approximately 50 miles from the Port; Melbourne Regional Airport at Melbourne, Florida, approximately 35 miles from Port. Also Space Coast Executive Airport approximately 25 miles from the Port, but this airport has only limited service.

TIME: GMT minus 5 hours normal, GMT minus 4 hours Daylight Saving Time.

HOLIDAYS: Numerous holidays do not effect operation of port, which operates 24 hours a day, 7 days a week.

POLICE/AMBULANCE/FIRE: Police/Fire, Tel. 783 – 7800; Ambulance, Tel. 452 – 1444.

EMERGENCY CO-ORDINATION CENTRE: United States Coast Guard Station, Port Canaveral. Tel: (305) 853-7601.

TELEPHONES: Arrangements are not available for placing on board.

GENERAL: All vessels, civilian and military, will provide wire ropes from the bow and stern with eyes that can be reached by tugs coming alongside. Pilots will make sure wires are in proper position before leaving vessel. All vessels will undock and proceed to outer anchorage when so ordered by Port Manager and/or Harbour Master in the event of: *(a)* a severe oil spillage; *(b)* fire is discovered on board a vessel laden with petroleum, explosives or a quantity of dangerous cargo; *(c)* vessel is in jeopardy due to conditions on shore. Emergency movement of ships will be made with an able sea watch without awaiting for return of other ships personnel.

SHORE LEAVE: Crew allowed ashore.

BANKS: The American Bank, 326 E. Merritt Island Causeway, Merritt Island, Florida.

Barnett Bank, 430 Brevard Avenue, Cocoa, Florida.

The First Bankers of Florida, N.A., 111 George King Boulevard, Port Canaveral, Florida 32920.

The First National Bank of Brevard, 15 E. Merritt Island Causeway, Merritt Island, Florida.

United National Bank, 82 N. Atlantic Avenue, Cocoa Beach, Florida 32931.

Numerous other banks are available in this area.

STORING: See "Prelims".

1. Vessels stored by truck only.
2. N/A.
3. Yes.
4. No.
5. Usual.
6. Yes, if required.

SHIP SUPPLY SERVICE: No ship supply services operate at the port. In times of emergency, launch or tug service could be arranged through the Port Authority, and helicopter evacuation provided through the United States Coast Guard.

REGULATIONS: All radio frequency radiations from ships in Port Canaveral must be scheduled to prevent any possible interference to missile tests conducted on the Cape Canaveral Missile Test Annex. The only exception is standard ship/shore HF harbour control frequencies. Vessels desiring to radiate will request permission from the Port Manager and/or Harbour Master.

DEVELOPMENTS: Western Basin Expansion started in mid-1986, completion 1988. 16 additional ship berths, including container, general cargo, bulk cargo, shipyard and cruise terminals. Estimated cost $110 million US.

AUTHORITY: Canaveral Port Authority, P.O.Box 267, Cape Canaveral, Florida 32920. *Tel:* (305) 783-7831. *Contact:* Charles M. Rowland, Port Director. Kenneth P. Karpinski, Deputy Port Director.

PORT EVERGLADES (including Fort Lauderdale), Florida: 26.05 N. 80.05 W. (See Plan)

DOCUMENTS:

3 copies Cargo Manifest (Form 1302), the original showing all cargo on board, and 2 copies showing only cargo for this port.
2 copies Crew Manifest (Curio list).
2 copies Stores List.
2 copies Passenger List (Form I-418).
2 copies Crew List (Form I-418).

Customs Boarding Officer will also examine Ship's Register and Loadline Certificate. In addition, the following documents will be required for formal entry to be made within 48 hours of arrival from abroad, or 24 hours from arrival from a United States port:

Health Pratique.
Master's Oath (Form 1300).
All foreign clearances.
U.S. Certificates of payment of tonnage tax (Customs Form 1002).
Certified Crew List.

PILOTAGE: Pilot boards at Port Everglades Sea Buoy, located Lat. 26° 05′ 30″ N., Long. 80° 04′ 45″ W. Pilot available 24 hours a day.

ANCHORAGE: The prescribed anchorage area at Port Everglades is outside the harbour and North of the channel. Vessels desiring to anchor off harbour of Port Everglades are required to do so in this area to avoid possible damage to cables laid on ocean floor South of the channel.

South of the channel, immediately offshore, there is a Government Restricted Area.

North of the channel, immediately offshore, there is a spoil bank visible at low water.

RESTRICTIONS: Entrance to Port Everglades is by a straight channel running in a due Westerly direction for a distance of 1.7 miles from the 50 ft. contour of the ocean to the turning basin. The channel is 500 ft. wide to turning basin. The water depth is 42 ft. including the turning basin. All depths are at Mean Low Water.

BASIN: The main turning basin is 1,200 ft. East and West and 2,450 ft. North and South with a depth of 42 ft. The North extension of turning basin is 620 ft. wide East and West on the North limits and 900 ft. wide East and West on the South limits and 1,150 ft. North and South, with a depth of 31 ft. The South extension of turning basin is 1,300 ft. wide East and West by 1,300 ft. North and South, with a depth of 37 ft. All depths are at Mean Low Water.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: The following radio channels are available to communicate with facilities at Port Everglades:

Ship calling and safety: Channel 16, 156.8 MHz.
Harbour Master and operations: Channel 14, 156.7 MHz.; 7A, 156.35 MHz.; 18A, 156.9 MHz.
Port Everglades Bar Pilot: Channels 16, 13, 14, 18A, 19A, 77.
Pórt Everglades Towing Co.: Channels 16, 13, 77.

TUGS: 3 tugs available to assist berthing with up to 4,200 h.p. Available 24 hours a day.

BERTHING:

Berth	*Length in feet*	*31 ft. depth*	*37 ft. depth*	*38 ft. depth*	*42 ft. depth*

Ro-Ro facilities at Berth Nos. 4 and 5.

CRANES: Paceco, modified A and Kone modified A, 30 long ton container cranes located at berths 16, 17 and 18 adjacent to marshalling facility. Up to 260 ton mobile cranes available for hire.

STEVEDORES: These services are provided by licensed stevedoring firms. Arranged by Agent.

FRESH WATER: Available.

FUEL: Available from Florida Fuels, Inc., 1040 Port Blvd., Suite 406, Miami, Florida 33186 U.S.A. Tel: 305/358-3835. Telex: 853274 Flor Fuel. Cables: Florfuel Miamiflorida.

All deliveries in both ports are made by barge. Florida Fuels can deliver all grades of bunker fuels including Bunker 'C', all IFO's, MDO, and MGO.

Also see "Tankers".

TANKERS:

Berth 4: Length of 900 ft., with a depth alongside of 43 ft. Operators: Belcher Oil Company; Exxon Company, U.S.A.; Marathon Oil Company.

Berth 5: Length of 900 ft., with a depth alongside of 43 ft. Operators: Belcher Oil Company; Exxon Company, U.S.A.; Amerada Hess Corporation; Marathon Oil Company; Shell Oil Company; Trumbull Asphalt.

Berth 6: Length of 400 ft., with a depth alongside of 35 ft. Operators: Belcher Oil Company; Shell Oil Company.

Berths 7 and 8: Length of 1,200 ft., with a depth alongside of 37 ft. Operators: Amoco Oil Company; Belcher Oil Company; Citgo Petroleum Corporation; Exxon Company, U.S.A.; Porto Fina Oil Company; Gulf Oil Company, U.S.A.; Amerada Hess Corporation; Marathon Oil Company; Mobil Oil Corporation; Phillips Petroleum Company; Shell Oil Company; Chevron, U.S.A.; Texaco, U.S.A.; Union Oil of California.

Berths 9 and 10: Length of 1,200 ft., with a depth alongside of 37 ft. Operators: Belcher Oil Company; Citgo Petroleum Corporation; Porto Fina Oil Company; Gulf Oil Company, U.S.A.; Mobil Oil Corporation; Phillips Petroleum Company; Chevron, U.S.A.; Texaco, U.S.A.; Union Oil of California; Amerada Hess Corporation.

Berth 11: Length of 500 ft., with a depth alongside of 37 ft. Operators: Belcher Oil Company; Porto Fina Oil Company; Warren Petroleum Company.

Berths 12 and 13: Length of 1,225 ft., with a depth alongside of 35 ft. Operators: Belcher Oil Company; Citgo Petroleum Corporation; Porto Fina Oil Company; Gulf Oil Company, U.S.A.; Mobil Oil Corporation; Phillips Petroleum Company; Chevron, U.S.A.; Texaco, U.S.A.; Union Oil of California.

Berths 14 and 15: Length of 1,225 ft., with a depth alongside of 37 ft. Operators: Belcher Oil Company; Amerada Hess Corporation.

Size of Pipe-Lines:

American Oil Company: 3×12 in.

Belcher Oil Company:

Berth No. 1: 6 in. and 8 in. bunker and diesel.
Berth No. 2: 6 in. and 8 in. bunker and diesel.
Berth No. 3: 6 in. and 8 in. bunker and diesel.
Berth No. 4: 10 in. and 8 in. bunker and diesel.
Berth No. 5: 12 in. bunker; 24 in. gas; 12 in. gas; 12 in. Jet-A; 12 in. diesel; 10 in. bunker; 6 in. diesel; 24 in. crude.
Berth No. 6: 10 in. bunker and 6 in. diesel.

Berth No. 10: 10 in. bunker.
Berth No. 11: 8 in. bunker.
Berth No. 12: 8 in. bunker; 6 in. diesel.

Belcher Oil has 6 in. and 8 in. bunker and diesel lines on all berths except 23, 26 and 27.

Chevron: 1×24 in.; 2×12 in.; 2×8 in.
Cities Service Oil Company: 3×12 in.; 1×14 in.
Exxon Oil Company: 3×12 in.; 1×8 in.
Gulf Oil Company (Berth Nos. 9 to 13): 6×6 in.; 1×8 in.; 2×10 in.; 1×12 in.; 1×14 in.; 2×16 in.
Hess Oil Company (North Terminal): 1×14 in.
Marathon Oil Company: 2×12 in.; 2×8 in.
Mobil Oil Company: 2×12 in.
Phillips Petroleum Company: 1×12 in.; 1×10 in.
Shell Oil Company: 3×12 in.; 1×8 in.
Texaco, Inc.: 1×14 in.; 2×12 in.; 1×10 in.
Trumbull Asphalt Company: 1×12 in.
Union 76: 2×12 in.; 2×8 in.
Warren Petroleum Company: Propane.

REPAIRS: Shipyard equipped with a 350 ft. Syncrolift dry dock with a capacity of 4,200 tons, 1×1,000 ton floating dry dock, complete machine-shop and all supporting facilities.

IDENTIFICATION CARDS: Standard U.S. Immigration Form I-95 to be made up for each crew member on arrival. Not necessary for crew man already holding Form I-95 if issued for the same vessel.

CUSTOMS ALLOWANCE: At the discretion of Customs officers. Normal allowance is 200 cigarettes or 2 lb. tobacco and 1 quart wine or spirits per man. Additional allowances may be given if considered necessary, due to length of vessel's stay in port.

HOLIDAYS: New Year's Day (January 1st); Martin Luther King's Birthday (January 15th); Lincoln's Birthday (February 12th); Washington's Birthday (February 22nd); Good Friday; Memorial Day (May 30th); Independence Day (July 4th); Labour Day; Columbus Day (October 12th); Veteran's Day (November 11th); Thanksgiving Day; Christmas Day (December 25th).

When any of the above holidays fall on a Sunday, they will be observed on the Monday following. Work on these holidays is by special arrangement only.

TIME: Eastern Standard Time, GMT minus 5 hours. Daylight saving time, GMT minus 4 hours, from April to October.

DEVELOPMENTS: Construction of South Terminal to commence during second quarter of 1986. When completed, the new complex will feature six cranes on a 2,800 ft. berth with 44 ft. MLW depth, a gatehouse complex incorporating a weighbridge, a piggyback rail facility, stuffing and stripping sheds and a computerised cargo tracking system.

AUTHORITY: Port Everglades Authority, P.O.Box 13136, Fort Lauderdale, Florida 33316. *Tel:* (305) 523-3404. *Telex:* 514-462. *Cables:* Portglades. *Contact:* James H. Phifer, Acting Port Director. R. Richards, Harbour Master.

AGENT: Strachan Shipping Company, P.O.Box 13131, Port Everglades, Florida 33316. Tel: (305) 523-6563. Telex II: 510-955-9861. Cables: "Strachan".

PORT HURON, Michigan: 42.59 N. 82.26 W.

Refer to St. Lawrence Seaway for important general information.

PILOTAGE: Compulsory, by Seaway Pilots.

ANCHORAGES: Near head of St. Clair River at Sarnia. Vessels should anchor as close to shore as safely possible to keep channel clear for passing vessels.

RESTRICTIONS: Navigation season from mid-March to end-December approx. Dock channel depth – 25 ft. Vessel's size restricted by Seaway locks.

MAX. SIZE: 730 ft. length; 26 ft. draft.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Chicago Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Master must give at least 24 hours notice to Commander 9th Coast Guard District, Cleveland, Ohio, of the vessel's ETA at Snell Lock. Also, at least 24 hours notice of ETA at first U.S. discharge port is required. Port can be contacted through Marine Operator, Sarnia.

TUGS: Available. Not compulsory, but sometimes necessary in bad weather.

BERTHING: Port Terminal Co. Dock: 700 ft. long 26 ft. – 31 ft. depth.

DENSITY: Fresh water.

MEDICAL: All facilities available.

FRESH WATER: Obtainable by pipe-line at all docks.

FUEL: All grades available by pipe-line at all docks.

REPAIRS: Machine shops available for limited deck and machinery repairs.

AUTHORITY: *Managers:* Port Huron Seaway Terminal Co., 2336 Military Street, Port Huron, Michigan 48060. *Contact:* W. R. Neal, President.

PORT JEFFERSON, New York: 40.59 N. 73.06 W.

(See Plan)

OPERATOR'S REPORT: 1981

APPROACHES: *Port Approaches – Cautionary Advice:* (via New York) Charts: 12339, 12366, 12367, 12363, 12362, 12354.

Vessels leaving New York bound for Port Jefferson transit New York's East River and Long Island Sound.

Sandy Hook Pilots handle the ship in the East River and Hell's Gate, and the Long Island Sound Pilots handle the ship in the Sound. The change of Pilots is made off City Island. The pilot boat can be raised on Channel 13. All shoals and rocks are well marked and the shore line provides an excellent radar target for position checking.

During Summer months, thick fogs present a hazard on this route. Long Island Sound is also a major yachting centre so extreme care must be exercised while transiting this area.

There are several dangers to be wary of when making the passage from New York to Port Jefferson; in order of approach they are:

1. East River and Hell's Gate are areas of strong tidal currents averaging 4.6 knots during ebb tide which set in a Southwesterly direction. Vessels drawing up to 35 ft. may transit Hell's Gate only at Slack High Water. Sluggish handling vessels should arrange for tug assistance through the East River and Hell's Gate.
2. 26-ft. buoy "32A"; usually passed well clear to the South.
3. Cable and Anchor Reef; usually passed to the South.

Port Approaches – Cautionary Advice: (From Block Island) Charts: 13205, 13215, 13209, 12354, 12362.

On approaching Block Island from a Southerly direction, a good radar picture is obtained of the Island's South coast. The RDF station at S.E. Light is also useful.

It is advisable to remain at least 1 mile to the East of Block Island because of the numerous shoals close in shore.

Non-U.S. flag vessels and U.S. flag vessels under registry approaching from Block Island embark Pilot about 2.5 miles South of Point Judith.

U.S. flag vessels under enrolment approaching from Block Island embark Pilot 1.4 miles East of Old Harbour – Block Island.

There are several dangers to be wary of when making the passage to Port Jefferson; in order of approach they are:

Block Island North Reef Buoy "1B1" marks a dangerous shoal and should be passed well clear.

The Race is a narrow channel into Long Island Sound. Strong East to West currents occur during maximum ebb or flood and knowledge of position should be maintained in view of possibility of unusual set. Valiant Rock may be passed on either side. The Race is an extremely popular area for sport fishermen and the area is usually congested with small craft.

Extreme caution should be exercised during the Summer months when transitting through Block Island and Long Island Sound as there is heavy traffic of pleasure craft.

Thick fog is prevalent during Summer months.

Good water is found in Long Island Sound from The Race to Port Jefferson as long as the mid-channel buoys "P1" and "CF" are passed close to, and care is taken so as not to pass North of "28-ft. shoal" buoy.

Vessels headed for Port Jefferson will pass South of "Stratford Shoal" light. Radar is the best navigational aid in this area, also, there are several RDF stations that can be used.

PILOTAGE: Harbour Pilot/Docking Master will board outside of the sea buoy. If at anchor, Docking Master will board at the anchorage.

ANCHORAGE: Anchorage is available North of "Mount Misery" shoal in depth of 80 ft. to 100 ft. Barges are available for lightering from New York. Winter weather conditions with strong winds sometimes hold up lightering operations 2 to 3 days. Vessels with stern anchors can sometimes minimise this delay by making a lee for the barge.

RADIO: Send ETA to Agent 72 hours, 48 hours and 24 hours prior to arrival at Block Island pilot station. Advise max. draft (salt water) in the initial message.

VHF: Pilot: Channel 13, 16 and 18A. Tugs: Channel 19A "KFT 234" 18A. Traffic Control: Channel 13. USCG: Channel 16. Terminal: Channel 13.

TUGS: 3 tugs available from New Haven, 2 single screw diesels of 1,800 s.h.p. and 1,600 s.h.p. and a twin screw boat of 1,800 s.h.p.

TANKERS: Consolidated Petroleum Terminal: Traffic at times may be heavy near the harbour entrance and in the inner harbour. Sand and oil tows, coastal tankers, and the Bridgeport/Port Jefferson ferry may be encountered. Arrangement should be made with the Pilot ensuring that other traffic is not hampering the safe entrance and channel transit.

Vessels start in one hour prior to HW. The entrance between the jetties is made by lining up with the ranges at the head of the harbour. Consideration should be given to a possible cross set. Once inside the jetties, speed is reduced, and the vessel is stopped off the dock. The vessel is then breasted into position starboard side to with the assistance of 1 or 2 tugs. The terminal is located approximately 1.8 miles from the breakwaters on the starboard side of the channel.

Vessels in a light condition, when departing with the assistance of 1 or 2 tugs, are backed and turned off the LILCO dock with the forward draft not exceeding 14 ft.

Shore Facilities: 2×8 in. hoses.
1×16 in. shoreline (3.5 miles long).
Shore booster pumps.

FRESH WATER/FUEL: Bunkers are not readily available; in an emergency, bunkers could be arranged by Exxon Marine, Bayway, N.J. and delivered by barge from New York. Fresh water is available ex berth.

GENERAL: *Gangway:* Ship's gangway is required.

Tides and Depth of Water: The depth of water in the channel determines the safe draft for entering. Agent and Pilot should be consulted as to safe draft. Strong Westerly winds will cause the water level to be lower than usual, and strong Easterly winds will increase the water level. Average range of tide is 6.6 ft.

Oil Pollution: This area is very sensitive to oil pollution, so extreme care should be exercised. In case of an oil spill, consult with Pollution Control Officer and notify U.S. Coast Guard, Terminal Representative and Agent. Visible smoke from ship's stack is also a very critical area of pollution in this port. Spill booms are deployed.
Security: The terminal is fenced but not guarded. Maintaining a gangway watch is recommended.
Ballast/Slop Facilities: There are no dirty ballast or slop facilities in Port Jefferson.
Firefighting Facilities: The terminal is equipped with 2 fire pumps which service 2 fire monitors on the dock. The fire line has the capability to deliver foam. There is a 150 lb. wheeled dry chemical extinguisher, various hand extinguishers, and a 2,000 lb. dry chemical extinguishing system at the head of the dock to cover the hose tower area.

Fire wires should be hung, one forward and one aft, on the offshore side with eyes which can easily be reached by tugs in case of fire. The tanker should have all fire fighting equipment aboard in readiness to combat any fire that may arise.

PORTLAND, Maine: 43.39 N. 70.14 W. **(See Plan)**

DOCUMENTS:
1 Crew List.
1 Passenger List.
2 Stores Lists.
2 Foreign Purchases Lists.
2 Inward Foreign Manifests uniform cargo.
Original Bill of Lading.
1 Form 1300 Master's Oath on entry of vessel.
2 Form 1374 Outward Foreign Manifest.

PILOTAGE: Ship's Agents usually notify Pilot approximately 48 hours in advance of arrival then changes are made at 24 and 12 hours. Pilot boat usually called on Channel 16 and then switched to Channel 11 to continue conversation. Pilot goes aboard ship in vicinity of lightship using ladder on lee side. When weather bad, suggest vessel anchors approximately 1 mile North of lightship.

Portland Pilots Inc. Tel: 774-5623. Docking Pilots: McDuffie Pilots Inc. Tel: 781-3954.

ANCHORAGES:
Anchorage A (General): Beginning at Eastern corner of Grand Trunk Railway Company Pier No. 3; thence approximately 90°, 1,700 yd. to Brooklyn Ledge Buoy 16; thence 330°, 350 yd.; thence 25°, 780 yd.; thence 303°, 750 yd.; thence 254°, 560 yd.; thence 186°, 750 yd.; and thence to the point of beginning.
Anchorage B (General and Quarantine): Beginning at Brooklyn Ledge Buoy 16, thence 58° to Little Diamond Island thence along the S.W. shore to the pier on the Southern end of Little Diamond Island; thence 143°, 1,200 yd.; thence 270.25° to House Island Light; thence along the Western shore of House Island to Fort Scammel Point Light; and thence 329°, 1,620 yd. to the point of beginning. Anchorage B is intended for general purposes, but especially for use by oil tankers and other deep-draft ships entering the harbour at night and intending to proceed to the dock allotted at daylight the following morning, or as soon as practicable. This area also is to be used for quarantine anchorage. Any vessel anchored in this area shall be ready to move on short notice.
Anchorage C: Bounded on the N.W. by House Island; on the North by a line running 90° from House Island Light to Peaks Island; on the East by the Western shore of Peaks Island, by a line running 198° from the Westernmost point on Peaks Island to Cushing Island, and by the shore of Cushing Island to its Westernmost point; and on the Southwest by a line running from the Westernmost point on Cushing Island to Fort Scammel Point Light. Anchorage C is intended for use only by small vessels and for temporary anchorage.
Anchorage D: Southerly and Westerly of a line beginning at Lighthouse Channel Buoy 1; thence 35° to Anchorage Buoy E; and thence 145° to the mainland. Anchorage D is for use only by small yachts and pleasure craft, and small, light draft coastwise freighters.
RESTRICTIONS: No entry restrictions at night. Deep draft vessels brought in on high water only.
MAX. SIZE: Size of vessel restricted to 45 ft. draft in harbour area. No outside installations at port at present.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Boston Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
RADIO: Tugs in Portland Harbour use Channel 07. Vessels arriving at Portland go through radio station in Chatham, Mass., RCA installations, or call station WOU via radio-telephone. VHF Harbour Control at Portland.
VHF: Voluntary reporting system in effect on Channel 13.
TUGS: Tugs join vessel at Spring Point in Portland Harbour. Tugs use own lines at no additional charge. Docking Pilots not supplied by Company but are available.
BERTHING: Tidal conditions govern arrivals and departures. Depth alongside up to 35 ft.
BRIDGES: No undocking on ebb tide through bridge.
STEVEDORES: 4 hours notice on ordering gangs.
MEDICAL: No advance notice required by Agent. 2 hospitals, Maine Medical Center and Mercy Hospital, who take bed patients.

TANKERS: Tankers arriving at Portland Pipe-line, Pier 2, make preparations for 2×10 in. and 12 in. hoses.

Berth	*Depth Alongside*
American Oil Terminal	30 ft. MLW
Chevron Terminal	32 ft. MLW
Portland Pipe-line Pier No. 1	35 ft. MLW
Portland Pipe-line Pier No. 2	48 ft. MLW
Texaco Terminal	30 ft. MLW

Shore Storage: Due to shore storage difficulties the Portland Pipe-line Authorities have requested vessels leaving Venezuelan ports for discharge at Portland to provide the following information in order to avoid ship delays at this terminal:
(a) Vessel's expected time of arrival at Portland.
(b) Quantity and grade of cargo loaded.
(c) In case of split cargoes, intended order of discharge.

The above mentioned information should be radioed to Portland Agent for forwarding to Portland Pipe-line Authorities immediately on sailing from the final Venezuelan loading port.

Report: *General/Anchorages:* Deeply laden vessels will enter Portland through the Witch Rock Channel, passing between Buoys "1" and "2", which mark Witch Rock. Lightly loaded vessels will enter through Willard Rock Channel. All vessels will pass between Portland Head and Cushing Island. The swell usually subsides near Spring Point, allowing the tugs to come alongside. Vessels bound for the Amoco, Exxon, Mobil and Texaco terminals must pass through the South Portland bascule lift bridge which has a horizontal clearance of 98 ft. 2 tugs assist vessels through the lift bridge; one on the starboard bow with good backing line, the other on the starboard quarter. The bridge will not open between the hours of 0700 to 0900 and 1600 to 1800, Monday through Friday. The bridgetender can be contacted on VHF Channel 13; a minimum of 1 hour's notice prior to arrival at the bridge is desired.

Vessels proceeding to Hussey Sound to lighter will be taken by the Sea Pilot through West Cod Ledge and will enter the sound via the channel between Peaks Island and Long Island. Extreme care should be exercised while passing Soldier Ledge, a rock ledge with 40 ft. of water at MLW marked by lighted buoy "6".

Amoco Terminal: The vessel continues approximately 1 mile above the lift bridge where it is turned to port and worked ahead into the berth. Vessels dock starboard side to with a minimum of 12 mooring lines. The terminal prefers synthetic mooring lines. The first lines positioned on the dock are the forward spring lines which are passed as the vessel moves ahead slowly. The pier is a typical wooden finger pier with 2 woodfaced steel pile breasting dolphins. Breast lines are led across the dock to wood pile clusters. Vessels dock at Slack High Water and generally can undock at any time with the assistance of 2 tugs. Upon undocking, the vessel must back into the channel and turn before heading out to sea.

Chevron Terminal: The Chevron Terminal is located in South Portland about 1 mile outside the lift bridge. The berth consists of 2 steel breasting dolphins 40 ft. in diameter which are fendered with wood. The hose rig and manifolds are located midway between the 2 dolphins. Vessels approach the finger pier and are breasted alongside by 2 tugs. Care should be taken not to work the vessel along the pier face. Vessels dock port side to with a minimum of 10 mooring lines. The 2 stern lines lead to 2 mooring buoys. Vessels start in 3 hours prior to HW in order to arrive at the dock at HW. Vessels undock with either 1 or 2 tugs. Mooring lines should be carefully tended as strong Northeasterly winds may cause a vessel to move off the breasting surfaces.

Exxon-Bancroft Martin Terminal: This Terminal is located at the extreme Western end of the Fore River, approximately 1.5 miles beyond the lift bridge and adjacent to a fixed highway and railroad bridge. Vessels transit the Fore River on a rising tide in order to dock at Slack High Water. The vessel approaches the dock slowly, in line with the pier and slightly off of the face to prevent rubbing on the wood fendering. The vessel should be stopped dead in the water and then gently breasted alongside. All vessels dock port side to with a minimum of 11 lines. Stern lines are run to a mooring buoy. Vessels undock with 2 tugs.

Mobil Terminal: This Terminal is a marginal-type berth located on the South bank of the Fore River approximately 1.25 miles above the lift bridge. The dock has 2 breasting cells 160 ft. apart. The cells are concrete capped supported by cylindrical steel pipes. The hose gantry platform is located midway between the breasting cells and is set back 3 ft. from the outer face of the cells. The breasting cells are equipped with hard rubber fixed fendering. The mooring points for head, stern, and breast lines are smaller concrete caps supported by steel pipes. A wood walkway runs the length of the dock connecting the the concrete caps. 2 tugs breast the vessel alongside for a port side to docking. 12 mooring lines are considered the minimum acceptable. Vessels dock at HW. On departure, the vessel is worked astern and then turned off the dock with the assistance of 2 tugs.

Portland Pipe-line Terminal: Portland Pipe-line Corporation operates 2 separate finger piers in South Portland. The Terminal is the Eastern terminus of a pipe-line which carries oil to Montreal, Quebec. Pier No. 1 is the older of the 2 piers. There is a tanker berth on both the East and the West sides of the pier. Vessels dock bow in, starboard side to on the East side and port side to on the West side. On approaching the pier at Slack High Water, vessels are turned to port with the assistance of 2 tugs and are worked into the berth. Forward spring lines are positioned first. 12 mooring lines are recommended. Vessels undock with the assistance of 2 tugs at any stage of the tide.

Pier No. 2 consists of a 975 ft. extension to an older 1,000 ft. finger pier. There is a tanker berth on both the North and the South sides of the pier. Vessels dock bow in, starboard side to on the South side and port side to on the North side. Vessels drawing less than 42 ft. dock at Slack Water. Vessels dock at Slack Water due to the fact that the tide sets across the pier at about 1 knot. Vessels under 80,000 d.w.t. dock with the assistance of 2 tugs; vessels up to 110,000 d.w.t. may require additional tugs. Vessels make a normal approach to the finger pier, are turned to port, and worked slowly into the berth. Forward spring lines are positioned first. 12 mooring lines are considered the minimum acceptable. Vessels undock at any stage of the tide with the assistance of 2 tugs.

Vessels bound for Portland Pipe-line Terminal are usually brought to the inner anchorages, Diamond Island Roads, one tide before their scheduled berthing in order to dock at Slack Water.

Texaco Terminal: The Texaco Terminal is located on the South side of the Fore River directly inside the lift bridge. Vessels dock with the assistance of either 2 or 3 tugs. The vessel must transit the bridge as slowly as possible for it must stop immediately after the bridge. It is then slowly turned slightly to starboard and breasted alongside the pier by the tugs for a port side to docking at Slack High Water. Vessels undock at any time with the assistance of 2 tugs and are turned before proceeding through the bridge outbound. 10 mooring lines are considered the minimum acceptable.

DENSITY: Average density 1024.

FRESH WATER: Available by tug for boilers only at rate of tug hire. Drinking water available at piers.

FUEL: No. 6 diesel oil and blended intermediate fuel oils. Delivery is via barge only and 24 hours notice required.

FIRE PRECAUTIONS: None – except at certain oil piers where information given to Shipmaster upon arrival at pier. Ample fire protection, salt water lines, sprinkler system on pier, local fire department.

GANGWAY/DECK WATCHMEN: Not required.

OPENING/CLOSING HATCHES: Ship's crew open hatches.

CERTIFICATES:

Load-line certificate.
Certificate of Foreign Clearance.
Ship's Safety Certificate.
U.S. Tonnage Tax Certificate of previous trip if available.
Radio Operator's Licence.

CUSTOMS ALLOWANCES: Tobacco, 200 cigarettes per man. Wine and/or Spirits, 1 bottle per person.

CARGO GEAR: No additional cargo gear necessary.

IDENTIFICATION CARDS: Form I-95 must be filled-out on arriving unless seaman has had a prior one made out for a previous arrival on same ship.

CONSULS:

Finnish: Frank W. Bjorklund, 163 Main Street, Norway, Maine.
French: Dr. Paul O. Proudian, 776 Main Street, Westbrook, Maine.
Italian: Dr. Domenico A. Santoro, 43 Deering Street, Portland, Maine.
Norwegian: Allan Kjos-Hanse, 30 Mayer Road, Portland, Maine, Vice-Consul.
Panamanian: Mary Navarro de Cerrillo, Lafayette Town House, Portland.
Swedish: Martin Johnson, Vice Consul, 443 Congress Street, Portland.

REPAIRS: Repair facilities for all types of machinery available.

DRY DOCKS: 3 basins divided into 7 berths which can handle a vessel up to 455 ft. long and 62 ft. wide (not currently activated). Also 3 other smaller marine slipways.

80,000 ton lift floating dock. Depth over keel blocks 14 m. Length 257 m. Clear width 40.7 m.

New Bath Ironworks: New dry dock in operation.

Specifications:		
	Clear Width:	134 ft.
	Draft:	46 ft. over 4 ft. keel blocks
	Max. Lift:	90,000 long tons
	Dock Length:	747 ft. without outriggers 797 ft. with one outrigger.

SURVEYORS: National Cargo Bureau, Tel: 781-4467.

REPATRIATION: Arrangements must be made with Agent in advance by telegram.

AIRPORT: Portland Municipal Airport 3.5 to 4 miles distant.

HOLIDAYS: New Year's Day; Washington's Birthday; Patriots Day; Memorial Day; Independence Day; Labour Day; Thanksgiving Day; Christmas and Veterans' Day. Possible to get gangs to work all days except Labour Day and Christmas.

POLICE/AMBULANCE/FIRE: Police Tel: 773 – 5651; Ambulance Tel: 772 – 5463; Fire Tel: 772 – 6531.

TELEPHONE: Arrangements can be made to have phone put on ship, but most docks have pay phones.

GENERAL: Discussions underway with Coast Guard and other officials to install fixed lighthouse stations to replace lightships at entrance.

DEVELOPMENTS: Plans under way for redevelopment of waterfront. Plans call for deepening Fore River from 35 ft. to 45 ft.

AUTHORITY: State of Maine, Department of Transportation, Ports and Marine Transportation Division, Station No. 16, Augusta, Maine 04333. *Tel:* (207) 289-2841. *Contact:* R. Elder, Director.

Port of Portland, City Hall, Portland, Maine 04101. *Tel:* (207) 775-5451. *Contact:* Thomas Valleru, The Waterfront Director.

PORTLAND, Oregon: 45.30 N. 122.40 W. (See Plan)

PORT LIMITS: The seaward boundary of the Port of Portland is Astoria, 96 miles N.W. of Portland.

DOCUMENTS:

3 Cargo Manifests.
3 Store Lists.
3 Crew Curio Lists.
3 Crew Lists.
1 Clearance from Last Port.
1 Tonnage Tax Certificate.
1 Copy of Vessel's Register.
1 Itinerary of Vessel, port by port.

PILOTAGE: Compulsory. ETA Bar Pilot Astoria at least 12 hours before arrival giving deepest draft. Bar pilotage covers from sea to the Port of Astoria, river pilotage covers from Astoria to Portland. They change from launch while steaming in channel off Astoria buoy No. 37.

Warning: Due to heavy swells on bar during stormy Winter conditions, crossings may be temporarily suspended, therefore Masters should attempt earliest VHF radio contact on Channel 16 with Pilots or coastguard station "Cape Disappointment" for latest bar conditions.

During Summer months Masters should use extreme caution in poor visibility as many small fishing craft will be encountered near mouth of Columbia River.

Also see "General – Pilotage" before first U.S.A. port (Albany).

ANCHORAGES: Vessels may anchor to await berths at various locations on the Columbia River. Usual spots are at Tongue Point Astoria, Longview and at Vancouver, Washington.

RESTRICTIONS: All vessels Masters or their Agents to obtain Coast Guard clearance at least 24 hours before arrival. Captain of Port may impose movement restrictions if any hazardous cargo. Under 36 ft. draft no movement restrictions, 36 ft. and over up to maximum permissible draft of 39 ft. on Pilot's recommendations. Bar Pilots will take vessels up to 45 ft. draft out on HW.

No size restrictions length and beam, however, Corps of Engineers maintain only 600 ft. wide channel, therefore, deep laden vessels over 600 ft. in length to use extreme caution when turning.

MAX. SIZE: No restrictions length and breadth. Depth at Columbia River Bar 55 ft. River channel to Portland/Vancouver maintained at 40 ft. by 600 ft. Seasonal tidal effect up to 3 ft. at Portland.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Seattle Quarantine Station.

Master to radio with ETA state of crew health noting any sickness. Agent will report sickness to Seattle Quarantine Station for clearance instructions.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Route ETA cables through KLBITT Seattle, Washington.

Marine Exchange of the Columbia River District (Merchants Exchange): 24 hour marine reporting. Call sign "KDO 759". Call on Channel 16 VHF. Working (Astoria – Longview and 50 miles out to sea) on Channel 9 and (Longview – Portland) on Channel 11 and 18A.

Marine Exchange (Tel: 503 – 228 – 4361) pass messages to vessels from Agents and vice-versa. Coverage is good in river and 50 miles to seaward.

TUGS: Tugs normally join vessel at designated berth. Tugs' lines used at no charge.

BERTHING: The port operates 5 public ocean cargo terminals containing 28 deepwater berths, including 5 container berths with 6 high-speed container cranes. Present depths alongside berths is 40 ft. min. at MLLW.

There are general cargo berths and berths for commodities which require special handling. Port facilities include 21 transit sheds, and 5 warehouses with 2.2 million sq.ft. of sprinkler protected storage area.

BRIDGES: No arrival times designated if coming from sea and in excess of 750 tons gross. Departures regulated, with bridge closures during peak traffic flow (0700 to 0900 hrs. and 1615 to 1815 hrs.) unless permission granted by Harbour Master.

SPECIALISED CARGO HANDLING FACILITIES: As well as the 6 container cranes, there are 6 Whirley cranes, a 150 ton shear leg crane and a 175 ton mobile crane, largest of its kind on the Pacific Coast.

At Terminal 2 is a 1,341 ft. container/general cargo pier with a 40 ton and a 50 ton straight line crane and 2×65 ton gantry cranes. Terminal 2 contains a Roll-on/Roll-off berth. Pier has a 25 acre open storage yard with rail and truck service. 4 straddle carriers, capable of stacking 20 ft. containers 3 high, or 40 ft. 2 high, serve the yard. Pierside warehouse and container freight station 90,000 sq.ft. Terminal under re-development. An additional gantry is to be installed.

At Terminal 4 there is an 8.1 million bushel capacity grain elevator (Cargill), with box car tipper, truck dumper and barge unloading facility. Log dock is equipped with 2 Whirley cranes. There is a Dravo bulk unloader with digging capacity of 900 t.p.h. Tanks are available for special cargoes such as petroleum, molassses, tallow and ore concentrates. Also available is a 120 acre open storage area and floating dock for import of automobiles. Ro/Ro ramp to be built in order to accommodate large vessels. Also see "Developments".

The Terminal 5 elevator is the most modern grain outloading facility in the lower Columbia River and is operated under sub-lease by Columbia Grain Inc.

The elevator has a storage capacity of 1.5 million bushels and is the fastest on the river, with an outloading capability of 2,100 tonnes/p.h. The facility can receive grain by rail, truck and barge. The barge leg operates at 1,000 t.p.h., trucks are unloaded at 225 t.p.h. and about 65 railcars can be unloaded in an 8-hour shift.

Terminal 6 has a container pier, length 1,800 ft., with 3×50 ton straight line cranes and a 60,000 sq.ft. container freight station. Also a 60 acre open storage area and floating dock for import of automobiles.

Bunge Corp: Depth alongside 40 ft. Storage Capacity: 8,000,000 bushels. Receiving Capacity: Ex-barge 500 t.p.h.; ex–rail 750 t.p.h. and ex-truck 750 t.p.h. Loading Capacity: 1,800 t.p.h. (1 belt and 5 spouts).

Louis Dreyfus: Depth alongside 42 ft. Storage Capacity: 1,500,000 bushels. Receiving Capacity: Ex-barge 600 t.p.h.; Ex-rail 350 t.p.h. Loading Capacity: 1,200 t.p.h. (2 belts and 6 spouts).

STEVEDORES: Allocation for gangs Monday to Saturday must be confirmed at 1100 hrs. to longshore hiring hall. Allocation for gangs Sunday and Monday made at 1100 hrs. Saturday for both day and night gangs. Same procedure applies to allocation of night gangs, but night gangs may be cancelled by 1400 hrs. in afternoon if night gangs are to work.

MEDICAL: Any type medical treatment provided and hospital facilities available.

TANKERS:

Berth	Max. Size Vessel Length	Draft
Shell Oil Company	575 ft.	32 ft.
Standard Oil	660 ft. – 700 ft.	35 ft.
Texaco Inc.	650 ft.	30 ft.
Phillips Petroleum Co.	No maximum	30 ft.
Time Oil Co.	600 ft.	38 ft.
Mobil Oil Corp.	550 ft.	31 ft.
Richfield	600 ft.	30 ft.
Union Oil Co.	550 ft.	30 ft.

DENSITY: Fresh water at all times.

FRESH WATER: Available at all berths delivered through pier-side connections.

FUEL: Viscosity grades of B and lower. No advance notice required. Barging essential. Also see "Notice" No. 2.

FIRE PRECAUTIONS: Fire precautions respecting tankers administered by U.S. Coast Guard, which enforces shipboard regulations under the Code of Federal Regulations, Part 46, Sub-Part D, Sections 20 to 40; the Police Harbour Patrol, which controls port movements, boards vessels to warn Master regarding harbour regulations, including spilling of oil, etc.; Fire Marshal exercises jurisdiction regarding fire regulations at shoreside facilities serving tankers.

All vessels to have towing cables rigged fore and aft on the offshore side. Cables to be made fast with the eye 1 m. above the water.

GANGWAY/DECK WATCHMEN: Option of vessel Owner/Agent and available through private firms.

OPENING/CLOSING HATCHES: While ship at dock, opening and closing is work of longshoremen. Ship may open or close own hatches while underway.

CERTIFICATES: Registered tonnage certificates. Certificate of Financial Responsibility (all details must agree with vessel's register).

CARGO GEAR: Valid cargo gear certificate required, acceptable to U.S. Bureau of Labor Standards.

IDENTIFICATION CARDS: Immigration Dept. requires form No. I-95A and No. 31 (Repatriation). Changes can be effected at any U.S. Immigration Office.

CONSULS: The following countries are represented in Portland:

Austria
Belgium
Costa Rica
Denmark
El Salvador
Finland
France
Germany F.R.
Ghana
Great Britain
Iceland
Italy
Japan
Korea
Lebanon
Mexico
Netherlands
Nicaragua
Norway
Panama
Peru
Senegal
Sweden
Venezuela

REPAIRS: All types of deck and engine repairs possible.

DRY DOCKS: 4 floating docks, largest 982 ft.×188 ft. clear width, with lift capacity of 81,000 long tons.

REPATRIATION: Arrangements possible for crew changes or other repatriation.

AIRPORT: Airport 10 miles distant, served by 17 regularly scheduled passenger airlines with direct service and/or connections domestically and world wide. 13 cargo carriers also serve the area.

TIME: GMT minus eight hours. Daylight Saving Time becomes effective annually on the last Sunday in April through the last Saturday in October.

HOLIDAYS: *New Year's Day; President's Day (Feb. 21st); Memorial Day (May 30th); *Independence Day (July 4th); *Labour Day (first Monday in September); Veterans' Day (Nov. 11th); Thanksgiving Day, *Christmas Day (Dec. 25th), State-wide Election Days. Other legal holidays may be proclaimed by state or national authority. When holiday falls on Sunday, the following Monday is observed as holiday. Longshore work performed on any of above listed days is overtime, which is one and a half time rate. Days marked (*) are stop-work days, i.e. no ships will be worked. This also applies to July 5th, which observed locally on unilateral basis.

POLICE/AMBULANCE/FIRE: Police Tel: 226-7551; Fire Tel: 232-2111; Ambulance: provided by several private firms, but can be obtained through police or fire number.

TELEPHONES: Available by order from terminal superintendents at $5.00 connection charge.

SERVICES: All services available such as compass adjusting, major or minor repairs either with work barges or at ship repair berths; lay berths available; charts available from private companies; all chandlery supplies available.

SHORE LEAVE: Crew members permitted ashore except where vessel has made first arrival from Communist-controlled port.

NOTICE No. 1:

Custom of the Port Rules and Regulations:

Pertaining to bulk grain and other bulk commodities customarily handled through regular grain elevators, recognised as the practice in the Columbia River District by the Merchants Exchange. It is not the intent of the Rules and Regulations to supersede the contractural relationship between vessel and shipper or charterers, but rather state customary trade practices for the purpose of facilitating commerce under conditions where the contractural arrangements do not cover specific local conditions, in which case these "Custom of the Port" rules and regulations will apply. These rules are applicable to vessels loading in the Columbia River District, which shall be considered as one port and includes grain berths from Astoria, Oregon, to Portland, Oregon, including Longview, Kalama and Vancouver, Washington. Loading berth(s) to be declared during regular business hours at least 24 hours before arrival at the Columbia River.

Rule 1: Subject to the exceptions enumerated below, vessels shall be assigned to a berth(s) in the order in which they file with the elevator(s) as ready to load. A vessel shall be considered ready when it has obtained Certificate of Readiness issued by the National Cargo Bureau, Inc., and an official certificate of stowage examination from the U.S. Department of Agriculture, Federal Grain Inspection Service, Inspection Division, stating the vessel is completely fit in all compartments in which it is intended to receive cargo.

EXCEPTIONS:

(a) In assigning berth to vessels at any elevator, liners shall be given preference over other vessels, except that any tramp vessel whose allowed loading laytime has expired shall assume the status of a liner vessel for purposes of berth assignment. (For the purpose of these rules, the term "Liner" is defined as a vessel sailing under an advertised Pacific Coast schedule and operated by a line maintaining regular sailings from any Pacific Coast port to named ports, and on which the total quantity of all grain to be loaded shall not exceed one-half of the total deadweight tonnage of the vessel.) A vessel which arrives and presents Notice of Readiness to load in accordance with this rule, but which cannot attain "Liner" status because the allowed loading laytime is not defined in the contract of affreightment, will not lose its berthing priority to a tramp vessel with later Notice of Readiness, that has gone on demurrage.

(b) The elevator may alter the turn of the vessels whenever confronted with the urgent necessity of receiving or loading any particular grade of grain, or to facilitate conditions at the elevator. When requested, elevator operator to supply written confirmation of such loading alteration as authorised under this rule and/or applicable tariff to owner's or charterer's representative.

Rule 2

Normal working days are Monday through Saturday from 0800 hrs. to 1700 hrs. (exceptions are Sundays, legal holidays, and July 5th). Refer to notes below.

(a) July 5th – while not a legal or longshore holiday, has not been worked by Pacific Coast Longshoremen since 1935, and is considered a holiday.

(b) Overtime – is all work over 6 hours in one day, and work between 1700 hrs. and 0800 hrs., Monday through Friday, and all work on Saturdays, Sundays, legal holidays, and overtime days as defined in the Pacific Coast Longshore Contract.

(c) Awaiting vessel – where the same holiday is observed on different days in adjoining states, a waiting vessel not knowing where it could work will observe (for laytime purposes) the holiday in the state that it first works.

Rule 3

Should the vessel refuse to work during a normal working day, or beyond a normal working day when so required in writing by the elevator in accordance with its published tariff, it shall lose its turn and vacate the berth in favour of the next vessel that is willing to work overtime. The vessel so losing its turn shall be entitled to berth as soon as the berth is next available thereafter. Should any vessel refuse to vacate its berth when ordered to do so under the above circumstances, the elevator may effect the removal of such vessel at the vessel's risk and expense.

Rule 4

The Board of Directors of the Merchants Exchange will, on an annual basis, select an abitrator for the purpose of arbitration or interpretation of the Rules and Regulations set forth herein.

Requests for arbitration or interpretation of these rules shall be submitted in writing stating the parties involved and outlining the facts in brief detail to the Manager of the Merchants Exchange. The Manager of the Merchants Exchange and the arbitrator will select the time and place for the arbitration. Failure of the parties named in the abitration to respond or acknowledge the request for arbitration will require the arbitrator to rule on the facts as presented by the requesting party.

Any requests for revisions of these rules must be submitted in writing to the Chairman of the Custom of the Port Rules and Regulations Committee with a copy to the Manager of the Merchants Exchange.

Arbitration fees payable to the Merchants Exchange shall be $50 plus any extra ordinary charges in connection therewith. The above fee shall be paid by the party requesting the arbitration or interpretation.

NOTICE No.2: Issued by the Harbour Master in August, 1980.

SUBJECT: Discontinuing Ship Repairs at Grain and Oil Docks, and Refueling at Grain Docks.

We feel after considerable deliberation that ship repair at Oil and Grain Docks is an unnecessary hazard and should be discontinued at once.

The practice of refueling ships at Grain Docks also would be considered taking an unnecessary risk, and as such, will be stopped.

After surveying numerous longshoremen and Grain Operators who reaffirmed this position, we are hereby notifying the concerned contractors that this will be our policy from now on.

DEVELOPMENTS: New coal export terminal under construction. It is expected to handle a 60,000 d.w.t. vessel in 12 hours. Depth alongside 40 ft.

A new bulk export facility is to be constructed at Terminal 4. Completion expected late 1987.

AUTHORITY: Port of Portland, P.O.Box 3529, 700 Northeast Multnomah Street, Portland, Oregon 97208. *Tel:* (503) 231-5000. *Telex:* 910-464-5105. *FAX:* (503) 231-5332. *Cables:* Portofport. *Contact:* Lloyd Anderson, Executive Director.

AGENT: Norton Lilly Intl., 200 S.W. Market Street, Suite 860, Portland, Oregon 97201. Tel: (503) 224-6612. Telex: 6839232/TWX 910-464-1589.

PORT LAVACA/POINT COMFORT, Texas: 28.40 N. 96.35 W. **(See Plan)**

DOCUMENTS:
2 Cargo Manifests.
2 Stores Lists, Form CF1303.
2 Crew's Effects Declaration, Form CF1304.
1 Clearance from last Port.
Vessel's Register, tonnage, tax receipts, etc.
2 Copies Crew List.
2 Copies Passenger List.

PILOTAGE: Ship's Agents usually notify Matagorda Bay Pilots as to vessel's ETA. Pilot boat can be contacted on VHF Channel 16, then switch to Channel 26 to continue conversation. Pilot boards at buoy 1-A at position Lat. 28° 23′ N., Long. 96° 17′ W.

ANCHORAGES: Marked on chart of Matagorda Bay and approaches.

RESTRICTIONS: Vessels may enter any time day or night. Entrance channel depth 38 ft. Bay Channel depth 36 ft.

MAX. SIZE: Public Dock – max. length approximately 750 ft. Draft controlled by channel depth of 38 ft.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Galveston Radio (ITT Mackay Marine) and Port Lavaca Marine operator can be contacted on VHF Channel 16, then switch to Channel 26 for continued conversation.

TUGS: 1 tug available joining vessel shortly before arriving at berth.

BERTHING: Vessels berth at Public Dock.

STEVEDORES: Boyd-Campbell & Co. and Dix Shipping Company of Corpus Christi, Texas. At Alcoa's Dock all plant labour is used.

MEDICAL: No advance notice required. Several clinics and 1 hospital available in Port Lavaca.

DENSITY: Average density is 1010/1012.

FRESH WATER: Fresh water available alongside berth.

FUEL: Fuel is available from VAL-CAP located in Port Lavaca. Can be delivered by barge or truck.

OPENING/CLOSING HATCHES: At Public Dock this is done by stevedores. At Alcoa Dock this is done by ship's crew.

CERTIFICATES: Load line, foreign clearance, safety equipment, financial responsibility (oil pollution), tonnage tax receipts, will be required.

IDENTIFICATION CARDS: Immigration Crew Landing Permit I-95 required for each man.

CONSULS: Only Norwegian Vice-Consul Tel: 512-987-2311.

REPAIRS: Only minor repairs possible. No dry docks.

REPATRIATION: Arrangements are possible but preferably should be accomplished in larger ports.

AIRPORT: Nearest airport 20 miles at Victoria, Texas, served by Texas International only, Corpus Christi Airport about 90 miles; Houston Airport about 150 miles.

TIME: Central Standard Time during Winter (GMT minus 6 hours). Beginning last Sunday in April until last Sunday in October, Daylight Saving Time (clocks are moved ahead 1 hour).

HOLIDAYS: All holidays observed by contract with ILA. See "Houston".

POLICE/AMBULANCE/FIRE: Police Department, Fire Department and Ambulance Service, Tel: 911.

TELEPHONES: Telephones are available ashore only. Telephone booth on Public Dock.

DEVELOPMENTS: Plans for lengthening dock and another warehouse are now being considered.

AUTHORITY: The Port of Port Lavaca/Point Comfort, The Calhoun County Navigation District, P.O.Box 397, Point Comfort, Texas 77978. *Tel:* (512) 987-2631. *Contact:* Cheryl Gray, Port Manager.

Private Dock owned by Aluminium Company of America with its Agent being Alcoa Steamship Company Inc., Point Comfort.

PORT NECHES, Texas: 30.00 N. 93.57 W.

DOCUMENTS, PILOTAGE, RADIO, etc.: Refer to "Port Arthur".

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

TUGS: Meet vessel in Neches River before arriving at berth. Normally 2 tugs used for docking, 1 for undocking.

BERTHING: Texaco Chemical Co. (Jefferson Dock) Chemical Co.: Distance from sea 30 miles, depth at berth 36 ft. Max. LOA 800 ft. Max. draft 32 ft.

Texaco Terminal: Distance from sea 34 miles, depth at berth 38 ft. Max. LOA 810 ft.

MEDICAL: All facilities available.

DENSITY: Fresh water.

FRESH WATER: Available by barge.

FUEL: Bunker C not available ex-wharf at Texaco Terminal, only by barge from Port Arthur or Beaumont.

GANGWAY/DECK WATCHMEN: Not required unless crewmen detained by Immigration.

CUSTOMS ALLOWANCES: 300 cigarettes and 1 quart wine or spirits for each man.

IDENTIFICATION CARDS: Foreign crew only require Immigration Landing Permit.

CONSULS: Nearest at Houston.

REPAIRS, DRY DOCKS: See "Port Arthur".

AIRPORT: 15 minutes from docks. Several flights a day 0600 hrs. – 2200 hrs. to Houston International Airport.

AUTHORITY: *Operators:* Texaco Chemical Company, P.O.Box 430, Bellaire Texas 77401, U.S.A. *Tel:* (713) 666-8000 *Contact:* Peggy Goolsey, Marine Co-ordinator.

PORT ST. JOE, Florida: 29.49 N. 85.19 W.

DOCUMENTS:

All documentation must be on United States forms.

At least: 3 Passenger Lists.
3 Crew Lists (1 for visa crew list).
3 Curio Lists.
3 Stores Lists.
2 Complete Manifests.
Clearance Papers from last port.

PILOTAGE: Apply for Pilot through ship's Agent – address is "Port St. Joe, Pilots" and advance ETA 18 hours. "VHF – Channel 16". Pilot boat station is at Sea Buoy, Port St. Joe only and location of anchorage for vessel awaiting a Pilot is 1 mile West of Sea Buoy.

ANCHORAGES: Local harbour charts indicate safe anchorage.

MAX. SIZE: Draft 32 ft.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Call sign WLO, Mobile, Alabama.

TUGS: None presently available.

STEVEDORES: ETA must be received by 1800 hrs. in order to have gangs at 0800 hrs. following day.

MEDICAL: No notice required. Hospital facilities available. Inoculations required same as public health U.S. Government requirements.

TANKERS: Discharge lines 8 in. No residue discharge allowed. 2 tanker berths 32 ft. draft.

DENSITY: Salt water – heavy concentration.

FRESH WATER: Available in unlimited quantities by hose connection from dock to ship, 1.5 in. to 2.5 in. size at 60 p.s.i.

GANGWAY/DECK WATCHMEN: Only when requested by ship.

OPENING/CLOSING HATCHES: Work can be performed by either stevedores or crew.

CUSTOMS ALLOWANCES: 1 carton of cigarettes per week per crew member permitted. Further allowances would depend on circumstances. Wine and/or Spirits 1 bottle per crew member as allocated by Customs.

CARGO GEAR: Must be in compliance with "U.S. Government Longshoremen Safety Codes".

CONSULS: None.

REPAIRS: None.

DRY DOCKS: None.

REPATRIATION: Can be accomplished by Agent and Immigration but should be accomplished in larger ports if possible.

AIRPORT: Served by regular airlines. (Southern Airways, National Airways). 6 combined flights a day. Distance 40 miles.

TIME: Standard Time GMT minus 5 hours. GMT minus 4 hours Daylight Saving Time from first Sunday in May to last Sunday in October.

HOLIDAYS: *No Work Holidays:* No work performed New Year's Day, Fourth of July, Labour Day, Christmas Day, or December 24th & December 26th, and Easter Sunday, except handling of mail, baggage and perishables (except bananas) or unless a ship is in distress, such as fire or leaking bottom, or, other causes that would damage cargo or vessel. In event work done on New Year's Day, Fourth of July, Labour Day, Christmas Day, December 24th & December 26th, or Easter Sunday, rate of pay for such ship work shall be double the normal time rate. Should above holidays fall on Sunday, double time will be paid. Following Monday will be paid at time and one-half.

Working Holidays: Armistice Day, Thanksgiving Day and Memorial Day are to be paid for at overtime rate – one and one-half times straight-time rate. Should any of above holidays, except Sunday fall on Sunday, the following Monday will be observed.

POLICE/AMBULANCE/FIRE: Police Tel: 229-8265; 227-4526; Ambulance Tel: 227-1115 (Comforter), 277-1818 (St. Clair), 229-8111; Fire Tel: 227-1115.

TELEPHONES: Available for placing aboard.

GENERAL: In sending ETA when ship is going to arrive over weekends (Saturday and Sunday), an ETA notice should arrive prior to 1700 hrs. Friday.

SHORE LEAVE: Shore leave allowed when cleared by Immigration.

REGULATIONS: Normal working hours of longshoremen from 0800 to 2230 hrs. only, 7 days a week.

DELAYS: Only when due to port congestion.

AUTHORITY: Port St. Joe Port Authority, P.O.Box 280, Port St. Joe, Florida 32456. *Tel:* (904) 227-1111. *Contact:* George Tapper.

PORT SAN LUIS, California: 35.10 N. 120.45 W. **(See Plan)**

ANCHORAGE: The best anchorage in the Harbour is in the starboard side, coming from the sea, being the area between No. 3 Pier and the second, Union Oil Terminal Pier. Anchorage be outside of the existing mooring area and the holding ground is primarily sandy bottom.

APPROACHES: The approach channel, directly off the end of the Harbour District's Pier is an entrance channel, which is unlit and identified by large green or red buoys.

The tanker channel runs North/South to Pier No. 2 (Union Oil) and small vessels using Pier No. 3 (Harford) run a course of approx. S.E. – N.W.

MAX. SIZE: Tankers up to 750 ft. length and 26ft. draft.

48,000 d.w.t. tankers may not use Pier No. 3 (Harford). Vessels wishing to use Pier No. 3 must give prior notice in writing, except commercial fishing vessels.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Los Angeles Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
RADIO: Vessels should contact Union Oil Company through Marine Operator. "Walkie-talkie" sets used for communication with terminal. VHF station KTD 411, Channels 10 and 16.
VHF: Harbour Office, call sign "KYZ 664", on VHF Channel 16 throughout 24 hours, working Channels 10 and 12.
TANKERS: Tanker berths only at Union Oil Company Pier. Vessels tie off pier at Berth No. 4. Depth alongside 32 ft. MLW.

1×12 in. and 1×16 in. load/discharge lines. No ballast discharge allowed.
DENSITY: Salt water, 1025.
MEDICAL: Services available.
FRESH WATER: Available.
FUEL: The Harbour District maintains and operates a diesel fuel facility, capacity 12,000 gallons. The facility is at the end of the District's 1,400 ft. pier. Limited use restricted to small vessels up to 300 d.w.t.
CONSULS: Nearest consuls situated at Los Angeles and San Francisco.
REPAIRS: Facilities available for all vessels.
AIRPORT: County Airport, San Luis Obispo, situated 12 miles distant. 6 flights daily to Los Angeles and to San Francisco.
HOLIDAYS: Christmas and New Year.
GENERAL: Port San Luis is an official Port of Entry with U.S. Customs. The Port Director is on duty Monday to Friday from 0900 hrs. to 1600 hrs.

There is a boat yard with a 50 ton mobile hoist.
WEATHER: The mean tidal range in San Luis Obispo Bay is 3.6 ft., the Spring range is 5.3 ft. and the maximum range is approximately 9.8 ft. The highest observed tide was 7.5 ft. above MLLW mark in January, 1948. The lowest tide of −2.3 ft. MLLW mark occured on January 7th, 1951. Tidal level above the MHHW or MLLW will occur approximately 20% of the time during severe storms. The existing breakwater gives partial protection from waves approaching from the Western part of the San Luis Bay. The bay is exposed to open sea from the South to Southwest. Northwesterly winds are predominant, except during the Winter months, October through April, when these storms from the South generate waves that approach from the S.W. to S.E. The magnitude of the surge is usually less than 0.5 ft. However, 1 ft. waves are common.

The prevailing wind is from the N.W. and averages 5 to 15 knots and, during a Southerly storm, can go up to 60 knots.

The climate and weather are typically mild and favourable. The rainy season, including the storm season, is generally from November 15th to April 15th. Occasionally, brisk winds or fog make it temporarily difficult to navigate within the Port. Rain and heavy winds are not usually experienced at other times of the year. Normally, the temperature is from the low 50's to the high 70's.
AUTHORITY: Port San Luis Harbour District, Pier No. 3, P.O.Box 249, Avila Beach, California 93424. *Tel:* (805) 595-2381 *Contact:* William S. King, Harbour Master. J. K. Elder, Assistant Harbour Master.

PORTSMOUTH, New Hampshire: 43.03 N. 70.45 W. **(See Plan)**

PILOTAGE: Pilot boards at entrance.
TUGS: The Port of Portsmouth is serviced by 3 regular tugs, one of 1,200 h.p. and two of 1,600 h.p. operated by the Portsmouth Navigation Division of the Central Wharf Towboat Company, Inc. Tel: 1-603-436 1209 (radio frequency 1316). Additional tugs are available in the area if needed.

The rates for moving vessels from the anchorage (1 mile South of Sea Buoy KR2) to berths in the harbour vary according to distance, conditions and tonnage of vessels. Tonnage referred to is s.d.w.t. or Coastwise, whichever greater.
BERTHING:

New Hampshire Port Authority:

Operator:	J. T. Clark & Son of N.H. Inc. Tel: (603) 431-8500.
Location:	3 miles from Outer Anchorage (Buoy KR2).
Depth at Dock:	35 ft. (MLW).
Type of Pier:	Length 600 ft. Concrete and steel pile with precast concrete deck.
Products Handled:	General cargo, bulk and containerised.
Dry Storage:	50,000 sq.ft. in two sheds.
Dockside:	Potable water, power, telephone and marine bunkers. Modern fork-lift trucks, bucket loaders, tractors and heavy lift cranes are permanently stationed at the facility to prevent any delays in servicing all types of vessels. The 4 cranes range in size from 35 tons to a 165 ton mobile container crane. Additional mobile cranes of 150 ton capacity are readily available. A certified weighing system is located in the centre of the freight marshalling area for easy access to trucks and containers entering or leaving the terminal.

Fuel Storage Inc.:

Operator:	Dorchester Sea-3.
Address Terminal:	Avery Road, Newington, N.H. 03801. Tel: (603) 431-5990.
Office:	144 Washington Street, Portsmouth, N.H. 03801. Tel: (603) 436-6225.
Type of Pier:	Steel piled cells offshore 125 ft.
Depth Alongside:	38 ft. (MLW).
Normal ship side to dock:	Port.
Line Handling boat required:	Motorised shore bollards.
Access to vessel (for stores and repairs):	Trucks to shoreside, cart or hand to shipyard.
Product handled:	LPG.
Size and number of pipe-lines:	16 in. liquid line, 8 in. vapour return.
Bbls. per hour Discharge capacity:	12,420 bbls.p.hr.
Maximum vessel dimensions:	59,000 c.b.m.
Storage capacity:	400,000 bbls.
Other dock users:	Belcher Oil, Dorchester Sea – 3 Products Inc., U.S. Government, Global, Trimont International, Cyro.

Also see "Shipmaster's Report".

Simplex Wire & Cable:

Operator:	Simplex Wire & Cable.
Address:	Old Dover Road, Newington, N.H. 03801. Tel: 436-6100.
Type of Pier:	T-Shape (permanent).
Depth Alongside:	28 ft. (MLW).
Normal ship side to dock:	Port (bow upstream).
Line handling boat required:	Yes.
Access to vessel (for stores and repairs):	Yes.
Product handled:	Ocean cables.

Public Service Co. of N.H. Schiller Station:

Operator:	C. H. Sprague & Son.
Location:	1.5 miles above the Interstate Bridge.
Distance seabuoy to dock:	7.1 miles.
Controlling depth in approaches:	35 ft.
Controlling depth at dock – MLW:	37 ft., ledge bottom.
Rise and fall of tide:	8 ft.
Docking and undocking conditions:	Docking is restricted to a high water operation – Pilot starting ship in from anchorage area at high water only. Undocking: Low water slack at the dock or 1 hour before high water slack at the dock.
Length of dock and construction:	700 ft. with dolphins. Concrete pile, concrete decked T-head wharf with a 100×20 ft. approach.
Tugs and linehandlers:	2 or 3 tugs used to dock and undock. Terminal personnel used as linesmen.
Bunkers:	Available through 6 in. line at 2,000 bbls./hr.
Water:	Supplied through 2.5 in. line.

C. H. Sprague & Son Co., Newington Terminal:

Operator:	C. H. Sprague & Son Co.
Address Terminal:	Old Dover Road, Newington, N.H. 03801. Tel: (603) 431-5131.
Office:	One Parade Mall, Portsmouth, N.H. 03801. Tel: (603) 431-1000.
Type of Pier:	Steel piled cells (2) and mooring dolphins (3) Offshore 300 ft.
Depth Alongside:	36 ft. 6 in. (MLW).
Normal ship side to dock:	Port.
Line handling:	Motorised capstans on all dolphins. Lines handled by Sprague personnel.
Lines:	6-18 depending on size of vessel.
Access to vessel (for stores and repairs):	5 ton vehicle or less to ship side, 5 ton vehicle or more, cart or hand to ship side.
Products handled:	Kerosene, diesel fuel, No. 2 home heating oil.
Size and number of pipe-lines:	1×16 in., 1×14 in., 3×10 in., 1×8 in., 1×6 in.
Discharge Rate:	7,000-20,000 bbls./hr. (varies on product and tank size).
Max. vessel size:	700 ft. overall length.
Storage capacity:	1,200,000 bbls.
Dockside:	Potable water, pay telephone, marine bunkers (light oil only).

Public Service Co. of N.H. Schiller Station:

Operator:	Mobil Oil Corp.
Address:	Gosling Road, Newington, N.H. 03801.
Depth Alongside:	34 ft. (MLW).
Normal ship side to dock:	Port.
Access to Vessels (for stores and repairs):	Limited.
Products handled:	Gasoline and distillates.
Size and number of pipe-lines:	Various.
Discharge capability of bbls.:	6,000 bbls.p.hr.
Average distance to storage tanks:	Tank farm adjacent to dock.

Gold Bond Building Products Division of National Gypsum Company:

Operator:	Gold Bond Building Products.
Address Plant:	Freeman's Point, Portsmouth, N.H. 03801. Tel: (603) 436-4840.
Mailing:	P.O.Box 270, Portsmouth, N.H. 03801.
Type of Pier:	2 circular marine cells, 40 ft. dia. at shore side.
Depth alongside:	40 ft. (MLW).
Normal ship side to dock:	Port.
Line handling boat required:	Motorised shore bollards.
Access to vessel (for stores and repairs):	Trucks to shoreside.
Product handled:	Gypsum ore through a conveyor system designed for self-unloading ships.
Other Dock Users:	Northeast Petroleum Corp. N.H. Trading Corp.

BRIDGES: *Bridge Clearances:*
Memorial Bridge (lift): Horizontal 260 ft., vertical 150 ft.
ME.-N.H Bridge (lift): Horizontal 200 ft., vertical 135 ft.
1-95 Highway Bridge (fixed): Horizontal 440 ft., vertical 135 ft.
General Sullivan Bridge (fixed): Horizontal 100 ft., vertical 46 ft.
New Castle Highway Bridge (Bascule): Horizontal 29 ft., vertical 12 ft.

TANKERS: Also see "Berthing".
Report: Cautionary Advice – Port Approaches: Vessels approaching Portsmouth should pass South of Isles of Shoals, and, if waiting for the Pilot, anchor inside of Gunboat Shoals Buoy No. 1. Vessels should not anchor during periods of heavy swell. It is not prudent to enter port in fog, snow or when swell is running West of Whaleback Reef. Numerous small craft frequent this area during Summer months.
Tugs: 4 tugs are available at this port. Pilot acts as Docking Master and his advice should be heeded concerning number of tugs and number and placement of mooring lines.
General: Portsmouth Harbour is at the mouth of the Piscataqua River and is the approach to all marine terminals located on the river. The terminals are located above the City of Portsmouth. Vessels transitting up-river must pass beneath either 2 or 3 bridges, depending on the terminal. The first bridge is the Memorial Highway Bridge which is a lift bridge with a vertical clearance of 150 ft. in the raised position. The second bridge is the Route No. 1 Bypass and Railroad Bridge (Noble Island Bridge) which is also a lift bridge and has a vertical clearance of 135 ft. in the raised position. The third bridge is the Route 95 Bridge which is a fixed structure with 135 ft. of vertical clearance. The 2 lift bridges monitor VHF Channel 13. The minimum horizontal clearance on the bridges is 200 ft.

The Agent must notify the U.S. Coast Guard 24 hours prior to the vessel entering the harbour. The vessel must notify the U.S. Coast Guard on VHF Channel 16 upon entering the harbour. The Pilot will get a vessel under way approximately 1 hour before the tide changes in order to make a Slack Water passage. Tugs will come alongside after the vessel has rounded Fort Point.

Dorchester – Sea 3 Terminal: LPG vessels scheduled to discharge at this terminal must pass through all 3 bridges. The terminal is located 2.9 miles above the Memorial Highway Bridge on the South bank of the river. An exact ETA is important for LPG vessels due to the nature of the vessel's cargo and necessary notification of state, local, and federal agencies (USCG). LPG vessels must meet the following Port Regulations:

(a) Vessels move within the harbour only during daylight hours (loaded or light).
(b) Vessels move within the harbour only during periods of good visibility. If the visibility falls to less than 2 miles, vessels at sea must not enter port without the permission of the USCG Captain of the Port. If a vessel is under way within the harbour and the visibility deteriorates to less than 2 miles, the vessel must notify the Captain of the Port and then proceed to the berth or anchor as directed.
(c) Vessels must continuously monitor VHF Channel 13 while under way in the harbour. Constant communications must be maintained with the attending tugs and the USCG escort craft.
(d) Vessels transitting in-bound may do so only during periods of Slack Water. This could be either High or Low Slack Water, depending on the vessel's draft. On departure from the berth, vessels leave either at LW or 1 hour before Slack High Water (daylight only).
(e) Vessels transit the harbour with at least 4 tugs in attendance.
(f) LPG vessels should not enter the port unless the terminal is able to immediately receive cargo.
(g) On a LPG vessel's first call to the port, a USCG inspection team will board the vessel at anchorage. All LPG vessels, whether awaiting inspection or harbour transit, must anchor 1 mile South of the Sea Buoy "KR2". After the initial inspection, a vessel on future calls to Portsmouth need only send the following message to the Captain of the Port, South Portland, Maine:
"To the best of my knowledge and belief, there are no known casualties to this vessel or its machinery which might affect its seaworthiness. I further state that all cryogenic handling and detection equipment is in proper operating condition."
This will permit vessel to proceed to the dock for pre-transfer inspection. Failure to send the message will require the vessel to be inspected at anchor.
(h) Vessels must be prepared to get under way on short notice in case of an emergency. One "live" tug must stand-by during all cargo operations.

LPG vessels transit Portsmouth Harbour and the Piscataqua River escorted by a USCG vessel with 4 tugs in attendance. The marginal-type dock consists of 3 concrete cells connected by catwalks. The 4 tugs breast the vessel alongside for a port side to docking. The bow is worked in first while head and forward breast lines are positioned and secured to the bitts. The stern is then worked alongside and the remaining lines positioned. This allows for the required tension on the long mooring leads forward. 20 mooring lines are considered the minimum acceptable as the ebb current forces the vessel off the dock and the bow has a tendency to yaw with the current. All moorings lines must be carefully tended. Light vessels undock with 3 tugs; vessels departing with part cargo must use 4 tugs to undock.

New England Tank Industries – Newington: Located approximately 10 miles rom the Sea Buoy in the Piscataqua River. Vessels generally dock and undock with the assistance of 3 tugs. Vessels are breasted alongside by the tugs for a port side to docking. 12 mooring lines are considered to be the minimum as current can reach 8 knots especially during spring freshets. Vessels dock and undock day or night. Vessels are turned off the dock or in the turning basin upon undocking after discharging.

Northeast Petroleum – National Gypsum: Located on the West bank of the Piscataqua River below and adjacent to the Route 95 Fixed Bridge. The berth is approximately 5 miles from the Sea Buoy and is above the City of Portsmouth. The marginal-type dock consists of 2 breasting cells set on 163 ft. centres. The hose gantry is mounted on a third cell which is set back 4 ft. from the face of the breasting cells.

Both breasting cells are fitted with hard rubber fixed fenders. A gypsum unloading conveyor gantry is located at the South end of the pier but the structure does not interfere with tanker operations. The mooring line lead to the shore mooring point is approximately 115 ft. Vessels dock day or night with the assistance of 2 tugs. The tugs breast the vessel alongside for a port side to docking. 17 mooring lines are considered to be the minimum acceptable. Vessels undock with the assistance of 2 tugs and are turned below the berth. Due to the strong river currents and the close proximity to the navigational channel, lines must be tended closely.

C. H. Sprague & Son – Company Shiller Station: Located on the South side of the Piscataqua River about 7.1 miles above the Route 95 Fixed Bridge. The dock consists of a concrete pile, concrete decked 'T'-head wharf and dolphins. The overall length of the dock with the dolphins is 700 ft. Pilots start vessels in from the anchorage area at a suitable time in order to dock during Slack High Water. Vessels dock and undock with the assistance of either 2 or 3 tugs. Vessels dock port side to using approximately 14 mooring lines due to the extreme currents experienced during maximum stages of ebb and flood. After completion of discharge, vessels are turned in the turning basin or off the dock. Vessels undock either at Slack Low Water or 1 hour before Slack High Water. As with other terminals, mooring lines must be closely tended at all times due to the strong river currents.

Tides and Depth of Water: Tidal currents are very strong in the Piscataqua River, averaging between 3 – 5 knots. Spring freshets increase this current. Eddies form around most of the berths making slack tide berthing mandatory. Tidal range is 8.1 ft.

FRESH WATER: Available.
FUEL: Available.
REPAIRS: Facilities available.

BANKS: First National Bank of Boston. Tel: (617) 434-3770.
First National Bank of Portsmouth. Tel: (603) 436-7700.
Maine National Bank. Tel: (207) 439-0451.
State Street Bank. Tel: (617) 786-3839.

GENERAL:
VESSEL ARRIVALS AND DEPARTURES
Marine Section, Federal Building, Room 103, Portsmouth. Tel: (603) 436-7620, ext. 737.
District Office (Portland, ME): Tel: (207) 780-3328.
COMMERCIAL VESSELS, ARRIVALS & ENTRY
Report of Arrival: These vessels must report arrival to a U.S. Customs Officer within 24 hours (19 U.S.C. 1433):
A. Vessels arriving at any port or place in the U.S. from any foreign port or place (refers to domestic and foreign vessels);
B. Domestic vessels arriving at any port or place in the U.S. from another U.S. location with bonded merchandise or foreign merchandise for which entry has not been made. Failure to report results in penalties.
Entrance: Within 48 hours of arrival from a foreign port, the Master is required to make entry of his vessel, even though the vessel may be at anchor awaiting berth. Foreign flag vessels arriving in ballast from another U.S. port must also make entry within 48 hours of arrival. When vessels which have residue foreign cargo and/or passengers on board arrive from another U.S. port, entry should be made within 24 hours.

Vessels arriving from a foreign port must have made either Preliminary or Formal entry prior to transacting any type of business or permitting anyone on board other than Customs, Immigration, Agriculture, Public Health, and Agent's personnel. Vessels arriving from another U.S. port to discharge cargo must make Preliminary or Formal entry prior to discharging cargo.

Foreign non-commercial vessels are also required to make entry. In Portsmouth this will be done on board at the time of boarding by Customs. The Officer will provide necessary forms and assistance. Non-commercial vessels may contact the New Castle Coast Guard Station for assistance in obtaining a Customs Officer.

WARNING REGARDING SEA STORES

(U.S. Dept. of Agriculture, Animal & Plant Health Inspection Service)

You are hereby warned that WHILE YOUR VESSEL IS IN THE TERRITORIAL WATERS OF THE U.S., regulations of the Department of Agriculture **prohibit** the unloading for any purpose of:

1. Fresh, chilled or frozen meats;
2. Undrawn poultry carcasses;
3. Plants or plant products, including fruits or vegetables;
4. Garbage, consisting or contaminated with scraps, parts or other waste of meats, plants, fruits, and vegetables.

DEVELOPMENTS: The Port Authority has developed a comprehensive plan for maximum utilisation of existing space on a phased basis. An integral part of that plan is another docking facility, 600 ft. long with a depth of 35 ft. alongside at MLW. This new docking facility will provide additional berthing space for new users as well as prevent costly delays due to terminal congestion. The Port Authority is also planning to develop approximately 10 acres of new land from a tidal basin adjacent to the present facility. This area will be used for open as well as enclosed throughput storage.

SHIPMASTER'S REPORT: February 1983.

Dorchester Sea-3 Terminal:

The vessel arrived off Portsmouth N.H. on the 2nd February, at the entrance to which port the Pilot boards, to take vessels up river to Newington. At the arrival time a S.E. gale was in force, so the passage was ended at 2400 hrs. and the vessel stood some 20 miles off the coast waiting for the weather to abate, as I considered it unwise to proceed to the waiting area to anchor; as the holding ground is not good, and in S.E'ly winds there is no shelter. The vessel cruised around at reduced speed until the following day.

At 1450 hrs. on the 3rd February, with the weather, and sea conditions much improved, the vessel anchored 1 mile South of Kitts Rock No. 2 buoy (KR2). Two U.S. Coast Guard officers boarded from a local harbour tug after some difficulty in coming alongside, due to the ground swell that was still running. The Officers carried out an inspection of all cargo handling equipment, and shut down systems. The Coast Guard officers then granted permission for the vessel to enter the port of Newington, and disembarked at 1715 hrs.

As there is a port regulation that no LPG carrier can move during the hours of darkness, and that large vessels can only dock, and undock during slack water periods, it was necessary to wait until the following morning before docking.

At 1020 hrs. on the 4th February the Pilot boarded. At 1040 hrs. anchor aweigh, and the vessel proceeded up river. At the mouth of the river there is a shallow patch with only 35 ft. over it at low water. This left only 5 ft. clearance under the keel, and the vessel had to proceed very slowly over it. Four tugs were made fast, 2 for'd and 2 aft, and a U.S. Coast Guard cutter escorted the vessel up-river. The river is narrow, with some very sharp bends. There are 3 bridges, with the port limitations governed by the Noble Island Bridge. The vertical clearance on this bridge is 135 ft., and the horizontal distance is 200 ft. Maximum draft loaded, and on high water is 36 ft. On approaching this bridge it was necessary to let go the 2 for'd tugs, and allow them to pass through the bridge first, making them fast again when the vessel has passed through.

The vessel docked at Dorchester Sea 3 Terminal, at 1315 hrs. 4th February. The berth constructed from 3 cement and steel dolphins, joined together by a steel platform. It stands about 150 ft. out in the river, and is connected to the shore by a narrow footbridge. The mooring arrangements for a vessel of this size are poor. There is not sufficient leads on the head lines or stern lines due to the way the mooring bollards are placed on the shore, and all the weight is taken on the spring lines. Recommended mooring arrangements as supplied by the Port Authority (see "Plan"). On the full run of the tide the water runs at up to 4 knots alongside, and because of this there is a port regulation that a tug must stand-by at all times while the vessel is alongside. The cost of this tug, on this call was U.S.$300 per hour, which can add a considerable amount to the overall cost of calling at Newington.

Before loading commenced, a liquid and vapour return line were connected. At 1530 hrs. on the 4th February loading commenced. The vapour return line proved very important as it appeared there was a large percentage of impurities in the product received judging by the performance of the vessel's reliquification plant. It was necessary to return a considerable amount of vapour to the shore tank during loading operations. I issued a Letter of Protest, to the Terminal Manager, protesting the quality of the product.

On docking, the vessel was again boarded by the U.S. Coast Guard, and further inspections were carried out. The Coast Guard personnel remained on board throughout the loading operation; sometimes as many as 6 Officers, but never less than 3 at any one time. It was explained to me by their Commanding Officer that some of the personnel had no experience of LPG vessels, and were on board to learn. In this respect the ship's Officers gave all assistance possible in showing them around. The loading rate was slow, only reaching an average of 400 tonnes/p.h. on full rate, and the shore installations could not supply the product any faster. Loading was completed at 0730 hrs. on Monday, 7th February when the cargo loaded was estimated as follows:

Ship's figure:	23,965.127 tonnes
Surveyor's figure:	23,901.602 tonnes
Shore figure:	23,828.614 tonnes (taken from shore tank gauge reading)

The draft on completion was 33 ft. 00 in. for'd., 34 ft. 08 in. aft.

Owing to port regulations the vessel had to remain alongside until the next daylight high water which was at 0800 hrs. on the 8th February. The vapour return line remained connected during this time, as regulations prohibit releasing uncondensables to the atmosphere, and in view of the impurities in the product it was found necessary to use this vapour return line.

At 0745 hrs. on the 8th February while the vessel was preparing to sail, a Coast Guard Officer boarded and informed me that the visibility in the river was less than 2 miles, and the U.S. Coast Guard would not grant permisson for the vessel to sail. Heavy snow had fallen throughout the previous day, but had cleared during the night, and the visibility at the vessel was over 2 miles. Evidently further down river it was still snowing, and visibility was restricted. The vessel had to remain alongside until the next daylight high water which was 0900 hrs. on the 9th February.

At 0715 hrs on the 9th February while preparing the vesel to sail, the vapour return line was disconnected, and a further survey of the product on board carried out. The result was as follows:

Loss of product as found by ship:	50.283 tonnes
Loss of product as found by Surveyor:	52.568 tonnes

At 0855 hrs. on the 9th February the vessel sailed for the Panama Canal. She was assisted by 5 tugs, as both the Pilot and the U.S. Coast Guard insisted on an additional tug being employed for the down-river passage as the vessel was deep loaded. There was no difficulty in leaving the berth. All stern lines were let go, and the vessel's stern allowed to swing out into the river, while still made fast for'd, with all weight coming on the for'd spring lines. When the vessel was at right angles to the dock all lines were let go, and the tugs pushed her around until she was heading down river. The river passage went without incident, and the Pilot disembarked at 1037 hrs. when approaching Kitts Rock No. 2 (KR2) buoy. The passage commenced at 1100 hrs on the 9th February, 1983.

AUTHORITY: New Hampshire State Port Authority, 555 Market Street, Box 506, Portsmouth, New Hampshire 03801. *Tel:* (603) 436-8500. *Contact:* George E. Smith, Director.

Harbour Master: *Tel:* (603) 436-6421.

PORT SULPHUR, Louisiana: 29.28 N. 89.41 W.

(See Plan)

DOCUMENTS, etc: Refer to "New Orleans".

PILOTAGE: A vessel coming into port from sea can arrange to pick up a Bar Pilot (Associated Branch Pilots) by furnishing ETA to the ship's Agents, radio contact by VHF Channel 9 and AM Channels 2738 and 2182. Bar Pilot is exchanged for river Pilot at Head of Passes, Pilot town, Louisiana. River Pilot (Crescent River Port Pilot's Association) can be arranged through ship's Agent in New Orleans and radio contact as above. Vessel awaiting Pilot for departure may remain at dock until Pilot arrives. Advance notice of 3 hours is required for departing Pilots. This can be arranged by the ship's Master with the shipping foreman.

ANCHORAGES: Anchorage is available on East bank of river opposite to Freeport Sulphur Company dock. Depth of water at anchorage is 40 ft., the controlling depth in the river.

RESTRICTIONS: No restrictions for entry because of time of day, nor conditions of tide or draft except the controlling depth of Mississippi River to Port Sulphur (35 ft. – 40 ft. as published in reports by U.S. Army Corps of Engineers).

MAX. SIZE: Max. permissible length – 750 ft., breadth not limited, draft equal to controlling depth of river.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Tropical Radio WNU New Orleans.

TUGS: Tugs not normally required. Shore crews usually handle ship's lines. Tug may join the vessel opposite the dock. Charges for handling ship's lines.

STEVEDORES: Not normally required. When requested, stevedoring services can be obtained from Port of New Orleans; contact ship's Agents for particulars.

MEDICAL: Advance notice for personnel requiring medical service is required through ship's Agents. Hospital facilities are available.

TANKERS: 1 tanker berth, permitted draft equal to or greater than controlling depth of Mississippi River. Diameter of loading/discharge lines are 12 in. and 16 in. respectively.

DENSITY: Density in port not affected by tide. Fresh water.

FRESH WATER: Not available.

FUEL: Fuel may be loaded by barge with vessel at anchor. Fuel transfer is not permitted at dock.

FIRE PRECAUTIONS: No welding repair permitted at dockside. Fuel transfer is not permitted. No other specific precautions observed except for "no smoking" precautions, etc.

GANGWAY/DECK WATCHMEN: Services of watchmen desirable but not required. Port does not furnish this service.

CERTIFICATES: Certificate of condition of cargo handling gear required when use of gear is necessary.

IDENTIFICATION CARDS: Immigration Form I-95.

CONSULS: Consuls offices are located in New Orleans, Louisiana.

REPAIRS: Engine and deck repairs are possible when the dock is not otherwise occupied.

AIRPORT: New Orleans International Airport, served by most major airlines. 55 miles from Port Sulphur.
TIME: Local time is Central Standard Time (GMT minus 6 hours), except from May/October, Daylight Saving Time is in effect.
HOLIDAYS: Vessels are loaded on all holidays except Christmas Day.
POLICE/AMBULANCE/FIRE: Police Tel: 564-2525; Ambulance Tel: 564-2525; Fire Tel: 564-3231.
TELEPHONES: Jacks for telephones are provided at no additional cost to tankers loading at port.
SHORE LEAVE: Crew members are allowed ashore.
DELAYS: Loading will not commence until all holds are clean of scale and other foreign matter.
AUTHORITY: Freeport Sulphur Company, P.O.Box 1025, Port Sulphur, Louisiana 70083. *Contact:* C. L. Kinard, Operations Manager.

Freeport Sulphur Company, P.O.Box 925, Port Sulphur, LA 70083. *Tel:* (504) 564-3981.

PORT WENTWORTH, Georgia: 32.09 N. 81.08 W.

PILOTAGE: Compulsory. Pilot boards at Savannah Sea Buoy. 48, 24 and 12 hours notice required through Agent.
RESTRICTIONS: Vessels can enter and leave port during hours of darkness and at any stage of the tide, however, depth of water at River Bends controls draft.
MAX. SIZE: See "Berthing".
VHF: Pilot on Channels 16, 14 and 13.
TUGS: Tugs from Savannah assist with berthing and unberthing.
BERTHING: *Continental Can & Paper Co.:* Port Wentworth is the most inland berth up the Savannah River and is 29 miles from the entrance. Max. size of vessel so far to berth was LOA 628 ft. Pilots would accept vessels of 700 ft. LOA but would be unable to swing with this length. The berth is dredged to approximately 40 ft. for a length of 700 ft. Least depth of water in channel from sea to berth 28 ft.

Mean tidal range at berth 8 ft. to 9 ft. Nature of bottom – mud.

Vessel is able to dock at any stage of the tide, however, vessels undock on the flood to swing off berth. (Approximately one hour's flood tide required). The berth is a timber faced concrete wharf of length 240 ft.

Facilities: There are no bulk handling facilities or quay cranes. Three mobile cranes used. There are no Ro-Ro facilities or floating cranes available. Fork lifts are available for handling reels of linerboard. There are no facilities for handling containers as berth is only used by Paper Mill.
DENSITY: 1001.
STEVEDORES: Savannah labour used (Experts on loading paper reels).
FRESH WATER: Not available.
FUEL: Bunker fuel oil available by barge. Diesel oil and lubricating oils also available.
MEDICAL: Doctor and hospital available.
SERVICES: (Available locally or from Savannah). Fresh provisions, repairs, dry dock, airport, surveyors and laundry service.
AUTHORITY: Continental Forest Industries, P.O.Box 4068, Port Wentworth, Georgia 31407. *Tel:* (912) 964-1271. *Telex:* TWX 810-784-5635. *Contact:* J. R. Knight, Traffic Dept.

PROVIDENCE, Rhode Island: 41.48 N. 71.23 W.

(See Plan)

PILOTAGE: Compulsory. Pilot boards 1 mile South of Brenton Reef Light Tower (position: Lat. 41° 25′ N., Long. 71° 23′ W.). Send ETA to Agent 24 hours prior to arrival. Pilots (call sign "Rhode Island Pilots") on Channels 16, 12 and 18A.
ANCHORAGES: There is no port anchorage for dry cargo vessels. It was reported that tankers can discharge into barges off Newport.
RESTRICTIONS: Vessels can enter and leave at any stage of the tide, day or night.
MAX. SIZE: Pilot advised max. draft is 38 ft., however, Agent recommends 35 ft. No keel clearance was stated.
TUGS: 9 tugs available, 1,600 h.p. – 3,200 h.p. Vessels may dock and undock without tugs, however, they are required for turning in the harbour.

Providence Steamboat Company serving Ports of Providence, Narragansett Bay, Fall River and New England Electric at Brayton Point. 4 tugboats – 24 hour dispatching service. 2×3,000 h.p. tugboats.
RADIO: Station WCC.
VHF: Port Authority on Channels 16 and 18A. Agent on 16, 18A, 13 and 9. Also see "Pilotage".
BERTHING: *No. 6 Municipal Pier:* The berth is the first port hand berth when entering Providence. Distance from entrance to berth 25 miles. Length and beam no limit. Max. draft 35 ft. Least depth of water in channel from sea to berth reported to be 40 ft. Mean tidal range at berth 4.5 ft. Also see "General".

Cargo Handling Facilities: Mobile cranes only available for handling bulk steel and scrap cargoes. 6 mobile cranes, capacity 100 tons to 250 tons. No Ro/Ro facilities. No floating cranes. There are facilities for handling 20 ft. and 40 ft. containers, also sufficient storage space. There is also adequate storage space for breakbulk and palletised cargoes.
DENSITY: 1016.
FRESH WATER: Available, rate 15 t.p.h. – 30 t.p.h.
FUEL: Bunker fuel oil available if vessel has contract. Diesel oil not available. Lubricating oils available.
MEDICAL: Doctor and hospital available.
TANKERS: LPG/LNG carriers – see "Shipmaster's Report" dated February 1985.
Report: *American Chemical-Wilkes Barre:* General: The Wilkes Barre Terminal of the American Chemical Company is located 26 miles from the Sea Buoy on the Providence River. This facility was formerly operated by Exxon Company, U.S.A. It is now operated by Union Oil Company of California and Getty Oil Co., Inc. The wharf has a 75 ft. face, 300 ft. with dolphins; 30 ft. depth alongside. Deck height of 9 ft.

The berth can accommodate vessels up to 600 ft. in length, 85 ft. beam, maximum 25,000 d.w.t., and maximum drafts to 27 ft. Docking is accomplished at HW or rising tide only. Undocking can take place at any state of the tide.

Pilotage and Docking: The services of a Pilot and Docking Master are recommended. The width in the existing berthing area and required approach manoeuvres make utilisation of the Docking Master mandatory. 2 tugs are required when docking vessels of any tonnage. A minimum of 1 tug (1,800 h.p.) is required when undocking. During strong Southerly winds 2 tugs shoud be employed for undocking.

Mooring: Normal mooring leads are adequate for this berth. However, strong Southerly winds are cause for concern. There is a poor lead for the after spring and breast lines. During times of excessive Southerly winds, all lines should be tended and checked frequently. The terminal does not provide a gangway.

Only No. 2 heating oil is discharged at this terminal. Discharge is accomplished through 2×8 in. hoses using ASA flange connections. Pumping pressure is 125 p.s.i. The terminal has no facilities for receiving ballast or slops.

Amoco – Providence, Kettle Pt.: General: The Amoco Wharf is on the East side of Providence River 26 miles from the Sea Buoy. This wharf is used for the receipt and shipment of petroleum products. The berth is aligned North and South with a total of 6 wooden breasting dolphins. The wharf has a 500-ft. face (600 ft. with dolphins). Hose rig and hoist are located on a "T" head 90 ft. long, 30 ft. wide at the centre of the pier.

Entering and Docking: 2 mooring dolphins located approximately 90 ft. inside the main pier and used for fore and aft breast lines, head lines are run to a mooring dolphin, and stern lines to bollards located on shore.

Vessels can dock either port or starboard side to but a starboard side berthing is preferred. Deep draft vessels dock on Slack High Water only, day or night, and can unberth at any stage of the tide any time.

Depth of water alongside the berth is 35 ft. MLW. Average tide at Providence is 4 ft. 6 in.

A Docking Master is recommended. Docking should not be attempted without local knowledge. 2 tugs are used for docking under normal conditions. One tug is used for normal undocking. Both tugs and Docking Master meet the vessel 0.5 miles below Kettle Point and assist vessels to the berth.

Gasoline, heating oil, diesel, and No. 5 fuel are all discharged through 8 in. hoses. All connections are made with ASA flanges. Maximum pumping pressure for all cargo lines is 90 p.s.i.

Gulf – Gulf Oil Pier: General: The berth projects Westerly into the river for a distance of 800 ft., and is 50 ft. wide, wooden piling, open faced construction, and wooden decked, terminating in a "T" head 90 ft. long and 30 ft. wide which is aligned North and South.

The are a total of 6 wooden piling breasting dolphins, 3 on each side of the "T" head for a total face of 280 ft. The hose rig, hoist, and discharge heads are located at the centre of the "T" head.

Entering and Docking: Vessels can berth heading either North or South, but a starboard side-to or up-river berthing is preferred. Bow, stern, and breast lines are run to mooring buoys.

Vessels can dock day or night, any stage of the tide, depending on draft. The depth of water alongside the berth is 35 ft. MLW.

In this area local features are such that current movement in particular is subject to considerable distortion.

This berth can accommodate vessels up to 675 ft. in length, maximum 100 ft. beam and maximum draft to 31.5 ft. at MLW. Docking should not be attempted without a Docking Master. 2 tugs are employed for docking and undocking all vessels. Tugs and Docking Master meet the vessel in the vicinity of Kettle Point and assist the vessel to the berth generally with the starboard side alongside the berth. Head lines and stern lines are run out to mooring buoys. Forward and back spring lines are run out to the "T" head. The terminal does not provide a gangway.

Mobil – South Terminal: General: The Mobil Oil Corporation Terminal is located 25 miles from the Sea Buoy on the Eastern side of the Providence River. This facility is used for the receipt and shipment of petroleum products and bunkering vessels.

Maximum size of vessels that can be accommodated at this facility include lengths up to 750 ft., beams to 125 ft., 50,000 d.w.t. maximum, and drafts to 39.5 ft. The water at this berth is brackish. Distance from bow to manifold is limited to 390 ft. Docking is done at HW only day or night.

Entering and Docking: The services of a Docking Pilot is both compulsory and recommended. 2 tugs are used for docking and one tug for undocking. Tugs and Docking Master meet incoming vessels in the vicinity of Sabin Point and assist vessels to the berth for a starboard side docking. If a port side landing is required, vessels proceed about 1 mile beyond the berth to Fox Point Reach and turn around. Normal mooring leads are used at this berth. No gangway is provided by the terminal.

C. H. Sprague: General: The C. H. Sprague and Son Terminal is located 26 miles from the Sea Buoy at the Allens Avenue Terminal.

The main pier projects Easterly into the river and is 526 ft. long and 37 ft. wide, wooden piling, open faced construction. A turning dolphin, concrete crown, wooden fendered, and connected by a walkway extending out from the main pier an additional 75 ft. and fitted with 2 bollards, making for a total face of 601 ft. The berth also has 3 unloading towers serving a belt conveyor system.

The South side of the pier is not used and has a depth of 12 ft. to 14 ft. alongside. The North side has a depth of 35 ft. LW, but commences to shoal up 35 ft. from the inner bulkhead.

Vessels up to 650 ft. in length, maximum beams of 100 ft., and drafts at MLW of 35 ft. can be accommodated at this terminal. Maximum deadweight of vessels at this terminal is 38,000 d.w.t. The water at this terminal is brackish.

Ships having a large flared bow should exercise caution as the loading towers extend over the pier, and in light condition the ship has to be given a 3° list before undocking.

Maximum limit bow to manifold is 380 ft. There are 4×8 in. hoses and 2 lines, 1×18 in. for No. 6 fuel and 1×12 in. line for heating oil. Vessels scheduled to call at this terminal should have hose derrick ready for lifting the hose as there are no facilities on the berth for this operation.

Deep draft vessels dock day or night, HW only, and undock anytime, any state of the tide.

Entering and Docking: A Docking Pilot is not compulsory but is recommended. Docking should not be attempted without local knowledge. 3 tugs are used for docking all vessels and 2 tugs are used for undocking all vessels. Tugs and Docking Master meet incoming vessels in the vicinity of Kettle Point and manoeuvre vessels to the berth. Normal mooring leads are used at this berth.

Normal docking is done port side to. The terminal does not provide a gangway.

Texaco/Curran: General: The Texaco/Curran Terminal is located 26 miles from the Sea Buoy at the Allen's Avenue Terminal.

The berth projects Easterly into the river for a distance of approximately 100 ft. and is 70 ft. wide, wooden piling, open faced construction, concrete decked for the first 800 ft. and the remainder of the dock is wooden decked.

The South side has a total of 3 wooden pilings, concrete crowned 20 ft.×20 ft. breasting dolphins, wooden fendered for a total face of 500 ft. Usable length of the berth on the South side is 650 ft. for fully loaded vessels and 700 ft. for partially loaded vessels and a controlling depth of 32 ft. MLW.

The hose rig hoist and discharge headers on the South side are located on a 60 ft.×25 ft. concrete platform 35 ft. from the extreme Eastern end of the pier, and is used by Texaco.

The North side of the dock has a turning dolphin at the extreme Eastern end of the pier, open faced wooden piling construction with a 12 in.×12 in. chafing string piece.

The North side has a usable length of 650 ft. for fully loaded vessels and 700 ft. partially loaded. A controlling depth of 32 ft. MLW. The hose rig and discharge headers are located 320 ft. from the extreme Eastern end of the pier and is used by Curran & Burton.

Vessels up to 700 ft. in length, beams of any width, drafts to 32 ft. at MLW, and 35,000 d.w.t. maximum can be accommodated at this berth. Vessels normally dock at HW, day or night, and undock at any stage of the tide. Water at this berth is brackish.

Entering and Docking: The services of Docking Master are not compulsory but are recommended. Docking should not be attempted without local knowledge. Docking Master and tugs meet the vessel about 0.5 miles below the berth and proceed to off the berth where the vessel is turned 90° and manoeuvred into the berth for a starboard side landing. 2 tugs are used for all vessels and 1 tug is used for all undockings under normal conditions. Normal mooring leads are used at this berth.

Cargoes handled at this terminal include heating oil, kerosene, gasoline, jet fuel, diesel fuel, and avgas. Sizes of cargo lines are 6 in., 8 in. and 10 in. All connections are ASA bolted connections. Maximum pumping pressure on all lines is 100 lbs.

REPAIRS: Minor repairs possible, machine shop available.
AIRPORT: At Boston and Green Airport, Providence, R.I.
SURVEYORS: At Boston.
GENERAL: *Quay:* Granite slab construction with a wooden pile facing. A large number of the piles are missing but there are still sufficient to land on. Surface of quay looks very rough and covered in sand and earth but it is metalled under this and will take heavy mobile crawler cranes.
Ship Chandler: Satisfactory, prices reasonable.
Laundry: Satisfactory and prices reasonable. Laundry collected Saturday 1430 hrs. and returned Sunday morning.

SHIPMASTER'S REPORT: September 1982.
Documents: The same as for other U.S. ports.
Pilotage: (Serving all ports in the Narragansett Bay area).

Pilot boards near Brenton Reef Light structure. There is a 24 hour service. Cable address for Pilots is "Rispilot Providence". Pilot launch as well as their shore establishment have VHF and operate on Channels 16 and 10.

Anchorages: There are a number en-route to Providence. Our vessel anchored off Jamestown for 3 days in a well sheltered place and good holding. Max. draft allowed I was informed is about 36 ft.
Berths: There are a number of isolated tanker berths in and around Providence, details of which are found in the Sailing Directions.

A total of 6 berths comprise the Municipal Docks. Most of these are in a poor state of repair although some major work is in progress on repairs. There are 2 cargo storage sheds one of recent construction. There are no quayside cranes but mobile cranes can be hired through the stevedores. These are only suitable for small vessels because of their outreach.

Fresh Water: Fresh water is laid on to the quay.
Stevedores: Normal cargo working is from 0800 hrs. – 1700 hrs. (Monday to Friday), overtime can be worked until 1900 hrs. and also weekends.
Cargo-Imports: Mainly automobiles from Europe and Japan, containers from feeder vessels, steel from Europe by regular liner trade.
Cargo-Exports: Scrap steel, logs, timber and latterly wastepaper.

Our vessel loaded a full cargo of wastepaper (cardboard) of almost 12,000 tons. Stowage factor was 135 cu.ft./tonne. 1,400 tons were stowed on deck suitably lashed and covered. The whole cargo was loaded in 27 working days using ship's cranes. Sizes of paper bales varied immensely with weights ranging from 500 kg. to 800 kg.

Bunkers: Not available.
Repairs: Main repair facilities are at Boston (e.g. Bethlehem Steel).
General: It was found difficult to bring the vessel alongside the quay nearer than 4 ft. during the whole stay in port. This was due to strong water outlets on the quay face from the adjacent sewage works.

Vessel should be amply moored to compensate for strong off-shore winds which are quite common even in Summer.

Do not forget the rat guards as huge rats were seen prowling the quay at night!

SHIPMASTER'S REPORT: February 1985.
Port Limits: Entrance to Narraganset Bay, Brenton Tower.
Documents: Standard for U.S.A. Customs & Immigration. Coastwise Documents are sufficient if coming from a U.S. port, no others are asked for.
Pilotage: Rhode Island Pilots, arranged via Agents, require 8 hours' notice. Board off Brenton Tower, listen VHF 16.
Anchorage: Can be obtained 1.5 miles S.E. of Brenton Tower but bottom is rock hard and holding will be doubtful in bad weather. There are allocated anchorages within Narragansett Bay.
Restrictions: Vessels can enter/leave at any time except for LNG/LPG Tankers. These must transit in/out in daylight only, whether they have cargo onboard or just cooldown 'heel' remaining. LPG Tankers are provided with a Coastguard escort vessel, which creates a Safety Zone 2 miles ahead and 1 mile astern, keeping all other traffic clear.
Max. Size: 35 ft. draft was quoted; this vessel went in at 30 ft. comfortably.
Health: Standard U.S.A. requirements.
Radio: WCC Chatham.
VHF: All Channels used as necessary, no special allocation. "Securite" messages for LPG Tanker transit are broadcast on Channels 13 and 16.
Radar: No radar surveillance or Vessel Traffic Scheme (VTS) Control.
Tugs: Join off berth, using their own lines.
Berthing: LPG (Propane) is discharged at Municipal Wharf No. 5, with empty oil drums providing a safety area around the shore manifold, as this is a Public Wharf with free access.

Moorings were adequate, 2 headlines, 1 breast line, 2 springs forward and similar aft, the berth being a continuous quay with rubber tyre fenders.

Bridges: One vertical bridge, clearance 194 ft.
Medical: All facilities available.
Tankers: LPG discharged at No. 5. Municipal wharf at a bulk rate of 750 tonnes per hour, through a 10 in. chicksan. This chicksan is a mobile one connected temporarily into an underground line, and jacked up off its wheels; thus it is rather fragile and demands precise positioning during berthing, and careful control of the list during the discharge as it is at its maximum reach when a 60,000 cu.m. vessel is in ballast.
Density: Salt.
Fire Precautions: LPG Tanker, only those imposed by the ship.
Surveyors: Saybolt attended this LPG vessel on behalf of receivers.
Gangway/Deck Watchmen: None. Ship's accommodation ladder was used to the wharf.
Customs Allowances: Usual U.S.A. allowances but no check of bond made on this visit.
Repatriation: Local Airport with services to Philadelphia for International flights, or by bus – approximately 1 hour ($7.00) to Boston International.
Airport: See above.
Time: GMT minus 5 hours. Eastern Daylight Saving Time GMT minus 4 hours in the Summer.
Emergency: U.S.C.G. "Castle Hill" on Channel 16 VHF, working 22A or 12.
Telephone: At No. 5 Municipal Wharf there is a public telephone booth within 250 ft. of the foot of the gangway, against the wall of a warehouse.
Storing: No known restrictions.
Shore Leave: Bus route into town (2 miles) about 100 yards from No. 5 Wharf.
Identification Cards: Standard U.S.A. Immigration requirements.
Regulations: All LNG/LPG Tankers have to anchor off Brenton Tower for U.S.C.G. inspection (2 – 3 hours), even those with valid letters of compliance and if no LOC then the inspection could take about 6 – 7 hours. During the discharge of LPG, 2 U.S.C.G. personnel are permanently stationed by the shore manifold, and do occasional spot checks onboard.
Delays: See above.

AUTHORITY: Port of Providence, Marine Terminal Building, Municipal Wharf, Providence, Rhode Island 02905. *Tel:* (401) 781-4717/8.
Contact: Eugene G. Neary, Port Director.

REDWOOD CITY, California: 37.50 N. 122.28 W.

(See Plan)

DOCUMENTS, PILOTAGE and all general information refer to "San Francisco".
RESTRICTIONS: Though a natural deep water channel extends down the bay to Redwood City there is controlled depth channel 500 ft. wide and 30 ft. deep across San Bruno Shoal. The entrance channel to the port is 2 miles long and 30 ft. deep (all depths are at MLLW) and 300 ft. to 350 ft. wide. There are 2 large turning basins at either end of the port harbour channel. See also San Francisco.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to San Francisco Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
BRIDGES: The San Mateo Hayward Highway Bridge with a vertical clearance of 138.5 ft. and horizontal of 500 ft. crosses the ship channel.

BERTHING:
Port of Redwood City:

Berth	*Length* (ft.)	*Depth* (ft.)	*Remarks*
No. 1	500	35	General cargo and bulk cement through pneumatic pipelines.
No. 2	355	35	
No. 3	450	35	General cargo, heavy lifts and scrap metal.
No. 4 (New Berth)	450	35	General cargo USGS facility.
No. 5	500	36	Designed to accommodate large tankers, general cargo and heavy lift cargoes.

Private Facilities:

Ideal Cement Co.	649	12	Barge unloading dock. Used for storage (not in use).
Lone Star Industries	496	18	Barge dock for loading cement.
Lone Star Industries	20	16	Oil berth. Not in use.
Leslie Salt Co.	200	33	Elevator berth used for loading crude bulk salt.

DEVELOPMENTS: See "Plan".

AUTHORITY: Port of Redwood City, 475 Seaport Boulevard, Redwood City, California 94063. *Tel:* (415) 365-1613. *Telex:* WUT 172251 Portrdcy. *Contact:* Fred J. Di Pietro, Port Manager.

RICHMOND, California: 37.56 N. 122.25 W. (See Plan)

(A) STANDARD OIL COMPANY OF CALIFORNIA TERMINAL.
(B) OTHER TERMINALS AT RICHMOND.

(A) STANDARD OIL COMPANY OF CALIFORNIA TERMINAL

DOCUMENTS and all general information, refer to "San Francisco".

LOCATION: Richmond Long Wharf and Point Orient Wharf are situated on N.E. side of San Francisco Bay, a protected harbour. The refinery and storage tanks are near the wharves.

The exact position of the Long Wharf is Lat. 37° 55′ 20″ N., Long. 122° 24′ 35″ W. Wharf heading is 324° to 144°.

The exact position of the Point Orient Wharf is Lat. 37° 57′ 20″ N., Long. 122° 25′ 39″ W. Wharf heading is 356° to 176°.

There is adequate anchorage and room for manoeuvring in the bay.

DOCUMENTS: To clear vessel for entry, the Custom House requires the following documents:

Last Foreign Port Clearance.
Vessel's Register.
Vessel's Tonnage Tax Receipts.
Master's Oath of Entry.
Certificate of Financial Responsibility.
General Declaration.

If vessel is arriving from (or departing for) a foreign port, Master must also furnish:

6 Copies Crew List.
3 Copies Store List.
3 Copies Passenger List.
3 Copies Curio List.
4 Copies Cargo Manifest.

The Boarding Inspectors may require additional information.

PILOTAGE: Federal and/or State Regulations require licensed pilotage in and out of San Francisco Bay. Make arrangements for this ahead of time with the Ship's Agent.

Pilots may be picked up near the Light Buoy, 9 miles W.S.W. of the entrance to San Francisco Bay: Lat. 37° 45.0′ N., Long. 122° 41.5′ W.

To signal for Pilots:

In Fog – Approach, San Francisco approach Lighted Horn Buoy "SF", lay to, and blow four long blasts.
When Clear – By day, hoist International Code Flag "G".
By night, make four long flashes on signal light.

When necessary, Pilots may be contacted on 2182 kHz or VHF Channels 10 (156.5 MHz) and 16 (156.8 MHz). The Pilot boats may also be contacted by radio telephone.

The Pilot will serve as the Mooring Master until the ship is berthed.

If vessel goes to anchorage, a licensed Bay Pilot will be required before vessel can proceed to berths.

MAX. SIZE: The main ship channel into San Francisco has a project depth of 50 ft. However, the 35 ft. depth of the Southampton Shoal channel restricts the size of ships to wharves.

LIGHTENING: When a lightening operation is necessary the terminal management will direct the ship to Anchorage No. 9. The ship to be lightened will install fenders before the lighter ties alongside. The terminal will provide the fenders. The lightening Supervisor and ship's officer will hold a meeting to discuss the cargo transfer. During transfer, follow the same precautions and safety regulations that apply to cargo transfer at the wharf. The transfer rate will be regulated by the lightening vessel. The lightening Supervisor will observe all the lightening operations. The terminal will provide oil spill recovery equipment during lightening.

HEALTH: See "Health: All Ports" before first U.S.A port (Albany). Illness reports made to San Francisco Quarantine Station.

Quarantine and Pratique: Vessels are not required to pass a quarantine inspection. It is necessary that vessels notify their Agents at least 2 days in advance of arrival in San Francisco Bay if sickness or disease is on board. The Agent shall notify Public Health for further action if necessary.

All vessels arriving from foreign ports will require clearance by the following U.S. Government Agencies: Customs House, Immigration Service, Department of Agriculture.

The vessel's Agent should make arrangements for the inspectors to board dockside or at anchorage.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO/VHF: The official language of the terminal is English. Therefore, vessel must have personnel on duty at all times who can communicate in English with the wharf personnel.

San Francisco Harbour Advisory Radar System, designated bridge-to-bridge frequency: VHF Channel 13 (156.65 MHz).

Federal communication regulations require that at any time VHF radio is in operation, Channel 16 must be monitored (156.8 MHz distress and calling frequency).

The U.S. Coast Guard requires all vessels anchored in San Francisco Bay to maintain a radio listening watch on VHF-FM Channel 13 (156.65 MHz) when the wind is 20 knots or greater. Any ship not equipped with Channel 13 shall maintain the listening watch on Channel 16 (156.8 MHz).

The 2-3 MHz radio telephone call letters for the San Francisco Bay area are KLH.

Richmond Long Wharf (radio call KCE 373 – Chevron Shipping) is equipped with VHF radio, manned 24 hours per day. Channel 10 (156.5 MHz) is the operating frequency. While at anchor, in San Francisco Bay, vessels should maintain normal listening watches on VHF Channel 10.

ETA Requirements:

The Master of a vessel bound for San Francisco Bay is requested to advise Chevron Shipping (Cables address: Chevronship Richmond Sanfrancisco) of ETA, 7 days, 3 days and again 1 day (24 hours) before arrival at the wharf. First ETA message should include:

Estimated time of arrival at the wharf (local time).
Last port of call.
Estimated deep draft on arrival.
Quantity of ballast to be discharged.
Quantity and grade of cargo to be transferred.
Distance from bow to cargo and bunker manifolds.
Size and type of cargo and bunker connections.
Quantity and grade of bunkers and lubes required.
Quantity of fresh water required.
Number of crew replacements expected.
Amount of provisions and stores to be loaded.
Repair work anticipated.
Make 24 hour ETA as accurate as possible and whenever arrival time changes, by 1 hour or more, send a correcting message promptly.

BERTHING: At least 1 hour before docking contact Chevron Shipping, in Richmond, by VHF radio (Channel 10, 156.5 MHz) and request a berth assignment. They will try to berth vessel as soon as it arrives. However, if no berth is available, anchor in the prescribed anchorage (as directed by the Captain of the Port) and maintain radio contact with Chevron Shipping, Richmond.

Recommended Docking Practices: The terminal require the use of adequately powered tugboats when docking at the wharves. Chevron Shipping Company has two tugs that can be hired, provided arrangements are made prior to vessel's arrival.

(a) In order to ensure maximum safety while berthing and unberthing ships at Long Wharf and Point Orient Wharf, the following minimum tug assistance is required:

Vessel Size	*No. of Tugs*	Minimum Total Horsepower Required *Mooring*	*Unmooring*
Up to 20,000 d.w.t.	1 or more	1,000 h.p.	1,000 h.p.
20,001 to 50,000 d.w.t.	2 or more	2,000 h.p.	1,500 h.p.
50,001 to 80,000 d.w.t.	2 or more	3,000 h.p.	2,000 h.p.
80,001 to 100,000 d.w.t.	2 or more	3,500 h.p.	2,500 h.p.
Over 100,000 d.w.t.	2 or more	4,000 h.p.	3,000 h.p.

(b) Bow thrusters are acceptable provided the horse power rating equals or exceeds the minimum requirements.

(c) Always stem the tide when docking.

(d) If possible, avoid steep-angle approaches.

(e) In view of the strong tidal currents at both wharves, make sure vessel is moored securely. Check on the number of lines and their strength. Pay special attention to the fore and aft leads.

Gangway: Rig gangway properly and safely, with handrails and adequate illumination, suspend a safety net under gangway. If vessel does not have a gangway, the pier has some available in limited sizes. However, the Company cannot be liable for the manner in which the ship's crew rigs the gangway. Berths 1 and 4 have permanent gangways installed.

There are 2 piers that accommodate oil transfers. They are referred to as Richmond Long Wharf and Point Orient Wharf.

Long Wharf: Richmond Long Wharf, a "T"-head pier, has an overall length of 3,396 ft. It consists of concrete and wooden piles and a concrete superstructure connected to the shore, 4,200 ft. away by a piled causeway. The fender-to-fender width is 132.5 ft.

Berths 1, 2 and 3 deck level is 15.5 ft. above MLLW. Berth No. 4 deck level is 25 ft. above MLLW.

There are four deep water berths on the West side. Berth No. 1 is 950 ft. long, Berth No. 2 is 650 ft. long, Berth No. 3 is 700 ft. long and Berth No. 4 is 1,050 ft. long. They are numbered 1 through 4 from South to North. Water depth is maintained at 38 ft. at MLLW. There are two inner Berths No. 9 and No. 11 that are used primarily for barge loading or discharging. Water depth is maintained at 18 ft. at MLLW.

Point Orient: The Point Orient Wharf, an "L"-head pier, is 2.25 miles North of the Long Wharf. It is 504 ft. long and 60 ft. wide. It is supported on wooden piles and has a causeway that extends 1,200 ft. to the shore.

There is one ship berth, No. 1 where the water depth is 32 ft. at MLLW. There is also one barge berth No.2. Deck level is 14.5 ft. above MLLW.

LOADING AND UNLOADING: Berth No. 2 is fitted with 4 in., 6 in, and 8 in. hoses for cargo transfer. Berth No. 1 has two 12 in. and two 16 in. Chicksan loading arms. Berths No. 3 has two 8 in. and four 12 in. Berth No. 4 has two 12 in. and four 16 in. arms.

NOTE: All terminal flange facings are carbon steel ANSI 150 lbs. rating.

No cast iron is allowed outside of (and including) the first valve on the vessel's cargo or bunker system.

Berth vessel so that its manifold is positioned within the horizontal and vertical limits of the hoses or Chicksan arms.

Cargo Transfer:

(a) Pre-Transfer Declaration of Inspection – Before cargo transfer begins, the Wharfmaster and Vessel Co-Ordinator will board vessel. They will discuss the safe transferral of your cargo. They will also review the Declaration of Inspection and sign it with you when all items are understood and agreed upon.

(b) Inspection During Cargo Transfer – These representatives will also visit the ship during cargo transfer. With the approval of Deck Watch, they will check to ensure that safe working practices are being observed by both ship and wharf.

(c) Minimum Cargo-Handling Crew – When transferring cargo or ballast, the officer in charge of cargo transfer must have at least two assistants: one to maintain watch on the open-deck cargo transfer manifolds; the other to assist in handling valves, tank gauging, or shutdowns of transfer pumps in case of emergency. Other crew members may be needed depending on the size and complexity of ship transfer system. These requirements will be developed at the pre-cargo-transfer conference. When loading ship's bunkers and lubes, the Master and Chief Engineer will assure the terminal that this transfer will be handled in a similar manner.

Loading Rates: Several products can be loaded at each berth. Loading rates depend on a multitude of situations. These will be discussed at the pre-cargo-transfer conference.

Unloading Rates: Unloading rates also depend on many things – vessel's pumps, the size and availability of terminal lines and tanks, refinery operations, etc. The pre-cargo-transfer conference will develop the estimated unloading and deballasting rates and procedures.

To expedite cargo transfer, it may be necessary to use booster pumps. To eliminate hazards to this equipment, notify the Berth Operator 15 minutes ahead of time whenever you are going to: Stop or change any cargo transfer rate, strip any tanks, switch tanks.

Maximum Temperature and Pressure Limits: The terminal cargo-handling system is designed to comply with the 150 lbs. ANSI flange rating. For example: 275 psig at 100°F, 240 psig at 200°F, etc. Special restrictions apply for aromatic and other hazardous stocks. These will be explained during the pre-cargo-transfer conference.

Tank Gauges: To ensure proper handling of each cargo, the terminal requires U.S. flag company vessels to be gauged every *two* hours and matched with shore-tank gauges. Non-company vessels are not required to gauge, but may wish to compare their gauges against the shore gauges. Transfer operations will shut down immediately if:

— the transfer rate is over 1,000 b.p.h. and there is a discrepancy in the tank's gauges that amounts to more than 20% of that transfer rate.

OR

— the transfer rate is under 1,000 b.p.h. and there is a discrepancy in the tank's gauges that amounts to more than 30% of that transfer rate.

For example: Vessel arrived with 120,000 bbls. of crude. First 2 hour gauge at 1000 hrs. Estimated rate 7,000 b.p.h.

	Ship	*Shore*	*Difference*
1000 hrs.	14,241	13,996	245
1200 hrs.	28,435	25,643	2,792

As the estimated transfer rate is 7,000 b.p.h., the allowable difference would be 1,400 bbls. The 245 bbls. difference at 1000 hrs. is OK and transfer should continue. The 1200 hrs. gauge of 2,792 bbls. difference is out of tolerance and the transfer should be discontinued until discrepancy can be resolved.

POLLUTION: The Federal Water Pollution Control Act prohibits the discharge of oil or oily waste in the waters of San Francisco Bay which causes a film or sheen on the water or discolours it or causes a sludge or emulsion beneath the surface of the water.

Regulations enforced by the Bay Area Pollution Control District also prohibit the emission of smoke and soot. Vessel can be fined if it emits visible smoke (Ringelmann 1) for more than 3 minutes in one hour, or blows its boiler tubes enough to create a soot nuisance on shore.

In addition, the terminal has certain regulations designed to eliminate obnoxious odours. Vessel may, therefore, be required to follow special procedures before tank cleaning, loading or ballasting. If, in spite of precautions, vessel does cause such odours, loading or unloading operations may be stopped.

OIL INSPECTIONS: To control product quality, the terminal has several requirements for sampling and gauging the oil as it is being transferred. These requirements will be explained during pre-cargo transfer conferences. Outside inspection service is provided by the following independent companies:

Charles Martin & Company, 488 Wright Avenue, Richmond, California 94802. Tel. (415) 232-5270.

E. W. Saybolt Company, 889 Ensenada Avenue, Berkeley, California 94710. Tel. (415) 525-0417.

Caleb Brett U.S.A. Inc., P.O.Box 673, Station A, 310 29th Street, Richmond, California 94808. Tel: (415) 236-1733. Telex: 171-330.

S. G. S. Control Services Inc., 2917 MacDonald Avenue, Richmond, California 94804. Tel: (415) 236-3007.

BALLAST: Ballast facilities at Richmond Long Wharf only (max. capacity 25,000 bbls. – normal capacity 15,000 bbls.). None available at Point Orient. However, arrangements for this to be made through Agent before arriving at the wharf. All ballast to be discharged must be pumped to shore while berthed at wharves.

MEDICAL: No facilities at wharves. Local ambulance may be reached at: Cadillac Ambulance Service (415) 234-3242; Alhambra Air-ground Ambulance Service (air) (415) 228-1096; California Aviation Service Inc. (air) (415) 569-3855.

FRESH WATER: Potable water available. Make arrangements through Agent.

FUEL: Many grades of bunkers, diesel and lubricating oils are available in bulk or drum quantities. Agents order them from Supply and Distribution or Chevron International at least 48 hours before vessel arrives, otherwise, vessel may be delayed.

To take on bunkers and diesel, vessels must be able to connect to terminal's 4 in., 6 in. and 8 in. hoses in Berth 2, connect to 8 in. Chiksan in Berth 3, to 12 in. Chiksans in Berths 1 and 4.

PROVISIONS: Provisions and stores are available through ship's Agent. However, they will be loaded only at the Richmond Long Wharf, and only when the loading does not interfere with cargo or ballast transfer. No hydrocarbons, paints, detergents or other polluting materials will be allowed to go aboard the vessel by means of slings or cargo nets. If the vessel is large and is not equipped with booms, the Agent may need to supply a spark-proof crane for the loading. Stores will not be handled by wharf personnel. Contact Wharf Master for weight restriction of equipment on the wharf.

REPAIRS: There are many major repair facilities located in the San Francisco Bay Area. The Agent can probably make arrangements for use of their services.

Repairs at the terminals are not normally permitted on non-company vessels, unless it is absolutely necessary in order to move the vessel. Any repair work that would necessitate hot work must have approval from refinery management. No repairs will be allowed that would delay cargo transfer or lengthen the transfer time.

TIME: Local time: Pacific Standard Time GMT minus 8 hours or Zone plus 8 hours.

(Note: From the last Sunday in April to the last Sunday in October, this is modified by use of Daylight Time to GMT minus 7 hours or Zone plus 7 hours)

All communications should refer to local time.

REPATRIATION: Facilities exist for repatriating of crew by sea or air. Make the arrangements through ship's Agent, and notify the terminal management.

STORING: See "Prelims".

1. Vessels cannot be stored by barge while at docks; however, they can be stored by small trucks.
2. Storing by truck requires the truck to be cleared by operations and towed into location. No paint or hydrocarbon may be lifted by net over local waters. This is described in the "Provisions".
3. Trucks can come alongside vessel (within 50 ft. of vessel).
4. There are no forklifts available at the terminal and the rental of one requires the rental of a "spark approved" forklift. Arrangements must be made with the Wharf Master.
5. All customs rules and regulations are enforced.
6. Local riggers can be employed to help get stores aboard vessel, but the vessel must make arrangements with ships Agents, and all storing of vessels must be approved by Wharf Master.

Also see "Provisions".

SHORE LEAVE: Chevron Shipping Co. provides bus service from the Long Wharf to shore and from there ship's personnel can connect with local taxi or bus service nearby. For transit – system information, call (415) 232-5665.

No ship's commercial passengers are ever allowed to board or leave a ship at the wharves.

GENERAL:

Tides and Currents: The maximum tidal range is approximately 9 ft. and the mean range is 4.2 ft.

Tidal currents in the wharf area can be very strong. They generally run in a North'ly and South'ly direction.

Winds: Winds of varying strength may come from any quarter. The normal wind, however, is from the N.W. in Summer, and S.W. in Winter.

Visibility: The visibility in this area of San Francisco Bay is generally fair to excellent, with occasional late evening fog in the Summer lasting until noon the following day. In the Winter, morning or tule fogs frequently occur. The Winter fogs are generally more dense than those of Summer.

Weather: The local weather is usually moderate, with average temperatures ranging between 40°F and 85°F.

The U.S. Coast Guard radio stations make scheduled weather broadcasts (preceded by a preliminary call on 500 kHz and 2182 kHz) at the times and on frequencies shown below:

Radio Telegraph – NMC San Francisco, Calif. 420 kHz, 2000 hrs. and 0900 hrs. PST.

Radio Telephone – NMC San Francisco, Calif. 2670 kHz, 1800 hrs. and 0600 hrs. PST.

VHF Radio – KHB 49 San Francisco, California 162.55 MHz.

Navigation: Master is required to notify the U.S. Coast Guard Captain of the Port at least 24 hours before arriving in the Bay. Master will satisfy this requirement automatically if he reports in accordance with the U.S. Coast Guard's voluntary Automated Merchant Vessel Report (AMVER) System.

On entering the Bay, follow the traffic-separation scheme shown on United States Coast and Geodetic Survey Chart 5072.

Charts and Publications: The following official charts and publications are recommended for use when entering San Francisco Bay:

United States Coast & Geodetic Survey Charts:

No. 5002 – San Diego to Point St. George.
No. 5072 – Gulf of the Farallones.
No. 5532 – San Francisco Entrance.

West Coast of North and South America Tide Tables, published by U.S. Coast and Geodetic Survey.

Tidal Current Charts – San Francisco Bay, published by U.S. Coast and Geodetic Survey.

Coastal Pilot No. 7 for West Coast of United States, published by U.S. Coastal and Geodetic Survey.

U.S. Coast Guard Regulations 33 CFR 154, 155 and 156, published by U.S. Coast Guard.

Current Edition of Operating Manual, S.F. Harbor Advisory Radar, published by U.S. Coast Guard.

Light Lists for United States and Possessions, published by U.S. Coast Guard.

Radio Navigational Aid, Pacific and Indian Oceans (Publication No. 117113), published by U.S. Hydrographic Office.

Wharf Communication: The Richmond Wharves are equipped with a positive and dedicated ship-to-terminal radio communication system. On arrival, vessel will be provided with one radio (walkie-talkie). It must be with an English-speaking person on duty at all times. Vessel will be instructed in the proper use of this radio during the pre-cargo transfer conference. If the radio is not returned, a charge of $2,500 will be levied.

Telephone: A telephone will be placed on the open deck of the ship near the gangway. It is to be used for the local calls only. the following is a partial list of commonly used numbers:

Wharf Master	4388
Vessel Co-Ordinator	4620
Head Operator (PAD) Long Wharf	4494
Terminal Superintendent	2314

There are two public telephones on the Long Wharf for outside calls, one between Berths 1 and 2 and one at Berth 3. There is also a public telephone at Point Orient Wharf.

SAFETY REGULATIONS:

A. General – Observe the following regulations AT ALL TIMES while berthed at the wharves:

1. Boiler-Tube Blowing – Do not blow boiler tubes and take every precaution to prevent sparks from escaping from the funnel. If vessel safety is at stake, stop transfer operations and move the ship to anchorage before blowing the tubes. In case vessel has boiler trouble, notify Chevron Shipping Co. who in turn will notify the Air Pollution District Control.
2. Cargo Tank Tops:
   (a) Before berthing, all tank tops, ullage plugs, and gauge tapes must be closed and dogged down unless the Master certifies that the tanks are gas free.
   (b) Cargo and bunker tank tops must be kept closed. This also applies to permanent ballast tanks.
3. Cargo Connections, Unused – blank unused cargo and bunker connections. A proper-sized bolt in *every other hole* is the minimum requirement. Offshore risers on systems being used are to be fully bolted.
4. Engines – Keep the engines ready and the vessel trimmed so it can leave the piers under short notice. If the vessel becomes unable to get underway 2 tugs of adequate size will be standing by at all times.
5. Fire Fighting – Keep fire and emergency equipment in readiness. At least 2 fire hoses to be uncoiled and laid out at the vessel's manifold area. Place two portable fire extinguishers near the manifold.
6. Gas Venting:
   (a) Ullage Holes – Keep all ullage or gauge tapes completely closed (not secured) except for intermittent periods needed to ullage or gauge ship's tanks.
   (b) Flame Screens – When open, all ullage ports must be protected by clean, well-fitted flame arrestors of wire-gauge screens: these must be of an approved type and have no defects.
7. Gas Freeing and Tank Cleaning – Do not gas-free or clean any tanks at berth without prior approval of terminal management.
8. Gangways – Tend the gangway and keep it safely rigged, secured and lighted.
9. Mooring Lines – Tend mooring lines to keep them taut and keep the vessel in position. See that tension winches are on manual brake. During ebb tide and East winds, when the ship has a tendency to drift away from the pier, tend the mooring lines with special care.
10. Portholes – Portholes and passageway hatches facing the cargo transfer area must remain closed. Portholes facing the wharf must also remain closed or be suitably screened.
11. Repairs – While at berth, do not perform any repair work, hot work, or maintenance work without prior approval from the terminal management. Hot work will require *written* approval by terminal management.
12. Radio – At all times in port, keep the radio transmitter and aerials switched off and grounded. Portable radios (walkie-talkies) that are certified intrinsically safe may be used.
13. Sea Suctions and Bilge Valves – See that all ship's sea, bilge, and overboard discharge valves connected to the cargo system are tightly closed, lashed and sealed in accordance with U.S. Coast Guard Regulation 33 CFR 155.

    The seals are *not* to be broken while berthed except in the presence of the Vessel Co-Ordinator or in case of emergency.
14. Sewage Discharge – Install deflection plate over the sewage discharge if it is capable of discharging on the wharf.
15. Smoking – Allow smoking on board only in places which the Master has personally approved. There is to be NO SMOKING ON THE WHARF OR WEATHER DECK OF THE VESSEL AT ANY TIME.
16. Stern Discharge Line – Keep the stern discharge line, if any, blanked at all times.
17. Towing Wires – Keep the towing wires (fire wires) for emergency use, lowered to the water's edge from the offshore bow and stern. Tend them to keep the "eye" near the water's edge, where they can be reached by tugs in case of emergency.

B. Cargo Transfer – Observe the following additional regulations DURING CARGO TRANSFER:

1. Air Intakes and Air Conditioning Units – Close any central air-conditioning or fresh-air intakes which might take in gas. Close all intakes within a combined total of 100 ft. vertically and horizontally of cargo tank openings and venting points. External window-type air-conditioning units that face the cargo transfer area must be kept disconnected.
2. Communication – Ship/Shore – Station a responsible member of the crew on the loading deck by the transfer connections to maintain communications or remain in visual contact with the Berth Operator. He is to advise the Operator when changes in rates are required, using radio pack sets or voice contact.
3. Passageway hatches to open weather decks facing the cargo area and wharf must be kept secured except for momentary passage.
4. Electric Lights and Cables – Use only vapour-proof electric lights of an approved type, on the open deck. Disconnect portable electrical equipment on the open deck unless certified for use in hazardous areas.
5. Galley Fires – Light no galley fires unless you can first assure the terminal that they present no hazard to the cargo transfer.
6. Hand Torches (Flashlights) – See that hand torches used during cargo transfer are of an approved type, certified as safe in hazardous locations.
7. Hoses:
   (a) Before transfer, inspect cargo-loading hoses or arms to see that they are in good condition, *fully bolted*, and properly connected.
   (b) The hoses must be supported at not more than 12 ft. intervals with a bridle or mat to minimise kinks or chafing. They must not be bent to a radius less than 12 times their diameter. Do not use single slings when taking aboard or supporting during transfer.
   (c) The hose or arm-to-riser connections must have drip pans of adequate size installed under them.
   (d) When cargo transfer has concluded, each hose/arm is to be drained via the drain valve and blank-flanged *before* being removed from the vessel. The Terminal Head Operator is to be aboard the vessel to oversee the connecting and disconnecting of the loading arms and, also, to alert crew members when passing the arms.
8. Scuppers – All deck scuppers must be plugged and cemented oil tight or sealed with a Coast Guard approved device. Do not remove the plugs until ship has departed, except when necessary to drain off rain water. In such cases, supervise the draining closely and replace the plugs immediately. Install splash boards (on dock side) over scuppers. Cement is to be supplied by the ship.
9. Special Stock Hazards:
   (a) Static-Ignition Hazards – Some kinds of stock require special precautions because of the static they accumulate. Their handling will also be fully discussed during pre-cargo transfer inspection. Lube oils may be loaded through ship's risers or connections to butterworth plates. No overall loading is permitted.
   (b) Hydrogen-Sulfide Hazards – Some kinds of crude may contain dissolved hydrogen-sulfide or mercaptans in concentrations which would cause the gases vented during tanker ballasting to be hazardous or odorous. Do not ballast or load into cargo tanks that might contain H_2S or mercaptan vapours, unless the tanks have been passed for loading by the wharfmaster. The vessel must proceed to sea for clean-up prior to loadback if the wharfmaster deems the tanks unsuitable for loadback.
   (c) Aromatic-Stock Hazards – Special precautions are required for toxic cargoes such as aromatics. It is recommended that Masters review the instructions by Owners/Charterers about toxic chemical hazards.
10. Valve Shut-off – Many new tankers have motor-operated valves, operated from a central location. Never operate these valves to close off against full oil-delivery rates unless the valve closure action takes at least 60 secs. Closure times less than 60 secs. may result in surge and hammer of sufficient force to rupture the loading arm/hoses.
11. Ventilators – Keep ventilators suitably trimmed with regard to tank vents and prevailing wind conditions to prevent entry of flammable vapours.

AUTHORITY: Standard Oil Co. of California, Richmond, California.

(B) OTHER TERMINALS AT RICHMOND

BERTHING: *Levin-Richmond Bulk Commodity Wharf:*
Owners: Levin-Richmond Terminal Co.
Operated by: Levin-Richmond Terminal Co.
Use: Receipt and shipment of various dry-bulk commodities.
Water Depth: 35 ft. - 36 ft.
Mechanical handling facilities: On wharf; 4×50 ton electric, travelling full portal gantry cranes, each with 100 ft. boom and 2×45 ton electric travelling full portal gantry cranes, each with 118 ft. boom.
Dimensions: Length of face 600 ft.
Remarks: 50,000 sq.ft. warehouse. Railroad on premises.

Santa Fe Sugar Dock:
Owned and operated by: Atchison, Topeka and Santa Fe Railway Co.
Use: Receipt of sacked sugar by inland waterway vessels for transfer to railroad cars.
Dimensions: Length of face 545 ft., lower end 51 ft.; depth alongside at MLLW 24 ft.

Levin Metals Corporation:
Owner: City of Richmond Port Commission.
Operated by: Levin Metals Corporation.
Use: Scrapping of ships, consideration of scrap and export loading of cargo.
Dimensions: Length of face 555 ft. each; Pier 1 depth 35 ft. – 38 ft., Pier 2, 17 ft.

Richmond Container Terminal No. 3:
Owners: City of Richmond.
Operated by: Multi-Terminals Richmond Inc.
Use: Receipt and shipment of containerised cargo in foreign and domestic trade.
Dimensions: Length of face 1,009 ft.; depth alongside at MLLW 41 ft.
Mechanical handling facilities: Two rail-mounted dock cranes and two transtainers, two transfer devices and two bridge cranes. Semi-automated operation.
Remarks: Area of container terminal – 16 acres plus back-up area.

Richmond Terminal No. 4 Wharf:
Owners: City of Richmond.
Operated by: Richmond Terminal Agency, Pacific Molasses Co. Ltd., & Paktank Corporation.
Use: Bulk Liquids.
Dimensions: Length of face 1,047 ft.; South side 175 ft.; North side 100 ft.; depth alongside at MLLW 32 ft. - 50 ft.

Pasha Properties/Pasha Services:
Owner: City of Richmond Port Commission.
Operated by: See No. 4 Wharf.
Use: Import service and delivery of foreign automobiles.
Dimensions: Length of face 700 ft.; depth alongside at MLLW 35ft.; usable berthing space with dolphin 900 ft.
Mechanical handling facilities: Mobile handling equipment available. Complete range of crane and ship facilities for major ship repair.

Richmond Terminal No. 7 Wharf:
Owners: City of Richmond Port Commission.
Operated by: Pasha Properties/Pasha Services.
Use: Import service/delivery of foreign automobiles.
Dimensions: Length of face 700 ft.; depth alongside at MLLW 35 ft.; usable berthing space with dolphin 900 ft.

TANKERS: *Atlantic Richfield Tanker Dock:*
Owned and operated by: Atlantic Richfield Co.
Use: Receipt and occasional shipment of petroleum products; bunkering vessels.
Dimensions: Length of face approx. 250 ft.; lower and upper sides 40 ft. each; depth alongside at MLLW 35 ft.

Atlantic Richfield Barge Dock:
Owned and operated by: Atlantic Richfield Co.
Use: Receipt and shipment of petroleum products by barge; bunkering vessels.
Dimensions: Length of face 150 ft.; depth alongside at MLLW 34 ft.

Richmond Terminal No. 1 Wharf:
Owners: City of Richmond.
Operated by: Petromark Inc.
Use: Receipt and shipment of petroleum products, chemicals and petrochemicals.
Dimensions: Length of face 557 ft.; depth alongside at MLLW 35 ft.

Richmond Terminal No. 2 Liquid Cargo Wharf:
Owners: City of Richmond.
Operated by: Richmond Terminal Agency.
Use: Receipt and shipment of vegetable oils, chemicals and petrochemicals.
Dimensions: Berthing length 720 ft.; depth alongside at MLLW 35 ft.

Texaco Wharf:
Owners: Texaco Inc.
Operated by: Texaco Inc.
Use: Receipt and shipment of petroleum products.
Number of Berths: 1.
Water Depth: 35 ft.
Dimensions: Length of face 600 ft.

Time Oil Company Wharf:
Owned and operated by: Time Oil Co.
Use: Receipt and shipment of petroleum products.
Number of Berths: 1.
Water Depth: 35 ft.
Special Remarks: 3×10 in. pipe-lines extend to 25 steel storage tanks in rear; total capacity of 618,000 barrels.

Union Oil Co. Tanker Dock:
Owned and operated by: Union Oil Co. of California (also services Unitank).
Use: Receipt and occasional shipment of petroleum products; bunkering vessels.
Dimensions: Length of face 225 ft.; lower end 45 ft.; upper end 45 ft.; depth alongside at MLLW 35 ft.
Mechanical Handling Facilities: Hose handling at wharf is by ship's gear and small tractor crane.

Union Oil Co. Barge Dock:
Owned and operated by: Union Oil Company of California.
Use: Shipment and occasional receipt of petroleum products; bunkering vessels.
Dimensions: Length of face 150 ft. (approx.); lower end 45 ft.; depth alongside at MLLW 35 ft.
Mechanical Handling Facilities: Hose handling at wharf is by ship's gear and small tractor crane.
Remarks: Wharf and Tanker Docks are spaced about 230 ft. apart; together they provide 1 large tanker berth.

BANKS:
Bank of America, Richmond Main Office, 261 Harbour Way South, Richmond, California. Tel: 415-231-1729. Telex: TWX (San Francisco) 910 372 7720.
Central Bank, Civic Center Office, 2705 Macdonald Avenue, Richmond, California. Tel: 415-233-5710. Telex: TWX (Oakland) TLX 17-1329.
Crocker National Bank, 3900 Macdonald Avenue, Richmond, California. Tel: 415-235-6458.
The Mechanics Bank, Civic Center Office, 22nd and Macdonald Avenue, Richmond, California. Tel: 415-222-0340. Telex: TWX 910 382 8167.
Wells Fargo Bank, 1221 Macdonald Avenue, Richmond, California, Tel: 415-232-3435. Telex: TLX 34-0284 (San Francisco-International).

EMERGENCY CO-ORDINATION CENTRE: The Emergency Co-ordination Center for the Port of Richmond is the U.S. Coast Guard, San Francisco, California. CA. Tel: (415) 556-2103.

SURVEYORS: Surveyors are available from various San Francisco Bay Area companies and organisations.

STORING: See "Prelims".
1. Yes.
2. Yes.
3. Yes.
4. Yes.
5. Normal U.S. Customs Regulations apply.
6. Yes.

AUTHORITY: City of Richmond, Port of Richmond, City Hall – Room 301, 27th Street and Barrett, Richmond, California 94804. *Tel:* (415) 620-6784. *Contact:* Michael R. Powers, Port Director.

~~**AGENT:** See "San Francisco".~~

RICHMOND, Virginia: 37.32 N. 77.25 W. (See Plan)

LOCATION: On the James River, 90 miles from Chesapeake Bay.
DOCUMENTS: See "Hampton Roads".
PILOTAGE: Entrance through Hampton Roads. Virginia Pilots Assn. original contact same as for Norfolk, Virginia. Pilots will arrange for change of Pilots to proceed up the James River.
ANCHORAGE: Hampton Roads anchorage, also river anchorage approximately 40 miles up river, shown as "Upper Brandon" on charts.
RESTRICTIONS: Navigation of river above Upper Brandon recommended in daylight hours, except vessels under 250 ft. length.
MAX. SIZE: Max. length recommended by Pilots 550 ft., draft 21 ft. 6 in. any tide, depth of channel 25 ft. MLW tide, change 3 ft. 5 in.
HEALTH: See "Health: All ports" before first U.S.A. port (Albany). Illness reports made to Washington, D.C. Quarantine Station
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
RADIO: See "Hampton Roads".
TUGS: Not needed for berthing unless vessel is to be turned around on arrival. Tug available at Terminal on reasonable notice.
BERTHING: Vessels berth alongside wharf 1,250 ft. long. Depth 25 ft. at MLW.
Turning Basin: 700 ft. × 1,600 ft.
CRANES: 1×10 ton electric crane, 3 additional cranes (65 ton, 35 ton and 15 ton).
BRIDGES: 2 bridges across river between Hampton Roads and Richmond. No specific time or notice required.
STEVEDORES: Arrangements to be made through Agents. 48 hours notice requested.
MEDICAL: Vessels cleared by U.S. Health Officials at Hampton Roads before proceeding up river.
DENSITY: 1000.
FRESH WATER: Available at pier.
FUEL: Bunkers only available at Hampton Roads.
GANGWAY/DECK WATCHMEN: None required, unless crew detained by U.S. Immigration.
OPENING/CLOSING HATCHES: On bulk cargo vessels, usually opened and closed by ship's crew, also steel hatches handled by ship's crew, sometimes determined by terms of Charter.

CERTIFICATES:
Ship's Register.
Load-line Certificate.
Safety Certificate.
Tonnage tax receipts.
Certificate of nationality.
Passenger Certificate.

CUSTOMS ALLOWANCES: Tobacco, 200 cigarettes (1 carton for 2/3 days) if further allowance is needed Customs Officer will return on request of Master. Wine and Spirit, 1 bottle per officer, Customs Officer will return on request of Master.

IDENTIFICATION CARDS: Immigration landing permit required.

CONSULS: No consuls in Richmond, handled through Hampton Roads if needed.

REPAIRS: Only minor repairs, no shipyards.

REPATRIATION: Handled through Norfolk, Virginia.

AIRPORT: Approximately 10 miles from port, regular airline service.

TIME: Eastern Standard Time, GMT minus 5 hours. Daylight saving time from first Sunday in May to last Sunday in October.

HOLIDAYS: January 1st, January 15th (Martin Luther King Day), May 30th, July 4th, Labour Day (1st Monday in September), Thanksgiving Day, Christmas Day.

POLICE/AMBULANCE/FIRE: Police Tel: 780-9461; Ambulance Tel: 780-9404; Fire Tel: 780-9191.

TELEPHONES: No arrangements for placing aboard vessels.

SHORE LEAVE: Allowed. Proper papers should be available.

AUTHORITY: Port of Richmond.

Operator: Richmond Waterfront Terminals Inc., 5000 Deepwater Terminal Road, Richmond, Virginia 23234. *Contact:* J. N. Collins, Terminal Manager (*Tel:* 275-9248).

RIVERHEAD, Long Is., New York: 41.00 N. 72.39 W.

(See Plan)

LOCATION: The fixed Offshore Tanker Berth is situated 1.2 miles offshore from the North shore of Long Island in Long Island Sound, 4 miles 257° true from the beacon on Mattituck Inlet breakwater and 12.7 miles 178.5° true from Falkner Island Lighthouse. The geographic position of the centre point of the Operating Platform is in Lat. 41° 00′ 01″ N., Long. 72° 38′ 50″ W. The platform has 4 navigation lights situated on each corner of the structure flashing every second. A similar navigation light is also situated on each of the East and West mooring dolphins.

DOCUMENTS: See "New York".

Terminal will provide "Declaration of Inspection" form which must be completed before cargo transfer begins.

PILOTAGE: Pilot is arranged for by ship's Agent. Vessels will pick up Pilot South of Point Judith Buoy No. "2". Pilot boarding position is Lat. 41° 18′ N., Long. 71° 29′ W. Ships with draft exceeding 50 ft. should keep Point Judith 4 miles distant to keep clear of charted wreck and shoals. Pilot boats "Northeast Pilot" or "Rhode Island Pilot" watch Channels 16, 13 and 18A. Distance to platform is approximately 65 miles. The Pilot will also perform the duties of Docking Master while vessel is at the Offshore Platform. It is required that the Pilot remain on board on standby while the vessel is moored at the Offshore Platform. Vessels with 50 ft. or deeper draft require a Pilot's assistant to assist regular Pilot in navigating the vessel into Long Island Sound and to the Offshore Platform.

ANCHORAGES: Vessels awaiting berth shall anchor 1 to 1.5 miles North of the platform facility. Holding ground is good and 90 fathoms (6 shackles) in the water is considered safe.

Platform crew under the supervision of the Marine Supervisor will board about 1 hour prior to scheduled mooring time. Generally launch does not arrive before this time, except for emergencies.

The Marine Supervisor will board the vessel with the boarding party to provide communications and information.

RESTRICTIONS: Generally, vessels are moored on any stage of the tide and at night when weather conditions permit.

MAX. SIZE: Length in North Berth 1,150 ft. LOA and draft not to exceed 60 ft. Length in South Berth 700 ft. LOA and draft not to exceed 42 ft.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to New York Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

TUGS: Tugs are arranged by ship's Agent. Tug boats generally come from New Haven. Tug orders must be placed 24 hours in advance of docking time. Tel: (212) 840-4600. Tug horsepower requirements are determined by vessel displacement.

A tug is required for undocking all vessels.

COMMUNICATIONS: Telephone at Riverhead 727-5600. (Code for station to station: Dial 516 727-5600). Cable Address "Northville Riverhead New York". Radio I.T.T. Amagansett. TWX No. 96-1415 Northville Melville and TWX No. 510-224-6443 or 510-226-7837 Northville Melville.

VHF: Communication with shore and launch via portable VHF radiophone. This equipment on continuously during vessel's stay. The Platform crew maintains radio watch and constant communication with shore for general purposes and emergencies. Platform monitors Channels 16 and 13. Shore monitors Channels 16 and 19A.

VHF Marine Operators use VHF Channels: Riverhead (N.Y.) Marine Operator 28; New London Marine Operator 25 & 26; Providence Marine Operator 28; to place land calls.

BERTHING: North Berth (1): Vessels berthed during flood tide will moor starboard side to and during the ebb tide current will moor port side to. Forward and stern spring lines are secured to the breasting dolphins and bow and stern lines are made fast to mooring dolphins located to the East and to the West of the platform structure. Terminal Foreman boards vessel to provide communications and assistance during the mooring operation.

South Berth (2): Vessels berthed during flood tide current will moor port side to and during the ebb tide current will moor starboard side to. Forward and stern spring lines are secured to the breasting dolphins in the South Berth. Bow and stern lines are made fast to the mooring dolphins located to the East and West of the platform structure. Breast lines are secured to the North breasting dolphins.

Two mooring buoys are situated South of the mooring facility which were formerly used for mooring vessels in the North Berth. Mooring buoys will be used at the discretion of the Docking Master (Pilot) and/or Northville's Marine Supervisor.

Masters will note that platform is situated in an open roadstead and that all mooring equipment must be in proper working order and in good condition. If, in the opinion of the Pilot (Docking Master) or Northville's Marine Supervisor, the vessel's mooring equipment is inadequate, the vessel will not be permitted to remain in the berth.

Vessels must be equipped with 12 manilla or better mooring lines of not less than 8 in. circumference and not less than 90 fathoms length.

Vessels having wire moorings secured on warping winches with brake are acceptable. Warping winches must be adequate to handle mooring lines under heavy strain. Efficient stopper lines must be readily available to "stop off" mooring lines for transfer from winch to bitts without loss of tension.

The Docking Master (Pilot) will assist the Master in the berthing of the vessel and supervise the mooring and unmooring operations.

No gangways are used at this terminal. Crew must use ship's ladder for launch service. Crew are forbidden to go onto the Platform, except on ship's business.

OIL TRANSFER CONNECTIONS: The Marine Supervisor and/or his crew will supervise the connecting and disconnecting of the hydraulically operated steel loading arms.

In the North Berth there are 2×16 in. and 2×12 in. steel loading arms, and in the South Berth there are 2×12 in. steel loading arms, all with appropriate reducers. The 12 in. L/U arms will connect to 8 in., 10 in., and 12 in. 150 lb. ASA flanges. When connecting 2×12 in. L/U arms the centre line of the ship's flanges must be at least 6 ft. (72 in.) apart.

The 16 in. L/U arms will connect to 10 in., 12 in., 14 in., and 16 in. 150 lb. ASA flanges. When connecting 2×16 in. L/U arms the centre line of the ship's flanges must be a minimum of 15 ft. (180 in.) apart.

The L/U arms cannot be connected directly to valve flanges. Flanged spools or reducers must be provided. Provisions must be made available for quick draining of the L/U arms.

LOADING AND DISCHARGE OF CARGO: Oil transfer operations are entirely in accord with the Rules and Regulations of the United States Coast Guard. Declaration of Inspection by the Dock person in charge and the Vessel person in charge must be completed prior to commencement of any oil transfer operations.

Discharge rates usually vary between 7,000 bbls.p.h. and 20,000 bbls.p.h. per shore line, depending on the gravity of the cargo and ability of the vessel. Wharfage is charged to vessels which discharge at less than 10,000 bbls.p.h.

BALLAST: No ballast disposal facilities. Long Island Sound is inland water and United States Anti-Pollution Regulations rigidly enforced. No bilge water, oil-contaminated water, garbage or any waste matter which may pollute sea water is to be discharged overboard while vessel within Long Island Sound and approaches.

Ballast suction valves must be sealed with a numbered seal on arrival. Terminal personnel will inspect seals before and after cargo transfer.

STORES/FRESH WATER: No fresh water facilities. Small quantities provisions may be purchased at local stores in Riverhead, 4 miles inland. Stores may be delivered by prior arrangement with Miller launch (Tel: (516) 654-4900) or Wahlen launch (Tel: (516) 928-2223).

QUARANTINE, CUSTOMS AND IMMIGRATION: New York City is port of entry for Northville. Entry and clearance must be arranged by ship's Agent. Boarding Officers board in the anchorage or upon arrival. Pertinent Government Officials should be advised in sufficient time, usually not less than 24 hours, Monday through Friday and 48 hours on Saturday and Sunday. Generally, entry and clearance can be arranged by Agent who should advise Customs well in advance of vessel's arrival, thus saving necessity of having Master go to Customs House in New York.

MEDICAL: Hospital in Riverhead equipped with all medical facilities. Medical attention must be arranged by ship's Agent. U.S. Public Health Service not available locally.

WEATHER AND TIDE: Strong winds from North and N.W. experienced during Winter and Spring. Tide during maximum ebb and flood often reaches 3.5 to 4 knots velocity.

DENSITY: Flood tide density 1025. Ebb tide density 1020.

CUSTOMS ALLOWANCES: Tobacco, wine and/or spirit allowance: Same as permitted in New York Harbour.

IDENTIFICATION CARDS: Issued by Immigration Officer.

CONSULS: All Consuls Offices located in New York City.

REPAIRS: No repair facilities are available. Vessel must remain in sailing readiness at all times while moored at the platform facilities.

DRY DOCKS: At New York Harbour.

SURVEYORS: *Inspection Companies:*

Panama Bureau of Shipping, 104 E. 40 St., NY, NY 10016. Tel: (212) 867-4760.

REPATRIATION: Agent arranges all crew repatriation via New York.
AIRPORT: New York Airports 80 miles distant.
TIME: Standard time GMT minus 5 hours. Daylight Saving Time first Sunday of May to last Sunday of October, GMT minus 4 hours.
POLICE/AMBULANCE/FIRE: Terminal attends Police/Ambulance and Fire services.

State Police Tel: 727-2727, Police Tel: 911 (Emergencies only). Fire Tel: 0 (to report fire, otherwise 727-2750). Ambulance Tel: 911 or 298-4016.

EMERGENCY CO-ORDINATION CENTRE: United States Coastguard at New Haven, Connecticut. Tel: (203) 773-2464; and the United States Coastguard National Response Centre. Tel: (800) 424-8802 (toll free number).
BANKS: European American Bank, located at 209 West Main Street, Riverhead, New York, NY 11901. Tel: (516) 727-7082.
STORING: Bunkers must be taken at anchor. Stores can be loaded during transfer.

Trucks cannot proceed alongside the berth, but by launch only.

Fork lift trucks cannot be used to handle stores.

Customs Regulations regarding storing are not known by this terminal.

Local Riggers can be employed to assist with storing.

TELEPHONES: A coin telephone is located in the platform office. Tel: (516) 727-9549.
SHORE LEAVE: Shore leave permissible by arrangement with local launch service.
SHIP SUPPLY SERVICE: James Miller Marine Services operate Coast Guard inspected crew boats on a charter service to vessels in the Long Island Sound area. They also have available LCMs with a 25 ton capacity for stores and equipment. These vessels are based in Port Jefferson, Long Island, New York and are on call 24 hours a day, 7 days a week. Tel: 516-654-4900.

James Miller Marine Services also operates inspected crew boats for passenger service on a per head basis in New York Harbour. The operations centre is at Pier 13, Staten Island. They can be reached on Channel 16 VHF "Miller's Launch" or call 212-727-7303 or 516-654-4900. Also available at this location are similar LCMs with 25 ton capacity for stores and equipment.

AUTHORITY: Northville Industries Corp., P.O.Box 111, Riverhead, NY 11901. *Tel:* (516) 727-5600. *Telex:* 96-1415. *Cables:* Northville, Melville. *Contact:* Earl Espeland, General Manager. A. Golz, Marine Supervisor.

ROCHESTER, New York: 43.17 N. 77.36 W. **(See Plan)**

Refer to "St. Lawrence Seaway" for important general information.

See "General" below.

PILOTAGE: Not necessary.
ANCHORAGE: No anchorage available within harbour limits.
RESTRICTIONS: Permit for non-emergency docking must be obtained 2 weeks in advance by mail or telephone request.
MAX. SIZE: Channel depth 20 ft. (LW). All depths in channel or alongside wharves should be checked carefully against the latest recorded elevated or lake level. This may vary from month to month. Entrance width 300 ft., turning basin depth 20 ft., 600 ft. in width.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to New York Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
RADIO: Rochester Coast Guard Station.
TUGS: Not available.
BERTHING: Entrance piers are parallel to each other, and about 450 ft. apart. The West Pier is 3,036 ft. long and the East Pier 2,699 ft. long. Fog horn and beacon on West Pier, East pierhead lighted. Radio beacon. Port Authority Terminal located on West bank of Genesee River at end of Lake Pier. Has a quay wall of about 1,400 ft. in length. Depth of water alongside quay wall uncertain, estimated at between 10 ft. and 16 ft. Charlotte Docks located about 2 miles upstream from mouth of river on West bank.
CRANES: Not available, except through private arrangements.
BRIDGES: New York Central Railroad swing bridge near mouth of the river and upstream from Port Authority Terminal. Traffic lift bridge about 0.25 mile upstream from railroad bridge.
STEVEDORES: Vessel to make own arrangements.
DENSITY: Fresh water.
FRESH WATER: Available at both docks.
FUEL: Vessel to make own arrangements.
IDENTIFICATION CARDS: Required.
CONSULS: None.
REPAIRS: Minor only.
REPATRIATION: Can be arranged.
AIRPORT: Approximately 10 miles from port.
POLICE/AMBULANCE/FIRE: Police, Ambulance and Fire Tel: 911.
SHORE LEAVE: Allowed.
GENERAL: Rochester, New York, no longer operates a commercial port. The facilities are available only for tour and cruise boats to take on and discharge passengers, and by commercial vessels in the case of an extreme emergency.

It should be stressed that emergency docking is completely the Master's responsibility. The City of Rochester and the Department of Recreation and Community Services assume no liability for any vessel docking under emergency conditions at the former Port of Rochester.

AUTHORITY: City of Rochester, Department of Recreation and Community Services, Office of the Director, 226B City Hall, Rochester, New York 14614. *Tel:* (716) 428-6755.

SACRAMENTO, California: 38.32 N. 121.30 W. **(See Plan)**

DOCUMENTS: See "San Francisco".
PILOTAGE: Pilots board vessel in San Francisco Bay. (Also see "San Francisco").
RESTRICTIONS: *Ship Channel:* Distance Fort Point to Sacramento, 79 nautical miles (146 km.). Bottom width in river reach 300 ft. (91.4 m.). Bottom width in channel reach 200 ft. (61.0 m.). Min. depth at MLLW 30 ft. (9.1 m.).
Harbour: Area 60 acres (24.3 hectare). Min. depth at MLLW 30 ft. (9.1 m.). Tidal variation 5 ft. (1.5 m.) average.
MAX. SIZE: 800 ft. LOA and 106 ft. beam, 30 ft. deep at MLLW.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to San Francisco Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
RADIO: KBA 386, 156.9 MHz (24 hours).
TUGS: Join vessel at Light 76 (turning basin).
BERTHING: Anchor – ships will have at least 1 anchor ready to let go in case of emergency, when docking or undocking. Anchor will be raised immediately upon ship being made fast to wharf.

Insurance lines are required on off-shore side, fore and aft, immediately after ship is made fast to wharf.

A cargo net shall be securely placed under gangways. Save-all nets shall be rigged abreast of holds at which general cargo is being handled.

Rat guards, at least 3 ft. in diameter, shall be placed on all mooring lines immediately after docking, and shall be maintained in place until ship's departure.

Pier 1:
Owned and operated by: Port of Sacramento.
Use: Bulk-loading rice facility.
Construction: Concrete with timber fender piles, length 600 ft. (182.9 m.).
Water depth: 32 ft. (9.8 m).
Storage capacity: 22,000 tons; 8 silos at 2,200 tons each; 6 silos at 470 tons each; 6 silos at 270 tons each.
Mechanical handling facilities: 3 loading spouts dockside, conveyor system to storage facility.
Loading rate: 600 t.p.h.

Wharf 2:
Owned and operated by: Port of Sacramento.
Use: General cargo.
Construction: Concrete with timber fender piles; apron width 60 ft. (18.3 m.); length 600 ft. (182.9).
Water depth: 30 ft. (9.1 m.).
Transit sheds: One, 86,400 sq. ft.

Pier 5:
Owned by: Port of Sacramento.
Operated by: Cargill of California, Inc., as a public utility.
Use: Bulk-grain facility.
Construction: Concrete and steel silos; concrete with timber fender piles; length 600 ft. (182.9 m.).
Water depth: 32 ft. (9.8 m.).
Storage capacity; 1,250,000 bushels (30,000 tons); 17 concrete silos; total capacity 500,000 bushels; 6 steel silos; total capacity 750,000 bushels.
Mechanical handling facilities: Bulk ship loader (600 t.p.h.), conveyor belt system connects bulk storage/rail/truck.

Wharf 6:
Owned and operated by: Port of Sacramento.
Use: General cargo and containers.
Construction: Concrete with timber fender piles; length 600 ft. (182.9 m.)., apron 60 ft. (18.3 m.).
Water depth: 30 ft. (9.1 m.).
Mechanical handling facilities: 2 gantry cranes, 45 tons each.
Remarks: 6 acres of open wharf; 70,000 sq. ft. off dock warehouse.

Wharves 7-8:
Owned and operated by : Port of Sacramento.
Use: Bulk material facility and general cargo.
Construction: Concrete with timber fender piles; apron 60 ft. (18.3 m.), length 600 ft. (182.9 m.).
Water depth: 30 ft. (9.1 m.).
Storage capacity: Covered 200,000 tons, open 750,000 tons.
Mechanical handling facilities: Conveyor-belt system from truck to storage, from ship to storage; from storage to ship, or from storage to truck; 2 gantry cranes, 45 tons each.
Loading rate: 600 t.p.h.
Transit shed: 86,400 sq. ft. Bagging facilities for bulk cargoes.

STEVEDORES: Same as San Francisco.
MEDICAL: All normal medical facilities available.
DENSITY: Full fresh.
FRESH WATER: Available at all berths.
FUEL: All grades available with 24 hours notice. Delivered by barge.

GANGWAY/DECK WATCHMEN: Each ship shall have a security detail in readiness on board at all times it is in port. The security detail shall perform tasks of an emergency nature and shall have information concerning cargoes aboard in case of need for fire fighting purposes.
OPENING/CLOSING HATCHES: Opening/closing hatches is stevedore work while docked in port.
IDENTIFICATION CARDS: A pass signed by the Master or his designated officer will be required for crew members, passengers and their personal property to leave the port's fenced area. Property may be subject to physical inspection before leaving the fenced area.
CONSULS: Nearest at San Francisco.
REPAIRS: Limited repair facilities available.
REPATRIATION: Can be arranged through local Agent.
AIRPORT: 16 miles from port and served by regular airlines.
TIME: GMT minus 8 hours.
HOLIDAYS: Only days not worked are 4th and 5th July, Labour Day, Christmas Eve and Day, New Year's Eve and Day.
POLICE/AMBULANCE/FIRE: Tel: 371-8000. Extensions 252 and 228.
TELEPHONES: Telephones are available.
SHORE LEAVE: Crew members allowed ashore subject to Immigration clearance.
REGULATIONS: Ships will not blow boiler tubes while in port. Bilge water or oil will not be discharged into harbour. Accidents will be reported immediately to the Terminal Superintendent. Splash boards will be placed over disposal vent-pipe openings on inboard side of vessel.

Garbage – United States and California State laws make it unlawful to dispose of ship's garbage except in approved ways. Garbage retained on board must be kept in tightly closed containers.

Smoking – Smoking prohibited in and around cargo compartments, and on open decks except that it may be permitted in marked areas under sheltered portion of weather decks on offshore side. Smoking prohibited on wharfs and piers except in marked areas. Smoking prohibited on or near ship while it is bunkering.

Welding/Burning – Welding or burning will not be done until written approval is obtained from the Terminal Superintendent and the Fire Marshal. All requirements of both the Superintendent and Marshal will be strictly adhered to.

Fire Signal – Upon detection of a fire, regardless of location or size, the alarm of fire will be sounded. The alarm shall be sounded by telephone and/or whistle or siren blasts. 5 each, 5 second blasts repeated as necessary.
AUTHORITY: Port of Sacramento, P.O.Box 815, World Trade Centre, West Sacramento, California 95691. *Tel:* (916) 371-8000. *Telex:* TWX 910-367-3581. *Contact:* Dennis Clarke, Director.

~~**AGENT:** See "San Francisco".~~

③

SALEM, Massachusetts: 42.31 N. 70.53 W. (See Plan)

SHIPMASTER'S REPORT: August 1986.

DOCUMENTS: See "Boston".
PILOTAGE: Cape Ann Pilots Association (serves Gloucester and Salem). Pilot on VHF Channels 16 and 12. Pilot boards about 1 mile South of Eastern Light Buoy No. 2.
ANCHORAGES: About 2 miles S.W. of Eastern Point.
RESTRICTIONS: Salem Channel 150 ft. in width only, therefore large vessels berth or unberth in daylight hours only.
MAX. SIZE: Length 700 ft. (approx.). Breadth 110 ft. (approx.) and draft 34 ft. (salt water).
TUGS: Available from Boston.
BERTHING: New England Power Company (NEPCO) operates Salem Terminal Wharf to supply Salem Harbour Station with coal and fuel oil.

No cranes available, coal is discharged from "self-unloading vessels" only.
TANKERS: 2 arms (Chicksan-type), 12 in. diameter. Discharging rate: 7,000 bbls. each. Length of wharf (incl. dolphin) 250 m. (approx.) dredged to 34 ft. at LW.
DENSITY: 1022 – 1025.
AIRPORT: See "Boston", about 45 minutes. Cost US$50.00 by van.
TELEPHONES: Not placed on board, however communication with Agents via VHF possible.
GENERAL: Port is served by 1 or 2 colliers a week, and about 3 tankers a month.

NEPCO Representative acts as Loading Master. Linesman are provided from the power station.

REPORT: From Tanker Operator:
Port Approaches: The RDF stations at Cape Cod, Boston Buoy 'B' and Eastern Point are useful navigation aids. The rocky shore lines provides a good target for position fixing by radar. Fathometer readings should not be relied on for position fixing purposes, since bottom contours are erratic. Fishing boat traffic in Massachusetts Bay is heavy especially near Gloucester. It should be noted that the small fishing vessels in this area sometimes display working and running lights that could be mistaken for reguar range lights. During the Summer months, the yacht traffic is considerable. Most yachts reportedly show up poorly on the radar screen.
Channel Transit and Berthing: Loaded tank vessels enter with a rising tide. The Pilot and Agent should be consulted with regard to the actual water depths available in the channel during the intended period of transit.

The transit from the pilot boarding area to the terminal is about 10 miles. Salem Sound is entered via the Salem Channel between Bakers Island and Little Misery Island, leading Westwards for 3 miles thence Southwestward through a dreged section to the turning basin off the berth. The channel is well marked with buoys and range lights.

Shallow vessels and tows crossing the channel may be met. During Summer months, Salem Sound is crowded with pleasure craft. Coastguard patrol boats must sometimes be utlised to clear a path.

The tugs usually join the ship before entering the inner dredged channel Buoy No. 16. The ship is berth port side to, which requires a starboard turn of approximately 130° before landing.

During normal weather conditions, 10 mooring lines are considered to be the minimum acceptable.
Weather: Gales occur year round. The severest storms occur during the Winter months. Rain or snow associated with these storms, at times, reduce visibility to zero for extended periods. During the Winter months, freezing spray may be experienced.

Fog presents a problem year round, being heaviest during late Spring and early Summer. It is not advisable to enter or leave in thick weather.

SAN DIEGO, California: 32.41 N. 117.07 W. (See Plan)

PORT LIMITS: The seaward boundaries of the port of San Diego at which a vessel is considered to be an "arrived vessel" is that time when the vessel is boarded by a Port Pilot at Sea buoy No. 1 and (subject to charter party terms) lay time commences when Notification of Readiness is tendered at berth.
DOCUMENTS:
Crew Lists.
Passenger Lists.
Customs Documents.
Manifests.
Stores Lists.
Crew Curio Declaration List.

If the vessel arrives from foreign direct, 3 copies each of the above documents are required.

If the vessel movements are between U.S. ports, 2 copies each of the above documents are required.

Health Documents. Arrival from foreign direct, 1 copy only. All crew members should be in possession of valid vaccination certificates.

Manifests. Arrival from foreign direct, 1 copy of travellers manifest which remains with vessel, and 3 copies each of U.S. Customs inward foreign manifest. Bills of lading, ship's papers carried aboard vessel varies with steamship companies.
PILOTAGE: Compulsory. The San Diego Pilots do not maintain Pilots on station. Service is rendered according to ETA received from vessel. If any vessel's arrival or departure is delayed over 1 hour, an additional charge will be made. Telegraphic address of pilot station – radio ETA to "Pilots", San Diego. Advance notice of ETA required – 24 hours prior to arrival of vessel with amendments 2 hours prior to arrival. Pilot boat is 54 ft. in length, painted white. The exact area where Pilot boards the vessel is No. 1 sea buoy. Pilot on VHF Channels 16 and 12 (Tel: (714) 233-7814).
ANCHORAGE: 3 miles S.E. of Point Loma Light.
MAX. SIZE: Length, breadth – no restrictions. Max. draft alongside face of terminal, 36 ft.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to San Diego Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
RADIO: All radio messages go through the Los Angeles station for relay.
VHF: The Port of San Diego Harbour Police maintains a listening watch on Channels 12 and 16. Channel 11 is available after initial call-up on Channel 16.
TUGS: Tugs normally join vessel approximately 1 mile before berth. 5 available ranging from 200 h.p. – 1,700 h.p. There is no charge for the use of tug's lines.
CONTAINER FACILITY: A new generation, high-speed, all-electric container crane capable of handling 20 ft. and 40 ft. units, or single hook lifts of 40 long tons at National City Marine Terminal. This 17.4 acre facility includes 32,500 sq. ft. for a container freight station, a container steam-cleaning facility, office, maintenance shop, truck scales, railroad spur, and paved storage for 2,280 containers including electrical outlets for 45 refrigerated containers. Depth 35 ft.
SPECIALISED CARGO HANDLING FACILITIES: High-speed bulk-loading facilities exist with 800 ft. of 37 ft. deep water berthing space and bulk storage, plus a bulk loader boom that travels 500 ft. laterally and can be extended or raised enough to load nearly any size or type of ship.

High-speed bagging of bulk commodities is available for bagging of bulk materials from powder to pellets at the rate of 1,000 tons per hour.
STEVEDORES: Advance notice of 24 hours desired in order to arrange gangs.
MEDICAL: Agents should receive notification of medical attention required 24 hours prior to ETA of vessel. Complete hospital facilities available.
TANKERS: Diameter of load/discharge line 6 in. to 8 in. Slop (residue) discharge facilities available upon request. 2 tanker berths – max. draft 35 ft. There are also 2 Tanker Berths at National City Marine Terminal with 12 in. discharge lines.
DENSITY: Salt water in bay.
FRESH WATER: Fresh water available, delivery via pipeline.
FUEL: Diesel and bunker fuel available.
GANGWAY/DECK WATCHMEN: Available if considered necessary.
OPENING/CLOSING HATCHES: Carried out by stevedores.
CERTIFICATES: Registered Load-line Certificate, Certificate of Inspection, Safety Certificate.
CUSTOMS ALLOWANCES: Tobacco: Per each crew member U.S. Customs allowed 2 cartons of cigarettes and 1 box of cigars. Wine and/or Spirits: Quantity allowed per each crew member – 1 quart.
CARGO GEAR: Up-to-date certification of all cargo gear required in order to comply with Pacific Coast Marine Safety Code.
IDENTIFICATION CARDS: U.S. Immigration requires completion of Form I-95, U.S. Coast Guard requires landing permits.

CONSULS:

Chile
Costa Rica

REPAIRS: All types of deck and engine repairs are available.

DRY DOCKS: Largest dry dock 700 ft. length, 104 ft. width. Capability can accommodate C – 2 Mariner type or San Diego type hulls (600 ft. length, 85 ft. width) and up to and including 28,000 displacement tons. 4 additional floating dry docks with capabilities up to and including 3,500 displacement tons.

New floating dock, length 800 ft.

SURVEYORS: A full complement of cargo inspectors and surveyors are available locally.

AIRPORT: Distance from marine terminal approximately 5 miles. Airport is serviced by major airlines.

TIME: Local time GMT minus 8 hours. Daylight Saving Time becomes effective the last Sunday in April and continues to the last Sunday in October.

HOLIDAYS: Recognised holidays are: New Year's Day; Lincoln's Birthday; Washington's Birthday; Memorial Day, Independence Day, Labour Day, Columbus Day, Veteran's Day, Thanksgiving Day, Statewide Election Day, Christmas Day, or any other legal holiday that may be proclaimed by State or National Authority; when a holiday falls on a Sunday, the following Monday shall be observed as a holiday.

POLICE/AMBULANCE/FIRE: Police Tel: 236 – 5911; Emergency Ambulance (Paramedic) Tel: 238 – 1212; Fire Tel: 238 – 1212.

EMERGENCY CO-ORDINATION CENTRE: Local maritime emergency co-ordination is handled by the U.S. Coast Guard, San Diego Region, 2710 North Harbor Drive, San Diego, CA 92101. Tel: (714) 293-5860.

TELEPHONES: Arrangements exist for placing telephones on board. No charge for hooking up.

SERVICES: Tank-cleaning equipment. Facilities for tank washings Compass and radar adjustments, etc.

SHORE LEAVE: Permitted.

BANKS: Full banking services for both domestic and international transactions are available locally.

STORING: Storing and provisioning may be accomplished at dockside or via barge by prior arrangement. Trucks and forklifts may be used alongside and riggers are available by arrangement with the representative Agent. U.S. Customs Agents will board on arrival and seal all bonded items. Otherwise, normal procedures concerning controlled items will be observed by the vendor.

DEVELOPMENTS: Broadway and 'B' Street Piers have been reconstructed for use as a passenger vessel facility, public park, for berthing of public visit Naval vessels, and for berthing and clearance of fishing vessels. U.S. Customs has an office at the end of Broadway Pier.

AUTHORITY: Port of San Diego, P.O. Box 488, 3165 Pacific Highway, San Diego, California 92112. *Tel:* (619) 291-3900. *Telex:* 695-456. *Cables:* Sun Harbor San Diego. *Contact:* Don L. Nay, Port Director.

SAN FRANCISCO, California: 37.48 N. 122.25 W.

(See Plan)

DOCUMENTS:

General Declaration (arrival) on Customs Form 1301.

Cargo Manifest (Customs Form 1302). One original copy indicating all the cargo on board, used for making formal entry. One copy listing all cargo on board, to be used by the Customs Inspector. One copy indicating cargo for this port only.

2 copies of Crew's Effects Declaration on Customs Form 1304.
2 copies of Ship's Stores Declaration on Customs Form 1303.
2 copies Passenger List (Form I-418).
2 copies Crew List (Form I-418).
1 Copy "Oil Pollution Certificate", issued in Washington D.C.

Customs Boarding Officer will also examine Ship's Register and Load-Line Certificate. In addition, the following documents will be required for formal entry to be made within 48 hours of arrival from abroad, or 24 hours of arrival from abroad, or 24 hours of arrival from a U.S. port:

(a) Health Pratique.
(b) Master's Oath (Customs Form 1300).
(c) U.S. Certificates of Payment of Tonnage Tax (Customs Form 1002).
(d) Certified Crew List (U.S. vessels only).

PILOTAGE: Pilotage in and around Golden Gate Region is performed by the San Francisco Bar Pilots who provide service from sea to all ports within the regions, including the Ports of Sacramento and Stockton.

The San Francisco Bar Pilots' Association, maintains a sea station 12 miles outside the Golden Gate, in the vicinity of the large navigation buoy for vessels arriving and leaving the area.

On station around-the-clock. Pilot boats are equipped with VHF radiotelephone, and maintain continuous watch for ship traffic and operate co-operatively with the Marine Exchange communication centre and lookout station. The Bar Pilots also carry portable VHF radios.

Some 8,500 ships are piloted annually into and out of the port complex, through the Golden Gate and the 2,000 ft. wide, 55 ft. deep main ship channel across the sand bar about 9 miles outside the Gate.

Considerable Summer fog is experienced on the pilot grounds. In Winter months radiation or tule fogs frequently occur. The tidal prism of hundreds of square miles of inland waters cause unusually swift and changing currents in the area. Pilotage for San Francisco Bar and entrance is compulsory and available 24 hours a day. The pilot boat is at a station 3 miles outside Main ship Bar channel about 14 miles from San Francisco, VHF Channels 18A and 10 for radio contact. Vessels with a draft of 42 ft. or more are requested to arrive at the pilot station for the inward passage about one hour before high water at the Golden Gate Bridge.

ANCHORAGES: Several anchorages available in San Francisco Bay for any type of vessel up to 50 ft. draft.

The well-protected bay affords excellent shelter and anchorage in all weather. The Captain of the Port (Coast Guard) will assign an anchorage to a vessel upon request. In San Francisco and San Pablo Bays, there are a large number of anchorages available for naval, quarantine, general and explosives.

The specific anchorages available include:

1. *General Anchorage*

(a) No. 5 – found just South of the Richmond-San Rafael Bridge, has no limitations.

(b) No. 9 – found in the South Bay, also has no limitations.

2. *Temporary Anchorage*

(a) No. 7 – found off Treasure Island, has a 12 hour limit. A ship cannot lighter nor bunker at this mooring.

No. 8 – same as No. 7 but has a 6 hour limit.

3. *Explosive Anchorage*

No. 12 – is normally not activated.

No. 13 – found off Larkspur, this mooring is activated only as the need arises.

No. 14 – found in the South Bay, this mooring is always activated.

4. *Naval Anchorage*

No. 10 and No. 21 are the most frequently utilised.

RESTRICTIONS: The San Francisco Bay region is the first on the West Coast to have sea lanes established by the Coast Guard for greater safety in its ocean approaches. Use of the lanes is not mandatory, but is strongly recommended to reduce chance of ship collisions in congested approach and departure areas. The lanes are not intended to supersede or alter applicable rules of the road.

The lanes begin within 6 miles of the San Francisco Lightship, with each lane inbound and outbound separated by a buffer zone. The headings are: North lane outbound, 305°; North lane inbound 120°, main line outbound, 247°; main line inbound, 058.5°; Southern lane outbound, 169°; Southern lane inbound 343°.

The size of the bay and the narrowness of the Golden Gate cause tricky and sometimes difficult tidal and current conditions. The flood current sets into all parts of the bay and causes swirls as far East as Alcatraz and Angel Islands. At the San Francisco-Oakland Bay Bridge there are large current eddies near the foundation piers which may require care to maintain proper course.

The bar channel is dredged to 55 ft. MLLW by the U.S. Army Corps of Engineers. Entrance channels to the various ports are dredged to 35 ft., with the exceptions of Sacramento, Stockton and Redwood City, which are 30 ft. Stockton, however, is approved for a 6 ft. deepening, and study of similar deepening for Redwood City is being completed.

MAX. SIZE: The max. permissible draft for tankers at the oil installation is 35 ft., for regular freighters and passenger ships at the San Francisco piers is 30 ft. No restrictions on length or berth. The best time to dock with max. draft is at a rising tide.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to San Francisco Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Radio station via RCA – Radio Corporation of America – Station KPH ITT – World Communications – Station KFS.

Safe and efficient navigation for all bay vessel traffic is maintained through a Ship Location and Reporting Service operated by the Marine Exchange. U.S. Coast Guard Vessel Traffic Service on Yerba Buena Island and at Port Bonita maintains 24 hour radar surveillance of all traffic from Golden Gate on the West (with 32 mile capacity beyond) to Oakland on the East, Dumbarton Bridge on the South and Port San Pablo on the North. Vessel Movement Reporting System (VMRS) extends beyond Port San Pablo all the way to the Ports of Stockton and Sacramento. Coast Guard urgently requests that all vessels as specified below, moving anywhere within the VMRS (including all area under radar surveillance), tune to Channel 13 (156.65 MHz., VHF FM): All ships of 300 gross tons and over, passenger ferries for hire over 100 gross tons, and tugs with tows of barges or dredging rigs of over 26 ft. length.

Coastguard Regulations: Foreign tankers should give 72 hours' advance notice of arrival to ensure that U.S.C.G. has enough time to check the vessel's records for compliance or outstanding violations and to arrange for any onboard inspections required. Failure to provide 72 hours' notice may delay the commencement of cargo transfer while awaiting the required U.S.C.G. inspections. Letter of Compliance inspections must still be arranged through Washington D.C. The statutory notification remains at 24 hours. This notice applies only to the San Francisco Bay area. Any vessel required to have an inert gas system must have its tanks inerted at all times unless they are gas free.

VHF: VTS in operation. Call sign "San Francisco Vessel Traffic Centre", operates on Channels 16, 13, 12 and 18A.

TUGS: Tugs available and normally join the vessel when approaching their pier. Tug's lines are always used, with no extra charge.

BERTHING: No restriction on berthing other than draft limitation and preferable at slack water.

Pier	No. of Berths	Length (ft.)	Depth (ft.)	Remarks

Alameda: (See Plan). (Not part of the Port of San Francisco). Alameda, an island and city across the Inner Harbour channel from Oakland, is the home of Encinal Terminals, the largest privately owned and operated steamship terminal in the United States. There are 6 berths for vessels at Encinal.

Berths 1, 2, 3 and 4: Used for general cargo and bulk liquids. Total berthing length 2,125 ft. Depth 31 ft. to 33 ft.

Berth 5: Used for general cargo. Length 750 ft. Depth 35 ft. Berth equipped with Paceco crane.

Berth 6: Used for receipt and shipment of bulk liquids. Depth 30 ft. Facility has tank storage of 12 million gallons.

Operator: Encinal Terminals, 1521 Buena Vista Avenue, P.O.Box 2453, Alameda, CA. 94501. Tel: (415) 523-8800. Telex: TWX (910) 366-7174.

CONTAINER/BULK HANDLING FACILITIES: *San Francisco Container Terminal - (SFCT) South:*
(formerly Pier 94/96).
Container Ship Terminal.
Cargo Way.
Steamship Lines: Evergreen Line, Columbus Line, COSCO, Grancolombiana Line, United Yugoslav Line, Evergreen Line, National Shipping Corporation of the Philippines.
Assigned to: Stevedoring Services of America.
Dimensions: Total terminal area is 76 acres. Outer apron is 2,456 ft.
Number of berths: Three at 40 ft. MLLW alongside and a design load of 800 p.s.f.
Special Facilities: The ondock Intermodal Container Transfer Facility accommodates up to 20 rail cars on a single switch. Port packers used for yard operations. Elevated control tower with radio and PA communications systems. A maintenance and repair building of 24,000 sq. ft. is sprinklered and has a 5-ton capacity overhead bridge crane. Other buildings include an administration building (14,000 sq. ft.) and gate house/terminal office building (2,475 sq. ft.).
Lift equipment: 2×30 ton Pacero Cranes, and 2×30 ton Star porter cranes, rail mounted. The spreaders can be expanded in order to afford easy accommodation of both 20 ft. and 40 ft. containers. Each crane has a 50 ft. gauge with an outreach of 115 ft., backreach of 30 ft. and an 88 ft. clear hoist above HW. The Paceco can load and off-load containers thwartships. There is also 1×25 ton P&H mobile crane.
Connections: Trucks via Cargo Way; Southern Pacific Railroad tracks. San Francisco Belt RR.

San Francisco Container Terminal - (SFCT) North:
(formerly Pier 80)
Combination Terminal - Container/Ro-Ro/Unitized Break Bulk.
Foot of Army and Marin Streets.
Construction: Concrete pilings, concrete deck.
Steamship Lines: Lykes Lines, Barber Blue Sea, ELMA, Lloyd Brasileiro, Independence Line, Nauru Pacific Line, Navicana Line, Nedlloyd Lines, Shipping Corporation of India.
Assigned to: California Stevedore & Ballast Company and Lykes Lines.
Dimension: Total terminal area is 68.5 acres. The face measures 1,296 ft. North measures 1,138 ft. and South measures 2,657 ft.
Berths: Six at 40 ft. MLLW alongside.
Special facilities: 2 steel-framed transit sheds totaling 392,200 sq. ft., 270 reefer outlets and Container Freight Station accommodations. The van yard is fully lighted and completely fenced for security.
Lift equipment: 1×30 ton and 1×40 ton Paceco Crane, and 1×40 ton Starporter Crane, rail mounted. All cranes can accommodate 20ft. and 40 ft. containers. Each crane has a 34 ft. gauge and an 88 ft. clear hoist above high water. Cranes can load and off-load containers thwartship.
Connections: Via Army Street or Marin Street; UP System Railroad tracks.

Pier 70-72: Automobile Terminal.
Foot of 23rd Street.
Assigned to: Fred F. Noonan Company.
Construction: Timber pile, timber deck.
Steamship lines: Wallenius Line.
Dimensions: The total terminal area is 24.5 acres. The face measures 723 ft.
Berths: Two at 40 ft. MLLW alongside.
Special facilities: 22 acres of open storage for car-loading, unloading and processing.
Connections: Via Third Street, East on 20th Street.

Pier 50: Combination Terminal.
Container/Ro-Ro/Unitized Breakbulk.
Foot of Mission Rock Street.
Construction: Concrete piles, concrete deck.
Steamship Lines: Various.
Dimensions: Total terminal area is 20.8 acres. The face measures 1,000 ft. North measures 1,480 ft. and South measures 1,100 ft. and 582 ft.
Berths: Four at 35 ft. MLLW alongside.
Special facilities: This pier offers 8 acres of open storage, 4 transit sheds totaling 274,000 sq. ft. and reefer outlets.
Connections: Via Mission Rock Street; Santa Fe Railroad tracks.

Pier 27 – 29: Newsprint/General Cargo/Containers.
Foot of Lombard Street.
Assigned to: Marine Terminals Corp.
Construction: Concrete piles, concrete deck.
Steamship lines: B.C. Forest Products, Papua New Guinea Line, Sig. Bergesen, Star Bulk Shipping, Atlantic Cargo Services and Scann Scot.
Dimension: The face measures 206 ft., North measures 750 ft. and South measures 1,340 ft.
Berths: Three at 35 ft. MLLW alongside.
Special facilities: Piers 27-29 are integrated piers connected by a 117,000-sq. ft. bulkhead and 2.5 acres of open storage space. It also offers 601,700 sq. ft. of transit shed space.
Connections: Via Embarcadero; Belt Railroad tracks.

Pier 92: Automobile and Bulk Liquids Terminal
Cargo Way.
Assigned to: Baker Commodities (Bulk Liquids) and California Stevedore and Ballast (Fishmeal).
Construction: Concrete piles and deck, timber apron.
Dimensions: The face measures 702 ft. and 166 ft. This facility also has a transit shed measuring 57,270 sq. ft.
Special Facilities: 10 acres of open storage space for automobiles, automobile detailing and repair centre, bulk oil processing and storage equipment, and heated and cooled pipe-lines connecting pier with the storage tanks.
Berths: One with 38 ft. MLLW alongside.
Connections: Via Cargo Way from Third Street; Southern Pacific Railroad/S.F. Belt

STEVEDORES: Stevedores orders must be placed 1000 hrs. for night gangs and day gangs. 2×8 hour shifts 7 days a week. Sunday and Sunday night gangs must also be ordered on Saturday 1000 hrs.

MEDICAL: Medical, and all hospital facilities available. No advance notice required.

TANKERS: All major oil companies have their own oil discharging piers which are outside the jurisdiction of the Port Authority. Reducing pieces are available. The max. drafts are 35 ft. Tankers arriving with a greater draft are partly discharged in the bay before docking.

Davis Point: Union Oil Co. Oleum Refinery Wharf, depth up to 38 ft. MLW.

Martinez: Shell Oil Co. Wharf, depth alongside 30 ft. – 42 ft. MLW. Phillips Petroleum Co. Amorco Wharf, 2 berths, depth 30 ft. – 42 ft. MLW. Phillips Petroleum Co. Avon Wharf, depth alongside 35 ft. MLW. Urich Oil Co. depth alongside 35 ft.

Ozol: Oil Wharf, depth alongside 39 ft. MLW.

Hercules: Sequoia Ref. Corp. Terminals, depth 35 ft. MLW.

DENSITY: Average density in the bay is 1016.
FRESH WATER: Available at all piers rate between 25 t.p.h. and 50 t.p.h.

FUEL: Fuel available by barge or at the oil companies own pier. Special blends require some advance notice.
FIRE PRECAUTIONS: Any special instructions are given to the Master upon docking.

GANGWAY/DECK WATCHMEN: Not required but this service available at Master's request.
OPENING/CLOSING HATCHES: Normally done by stevedores. But crew may open and close before arrival at the dock or after departure.

CUSTOMS ALLOWANCES: Each crew member may land free of duty and/or taxes articles acquired abroad not exceeding $10 in value, plus 50 cigars or 300 cigarettes or 3 lb. of smoking tobacco, and not over 1 quart of alcoholic beverages.

IDENTIFICATION CARDS: Standard U.S. Immigration Forms I-95 to be made up for each crew member on arrival. Not necessary for crew man already holding Form I-95, issued for the same vessel.

CONSULS: All Maritime countries represented at San Francisco.
REPAIRS: The major yards in the Golden Gate region have fully equipped machine-shop facilities capable of handling virtually any job; welding, heavy plate construction, turning, boring, facing, grinding, milling and rolling.

The larger yards also have facilities for pipe, sheet metal, electrical, carpentry, painting, rigging, machining and boiler work.

Southwest Marine, Westwinds, Service Engineering, SFW Corp., Todd and Triple "A" Repair are all located in San Francisco and provide berth space for all types of ship repairs at plant and at any location in the San Francisco Bay area.

DRY DOCKS: Todd Shipyards San Francisco shipyard has 3 floating dry docks, 1 with 22,000 tons capacity and 654 ft. long, 1 of 11,400 tons capacity and 542 ft. long, and 1 of 6,500 tons capacity and 450 ft. long. With a recently completed pier, its tie-up and outfitting space totals 4,271 ft.

Continental Maritime - New floating dock, carrying capacity 22,000 tons, LOA 664 ft., length over blocks 579 ft. clear draft over blocks 34.5 ft., clear width for docking 138 ft. Dock will accept vessels up to 70,000 d.w.t.
Williamette Iron and Steel Company's yard in Richmond has 5 concrete graving docks. 4 of these docks can each accommodate a vessel 600 ft. long with 83 ft. beam, and 1 dock can handle a vessel 750 ft. long by 83 ft.

Tonnage capacity is limited only by the above dimensions. Williamette's facilities include 1,500 ft. of concrete outfitting pier for in-the-water repairs. The graving docks are served by 4 gantry cranes of 60 ton capacity and 2 of 45 ton capacity, and the outfitting pier by 3×45 ton cranes. Williamette has fully equipped shops for repair and conversion work, and mobile units for out-of-yard work at all Bay Area piers.
Hunters Point Naval Shipyard: (Triple A Machine Shop) Under lease from the US Navy, graving docks and repair facilities available to all types of ships. Triple A operates 3 graving docks: (No. 4) 200 ft. beam×1,100 ft. length and 50 ft. depth; (No. 3) 150 ft.×1,000 ft. and 39 ft. depth; (No. 2) 100 ft.×800 ft. and 27 ft. depth, 17 repair berths can serve ships of any length. 12 gantry cranes of 50 ton capacity serve graving docks and repair berths. 50 ft. depth channel from Golden Gate to Hunters Point; unique to West side of San Francisco Bay.

REPATRIATION: All facilities available for crew changes by sea, air or land.
AIRPORT: Distance about 10 miles South of San Francisco and is served by most domestic and international passenger airlines plus 20 international air cargo carriers..

TIME: GMT minus 8 hours. Summertime from last Saturday in April till last Saturday in October – GMT minus 7 hours.

HOLIDAYS: New Year's Day; Lincoln's Birthday (February 12th); Washington's Birthday (February 22nd); Good Friday (afternoon); Memorial Day (May 30th); Independence Day (July 4th); Labour Day (1st Monday in September); Admission Day (Calif. only Sept. 9th); Columbus Day (October 12th); Veteran's Day (November 11th); Election Day (1st Tuesday after the first Monday in November); Thanksgiving Day (last Thursday in November); Christmas Day.

When any of the holidays fall on Sunday, the holiday will be observed on Monday.

On a holiday the longshoremen are working at the overtime rate (time and a half) except on the following days when no work will be performed:

1. New Year's Day;
2. Bloody Thursday (July 5th, memory of 3 longshoremen killed during the 1936 strike);
3. Labour Day;
4. Thanksgiving Day;
5. Christmas Day.

POLICE/FIRE/AMBULANCE: Police, tel. 533-0123; Fire, tel. 861-8020; Ambulance, tel. 431-2800.
TELEPHONES: On some piers telephone connections to ships are available, no extra cost for this service.

SHORE LEAVE: Crew members are allowed to go ashore after passing U.S. Immigration at first U.S. Port.
GENERAL: Vessels arrival has to be reported to the U.S. Coast Guard 24 hours prior arrival by Agent.

DEVELOPMENTS: The channel over the bar has been deepened to 55 ft. A new channel will be cut 600 ft. wide and 45 ft. deep (at low water), through the upper bay and the channel through San Pablo and Suisun Bays will be deepened to 45 ft. Manoeuvring areas near Richmond and the refinery terminals will be widened. The Stockton Deep Water Channel will be deepened to 35 ft. and the channel alignment improved.
Improvements to Pier 35 – Passenger Terminal: Improvements to the passenger boarding and unloading facilities at Pier 35, including a new Customs area have been completed.

Pier 35 is the major steamship passenger facility in the Bay Area and the point of disembarkation for tens of thousands of cruise passengers who look forward to San Francisco as a port of call or destination. An improved passenger terminal will be beneficial to our city and its tourist industry.

The area involved contains a 200,000 square foot passenger processing facility on the first floor with a 10,000 square foot visitor waiting area on the second floor.

The cost of the initial phase of the improvement is estimated at $1 million.
Expansion of Rail Capabilities to Pier 94-96: New track construction, as well as reconstruction of existing track, from the Terminal to Southern Pacific's mainline track has been designed to allow unit train access onto the Container Terminal.

The Container Terminal is composed of Piers 94-96. This 65 acre three-berth facility is serviced by 4 rail-mounted cranes and represents a $45 million capital investment. An additional 75 acres of expansion area lies adjacent to the Pier.

Direct rail access to this terminal will position San Francisco as a competitive intermodal port offering direct land-bridge and mini-bridge services through Port facilities. By being able to move containers directly from ship to rail, carriers will have the advantages of reduced costs, better control of containers and less damage.

San Francisco will be the first port in California with this capability.
AUTHORITY: Port of San Francisco, Ferry Building, San Francisco, California 94111. *Tel:* (415) 391-8000. *Telex:* 467560 Port of SF Cl. *Cables:* Sfportcomm. *Contact:* Eugene L. Gartland, Executive Director. Roger Peters, Intermodal Manager.

SAVANNAH, Georgia: 32.02 N. 81.07 W. (See Plan)

DOCUMENTS:
3 Crew Lists.
3 Store Lists.
3 Curio Lists.
3 Manifests.
3 Passenger Lists.

These documents required in order to enter vessel at U.S. Customs.

Direct Foreign Arrival – Quarantine Pratique issued by Public Health Service representative; Cargo on Customs Form 1302, in duplicate with abstract manifest of Savannah only cargo; Crew list on Form I – 418, in triplicate; Passenger List on Form I – 418, or other acceptable form, in triplicate; Crew curio list, in triplicate, with crew declaration on Customs Form 1304, or crew list on Form I–418, in triplicate, with numbers of attached Forms 5129 endorsed thereon for American vessels, List of sea stores and ship's stores Customs Form 1303, in triplicate; for American vessels, repair declaration on Customs Form 226; for American vessels, certified crew list; Clearance from last foreign port, if one issued.

Coastwise arrival with Residue Foreign Cargo or Passengers – Form 1301, "Permit to Proceed", in duplicate; Travelling Manifest; Abstract Manifest, in duplicate, of cargo to be discharged in Savannah; Stores list, in duplicate; Crew list, in duplicate; Crew purchase list, in duplicate, and any crew declarations on Customs form 5123 for Savannah for American vessels; Passenger list, in duplicate.
PILOTAGE: Savannah Pilots' Association, 550 E. York, Savannah, Georgia, 31401 (telegraphic); Pilot required all vessels; ETA 24 hours advance notice, change ETA 8 hours; VHF Channel 16 (monitored at all times), 18, 12, 13 – Radio telephone 2182 and 2738 kHz. Pilot boards vessel 1 mile outside fairway buoy.
SHIP CHANNEL: Project depth and widths are as follows: Sea buoy to jetties 40 ft. depth×600 ft. width; New Channel Range through Upper Flats Range 38 ft. depth×500 ft. width; The Bight Channel 38 ft. depth×600 ft. width; Fort Jackson Range to Wreck Channel 38 ft. depth×500 ft. width; City Front Channel to Kings Island Channel 38 ft. depth×400 ft. width; Whitehall Channel 35 ft. depth×400 ft. width.
ANCHORAGES: Outside fairway buoy North and N.E. of fairway buoy; no anchorages in river.
RESTRICTIONS: 31 ft. at any time; over 31 ft. on incoming tide, no restrictions day or night.
MAX. SIZE: Abbreviation OT: Ocean Terminal. Vessels berthing at OT 14 – 15 – 16 – 17 (slip 1). Vessels 550 to 600 ft. on slack water; vessels less than 550 ft. any time to berths 14 and 17; vessels docking or undocking at OT 15 – 16, with vessels in OT berths 14 and 17, can be docked or undocked during slack water.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Miami Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
RADIO: Vessels route ETA cables to Agents, etc., via Radio Lantana.
TUGS: Tugs join vessels at city front for berths above city; for berths below city, tugs usually meet vessels in vicinity of Fort Jackson or well below berth. Tugs' lines used at all times.
BERTHING: The Georgia Ports Authority operates 12 general cargo berths, 2 tanker berths, 5 container berths and 1 dry bulk cargo berth.
CRANES: Ocean Terminal – One 175 short ton gantry crane, one 100 short ton gantry crane, two 50 short ton gantry cranes, one 30 short ton gantry crane, one 100 ton mobile crane, one 30 ton mobile crane. Garden City Terminal – Two 35 short ton gantry cranes, one 100 ton mobile crane, one 30 ton mobile crane. Garden City Terminal (container port) – 9×45 short ton container cranes, 9×45 short ton rubber tyred bridge cranes. Other cranes, floating and mobile, are available from various private contractors.

BULK CARGO FACILITIES: Located at the Georgia Ports Authority's Garden City Terminal are 1 dry bulk cargo berth (loading). This facility is suited for the handling of various ores, grains, peanuts, meals and fertiliser materials. The storage at this facility consists of silos for the storage of grain and grain type products as well as flat floor storage for these various other materials.

Colonial Terminals: Kaoline/mineral bulk terminal. Handling rate 800 t.p.h. 12×109 cu.ft. Silos for kaoline. Minerals stored in 8×73,000 cu.ft. storage bays.

SPECIALISED CARGO HANDLING FACILITIES: Located at Container Central, on the up-river end of Berth 60, is a stern Ro-Ro ramp which is situated as to allow a vessel to utilise the Ro-Ro ramp and container cranes at the same time. Accommodating side and quarter ramps also available. At the Garden City Terminal there is a modern cold storage facility. The refrigerated space consists of 3 rooms of approximately 68,000 sq. ft.

BRIDGES: *Eugene Talmadge Memorial Bridge:* 135 ft. vertical clearance for 400 ft. at MHW. Distance between fender uprights – 600 ft.

MEDICAL: Agent should be advised as far in advance as practicable for required medical attention. U.S. Public Health Clinic in Savannah, also other extensive medical facilities. Standard information required as to inoculations, vaccinations, etc.

TANKERS: Standard requirements on diameters of load/discharge lines. No facilities for slop (residue) discharge facilities except American Oil Company. A.P.I. of local types of oil is 36 gravity marine diesel fuel. 8 tanker berths in port, max. drafts range from 32 ft. – 38 ft.

DENSITY: Average density of water at 20° Centigrade in channels of Savannah Harbour are:

Savannah River Entrance	*High Water*	*Low Water*
Surface	1.0196	1.0090
Bottom	1.0196	1.0181
Port Area		
Surface	1.0022	0.99915
Bottom	1.0120	1.0075

FRESH WATER: Available at all terminals.

FUEL: Marine gas oil (No. 2 Fuel). Marine diesel oil (No. 4 Fuel Oil). All Intermediate grades from Intermediate 30 (=30 centistokes at 50°C) to Intermediate 420 (=420 centistokes at 50°C) Bunker fuel oil (No. 6 Fuel). Advance notice of 24 hours required.

FIRE PRECAUTIONS: No special fire precautions. All tanker berths have water and fire extinguishers on dock. Fire fighting equipment on dock. Fire fighting equipment on tugs.

GANGWAY/DECK WATCHMEN: Garden City and Ocean Terminals of Georgia Ports Authority, East Coast Terminal Company and Georgia Kaolin International require that a watchman, or someone in authority, will be aboard any vessel tied to their facilities at all times.

CERTIFICATES: See "Documents". Current Registry Papers, Load Line Certificates, Certificates of Inspection, etc., are required.

CUSTOMS ALLOWANCES: Tobacco, a crew member may take ashore 50 cigars, 300 cigarettes, or 2 kilos of smoking tobacco, or a proportionate amount of each. An appropriate amount of tobacco products may be held out of bond for use of passengers and crew members while aboard ship when in port. Wine and/or Spirit, a crew member may take ashore one litre of alcoholic beverages for his own use. Container should be opened, that is the seal should be broken. An appropriate amount of wine and/or spirits may be held out of bond for consumption by passengers and crew while aboard ship when in port.

CARGO GEAR: Certified in accordance with U.S. Department of Labor Regulations. Supplied by stevedores.

IDENTIFICATION CARDS: Identification required by crew members coming ashore. U.S. Immigration & Naturalisation Service issues landing permit, I-94, to any passenger; and I-95, to any crew member of a foreign vessel who is not considered a security risk. This form must be in man's possession any time he is ashore.

DELAYS: With reasonable advanced notice of ETA no delay anticipated in berthing, loading, discharging or bunkering.

DEVELOPMENTS: Ocean Terminal rehabilitation underway will provide one 1,000 ft. berth, 800,000 sq.ft. transit space, two 200,000 sq.ft. warehouses.

Container Berth No. 5 recently completed. Facilities include a 1,000 ft. berth, 60 acres of paved storage and 3×45 ton cranes.

SHIPMASTER'S REPORT: August, 1980.

Pilotage: Because of difficulties with the port crane and large storing programme we elected to berth starboard side alongside this call.

The Pilot will only undertake this on the flood (since vessel is invariably deep, berthing will only be done on the flood in any case) but because of a delay we were off the berth very nearly at slack water. The Pilot carried out the manoeuvre in the most reassuringly competent manner and I would not hesistate to do the same again if necesary; only with a Pilot prepared to carry out the manoeuvre.

Vessel is swung downriver off the container berth, about 4 cables below the berth.

When landed on starboard side to, it is just possible to plumb the berth with the crane by making the connection to the after crossover.

Discharge: Straightforward; some slight initial delay. Capable of receiving cargo at over 1,000 t.p.h. Our rate 810 t.p.h. overall.

Connection 12 in. 150 ASA. No VRL.

Density 1000 this call.

Storage capacity about 50,000 cu.m. Storage plant only for filling road and rail tankers.

U.S.C.G.: Deck inspection before commencing. Vessel was congratulated on her 'very high standard of equipment and personnel'. Monitoring detail on board throughout. Scuppers unplugged, please.

They are aware of the draft problem at LW and boarded immediately on berthing.

General: Lloyd's surveyor easily available.

Bunkered lube oils whilst discharging with U.S.C.G. approval.

Can touch up ship's side from quay.

Movements allowed at night, dependent on draft/tide.

Chandler: Southern Marine: Poor service this time despite our cables. This is in contrast to excellent service last time. These services are entirely at the mercy of ship representative.

SHIPMASTER'S REPORT: October, 1980 (updated 1984).

Approach: From East: The coast between Sandy Point to Isle of Palms near Charleston shows up at 40 miles and South of Hunting Island near Port Royal Sound at 35 miles, on radar. Port Royal channel gives a good radar echo at 15 miles. Soundings give little indication of position until fairly close inshore. Savannah light was observed at 28 miles.

DF stations at Tybee and Charleston are useful if nothing else is available.

Anchorage: Pilots advise anchoring to N.E. of Savannah Light Beacon. Good holding ground without obstructing arriving and departing traffic.

Arrival Procedure: ETA through Agents.

For deep draft ships proceeding to Ammonia Berth No. 61 about 5 miles above town, Pilot will board between 3 hours to 1.5 hours before HW.

Under 31 ft. can berth/sail any state of tide day or night. Berthing day or night.

Can berth either side to, the generally accepted side to is port side. However, if taking stores try for starboard side as the crane plumbs better, plus the Chiksan arm is in the way of trucks.

For starboard side to, arrive well in time for earliest Pilot boarding time.

The problem is the berth has a reported 36 ft. at LW (actually by lead line we found (Oct. '80) a minimum of 33 ft. 9 in. reduced to datum along the dock face). Therefore before LW you have to pump out about 2,000 tonnes, any delay can be important.

Pilots: Boards from large fast cutter between Savannah Light and whistle buoy.

Give plenty of notice as cutter might be lying up-river at pilot station. Based at Cockspur Island in the ship channel. Call "Savannah Pilots".

Pilot ladder must be 8 ft. above water. Side dependent on wind. Berthing Pilot joins from tug using own ladder at Kings Island.

On departure from berth, Pilot requires 1.5 hours notice.

VHF: "Alpha" Channels used frequently.

U.S.C.G. uses 22A, Pilots use 18A, tugs use 19A. Otherwise use 16, 12 and 13.

Channel: The maximum draft of vessels has been 39 ft. with a 6 ft. tide. Normal maximum 37 ft. This can only take place on the flood so as to be on the berth at slack water.

Channel is narrow, less than Houston Ship Canal. Constant dredging is required. From Whistle Buoy to berth is about 3 hours.

Vessel is swung in Argyll Turning basin off the container quay. 24 hour navigation is undertaken.

From soundings from Savannah Light beacon to Berth No. 61 proceeding inwards 3 hours before Savannah HW (2.5 m.) a minimum of 1.6 m. under keel was found with draft 11.15 m.

Berth: Depth: "See Plan". Minimum depth reduced to datum found to be 33 ft. 9 in. along jetty face.

Berth No. 61: Owned by Georgia Ports Authority and leased to Occidental.

Concrete jetty on piles with centre section connected by roadway to shore, and mooring dolphins either end connected to jetty by catwalk. Length of centre section 266 m. Good fendering.

The upriver dolphin is not used due to damage. Can turn gangway out before arrival.

Pilot with the aid of powerful tugs swings vessel in very competent manner at Argyll Turning Basin.

Density: 1001 to 1002.

Moorings: Basic 3, 2, 2, each end. Forward headlines (3) go to Ro-Ro dock and breastlines to dolphin with springs to main jetty. Due to damage the upriver dolphin cannot be used so all stern and breast lines go to Grain Berth No. 62.

Springs out first, last in. Mooring boat used. Port Authority mooring gang require 4 hours notice.

Tugs: Atlantic Towing Company and Crescent Towing and Salvage Company of Savannah, Inc. based along town water front. Several large and powerful tugs. Two used, one each end, American style, tie up with own lines alongside. One and a half hours notice required.

U.S.C.G.: Very co-operative. Although Agent will try to get them to board in river for pre-inspecton, they board at dock. Carry out check list and inspection before cargo allowed to be worked. Takes about 30 minutes.

One U.S.C.G. rating on board at all times (8 hour shifts). Strict on pollution.

The U.S.C.G. do not seem to mind which way round the ship is berthed. Scuppers to be plugged.

Discharge: Into mobile Chiksan (as berth only leased). After manifold if starboard side too. Maximum rate about 1,200 t.p.h. but generally nearer 900 t.p.h. to 1,000 t.p.h. Connection 12 in. 150 ASA. No vapour return line. Shore tank capacity 45,000 tonnes, which fills rail and road tankers. Takes about 45 minutes to connect/disconnect. Shore labour assist. Shore personnel always in attendance. Manager very helpful.

In light ship condition we had 18 m. air draft which did not create any difficulties.

General: Lloyds Surveyor easily obtainable from Jacksonville. Fresh water from jetty, require 6 hours notice, especially at weekends.

Lube oils whilst discharging with U.S.C.G. permission. Stores lorry able to get close alongside ship.

Ship's crane (if starboard side to) will just plumb after end of jetty.

Liferaft service (Beaufort) at Southern Ship Supply – 24 hour service.

Shoreline infested with rats, snakes and big spiders.

Chandler: Southern Ship Service, good fresh produce.

Town: About 5 miles away. Can telephone for taxi – free of charge local calls, from hut at grain berth about 100 yards from gangway.

Airport 6 miles South of town centre with regular flights to Atlanta International, etc

AUTHORITY: Georgia Ports Authority and East Coast Terminal. Savannah Port Authority.

The Savannah Port Authority does not operate terminals; however, is engaged in port and industrial development for the City of Savannah and Chatham County, Georgia. Harbour regulations pier and bulkhead lines, etc., come under the jurisdiction of this organisation.

Georgia Ports Authority, P.O.Box 2406, Savannah, Georgia 31402. *Tel:* (912) 964-3811. *Telex:* 804782 and TWX 810-784-5634. *Cables:* Gaports. *Contact:* John J. Powers, Jr.

AGENT: Strachan Shipping Company, P.O.Box 9667, Savannah, Georgia 31412. Tel: (912) 234-6671. Telex I: 54-6415. Telex II: 810-784-5630. Cables: "Strachan".

SEARSPORT, Maine: 44.28 N. 68.56 W. (See Plan)

LOCATION: The Port of Searsport is located on Penobscot Bay, approximately 112 road miles East of Portland, and 20 miles from Bangor.

DOCUMENTS:

Clearance from Last Port.
2 copies of Form 1300 (Master's Oath).
2 copies of Form 1301 (General Declaration).
3 copies of Form 1302 (Inward Foreign Cargo Manifest).
NOTE: Form 1302 will only be accepted.
2 copies of Form 1303 (Ship's Stores Declaration)
(Including Narcotic Medicines).
Form 1374 outward foreign Manifest.
2 copies of Form 1304 (Crew Effects Declaration).
2 copies of I-418 (Crew List).

Also available: Vessel Register, Safety Equipment Certificate, Load Line Certificate, Certificate of Financial Responsibility, (Oil Pollution), and U.S. Tonnage Tax Receipts.

PILOTAGE: Ship's agent notifies Pilot approximately 48 hours in advance of arrival, correcting at 24 hours. Pilot's boat called on Channel 16.

Vessels from South and West, Pilot boards at Monhegan Island (Buoy 14M). Vessels from East, Pilot boards at Matinicus (Buoy 2WB). The pilot station is located on Matinicus Rock Island. Pilot boards at Wooden Ball Light Bell Buoy "2WB." Lat. 43° 49′ N., Long. 68° 50′ W.

The pilot boat is a fishing boat with a white hull showing the international signals.

Pilot signal: 3 long and 2 short on ship's whistle.

Radio contact: VHF Channel 16 (156.8 MHz).

36 and 24 hours ETA requested, cable "Penbay – Belfast/Maine", via Chatham Radio.

ANCHORAGES: No restrictions on anchoring.

RESTRICTIONS: No restrictions at night. Deep draft vessels brought in only on high water. Draft in concurrence with docks, 32 ft. low water. 10 ft. rise in tide – approach to Searsport 35 ft. – Bay 60 ft. limit.

MAX. SIZE: Size of vessel restricted to 38 ft. draft in harbour area. No outside installations at the port yet.
HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Boston Quarantine Station.
AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).
RADIO: Tugs in Searsport Harbour use Channels 16 and 13. Vessels arriving Searsport go through radio station at Chatham, Mass., RCA installation, SSB station or a VHF public correspondence station.
TUGS: Penobscot Bay Towing Co., Marshall Wharf, Belfast, Maine 04915. Tel. (207) 338-3000. 24-hour service. Requested that orders for tugboat service be given during normal business hours, 24 hours in advance.

Tugs: "Patrick McAllister", 1,200 h.p.
"Brian F", diesel 1,200 h.p.
"Roderick McAllister", diesel 1,200 h.p.
"Bronx", diesel 1,800 h.p.

Radio: Ship to ship, VHF Channels 16-13-10.
Sea Pilots dock ship with tug's assistance.

BERTHING: Draft conditions govern arrival and departures.
Bangor and Aroostock Pier: Length 800 ft., width 100 ft. Depth alongside (East side) 34 ft., (West side) 30 ft.

This pier handles a wide variety of cargoes including petroleum, forest and agricultural products, such as newsprint, tapioca, long logs, dimension lumber, potatoes, etc.

Cargoes can be off-loaded or loaded directly from or to railroad cars or trucks. There are 4 warehouses on the facility available for import or export cargoes.
C. H. Sprague Dock: Length 614 ft., depth alongside East side 33.6 ft.

This facility has and can handle many bulk cargoes, including salt, coal, gypsum, potash, bauxite, liquid chemicals, and Bunker C petroleum. There are 3 towers for discharge of bulk cargoes.

Turning basin off docks, depth 34.5 ft. and 1,200 ft. width.

STEVEDORES:
Weekdays:
Order gangs by 1700 hrs. for following day 0800 start.
Order gangs by 0900 hrs. for same day 1300 start.
Order gangs by 1300 hrs. for same day 1800 start.
Weekends:
Order gangs by Saturday 1200 hrs. for a Sunday 0800 start.
Order gangs by Saturday 1200 hrs. for a Monday 0800 start.

MEDICAL: No advance notice required by Agent. 1 hospital, Waldo County, which takes bed patients.
TANKERS: 2 berths at Searsport – 2 for No. 6 oil and 1 for light oil and gas. 2×8 in. hoses. 34 ft. LW.
DENSITY: Average density 1024.
FRESH WATER: Available by tug for boilers only at rate of tug hire at anchorage. Drinking water available at piers.
FUEL: No. 6 oil at C. H. Sprague dock. Light oils delivered by tank truck at dock.
FIRE PRECAUTIONS: At certain oil piers information given to Shipmaster upon arrival at pier. Ample fire protection, salt-water lines, sprinkler system on pier, local fire department.
GANGWAY/DECK WATCHMEN: Not required.
OPENING/CLOSING HATCHES: Ship's crew may open hatch after longshoremen boarded ship.
CERTIFICATES:
Load-line Certificate.
Certificate of Foreign Clearance.
Ship's Safety Certificate.
U.S. tonnage Tax Certificate of previous trip if have them.
Radio Operator Licence.
CUSTOMS ALLOWANCES: Tobacco, 200 cigarettes per man. Wine and/or Spirit allowance 1 bottle per person.
CARGO GEAR: No additional cargo gear necessary.
IDENTIFICATION CARDS: Form I-95 must be filled out on arriving unless seamen has had a prior one made out for a previous arrival on same ship (on plastic card).
CONSULS:
French: Dr. Paul O. Proudian, 776 Main Street, Westbrook, Maine.
Finnish; Frank W. Bjorklund, 163 Main Street, Norway, Maine.
Italian: Dr. Domenica A. Santoro, 43 Deering Street, Portland, Maine.
Norwegian: Allan Kjos-Hansen, 30 Mayer Road, Portland, Maine, Vice-Consul.
Panamanian: Mary Navarro de Carrillo, Lafayette Town House, Portland, Maine.
Swedish: Martin Johnson, Vice Consul, 443 Congress St., Portland, Maine.
REPAIRS: All types of machinery repairs.
DRY DOCKS: None.
REPATRIATION: Arrangements must be made with Agent in advance by telegram.
AIRPORT: Bangor International Airport, 30 miles, Northeast Airlines.
HOLIDAYS: New Year's Day; Washington's Birthday; Patriot's Day; Memorial Day; Independence Day; Labour Day; Thanksgiving Day; Christmas Day and Veteran's Day. Possible to get gangs to work all days except on Labor Day and Christmas.
POLICE/AMBULANCE/FIRE: Police Tel: 548-6372; Ambulance Tel: 548-2900; Fire Tel: 548-2900.
TELEPHONE: Arrangements can be made to have phone put on ship, but most docks have pay phones.
DEVELOPMENTS: Directly across from the Port of Searsport lies Sears Island. A major new cargo facility and industrial park will be constructed. Emphasis will be directed toward potential user groups of heavy machinery and equipment assembly and manufacturing, plus a full spectrum of forest products storage and shipment.

This development will feature modern container-handling facilities and breakbulk handling capability.
AUTHORITY: *Contact:* Searsport Port Committee, Searsport, Maine 04974, or Maine Department of Transportation, Division of Ports & Marine Transportation, Augusta, Maine 04333. *Tel:* (207) 289-2841.

SEATTLE, Washington: 47.36 N. 122.20 W. (See Plan)

PORT LIMITS: Port of Seattle limits are co-extensive with the boundaries of King County in which Seattle is situated. A vessel has "arrived" when it has tied-up to a berth.

DOCUMENTS (on arrival from foreign):
Clearance from Last Foreign Port.
2 Crew Lists on Form. I-418.
2 Passenger Lists on Form I-418 (if applicable).
Passenger Declarations if applicable.
2 Store Lists.
2 Crew Purchase (curio) Lists.
2 Manifests of Cargo for discharge on CF1302.
If first arrival port on an inward voyage, must also have 2 sets of Manifests of complete cargo on 1302, one for Customs at this port and the other for use as a "Travelling Manifest" to go forward to other discharge ports.
A – For U.S. Public Health Quarantine Boarding Officer: "Quarantine Declaration" on Form PHS.43. (Only required if boarding on arrival is necessary) see "Health" before first U.S.A. port.
B – For U.S. Dept. of Agriculture Boarding Officer: "Shipmaster's Declaration and Warning Notice" on Form AIQ.43.
C – For U.S. Immigration Boarding Officer:
Crew List on Form I-418 visaed by U.S. Consul abroad.
Passenger List on Form I-418.
Attachment to Passenger List on Form I-92.
Form I-94 for each passenger.
Form I-95 or ID Card (Form 184) for each crewman. (These are re-usable for multiple entries, but for seamen on first trip to United States a new Form. I-95 must be ready for presentation on arrival.)
D – For U.S. Customs Boarding Officer and Agent or Broker:
3 copies Crew List (Form I-418).
3 copies Cargo Manifest on Form 1302.*
3 copies Store List – Form 1303.*
3 copies Crew Purchases or Curio List (Form 1304).*
3 Passenger Lists on Form I-418.
For U.S. Ships – Declaration re foreign repairs on Form 3415.
For U.S. Ships – Certified Crew List from last U.S. port before going foreign.

*At subsequent U.S. ports of call 2 copies required of extracts Cargo Manifests of cargo for the port concerned, and 2 copies of lists of stores and curios remaining on board.

PILOTAGE: Compulsory for all vessels except those on coasting trade. Pilots may be obtained from Port Angeles Pilots' Association, Seattle, at short notice. Inward, Pilot boards vessel at pilot station off Port Angeles.
Port Angeles Pilots: Pilotage service furnished to any port or place on Puget Sound and its adjacent inland waters.

Pilot stations are located on Ediz Hook, Port Angeles and Seattle Washington.

Vessels desiring a Pilot should proceed to a position 0.25 miles East of Ediz Hook, where Pilot will board the vessel. If a Northwest wind, sea, or swell exists, vessels are requested to proceed to a position inside and South of Ediz Hook to obtain a lee and facilitate boarding.

In clear weather, vessels should indicate their desire for a Pilot by hoisting the International Code Flag "G" and by blowing the whistle signal of 1 long, 1 short and 1 long blast.

In fog or thick weather, the blowing of this whistle signal will attract the attention of the pilot station and repetition of this signal will assist the pilot boat to locate the vessel.

The pilot station is located 1,200 yards, 277° from Ediz Hook Light. At night, the station will show from a mast, 3 vertical lights, the highest and lowest being red and the middle one green, to indicate that the pilot boat is en route to the ship. The pilot station is equipped with radar to locate and track vessels. The pilot boats, 'Juan de Fuca' and 'Puget Sound' are equipped with radar.
Communications: Vessels may ensure prompt service by advising their ETA, Port Angeles, 24 hours in advance, via radio to station KLB, addressed to Port Angeles Pilots, Seattle, Washington. A vessel may also advise the pilot station, Port Angeles, Washington, addressed to "Pilots Port Angeles" of their ETA, and amended ETA, when subsequent conditions make it necessary. The message is transmitted immediately from KLB to Port Angeles via telephone. The pilot station, Port Angeles, monitors VHF Channels 14 and 16 continuously and transmits on Channel 13.

At the time of passing Cape Flattery, inbound vessels are requested to re-affirm their ETA by calling the pilot station directly, using VHF calling Channel 16 and transmitting on Channel 13.

Channel 14 is for vessel traffic system only.
Pilot Ladder Requirements:

1. Please contact pilot boat via voice radio (Channel 13) approximately 30 minutes prior to arrival for desired lee.
2. The ladder must be kept clean and used solely for embarking and disembarking Pilots.
3. Rigging of the ladder, along with embarking and disembarking Pilot, must be under supervision of a licensed officer.
4. The ladder must be made in 1 length and not consist of 2 lengths shackled or lashed together, and should be equipped with spreaders about 10 ft. apart to comply with SOLAS Regulation 17, Chapter 5.
5. The pilot boats have their own lights to illuminate the pilot ladder, but a standby light should be ready for an emergency.
6. The area of the deck where the Pilot boards and leaves must be well lighted and the area must be clear of all obstacles to ensure a safe passage for the Pilot.
7. *No tag lines, pull-up ropes, or trailing lines may be attached to the lower ends of the ladder.*
8. Ladders must be rigged well clear of discharge and water outlets and at a place near midship which affords the best lee for the Pilot. At no time should the ladder be rigged near the stern of the vessel.

9. Means must be provided to allow the Pilot to pass safely onto the ship's deck. Where portable stanchions and bulwark steps are used for this, the portable stanchions must be rigidly attached to the ship's structure and not the steps. The bulwark steps must also be securely fastened.

10. The ladder must be in good condition. the treads must remain horizontal when used and the upper surface must have a rough nonskid quality.

11. Manropes approximately 3 in. manila in circumference, a heaving line and a ring buoy with a self-igniting light must be provided.

12. If your vessel is to take a load of logs, make sure the Agent makes arrangements to have a cat-walk to provide safe passage to and from the ladder.

Accommodation Ladders for Embarking or Disembarking of Pilots:

1. All vessels where the distance from sea level to the point of access of the ship exceeds 9 m. (30 ft.) at any time, should carry on each side an accommodation ladder. The ladder is to be so sited that when in use the lower end of the ladder shall rest firmly against the ship's side under all conditions of roll and heel, clear of all discharges, and within the parallel length of the ship.

2. A conventional pilot ladder should be rigged just abaft the lower platform of the accommodation ladder. The pilot ladder should be secured firmly to the lower platform to allow access between the pilot ladder and accommodation ladder. The pilot ladder should extend at least 2 m. (6 ft.) above the lower platform of the accommodation ladder. Manropes to be provided and rigged alongside the pilot ladder.

ANCHORAGES: Extensive anchorage in Eliott Bay, depths of 90 ft.

RESTRICTIONS: Overhead power cables at Burlington Northern Railroad Bridge with a vertical clearance of 155 ft.

MAX. SIZE: Controlled by depth at berth.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Seattle Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

TUGS: Available, 2nd tug normally used.

BERTHING: Over 46 berths for ocean-going vessels. Depths alongside, 30 ft. to 73 ft. MLLW.

Terminal No.	*Total Length (m.)*	*Depth (m.)*	*Remarks*
2	244	12.0	Leased to North Star Forwarding – barge berths.
5	537	12.0	3 container berths.
	329	9.0	2 general cargo berths.
	166	—	Undeveloped berth.
18	1,844	12.0 – 15.0	Container, breakbulk, bulk, Ro-Ro, non-petroleum products. 352 reefer plugs.
25	482	15.0	2 container berths. 120 reefer plugs.
30	823	12.0	Container and breakbulk.
37	270	15.2	2 container berths. 186 reefer plugs.
42	290	15.2	Container
46	336	15.2	2 container berths. 217 reefer plugs.
48	585	10.6	State passenger and freight terminal.
66	436	8.5 – 10.6	3 berths. Passenger ship terminal.
86	130	21.0	Export grain terminal operated by Cargill, Inc.
91	3,058	10.66	General cargo, auto import, fruit, frozen meats and seafood. Oil tank farm handles bunker fuel and waste oil products. Chill space 53,802 cu.m. Liquid storage 213,000 barrels.
115	366	12.0	Steel imports, fish and crab processing, general cargo.
	122	4.25	Barge berth.

SPECIALISED HANDLING FACILITIES: Terminals 18 and 20 combined and now designated as Terminal 18. Pipe-lines are available to carry molasses, tallow or other non-petroleum liquid cargo, and has a tank farm for storage.

Terminal 115 – 2 berths, capacity, import steel.

Terminal 115 – Foss Alaska Barges, has specialised finger piers, to handle container-to-barge operations.

Terminal 128 – A barge terminal.

Terminals 5, 18, 25, 37, 42 and 46 – Container Terminals, equipped with large container cranes and yards to handle van shipments. Depth alongside, Terminals 18 and 25 – 50 ft. Terminals 5, 37 and 46 – 40 ft.

Pier 86 – fully automated, deep water, Grain Terminal. 1 berth, length 600 ft. (Max. LOA 1,400 ft. using dolphins). Depth of water 70 ft. at MLLW. Grain Terminal: capacity 4.2 million bushels, loading rate 3,000 t.p.h. via twin conveyor belts.

CRANES: *Terminal 5:* 4×50 ton container cranes.
Terminal 18: 8×45 ton and 3×33 ton container cranes.
Terminal 20: 2×50 ton revolving cranes and 1×30 ton sheer leg.
Terminal 25: 2×45 ton and 1×33 ton container cranes.
Terminal 30: 1×50 ton gantry.
Terminals 37, 42 and 46: 5×45 ton container cranes.
Terminal 115: 1×50 ton and 1×40 ton gantry crane.

STEVEDORES: 40 local gangs available. Gang requirements must be made known to the contracting stevedore prior to 1100 hrs. on day before vessel plans to dock. Order before 1030 hrs. on Saturday for Saturday afternoon, Sunday, and Monday.

FRESH WATER: Available at all wharves.

FUEL: Available.

Ship-Shore Inc. Tel: 783-9343.
Texaco, Inc., U.S.A. Tel: 623-6101.

DENSITY: Salt water in Outer Port. Fresh water inside Canal Locks.

GANGWAY/DECK WATCHMEN: Watchmen required if detainees aboard.

OPENING/CLOSING HATCHES: Normally carried out by stevedores while in port.

CERTIFICATES:
Certificate of Registry.
Certificates for any previous U.S. tonnage tax payments within the past year.
International Load Line Certificate.
Safety Radio Certificate.
Derat Certificate.
Cargo Gear Inspection Certificate.
Certificate of Inspection (for U.S. vessels).

CUSTOMS ALLOWANCES: No definite quantities prescribed; reasonable allowance at discretion of Customs Inspector.

IDENTIFICATION CARDS: Required.

3 copies Cargo Manifest (Form 1302) the original showing all cargo on board, and 2 copies showing only cargo for this port.
2 copies Crew Manifest (curio list).
2 copies Stores List.
2 copies Passenger List (Form I-418).
2 copies Crew List (Form I-418).

Customs boarding Officer will also examine Ship's Register and Loadline Certificate. In addition, the following documents will be required for formal entry to be made within 48 hours of arrival from abroad, or 24 hours from arrival from a United States port:
Health Pratique.
Master's Oath (Form 1300).
All Foreign clearances.
U.S. Certificates of payment to tonnage tax (Customs Form 1002).
Certified Crew List.

PILOTAGE: Alaska Marine Pilot's Association, Box 273, Homer, Alaska 99603. 48 hours advance notice. 2182 calling frequency KC – KTE – 21. Anchorages as noted on chart. C. & G. S. 8529 Resurrection Bay.
Pilot boards at Cains Heads in Resurrection Bay.

MAX. SIZE: Harbour depth 35 ft. MLLW.

ANCHORAGE: Suitable anchorage in 30 fathoms depth; available for deep draft vessels at the head of the Bay, South of marked buoy.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Anchorage Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: KWA 346 (AM) Alaska Railroad Dock, frequency monitored 2182 kHz. KWA 364 (SSB) Alaska Railroad Dock frequency monitored 4-6-8-12 Megs.

TUGS: Regular tug service available. Anderson Tug & Barge (907) 224-5506.

BERTHING: *Alaska Railroad Corp.:* 24 hour berthing. Berthing permit required. Advance notice of 48 hours requested.
200 ft. by 735 ft. steel and concrete finger pier.
East Side — 450 ft. long with 35 ft. depth of water. (10 ft. out from dock face).
West Side — 600 ft. long with 35 ft. depth of water.
South End — 200 ft. long with 35 ft. depth of water.
(East and West Berths serviced by railroad spurs).
Ro/Ro capability provided through a triple deck, articulating ramp along West Berth. Service provided weekly by SeaWay Express with a 385 TEU triple deck barge from Seattle.

BULK HANDLING FACILITIES: *Terminal Specifications:*

Unit Train Unloading	3,000 tonnes*/p.h.
Stacking	
Rail-mounted stacker/relaimer	1
Stacking capacity per hour	3,000 tonnes
Reclaiming capacity per hour	1,000 tonnes
Shiploading	
Fixed position slewing shiploader	1
Loading capacity per hour	1,000 tonnes
Ship berth	1
Maximum d.w.t.	120,000
Maximum draft (MLLW)	58 ft.
Additional Data	
Seward Coal Terminal Area	33.91 acres
Total conveyor length	6,590 ft.
Stockpile capacity	120,000 tonnes
Annual throughput capacity	3,000,000 tonnes

*1 tonne is equivalent to approximately 2,204 lbs.

Operator: Suneel Alaska Corporation, P.O.Box 1789, Seward, Alaska 99664. Tel: (907) 224-3120. Telex: 25353 Suneel Swrd.

City Dock Facilities: City Dock: Located inside Small Boat Harbour. Up to 100 ft. vessels. Depth 15 ft. MLLW.
Fourth Avenue Dock: Up to 300 ft. vessels. Depth 35 ft. at MLLW. Power available. Mobile cranes to 100 tons.

Seward Marine Industrial Centre: Basin is 660 ft. × 1,200 ft. with depth of 21 ft. at MLLW.
Syncrolift shiplift 300 ft. × 80 ft. with 3,600 ton lift capacity.
Adjacent 100 acre industrial site.
Light cargo dock 300 ft. long with 21 ft. at MLLW.

CRANES: East and West Dock Face – 2 gantry cranes. Maximum capacity – 45 short tons, maximum radius – 105 ft. Forklifts ranging up to 35 ton capacity.

Operator: The Alaska Railroad Corp., P.O.Box 95, Seward, Alaska 99664. Tel: (907) 224-5550.

STEVEDORES: Northern Stevedoring and Handling Corporation supply labour force.

MEDICAL: Fully staffed 30 bed hospital. All medical facilities available.

DENSITY: 1.0248 at Mean High Water.

FRESH WATER: Available at East and West berths. 4 in. water line; 67 lb. pressure.

FUEL: Marine Gas Oil available from pipe-line at South & West Berth. Marine Diesel Oil available from same pipe-line during Summer months only (Maritime Oil, Vancouver, B.C.).

OPENING/CLOSING HATCHES: Handled by crew, if done before berthing ship. By stevedores if tied to dock.

IDENTIFICATION CARDS: U.S.C.G. Port Security Card or Seaman's Card required.

REPAIRS: Radio, radar, welding, machining and light engine repairs can be effected.

DRY DOCKS: Syncrolift available. See "Berthing".

AIRPORT: 1 mile. 1 flight daily to Anchorage.

TIME: Alaska Standard Time.

HOLIDAYS: All holidays are time and one half. Cargo can be worked on all except Christmas, New Year's and Labour Day.

POLICE/FIRE/AMBULANCE: Tel: 911.

AUTHORITY: City of Seward, P.O.Box 167, Seward, Alaska 99664. *Tel:* (907) 224-3331. *FAX:* (907) 224-3248. *Contact:* Ronald Garzini, City Manager. Foster Singleton, Harbour Master.

SITKA, Alaska: 57.03 N. 135.20 W. (See Plan)

Located on the Western side of Sitka Sound, Baranof Island. Open all year.

APPROACHES: 3 natural channels: Western, Middle and Eastern.

DOCUMENTS: See "Anchorage, Alaska".

PILOTAGE: Pilot pick-up point – close aboard vicinity Eckholm Light.

ANCHORAGE: Jamestown Bay.

MAX. SIZE: Harbour depth 22 ft. MLLW. Tides: diurnal range – 9.9 ft.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Anchorage Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

CUSTOMS: Quarantine, Immigration and Customs, local.

TUGS: 7 tugs 300 h.p. to 1,200 h.p.

BERTHING: 3 wharves.
1. Conway Dock: Berthing length 160 ft., depth 30 ft. MLLW. No cranes, 3 lift-trucks; 10,000 sq. ft. covered shed space; fresh water.
2. Japonski Dock: Government dock only for limited commercial use.
3. Alaska Lumber & Pulp Co.: (Private) Berthing length 700 ft., depth 35 ft. LW. Walking cranes only. Not less than 12 lift-trucks, 30,000 sq. ft. covered shed space; fresh water. (Located at Silver Bay, Sawmill Cove, 4 miles South of Sitka). 30,000 sq. ft. open storage.

STEVEDORES: 3 gangs.

DRY DOCKS: 1×400 ton floating dock at Jamestown Bay, approximately 3 miles East of Central Sitka.

REPAIRS: Light repairs only.

FRESH WATER: Available.

FUEL: Not available.

MEDICAL: Sitka Community Hospital and U.S. Public Health Service Hospital on Japonski Island.

TRANSPORTATION: Air and ferry.

AUTHORITY: City and Borough of Sitka, 304 Lake Street, Sitka, Alaska 99835. *Tel:* (907) 747-3439, 747-3294, 747-3245. *Contact:* Richard J. Guhl, Harbour Master.

SKAGWAY, Alaska: 59.27 N. 135.18 W.

Located at the Northern end of Lynn Canal, 14 miles North of Haines.

APPROACHES: Via Lynn Canal.

DOCUMENTS: See "Anchorage, Alaska".

PILOTAGE: Pick-up point located in vicinity of Point Retreat.

MAX. SIZE: Harbour depth 30 ft. running out to 300 ft. Tides diurnal range 16.7 ft. Also see "Berthing".

ANCHORAGE: In Lutak Inlet, 14 miles South of Skagway.

HEALTH: See "Health: All ports" before first U.S.A. port (Albany). Illness reports made to Anchorage Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

CUSTOMS: Quarantine, Customs and Immigration available in Skagway.

TUGS: 2 tugs available at Skagway.

BERTHING: 1. White Pass and Yukon Railroad Dock: Containerised cargo to Vancouver and Whitehorse is the principal use, also used for tankers and cruise ships. 1,240 ft. long, 100 ft. wide; depth at face varies from 20 ft. to 43 ft. Southern 400 ft. in poor condition. No covered storage. Open storage 80,000 sq.ft. 1 fork-lift is available. Containers presently loaded and unloaded with ship's gear. 2 straddle cranes for containers on dock. Deck for 400 lbs. per sq. ft. loading.

2. Skagway Terminal Co.: Ore loading facility. 1,000 ft. berth, fender dolphins, and walkway. 42.5 ft. deep at face. Sole use for bulk cargo ships. Adjacent to the berth is a warehouse of 108,000 sq.ft. Also available are 50 acres for open storage. Loading equipment consists of 1 fixed loading spout with a capacity of 1,500 t.p.h.

3. State: City joint use ferry pier – barge off-loading facility.

4. City of Skagway: Small boat harbour, approx. 100 stalls. Fuel available. Water available in temperate seasons.

STEVEDORES: 3 gangs.

REPAIRS: None.

SURVEYORS: Not available locally.

WATER: Available in small quantities in temperate seasons only.

FUEL: Available at Chevron Dock.

MEDICAL: Medical clinic and one nurse.

AIRPORT: One mile from harbour. Scheduled and charter flights available daily.

TELEPHONE: Pay phone at top of small boat harbour ramp.

POLICE/AMBULANCE/FIRE: Police Tel: 983-2301. Ambulance Tel: 983-2300. Tel: Fire 983-2300.

BANKS: National Bank of Alaska, Skagway.

EMERGENCY CO-ORDINATON CENTRE: Skagway Fire Hall, Tel: 983-2300

STORING: See "Prelims".

Storing at White Pass Railroad Dock:

1. By truck.
2. No barge storing.
3. Trucks can proceed alongside, except south 400 ft. of dock.
4. Fork lift trucks can be used.
5. Customs perform supervision of loading/unloading of all bonded stores. Customs/Immigration Tel: 983-2325
6. Local riggers are available.

GENERAL: Highways: Klondike highway open approx. May 15th to October 15th.

AUTHORITY: City of Skagway, P.O.Box 415, Skagway, Alaska 99840. *Tel:* Harbour Master 983-2542.

SMITHS BLUFF, Texas: 30.00 N. 93.59 W. (See Plan)

DOCUMENTS, PILOTAGE, RADIO, etc.: Refer to "Port Arthur".

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

TUGS: Meet vessel in Neches River before arriving at berth. Normally 2 tugs required berthing/unberthing.

BERTHING:

Pure Oil Co.: Distance from sea 38 miles, depth at berth 37 ft.

Sun Oil Co.: Distance from sea 38 miles, depth at berth 39 ft. 6 in.

Sun Oil Terminal:

Operators: Sunoco Terminals, Incorporated, P.O. Box 758, Nederland, Telex: 77627. Tel: 713-727-2301.

Type of terminal: Refinery. Handling Crude Oil & lub.

Density: Fresh water.

Controlling Depth: From channel to berth – 39 ft. – 40 ft. Actual depth alongside – 40 ft.

Vertical clearance at HW: 136 ft.

Max. length of berth facility: 150 ft.

Max. length of vessel to be moored safely: 900 ft. but that is absolute maximum and normally prefer not more than 850 ft.

Hoses: 4×12 in. (Crude). 6×6 in. (Lub).

Usual Discharge Pumping Capacity: 60,000 bbls.p.h. (Crude). 2,000 bbls.p.h. (Lub).

Usual Discharge Pumping Capacity: 50,000 bbls.p.h.

Fresh Water: Available on 24 hour basis.

Fuel: Available ex-wharf.

Tugs: Per Pilot's requirements.

Anchorage: Max. draft 39 ft. (2 anchorages).

Report: Sunoco is located on the Neches River 38 miles from the Sea Buoy. The terminal is owned, operated and used by Sun Oil Co. The controlling depth of the channel and turning basin is 40 ft. The specific gravity of the water at this terminal is 1000. The maximum size vessel normally received at this terminal is approximately 76,000 d.w.t. at Berth No. 1 and 150,000 d.w.t. at Berth Nos. 2, 3, 4 and 5. Vessels are docked and undocked day or night. Vessels are cautioned to keep mooring lines tight and be on alert for passing traffic.

2 tugs are normally used while docking and 1 while undocking. Sabine Towing requests a 3 hour advance notice when ordering tugs.

Vessels are berthed head upstream port side to with a usual arrangement of mooring lines including 2 forward springs and 2 aft springs. Head and stern lines run by launch. Pilots require one-way traffic and daylight navigation for all vessels in excess of 85,000 d.w.tonnes (83,700 LT). 2 lay-berths are provided across the channel. These consist of trenches dredged into the entrances of an unused ox-bow in the river. There are mooring points but most vessels lie to an anchor in the trench.

The Sunoco terminal does provide a gangway.

Fuel and fresh water are available at the terminals.

The terminal is fenced and guarded.

Pollution Control: 3,400 ft. of spill boom launch.

Fire: There are foam nozzles and monitors on the dock.

Union Oil: Located on the Neches River, 37 miles from the sea buoy, is owned, operated and used by Union Oil Co. The controlling depth of the channel and turning basin is 40 ft. The specific gravity of the water is 1000. The maximum size vessel normally received at this berth is approximately 50,000 d.w.t. Vessels are docked and undocked both day and night. Vessels should be advised to keep lines tight due to passing traffic. The berth is similar in design to those alongside the Mississippi River in that the dock platform is approximately 40 ft. above the water.

2 tugs are normally used while docking vessels, except in the case of vessels over 80,000 d.w.t. where 3 tugs are needed. 2 tugs are normally used while undocking. Pilots will not handle any vessel of greater than 137,600 d.w.tonnes (135,000 LT). 3 hours' advance notice is required when ordering tugs.

Routine berthing manoeuvres are observed. Loaded vessels moor bow upstream and turn above pier after discharging.

The Refinery does not provide a gangway; however, there is room ashore for vessel's gangway.

Fuel and fresh water available.

The Refinery is fenced and guarded.

Pollution Control consists of 3,000 ft. spill boom, 2 pumps, and 2 launches.

Fire Protection includes water under pressure on pier. Water nozzles under pier. Portable foam carts of limited capacity.

MEDICAL: All facilities available.

DENSITY: Fresh water.

FRESH WATER: Available ex-wharf at Sun Oil Terminal.

FUEL: Available ex-wharf at Sun Oil Terminal.

GANGWAY/DECK WATCHMEN: Not required unless crewmen detained by Immigration.

CUSTOMS ALLOWANCES: 300 cigarettes and 1 quart wine or spirits for each man.

IDENTIFICATION CARDS: Foreign crew only require Immigration Landing Permit.

CONSULS: Nearest at Houston.

REPAIRS/DRY DOCKS: See "Port Arthur".

AUTHORITY: Port of Beaumont, Navigation District of Jefferson County, P.O.Drawer 2297, 1255 Main Street, Beaumont, Texas 77704. *Tel:* 835-5367. *Telex:* 779486. *Cables:* Portbomont. *Contact:* Mr. J. W. Martin.

STOCKTON, California: 37.57 N. 121.19 W. (See Plan)

DOCUMENTS: See "San Francisco".

PILOTAGE: Pilots commissioned by Stockton Port District. Pilots obtained by contacting Secretary of California Inland Pilots' Association, located at Marine Exchange, World Trade Center, San Francisco, California (KBP 386). Also see "San Francisco"

ANCHORAGE: Emergency anchorage only permitted in Turning Basin, 32 ft. depth.

RESTRICTIONS: Restrictions only in effect if water at flood stage. See "San Francisco".

MAX. SIZE: Draft restrictions of 30 ft. at low tide, 32 ft. at high tide (fresh water). (Also see "Developments").

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to San Francisco Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Ship to shore Radio (KBP 376 – Marine Channel 18A) enables constant contact with Pilots who therefore aware of any problem that may develop up or down river. Arrangements also may be made for readiness of ordered gangs within 15 minutes of ship's arrival.

TUGS: 2×1,000 h.p. tugs available. Tugs join vessel 0.5 miles up river from Main Channel; generally, ship's lines used, however, tug lines may also be utilised. 2 companies – Stockton Tugboat, Tel: (209) 462-6471. Delta Tugboat, Tel: (209) 462-5534.

BERTHING: *Port Stockton Bulk Material Wharf, Berths 12-13:*

Owned by: Stockton Port District.

Operated by: Stockton Port District.

Use: Shipment of dry-bulk commodities, both systems handle the following: coal, petroleum coke, clay, copper concentrates, fertiliser, soda ash, sulphur, and other dry bulk commodities; receipt of molasses and petroleum products.

Dimensions: Length of face 566 ft.; lower side 13.5 ft., upper side 13.5 ft.; depth alongside at MLLW 35 ft.; usable berthing space 566 ft.

Mechanical handling facilities: Two bulk handling systems. *One:* Max. vessel loading rate 600 short tons/p.h. Equipped with shiploader, belt conveyor, 360 degree spout trimmer, bottom drop car dump (Max. 7.5 cars per hr.) and truck unloader hopper (Max. 24 trucks per hr.) *Two:* Max. vessel loading rate 4,000 short tons/p.h. Conveyor system equipped with a 54 in. belt, rotary car dump, loop railroad for unit train.

Port Stockton Wharf, Berths 10-11:

Owned by: Stockton Port District.

Operated by: Stockton Port District.

Use: Container-handling dock; receipt of molasses, petroleum products, bulk dry cargo, container cargo and general cargo. Delivery of scrap steel, container cargo and general cargo.

Dimensions: Length of face 810.5 ft., lower side 102 ft.; depth alongside at MLLW 32 ft.; usable berthing space 810.5 ft.

Remarks: Face of wharf is in line and continuous with face of Berth 9 providing a total of 1,455.5 ft, of berthing. This dock has 5.5 acres of open marshalling area.

Port Stockton General cargo Wharf, Berth 9:

Owned by: Stockton Port District.

Operated by: Stockton Port District.

Use: Receipt and shipment of general cargo and receipt of bulk cargo.

Dimensions: Length of face 645 ft., upper side 75 ft.; depth alongside at MLLW: Face 37-34 ft., upper side 35 ft.; usable berthing space: Face 645 ft. upper side 110 ft. with dolphin; width of apron: Face 41.25 ft.

Mechanical handling facilities: Forklift trucks and other types of cargo-handling equipment, owned by the Port District and by stevedoring companies, are available as needed.

Port Stockton Wharf No. 8:

Owned by: Stockton Port District.

Operated by : Stockton Port District.

Use: Receipt and shipment of general cargo; Liquid sugar facility and receipt of molasses. Anhydrous Ammonia also unloaded at this dock through refrigerated pipelines.

Dimensions: Length of 396 ft.×88 ft.; depth alongside MLLW 37-36 ft.; usable berthing space 484 ft. with trestle.

Port Stockton Wharf No. 7:

Owned by: Stockton Port District.

Operated by: Stockton Port District.

Use: Receipt and shipment of general cargo.

Dimensions: Length 516 ft. depth alongside MLLW 37-36 ft.: usable berthing space 516 ft.; width of apron 31 ft. with trestle.

Port Stockton Wharf No. 6:

Owned by: Stockton Port District.

Operated by: Stockton Port District.

Use: Receipt and shipment of general cargo.

Dimensions: Length 418 ft.; depth alongside MLLW 37-36 ft.; usable berthing space 329 ft.; width of apron 31 ft.

Port Stockton Wharf No. 5:

Owned by: Stockton Port District.

Operated by: Stockton Port District.

Use: Receipt and shipment of general cargo.

Dimensions: Length of face 428 ft.; depth alongside MLLW 34-32 ft.; usable berthing space 429 ft.; width of apron 31 ft.

Port Stockton Grain Wharf No. 4:

Owned by: Stockton Port District.

Operated by: Stockton Port District.

Use: Receipt and shipment of general cargo, receipt of bulk cargoes.

Dimensions: Length of face 461 ft.; depth alongside MLLW 32-35 ft.; usable space 462 ft.; width of apron 31 ft.

Port Stockton Wharf No. 3:

Owned by: Stockton Port District.

Operated by: Stockton Port District.

Use: Receipt and shipment of general cargo.

Dimensions: Length of face 461 ft.; depth alongside MLLW 32-36 ft.; usable berthing space 461 ft.; width of apron 81 ft.

Port Stockton Open Wharf No. 2:

Owned by: Stockton Port District.

Operated by: Stockton Port District.

Use: Receipt and shipment of general cargo; shipment of logs, and handling of heavy-lift cargo. Also receipt of bulk cargo.

Dimensions: Length of face 506 ft.; depth alongside MLLW 32-36 ft.; usable berthing space 506 ft.; width of apron: open.

Remarks: Wharf has 39,000 sq. ft. of open storage area and 5 bulk cone shaped buildings for handling inbound dry bulk cargo, 2 cone shaped buildings for handling inbound cement bulk cargo, with direct belt conveyor from dock to cone buildings, with a capacity of 70,000 short tons to the rear of the dock area. At the Industrial Park approx. 104 acres of open storage area are located South of W. Washington Street; over 50 acres of this area can be used for storing logs awaiting shipment. An additional 56 acres of open storage are located North of W. Washington Street. There is a total of other warehousing with a capacity of 2.7 million sq. ft. of covered storage area comprised of 33 separate units.

Logs may be transferred to wharf by trucks and by tractors equipped with log clamps.

This dock also has two Whirley type gantry cranes with a 30 short tons capacity each at 36 ft. offshore reach. Equipped to handle bulk dry materials, containers, heavy lifts, etc. Cranes may be geared double to accommodate lifts up to 60 short tons.

Continental Elevators Grain Elevator Main Wharf No. 1:

Owned by: Continental Elevators Inc.

Operated by: Continental Grain Co.

Use: Shipment of grain by vessels and by ocean going and inland waterway barges; receipt of grain by self-unloading barges.

Dimensions: Length of face 564 ft., West side 20 ft., East side 20 ft.; depth alongside at MLLW 35-37 ft.; usable berthing space 564 ft.; width of apron, open end 20 ft.

Mechanical Handling Facilities: 2 towers on wharf, each with 13-in. diameter, telescopic, mechanically operated, grain-loading spout; loading rate, 900 short t.p.h. (29,877 bu.) at East tower; 800 (26,557 bu.) at West tower; combined rate, 900 short tons.

Remarks: Grain gallery connecting towers on wharf has a 30-in., electric-belt conveyor; and gallery extending from East tower to grain elevator has two 30-in. belt conveyors. Grain elevator capacity 6,000,000 bushels.

BRIDGES: Fixed-span high-level toll bridge across Carquinez Strait, with minimum clearance of 134 ft. above MHHW. Southern Pacific Railroad lift span bridge crosses Suisun Bay 6.5 miles upstream from Carquinez Bridge, with minimum clearance above MHHW of 70 ft. when closed and 135 ft. when open. Horizontal clearance on lift span 291 ft. A third bridge, 22 miles above Southern Pacific bridge, is near Antioch. It has a fixed span bridge with minimum clearance above MHW 135 ft.

STEVEDORES: *General Cargo* – For gang start at 0800 hrs., orders must be placed at 1600 hrs. of previous day; night gangs must be ordered by 1100 hrs. These times pertain to week-day gangs. For week-end gangs, 1100 hrs. Saturday for Saturday night, Sunday morning, Sunday night and Monday morning. Day shifts from 0800 to 1700 hrs. Night shifts 1700 to 0300 hrs. Arrangements can be made for a special third shift from 0300 to 0800 hrs. Rates quoted on request.

Bulk Ore and Grain Cargoes – Orders for gangs must be placed at same time as for general cargo. This operation on 24 hour basis; day shift, 0800 to 1600 hrs., night shift 1600 hrs. to midnight, swing shift, midnight to 0800 hrs. Stop work meeting first Tuesday of each month.

Also see "Radio".

MEDICAL: Arrangements with San Joaquin Medical Society for physicians, surgeons and dentists. 5 hospitals within radius of 6 miles from port. Ambulance service readily available. Telephone number for this service is 466-9535 (day or night).

TANKERS: 2 berths, 32 ft. depth available.

FRESH WATER: Available through pipelines.

FUEL: All grades of fuel available with 1 day's advance notice.

GANGWAY/DECK WATCHMEN: Services of watchmen not necessary. Available if requested.

OPENING/CLOSING HATCHES: Hatches may be opened prior arrival and closed after ship sailed from port; any opening or closing of hatches at dockside must be performed by stevedores.

CERTIFICATES: See "San Francisco".

CUSTOMS ALLOWANCES: Tobacco, Wine and/or Spirit, see "San Francisco".

CARGO GEAR: Safety regulations require strict adherence to max. loading or unloading weight capacity of ship's gear.

IDENTIFICATION CARDS: Not required.

CONSULS: See "San Francisco".

REPAIRS: Minor types of repairs carried out.

DRY DOCKS: Nearest dry docks, San Francisco.

REPATRIATION: No facilities in Stockton for effecting crew changes and arranging any necessary repatriations. Special arrangements may be made through Customs.

AIRPORT: Stockton Metropolitan Airport located approx. 6 miles from port. Serviced by Frontier, Air West and PSA.

TIME: Pacific Standard Time, GMT minus 8 hours; Pacific Daylight Time goes into effect on last Sunday of April until last Sunday in October, when clocks are advanced 1 hour.

HOLIDAYS: New Year's Day; Martin Luther King's Birthday; Lincoln's Birthday; Washington's Birthday; Memorial Day; Independence Day; Harry Bridge's Birthday; Labour Day; Admission Day; Columbus Day; Veteran's Day; Thanksgiving Day; Christmas Eve Day; Christmas Day and New Year's Eve Day are all holidays. In addition to above, General Election Day, both State and National, as well as any day proclaimed by Governor of California or President of United States shall be observed as holiday. Work can be arranged for all holidays except New Year's Day, Labour Day, Thanksgiving Day and Christmas Day.

POLICE/AMBULANCE/FIRE: Security Force on duty 24 hours a day and can be reached by dialling extension 228 for any emergency that might arise. Stockton Police Department's emergency telephone number 911, or (209) 943-9111. Stockton Fire Department 911, or (209) 464-4646. Ambulances may be secured by telephoning (209) 466-6869; 464-4846; 464-4611; 466-0223; 948-6056 and 948-5117.

TELEPHONES: Telephones placed aboard on request.

ELECTRIC CURRENT: At wharves where current available for ship's use, it is 110 volt, single phase, 60 cycle for lighting and 440 volt, 3 phase, 60 cycle for power.

SHORE LEAVE: Permitted.

REGULATIONS: Port of Stockton requests notice of ship's intent to come into port at least 7 days prior to arrival; vessels, who have made prior arrangements, will have precedence over vessels who sail into port without previous notice.

GENERAL: *Railroad Service:* Three transcontinental railroads serve the Port – Santa Fe, Southern Pacific, and Union Pacific (Western Pacific Division) with reciprocal switching privileges.

Truck Scales: Public truck scale available, operated by the Port.

DEVELOPMENTS: Deepening of channel to 36 ft. (MLL), 42 ft. at HW. Completion expected late 1986.

AUTHORITY: Port of Stockton, 2201 West Washington Street, Stockton, California 95202. Postal address: P.O.Box 2089, Stockton, California 92501-2089. *Tel:* (209) 946-0246. Toll free outside State of California (800) 344-3213 or 344-3214. *Telex:* 35-9467 and TWX 510-765-6661. *Contact:* Alexander Krygsman, Port Director. M. Tollini, Marine Operations Manager.

TACOMA, Washington: 47.14 N. 122.28 W. (See Plan)

DOCUMENTS (on arrival from foreign port):

Ship's document.
Clearance from Last Foreign Port.
2 Crew Lists on Form I-418
2 Passenger lists on Form I-418 (if applicable)
Passenger declarations if applicable.
2 Store Lists.
2 Crew Purchase (curio) Lists.
2 Manifests of cargo for discharge on C.F. 1302.

If first arrival port on an inward voyage, must also have 2 sets of Manifests of complete cargo on C.F. 1302, one for Customs at this port and other for use as a "Travelling Manifest" to go forward to other discharge ports.

A – For U.S. Public Health Quarantine Boarding Officer: "Quarantine Declaration" on Form PHS.43.
B – For U.S. Department of Agriculture Boarding Officer: "Shipmaster's Declaration and Warning Notice" on Form A1Q.43.
C – For U.S. Immigration Boarding Officer:
  Crew List of Form I-418 visaed by U.S. Consul abroad.
  Passenger List on Form I-418.
  Attachment to Passenger List on Form I-92.
  Form I-94 for each passenger.
  Form I-95 of ID Card (Form 184) for each crewmen. (These are re-usable for multiple entries, but for seamen on first trip to United States a new Form. I-95 must be ready for presentation on arrival.)
D – For U.S. Customs Boarding Officer and Agent or Broker:
  3 copies Crew List (Form I-418).
  3 copies Cargo Manifest on Form 1302.
  3 copies Store List – Form 1303.
  3 copies Crew Purchases or Curio List – Form 1304.
  3 Passenger Lists on Form I-418.
  For U.S. Ships – Declaration re foreign repairs on form 3415.
  For U.S. Ships – Certified Crew List for last U.S. port before going foreign.

* At subsequent U.S. ports of call 2 copies required of extracts Cargo Manifests of cargo for the port concerned, and 2 copies of lists of stores and curios remaining on board.

PILOTAGE: Compulsory for all vessels except those under coasting trade on West coast of the United States, including Alaska and British Columbia. Pilots board off Port Angeles Pilot Station.

ANCHORAGE: The depths as a rule are too great for convenient anchorage, but vessels occasionally anchor under the Northern shore about 1 mile Eastward of Brown's Point. Vessels may anchor in about 18.29 m., 450 yards N.N.W. of the outer end of Puyallup Waterway West Jetty.

City regulations permit anchorage in any part of the bay outside harbour lines so as not to interfere with vessels arriving or departing from their docks.

MAX. SIZE: Length over 305 m. (centre to centre dimensions of mooring dolphins), draft subject to berth depth.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Seattle Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

TUGS: Available, join vessel in Commencement Bay, approx. half way between Brown's Point and the designated Dock. Tug's lines are used and there is a charge for tug's lines.

BERTHING: 32 deep water berths. Water depths: 9.15 m. to 21.34 m. below MLLW.

General Cargo: 161,000 sq.m. warehouse space, 91 hectares of open storage paved, lighted, fenced, serving all piers.

BULK HANDLING FACILITIES: 550 m. pier with 12 m. to 15 m. water depth. 5 heavy lift whirley cranes and bulk unloading crane with 750 to 1,500 t.p.h. capacity; 150,000 tons capacity alumina storage structure with load-out facility; 12.14 hectare stockpile area including holding area for 300 rail cars.

Bulk Grain Elevator; Continental Grain: 3 million bushel capacity: loading rate: 2,400 t.p.h.; 137 m. dock with dolphins to 244 m.; 21.34 m. water depth.

Bulk Liquid Facility: 3.5 million gallon capacity; heated tanks and piping for both rail and truck shipping and receiving; serves vessels at Pier 1, 676 m., 10.67 m. water depth, and Pier 5, 174 m., 10.06 m. water depth.

CONTAINER HANDLING FACILITIES: *Terminal 4:* Container handling and general cargo. Container handling capability – 5,000 units per month. 2 berths, total length 378.6 m., width 42.7 m., Depth 13.7 m. MLLW. 1 warehouse 14,536 sq.m., 2×40 ton IHI container cranes, 10.12 hectares paved, lighted, fenced, back-up storage. 200 Reefer container outlets (240-480 volts). Direct rail access to pier. Intermodal yard for containers loading to rail cars.

Terminal 7: Containers and General cargo. 4 berths, total length 823 m., width 41 m., depth 13.7 m. MLLW. 2 warehouses each 9,290 sq.m. 3×40 ton Whirley cranes, 1×40 ton IHI multi-purpose crane, 1×50 ton Peiner multi-purpose crane (Containers, dry bulk). 1×40 ton IHF container crane, 17 hectares paved, lighted, fenced, back-up storage. 24 Reefer container hook-ups (240-480 volts). Direct rail access to pier.

BRIDGES: The 11th Street Bridge: All ships are required to notify for opening 2 hours in advance. The Puyallup River Bridge on 11th Street has been deactivated. The Blair and Hylebos Bridges have no restrictions. Closed periods apply to the 11th Street Bridge and the hours are as follows: 0645 – 0745 hrs., 1530 – 1730 hrs.

STEVEDORES: Jones-Washington Stevedore Company and Eagle Marine Services Ltd., and Stevedoring Services of America (SS of A).

Gang requirements must be made known to contracting stevedore prior to 1100 hrs. on day before the vessel plans to dock. (1030 hrs. on Saturdays for gangs on Saturday p.m., Sunday and Monday.)

Stowage of cargo for discharge or load determines the gang size requirements. Sufficient information for intelligent gang orders is a necessity – i.e. advance cargo plans, unusual size and/or weight, etc.

TANKERS: Loading/discharge lines 8 in. and 10 in. 150 ASA flanged connections. Slop discharge facilities not available. Fresh water available. Coast Guard regulations strictly enforced.

DENSITY: The average density in the port is 16.8 at 15° C.

FRESH WATER: Available. Delivers to vessel through portable meter hose.

FUEL: Available. Advance notice required.

Grade	*Viscosity at 122°SSF*
Bunker "C"	165 – 175
PS – 400	112 – 116
Bunker Special	50 – 60
PS – 300	32 – 35

FIRE PRECAUTIONS: Very strict precautions in force.

GANGWAY/DECK WATCHMEN: Watchmen required if detainees are aboard.

OPENING/CLOSING HATCHES: Normally carried out by stevedores. In practice, however, the crew can perform this task while in transit.

CERTIFICATES:

Certificate of Registry.
Certificates for any previous U.S. tonnage tax payments within the past year.
International Load-line Certificate.
Safety Radio Certificate.
Derat Certificate.
Cargo Gear Inspection Certificate.
Certificate of Inspection (U.S. vessels).

CUSTOMS ALLOWANCES: Tobacco: Wine/Spirit: No definite quantities prescribed; reasonable allowance at discretion of Customs Inspector.

IDENTIFICATION CARDS: Required.

REPAIRS: The largest repair yard in Tacoma can haul out vessels up to 1,000 tons for all kinds of repairs, including electronics, welding, painting and machining; shafts up to 30 ft. in length are machined here. Another plant does shipbuilding exclusively, but will perform topside repairs if needed. Wreckage and salvage facilities are available. Larger vessels go to Seattle for dry-docking. Minor repairs and services for small craft are available at marinas on the City Waterway and the N.E. shore of Commencement Bay.

AIRPORT: Seattle – Tacoma International Airport is 16 miles North from Port and Tacoma Industrial Airport 8 miles West.

TIME: Local time reference is GMT minus 8 hours. In Summertime it is GMT minus 7, or Pacific Daylight Saving Time, started the last week-end in April and finished the last week-end in October.

HOLIDAYS: New Year's Day (January 1st) no work; Lincoln's Birthday (February 12th); Washington's Birthday (February 22nd); Memorial Day (May 30th); Independence Day (July 4th) no work; Bloody Thursday (July 5th); no work; Labour Day (September 1st) no work; Columbus Day (Friday after Thanksgiving); Veterans' Day (November 11th); Thanksgiving Day (November 27th) no work; Christmas Day (December 25th) no work.

POLICE/AMBULANCE/FIRE: Emergency tel. numbers:
Police 593-4911; Fire MA 7-0151; Ambulance 473-1611.

TELEPHONES: Pay telephones available at Piers 1, 2, 4, 7, Blair Terminal, Pierce County Terminal, Grain Docks 23 and 24. There is no charge for this service.

SHIP SUPPLY SERVICE: Contact: Foss Launch and Tug, 225 East F Street, Tacoma, WA. 98421. Tel: (206) 272-0362.

SHORE LEAVE: Allowed.

AUTHORITY: Port of Tacoma, P.O.Box 1837, Tacoma, Washington 98401. *Tel:* (206) 383-5841 or Seattle (206) 838-0142. *Telex:* 32-7473 A/B Port of Tac, TWX: 910-441-2646. *Contact:* Rod Koon, Director – Port Relations.

TAMPA, Florida: 27.57 N. 82.28 W. (See Plan)

DOCUMENTS:

Passports and Seamen's Books.
Vaccination Certificate for each Seaman.
Certified Crew List: must be on American form and certified by American Consular office at foreign country from which departed.
Crew List.
Ship's Register.
Load Line Certificate.
Certificate of Financial Responsibility (Oil Pollution Certificate).
U.S. Customs requires Inward Foreign Manifest (original and 3 copies). This must describe cargo which is to be discharged this port and/or any other port in vessel's itinerary. It must show:
  Vessel's name and flag.
  Master's name.
  Last foreign port of departure.
  Net registered tons of vessel.
  When and where vessel built.
  Consigned to Agent.
  Bill of Lading Number.
  Marks and numbers (on cargo).
  Complete description of merchandise.
  Weight in kilos or pounds.
  Port of loading.
  Port of discharge.
  Stores Lists (original and 3 copies).
  Crew Curio List (original and 3 copies).
  Narcotic List (original and 3 copies).
  *Dangerous Cargo List (original and 3 copies).
  *This should be filled out even if nothing dangerous aboard.

Health officials will board vessel first. Bills of Lading not needed for Customs purposes.

PILOTAGE: Compulsory for all foreign vessels and U.S. vessels under register in the foreign trade. Pilotage is optional for U.S. coastwise vessels drawing over 7 ft. that have on board a Pilot licensed by the State government. Pilots board vessels day or night. Vessels entering by Egmont Channel are boarded between the Tampa Bay Lighted Whistle Buoy "T" (Lat. 27 35.3 N., Long. 83 00.7 W.) and Egmont Channel Lighted Bell Buoy No. 2 (Lat. 27 35.4 N., Long. 82 59.0 W.). Vessels entering by S.W. Channel are usually boarded between S.W. Channel Buoy No. 2 and Lighted Bell Buoy No. 3, or if desired, at the lighted bell buoy off the entrance to the channel.

Two pilot organisations, Tampa Bay Pilots and Tampa Tri-County Pilots (Trico Pilots), serve Tampa Bay. Tampa Bay Pilots have 4 launches, *"Egmont"*, *"Manatee"*, *"Tampa"* and *"Tampa Bay Pilot"*, each with a black hull and white deckhouse with the word "Pilot" on either side. Tampa Tri-County Pilots (Trico Pilots) have 2 launches, *"Trico Pilot"* and *"Trico Manatee"* each with a red hull and white deckhouse with the word "Pilot" on front of the deckhouse in red. Both Pilot Associations monitor VHF-FM Channels 10 (156.50 MHz), 12 (156.60 MHz), and 16 (156.80 MHz) continuously; call-signs, Tampa Bay Pilots and Tampa Trico Pilots. The Tampa Tri-County Pilots also monitor VHF-FM Channels 11 (156.55 MHz) and 13 (156.65 MHz). Both Pilot Associations' boats are equipped with VHF-FM Channels 10, 12 and 16 and use Channel 10, 12 and 11 as working frequency. All pilot boats fly the International Code flag "H". For boarding, Pilots request that vessels maintain a speed of 6 knots or less and have the pilot ladder rigged 6 ft. above the water. Vessels are requested to give a 24-hour and a 3-hour advance notice of their time of arrival. Length, beam and max. draft of the vessel should be provided with the first notification. Vessels are normally not moved in dense fog, and during strong North/South winds vessels are boarded inside Egmont Key. In March 1984, the deepest draft entering Tampa Bay was 33 ft. 6 in. Pilots can be obtained by radiotelegraph (cable address: "Tampilot" for Tampa Bay Pilots and "Trico Pilots" for Tampa Tri-County Pilots), by telephone (813-248 3732 for Tampa Bay Pilots and 813-251-1669 for Tampa Tri-County Pilots) through the Tampa Marine Operator, or through ships' Agents.

Pilots for St. Petersburg and Port Manatee can be obtained through the Tampa Bay Pilots or Tampa Tri-County Pilots (Trico Pilots).

ANCHORAGES: Vessels with good ground tackle can anchor anywhere outside Egmont Bar in depths of 35 ft. to 50 ft. Inside anchorages Southward of Mullet Key in depths of 30 ft. to 35 ft.; and S.W. of Gadsden Point in depths of 29 ft. to 36 ft.

Explosives and quarantine anchorages East of Mullet Key and South of Interbay Peninsula.

(1) Explosives anchorage East of Mullet Key. A rectangular area in Tampa Bay, approximately 4,459 yd. long and 1,419 yd. wide, beginning at Lat. 27 38 30 N., Long. 82 39 09 W., and extending N.E. to Lat. 27 39 48 N., Long. 82 37 15 W.; thence S.E. to Lat. 27 39 17 N., Long. 82 36 46 W.; thence S.E. to Lat. 27 37 52 N., Long. 82 38 38 W.; thence N.W. to point of beginning. Anchorage is used by vessels awaiting loading or unloading at Port Tampa where duration of anchorage will exceed 72 hours.

(2) Temporary explosives anchorage South of Interbay Peninsula. Beginning at a point bearing 107, 1,750 yd. from Cut F Range Front Light; thence to a point bearing 125, 2,050 yd., from Cut F Range Front Light; thence to a point bearing 180, 1,725 yd., from Cut F Range Front Light; thence to a point bearing 222, 2,180 yd., from Cut F Range Front Light; thence to a point bearing 251, 1,540 yd., from Cut F Range Front Light; and thence to the point of beginning. Anchorage is used for vessels engaged in loading explosives when duration of the anchorage is less than 72 hours.

(3) Temporary explosives anchorage off Port Tampa. A circular area with a radius of 200 yd. with the point at Lat. 27 50 22 N., Long. 82 34 15 W.

(4) Quarantine anchorage. S.E. of the temporary explosives anchorage, beginning at a point bearing 97 true, 4,370 yd., from Cut F Range Front Light; thence to a point bearing 113 30, 5,370 yd., from Cut F Range Front Light; thence to a point bearing 161 30, 3,770 yd., from Cut F Range Front Light; thence to a point bearing 163 30, 2,070 yd., from Cut F Range Front Light; thence to the point of beginning.

RESTRICTIONS: Draft recommendation is 33 ft. 6 in. No tidal restrictions with exception of loaded vessels into Port Tampa.

43 ft. harbour deepening project underway. Scheduled for completion in 1986.

Existing Channels:

Name of Channel	*Width* (ft.)	*Length* (naut. miles)	*Depth MLW* (ft.)
Egmont Channel	700	3.9	45
Mullet Key Channel	600	2.9	43
Tampa Bay Channel Cuts A-F	500	13.6	43
Gadsden Point Cut	500	3.1	43
Hillsborough Bay Cut A & C	500	6.6	43
Hillsborough Bay Cut D	400	1.0	34
Seddon Channel	300	1.1	28
Garrison Channel	275	0.4	30
Ybor Channel	400	0.9	34
Sparkman Channel	400	1.2	34
East Bay Channel and Turning Basin	2,700	1.5	43
Port Tampa Channel	400	7.3	34
Port Sutton Channel	280	1.0	34
Alafia River Channel	200	3.4	32

MAX. SIZE: Max. draft 33 ft. 6 in. MLW. No limit on length and breadth. Air draft 149 ft. MHW. Skyway Bridge clearance.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Radio station "WPD" should be used by vessel to route ETA cables to Agents, receivers, etc. Station KUZ 383 on Channel 25 VHF, available for public messages.

TUGS: Positions are:

Main port area – right past Beacon No. 35
Port Sutton & East Bay – Beacon No. 29
Port Tampa – Cut "K"
East Tampa – Beacon No. 16

Tug's lines only.

BERTHING: See pages 1831 and 1832. Also see "Developments".

BRIDGES: The Sunshine Skyway Bridge spans lower Tampa Bay. The twin central cantilevered span has a navigation clearance of 800 ft. and a maximum vertical clearance of 151 ft. at MLW.

STEVEDORES: Stevedoring gangs must be ordered approximately 24 hours in advance (before 1700 hrs. on day before needed).

MEDICAL: Advance notice for medical attention not required, but is preferable.

TANKERS: Also see "Developments".

Note that part of above terminals use same piers. Most terminals have residue discharge facilities.

DENSITY: Density is affected by local rains due to Hillsborough River. Seasonal variances too great to allow advance prediction.

FRESH WATER: Available all over port and delivered through hoses and meters. Rates of delivery various.

FUEL: All grades and types available, including all types of blended fuel and Bunker "C". 24 hour notice required. All types of lube-oil available with delivery in bulk or drums – 24 hours' notice is required. Major oil companies (i.e. Shell, Amoco Oil, Texaco, Gulf, Chevron, Western Fuels, etc.) represented in Tampa. Delivery ex-pipe-line, barge or truck.

FIRE PRECAUTIONS: No specific precautions other than usual.

GANGWAY/DECK WATCHMEN: Watchmen not necessary, but available when required.

OPENING/CLOSING HATCHES: Longshoremen open and close hatches.

CERTIFICATES:

Documentation Papers.
Load-line Certificate.
Certificate of Safety at Sea (when carrying passengers).
Certificate of Safety Equipment.

CUSTOMS ALLOWANCES: Tobacco, 2 packs of cigarettes per day per man, wine and/or Spirit, no set amount. Each boarding officer has different views (i.e. German and Scandinavian vessels allowed 2 bottles of beer per day per man). Allowances made within reasonable bounds at Master's discretion subject to boarding officer's approval.

CARGO GEAR: No local special safety requirements. Longshoremen and U.S. Department of Labor requirements are uniform over the U.S.

IDENTIFICATION CARDS: Passports required.

CONSULS: The following countries are represented in Tampa:

Colombia
Denmark
Finland
Germany F.R.
Honduras
Italy
Mexico
Norway
Sweden

REPAIRS: All types are possible.

DRY DOCKS: Graving dock: 900 ft. long × 150 ft. wide, 21 ft. from MLW to top of keel blocks; 525 ft. long on bottom × 80 ft. wide, and depth over keel blocks 16-18 ft. at MHW.

Dry dock: 200 ft. long × 65 ft. wide. There are 2 other dry docks besides those listed above.

Also see "Developments".

GENERAL CARGO FACILITIES:

Operator	*Location*	*Length*	*Depth*	*Remarks and Equipment*
Eller & Co. Inc. (Port Authority Berth No. 209)	Verger Boulevard, Holland Terminal	600 ft. Marginal Wharf	34ft.	Fork Lifts: 110 tons, 48 tons, 52.5 tons, 114 tons. Mobile shore cranes available 70 – 300 tons
Garrison Terminals Inc.	13th and Beatrice St.	1,759 ft. Marginal Wharf	30 ft.	Crawler Cranes: 4 ranging from 37 to 72 tons. Fork Lifts: ranging from 1,000 to 20,000 lb. capacity. Bulk handling: 5 hoppers, clamshell buckets, shipside conveyor. Bagging: openmouth and valve baggers for bulk fertiliser materials.
Spessard L. Holland Terminal (Port Authority Berth No. 202)	Verger Boulevard	2,400 ft. Marginal	34 ft.	Back land leased to Pate Stevedoring with preferential berthing rights. 15 acres Storage. The 100 ft. apron on all berths is public. Cruise Ship Terminal location.
Kreher Terminal Berths No. 223, 224	Carbide Avenue, Hookers Point	1,120 ft. Marginal Wharf	34 ft. (for 800 ft.) 14/16 ft. (for 320 ft.)	Back land leased to South State Terminals and Standard Gypsum. Wharf apron and docking area is public and subject to preferential berthing rights of one tenant.
S.E.L. Maduro (Florida), Inc.	13th and York St.	1,200 ft. Marginal Wharf	30 ft.	All sizes fork lifts including specialised newsprint handling and 52,000 lb. capacity for handling of containers; mobile shore cranes. Modern banana unloading conveyor system.
Metroport Terminals Berths 263, 264, 265, 266.	601 N. 13th Street	2,255 ft. Marginal Wharf 6 berths	30/27/25 ft.	Banana unloading conveyor system, 20 ton gasoline crane with 45 ft. – 100 ft. boom, 4 lift trucks. Mobile shore cranes available up to 70 tons. Lift truck and crane restrictions, check with Port Authority.
Southport Stevedores Inc. (Port Authority Berths Nos. 251, 252)	Foot of Grant St.	1,200 ft. Marginal Wharf	34 ft.	Cranes: 440 tons gantries. Fork Lifts: up to 20,000 lb., conveyor system
Harborside Refrigerated Services, Inc. (Port Authority Berths Nos. 210, 211)	Verger Boulevard	1,200 ft. Marginal Wharf	34 ft.	Fork Lifts. Mobile shore cranes available 70 – 300 tons.
Spessard L. Holland Ro/Ro	Verger Boulevard	—	34 ft.	Public facility.

SPECIALISED GENERAL CARGO FACILITIES:

Operator	*Location*	*Length*	*Depth*	*Remarks and Equipment*
Commercial Metals Transport Co.	West end of Port Sutton, East side of turning basin	530 ft. Marginal Wharf	30 ft.	Scrap metal loading facility. 4 diesel cranes 380 ft. boom, 170 ft. boom, each equipped with electric magnets.
Tampa Bay Terminal Inc.	Foot of Grant St.	700 ft. Marginal Wharf	34 ft.	Scrap metal loading facility. 2 diesel electric travelling, revolving, full-portal shipside cranes with 130 ft. boom and capacity of 40 tons. Equipped with electric magnets.
Hardaway	Port Tampa	330 ft.	6 ft.	Pre-stressed concrete products. 130 ton crane with 120 ft. boom.
Tampa Scrap	Maritime Boulevard	1,120 ft. Marginal Wharf		Scrap metal loading facility.

DRY BULK FACILITIES:

Operator	*Location*	*Depth*	*Max. L.O.A.*	*Max. Beam*	*Height of Vessel Waterline to bulwark*	*Chute Travel*	*Loading Rate (N)=Net (L)=Long t.p.h.*
Agrico Chemical Co.	Big Bend	34 ft.	1,500 ft.	120 ft.	47 ft.	1,500 ft.	3,000 (N)
CF Industries Inc. (Port Authority Berth No. 204)	Holland Terminal	34 ft.	600 ft.	85 ft.	47 ft.	Stationary	1,100 (N)
Detsco Terminals Inc.	14th St. and Harbor	32 ft.	380 ft.*	80 ft.	40 ft.	350 ft.	1,250 (N)
Eastern Associated Terminals Co.	22nd St. Causeway Boulevard	34 ft.	850 ft.*	120 ft.	50 ft.	400 ft.	3,500 (N)
Gardinier Inc.	Highway 41 South	30 ft.	600 ft.*	80 ft.	51 ft.	335 ft.	400–900 (L)
IMC Phosphate Terminal Co.	Port Sutton	34 ft.	800 ft.*	104 ft.	43 ft.	378 ft.	1,800 (L)
Rockport	22nd St. Causeway Boulevard	34 ft.	1,450 ft.*	120 ft.	53 ft.	1,450 ft.	3,000 (N)

*Can load longer vessels by shifting during operation.

Shipmaster's Report: Bulk phosphates are loaded in Port Sutton (one berth) and in the East Bay (two berths: Rockport owned by SCL Seaboard Coast Line and Eastern Associated Terminal).

Loading rates: about 1,000 t.p.h. at Port Sutton;
about 3,000 t.p.h. at the two berths
in East Bay area.

Trimming: the loading elevators are not equipped with trimming devices. Most cargoes can be trimmed by bulldozers. The bulldozer weighs 5 long tons, and is placed on board with ship's gear. The IMC elevators at Port Sutton and the SCL elevator (Rockport) use shore gear to place the bulldozer on board. A minimum of 8 to 7.5 ft. headroom under the coaming is required for bulldozer trimming.

DRY BULK FACILITIES: Others:

Operator	*Location*	*Depth*	*Berthing Space*	*Handling Equipment*	*Storage Area*	*Product Handled*
Cargill Inc. (Port Authority Berth No. 258)	North 19th St.	32 ft.	700 ft.	Marine leg for unloading 30,000 bushels/p.h., and spout loader-rate of 600 tons	Capacity of elevator is 1,000,000 bushels; 8,000 ton bulk warehouse; 4,800 ton bulk warehouse.	Grain and dry bulk agriculture products
Detsco Terminals, Inc.	14th St. and Harbor	32 ft.	540 ft.	None.	Storage area leased out.	Cement and caustic soda
Florida Portland Cement Division	Hookers Point	34 ft.	820 ft.	Belt material handling system capable of receiving 4,000 short t.p.h. of aragonite or 1,500 short t.p.h. of gypsum 3 electric, travelling bridge cranes equipped with 2.5 and 3 cu.yd. grab buckets.	800×100 gypsum storage shed; 215,000 barrel holding tanks for fuel storage (for plant consumption) 220,000 ton capacity open storage.	Gypsum rock, aragonite
Ideal Basic Industries, Inc.	Port Sutton	34 ft.	1,038 ft.	2×8 in. pipelines to storage. 4×12 in. pipelines to storage.	8 silos with 190,000 barrel capacity. 3 bins with 5,640 ton capacity.	Cement
Tampa Bulk Services	Port Tampa	34 ft.	700 ft.	Belt elevator from storage to loading spout. Rate of discharge 500 t.p.h. Direct transfer from rail cars to vessels at 200 net t.p.h.	Silo capacity of 10,000 net tons.	Citrus pellets and other dry bulk products.
National Gypsum Co.	Port Tampa	34 ft.	950 ft.	Receiving hopper and conveyor–unloading rate of 2,000 net t.p.h.	Open area approx. 10 acres.	Gypsum rock
Paktank Florida, Inc.	Pendola Pt., Port Sutton	34 ft.	700 ft.	Dock crane with 80 ft. boom with unloading rate of 400 t.p.h. Loading tower with rate of 1,200 t.p.h.	Building 125 ft.×700 ft. with storage capacity of 50,000 tons. 4 silos with 8,000 ton capacity.	Potash, phosphatic products.
Standard Gypsum Corp. (Port Authority Berth No. 223)	Hooker Point	33 ft.	600 ft.	Evacuator and conveyor system; radial stacker.	4.62 acres	Gypsum and salt
Tampa Electric Co.	Big Bend	35 ft.	788 ft.	200 ft. high travelling tower-conveyors system with unloading rate of 4,000 t.p.h.	24 acres	Coal
Tampa	Port Sutton Electric Co.	30 ft.	450 ft.	2 electric travelling unloading towers equipped with straight-line boom, and receiving hopper-combined unloading capacity of 1,600 t.p.h.	Exact size unknown	Coal
Tampa Cement	Port Sutton	34 ft.	—			Cement
Gulf Portland	Port Sutton	34 ft.	—			Cement
Dravo Basic Metals	Hookers Point	—	—	Conveyor. 2 radical stackers.		Building construction aggregates and materials.

Facilities available for smaller vessels.

Operator	*Depth*	*Berthing Space*	*Product Handled*
Morton Salt Co.	14 ft.	600 ft.	Salt
Paktank Florida, Inc.	12 ft.	500 ft.	Grain fertiliser, materials, potash, caustic soda, salt.

REPATRIATION: No foreign crew pools in Tampa (located in New Orleans, San Francisco and New York), but crew changes can be made when Master radios requirements to Agent who arranges with local Consul or through crew pool in nearest city named above for applicable country (if no Consul is available in Tampa). American crew pools for all unions in Tampa.

Repatriation available at Tampa International Airport and is handled by Consul or Master.

AIRPORT: Tampa International Airport served by regular airlines and located approximately 15 miles from main port area; 5 miles from Port Tampa and 16 miles from East Tampa.

TIME: Tampa normally on Eastern Standard Time (GMT minus 5 hours) with Daylight Saving Time in effect from last Sunday in April to last Sunday in October.

HOLIDAYS: New Year's Day, January 1st; Martin Luther King's Birthday, January 15th; Gasparilla Day 2nd Monday in February (local); Lincoln's Birthday, February 12th; Washington's Birthday, 3rd Monday in February; Good Friday; Memorial Day, Last Monday in May; Independence Day, July 4th; Labour Day, 1st Monday in September; Columbus Day, 2nd Monday in October; Armistice Day, November 11th; National Election Day, November; Ted Gleason Birthday, November 8th; Thanksgiving Day, 4th Thursday in November; Christmas Eve, December 24th; Christmas Day, December 25th; New Year's Eve, December 31st.

When any of above holidays fall on Sunday, they will be observed on Monday following. Work on these holidays is by special arrangement only.

POLICE/AMBULANCE/FIRE: Police Tel: 223-1112; Ambulance Tel: 681-4422; Fire Tel: 223-4211.

TELEPHONES: Installation of telephone aboard can be arranged.

SERVICES: Compass adjustments available; radio direction finder; radar repairs; tank cleaning.

SHIP SUPPLY SERVICE: Captain Riley F. Bryan, Sea Taxi, P.O.Box 46618, Pass-A-Grille, Florida. Tel: (813) 381-3999.

Suncoast Helicopters, 4111 W. Columbus Drive, Tampa, Florida 33607. Tel: (813) 872-6625.

A. P. St. Philip, Inc., 1305 Shoreline Drive, Tampa, Florida 33605. Tel: (813) 248-1123.

SHORE LEAVE: Immigration authorities grant clearance after examination of passport or bona fide seaman's papers.

DELAYS: Delay can be expected in loading phosphate rock (1 or 2 days), and same delay applicable for berthing at elevators. Some delay possible in general cargo loading or unloading.

DEVELOPMENTS: The Tampa Port Authority has three new projects recently completed: a Roll-on/Roll-off dock capable of handling the largest vessels in the trade; a liquid bulk dock to accommodate vessels up to 900 ft. in length with 43 ft. drafts; and a dry dock to accommodate vessels up to 900 ft. in length.

Dredging operations are underway by the U.S. Corps of Engineers to deepen the main harbour channels from 34 to 43 ft. Completion of the project is scheduled for 1986.

AUTHORITY: Tampa Port Authority, P.O.Box 2192, Tampa, Florida 33601. *Tel:* (813) 248-1924. *Telex:* 52441 – Port Auth Tpa. *Contact:* Emmett C. Lee, Jr., Port Director.

AGENT: Strachan Shipping Company, P.O.Box 2441, Tampa, Florida 33601. Tel: 813-228-7563. Telex II: 810-876-4149. Cables: "Strachan".

TEXAS CITY, Texas: 29.22 N. 94.53 W. **(See Plan)**

DOCUMENTS, PILOTAGE, etc., refer to "Galveston".

RESTRICTIONS: Controlling depth in entrance channel 40 ft. Otherwise restricted by depth available at berth. Vessels enter day and night.

Industrial canal deepened from 34 ft. to 40 ft., in 1981.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Miami Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

TUGS: Available if required.

BERTHING:

American Oil Tanker Docks	Depth 36 ft.
International Minerals & Chemicals Corporation	Depth 40 ft.
Monsanto Tanker Dock	Depth 36 ft.
Texas City Oil Docks	Depth 36 ft.
Union Carbide Terminal	Depth 34 ft.
Import Crude Terminals:	
Amoco Docks 40 – 41	Depth 40 ft.
Arco Docks No. 11 – 12	Depth 40 ft.

Report: *AMOCO:*

General: The Amoco Terminal at Texas City consists of Berth Nos. 31, 32, 40 and 41. Distance from the sea buoy to these berths is 15 miles.

Mooring and Berth: Pilot services for the Texas City port are provided by the Galveston Pilot Association.

Products handled at Berth Nos. 31 and 32 include gasoline, distillate, anhydrous ammonia, crude and also ballast and slops. Anyhdrous ammonia is handled through 1 stainless steel arm, 6 in. flanged connection and maximum pumping pressure of 35 p.s.i. All other products are handled through 8 in. lines with flanged connections. Maximum pumping pressure on all products is 100 p.s.i.

Berth Nos. 40 and 41 handle the discharge of crude only. Both berths have 2 loading arms. All lines are 12 in. and are quick disconnect-type connections. Maximum pumping pressure is 150 p.s.i. There are no facilities for handling ballast or slops at these berths.

A minimum of 2 tugs are required for docking and undocking. However, the Master of the vessel and the Docking Master may determine actual tug requirements for their vessel based on vessel manoeuvrability and weather conditions.

The normal mooring arrangement at Berth Nos. 31 and 32 is starboard side to. Port side mooring is done after turning the vessel in the turning basin. 2 head lines, 2 forward breast lines, 2 spring lines, 2 stern lines, 2 aft breast lines and 2 aft spring lines are sufficient for mooring most vessels. Line handlers are supplied by Texas City Boatman Co. This terminal does not furnish a gangway to vessels.

ARCO:

General: The ARCO facility is located toward the North end and on the West side of the Texas City turning basin. Berth Nos. 11 and 12 are the 2 berths at this terminal. The area around these berths is dredged to 40 ft.

The ship dock is a concrete and steel finger pier permitting vessels to moor on either side. 2 vessels are the maximum that may be discharged at one time. There is no provision to load vessels at the facility and no facilites for dry cargo handling.

Mooring and Berth: Water depth is the factor that limits the size of fully loaded vessels that call at the facility. Lightered or partially loaded vessels of greater size can be accommodated. Distance from the bow of a vessel to the centre of its manifold cannot exceed 468 ft. and from the centre of its manifold to the stern of the vessel cannot exceed 500 ft. Vessels will be docked bow in unless prior arrangement has been made with facility operators to permit bow out mooring. Should the vessel be moored bow out, the bow/manifold restrictions become 500 ft. and the stern/manifold distance 468 ft.

The pilotage of vessels to Texas City is performed by the Galveston/Texas City Pilots. This terminal does not make arrangements for Pilots.

9 mooring structures are installed at each berth and several lines can be secured on each. A boat is required to reach some structures. The ship's Agent will be responsible for arranging mooring and unmooring line handlers. The handlers will be under the orders of the Ship's Officer regarding the handling of each individual line and location of the shore end. The facility has Regulations concerning the minimum number of lines and the type of lines used. They are:

Vessels less than 525 ft. LOA:
2 head lines
2 forward breast lines
2 forward spring lines
2 aft spring lines
2 aft breast lines
2 stern lines

Mixed moorings not encouraged or allowed.

Vessels greater than 525 ft. LOA:
3 head lines
3 forward breast lines
3 forward spring lines
3 aft spring lines
3 aft breast lines
3 stern lines

Vessel's mooring lines must be kept taut and secure at all times. If the vessel moves more than 4 ft. away from the dock or 4 ft. in either direction along the dock, all cargo transfer operations must be stopped immediately, and the proper manifold valves must be closed. Operations must not resume until the condition has been corrected.

Facility will provide gangway. Vessel's crew must attach gangway to the vessel and furnish/install safety net under gangway. If it is necessary to use vessel's gangway, facility's crew will help position gangway onto dock platform.

Aluminium gangways with rotating platforms and feathering treads are provided. The shipboard end is designed to attach to the vessel's gunwhale or over the ship's rail.

Crude is the only cargo handled at this berth. All lines are 16 in. and have hydraulic connections. Maximum pumping pressure is at 175 p.s.i. There are no facilities for ballast or slops at this terminal.

Municipal Docks Nos. 16, 18 and 20:

General: Municipal Docks Nos. 16, 18 and 20 are located adjacent to the Texas City Harbour turning basin.

Dock No. 16 has a 140 ft. face, 283 ft. with dolphins; 40 ft. depth alongside, deck height of 14 ft. This dock is used for receipt of crude oil and shipment of petroleum products, chemicals and petrochemicals.

Dock No. 18 has an 88 ft. face, 320 ft. with dolphins; 34 ft. depth alongside, deck height of 14 ft. This dock is used for receipt of crude oil.

Dock No. 20 has a 98 ft. face, 284 ft. with dolphins; 32 ft. depth alongside, deck height of 14 ft. This dock is used for receipt of crude oil and shipment of petroleum products.

Mooring and Berth: Tug requirements are determined according to vessel size, Master's requirements and recommendations of the Docking Master doing the docking.

The normal berthing manoeuvre into dock No. 16 consists of a turn of 140° to port from the Texas City turning basin. The berth is on the starboard hand of the basin about 1,500 ft. from the turning basin entrance. Vessels tie up either port or starboard side to manila or polypropylene lines are normally used, but wire is permissible. No gangway is provided at this berth.

Vessels destined to Berth No. 18, enter the turning basin from the Texas City Channel. Berth No. 18 is at a right angle to the turning basin approximately 2,000 ft. from the entrance to the turning basin. Vessels normally turn in the turning basin in order to back into the berth. Normal side to dock is the port side. Berth No. 18 is the first berth on the North side of the municipal dock basin. No gangway is available at this dock.

Vessels destined to Berth No. 20 enter the turning basin from the Texas City Channel. Berth No. 20 is also at a right angle to the turning basin approximately 2,500 ft. from the entrance to the turning basin. Vessels turn bow first into this dock area from the turning basin for a port side docking. Manila or polypropylene lines are used. This is the poorest of the 3 docks. Adequacy of mooring facilities is marginal, physical condition of the dock is poor, but acceptable. Dock equipment is fair, but acceptable. No gangway is provided at this berth.

Products handled by Berth No. 16 are all handled through 8 in. lines with flanged connections at pumping pressures between 20 p.s.i. and 125 p.s.i. Ballast and slops are handled through 8 in. lines with a maximum pumping pressure of 100 p.s.i.

At Berth No. 18 crude oil is discharged through 2×8 in. lines with flanged connections. Maximum pumping pressure is 125 p.s.i. Facilities for ballast and slops are available.

Products handled by Berth No. 20 are all handled through 8 in. lines with flanged connections at pumping pressures between 30 p.s.i. and 125 p.s.i. Ballast and slops are handled through 8 in. lines with a maximum pumping pressure of 100 p.s.i.

MEDICAL: All medical assistance available.

DENSITY: Brackish.

FRESH WATER: Available at all wharves except Union Carbide Terminal.

FUEL: Bunker "C" available to tankers loading/discharging. All grades available by barge from Houston.

GANGWAY/DECK WATCHMEN: Required only if crewmen detained by Immigration.

CUSTOMS ALLOWANCES: Each man 300 cigarettes or 100 cigars or 1 lb. tobacco. 1 qt. wine/spirits.

CONSULS: See "Houston".

TIME: Central Standard Time GMT minus 6 hours. Daylight saving time effective from April to October.

SHORE LEAVE: No restrictions unless detained by Immigration.

SHIPMASTER'S REPORT: February, 1979.

Restrictions: Vessels on maximum draft must be clear of Texas City Channel before dark. There is no sailing or berthing during darkness for maximum draft vessels.

For large vessels it is necessary to ballast during discharge otherwise shore connections become too high.

VHF: Channel 13 from sea and Channel 14 for berthing.

Tugs: Usually 4-6 tugs for vessels on maximum draft.

Tankers: Large tankers dock at Docks 40 & 41 usually starboard side to. On either dock it is not easy loading stores from the dock. 2×12 in. connections.

Consuls: British Consul at Houston.

Customs Allowance: All souvenirs to be collected (items intended as presents) and sealed.

Repatriation: As with all U.S. ports must make out Form I-408 – application to pay off or discharge alien crewman.

Airport: At Houston.

Telephone: Pay telephone at bottom of gangway.

General: Will require ship's gangway abaft of manifold if bottom of gangway is more than 115.5 ft. (35.20 m.) abaft after manifold with a freeboard of 23 ft. or more.

AUTHORITY: Texas City Terminal Railway Co., P.O.Box 591, Texas City, Texas 77592. *Tel:* (409) 945-4461. *Contact:* K. L. De Maet, President and General Manager. J. Gilder, Harbour Master.

TOLEDO, Ohio: 41.42 N. 83.28 W. **(See Plan)**

Refer to "St Lawrence Seaway" for important general information.

PILOTAGE: By Seaway Pilots.

RESTRICTIONS: Navigation season from mid-March to end-December, approx. The port is connected to Lake Erie by an entrance channel, depth 27 ft. Vessel's size restricted by Seaway locks.

MAX. SIZE: 730 ft. length; 26 ft. draft. Height restriction of 104 ft. above water-line which applies to grain berths only.

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Chicago Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

RADIO: Master must give at least 24 hours' notice to Commander 9th Coastguard District, Cleveland, Ohio, of the vessel's ETA at Snell Lock. Also, at least 24 hours' notice of ETA at first U.S. discharge port is required. Toledo Port can be contacted through Lorain, Ohio or Port Colborne, Ontario.

TUGS: Available. Not compulsory, but sometimes necessary in bad weather.

BERTHING:

C & O Railway Dock: 2,000 ft. long, 26 ft. depth alongside.
Torco Dock: 1,200 ft. long, 26 ft. depth alongside.
Interlake Steel Corporation: 23 ft. depth alongside.
Mid States Terminals: 27 ft. depth alongside.
Cargill, Inc. Elevator: 27 ft. depth alongside.
Port Authority Facility: 4,100 ft. long, 27 ft. depth alongside.
Anderson Elevator: 27 ft. depth alongside.

CARGO HANDLING FACILITIES: 3 grain elevators at Toledo load vessels at 50,000 b.p.h. There are 3 coal-loading machines, each of which can dump 1×100-ton car per minute, also 1 machine which dumps 2 cars simultaneously, for a max. of 6,000 t.p.h.

Iron pellets are received at new Torco Dock from self-unloading lake vessels. Storage Capacity 800,000 tons.

Liquids handled include petroleum products, industrial molasses, trichlorethylene and perchlorethylene.

CRANES: Located at Port Authority Facility No. 1 – electric gantry cranes 72.5 and 110 tons. Four 25-ton gantry cranes.

BRIDGES:

UNALASKA (Dutch Harbor), Alaska: 53.54 N. 166.30 W. **(See Plan)**

DOCUMENTS:

Customs:

Masters Oath (1300).
General Declaration (1301).
Cargo Declaration (1302).
Ship's Stores Declaration (1301).
Crew Effects Declaration (1303).
Clearance from Last Port.

Immigration:

Immigration Documentation (I-418).
Crew/Passenger List.
Landing Permit (I-95).
Visa Crew List for Shore Leave (Supplied by Immigration).
Passport and (or) Seamens' Book.

PILOTAGE: Compulsory. To avoid a delay in obtaining a Pilot, the Owner, Master or Agent of a ship bound for Unalaska/Dutch Harbor must make prior arrangements at least 12 hours before entering port. The following information must be included:

1. Name/Call Sign of vessel.
2. Nationality.
3. Length, draft and g.r.t.

Pilot Boarding Station:

Lat. 53° 55′ 00″ N., Long. 166° 29′ 00″ W. 1 mile (1.61 km.) East of Ulakta Head. Pilots, tugboats, Harbour Master and shipping Agents standby on VHF Channel 16 (156.8 MHz).

Berthing:

(a) Pilot – Compulsory. Shifting of and EDT requires 1 hour advance notification.

(b) Berths arranged by Agent in advance.

(c) 1 small tug available annually. Circumstances may arise when other tugs are available for ship assistance.

(d) Lineman – Arranged through ship's Agent.

(e) Boatmen – Arranged through ship's Agent.

ANCHORAGE:
Outer Anchorage: Lat. 53° 54′ 00″ N. to Lat. 53° 55′ 00″ N. at Long. 166° 27′ 00″ W., Rocky, Depth 12 fathoms.

Inner Anchorages: Domestic and other vessels which have cleared customs.

1. Dutch Harbor: Lat. 53° 54′ 00″ N., Long. 166° 31′ 20″ W., mud, depth 18 fathoms.
2. Iliuliuk Bay: Lat. 53° 52′ 40″ N., Long. 166° 31′ 10″ W., mud, depth 14 fathoms.
3. Captians Bay: Lat. 53° 52′ 00″ N., Long. 166° 33′ 33″ W., mud, depth 15 fathoms.
4. Nateekin Bay: Lat. 53° 53′ 00″ N., Long. 166° 37′ 00″ W., mud, depth 17 fathoms.
5. Broad Bay:
   (a) Lat. 53° 55′ 05″ N., Long. 166° 36′ 30″ W.
   (b) Lat. 53° 56′ 05″ N., Long. 166° 36′ 30″ W.

Must check with the U.S. Coastguard and the Alaska Department of Fish and Game prior to anchoring or placing an oil rig at these locations. More locations may be forthcoming.

Note: When anchoring in Dutch Harbor, no vessel may anchor in the glide path to the airport.

MAX. SIZE: No restrictions except draft at various facilities and through the East Channel 24 ft., Rocky Bottom at MLLW.

RADIO:

(a) Department of Public Safety, Harbour Master, Pilots, Tugs, Shipping Agents and National Marine Fisheries Observer Transfer Station standby on Marine VHF Channel 16. 4125 A kHz.

(b) Alaska Department of Fish and Game and the Alaska Department of Fish and Wildlife, (State Troopers) standby on Marine VHF Channels 6 and 16. 4125 A kHz.

(c) Marine Operator calls vessels on Marine VHF Channel 16 and receives all radio traffic on VHF Channel 28.

(d) All other traffic stands by on Marine VHF Channel 6.

TUGS: Unimac Pacific Towing – 55 ft., 800 h.p. vessel.

Boatmen:

Victory Services – VHF Channel 16.
Ballyhoo Services – VHF Channel 16.

BERTHING:

Berth No.	*Wharf Length (ft.)*	*Depth at MLLW (ft.)*	*Remarks*
1	450	30	City Dock – Warehouse available.
2	300	40	APL – 208, 3 ph., 60 cycle power. 100,000 lb. gantry crane.

6. Capt. Wolslenholm, P.O.Box 3313, Anchorage, Alaska 99510. Tel: (907) 277-5109.

REPATRIATION: Crew changes and repatriation can be carried out with little difficulty.

AIRPORT: Distance 4.5 miles from any facilities. 3 flights daily (except on Sunday and on holidays 1 flight) to Anchorage with domestic and international connections. Reeve Aleutian Airways, Air Pacific and Mark Air, Aleutian Aire Ltd., Air charter service state wide.

TIME: GMT minus 9 hours in Winter, and GMT minus 8 hours in Summer. Last Sunday in April clocks advanced 1 hour. Last Sunday in October clocks retarded 1 hour.

POLICE/FIRE/AMBULANCE: Tel: (907) 581-1233; Emergency Tel: 911; VHF Channel 16, 24 hours a day.

EMERGENCY CO-ORDINATION CENTER: U.S. Coastguard. Dial 0 – Ask operator for Zenith 5555 or 2182 kHz.

GENERAL: Fishing vessel's wide lights and search lights must be turned out prior to vessel entering port.

HOLIDAYS: New Year's Day, Lincoln's Birthday, Washington's Birthday (3rd Monday in February), Seward's Day (last Monday in March), Memorial Day (last Monday in May), Independence Day, Labor Day, Alaska Day (18th day in October), Veteran's Day (November 11th), Thanksgiving Day and Christmas Day and every Sunday and every day designated by public proclamation by the President of the United States or the governor of the state as a legal holiday.

AUTHORITY: City of Unalaska, P.O.Box 89, Unalaska, Alaska 99685. *Contact:* Harbour Master, Bryson M. Riordan, USN, Ret. *Tel:* (907) 581-1251 or Marine VHF Channel 16.

VALDEZ, Alaska: 61.07 N. 146.21 W. **(See Plan)**

Also see "Valdez Marine Terminal".

Located at head of Valdez Arm in Prince William Sound.

APPROACHES: Via Prince William Sound to the Valdez Pilot Station.

DOCUMENTS: See "Anchorage, Alaska".

PILOTAGE: Pilots board approx. 2 miles North of Busby Light.

MAX. SIZE: Harbour depth over 300 ft. Tides: diurnal range 12 ft. Also see "Berthing" and also see "Valdez Marine Terminal".

HEALTH: See "Health: All Ports" before first U.S.A. port (Albany). Illness reports made to Anchorage Quarantine Station.

AGRICULTURE: See "Agriculture" before first U.S.A. port (Albany).

ANCHORAGE: Excellent, close by dock. Bay is too deep.

CUSTOMS: Quarantine, local. Immigration and Customs from Anchorage.

TUGS: Limited availability.

BERTHING: Valdez City Dock: 36 ft. MLLW. 600 ft. long by 40 ft. wide. 2 warehouses, 1 heated, 1 unheated. Stevedore provides equipment which includes fork-lifts and 2×100 ton mobile cranes and 1×150 ton mobile crane. Dock operated by North Star Stevedoring Co.

Floating Quay: Length 700 ft., width 100 ft. Mobile cranes available. Facilities for Lo/Lo and Ro/Ro.

STEVEDORES: 3 gangs.

TANKERS: *Valdez Dock Co., Petroleum Dock:* Length 200 ft., width 40 ft., depth 36 ft. at MLLW.

Also see "Valdez Marine Terminal".

REPAIRS: Minor repairs only.

FRESH WATER: Available in temperate seasons.

FUEL: Not available.

MEDICAL: 150-bed mental patient hospital; 15 beds for local use; 1 doctor, 1 dentist regularly from Anchorage.

TRANSPORTATION: Air; highway to Fairbanks and Anchorage.

AUTHORITY: City of Valdez, P.O.Box 307, Valdez, Alaska 99686.

Port of Valdez, 200 S.W. Market Street, Suite 985, Portland, Oregon 97201-5713. *Tel:* (503) 227-4567. *Telex:* 360718 Portvaldez Ptl. *Contact:* Vernon W. Chase, Marketing Manager, Port of Valdez, Alaska.

VALDEZ MARINE TERMINAL, Alaska:
61.05 N. 146.24 W. **(See Plan)**

OPERATORS: Alyeska Pipeline Service Company.

The terminal does not provide any tug, launch or pilotage assistance for the berthing or unberthing of tankers calling at the terminal. These services, as well as any other tanker services, must be arranged separately by tanker owners.

LOCATION: The Trans-Alaska Pipeline Valdez Marine Terminal is situated on the Southern shore of Port Valdez.

Port Valdez is a natural deep-water fjord located at the N.E. part of Prince William Sound which provides access from the Gulf of Alaska. Port Valdez is about 12 miles long and 2.5 miles wide, is surrounded by steeply rising mountains, and remains ice free throughout the year. The approach to Port Valdez is by way of Valdez Arm, a deep-water channel with a minimum width of approximately 3,000 ft.

The overland approach to the site, which is close to the mouth of the Lowe river, is by road about 6 miles long connecting the terminal with the Richardson Highway. The town of Valdez is 14 miles from the terminal by this route. The distance by boat across to Port Valdez is approx. 2.5 miles.

The terminal operates 24 hours per day, 7 days per week, throughout the year.

The administrative offices will normally be open between 0800 and 1630 hrs., Monday through Friday. The office telephone number is (907) 835-2261.

DOCUMENTS:

Certificate of Financial Responsibility.
SOLAS Safety Equipment.
SOLAS Safety Construction, or for U.S. documented vessels: U.S. Coastguard Certificate of Inspection.
SOLAS Radiotelegraphy Certificate.
Crew Lists.
Derat Certificate.
Clearance from Last Port.

PILOTAGE: The Pilot boards off Rocky Point. Arrangements to be made by vessel's Agent.

ARRIVAL ADVICE: Masters of vessels bound for the terminal must advise the terminal as follows:

Last Port ETA: Tankers en route to the terminal, upon departure from their last port of call prior to Valdez, will send a telegram or telex to Alyeska Pipeline Service Company, Valdez, Alaska, Telex No. 090-26-564 (Answerback: Alyeska Valz) advising the estimated Alaskan local time and date of arrival.

72-hour ETA: Not less than 72 hours, unless transit time is less than 72 hours, prior to arrival at Cape Hinchinbrook, tankers will send a telex or telegram to Alyeska Pipeline Service Company providing the terminal with the following information:

a. ETA at Cape Hinchinbrook.
b. Quantity of ballast to be pumped ashore and grade of last cargo.
c. Quantity of oil to be loaded.
d. Distance from the bow to cargo manifolds.
e. Size, number and type of cargo connections. } At first call to Terminal. Not necessary on subsequent voyages.
f. Amount of provisions and stores to be loaded.

Final ETA: Tankers will send a final ETA, 24 hours in advance of their arrival. This 24 hour ETA shall be as accurate as possible and tankers will notify the terminal whenever the arrival time changes by more than 3 hours.

Notice of Arrival: After entering the Coastguard's Prince William Sound Vessel Traffic Service, vessels ready to commence loading or deballasting should give immediate notice to the terminal. This notice is extremely important as it can affect berthing priority.

Coastguard Notification: Terminal will advise USCG at Valdez of all ETAs received.

AMVER Participation: The notice of arrival requirement to be given to the U.S. Coastguard Captain of the Port in Valdez, Alaska, can be met if vessels participate in the Automated Mutual-assistance Vessel Rescue System (AMVER). Participation in AMVER will also make the Coast Guard's Prince William Sound Vessel Traffic Service aware of the tankers that will be entering the service.

Initial Radio Contact: Ship-to-shore radio telephone calls can be made to the terminal, (907)-835-2261, 24 hours a day by normal commercial Channels.

RADIO: All times are GMT – following information produced as a "guide" and subject to change.

Broadcast Notice to Mariners: Broadcast Notice to Mariners are disseminated on the following schedules:

Safety Broadcast:

(1) RADSTA Ketchikan (NMJ). (a) Code (CW) — Last 15 seconds of 1st Silent Period after receipt, next on operator schedule and repeat text only on next scheduled broadcast unless message cancelled. Additional broadcasts as directed, preliminary call on 500 kHz, broadcast on 416 kHz.

(2) COMMSTA Kodiak (NOJ). Voice (AM) — Upon receipt, repeat text only on next scheduled broadcast. Additional broadcasts made as directed with preliminary call on 2182 kHz, broadcast on 2670 kHz.

(3) RADSTA Adak (NOX). Code (CW) — Last 15 seconds of 1st Silent Period after receipt, next on operator schedule and repeat text only on next schedule broadcast unless message cancelled. Additional broadcasts as directed, preliminary call on 500 kHz, broadcast on 450 kHz.

(4) RCA — Alascom Ketchikan (WGG 58). Voice (AM) — On 2400 kHz upon receipt and as directed in broadcast instructions.

(5) RCA — Alascom Ketchikan (WGG 56). Voice (AM) — On 2400 kHz upon receipt and as directed in broadcast instructions.

Note: Watch hours (GMT) for single operator ships:

West Coast	*Central Pacific*
0001 – 0200 hrs.	0001 – 0200 hrs.
0400 – 0600 hrs.	0400 – 0600 hrs.
1600 – 1800 hrs.	0800 – 1000 hrs.
2000 – 2200 hrs.	2000 – 2200 hrs.

Scheduled Broadcasts: (Routine Precedence)

(1) RADSTA Ketchikan (NMJ)
  (a) Code (CW) – 416 kHz – 0530Z and 1730Z
  (b) Voice (AM) – 2670 kHz – 0630Z and 1800Z
(2) COMMSTA Kodiak (NOJ).
  (a) Code (CW) – 2670 kHz – 0630Z and 1930Z
  (b) Voice (AM) – 2670 kHz – 0445Z and 1645Z
(3) RADSTA Adak (NOX). Code (CW) – 450 kHz – 0430Z and 2130Z
(4) RCA – Alascom Juneau (WGG 58). Voice (AM) – 2400 kHz — 0830 hrs., 1300 hrs. and 1830 hrs. (local time).
(5) RCA – Alascom Ketchikan (WGG 56). Voice (AM) – 2400 kHz — 0830 hrs., 1300 hrs. and 1830 hrs. (local time).

TUGS: 2×7,000 h.p. and 1×9,000 h.p. twin-screw tugs and 2×300 h.p., single-screw mooring launches are on standby at the terminal to provide oil spill containment, cleanup and contingency services and fire fighting services as required by the terminal. The tugs are equipped with telescoping fire monitors and will be capable of providing 3,500 g.p.m. of foam or firewater at 150 p.s.i.g. at an elevation 70 ft. above the tug's waterline. The tugs are equipped with VHF-FM radio-telephone communication equipment. Should tankers desire to contact the tugs, the tugs may be reached by calling on Channel 16 (156.80 mHz).

The tugs and mooring launches are available to provide berthing and unberthing services to tankers calling at the terminal.

VHF: The Alyeska Pipeline Service Company operates a VHF – FM base station in Valdez, Alaska under the call sign "WAB – 952". This base station is maintained for the purpose of transacting company business with either inbound or outbound vessels and is open 24 hours a day. (Transmit/receive range of this station is limited to Port Valdez.) The official language for all communications shall be English.

Channel	*Frequency*	*Use*	*At*
10	156.500 MHz	Intership and Ship to Coast Guard	A – B – C
16	156.800 MHz	Distress – Safety and Calling	A – B – C

A – Contingency Management Centre
B – Oil Contingency Warehouse
C – Operational Control Centre

The VHF – FM marine radio system utilized by the terminal is compatible with the Prince William Sound Vessel Traffic Service which is operated by the U.S. Coast Guard in Valdez, Alaska. The USCG Vessel Traffic Service will have VHF – FM radio-telephone coverage extending beyond Cape Hinchinbrook and including Prince William Sound, Valdez Arm, and Port Valdez. The tugs available at the terminal will also be equipped with VHF – FM transceivers.

TANKER REQUIREMENTS: *General:* Certain requirements of governmental agencies are in effect at the terminal in order to minimize the chances for a pollution incident. These requirements apply to all tankers calling at the terminal.

Operations at the terminal are primarily aimed toward the safe loading of tankers and the prevention of collisions and groundings of vessels that call at the terminal. These aims will be met by insisting upon and utilizing conventionally constructed tank vessels manned by skilled crews, use of positive vessel traffic control within Prince William Sound and Port Valdez, and use of all traffic advisory and communications services in West Coast ports. The purpose of the following requirements for tankers calling at the terminal is to materially enhance tanker loading and discharge operations and to increase the safety of navigation so that the danger of pollution from oil spills is substantially reduced.

Safe Navigation: Tankers will observe the rules and directions issued by the U.S. Coast Guard as operator of the Prince William Sound Vessel Traffic Service. These rules and directions will pertain to communications check points, ETAs, traffic lane separation, anchorages, one-way traffic, speed, etc.

In addition to the normal instruments used in celestial navigation and piloting (sextant, pelorus, etc.), the following electronic devices must be aboard and in good working order:

a. Fathometer/Depth Sounder.
b. Loran C Receiver.
c. Two Independent Radar Systems. (10 cm. and 3 cm.).
d. Radio Direction Finder.

All vessels must have a qualified Pilot aboard for the transit of Prince William Sound and Port Valdez.

Communications: Tankers calling at the terminal will be required to have the following communications equipment aboard and in good operating condition:

a. VHF – FM radio-telephone with sufficient Channels and speakers to comply with the Prince William Sound Vessel Traffic Service operating rules and the Bridge-to-Bridge Radiotelephone Act.

b. Radiotelegraph.

c. Portable UHF transceiver will be supplied by the terminal.

d. Single sideband radio.

The portable UHF transceiver shall have at least five Channels which are tuned to the berth frequencies listed.

Additional Equipment: Tankers calling at the terminal will be required to have the following additional equipment:

a. Tankers must carry standard 6 in. hose sufficient to make at least 50 ft. in length for emergency lightering purposes.

b. Accommodation ladders and Jacob's ladders must be of sufficient integrity and free from ice and snow to permit safe embarking and disembarking by the Pilot.

c. Mooring lines must be of sufficient size, strength, and quantity to permit safe mooring of the vessel.

d. Manifold reducers, connectors, and extensions must be made of steel. Cast iron reducers will not be permitted.

e. Tankers which call at the terminal will be required to retain all solid waste refuse aboard the vessel, or use a suitable sewage treatment plant before discharge.

f. All ullage caps will remain closed during loading except during gauging or sampling.

g. Prince William Sound emergency towing cable package.

Operational Requirements: The following procedural and operational requirements are listed in order to make tanker Owners and Masters aware of some additional safety and anti-pollution measures in effect at the terminal. These requirements will be restated in the sections pertaining to the pre-loading inspection and cargo loading.

a. No repairs to radars shall be made while a vessel is moored to the loading berth unless authorised by the Terminal Marine Supervisor.

b. The tanker's main CW wireless set must be de-energized and switched off while alongside the loading berth.

c. Tank tops shall remain closed during loading operations. Petroleum vapours shall be vented through mast risers or stand pipes at an appropriate height above the main deck.

d. Ship's crew will assist with connecting and disconnecting loading arms to and from the vessel's cargo transfer manifold. Assurance that the arms are secured properly without damage shall be observed during pre-loading inspection. However, as a convenience the shore crew will aid the ship's crew in connecting loading arms to the ship's manifold as the shore crew will be more familiar with the shoreside facility connection.

e. All sea valves connected to the cargo piping system shall be sealed in the closed position prior to loading oil.

f. Prior to commencement of loading operations, a joint inspection of the vessel and a pre-transfer conference will be held by the Terminal Marine Supervisor and the tanker officer in charge.

g. No repairs that would result in immobilization of the vessel shall be carried out while alongside of the loading berths unless the Terminal Marine Supervisor specifically authorises such work.

BERTHING: *Berth Priority:* Berth priority and berthing order will be determined by the Terminal Marine Superintendent who will use the general guideline of assigning tankers and berths in the order by which tankers enter the Prince William Sound Vessel Traffic Service and are in all respects ready to discharge ballast or load.

Procedures: Tugs will be dispatched by the Marine Shift Supervisor to meet inbound tankers and to assist in berthing at the nominated berth. The Master shall remain solely reponsible, on behalf of his owners, for the safety and the proper navigation of his vessel. Manoeuvring power must be available on the main engines during berthing operations. The positioning of the tanker's loading manifold in relation to the metal loading arms has to be carried out to a proper alignment, as required by the berth operator.

Maximum Allowable Berthing Velocities: The following table gives the designed maximum allowable berthing velocities for Berth Nos. 1, 3, 4, and 5. The velocities are given in inches per second for the various size tankers in the 40% ballast condition:

	Berth No. 1	Berth Nos. 3, 4 and 5
85,000 d.w.t.	9 in./sec.	12 in./sec.
120,000 d.w.t.	8 in./sec.	11 in./sec.
265,000 d.w.t.	—	7 in./sec.

Note:

(a) 1 knot=20.2 in./sec.

(b) Velocities are given for a line normal (perpendicular) to the axis of the dock or the berthing dolphins.

Mooring Hooks and Mooring Capstans: Each berthing dolphin and each mooring dolphin will be equipped with a mooring capstan and either 2 or 3 quick-release mooring hooks. Berthing dolphins will have double quick-release hooks, and the mooring dolphins will have triple hooks.

The recommended mooring line arrangement diagrams included in the "Plans" show the location of these double and triple hooks. Since Berth No. 1 has no berthing dolphins, the 4 double quick-release hooks are located on the loading dock.

These mooring hooks are designed to service 1 mooring line per hook. Thus, no more than 3 lines should be led to any mooring dolphin nor should more than 2 lines be led to any berthing dolphin. These mooring hooks may be released locally.

Each mooring capstan will be mounted on, and form an integral part of, the associated double or triple quick-release mooring hook. This will provide a mooring capstan to assist in securing mooring lines at every berthing dolphin, mooring dolphin, and on the floating berth loading dock.

These mooring capstans are designed to give a minimum running pull of 2,000 kg. (4400 lb.) at a rate of 30 m. (98.4 ft.) per minute. The capstan will be positioned at a height sufficient to prevent mooring lines and messengers from becoming snarled on the quick-release hooks.

Mooring launches will be used to assist the tanker in running mooring lines to the mooring dolphins at each berth.

The terminal will provide suitable messengers for heaving in mooring lines from the launches.

Mooring Lines: Mooring arrangements shall be satisfactory to the Marine Superintendent. All critical moorings shall be of similar size and elasticity. Ropes of different material from those used to moor the ship may be used for positioning the vessel but shall not count as part of the final moorings. It is required that in ships of 90,000 d.w.t. and greater all final moorings shall be wire rope. Nylon tails may be used if fitted to all moorings. Ships should be outfitted with sufficient moorings of similar material for normal moorings. Ropes of different material may be used in emergency.

Moorings While Alongside Berth: Tankers must at all times remain adequately secured alongside the berth. Moorings must be kept at an even tension, avoiding a slack line or varying tensioning situation. Should such a situation arise and not be immediately rectified by the ship's crew after communication with the deck officer, the berth operator will suspend any transfer operation. All vessels fitted with tension winches should apply brakes once the tanker is moored and shall not leave winches in the self-tensioning position.

Emergency Towing Wires: While at a loading berth, tankers will provide emergency towing wires positioned at both the offshore bow and stern. The wires shall be in good condition, have an eye in each end, and be of adequate strength to move the vessel off the dock. The outboard eye shall be maintained at water level, and slack aboard ship shall be secured with small pieces of fibre line.

Mooring Line Arrangement Diagrams: (See "Plans"). The recommended mooring line arrangement diagrams are provided in the "Plans" as guidelines to acquaint the tanker Master with the general mooring line arrangement for the loading berths at the terminal. These arrangements are indicative of the minimum suggested number of lines and do not preclude the Master from using additional lines.

Also see "Berthing Facilities" on page 1838

PRE-LOADING INSPECTION: *Pre-transfer conference and joint safety inspection:* Prior to the discharging of ballast from cargo tanks or loading of oil, a pre-transfer conference and a joint safety inspection will be conducted by the Terminal Marine Supervisor and a responsible deck officer aboard the tanker who will be in charge of bulk liquid transfers aboard the tanker.

The purpose of the pre-transfer conference and the joint safety inspection is to insure that both the terminal and the tanker are suitable and ready for safe loading and handling of oil.

The checklist is designed to meet the following requirements:

a. Section 4.4 of the International Oil Tanker and Terminal Safety Guide which relates to the agreed procedures and safety checks prior to the commencement of cargo loading.

b. Title 46, U.S. Code of Federal Regulations, Section 35.35-30 relating to a Declaration of Inspection for Tank Vessels.

c. Title 33, U.S. Code of Federal Regulations, Section 156.150, relating to a Declaration of Inspection prior to the transfer of bulk liquid cargo from a shore facility to a large vessel.

The checklist is to be taken aboard the tanker by the Terminal Marine Supervisor and shall be used during the pre-transfer conference and the joint safety inspection of the tank vessel to insure compliance with applicable regulations and safety standards. Columns are provided on the checklist for the Terminal Marine Supervisor and the tanker person-in-charge to initial, indicating that the requirements have been met. The original of the checklist shall remain aboard the tanker, and a copy shall be returned to the Terminal Marine Supervisor for subsequent delivery to the berth operator.

Terminal personnel are authorised to suspend oil transfer operations if any of the safety rules listed or on the checklist are not observed, or if any other danger is believed to exist.

The Master of the tanker or his representative has the right to shut down loading operations in the event he feels shore operations are unsafe.

During the pre-transfer conference, the Terminal Marine Supervisor shall provide the responsible ship's officer with a printed sheet detailing description and location of the fire-fighting system and the other emergency systems at the terminal in general and at the berth to which the tanker is moored in particular. The Terminal Marine Supervisor shall also advise the vessel if any unusual or dangerous weather conditions are forecast or expected.

As the shifts on the berth change, the relieving Terminal Marine Supervisor and berth operator shall assure themselves that all conditions pertinent to their responsibilities are as previously agreed to, and shall sign the copy of the Declaration of Inspection. The relieving officer aboard the tanker shall assure himself that the original conditions still exist and shall sign the original of the Declaration of Inspection aboard the tanker. These relieving personnel will then become the person-in-charge of the transfer operation for the terminal and the tanker respectively.

BALLAST: *Ballast Quantities:* The terminal is to be informed of the approximate quantities of segregated clean and dirty ballast in the Master's pre-arrival message. This message should also state where the ballast was shipped and the grade of last cargo.

Ballast Reception Facilities: The terminal facilities will include three 430,000-barrel ballast reception tanks. Discharge of dirty ballast will be by way of the four 12 in. loading arms (Chicksans) on Berth No. 1 and the four 16 in. loading arms on Berth Nos. 3, 4 and 5. These loading arms connect to 20 in. lines at the berths and lead into a 42 in. line connecting each berth to the ballast reception tanks. Although the shore lines are insulated, they are not heat traced and there are no booster pumps to assist in the discharge of dirty ballast.

continued on pages 1838 and 1839.

BERTHING FACILITIES: The major ship loading facilities include four independent loading berths, numbered 1, 3, 4 and 5. Berth No. 1 is a floating berth whereas Berth Nos. 3, 4 and 5 are fixed structures.
